Content (abridged) Part I, The structure of biological intelligence Psychometric intelligence. Clinical intelligence. Neurological conceptions of intelligence *Present studies*. Quantitative results. *The central integrative field factor* C. The A factor. The power factor P The directional factor D. The nuclear structure of the ego. Part II, Localization of function in the brain. *Representation of* the basic factors in the brain. *Impairment* index and the frontal lobes. Impairment index and closed-head (brain) injuries. Localization of function and the problem of equivalence. *Appendixes. Abstracts of* medical histories of cerebral lobectomies. Diagrams of brain lesions *of cerebral lobectomies*. Quantitative indicators. References and bibliography Author index. Subject index.

Note The results of 12 years in evaluation of the effects of *brain lesions on intelligence.* Biological intelligence was resolved into four factors which are fully described. Using these as a base, approximately 230 brain-injured persons were examined with a battery of 27 neuropsychological tests. The results are fully reported and interpreted. Among the conclusions drawn by the author is one that the frontal lobes are the brain areas most essential to biological intelligence. The work *is written on a professional level* and is of interest to neurologists, biologists, and psychologists.

HAMBY, WALLACE BERNARD

Intracranial *aneurysms. Springfield* Ill. Charles C Thomas *1952 564 p illus.* 25 cm. $14.25 3840

lesions. Surgery of pain, by E. A. Kahn. Surgical closure of scalp defects, by J. M. Converse. Craniocerebral trauma, by R. C. Schneider. Trauma to the spine and spinal cord, by R. C. Schneider. Developmental anomalies of the craniovertebral border, by C. F. List. Congenital anomalies of the brain, spinal cord and their membranes, by E. A. Kahn. Author index. Subject index.

Note: A collaborative work based largely on laboratory work and clinical experience of the Neurosurgical Clinic and the Laboratory of Neuropathology of the Medical School of the University of Michigan. The clinical value of correlating neuroanatomy and neurosurgery [illegible] theme that runs through most of the chapters. A wide range of case experience is incorporated in the discussion, and [illegible] number of case histories is included. The book is directed primarily to young neurosurgeons, hence, the basic technique of neurosurgery are not described in detail. On the other hand, numerous special points gleaned from experience are included such as the following: "One must be cautioned that one may encounter [illegible] among the [illegible] and the medial side of the temporal lobe. If the patient continues to do poorly [illegible] search for [illegible] should be made in these areas." Highly extensive bibliographies are included in most of the chapters. There are 213 figures, including many pictures of gross pathology and neuropathology.

LASSEK, A. M.

The pyramidal tract: its status in medicine. Springfield, Ill. Charles C Thomas, 1954. 166 p. 23 cm. (American lecture series. Publication no. 233. A monograph in the Bannerstone division of American lectures in anatomy; edited by Otto F. Kampmeier) $4.75. 3850

Contents: Introduction. Events leading to the discovery of the pyramidal decussation—460 [illegible]–1710 A.D. Gross observations (1710–1870). Normal histological studies. Studies in secondary degeneration (pathology). Investigations in retrograde degeneration. Results of electrical stimulation. Signs and symptoms. Surgical operations involving pyramidal tract. Results of animal experimentation. A consideration of the afferent system. The status of the pyramidal tract in medicine. Conclusions. Chronological outline of basic pyramidal tract investigations to date. Chronological outline of [illegible] experiments on pyramidal tract. Bibliography. Index.

Note: A survey of accumulated knowledge. As shown in the above Contents, there are two historical chapters at the beginning of the book and two chronological outlines at the end. The chapters in between, in which the knowledge is classified under subtopics, also have [illegible] chronological pattern. At the same time, the presentation is [illegible] critical one. Especially in the chapter entitled "Conclusions" does the author point out gaps in the knowledge in such statements as "Little [illegible] known regarding the [illegible] and [illegible] of pyramidal tract impulses, but the afferent system has been implicated." The book [illegible] primarily of interest to neurologists.

LAUGHLIN, HENRY P.

The neuroses in clinical practice. Philadelphia, W. B. Saunders Company, 1956. 802 p. 25 cm. $12.50. 3851

Contents: The nature and origins of anxiety. The anxiety reactions—the acute anxiety attack or anxiety panic, the anxiety-tension state, and anxiety neurosis. Intrapsychic mechanisms of defense. The phobic reactions—fear and its avoidance—the phobias. The flimsy cause of emotional illness. The conversion reactions—somatic conversion or conversion hysteria, and physiologic conversion. The dissociative reactions. Depression. The fatigue reactions—emotional fatigue, the fatigue state, and neurasthenia. Overconcern with health—hypochondriasis, somatic and/or physiologic preoccupation. The obsessive-compulsive reactions—the obsessive character defenses, the obsessive personality and the obsessive type of character neurosis—the obsessive-compulsive neurosis. The neuroses following trauma. Appendix: A brief outline classification of emotional and mental illness. A glossary of psychiatric concepts and terms. Index.

Note: In this book the kinds of neuroses which are named in the chapter titles are all discussed according to [illegible] uniform pattern. The pattern may be illustrated by listing the subheadings under which the material in the chapter on fatigue reactions is organized: "Introduction," "History," "Diagnosis," "Incidence," "Symptoms and clinical features," "Psychodynamic considerations," "Additional aspects," "Neurasthenia," "Treatment," and "Summary." These topics are discussed for readers who have had some introduction to the terminology and concepts of clinical psychiatry. However the book is an introduction to the study of the neuroses. Over 200 condensed case histories are included. Each of the chapters includes an extensive list of references to the related literature. The glossary at the end of the volume is [illegible] comprehensive one of which various versions have been published elsewhere.

LENNOX, WILLIAM GORDON

Science and seizures: new light on epilepsy and migraine. With 10 illustrations. Second edition. New York, Harper & Brothers, 1946. 258 p. illus. 19 cm. $2.50. 3852

Contents: Part I. Convulsive seizures: Orienting facts. Various types of seizures. Numerical facts. The portion of the brain affected. Borderland conditions. The threat to life and intellect. The causes of seizures. The restraining dam. Seizures in childhood. Making [illegible] diagnosis. Radio to the rescue. The prevention of epilepsy. The problem of heredity and marriage. Treatment—preliminary problems—the psychological-social front—the physical front—the pharmacological front. Treatment during seizures. Care away from home. A campaign against epilepsy. Part II. Headache seizures. Orienting facts. The symptoms of migraine. The mechanism which causes symptoms. The causes of migraine. Putting the puzzle together. Prevention of migraine. Examinations and treatment. The hope of new knowledge. Appendix. *Index of names. Index of subjects.*

Note: Although now out of date in part, this book is still [illegible] ful exposition of the modern, informed view of epilepsy. It is addressed to educated general readers and [illegible] written primarily from the social viewpoint. However considerable space is given to clinical aspects, including diagnosis and treatment. Migraine is included as [illegible] related disorder, but less than 50 pages of the volume are devoted to it.

LEWIS, NOLAN D. C., AND OTHERS

Studies in topectomy. Edited by Nolan D. C. *Lewis, Carney Landis,* and H. E. King. New York, Grune & Stratton, 1956. 248 p. illus. 23 cm. $6.75. 3853

Contents: Editorial introduction, by N. D. C. Lewis and others. Surgical procedure, by J. L. Pool and others. *Physiological effects* by G. H. Glaser and others. Vestibular function, by H. E. King. Anesthesia, by H. E. King. Psychometric studies, by D. E. Sears. Complex mental functions, by R. D. North and J. Zubin. Activity—a time-sampling study, by E. F. Kinder and others. Psychophysiology, by H. E. King and J. Clausen. Psychosurgery and social behavior, by W. B. Pomeroy. Psychiatric effects, by P. H. Hoch and others. Independent psychiatric evaluation, by A. M. Stanley and others. Social service, by H. Crutcher and others. Index.

Note: A monograph composed of studies made by the New York State Association in Brain Research, [illegible] group whose purpose it is "to explore the potentialities of psychosurgical methods as [illegible] therapy for mental disorder, and to *investigate the role of the frontal* lobes of the brain in human behavior." The studies, [illegible] authors and titles are listed above, are critical examinations of experience. They are essentially independent, and no attempt was made to integrate the findings of the several investigators or to propose [illegible] unifying theory. The book is of interest primarily to neurosurgeons and other professional students who are concerned at the research level with the physiological and psychological effects of psychosurgery. It is complementary to F. A. Mettler, editor, *Psychosurgical problems,* 1952.

MAYO CLINIC

Clinical examinations in neurology. By members of the Sections of Neurology and Section of Physiology, Mayo Clinic and Mayo Foundation for Medical *Education* and Research, Graduate School, University of Minnesota, Rochester, Minnesota. James A. Bastron and others. Philadelphia, W. B. Saunders *Company,* 1956. 370 p. illus. (part col'd) 25 cm. $7.50. 3854

Contents: The neurologic history. Introduction to use of various forms for recording history and results of clinical examination.

INTERNATIONAL POLIOMYELITIS CONFERENCE

Poliomyelitis papers and discussions presented at the third International Poliomyelitis Conference. Compiled and edited for the International Poliomyelitis Congress Philadelphia J B Lippincott Company, 1955 567 p illus. 26 cm. $7.50 3845

Contents (abridged) Social aspects of poliomyelitis Social aspects of poliomyelitis—Italy by S. Cramarossa. Social aspects of poliomyelitis—Scandinavia, by S. M. Clemmesen. Social aspects of poliomyelitis—United States, by C. S. Kessler. Acute medical care in poliomyelitis Differential diagnosis f poliomyelitis in the acute stage, by A. J Rhodes. Systemic treatment of the acute stage, by W R. Russell. Basic physiology of respiration by J L. Whittenberger Treatment of respiratory difficulty in poliomyelitis, by H. L. Hodes. Infection and immunity in poliomyelitis Epidemiology and pathogenesis of poliomyelitis—present status of the problem, by P Lépine. Distribution of antibodies to poliomyelitis virus in the general population, by J H. S. Gear Influence of passive immunization on the incidence of poliomyelitis, by H. Moesch. Effect of passive immunity on infection with the poliomyelitis viruses, by W McD Hammon and others. Studies with noninfectious poliomyelitis virus vaccines, by J E. Salk. Avirulent viruses for immunization against poliomyelitis, by A. B. Sabin. Developments in tissue culture: Developments in tissue culture by J F Enders. Orthopedics. A discussion of the orthopedic rehabilitation of the poliomyelitis patient in the United States, by P C. Colonna. Recent methods of orthopedic surgery in the treatment of poliomyelitis and results, by C. Marino-Zuco. Physical medicine and rehabilitation. Selection of methods in physical medicine for poliomyelitis, by A. Barrière-Borchard. Muscle re-education and functional activity in poliomyelitis, by H. J Flax. Practical rehabilitation in convalescent poliomyelitis, by E. Mead. Trends in poliomyelitis. Poliomyelitis as a world problem, by A. M. M. Payne. Microbiology and immunization—a summary by T M. Rivers. Clinical aspects of poliomyelitis, by G. Fanconi. Orthopedics and physical medicine—a summary, by R. Zanoli. Social aspects of poliomyelitis, by R. Debré. Future prospects, by J R. Paul. Neurologic problems and relapses in poliomyelitis, by J Moreira da Fonseca. Scientific exhibits. Index.

Note Published in this volume are the full proceedings of the third International Poliomyelitis Conference held in Rome in 1954 The titles and authors of the scientific papers presented are listed above. In addition to these, the volume contains such information as list of officers and members of the International Poliomyelitis Congress, a list of sponsors and participants in the Conference, descriptions of the scientific exhibits, and an address by His Holiness Pope Pius XII. Many of the scientific papers include illustrations and bibliography Transcripts of discussions are also included.

JOSIAH MACY, JR. FOUNDATION

Neuropharmacology Transactions of the first conference, May 26 27 and 28, 1954, Princeton N J Edited by Harold A. Abramson. New York Sponsored by the Josiah Macy, jr Foundation, 1955 210 p illus. 24 cm $4.25 3846

Contents. Considerations of the effects of pharmacological agents on the over-all circulation and metabolism of the brain, by S. S Kety Group interchange. References. Functional organization of the brain, by E. A. Scharrer Group interchange. References. Studies of electrical activity of the brain in relation to anesthesia, by M. A. B Brazier Group interchange. References. Ascending reticular system and anesthesia, by H. W Magoun Group interchange. References. Observations on new CNS convulsants, by C. C. Pfeiffer Group interchange. References. Appendix—autobiographical sketches of participants. Index.

—— Neuropharmacology Transactions of the second conference, May 25 26 and 27 1955, Princeton N J Edited by Harold A. Abramson. New York Sponsored by the Josiah Macy, jr Foundation, 1956 328 p. illus. 24 cm. $4 25 3847

Contents. Lysergic acid diethylamide (LSD) and related compounds, by A. Cerletti. Group interchange. References. Effect of drugs on the behavior of animals and on psychoses of man, by S. L. Sherwood Group interchange. References. Research in schizophrenia, by H. Osmond Group interchange. References. Experimentally induced psychoses in man, by M. Rinkel. Group interchange. References. Tolerance to LSD-25 and a theory of psychoses, by H. A. Abramson Group interchange. References. Appendix. Index.

Note. Instead of formal papers, these volumes contain transcripts of discussions participated in by the 25 members and guests present at each conference. The pattern is the same as in the transactions of other conferences held under the sponsorship of the Josiah Macy Jr Foundation. Several of the conference participants report informally on research in which they are engaged, and these reports are discussed informally Often the discussants mention related research and experience. The transcripts of discussion occupy most of the volumes. The informality notwithstanding, literature references are included, and each volume contains detailed subject index.

JUDOVICH, BERNARD, AND WILLIAM BATES

Pain syndromes diagnosis and treatment. Fourth edition. 184 illustrations. Philadelphia F A Davis Company, 1954 440 p. illus 24 cm $7 50 3848

Contents. Segmental pain and tenderness (segmental neuralgia). Posture in relation to abdominal pain and tenderness and ptosis of the abdominal organs. Treatment. The dermatomes. Brachial plexus pain. Herniated cervical disk. Scalenus anticus syndrome. Reflex dystrophy—shoulder-hand syndrome (Steinbrocker's syndrome). Interscapular pain. Trigger points. Pain and tenderness of the chest wall. Abdominal pain. Persistence of lower quadrant abdominal pain following appendectomy Abdominal scars and adhesions. Investigative aspects of low back pain and lower quadrant abdominal pain. Sciatic nerve pain. The pitcher plant distillate and the ammonium salts for relief f pain. Herpes zoster (shingles) Occipital neuralgia. Vascular tension headache and atypical facial neuralgia. Trigeminal neuralgia. Control of pain in malignancy Vascular pain. Intravenous procaine. Technic of infiltration. Paravertebral infiltration of the sympathetic ganglia. Pain: neurosurgical management. Bibliography Index.

Note. This monograph is based on extensive experience and experimentation by the authors, and its particular viewpoint is best expressed in their words. the interpretation of pain can be greatly facilitated by eliciting hyperalgesic or tender skin areas which accompany the pain. The presence of tenderness, and its distribution, whether local or segmental, has been of great aid in diagnosis and therapy E en the absence of tenderness with pain is of significance the combination of segmental pain and tenderness usually appears to be due to factors which irritate roots, ganglia, or trunks of the spinal sensory nerve, and not due to painful impulses originating in diseased viscera. In other words, pain and segmental tenderness of skin in most instances appears to be of somatic origin, rather than of visceral origin. Writing from this viewpoint the authors cover etiology diagnosis and treatment of the pain syndromes which are named in the chapter titles in the above contents. Their book is widely recognized as significant contribution to the interpretation of pain. The first edition was published in 1944 and the third edition in 1949. In this fourth edition, there are several newly added chapters also new and revised sections in chapters carried over from the preceding edition.

KAHN EDGAR A , AND OTHERS

Correlative neurosurgery Springfield, Ill Charles C Thomas, 1955 413 p. illus. 29 cm. $19.50 3849

Contents. Expanding lesions of the brain, by E. A. Kahn. Roentgenologic examination of the skull, by J. F Holt. Electroencephalographic localization of intracranial tumors, by B. K. Bagchi. The use of radioactive isotopes in the diagnosis and localization of brain tumors, by R. G. Farris and others. Gliomas of the cerebral hemispheres, by E. A. Kahn. The meningiomas of the brain, by R. C. Bassett. Metastatic tumors of the brain, by R. C. Bassett. Brain abscess, by E. A. Kahn. Surgery of the primary vascular lesions of the brain and spinal cord, by R. C. Bassett. Prefrontal lobotomy by D. O. Freeman. Aphasia, agnosia, apraxia—their importance in localization of intracranial disease, by R. N. DeJong. Endocrinology and metabolism in neurosurgical practice, by J. M. Bauer. Tumors of the sellar region, by E. A. Kahn. Tumors of the third ventricle, by E. A. Kahn. Tumors of the posterior fossa, by E. A. Kahn. Tumors of the cerebellopontine angle, by R. C. Bassett. Tumors of the spinal cord, by R. C.

Note A companion work to Mettler, Fred A., editor. *Problems of the human brain, selective partial ablation of the frontal cortex,* described there. It is [illegible] study of the effects of several psychosurgical procedures other than lobotomy and topectomy. Eighteen patients were operated on as follows: In 12 cases bilateral ligation of the superior cerebral veins was carried out. In 3 cases bilateral surgical thalamotomy was performed. In 2 cases thermocoagulation of the cerebral cortex in the rostral portion of each frontal lobe was done, while in the 1 remaining case topectomy procedure was carried out. Together the two books present the results of [illegible] exposition of the techniques of operational research analysis to the study of [illegible] complex problem in therapy.

MINER, ROY WALDO editor

Reserpine in the treatment of neuropsychiatric, neurological and related clinical problems. Conference co-chairmen Frederick F Yonkman, Frank L. Mohr and Jack L. Graeme. Consulting editor Frederick F Yonkman. New York Published by the Academy 1955 280 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 61 art. 1) $3.50. 3860

Contents: Introduction, by H. Koprowski. Significance of selected central mechanisms for the analysis of the action of reserpine, by R. J. Bein. Neuropharmacological aspects of reserpine, by J. A. Schneider and others. A comparison of effects of reserpine and some barbiturates on the electrical activity of cortical and subcortical structures of the brain of rabbits, by F. Rinaldi and H. E. Himwich. The effects of reserpine on emotional behavior of normal and brain-operated monkeys, by L. Weiskrantz and W. A. Wilson. A comparison of cortical and subcortical brain waves in normal, barbiturate, reserpine, and chlorpromazine sleep, by R. R. Monroe and others. The use of reserpine in ambulatory and hospitalized mental psychotics, by [illegible] Sainz. Preliminary observations on the effects of parenteral reserpine on cerebral blood flow, oxygen and glucose metabolism, and electroencephalograms of patients with essential hypertension, by J. H. Hafkenschiel and others. Use of reserpine in [illegible] neuropsychiatric hospital, by N. S. Kline and A. M. Stanley. Treatment of chronic schizophrenic reactions with reserpine, by L. E. Hollister and others. Treatment of reserpine induced depression with [illegible] new stimulant—phenidylate, by J. T. Ferguson. The use of reserpine in shock-reversible patients and shock-resistant patients, by D. C. Tasher and M. W. Chermak. The control of deviant behavior in chronically disturbed psychotic patients by the oral administration of reserpine, by B. C. Campden-Main and Z. Wegierko. Clinical evaluation of reserpine in [illegible] state hospital, by W. L. Kirkpatrick and F. Sanders. Clinical and psychological observations on psychiatric patients treated with reserpine—a preliminary report, by J. L. McKeown and L. Kotchegal. The acute effects of reserpine and of amytal on central sympathetic reactivity, by R. A. Schneider. Clinical effectiveness of reserpine, by F. J. Flach. Clinical use of reserpine in psychiatry—comparison with chlorpromazine, by M. Kinross and W. A. Stoll. Chlorpromazine and reserpine in the treatment of psychoses, by A. Kinross-Wright. A preliminary report on the tranquilizing effect of reserpine, by R. R. Lentell and A. Y. Mericas. The use of reserpine in excitable and hyperkinetic infants, by M. W. Talbot, jr. The use of reserpine in office psychiatry—preliminary report, by F. R. Drake and F. G. Ebaugh. The use of reserpine in juvenile psychiatric practice, by S. K. Stark. The use of reserpine in certain neurological disorders—epilepsy, convulsive states, tremors, and head injuries, by [illegible] S. Lenihan. Preliminary report upon the effect of reserpine on epilepsy and behavior problems in children, by F. T. Zimmerman and B. B. Burgemeister. A new approach to the emergency treatment of sickness caused by narcotic withdrawal, by E. F. Carey. The tranquilizing efficacy of reserpine in dermatological therapy, by C. R. Rein and J. J. Goodman. Preoperative, operative, and postoperative sedation with reserpine, by C. R. Hayden and others. Reserpine [illegible] new adjunct in the management of resistant headache patterns—a preliminary report, by R. M. [illegible] and F. K. Hansel. The use of reserpine as an adjunct in the management of patients with chronic bronchial asthma and chronic pulmonary emphysema—preliminary studies, by M. S. Segal and E. O. Attinger. The treatment of headache with reserpine, by A. P. Friedman.

Note The papers presented at [illegible] conference held by the Section of Biology of the New York Academy of Sciences in February 1955 are made available in this publication. They are listed above by title and author. Most of them are based on clinical experience with reserpine. However, [illegible] few report the results of research on animals. Literature references are included.

MINER, ROY WALDO editor

The status of multiple sclerosis. Conference chairman, Pearce Bailey; organizing chairman and consulting editor Harold R. Wainerdi. New York New York Academy of Sciences, 1954 541–720 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 58, art 5) $4.50. 3861

Contents: Introduction, by O. R. Buckley. Part I, Biological and pathological methods. *One etiology in demyelinating diseases?* by S. S. Kety. Genetically controlled demyelination in the mammalian central nervous system, by F. J. Harman. The dynamics of early brain disease, with particular reference to multiple sclerosis, by B. Campbell. Return of spinal cord function in mammals after transecting lesions, by L. W. Freeman. Dermal and serological reactions to nervous tissue extracts in multiple sclerosis, by R. E. Staufer and R. R. Waksman. Electromyographic patterns in multiple sclerosis, by J. Moldaver. Circulatory disturbances and management of multiple sclerosis, by I. M. Scheinker. Part II, Biochemical methods. Paper chromatography of the amino acids of cerebrospinal fluid, by E. S. Walker and others. Protein fractions in serum and cerebrospinal fluids in multiple sclerosis, by R. W. York and others. Further studies on the gamma globulin content of cerebrospinal fluid in multiple sclerosis and other neurological diseases, by M. D. Yahr and others. Part III, Clinical methods. A study of the short- and long-term effects of adrenal steroids on the clinical patterns of multiple sclerosis, by H. H. Merritt and others. Effects of muscle adenylic acid in multiple sclerosis, by A. Shapera. Ophthalmological aspects of multiple sclerosis, by C. R. Franklin. Mannerisms [illegible] guide to therapy in multiple sclerosis, by R. A. Abramson and E. Tager. Metabolic characteristics of multiple sclerosis—chemical observations on the blood and urine of [illegible] large series of patients and metabolic balance in two patients, by H. H. Jones and others. The diagnosis of multiple sclerosis, by G. A. Schumacher. Predictability of remissions and relapses in multiple sclerosis, by L. Alexander and W. P. Parker. Epidemiologic factors in the etiology and prognosis of multiple sclerosis, by L. T. Kurland and K. B. Westlund. Specific factors in physical rehabilitation for multiple sclerosis, by G. G. Deaver. Observations on pharmacological agents recently suggested for multiple sclerosis, by M. Marks. Psychological factors in multiple sclerosis, by M. Harrower.

Note Published in this volume are the papers which are listed by author and title above. The conference of which the collection is [illegible] result was sponsored by the New York Academy of Sciences and the National Multiple Sclerosis Society and was held in April, 1953.

MOENCH, LOUIS GARDNER

Headache. Second edition. Chicago The Year Book Publishers Inc., 1951 217 p. illus. 21 cm. (The general practice manuals) $4.50. 3862

Contents: Pathologic anatomy and physiology of headache. Headaches from intracranial pathology; spinal puncture and ventriculography. Cranial nerve neuralgias. Headache of ocular origin. Headache of nasal origin. Headache from pathology in the neck and scalp. Headache from systemic disorders. Histamine headaches. Migraine. Headache of emotional origin. Index.

Note A useful and authoritative manual intended for the assistance of general medical practitioners. Each chapter is [illegible] summary of the current knowledge on incidence, physiology, diagnosis, and treatment of [illegible] type of headache, and is supplemented by literature references. In this edition the revisions are not major and consist chiefly of references to new treatments reported in the literature since 1947.

MOORE, SHERWOOD

Hyperostosis cranii; Stewart-Morel syndrome; metabolic craniopathy; Morgagni's syndrome; Stewart-Morel-Moore Syndrome (Ritvo); Le syndrome de Morgagni-Morel. Springfield, Ill. Charles C Thomas 1955 226 p. illus. 26 cm. $10.50 3863

Contents: The roentgen dimensions of the normal skull. Types and forms of hyperostosis cranii. The roentgen diagnosis of hyperostosis cranii. The roentgen dimensions of the hyperostotic skull. The incidence of hyperostosis cranii and its syndrome. The

General observations and order of procedure. The cranial nerves (except II, III, IV and VI) *Neuro-ophthalmology (including cranial nerves II, III, IV and VI)* *Motor function—Part I, Central integration of motor function—Part II, Specific study of muscle.* Reflexes. The sensory examination. Mental function. Language and motor speech. *Autonomic function. Clinical* examinations in selected problems of pain. *Electro-encephalography* Electromyography and electric stimulation of peripheral nerves and muscle. Biochemical and pharmacologic aids in neurologic diagnosis. Examinations of cerebrospinal fluid by lumbar and cisternal puncture. Index.

Note. The methods of clinical examination of neurological patients *which have been developed at the Mayo Clinic* are described in detail in this manual. The importance of careful observation of the patient and of co-operation between physician and patient, especially in history-taking, are stressed. Considerable space is devoted to the various distinct parts of th comprehensive neurological examination, for example, more than 50 pages to the study of the conditions and reactions of the muscles. Instrumental diagnostic procedures, such as electromyography are explained in regard to principle and interpretation of the results. *Forms used at the Mayo Clinic in neurologic examinations* are reproduced in the volume and separate samples are supplied folded in a pocket *inside the back cover.*

MEDUNA, LADISLAS JOSEPH

Carbon dioxide therapy, a neurophysiological treatment of nervous disorders Springfield, Ill Charles C Thomas, 1950 236 p illus 24 cm $7 50 3855

Contents. Central actions of carbon dioxide. The effect of carbon dioxide upon the function of isolated nerve. The effect of carbon dioxide upon the function of the brain. Technique and administration of the carbon dioxide treatment. Material and statistical data. Argumentation. A neurophysiological theory of psychoneuroses. Bibliography Index.

Note. A pioneer monograph on the use of carbon dioxide anesthesia in the treatment of psychiatric patients. It is based largely on the author's own researches and applications of the technique. Reports of 100 cases of psychoneurosis and psychosomatic disorders other than obsessive-compulsive neurosis are included. The final chapter is a development of the author's theory that the phenomena of psychiatric conditions can be understood and expressed in certain physiological and biological terms, and therefore it is unnecessary to resort to symbolical explanations.

MERRITT, HIRAM HOUSTON, AND OTHERS

Fundamentals of clinical neurology by H. Houston Merritt, Fred A. Mettler and Tracy Jackson Putnam. New York McGraw Hill Book Company, Inc 1947 289 p illus 26 cm $6 00 3856

Content Part I, Examination of the nervous system. Introduction. History and general physical examination. Generalities concerning the neurologic examination and instruments used. The cranial nerves. The motor system. The sensory system. Speech and other higher cerebral functions. The comatose patient. Part II, The anatomic diagnosis. Peripheral nerve, dorsal root ganglion, and ventral column cells. The spinal cord. The infratentorial brain stem. The cerebellum. Thalamus and corpus striatum. The cerebral cortex. The cerebrospinal fluid. Index.

Note This book outlines practical methods of examination and briefly describes the anatomy and physiology of the nervous system. The symptoms peculiar to various types of nerve injury and disease are discussed, but no attempt is made to cover methods of treatment. It is designed as text for students and manual for general medical practitioners. The authors are members of the *faculty of the College of Physicians and Surgeons of Columbia* University

MERRITT HIRAM HOUSTON

A textbook of neurology With 181 illustrations and 128 tables Philadelphia Lea & Febiger 1955 746 p illus 24 cm. $12 50 3857

Contents Infections Vascular lesions Tumors. Trauma. Developmental defects Degenerative and heredodegenerative diseases. Diseases due to toxins. Metabolic disease. *Demyelinating diseases.* Diseases and functional disturbances of unknown etiology Index.

Note. Designed for the instruction of advanced students in medical colleges and for reading and reference by graduate physicians, this book covers neurology essentially from the standpoint of internal medicine. As the chapter titles listed above show, all of the space is devoted to diseases and disorders, including trauma and developmental defects. The psychiatric aspects of neurology are not covered. Many data on such matters as average survival periods for various types of tumor and incidence of specific diseases are presented in tables. *Literature references are supplied to* individual diseases or groups of closely related diseases. The author is Professor of Neurology in the College of Physicians and Surgeons of Columbia University and Director of the Service of Neurology in the Neurological Institute of Presbyterian Hospital.

METTLER, FRED ALBERT, editor

Problems of the human brain. Selective partial ablation of the frontal cortex, a correlative study of its effects on human psychotic subjects. By The Columbia Greystone Associates New York Paul B Hoeber, Inc, Medical Book *Department of Harper &* Brothers 1949 517 p illus. 26 cm. $10.00. 3858

Contents. Section I, Introduction Nature of the project, by F. A. *Mettler and M. A. Curry Prognostic expectations of the patient* under ordinary institutional care by H. A. Cotton, Jr and E. Frankel. *Institutional management and social implications,* by M. A. Curry and H. A. Cotton, Jr Surgical procedure by J. L. Pool and others. Cytoarchitecture, by F A. Mettler Section II, *Medical survey* General medical condition and laboratory findings, by R. G. Heath and others. Laboratory findings, by C. M. Sepet and others Audiometric findings, by P J Gambill. Vestibular function, by L. A. Sheppard and others. Visual apparatus. Visual fields and acuity, color vision, autokinesis, by R. G. Heath and others. Gastrointestinal motility by D G. Melvin. Electroencephalography by J. F Zegrelli. Section III, *Psychological investigation* Design of the psychological investigation, by J Zubin. Intellectual function, by H. E. King. Learning and retention, by A. K. Stauffer *Ability to abstract,* by W R. King. Word association experiments, by R. R. Rubin. Time judgement, by J Clausen. *Critical flicker frequency* by K. M. Young. Affectivity by M. Garrison, Jr Rorschach test, by J. Zubin Other tests, by R. M. Beechley and others. Test results one year after operation, by C. Landis, and others. Psychologic changes following topectomy by C. Landis. Section IV Psychiatry—neurology—pathology Psychiatry by R. G. Heath and others. Neurology by J L. Pool and others. Pathology by A. Wolf and D. Cowen. Section *Summary Anatomy and physiology* by F A. Mettler. Psychology by C. Landis. Psychiatry by R. G. Heath. Bibliography Index.

Note. The findings of co-operative investigation set up "to discover whether technically improved and less drastic neurosurgical approaches to the therapy of the mentally ill could yield results as satisfactory as, or better than, those obtained by lobotomy" are presented in this work. The study was scientifically planned and involved the use of a control group. Topectomy was the operation particularly studied however the study was broad one, and much information on other aspects of surgical therapy in mental disorders is included in this report.

METTLER, FREDERICK ALBERT, editor

Psychosurgical problems. By the Columbia Greystone Associates Second Group. New York McGraw Hill Book Company Inc., 1952 357 p. 24 cm. o.p. 3859

Contents. Nature of the project, by F A. Mettler and M. A. Curry Hospital management and social evaluation, by M. A. Curry and others. *Surgical procedures,* by J L. Pool and others. General medical condition, including hematological and physiologic findings, by G. H Glaser and others. Neurology by W Carmen and R. B. Merritt. Olfaction, by R. M. Wenzel. Vestibular function and autokinesis, by N S. Kline. The design of the psychologic investigation, by J Zubin. Psychometric studies, by D. E. Sheer and M. Shattuck. Complex mental functions—memory learning, mental set, and perceptual tasks, by R. D North and others. Attitude evaluation, by M. Garrison, Jr and T D. Olin. Time-sampling study of behavior by E. F Kinder and D Williamson. Psychophysiology by H. E. King and J Clausen. Discussion of psychologic investigations, by C. Landis and J Zubin. Report of the psychiatric discipline, by P H. Hoch and others. Conclusions, by F A. Mettler and C. Landis. The original Columbia-Greystone patients two years after operation, by J J. Weber Bibliography Index.

length. The illustrations include many photographs of gross pathology and a considerable number of reproductions of electroencephalograms. The work is rounded out by inclusion of chapters on experimental epilepsy and on diagnosis and medical treatment. The book is a successor to *Epilepsy and cerebral localization*, written by the author and T. C. Erickson and published in 1941. The bibliography is a selected one; nevertheless, it is 16 pages long.

PENFIELD, WILDER, AND KRISTIAN KRISTIANSEN

Epileptic seizure patterns. A study of the localizing value of initial phenomena in focal cortical seizures. Springfield, Ill. Charles C Thomas, 1951 104 p. illus. 22 cm. $3 75 3869

Contents: Introduction and case classification. Historical note. Material. Seizure patterns: Initial somatosensory—initial motor phenomena—initial sensory phenomena—initial autonomic motor and sensory phenomena—Psychical [illegible] phenomena. Summary. Clinical application. References. Case index. Subject index.

Note: In this short monograph the authors discuss the value of seizure patterns in determining the region of the brain in which epileptic discharge occurs. The work is based on a series of 239 cases of focal epilepsy studied and operated on by them and their colleagues. The cases were studied thoroughly by preoperative electroencephalography, operative electrocorticography, craniotomy under local anesthesia, electrical stimulation of the cortex, local cortical excision and postoperative observation. Location of the discharge in the cortex was established in 222 of the cases. The book complements their *Epilepsy and cerebral localization*, Springfield, 1941.

POSER, CHARLES M

The relationship between syringomyelia and neoplasm. Springfield, Ill. Charles C Thomas, 1956 98 p. illus. 22 cm. (A monograph in American lectures in neurology edited by Charles D Aring. Publication no. 262) $3.50. 3870

Contents: Definition of terms. Pathogenesis of syringomyelia. Incidence. Review of published and personal cases. Summary and conclusions. Alphabetical list of cases analyzed. Bibliography. Index.

Note: A detailed study of 214 cases in which syringomyelia was found at autopsy to be associated with a neoplasm of the central nervous system. Two of the cases are from the files of the Columbia University Neurological Institute. The others were found by searching the international literature. Published reports of other cases not analyzed in this study are briefly described, and literature references are given. The author offers the theory that syringomyelia is caused by faulty differentiation during embryological development. "Syringomyelia" is defined in an effort to standardize the nomenclature.

PRATHER GEORGE C AND FRANK H. MAYFIELD editors

Injuries of the spinal cord. Springfield, Ill. Charles C Thomas, 1953 396 p. illus. 22 cm. $8.75 3871

Contents: Historical note, by W. G. Kuhn, Jr. Neurosurgical aspects, by F. H. Mayfield. Urological aspects, by G. C. Prather. Problems of nutrition, by A. M. Kleinman. Associated injuries and complications, by W. C. Ward. Treatment of decubitus ulcers, by D. E. Barker. The general rehabilitation program, by W. G. Kuhn, Jr. Orthopedic principles as applied to the rehabilitation program, by R. M. Hart. Psychological considerations, by D. A. Thom and C. F. Von Salzen. Index.

Note: All of the contributors to this volume were engaged during World War II in the care of military patients with spinal cord injuries. Their experience and the experience of other physicians and surgeons in both civilian and military practice have been incorporated in the book. All aspects of the treatment of patients with spinal cord injuries are covered, including rehabilitation. Such aspects as the clinical picture, treatment and complications are discussed in detail with specific reference to military practice and experience. References to literature are given. The book is a major addition to the literature of the subject and is of interest in the practice of medicine and surgery in civilian life as well as in the military.

PROGRESS IN NEUROLOGY AND PSYCHIATRY an annual review Volume VI. Edited by E. A. Spiegel New York Grune & Stratton, 1951 562 p. 22 cm $12 00 3872

Contents: I. Basic sciences: Neuro-anatomy by A. T. Rasmussen. General neurophysiology by R. Gesell and others. Regional physiology of the central nervous system, by E. C. Hoff and W. Riese. Neuropathology by A. Ferraro and L. Roizin. Pharmacology of the central nervous system, by A. S. Marrazzi and E. R. Hart. II. Neurology: Clinical neurology by J. C. Yaskin and C. Rupp. Otoneurology by H. R. Forman. Neuro-ophthalmology—the oculomotor system, by H.-L. Teuber and M. B. Bender. Epilepsy by F. M. Forster. The autonomic nervous system, by A. Kuntz. Neuroendocrine relationships, by R. Levine and M. S. Goldstein. Electroencephalography by M. A. B. Brazier. Cerebrospinal fluid, by M. Spiegel-Adolf. Radiology of the skull and central nervous system, by B. R. Young and R. L. Scanlan. III. Neurosurgery: Peripheral nerve surgery by B. Woodhall. Surgery of the spinal cord and column, by M. Scott. Cerebral trauma and surgical infection of the central nervous system, by H. T. Wycis. Brain tumors, by L. M. Davidoff and E. H. Feiring. The surgical treatment of pain and motor disturbances, by A. E. Walker and C. E. Harrison. Psychosurgery (surgical aspects) by J. W. Watts and F. E. Rosenblath. IV. Psychiatry: Clinical psychiatry by A. Simon and K. M. Bowman. Mental hygiene, by E. K. Bennett and J. C. Hirschberg. Forensic psychiatry by W. Overholser. Child psychiatry by S. Dubo and R. D. Rabinovitch. The neuroses, by J. H. Masserman and others. Psychosomatic medicine, by E. Weiss and others. Psychoanalysis, by R. L. Frank and others. Alcoholism, by R. B. Allen and C. T. Prout. Projective methods, by L. Bellak and D. Brower. Shock therapy by P. H. Wilcox and L. Adler. Psychosurgery (psychiatric aspects), by W. Freeman. Group psychotherapy by S. R. Slavson and E. Hallowitz. Psychiatric nursing and occupational therapy by A. E. Bennett and B. Engle. Rehabilitation, by M. Marks and E. F. Hoerner. Index.

—— Volume VII. Edited by E. A. Spiegel. New York Grune & Stratton 1952 604 p. 24 cm. $12.00 3873

Contents: I. Basic sciences: Neuro-anatomy by E. C. Crosby and R. T. Woodburne. General neurophysiology by H. Grundfest. Regional physiology of the central nervous system, by W. Riese and E. C. Hoff. Neuropathology by A. Ferraro and L. Roizin. Pharmacology of the nervous system, by A. S. Marrazzi and E. R. Hart. II. Neurology: Clinical neurology by J. C. Yaskin and C. Rupp. Otoneurology by H. R. Forman and J. R. Lindsay. Neuro-syphilis, by B. Dattner and M. A. Green. Pediatric neurology by H. W. Baird. Epilepsy by F. M. Forster and R. G. Berry. The autonomic nervous system, by A. Kuntz and C. A. Richins. Neuro-endocrine relationships, by R. Levine and M. S. Goldstein. Electroencephalography by M. A. B. Brazier. Cerebrospinal fluid, by M. Spiegel-Adolf. Radiology of the skull and central nervous system, by B. R. Young and R. L. Scanlan. III. Neurosurgery: Peripheral nerve surgery by B. Woodhall. Surgery of the spinal cord and column, by M. Scott. Cerebral trauma and traumatic infection of the central nervous system, by H. T. Wycis. Brain tumors, by L. M. Davidoff and E. H. Feiring. The motor system, by A. E. Walker and J. D. McQueen. Psychosurgery by W. Freeman and J. W. Watts. IV. Psychiatry: Clinical psychiatry by A. Simon. Genetics in neurology and psychiatry by T. Sjögren & B. Hallgren. Mental hygiene, by H. Fried. Forensic psychiatry by W. Overholser. Criminal psychopathology, by S. B. Maughs. Child psychiatry by R. D. Rabinovitch and S. Dubo. The neuroses, by J. H. Masserman and others. Psychosomatic medicine, by E. Weiss and others. Psychoanalysis, by R. L. Frank and others. Projective methods, by L. Bellak and D. Brower. Group psychotherapy by S. R. Slavson and others. Shock therapy by P. H. Wilcox and L. Adler. Psychiatric nursing and occupational therapy by A. E. Bennett and B. Engle. Rehabilitation, by M. Marks and L. R. Greene. Index.

—— Volume VIII. Edited by E. A. Spiegel. New York Grune & Stratton, 1953 591 p. 23 cm. $12.00 3874

Contents: I. Basic sciences: Neuro-anatomy by E. C. Crosby and R. T. Woodburne. General neurophysiology (biochemical aspects) by H. E. Himwich. Regional physiology of the central nervous system, by E. C. Hoff and W. Riese. Neuropathology by

clinical diagnosis of hyperostosis cranii and its syndrome. The symptoms found in hyperostosis cranii and in controls. Acromegaly hyperostosis cranii, contrasting conditions and the thyroid gland. The etiology of hyperostosis cranii and its syndrome. The pathology of hyperostosis cranii and its syndrome. Pathogenesis and morphogenesis of hyperostosis cranii. The treatment of hyperostosis cranii and its syndrome. Prognosis. Idiopathic hyperostosis of the skull in young individuals—a control study. Hypoplasia of the diploe. The social and economic aspect of hyperostosis cranii and its syndrome. Statistical critique skull dimensions in hyperostotics. Paleopathology. Conclusions. History and literature. Appendixes. Bibliography. Name index. Subject index.

Note. A "roentgen, clinical, and statistical study" based on an investigation that included a review of the skull roentgenograms of 10,064 consecutive patients admitted to the Edward Mallinckrodt Institute of Radiology, an analysis and tabulation of the hospital records of 1,807 patients, including 522 hyperostotics, and of 1,267 controls; the roentgen examination and measurement of 1,478 adult skeletons, and an extensive study of the literature. The author concludes among other things that hyperostosis is not a part of the aging process, nor is it of normal physiological origin. He advances the theory that it and its syndrome are the manifestation of endogenous intoxication traceable to aberrance in some unknown phase of the function of reproduction. There are 106 figures and a bibliography of 315 references to the international literature.

MURPHY, JAMES PETER

Cerebrovascular disease. Chicago The Year Book Publishers, Inc., 1954 408 p. illus. 24 cm. $12 00 3864

Contents. Embryology of the intracranial vessels. Anatomy of the arteries of the brain. The veins and dural venous sinuses. Nerve supply of the intracranial vessels. Physiology of the intracranial circulation. The acute cerebrovascular accident—examination. Cerebral vasospasm. Cerebral thrombosis, infarction. Cerebral embolism. Cerebral hemorrhage. Subarachnoid hemorrhage. Intracranial aneurysm. Vascular tumors arteriovenous malformations of the brain. Intracranial venous disease venous sinus disease. Hypertensive brain disease. Cerebral arteriosclerosis. Inflammatory and collagenous diseases. Blood dyscrasias, vitamin deficiencies poisons. Headache. General management of the patient. Diagnostic technics. Therapeutic technics. Index.

Note. A well-rounded presentation of basic and technical information. It is addressed to general practitioners of medicine, specialists in geriatrics, and other medical graduates who are not specialists in neurology. Approximately the first 100 pages are devoted to the basic anatomy and physiology. The sixth chapter deals with techniques of examination and diagnosis in cases of acute cerebral vascular accident. Most of the remainder of the book is concerned with specific individual disorders and diseases. Each of these is covered from the clinical viewpoint, with attention paid to etiology pathology signs and symptoms, diagnosis, differential diagnosis, treatment and prognosis. A few topics are treated somewhat superficially but well-selected literature references are included for the guidance of those readers who need more detailed information. The author is a specialist in neurological surgery associated with the George Washington University School of Medicine.

NIELSEN, JOHANNES MAAGAARD

A textbook of clinical neurology Third edition revised and reset. With 212 illustrations. New York Paul B Hoeber, Inc. Medical Book Department of Harper & Brothers 1951 709 p illus. 28 cm $10 00 3865

Contents. Diseases of the spinal nerves. Structures between the nerves and the spinal nerves. Diseases of the spinal cord. Diseases of the cranial nerves. Syndromes of the brain stem. Syndromes of the cerebellum. Syndromes of the thalamus. Diseases of the corpus striatum and subthalamic region. The vegetative nervous system. Clinical cerebral localization. Inflammations and intoxications. Intracranial and spinal tumors. The epilepsies. Migraine and headaches in general. Multiple sclerosis. Trauma to the brain and spinal cord. Diseases manifesting themselves in the muscles or myoneural junctions. Degenerative diseases of the nervous system and the leuko-encephalitides. Idiocy, imbecility and other congenital defects. Diseases of bone affecting the nervous system. Vitamins and avitaminoses. Electroencephalography. Intracranial angiography. The psychoneuroses. Addiction. Landmarks in clinical neurology. Index.

Note. Clinical aspects are given primary emphasis in this established text for medical college students. The background anatomy and physiology are outlined concisely and most of the space is devoted to descriptions of diseases, diagnosis, and therapies. Although written for students, the conciseness of the writing, the specific descriptions of diseases, and the literature references make a useful survey and reference book for medical graduates who are not specialists in neurology. In comparison to the preceding edition, chapters have been added on intracranial angiography and the psychoneuroses, and several other chapters and sections, notably those on epilepsy, poliomyelitis, and syphilis, have been rewritten.

PALUMBO, LOUIS T

Management of disorders of the autonomic nervous system Chicago The Year Book Publishers, Inc., 1955 186 p. illus. 21 cm. $5 00 3866

Contents. Clinical gross anatomy. Clinical physiology. Clinical pharmacology. Clinical tests and changes following surgery. The extremities. The cardiopulmonary system. Hypertension. The gastrointestinal tract. The genitourinary tract. The head and neck. References. Index.

Note: In this book, recent advances in the understanding of the anatomy and physiology of the autonomic nervous system are related to medical therapy and neurosurgery. The field is covered with relative brevity and in a style that is designed for easy reading by qualified readers. The author's approach is best made apparent by quotation of the following typical passages: (1) "Favorable advances have been made in the field of autonomic surgery for cardiopulmonary diseases and conditions." (2) "The medical and surgical management of essential, neurogenic and/or malignant hypertension remains in a state of flux." A special feature of the book is the inclusion of a number of photographs illustrating sweating patterns after various operations on the autonomic nervous system. The bibliography is chiefly a selection of material from United States of America and British medical journals. The author is Chief of the Surgical Service of the Veterans Administration Hospital in Des Moines, Iowa.

PARKER, HARRY LEE

Clinical studies in neurology Springfield, Ill Charles C Thomas, 1956 364 p. 24 cm. $6 50 3867

Note. A collection of bedside lectures and demonstrations originally given before a group of undergraduate and postgraduate medical students. In an informal style that encourages reading, about 65 specific cases are discussed as to history, clinical picture, diagnosis, treatment, and prognosis. There are no illustrations and no literature references. The author is Professor of Neurology on the staff of the Mayo Foundation and the University of Minnesota and a member of the consulting staff of the Section of Neurology of the Mayo Clinic.

PENFIELD, WILDER, AND HERBERT JASPER

Epilepsy and the functional anatomy of the human brain 8 color plates and 314 black and white illustrations. Boston Little, Brown and Company, 1954 896 p. illus. (part col d) 24 cm. $16 00 3868

Contents. Historical introduction. Introductory definitions and classifications. Functional localization in the cerebral cortex. Subcortical interrelationships. Electrophysiology and experimental epilepsy. Clinical observations on epileptic mechanisms. Epileptogenic lesions. Somatic motor seizures. Sensory seizures—auras. Autonomic seizures. Psychical seizures. Centrencephalic or highest level seizures. Automatism, amnesia, and mental disturbance. Other seizures. Chapters on diagnosis and medical treatment, by F McNaughton. Electrocorticography. Electroencephalography. Cranial roentgenography. Surgical therapy. Summary of clinical analysis and seizure patterns. Bibliography. Case index. Index.

Note. This monograph is both an important review of experience in the treatment of focal epilepsy by cortical excision and their contribution to the knowledge of the functional anatomy of the brain from the Montreal Neurological Institute under the directorship of Dr Penfield. Epilepsy is the primary subject. However, while operating on the brain in the course of its treatment, the authors explored areas of the cortex of their patients under local anesthesia and by so doing not only delineated the regions that required excision but also extended the knowledge of the functional purposes of various cortical areas. The protocols of numerous cases are included, and many of these are discussed at

had had cerebral lobotomy and 13 who had had transorbital lobotomy. The nature of these various operations is described in the second chapter of the book written by Dr. Walter Freeman, whose patients were among those studied and who collaborated in the writing of the book. The findings of the various tests are carefully analyzed, and the personality effects of the different operations mentioned are carefully described. Some notable studies of the effects of psychosurgery upon personality made previously to this one are summarized in the first chapter, and there is a list of references to the literature containing 179 items.

SCHEINKER, I. MARK
Medical neuropathology. With a foreword by Marion A. Blankenhorn. Springfield, Ill. Charles C Thomas, 1951. 372 p. illus. (part col'd) 23 cm. $10.50. 3879

Contents: Cerebral manifestations in cardiac disease. Cerebral manifestations in vascular disease. Cerebral reactions to chemotherapy and to cutaneous [illegible]. Polyneuritis and neuritis. Cerebral manifestations in blood dyscrasias. Cerebral manifestations of lung disease. Cerebral manifestations in arterial hypertension. Cerebral manifestations in liver disease. Bibliography. Index.

Note: The neurological manifestations of diseases of systems other than the nervous system are explored in this book, which is addressed primarily to general practitioners and general surgeons, but of interest also to neurologists. As noted above, there is also a chapter on pathologic reactions of the brain to various chemotherapeutic and [illegible]. A wide range of case material and nearly 200 illustrations of gross and microscopic pathology are incorporated. The bibliography includes along with literature in English many citations of the literature in German.

SCHEINKER, I. MARK
Neuropathology in its clinicopathologic aspects with a foreword by Tracy J. Putnam. Springfield, Ill. Charles C Thomas, 1946. 306 p. illus. (part col'd) 23 cm. $7.50. 3880

Contents: Diseases of vascular origin. Encephalitis. Demyelinating processes. Inflammatory diseases. [illegible]. Syringomyelia. Cerebellar disorders. Progressive degenerative diseases. Presenile and involutional senile degeneration. Bibliography. Index.

Note. A concise but valuable presentation of the pathology of the common diseases of the central nervous system. Much attention is paid in the discussions of the various diseases to the relations between the blood supply and structural changes in nervous tissue, and to the importance of observing and studying the sequence of changes in diseased tissue. There are 208 figures, most of which are reproductions of microphotographs prepared especially for this work at the laboratory of neuropathology of the Cincinnati General Hospital.

SCHEINKER, I. MARK
Neurosurgical pathology. Springfield, Ill. Charles C Thomas, 1948. 370 p. illus. (part col'd) 24 cm. $8.75 3881

Contents: Cerebral swelling. Central nervous system injuries. Tumors of the nervous system—intracranial tumors. Cerebral abscess. Hydrocephalus. Bibliography. Index.

Note: Pathologic reactions of brain tissue in the vicinity of tumors and the abscess. Important changes that occur throughout the central nervous system following injury to the brain or spinal cord are the subject of this book, which is addressed to neurosurgeons and to medical graduates preparing for this specialty. The chapter on injuries is 117 pages long, that on tumors is 20 pages longer, while those on cerebral abscess and hydrocephalus are brief. A wide range of case material is incorporated, and there are 218 illustrations of gross and microscopic pathology.

SKLETZ, EMIL
Surgery of peripheral nerves. Art editor Tom Jones. Springfield, Ill. Charles C Thomas, 1951. 135 p. illus. 29 cm. $11.50. 3882

Contents: Principles and techniques of nerve surgery. The hand. The median nerve. Incisions of the hand and wrist for exposure of median and ulnar nerves. The ulnar nerve. The median and ulnar nerves combined. The radial nerve. The axillary nerve. The musculocutaneous nerve. The scapular nerves. The anterior thoracic (pectoral) nerves. The long thoracic nerve. The brachial plexus. The femoral nerve. The sciatic nerve. The foot. The peroneal nerve. The tibial nerve. Injuries to the cranial nerves. Index.

Note. A detailed, fully illustrated presentation of surgical techniques that were largely developed by the author while in the surgical service of the United States Surgeon General's Office. According to statements in the introduction, he personally observed and followed the progress of 1,017 peripheral nerve injuries while he was in service at Wakeman Hospital Center. More than half of the space is devoted to illustrations—reproductions of both drawings and photographs. A considerable number of the illustrations are paired in order to show examples of correct and incorrect incisions.

SPENCER, WILLIAM A. editor
Treatment of acute poliomyelitis. Second edition. From the Departments of Pediatrics, Physiology and Physical Medicine, Baylor University College of Medicine, Southwestern Poliomyelitis Respiratory Center, Jefferson Davis Hospital. In cooperation with the National Foundation for Infantile Paralysis, Inc. Springfield, Ill. Charles C Thomas 1954. 134 p. illus. 26 cm. $3.75 3883

Note. An informative guide based on the extensive experience and research of the Southwestern Poliomyelitis Respiratory Center. It presents material originally prepared for use in teaching. It is organized in a number of short parts, many of which are only a page in length. These parts are designed for rapid comprehension rather than for straightforward reading. Much of the information is arranged in tabular form, and several typographical devices are used to emphasize the more important statements. Directions for the operation of respirators are included. The book is useful to such personnel as nurses and resident physicians in hospitals.

SPURLING, R. GLEN
Lesions of the cervical intervertebral disc. Springfield, Ill. Charles C Thomas 1956. 134 p. illus. 24 cm. $4.75 3884

Contents: Historical note. Anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis. Roentgenologic diagnosis. Management. Analysis of cases—results of therapy. References. Index.

Note: A complementary work to the author's Lesions of the lumbar intervertebral disc, described below. The present work is based both on the author's experience and an intensive study of the literature. A well-rounded view of the subject, including the history and nomenclature, and with the major emphasis on diagnosis and management. A total of 187 cases are described. The bibliography is five pages long.

SPURLING, R. GLEN
Lesions of the lumbar intervertebral disc. With special reference to rupture of the annulus fibrosus with herniation of the nucleus pulposus. Springfield, Ill. Charles C Thomas, 1953. 148 p. illus. 24 cm. (American lecture series. No. 177. A monograph in the Bannerstone division of American lectures in surgery, edited by Michael E. DeBakey and R. Glen Spurling. Neurosurgical division editor Barnes Woodhall) $4.75 3885

Contents: Historical note. Embryologic and anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis; neurologic diagnosis. Therapy. Results of therapy. References. Index.

Note: The subject matter of this book has been described by the author as follows: "The lesion to which most of the discussion in the following pages is devoted has two components: (1) a relatively small tear in the posterior annulus fibrosus, and (2) the resulting herniation of the nucleus pulposus through it into the spinal canal. The subject is covered in a compact manner from

—— Volume XI. Edited by E. A. Spiegel. New York Grune & Stratton, 1956 606 p. 23 cm $12.00 3877

Content I, Neurology Clinical neurology by C. Rupp and others. Otoneurology by J. R. Lindsay and H. B. Perlman. Epilepsy by R. G. Berry. Pediatric neurology by H. W. Baird. II. The autonomic nervous system, by C. A. Richins and A. Kuntz. Neuroendocrine relationships, by C. Fortier. Electroencephalography by M. A. B. Brazier. Cerebrospinal fluid, by M. Spiegel-Adolf. Radiology of the skull and central nervous system, by B. R. Young and R. B. Funch. II, Neurosurgery Peripheral nerve surgery by E. Seletz. Surgery of the spinal cord and column, by M. Scott. Cerebral trauma and traumatic infections of the central nervous system, by H. T. Wycis. Brain tumors, by A. Uihlein and others. The vascular system, by A. E. Walker and D. S. Rasmussen-Taxdal. Psychosurgery by W. Freeman. III, Psychiatry Psychology by R. S. Lazarus and R. W. Baker. Clinical psychiatry by E. V. Semrad and others. Forensic psychiatry by W. Overholser. Criminal psychopathology by S. B. Maughs. Child psychiatry by S. Dubo and R. D. Rabinovitch. The neuroses, by J. H. Masserman and others. Alcoholism, by E. B. Allen and C. T. Prout. Psychosomatic medicine, by B. K. Fischer. Psychoanalysis, by H. Freed. Projective methods, by L. Small. Group psychotherapy by J. W. Klapman and R. J. Corsini. Shock therapy by P. H. Wilcox and K. W. Wilcox. Drug therapy by W. H. Funderburk and others. Psychiatric nursing and occupational therapy by A. E. Bennett and B. Engle. Rehabilitation, by M. Marks and L. B. Greene. IV Basic sciences. Neuroanatomy by E. C. Crosby and E. W. Lauer. General neurophysiology (bioelectric aspects) by J. W. Woodbury. Regional physiology of the central nervous system, by A. R. Graham and G. R. Stavraky. Neuropathology by L. Roizin. Pharmacology of the nervous system, by A. S. Marrazzi and others. Index.

Note A successful annual publication in which current progress in neurology and psychiatry as reported in the international literature is reviewed. Some areas of these fields are covered annually, others, biennially. Reviewers cover the literature of a single year or a two-year period according to whether they are writing a review of a topic which is covered annually or biennially. Each chapter is accompanied by an extensive bibliography of the literature digested. The series is addressed to graduate practitioners, and its primary purpose is to enable such readers to keep abreast of the current literature and to select for fuller reading those articles of particular interest. The majority of the section titles and chapter titles are repeated from one volume to the next, but the actual content of each chapter is different in each issue. From time to time new chapters appear in accordance with new developments; for example, the 1956 volume contains a review of recent progress in neuropharmacology. The series began publication in 1946 and all volumes except the first are still in print.

ROBINSON, MARY FRANCES AND WALTER FREEMAN

Psychosurgery and the self New York Grune & Stratton, 1954 118 p. 22 cm $3.00. 3878

Content Previous psychological studies and present problem. Psychosurgery by W. Freeman. Glimpses of postlobotomy personalities. Subjects—experimental and control. General experiments. Special studies. Conclusions and theoretical remarks. Appendixes. References. Index.

Note The results of psychological studies of the personalities of a small group of patients who had undergone psychosurgery are presented in this monograph. The main group studied consisted of 51 persons upon whom standard prefrontal lobotomy had been performed. A group of 17 persons who had recovered from mental illness without surgery were used as controls. The same tests were given to nine patients who had had radical lobotomy for the

had had standard lobotomy and 11 who had had trans-orbital lobotomy. The nature of these various operations is described in the second chapter of the book written by Dr. Walter Freeman, whose patients were among those studied and who collaborated in the writing of the book. The findings of the [illegible] tests are carefully analyzed, and the personality effects of the different operations considered are carefully described. Some notable studies of the effects of psychosurgery upon personality made previously to this one are summarized in the last chapter, and there is [illegible] list of references to the literature containing 179 items.

SCHEINKER, I. MARK

Medical neuropathology With a foreword by Marion A. Blankenhorn. Springfield, Ill. Charles C Thomas, 1951 372 p. illus. (part col d) 23 cm. $10.50. 3879

Contents: Cerebral manifestations in cardiac diseases. Cerebral manifestations in vascular diseases. Cerebral reactions to chemotherapy and to exogenous intoxicants. Polyneuritis and neuritis. Cerebral manifestations in blood dyscrasias. Cerebral manifestations of lung diseases. Cerebral manifestations in arterial hypertension. Cerebral manifestations in liver diseases. Bibliography. Index.

Note: The neurological manifestations of diseases of systems other than the nervous system are explored in this book, which is addressed primarily to general practitioners and general surgeons, but is of interest also to neurologists. As noted above, there is also chapter on pathologic reactions of the brain to various chemotherapeutic and intoxicants. A wide range of case material and nearly 300 illustrations of gross and microscopic pathology are incorporated. The bibliography includes along with literature in English many citations of the literature in German.

SCHEINKER, I. MARK

Neuropathology in its clinicopathologic aspects with a foreword by Tracy J Putnam. Springfield, Ill. Charles C Thomas, 1946. 306 p. illus. (part col d) 23 cm. $7.50 3880

Contents: Diseases of vascular origin. Neurosyphilis. Demyelinating processes. Inflammatory diseases. Myopathies of motor neuron diseases. Syringomyelia. Cerebellar disorders. Progressive degenerative diseases. Postnatal and involutional senile degeneration. Bibliography. Index.

Note: A concise but valuable presentation of the pathology of the common diseases of the central nervous system. Much attention is paid to the discussion of the various diseases in the relations between the blood supply and structural changes in nervous tissue, and to the importance of observing and studying the sequence of changes in diseased tissue. There are 208 figures, many of which are reproductions of microphotographs prepared especially for the work at the laboratory of neuropathology of the Cincinnati General Hospital.

SCHEINKER, I. MARK

Neurosurgical pathology Springfield Ill. Charles C Thomas 1948. 370 p. illus. (part col d) 24 cm. $8.75 3881

Contents: Cerebral swelling. Central nervous system injuries. Tumors of the nervous system—intracranial tumors. Cerebral abscess. Hydrocephalus. Bibliography. Index.

Note: Pathologic reactions of brain tissue in the vicinity of tumors and the diffuse, widespread changes that occur throughout the central nervous system following injury to the brain or spinal cord are the subject of this book, which is addressed to neurosurgeons and to medical graduates preparing for this specialty. The chapter on injuries is [illegible] pages long, that on tumors is 20 pages longer, while those on cerebral abscess and hydrocephalus are brief. A wide range of case material [illegible] incorporated, and there are 110 illustrations of gross and microscopic pathology.

SELETZ, EMIL

Surgery of peripheral nerves. Art editor Tom Jones. Springfield, Ill. Charles C Thomas, 1951 155 p. illus. 29 cm. $11.50. 3882

Contents: Principles and techniques of nerve surgery. The hand. The median nerve. Incisions in the hand and wrist for exposure of median and ulnar nerves. The ulnar nerve. The median and ulnar nerve combined. The radial nerve. The axillary nerve. The musculocutaneous nerve. The scapular nerve. The anterior thoracic (pectoral) nerves. The long thoracic nerve. The brachial plexus. The femoral nerve. The sciatic nerve. The foot. The peroneal nerve. The tibial nerve. Injuries to the cranial nerves. Index.

Note: A detailed, fully illustrated presentation of surgical techniques that [illegible] are largely developed by the author while in the surgical service of the United States Surgeon General's Office. According to [illegible] statement in the introduction, he personally observed and followed the progress of 3,033 peripheral nerve injuries while he was in service at Walter Reed Hospital Center. More than half of the space is devoted to illustrations—reproductions of both drawings and photographs. A considerable number of the illustrations are paired in order to show examples of correct and incorrect incisions.

SPENCER WILLIAM A. editor

Treatment of acute poliomyelitis. Second edition. From the Departments of Pediatrics Physiology and Physical Medicine Baylor University College of Medicine. Southwestern Poliomyelitis Respiratory Center Jefferson Davis Hospital. In cooperation with the National Foundation for Infantile Paralysis, Inc. Springfield Ill Charles C Thomas 1954 134 p. illus. 26 cm $3 75 3883

Note: An authoritative guide based on the current experience and research of the Southwestern Poliomyelitis Respiratory Center. It presents material originally prepared for use in teaching. It is organized in [illegible] number of short parts, many of which are only page in length. These parts are designed for rapid comprehension rather than for straightforward reading. Much of the information is arranged in tabular form, and several typographical devices are used to emphasize the more important statements. Directions for the operation of respirators are included. The book is useful to such personnel as nurses and resident physicians in hospitals.

SPURLING R GLEN

Lesions of the cervical intervertebral disc. Springfield, Ill. Charles C Thomas, 1956 134 p. illus. 24 cm. $4.75 3884

Contents: Historical note. Anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis. Roentgenologic diagnosis. Management. Analysis of cases—results of therapy. References. Index.

Note: A complementary work to the author's *Lesions of the lumbar intervertebral disk*, described below. The present work is based both on the author's experience and on literature study of the literature. A well-rounded view of the subject, including the history and nomenclature, and with the major emphasis on diagnosis and management. A total of 197 cases are described. The bibliography is five pages long.

SPURLING R. GLEN

Lesions of the *lumbar intervertebral disc.* With special reference to *rupture of the annulus fibrosus with herniation of the nucleus pulposus.* Springfield, Ill. Charles C Thomas *1953* 148 p. *illus.* 24 cm. (American lecture series. No. 177 A monograph in the Bannerstone division of American lectures in surgery edited by Michael E. DeBakey and R. Glen Spurling. Neurosurgical *division* editor Barnes Woodhall) $4 75 3885

Contents: Historical note. Embryologic and anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis: neurologic diagnosis. Therapy. Results of therapy. References. Index.

Note: The subject matter of this book has been described by the author as follows: "The lesion in which most of the discussion in the following pages is devoted has two components: (1) relatively small tear in the posterior annulus fibrosus, and (2) the resulting herniation of the nucleus pulposus through it into the spinal canal. The subject is covered in [illegible] compact manner from

ROBINSON, MARY FRANCES, AND WALTER FREEMAN

Psychosurgery and the self New York Grune & Stratton, 1954 118 p. 22 cm. $3 00. 3878

Content Previous psychological studies and present problem Psychosurgery by W Freeman. Glimpses of prefrontal personalities. Subjects—experimental and control. General experiments. Special studies. Conclusions and theoretical remarks Appendices. References. Index.

Note The results of psychological studies of the personalities of a small group of patients who had undergone psychosurgery are presented in this monograph. The main group studied consisted of 51 persons upon whom standard prefrontal lobotomy had been performed. A group of 17 persons who had recovered from mental illness without surgery were used as controls. The same tests were given to nine patients who had had radical lobotomy but who

had had normal lobotomy and 13 he had had transorbital lobotomy. The nature of these various operations is described in the second chapter of the book written by Dr. Walter Freeman, [illegible] patients were among those studied and who collaborated in the writing of the book. The findings of the various tests are carefully analyzed, and the personality effects of the different operations mentioned are carefully described. Some notable studies of the effects of psychosurgery upon personality made previously to this one are summarized in the first chapter, and there is a list of references to the literature containing 179 items.

SCHEINKER, I. MARK

Medical neuropathology With a foreword by Marion A. Blankenhorn. Springfield Ill. Charles C Thomas, 1951 372 p. illus. (part col'd) 23 cm. $10.50. 3879

Contents: Cerebral manifestations in cardiac disease. Cerebral manifestations in vascular diseases. Cerebral reactions to chemotherapy and to exogenous intoxicants. Polyneuritis and neuritis. Cerebral manifestations in blood dyscrasias. Cerebral manifestations of lung disease. Cerebral manifestations in arterial hypertension. Cerebral manifestations in liver diseases. Bibliography. Index.

Note: The neurological manifestations of diseases of systems other than the nervous system are explored in this book, which is addressed primarily to general practitioners and general surgeons, but is of interest also to neurologists. As noted above, there is also a chapter on pathologic reactions of the brain to various chemotherapeutic and intoxicants. A wide range of case material and nearly 200 illustrations of gross and micropathology are incorporated. The bibliography includes along with literature in English many citations of the literature in German.

SCHEINKER, I. MARK

Neuropathology in its clinicopathologic aspects with a foreword by Tracy J Putnam. Springfield, Ill. Charles C Thomas, 1946 306 p. illus. (part col d) 23 cm. $7.50 3880

Contents: Diseases of vascular origin. Neurosyphilis. Demyelinating processes. Inflammatory diseases. Myopathies or motor neuron disease. Syringomyelia. Cerebellar disorders. Progressive degenerative diseases. Presenile and involutional senile degeneration. Bibliography. Index.

Note: A concise but valuable presentation of the pathology of the common diseases of the central nervous system. Much attention is paid to the discussion of the various diseases to the relations between the blood supply and structural changes in nervous tissue, and to the importance of observing and studying the sequence of changes in diseased tissue. There are 224 figures, many of which are reproductions of microphotographs prepared especially for this work at the laboratory of neuropathology at the Cincinnati General Hospital.

SCHEINKER, I. MARK

Neurosurgical pathology Springfield, Ill. Charles C Thomas, 1948 370 p. illus. (part col d) 24 cm. $8 75 3881

Contents: Cerebral swelling. Central nervous system injuries. Tumors of the nervous system—intracranial tumors. Cerebral abscess. Hydrocephalus. Bibliography. Index.

Note: Pathologic reactions of brain tissue in the vicinity of tumors and the diffuse, widespread changes that occur throughout the central nervous system following injury to the brain or spinal cord are the subject of this book, which is addressed to neurosurgeons and to medical graduates preparing for this specialty. The chapter on injuries [illegible] pages long, that on tumors is 70 pages long; [illegible] those on cerebral abscess and hydrocephalus are brief. A wide range of case material [illegible] incorporated, and there are 218 illustrations of gross and micropathology.

SELETZ EMIL

Surgery of peripheral nerves. Art editor Tom Jones. Springfield, Ill. Charles C Thomas, 1951 185 p. illus. 29 cm. $11.50. 3882

Contents: Principles and techniques of nerve surgery. The hand. The median nerve. Incisions in the hand and wrist for exposure of median and ulnar nerves. The ulnar nerve. The median and ulnar nerve combined. The radial nerve. The axillary nerve. The musculocutaneous nerve. The scapular nerves. The anterior thoracic (pectoral) nerves. The long thoracic nerve. The brachial plexus. The femoral nerve. The sciatic nerve. The foot. The peroneal nerve. The tibial nerve. Injuries to the cranial nerves. Index.

Note: A detailed, fully illustrated presentation of surgical techniques that were largely developed by the author while in the surgical service of the United States Surgeon General's Office. According to statement in the introduction, he personally observed and followed the progress of 2,037 peripheral nerve injuries while he was in service at Walter Reed Hospital Center. More than half of the space is devoted to illustrations—reproductions of both drawings and photographs. A considerable number of the illustrations are paired in order to show examples of correct and incorrect incisions.

SPENCER, WILLIAM A. editor

Treatment of acute poliomyelitis. Second edition. From the Departments of Pediatrics Physiology and Physical Medicine Baylor University College of Medicine. Southwestern Poliomyelitis Respiratory Center Jefferson Davis Hospital. In cooperation with the National Foundation for Infantile Paralysis Inc. Springfield, Ill. Charles C Thomas, 1954 134 p. illus. 26 cm. $3 75 3883

Note: An authoritative guide based on the extensive experience and research of the Southwestern Poliomyelitis Respiratory Center. It presents material originally prepared for use in teaching. It is organized in a number of short parts, many of which are only a page in length. These parts are designed for rapid comprehension rather than for straightforward reading. Much of the information is arranged in tabular form, and several typographical devices are used to emphasize the more important statements. Directions for the operation of respirators are included. The book is useful to such personnel as nurses and resident physicians in hospitals.

SPURLING R. GLEN

Lesions of the cervical intervertebral disc. Springfield, Ill. Charles C Thomas, 1956. 134 p. illus. 24 cm. $4 75 3884

Contents: Historical note. Anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis. Roentgenologic diagnosis. Management. Analysis of cases—results of therapy. References. Index.

Note: A complementary work to the author's *Lesions of the lumbar intervertebral disk,* described below. The present work is based both on the author's experience and an intensive study of the literature. A well-rounded view of the subject, including the history and nomenclature, and with the major emphasis on diagnosis and management. A total of 107 cases are described. The bibliography is five pages long.

SPURLING R. GLEN

Lesions of the lumbar intervertebral disc. With special reference to rupture of the annulus fibrosus with herniation of the nucleus pulposus. Springfield, Ill. Charles C Thomas 1953 148 p illus. 24 cm. (American lecture series. No 177 A monograph in the Bannerstone division of American lectures in surgery edited by Michael E. DeBakey and R. Glen Spurling. Neurosurgical division editor Barnes Woodhall) $4 75 3885

Contents: Historical note. Embryologic and anatomic considerations. Pathogenesis and pathologic process. Clinical picture and diagnosis. Roentgenologic diagnosis. Therapy. Results of therapy. References. Index.

Note. The subject matter of this book has been described by the author as follows: "The lesion to which most of the discussion in the following pages is devoted has two components. (1) [illegible] relatively small tear in the posterior annulus fibrosus; and (2) the resulting herniation of the nucleus pulposus through [illegible] into the spinal canal. The subject is covered in [illegible] compact manner from

the viewpoint of graduate medical practitioners. More space is devoted to basic matters and to diagnosis than to therapy. Diagnosis and differential diagnosis are discussed fully and from a practical viewpoint. Conservative therapy is recommended. Surgical techniques are described generally rather than in detail. The author is Clinical Professor of Surgery (Neurosurgery) in the School of Medicine of the University of Louisville.

TARLOV, ISADORE MAX

Plasma clot suture of peripheral nerves and nerve roots—rationale and technique Springfield, Ill Charles C Thomas, 1950 116 p illus. 24 cm. $6 25 3886

Contents The need for an improved nerve suture technique. The basis for selecting the most suitable type of plasma for nerve suture. Preparation of nerve stumps for suture. Necessity for using a mold to suture nerves with clot. Tantalum wire tension sutures combined with plasma clot. Suture of the nerve stumps by plasma clot. Suture of nerve grafts. Suture of the cauda equina nerve roots. The place of plasma clot suture in repertory of the neurosurgeon. Bibliography Index.

Note. Plasma clot suture techniques are explicitly described in this work. The illustrations include pictures of the latex mold and other instruments. The bibliography includes 94 references. The author, pioneer worker in the development of plasma clot sutures, is Associate Professor of Neurosurgery in the New York Medical College.

TARLOV, ISADORE MAX

Sacral nerve root cysts, another cause of the sciatic or cauda equina syndrome Springfield Ill Charles C Thomas 1953 134 p illus 24 cm $6 50 3887

Contents Historical. Structure of nerve roots. Structure of the filum terminale. Relation of meninges to nerve roots and filum terminale. Location and gross appearance of sacral perineurial cysts. Histology of perineurial cysts. Pathogenesis of perineurial cysts. Clinical significance. Diagnosis. Operative management and results. Conclusions. References. Index.

Note The interest of clinical medicine in sacral nerve-root cysts, discovered by the author of this book in 1938, lies in their causing of symptoms identical with the symptoms produced by herniated intervertebral discs. It is pointed out that the cysts are not rare, but are not often discovered because of the difficulties of diagnosis. Much of the book is devoted to the basic morphology including histology but the seventh, eighth, ninth and 10th chapters cover aspects of direct interest in clinical medicine. The 11th chapter summarizes, largely from the standpoint of clinical medicine, the information presented in more detail in earlier chapters. The bibliography provides references to 34 publications.

TARSY, JAMES M

Pain syndromes and their treatment with special reference to shoulder arm pain. Springfield Ill Charles C Thomas 1953 592 p illus 24 cm $12 00 3888

Contents (abridged) Part I, General considerations and methods of examination Anatomic considerations. Neuropathologic concepts. Sensory patterns in pain syndromes. Classification and possible causes in pain syndromes. Examination of the neck—shoulder—thorax Part II, Pain syndromes in cervical lesions Cervical peripheral syndrome. Scalenus anticus syndrome Cervical radicular syndrome. Cervical disk-compression syndrome. Part III, Pain syndromes in thoracic lesions Costoclavicular compression. Postural mechanisms in should-arm pain. Pectoral syndromes. Parietal syndromes. Part IV Pain syndromes in shoulder lesions Practical anatomy and mechanics of the shoulder Chronic muscular lesions Glenohumeral arthritis. Subacromial bursitis Supraspinatus and other tendon lesions. Bicipital syndromes. Acromioclavicular lesions. Part V Pain syndromes in peripheral lesions Part VI Treatment General measures—local analgesia. Therapeutic nerve block. Bibliography Auxiliary bibliography Index.

Note The pain syndromes which are the subject of this monograph often present special difficulties in diagnosis and treatment. Furthermore they do not fall squarely within the domain of any one medical specialty but are likely to be treated by general practitioner, urologist, or specialist in orthopedics. They are thoroughly covered in this book with particular emphasis on such aspects as basic anatomy pathologic lesions, and sensory patterns. Against this background of basic material, techniques of examination, diagnosis and differential diagnosis are described in detail. The section devoted to treatment is more than 130 pages long and covers both local analgesia and therapeutic nerve block. The author is chief of the Arthritis Clinic of University (New York Postgraduate) Hospital of New York University-Bellevue Medical Center.

VER BRUGGHEN, ADRIEN

Neurosurgery in general practice. Springfield, Ill Charles C Thomas, 1952 665 p. illus 26 cm $14 00 3889

Contents Head injuries. Injury of the cranial bones. Extradural haemorrhage. Chronic subdural haematoma. Head injuries in children. Spinal cord injuries. Peripheral nerve injuries. Herniated nucleus pulposus. Scalenus anterior syndrome and cervical rib. Trigeminal neuralgia. Intractable pain. Diseases of the spinal cord. Spinal cord tumors. Increased intracranial pressure. Cerebral tumours. Cerebellar tumours in children. Pituitary tumours. Suppurative diseases of the central nervous system. Cerebral vascular diseases. Coma. The sympathetic nervous system. Congenital anomalies Miscellaneous entities. Spinal puncture. X-ray diagnosis. Neurological examination. Bibliography Index.

Note. A practical book on the injuries and diseases of the nervous system which are likely to be encountered in general practice. In addition, a few rare conditions, for instance massive extrusion of lumbar intervertebral discs, are included because of the importance of early diagnosis. The book is frankly for the general practitioner and is not intended either for the medical college student or for neurosurgeons. It is written in clear style and includes a considerable number of illustrated case histories. There is particular emphasis on the symptoms, signs, and diagnostic features of the various common neurological disorders.

WALKER, ARTHUR EARL, editor

A history of neurological surgery Editorial committee Robert E Green, Herbert C. Johnson, and W Eugene Stern. Baltimore The Williams & Wilkins Company, 1951 583 p illus 26 cm $12 00 3890

Contents (abridged) Prologue, by D. C. O'Connor and A. E. Walker Diagnostic procedures, by A. E. Walker. Techniques of cranial surgery by R. E. Green and W. E. Stern. Techniques of intracranial surgery by R. E. Green and W. E. Stern. Surgery of the posterior fossa, by R. E. Green. Surgery of the third ventricle, by A. F. Thomson. Surgery of the hypophysis, by H. C. Johnson. Surgery of the craniocerebral infections, by W. E. Stern. Surgery of craniocerebral trauma, by A. E. Walker. Surgery of cerebral vascular anomalies, by H. C. Johnson. Psychosurgery by R. G. Fisher. Surgery of epilepsy and motor disorders, by C. Marshall. Surgery for pain, by J. V. Crawford and A. E. Walker. Surgery of the congenital anomalies, by R. G. Fisher. Surgery of the spinal cord and vertebral column by J. W. Markham. Surgery of the peripheral nerves, by K. M. Browne. Surgery of the autonomic nervous system, by W. J. Atkinson. Bibliography Index.

Note. An informal but rather comprehensive account of a major surgical specialty. The authors were at the time of writing members of the Division of Neurological Surgery of the Johns Hopkins University and the material was first presented as seminars at that university. The various chapters are based mainly on the published literature, and a number of the authors have devoted a good deal of their space to the antique and curious. However, the historical accuracy of the work was assured by submitting the manuscript to authorities on medical history before publication. Included but not indicated in the contents above are short biographical sketches of 14 persons who made major contributions to the development of neurological surgery. The bibliography of nearly 2 400 references is a valuable feature. There are 152 figures, most of which illustrate surgical techniques of historical interest.

WARTENBERG ROBERT

Diagnostic tests in neurology a selection for office use Chicago The Year Book Publishers Inc 1953 228 p illus. 21 cm. $4.50. 3891

Contents (abridged) Introduction. Section I, Cranial nerves. Section II, Peripheral nerves. Section III Pyramidal system. Section IV Extrapyramidal system. Section Cerebellar system.

Section vi, Sensory system. Section vii, Vasomotor-trophic system. Index.

Note: A small and useful manual of diagnostic tests which may be carried out without the use of mechanical or laboratory equipment; in short, those office and bedside tests within the resources of all general practitioners of medicine. Over 100 individual tests, classified under the headings given above, are described explicitly and in clear style. A fair number of them are illustrated in the 47 figures. The book contains, in addition, much common-sense advice on the conduction of neurological examinations.

WECHSLER, ISRAEL SPANIER

A textbook of clinical neurology with an introduction to the history of neurology. Seventh edition. Illustrated. Philadelphia, W. B. Saunders Company, 1952. 801 p. illus. 24 cm. $9.50. 3892

Contents (abridged): i, Methods of examination. Neurological examination and the interpretation of signs and symptoms. Psychological diagnosis, by D. Wechsler. ii, The spinal cord. Acute anterior poliomyelitis (infantile spinal paralysis). Family periodic paralysis. Compression of the spinal cord. Injuries to the spine and spinal cord. Vascular disorders of the spinal cord. Muscular atrophies (the myopathies). iii, The peripheral nerves. Neuritis and neuropathy. Diseases of the spinal nerves and plexuses. Tumors of nerves; neuromas. Diseases of the cranial nerves. Neuralgias. iv, The brain. General symptomatology and focal or regional diagnosis of diseases of the brain. Aphasia. Circulatory disturbances of the brain. Meningitis. Encephalitis. Chorea (Sydenham's chorea, St. Vitus dance). Syphilis of the nervous system. Tumors of the brain. Injuries of the brain. Disorders of motility and diseases of the basal ganglia. The epilepsies and the convulsive or paroxysmal states. The migraines or paroxysmal headaches (hemicrania). Affections of the autonomic nervous system. ... Neuroses. Classification of the neuroses. Clinical manifestations of the neuroses. Treatment of the neuroses. Trauma and the nervous system. Index.

Note: A widely used textbook and reference manual of the neurological conditions which are of clinical interest. Historical material is collected in one chapter and case reports are lacking. Most of the space is devoted to concise discussions of symptoms, diagnosis, treatment, and other relevant aspects of a wide variety of neurological syndromes. This seventh edition is an extensive revision with many changes in text, illustrations, and bibliographies.

WEIL, ARTHUR

Textbook of neuropathology. Second edition, revised and enlarged. New York, Grune & Stratton, 1945. 356 p. illus. 23 cm. $5.50 3893

Contents: Introduction. Changes through autolysis and fixation. Diseases of the neuron. The glia and its pathology. Pathology of the myelin sheath and the axis-cylinder. Amaurotic idiocy. Arteriosclerosis. Inflammations. Infections. Intoxications. Injuries. Degenerative diseases. Tumors. Congenital malformations. Appendix. Bibliography. Index.

Note: A compact, thoroughly illustrated review of the present knowledge of diseased nervous tissue, intended as a textbook for use in medical schools and as a reference book for the practitioner and laboratory worker. The author pays tribute to the German medical men who made a specialty of this branch of neurology before its importance was acknowledged in the United States of America, and his bibliography contains citations of many German articles. Changes in this edition include the adding of 27 illustrations and new material on the neurological manifestations of vitamin deficiencies.

WEPMAN, JOSEPH M

Recovery from aphasia. With a foreword by Wendell Johnson. New York, The Ronald Press Company, 1951. 276 p. illus. 24 cm. $5.50 3894

Contents (abridged): Part i, Nature of aphasia. Introduction to aphasia therapy. Etiology of aphasia. Nonlanguage characteristics of aphasics. Classification and nomenclature of aphasia symptoms. Part ii, Research findings during World War ii. Part iii, Aphasia therapy and therapists. Theory and working principles. The professional aphasia therapist. Associated therapies and therapists. Direct therapy in receptive aphasia. Direct therapy in expressive aphasia. Bibliography. Index of names. Index of subjects.

Note: Currently in the United States of America the aphasia therapist may be a person who has a background in teaching, speech pathology, psychotherapy, or some other field. Medical practitioners and nurses also play active parts in the treatment of aphasics. This book is a survey of the field for persons who are engaged in aphasia therapy or who are interested in entering the profession. The author has assumed some acquaintance with the fundamentals of education and psychology but not necessarily any previous acquaintance with aphasia. The aspects of the subject which are of interest to practical therapists are discussed fully and in a clear, explicit style. There is due emphasis on the necessity of viewing the aphasia patient as a person with family and other social relationships which are important factors in his recovery. The author is a member of the faculty of the Medical School of the University of Chicago.

WHITE, JAMES C. AND WILLIAM H. SWEET

Pain: its mechanisms and neurosurgical control. With assistance in the psychiatric sections of Chapters iv and x from Stanley Cobb and Frances J. Bonner. Springfield, Ill., Charles C Thomas, 1955. 736 p. illus. 27 cm. $17.50 3895

Contents: Introduction. Part i, Fundamental aspects: End organs, afferent tracts, and central stations concerned with the transmission and appreciation of pain. Mechanisms of pain conduction and perception—pain transmission by peripheral and visceral nerves. Psychiatric considerations. Part ii, Surgical techniques: Diagnostic and therapeutic nerve block. Peripheral neurectomy. Posterior rhizotomy—section of the spinal and cranial sensory roots, other cranial neurectomies, and medullary tractotomy of the descending trigeminal tract. Interruption of pain pathways in spinal cord, medulla, and mesencephalon—surgical technique—operative results and complications. Cerebral operations for relief of pain. Sympathectomy for visceral and causalgic pain. Part iii, Treatment of specific painful conditions: Neuralgias of the peripheral nerves; painful neuromata, amputation stumps, phantom limbs, causalgia, and post-traumatic dystrophy—painful surgical scars, intercostal neuralgia, meralgia paresthetica, gangrene of digits, and degenerative arthritis of the hip. Facial and cephalic neuralgias—trigeminal neuralgia (tic douloureux, trifacial neuralgia)—geniculate, glossopharyngeal, and vagal neuralgias. Cephalic pain, transmission pathways, ... Pain of spinal origin. Pain from the involvement of somatic nerves in the neck, thorax, abdomen, pelvis, and extremities. Pain in diseases of the thoracic ... Pain in abdominal visceral disease. Bibliography. Author index. Subject index.

Note: An elaborate and detailed treatise based primarily on the author's extensive experience, but including also techniques and cases from the literature. The anatomy and physiology are covered in some detail in the first part, and the importance of a thorough knowledge of them is re-emphasized in later parts of the book. However, neurosurgical techniques for the relief of pain are the primary subjects. These are described explicitly and in full detail. In practically all instances, the descriptions of specific operations include discussions of experience in a considerable number of cases in which the therapy was successful and of others in which it failed. So much case experience is included that the authors resorted to tables for presentation of the results of many cases. There are 114 figures and a 35-page bibliography.

WOLF, STEWART AND HAROLD G. WOLFF

Headaches: their nature and treatment. Illustrated. Boston, Little, Brown and Company, 1953. 177 p. illus. 19 cm. $2.75 3896

Contents: Pain and headache mechanisms. Headaches from brain tumor, injury, infections, intoxications, and high blood pressure. The migraine type of vascular headache. Patients with migraine. Understanding and treatment of migraine. Headache from tightness of muscles about the head and neck. Headaches from the nose and surrounding structures: so-called "sinus" headache. Patients in whom headache is but one of several complaints. Summary. Index.

Note: Written by two eminent neurologists, this book is addressed to lay readers. It describes the main types of headaches with particular reference to mechanisms, in so far as these are known, and to methods of treatment. There is some emphasis on the psychosomatic aspects of headache. The book is a useful one for physicians to recommend to their headache patients as a source of reliable and helpful information.

WOLFF, HAROLD G

Headache and other head pain New York Oxford University Press, 1948 642 p illus 24 cm. $12 00 3897

Contents (abridged) Foreword, by D P Barr Pain-sensitive structures within the cranial cavity Headache associated with changes in intracranial pressure. Headache and brain tumor Headache from distention of cerebral and pial arteries. The cerebral circulation and the headache of subarachnoid hemorrhage. The extracranial blood vessels as pain-sensitive structures. Inflammation of cranial arteries as a source of headache and other pain. Headache in the migraine syndrome. The relation of life situations, personality features, and reactions to the migraine syndrome. Vascular accidents with migraine headache. Headache associated with arterial hypertension. 'Cephalalgias, and 'atypical neuralgias' of the face and head. The teeth as sources of headache and other pain. The nasal, paranasal, and aural structures as sources of headache and other pain. The eyes as source of headache and other pains. Muscles of the head and neck as sources of headache and other pain. Chronic post-traumatic headache. Typical or major neuralgias ('tic douloureux') postinfectious neuralgias, neuritides, and intractable pain. The action of analgesics. Index.

Note A comprehensive summary and report of a series of planned investigations extending over about 15 years into the various disorders commonly classified as headache. The purpose of the research was to remove, if possible, headache from the category of symptoms and to build up a more accurate and comprehensive picture than has been given in previous studies of headache in relation to nervous phenomena or migraine. The studies were carried out by the author and numerous associates at Cornell University Medical College and New York Hospital. In preparing the book, the findings reported in previously published literature have also been incorporated in the appropriate chapters. The relevant literature is cited in chapter bibliographies. The book concludes with a useful summary chapter on the clinical differentiation of the various kinds of headache pain. A second printing, with added material, was made in 1950.

WOOD, ERNEST H, JR.

An atlas of myelography Prepared for the Registry of Radiologic Pathology American Registry of Pathology National Research Council from material in the files of the Neurological Institute of New York, by Ernest H Wood jr Washington, D C American Registry of Pathology, 1948 111 p illus 25 cm $5 00 3898

Contents Introduction. The technique of myelography The normal myelogram. Some technical errors of myelography Spinal cord tumors. Lesions of the intrathecal spaces. Extradural lesions of the vertebral canal. The differential diagnosis of myelography Index.

Note In this volume, concise discussion of the technique of myelography applied to the determination of the point of origin of pathologic processes in relation to the membranous investments of the spinal cord is followed by an extensive atlas of reproductions of myelograms. The myelograms included all pertain to cases in which the diagnosis was confirmed by inspection of the lesion at the operating table, pathologic examination of the specimen, or both. Each myelogram or set is accompanied by a history of the case.

YEAR BOOK OF NEUROLOGY PSYCHIATRY AND NEUROSURGERY (1955–1956 Year Book series) Neurology edited by Roland P Mackay Psychiatry edited by S Bernard Wortis. Neurosurgery edited by Percival Bailey and Oscar Sugar Chicago Year Book Publishers Inc 1956 576 p illus 20 cm $7 00 3899

Contents Neurology Introduction. Anatomy Physiology Pathology Infectious diseases. Vascular disturbances Degenerative diseases. Metabolic disorders. Trauma. Convulsive disorders. Exogenous toxins. The neuropathies. Diagnostic and therapeutic methods. Psychiatry Introduction. General topics. Psychodynamic studies. Psychosocial medicine (social psychiatric subjects) Psychophysiologic studies. Electroencephalographic studies. Experimental psychiatry Child psychiatry Organic disorders, acute and chronic. Paroxysmal convulsive disorders. Schizophrenia and affective disorders. Miscellaneous clinical syndromes. Mental deficiency Psychosomatic disorders and psychoneuroses. War and military neuropsychiatry Medicolegal psychiatry Therapy Neurosurgery Introduction. Hemorrhage. Tumors. Lobotomy The hypophysis. Epilepsy Trigeminal neuralgia. The sympathetic. Herniated disks. Stereotaxy Radioactivity Anesthesia. Dyskinesia. Vascular lesions. Angiography. Hemispherectomy Infections. Injuries. Hydrocephalus. Miscellaneous. Index. Index to authors.

Note. This annual publication is edited and organized similarly to the other annuals in the publishers' Year Book series. The chapters consist of abstracts of articles selected from the world's medical periodicals. The typical abstract is several hundred words in length and is sometimes supplemented by an editorial note evaluating its contents or pointing out relations to other published work. In some instances an illustration is reprinted also. A reference to the original publication is always given. The medical literature of approximately one year is covered in each issue, and the issue described here contains abstracts of articles in journals received by the editors between November, 1954 and October, 1955

PSYCHIATRY

ALDRICH, C KNIGHT

Psychiatry for the family physician. New York The Blakiston Division McGraw Hill Book Company, Inc., 1955 276 p illus. 23 cm. $5 75 3900

Contents. Part I, The emotions and illness. Meaning of illness—dependency—grief. Emotional illness—fixation and regression. Emotional homeostasis. Part II, Emotional development. Heredity and pregnancy Infancy Chronic dependency The training period. Chronic hostility and hostile dependency Power politics within the family Prolongation of family rivalries. The school child. Intellectual deficits. Adolescence. Delinquency Neurotic reactions. Psychotic reactions. Problems of marriage Menopause, retirement, and old age. Part III, Diagnosis and treatment. Diagnostic process. Physician role in treatment. Appendix. Bibliography Index.

Note. A useful book designed as a first textbook in psychiatry for advanced students of medicine and as a source of basic information and guidance to graduate general practitioners of medicine. The subject is not psychiatry in the technical sense of the term, but human behavior and its motivation. The basic knowledge on human behavior is related to the genesis and therapy of behavior and personality disorders of the kinds with which the average physician must deal in his practice. Most of the topics named in the chapter titles are discussed in detail from the family doctor's viewpoint. The book is well organized, and is written in a mildly technical style that is easy to read.

ALEXANDER, FRANZ, AND HELEN ROSS, editors

Dynamic psychiatry Chicago The University of Chicago Press 1952 578 p. 23 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $10 00 3901

Contents Part I, Concepts of dynamic psychiatry Development of the fundamental concepts of psychoanalysis, by F Alexander. Dreams and rational behavior by T M. French. History of motivational psychological concepts, by E. Weiss. Personality development, by T Benedek. Part II, Clinical psychiatry Neuroses, behavior disorders, and perversions, by F Alexander and L. B. Shapiro. Acute neurotic reactions, by L. J Saul and J W Lyons. Emotional disorders of childhood, by M. W Gerard. Contributions of psychoanalysis to the study of organic cerebral disorders, by H. W Brosin. Psychodynamic approach to the study of psychoses, by J. C. Whitehorn. Contributions of psychoanalysis to the study of the psychoses, by H. W Brosin. Principles of psychiatric treatment, by M. Levine. Part III, Influence of psychoanalysis on allied fields. The psychosomatic approach in medicine by F Alexander and T S. Szasz. Some relationships between social anthropology and psychiatry by M. Mead. Clinical psychology by D. Shakow Animal psychology in its relation to psychiatry by D M. Levy A review of the influence of psychoanalysis on current thought, by H. W Brosin.

Note. By "dynamic psychiatry" the editors and authors of the book designate contemporary psychiatry the scope of which has been enlarged by the impact of the theories and techniques of psychoanalysis. The editors state, "The advent of dynamic psychiatry is liquidating the isolated existence of psychoanalysis. As a

theory psychoanalysis is being reunited with medicine, where it originated as a method of psychiatry. As a body of theory it is becoming recognized as a basic science, both in psychiatry and in the social sciences. The various chapters are original papers. The authors include staff members of the Institute for Psychoanalysis, Chicago, and prominent teachers in American medical schools. The work is a survey of educational value for psychiatrists and others with professional interest in the field. Literature references are included.

ALTSCHULE, MARK D

Bodily physiology in mental and emotional disorders. New York Grune & Stratton, 1953 228 p. 22 cm. $6.25 3902

Contents: Circulation. Cutaneous functions: perspiration; temperature regulation; lymphatic activity. Respiration. Blood gas, bicarbonate, and hydrogen ion, concentrations. Gastro-intestinal function. Hepatic function. Renal function. [illegible] function. Hematologic changes. Carbohydrate, protein, and fat metabolism. Mineral metabolism. Vitamins, enzyme systems, and trace elements. Water balance: posterior pituitary function. Anterior-pituitary-adrenocortical function—gonadal function; prostatic function. Metabolic rate; iodine metabolism; thyroid function; respiratory quotient. Sensory functions. Neuromuscular functions. Autonomic system. General comment. Index.

Note: A critical survey of the physiologic content (and lack of it) of a vast body of psychiatric literature. The author's viewpoint is indicated by the following quotation printed on the fly-leaf of the book and which is taken from George Nesse Hill, *Essay on the prevention and cure of insanity*, 1814: "The reader is particularly intreated to observe, that the two following axioms contain the principles which form the basis of the essay. *First*, That insanity is always a symptomatic disease. Secondly, That there is no purely mental disease." The available scientific data are presented under the headings given above, with references to the literature from which they have been derived. Many of the chapters contain comments by the author of which the following is a sample: "Knowledge of the physiology of mental and emotional disturbances in mental or emotional disorders is markedly deficient. Despite this, many clinical psychiatric papers published in this country comment on organic matters or are based on inferences to them. The specific mechanisms responsible for [illegible] impotence, lack of libido, insomnia, lack of libido, dysmenorrhea, and homosexuality are not known, but speculations are discussed extensively in these writings."

AMERICAN PSYCHOPATHOLOGICAL ASSOCIATION

Current problems in psychiatric diagnosis the proceedings of the forty first annual meeting of *the American Psychopathological Association* held in Philadelphia, Pennsylvania, June, 1951 Edited by Paul H. Hoch and Joseph Zubin. New York Grune & Stratton, 1953 291 p. 22 cm. $5.50 3903

Contents: Part I, Perspectives in diagnosis and etiology. Some historical determinants of contemporary diagnostic and etiological thinking in psychiatry, by I. Stainbrook. An evaluation of contemporary research methods in the field of mental disorders, by J. Ruesch. The fallacy of the concept—psychosis, by O. Diethelm. A theory of diagnosis, by D. E. Cameron. Discussion, by P. H. Hoch. Part II, Progress in relation to diagnosis and etiology. A theoretical and practical analysis of the diagnostic process, by W. A. Hunt and others. Progress in the psychosomatic—biologic and anatomic developments, by T. A. C. Rennie. Diagnostic and etiological concepts in the [illegible], by C. P. Oberndorf. The use of [illegible] index of capacity for social adjustment in psychiatric disorders, by H. E. Chor. Discussion [illegible] by H. H. W. Miles.—Discussion II, by J. Zubin. Part III, Presidential address. The responsibility of psychiatry, by L. H. Smith. Part IV, Cultural and social factors in the diagnosis and etiology of mental disorders. Vocabulary and the law, by F. V. Rockwell. Diagnosis and etiology of psychopathic personalities as perceived in our time, by N. F. Gottmacher. The relation of culture to mental disorder, by A. Leighton. Experimental factors essential to the development of schizophrenia, by L. F. Woolley. Discussion I, by O. Kluckhohn—Discussion II, by E. V. Sullivan. Part [illegible] Current trends in diagnosis and etiology. Psychiatric disorders in children—diagnosis and etiology in our time, by N. W. Ackerman. Etiological aspects of psychosomatic conditions, by A. Schick. Time and rhythm in psy-

chosomatic relationships, by W. T. Liberson. Trends and advances in the study of mental deficiency, by G. A. Jervis. Discussion, by H. H. W. Miles. Appendix. Index.

Note: A variety of hypotheses, research and experience bearing on diagnosis and related topics are represented in this collection of papers and discussion by eminent psychiatrists. Literature references are included in most of the papers.

AMERICAN PSYCHOPATHOLOGICAL ASSOCIATION

Depression, the proceedings of the forty second annual meeting of the American Psychopathological Association, held in New York City June, 1952 Edited by Paul H. Hoch and Joseph Zubin. New York Grune & Stratton, 1954 277 p. 23 cm. $5.50 3904

Contents: Genetic principles in manic-depressive psychosis, by F. J. Kallmann. Clinical diagnosis of manic-depressive psychosis, by N. D. C. Lewis and Z. A. Piotrowski. A cross-cultural evaluation of depressive reactions, by E. Stainbrook. The organized adaptive aspect of the depression-elation response, by R. L. Frank. Discussion of Chapters 1–4, by O. Diethelm. Interrelations of hormone equilibria during depression, by M. Reiss. The biochemistry of depression, by W. M. Sperry. Infantile depression and the general adaptation syndrome, by R. A. Spitz. Children's reaction to the death of a parent, by E. Keiser. Discussion of Chapters 5–8, by W. Goldfarb. Presidential address—Biometric methods in psychopathology, by J. Zubin. Reactive depression in later life, by E. Stern. Hedonic control, action-self and the depressive spell, by S. Rado. Discussion of Chapters 10–11, by D. H. Funkenstein. Some problems in electric convulsive therapy of depressions, by L. B. Kalinowsky. The hospital treatment of involutional psychoses, by D. M. Hamilton and W. W. Mann. The influence of physical treatment methods in mental disease upon the defensive operations of the ego, by L. Alexander. The treatment of various types of depression in a general hospital, by E. Davidoff and E. Reed, jr. Acute depressive reactions to surgical treatment for cancer, by C. E. Orbach and A. M. Sutherland. Discussion of Chapters 13–14, by P. H. Hoch. Appendix. Index.

Note: Except for the common subject, the papers in this volume are independent of one another. Nevertheless, taken together, they provide a broad view of study and therapy of the depressed states of depression. Literature references are included.

AMERICAN PSYCHOPATHOLOGICAL ASSOCIATION

Relation of psychological tests to psychiatry. The proceedings of the fortieth annual meeting of *the American Psychopathological* Association, held in New York City June, 1950 Edited by Paul H. Hoch and Joseph Zubin New York Grune & Stratton 1952 301 p. illus. 22 cm. $5.50. 3905

Contents (abridged): Part I. Historical bases for psychological tests. What is tested by psychological tests? by R. W. White. Development of clinical tests in psychopathology, by L. E. Bellak. Theoretical bases of psychometric tests, by L. F. Shaffer. Part II, Diagnostic use of psychological tests. An experimental criterion for the prognostication of the status of schizophrenics after a three-year interval based on Rorschach data, by Z. A. Piotrowski and N. D. C. Lewis. The diagnostic use of psychological tests from the psychiatrist's standpoint, by O. Diethelm and C. A. Knehr. Personality and intelligence—integration of projective and psychometric technics, by R. S. Tomkins. Part III, Presidential address. The philosophy of scientific cooperation, by W. B. Terhune. Part IV. Influence of emotional factors on psychological test procedures: The relationship of abstract thinking to the autonomic nervous system in schizophrenia, by A. Mandler and D. H. Funkenstein. The prediction of success in clinical psychology, by E. L. Kelly. The conditional reflex function as an aid in the study of the psychiatric patient, by W. H. Gantt. Some theoretical and practical aspects of the diagnosis of early and latent schizophrenia by means of psychological testing, by M. R. Harrower and J. S. A. Miller. Part [illegible] Influence of the psyche on psychological test performance: Rorschach studies in combat flying personnel, by L. Alexander and A. F. Ax. The use of serial testing to supervise electroshock treatment, by R. C. Glueck, jr., and others. Illness—the evaluation of an infant's fantasy with special reference to testing methods, by F. Dunbar. The influence of psy-

chopathological emotions on psychological test performance, by L. Welch and T A. C. Rennie. Index.

Note A collection of original papers written for delivery on the occasion mentioned in the book's title. *Together* they represent a wide range of experience with the use of tests in psychiatry and a wide range of information about the usefulness and reliability of such tests. The book is of interest not only to psychiatrists but also to psychologists concerned with the development of tests. Each part of the book except the *third is accompanied* by one or two discussion papers which are not listed in the above *table of contents.*

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASE

Military neuropsychiatry, proceedings of the Association, December 15 and 16, 1944, New York, editorial board Franklin G Ebaugh, Harry C Solomon, and Thomas E Bamford, jr with 34 illustrations and 48 tables. Baltimore The Williams & Wilkins Company, 1946 366 p (Research publications Vol. 25) $6 00 3906

Contents Changing *concepts* of psychoneurosis in *relation to* military psychiatry by J C. Whitehorn. Neurotic reactions in psychopaths (hysteromalingering) by N Q Brill and M. J Farrell. A dynamic study of war neuroses in men returned to the United States, by R. R. *Grinker* Psychiatric contrasts in the two world wars, by E. A. Strecker and K. E. Appel. *The development* of psychiatry in the British army by J R. Rees. Research aspects at the AAF School of Aviation Medicine in nervous and mental diseases, by E. G Reinartz. Emotional problems of demobilization, by G. B Chisholm. The problem of the discharged neuropsychiatric patient, by W C. *Menninger The* mental hygiene unit: a practical approach to the utilization of the mild psychoneurotic in the armed forces, by L. L. Robbins. An experimental unit for the retraining of psychoneurotic soldiers, by F F Sconchia, jr Psychiatric reaction to amputation, by G. C. Randall, J. R. Ewalt, and H. Blair Anxiety in aerial combat, by D G. Wright. A note on the teleology of combat incurred neuroses, by J W Appel. Concerning combat exhaustion, by L. J Thompson. Neuropsychiatry in an overseas evacuation hospital, by R. T Collins. The importance of the emotional outlet in psychotherapy by H. L Harris. Psychopathology and group *therapy* by H. P Rome. Methods of *recovery in combat* fatigue and the influence of therapy by G. N Raines and others. Psychotherapy in naval convalescent hospital, by M. M. Pearson and E. A. Cohen. The therapeutic role of drugs in the process of repression, *dissociation and synthesis*, by L. S. Kubie and S. Margolin. The electro-encephalogram in war wounds of the brain; with particular reference to post-traumatic epilepsy by E. Rosemann and B Woodhall. Cranio-cerebral injuries of personnel involved in aircraft accidents, by G. M Hass. The response of muscle to electrical stimuli during degeneration denervation, and regeneration, by L. J Pollock and others. Psychiatric procedure in the Rehabilitation Center Second Service Command, by H. B Snow Convalescent reconditioning program for neuropsychiatric casualties in the U S. Army by W E. Barton. Neuropsychiatric problems of the Veterans Administration by J H. Baird. Mental illness and the expanded federal-state vocational rehabilitation program, by D A. Clark and V H. Vogel. Psychiatric rehabilitation in industry by L. E. Himler Personality and psychosomatic disturbances in patients on medical and surgical wards survey of 450 admissions, by B. Mittelmann and others. The development *of group psychotherapy in military* setting, by D. A. Shaskan. The psychiatric treatment program at Welch Convalescent Hospital by J M. Cotton. Neuropsychiatric rehabilitation problems of discharged veterans in rural communities of the South, by M. K. Greenhill and H. Lowenbach. Modification of the Rorschach method for large scale investigations, by M. R. Harrower Erickson. Index.

Note. The papers in this collection are addressed to professional psychiatrists and physicians. *Bibliographic* references and transcriptions of the *discussions that followed their readings* have been added to many of them.

BECK, SAMUEL J

The six schizophrenias reaction patterns in children and adults. New York American Orthopsychiatric Association Inc., 1954 238 p. 25 cm. (American Orthopsychiatric Association Research monographs no 6 George E. Gardner, *editor*) $5 00 3907

Contents Clinical introduction, by R. R. Grinker. The initial steps. The individual schizophrenic. The correlation outline. The Q-technique in these researches. The six schizophrenias. Schizophrenia in development. Q-technique and the Rorschach test, by W. Stephenson. Some nondiscriminating traits. Concerning environmental uniformities. Samplings from the histories. Implications concerning schizophrenia. Appendices: The statistics. Index.

Note. A monograph based on the results of coordinated psychologic, sociologic, and psychiatric study of schizophrenia carried out in Michael Reese Hospital in Chicago. The study was concerned with (1) recognition of the *disorder;* (2) *differentiation* of its sub-forms (3) estimation of the degree of schizophrenic involvement; (4) prediction of course, with special reference to children (5) relation between some environmental forces and the *dynamics of the overt symptoms,* (6) *inferences* regarding treatment (7) demonstration of a methodology with testing out of the theory on which it rests (8) indications for fresh research now inherent in the hypotheses set up by the six schizophrenias; (9) theory relative to the psychologic events that issue as the behavior disorders labeled schizophrenia." The presentation is a technical one, and the book is addressed to *graduate psychiatrists* and clinical psychologists.

BELLAK, LEOPOLD

Dementia praecox, the past decade's work and present status a review and evaluation. Foreword by Winfred Overholser New York Grune & Stratton, 1947 456 p. illus. 23 cm. $10 00 3908

Contents (abridged) Vital statistics. Etiology pathogenesis, and pathology Diagnosis and symptomatology Physiological studies. Psychological studies. Insulin treatment. Metrazol treatment. Electric shock treatment. Miscellaneous studies on various and combined shock treatments. *Miscellaneous* forms of somatic therapy. Psychotherapy Prognosis. Prevention. Dementia praecox in childhood. Appendix Possible etiological factors of dementia praecox. Index.

Note. An interpretative summary of the pertinent literature published in the decade 1936–1946. The author states that it was based on abstracts of 3,200 papers which were published originally in a variety of languages. The accounts of developments are presented as running text, and specific statements are identified with the sources of the information only by mention of the authors' names, less precise method than the usual schemes of identification by number or by combination of author's name and year of publication. The original titles of articles published in foreign languages are not given in the original language but are all translated into English. In spite of these defects, however the book is a useful guide to the literature. The author's own critical comments add considerable value.

BELLAK, LEOPOLD

Manic-depressive psychosis and allied conditions. With Blaise Pasquarelli, Ernest Parkes Sonya Sorel Bellak and the collaboration of Sydell Braverman. Foreword by Winfred Overholser New York Grune & Stratton 1952 306 p illus. 24 cm. $9 75 3909

Contents Introduction. Part I. Manic-depressive psychosis: Definition and description. Vital statistics. Etiology Physiopathologic studies. Psychopathologic studies. Diagnosis and symptomatology Manic-depressive psychosis in childhood. *Treatment.* Complications and sequelae. Prognosis. *Prevention.* Part II. Allied conditions: Psychotic reactions to pregnancy Involutional psychoses. Reactive depressions. Depressions of old age. Suicide. Bibliography Index.

Note. A digest of the world literature. The various chapters consist essentially of abstracts which are keyed to the classified bibliography by mention of authors names. The coverage is comprehensive and the presentation is noncritical. The index is adequately detailed for subject approach, but it does not include the names of authors of cited papers.

BENDER LAURETTA

Child psychiatric techniques diagnostic and therapeutic approach to normal and abnormal development through patterned, expressive, and group behavior Springfield Ill.

Charles C Thomas, 1952 335 p. illus. (part col'd) 26 cm. $8.50 3910

Contents: Techniques in child psychiatry—a survey. Form as principle in the play of children. Form principles in the sidewalk drawings and games of children. Genesis and maturation in visual motor gestalten. Deviations in visual motor gestalten in children. Dreams of art and its relation to the psychology and psychopathology of childhood. Abstract art as an expression of human problems. The drawing of man by children with chronic encephalitis. The art of high grade mental defective children depicting their struggle with emotional disorganization and their [illegible] perceptual experiences. Boats in the art and fantasy of children. Animals in the art and fantasy of children. Group activities on children's ward as methods of psychotherapy. The use of graphic art in psychotherapy. Clay modeling as a projective technique in child psychiatry. Puppet shows as a psychotherapeutic method. Creative dance. Special school room situations and activities for the problem child. The therapy of child. The art of children and the problems of modern art. Bibliography. Name index. Subject index.

Note: A book based largely on observations over a period of 15 years at the children's ward of the Psychiatric Division of Bellevue Hospital in New York City. It does not represent the efforts of a single author as the title page appears to indicate but is composed of papers written by Paul Schilder, Lauretta Bender, and others. The use of art in both diagnosis and therapy is stressed. Many of the papers have been published elsewhere, but in most instances they have been rewritten or extensively revised for this book. There are 35 figures, and practically all of them are reproductions of children's art work.

BENNETT, A. E., AND OTHERS

The practice of psychiatry in general hospitals. By A. E. Bennett, Eugene A. Hargrove, Bernice Engle with contributing authors. Berkeley University of California Press, 1956 178 p. 24 cm. $4 00 3911

Contents: Foreword, by D [illegible]. Introduction, by K. M. Bowman. Setting the psychiatric unit. Training personnel. Physician's training. Nursing education, by M. Kalkman. Administration, by A. E. Nally and A. W. Doyle. Architecture, by A. O. Gustafson. The problem of psychiatric referral. Medicolegal aspects of psychiatric treatment. The psychiatrist's viewpoint, by D. M. Kelley. The legal viewpoint, by T. [illegible]. Voluntary health insurance and nervous and mental diseases. The day hospital, by D. E. Cameron. Special treatments: Drug therapy. Alcoholism. Geriatrics. Group psychotherapy, by D. A. [illegible]. Results, recommendations, and suggestions for the future. Index.

Note: The underlying theme of this book is essentially that the apparent separateness between psychiatry and general medicine should give way to integration complete enough so that the care of psychiatric patients will be recognized as a responsibility of general hospitals and of physicians practicing in them. The book deals specifically and in some detail with the problems of organizing and operating psychiatric units in general hospitals. It is addressed to the medical profession in general and to hospital administrators and medical staffs in particular. It is based in part on experiences of the authors in organizing psychiatric departments in three hospitals and in part on a survey conducted by sending questionnaires to hospitals in the United States of America and Canada. Selected literature references are included in all of the chapters.

BERGLER, EDMUND

The battle of the conscience a psychiatric study of the inner working of the conscience. Westport, Conn. Associated Booksellers, 1948 296 p. illus. 22 cm. $3 75 3912

Contents (abridged): Origin of the pre-stages of conscience. Normal and neurotic feeling of guilt. A great poet's opinion of the development of the conscience. A few typical examples of neurotic guilt, including suicide. Tender love—the classical normal antidote for feeling of guilt. Other normal antidotes: work, sublimation, [illegible]. [illegible] and types of inner guilt. [illegible] and the unconscious background. Torturing dreams and [illegible] caused by inner guilt. The neurotic who unconsciously bargains for the electric chair: the criminal. "Let your conscience be your guide"—especially in the atomic age.

Note: In this book an internationally known psychiatrist discusses the "inner conscience," the influences which mold it, and its effect upon behavior. The working of the conscience in normal personalities, neurotic personalities, and [illegible] personalities is explained with many quotations from histories. The treatment is semi-technical. The book is of interest not only to professional psychiatrists but to students and to laymen who have had some previous introduction to the field. There is a fair number of bibliographical footnotes but no index.

BERGLER, EDMUND

The superego unconscious conscience—the key to the theory and therapy of neurosis. New York Grune & Stratton 1952 367 p. 23 cm. $6.75 3913

Contents: The superego's power and its subterfuges. Impersonal biology and two hearts in frustration. Constant "reformulation" of the oral-anal-phallic material in the "language" of later stages. The life blood of neurosis—psychic masochism. The slightly paradoxical moral code of the unconscious ego and the mechanism of taking the blame for the lesser crime. Differences between external and internal justice. The unconscious process of reaching normal and neurotic guilt. The pseudo-moral connotation of neurotic symptoms. Dreams and inner conscience. First thoughts on awakening and our daily moods. Are parents or inner conscience to blame for the neuroses of children? The tragicomedy of it all: superego triumphant—man dangling from the shoestring of two allies. Index.

Note: A complementary volume to the author's *The Battle of the conscience*, Washington, D. C., 1948. It contains further original studies on that hidden element of the personality which Freud named the "superego."

CAMPBELL, JOHN D

Manic-depressive disease clinical and psychiatric significance. Philadelphia J B Lippincott Company 1953 403 p. 24 cm. $6 75 3914

Contents: Definition and scope of manic-depressive disease. Cyclothymic personality. Autonomic disturbances in manic-depressive disease. Emotional disturbances in manic-depressive disease. Mental symptoms in manic-depressive disease. Mixed and manic phases of manic-depressive psychosis. Etiology and manic-depressive disease. Manic-depressive psychosis in children and adolescents. Cyclothymic personality in children and adolescents. Differential diagnosis of manic-depressive disease. Social maladjustments in manic-depressive psychosis. Homicide and suicide in manic-depressive psychosis. *Treatment of cyclothymic personality and mild manic-depressive psychoses.* Physical therapies in manic-depressive psychoses. Index.

Note: An important treatise in which is presented a modern view of manic-depressive disease. It is based both on the literature and on the author's study of a large group of patients. The significance of physiologic disturbances in the autonomic nervous system is stressed. The author tabulates [illegible] autonomic disturbances found by him in examination of [illegible] manic-depressive patients and states: "The true essence of the manic-depressive process is said to be in the emotional sphere, the autonomic disturbances being simply the outward physiologic manifestations of an underlying emotional disorder. There is considerable evidence to indicate that the autonomic and emotional disturbances are parallel or concomitant phenomena, neither being the cause of the other." The [illegible] available therapies ranging from preventive measures to lobotomy are discussed in detail. The book is directed primarily to general practitioners of medicine, although it contains material of interest to any physician, including specialists in psychiatry, who is interested in this disease.

COBB, STANLEY

Foundations of neuropsychiatry Fifth revised and enlarged edition of the work formerly known as *A preface to nervous disease* Baltimore The Williams & Wilkins Company 1952 287 p. illus. 23 cm. $3.00

Contents: Some general problems of anatomy and physiology. Autonomic nervous system. Segmental and suprasegmental aspects of the cerebrospinal nervous system. Motor integration and locomotion. Functional localization in the *cerebral cortex*. Consciousness and the "mind-body" problem. Cerebral circulation. Cerebrospinal fluid. General neuropathology. The peripheral nerves and muscle. Special neuropathology. Epilepsy. Some psychological concepts important in medicine. Some psychopathological reactions. Index.

Note: A standard work designed for advanced students and general practitioners of medicine. Though relatively brief, it defines basic terminology, describes the anatomy and physiology of the

nervous system, and correlates them with the chief nervous disorders. In this edition the work has been much revised, particularly in such parts as the chapter on functional localization in the cerebral cortex. The sixth edition was published in 1958, 305 p., $5.00.

DIETHELM, OSKAR

Treatment in psychiatry Third edition. Springfield, Ill Charles C Thomas, 1955 545 p 24 cm. $9 50 3916

Contents Fundamental considerations. Study of personality. Treatment in general. Suggestion and hypnosis. Psychoanalytic procedure. Various psychotherapeutic procedures. Dynamic psychotherapy Therapeutic action of various physical and chemical agents. Excitements. Depressions. Schizophrenic reactions. Paranoid and paranoic reactions. Delirious and toxic reactions. Psychiatric disorders with cerebral damage. Epilepsy Psychoneuroses. Stuttering, tics, occupational neuroses, compensation reactions, psychopathic personalities. Sexual difficulties. Alcoholism—drug addiction. Problems in general practice. Teaching of psychiatric treatment. Evaluation of current progress and trends. Index.

Note. Recognized as a standard work since the publication of the first edition in 1936, this book provides a broad eclectic introduction to principles and techniques of psychiatric treatment. It is widely used as a textbook for the instruction of medical graduates who are preparing for the specialty of psychiatry and as a source of information and orientation for general practitioners of medicine The first edition was published in 1936 and the second edition in 1950. Revisions and augmentations were made in several of the chapters in preparing this second edition, and the chapter on the author's own psychotherapeutic approach has been retitled Dynamic psychotherapy

GOLDFARB, WILLIAM, AND MARILYN M DORSEN

Annotated bibliography of childhood schizophrenia and related disorders, as reported in the English language through 1954 A contribution of the Henry Ittleson Center for Child Research, made possible by a grant from the Ittleson Family Foundation New York Basic Books Inc., 1956 170 p 18 cm. $2 50 3917

Note. Five hundred eighty-four papers bearing on schizophrenia in children under 12 years of age are listed and briefly abstracted in this publication. As indicated in the title, only English language publications are covered. The compilers state that they selected articles which were specifically concerned with the problem of childhood schizophrenia and other severe and related behavior difficulties. The arrangement is alphabetical by name of author or in the case of multiple authorship, name of senior author There are no indexes to aid in finding articles when only the name of a junior author is remembered, or in finding articles by year of publication, or by topic.

GREENBERG, HAROLD A AND OTHERS

Child psychiatry in the community a primer for teachers nurses and others who care for children In collaboration with Julian H Pathman Helen A Sutton and Marjorie M Browne New York G P Putnam s Sons 1950 296 p illus 21 cm $3 50 3918

Contents Part I The child The child-guidance movement in the United States. Personality development The psychogenesis of behavior problems Symptoms—diagnosis. Prognosis. Treatment in child-guidance clinic Collaborative therapy Part II, The clinic team The psychiatrist. The psychologist. The social worker Part III, The clinic and the community The psychiatrist's role as consultant in children's institution. Emotional problems in hospital-school for crippled children Child guidance and the nurse. Child guidance and the teacher Juvenile delinquency A look to the future. Appendix. Glossary Selected readings. Index.

Note. The methods and experiences of the Institute for Juvenile Research in Chicago were the basis for the greater part of the content of this introductory authoritative work. However a broad view of child psychiatry from the community aspect is presented. Current diagnostic and therapeutic techniques that are typical in work in community clinics and similar organizations are described rather fully although nontechnically

GRINKER, ROY RICHARD, AND JOHN P SPIEGEL

Men under stress. New York McGraw Hill Book Company, Inc., 1945 484 p. 24 cm $5 00 3919

Contents (abridged) Part I The men. Part II, The environment of combat. Part III, The reactions to combat—morale. The neurotic reactions to severe combat stress. Psychodynamics. Treatment and results. Part IV The reactions after combat. The syndrome of "operational fatigue" (war neuroses) in returnees. Passive-dependent states. Psychosomatic states. Guilt and depression. Aggressive and hostile reactions. Psychotic-like states. Treatment, psychotherapy—narcosynthesis—adjunctive, and results. Part V Civilian applications. References. Index.

Note A nontechnical but not superficial account of the emotional and nervous disorders produced in air crew members by the strain of combat flying and of the methods by which they were treated. The authors observations and deductions are based on the clinical examination and treatment of thousands of cases of war neuroses which developed among members of the United States Army Air Forces. With considerable emphasis on the use of narcosynthesis, some 65 case histories, including some [illegible], and varying from simple operational fatigue to the most severe mental and nervous disorders, are briefly outlined. Each history sketches the man s problem, the treatment used, and the results obtained. The authors are outstanding psychiatrists, and the book is of interest to both military and civilian practitioners of the medical specialty and to social workers and laymen.

GRINKER, ROY RICHARD, editor

Mid-century psychiatry, an overview Springfield, Ill. Charles C Thomas, 1953 183 p. illus 23 cm $5.50 3920

Contents. Introduction, by R. R. Grinker Cortex and mind, by P Bailey Neurophysiology in relation to behavior, by R. W Gerard. Homeostasis, brain local adjustment and the concept of health and disease, by G. L. Engel. On the organization of psychic energy—instincts, drives and affects, by T Benedek. Some aspects of mid-century psychiatry—experimental psychology by D. Shakow The biology of wishes and worries, by H. S. Liddell. Observational psychiatry—the early development of independent and oppositional behavior by D M. Levy Psychoanalysis in mid-century by H. R. Kaufman. Structural and functional approaches to the analysis of behavior by T M French. The influence of social science in psychiatry by C. S. Johnson. The therapeutic applications of psychoanalysis, by F Alexander Critique of symposium, by J. P Spiegel. Closure, by R. R. Grinker

Note. Papers presented as part of the dedicatory exercises of the Institute for Psychosomatic and Psychiatric Research of the Michael Reese Hospital in Chicago are printed in this volume. The authors and titles are listed in the above Contents. In the "Critique of symposium, Dr John P Spiegel concludes, among other things Both the weakness and strength of this symposium lie in the clarity with which it reveals the need for a methodological solution to the problem of the integration of the disciplines contributory to the science of human behavior The various points from which the various papers are written bear out this need, but if read individually are useful summaries of their specific topics

HALL, J K, editor

One hundred years of American psychiatry New York Columbia University Press, 1944. 649 p. illus 26 cm. $7 50 3921

Contents. The beginnings from colonial days to the foundation of the American Psychiatric Association, by R. H. Shryock. Psychiatry in Europe at the middle of the nineteenth century by H. E. Sigerist. The founding and the founders of the Association, by W Overholser The history of American hospitals, by S. W Hamilton. A century of psychiatric research in America, by J C. Whitehorn. American psychiatric literature during the past one hundred years, by H Alden Bunker. The history of mental psychiatric therapies, by W Malamud The history of mental hygiene, by A. Deutsch. I, Military psychiatry the Civil War 1861 1865, by A. Deutsch. II, Military psychiatry World War I 1917 1918, by E. A. Strecker III, Military psychiatry World War

n, 1844-1944, by A. Deutsch. A century of psychology in its relationship to American psychiatry, by T. V. Moore. American psychiatry as a specialty, by H. A. Bunker. Legal aspects of psychiatry, by G. Zilboorg. The influence of psychiatry on anthropology in America during the past one hundred years, by C. Kluckhohn. Index.

Note: Thirteen specialists here present the development of psychiatry as a medical specialty and the evolution of the insane asylum into the modern mental hospital. It is intended to be a historical synthesis of a century of American psychiatric endeavor. Bibliographical footnotes, charts, tables, and diagrams supplement the text. There is also a voluminous index.

Hinsie, Leland E., and Jacob Shatzky

Psychiatric dictionary with encyclopedic treatment of modern terms. Second edition. New York, Oxford University Press 1953 781 p. 24 cm. $15.00. 3922

—— Part two (supplement) New York Oxford University Press, 1953 563-781 p. 24 cm. $7.00. 3923

Note: A standard, comprehensive reference work. The original volume contains obsolete and obsolescent words and phrases as well as those in contemporary use. There are about 7,500 entries in it, including entries for personal names of eminent contributors to psychiatry. In the Supplement which includes some old terms but devoted largely to terms which came into use after the original volume was compiled, there are about 900 additional terms. In both the original volume and the Supplement, some terms from allied fields such as clinical neurology, [illegible], [illegible], mental deficiency and occupational therapy are included in addition to terms peculiar to psychiatry. The emphasis is, of course, on the latter group. Some definitions are brief, but a large number of them are long enough to [illegible] an extensive essay on the concept designated by the term. Definitions are couched in the technical terminology of psychiatry. Etymology and pronunciation are given for all terms. The first edition of the original volume was published in 1940. The second edition, published in 1953, contains the text of the first edition and the Supplement in one volume.

Hoskins, Roy Graham

The biology of schizophrenia. New York W. W. Norton & Company Inc., 1946. 191 p. 21 cm. $3.50. 3924

Contents: Section I. The history of man in relation to schizophrenia. Section II. The pattern of schizophrenia. Section III. Psychosomatic aspects of schizophrenia. Section IV. A biological concept of schizophrenia. Bibliography. Index.

Note: An expanded version of the three Salmon Memorial Lectures presented at the New York Academy of Medicine in 1945. It is based primarily upon the results of 18 years' research at the Worcester State Hospital, research which has been primarily biological in nature. Psychosis is surveyed primarily as a manifestation of evolution. The author begins with basic evolutionary units, the emergence of life, through more complex animal forms, to heredity [illegible], environment, the combination of ego and social in man, [illegible]. This is followed by a description of schizophrenic [illegible] as observed at the hospital. The author suggests that in earlier stages of evolution death rather than schizophrenia would have occurred. He then discusses glands, carbohydrate metabolism, [illegible], hormones, etc., in schizophrenia. He concludes there are changes at the level of cellular activity which indicate biological inadequacy [illegible] originating in the hypothalamus and that psychiatric treatment is largely palliative.

Kanner, Leo

Child psychiatry. With prefaces by John C. Whitehorn, Adolf Meyer and Edwards A. Park. Second edition. Springfield, Ill. Charles C Thomas, 1948 752 p. 26 cm. 3925

Contents (abridged): Part I. History of child psychiatry. Outline of the history of child psychiatry. Child psychiatry and pediatrics. Part II. Basic orientation. Age. Physical condition. Intelligence. Emotions. Family. The material environment. Part III. Clinical considerations. Initial contact. The case history. Orientation [illegible]. Treatment methods. Psychotherapy. Situational therapy. Psychiatric social work. Prevention. Part IV. Phenomenology. First section. Personality problems arising from physical ailments. Fits. Anomalies, diseases, and injuries of the brain. The epilepsies. The endocrinopathies. Second section. Psychosomatic problems. The central nervous system. The circulatory system. The respiratory system. The digestive system. The muscular system. The urinary system. Third section. Problems of behavior. Problems of eating behavior. Problems of sleeping behavior. Problems of speech and language. Problems of scholastic performance. Problems of sexual behavior. Anxiety attacks. Hysteria. Delinquency. Schizophrenia. Suicide. Author index. Subject index.

Note: The first edition of this work established it as an important contribution to the literature of its subject. It is based on extensive experience and study of large numbers of children at the Harriet Lane Home and the Henry Phipps Psychiatric Institute of Johns Hopkins University and on the experience of private practitioners and community child care agencies such as schools, welfare groups, courts, custodial and correctional institutions, and hospitals. It covers the field thoroughly both in regard to general principles and to details of specific conditions and situations. In the second edition the whole content has been so thoroughly rewritten and augmented that it can rightfully be called a new work on the general plan of the old one. The author's main thesis that all relevant facts must be considered in treating children's psychiatric problems has not changed. A third edition was published in 1957 [illegible] p., $12.50.

Leighton, Isabel, editor

The people in your life: psychiatry and personal relations, by ten leading authorities. New York Alfred A. Knopf 1951 278 p. 21 cm. $3.50. 3926

Contents: Man—woman, by E. Fromm. Husband—wife, by L. S. Kubie. Parent—child, by F. H. Allen. Age—youth, by F. J. Braceland. Race majority—race minority, by M. Mead. Student—teacher, by C. Kluckhohn. Friend—friend, by J. A. P. Millet. Employer—employee, by L. H. Bartemeier. Patient—practitioner, by G. R. Ross. Citizen—community, by G. S. Stevenson.

Note: The ten lectures here collected were first delivered as a course in psychiatry sponsored by Town Hall of New York. Conversational in tone and keyed to the background and understanding of the average layman, they serve as a sound introduction to anyone who seeks from psychiatry a better comprehension of himself and of the society of which he is a part. Included in the text and contributing to its worth are questions and answers transcribed from the discussion which followed each lecture when it was presented. Lacks index.

Levine, Maurice

Psychotherapy in medical practice. New York The Macmillan Company 1942 320 p. 22 cm. $4.50 3927

Contents: Common misconceptions. Methods of psychotherapy. Methods for the general practitioner. Advanced methods for the general practitioner. Methods for the specialist. Suicide risks. The study of psychogenic factors. The choice of cases. Sex and marriage. Basic attitudes toward children. The problem of parents and children. Summary and warning. Suggestions for further reading. Index.

Note: This is written especially for general practitioners, specialists in fields other than psychiatry, medical students, nurses, social workers, and others who guide individuals with personal and emotional problems. It explains in nontechnical language the methods of psychotherapy that may be used by nonpsychiatrists, and distinguishes those that should be reserved for psychiatrists only.

Lewis, Nolan Don Carpenter, and Bernard L. Pacella, editors

Modern trends in child psychiatry. Editorial assistant, Gertrud M. Kurth. New York International Universities Press, 1945 341 p. illus. 23 cm. $6.00. 3928

Contents: Anxiety in infants and its disorganizing effects, by M. A. Ribble. Maternal overprotection, by D. M. Levy. Primary conduct disturbances: their diagnosis and treatment, by J. H. W. Van Ophuijsen. Ego psychology applied to behavior problems, by M. S. Mahler. Psychosomatic approach in childhood disorders, by

H. Bruch. A new tool in psychotherapy with adolescents, by C. B. Zachry. Personality diagnosis in childhood, by B. Klopfer. The electroencephalogram in behavior disorders, by B. L. Pacella. Male sex delinquency and community responsibilities, by L. J. Doshay. Psychoses in children, by C. Bradley. Organic brain conditions producing behavior disturbances, a clinical survey of encephalitis, burn encephalopathy and the traumatic states, by L. Bender. Fantasy and reality in the art expression of behavior problem children, by M. Naumburg. Play analysis in research and therapy, by J. L. Despert. Combined psychotherapy with children and parents, by F. H. Allen. Child analysis, by M. S. Mahler. Group therapy with children, by S. R. Slavson. Psychiatric social case work with children, by L. M. Hambrecht.

Note. A collection of lectures on child psychiatry and child guidance that were given at the New York State Psychiatric Institute and Hospital in 1943 and 1944. The purpose of the collection is to make available a summary by leading authorities of recent thought, investigations, and achievements in child psychiatry. Most of the articles are accompanied by bibliographical references.

Liebman, Samuel, editor

Management of emotional problems in medical practice. *Philadelphia* J B Lippincott Company, 1956 152 p 23 cm $5 00 3929

Contents: Psychiatric emergencies, by K. M. Bowman. The use and abuse of sedatives and stimulants, by F. J. Gerty. The management of the anxious patient, by L. L. Robbins. The depressed patient, by F. G. Ebaugh. The management of emotional reactions in the male involutional period, by O. Billig. The management of the multiple complainer, by G. C. Ham. The management of over-eating, overdrinking and oversmoking, by L. H. Bartemeier. On avoiding the production of iatrogenic disease, by W. C. Alvarez. The utilization of community resources in medical practice, by M. H. Hollender. Index.

Note. The papers in this volume are directed to general practitioners of medicine and are a useful combination of fundamental psychiatric knowledge and sage advice. They were first presented as lectures at the North Shore Health Resort, Winnetka, Illinois. The lecture series was entitled, "Psychiatric problems in medical practice," but as the titles listed above show, the volume title is more apt, since the kinds of problems covered are those that occur often in general medical practice and are managed by the nonspecialist practitioner. The book is short and readable.

Lowrey, Lawson G

Psychiatry for social workers. Second edition New York Columbia University Press 1950 385 p 22 cm. $4 50 3930

Contents: Introduction. The data of psychiatry. Specific etiological factors. Clinical combinations of symptoms. Psychoses of organic origin. Psychoses of toxic origin. Psychodynamics and functional disorders. Cyclothymic (manic depressive) reactions. Schizophrenia (dementia praecox). Paranoia and paranoid conditions. The convulsive disorders. Mental deficiency. The neuroses (psychoneuroses). Psychopathic personality. Behavior and its disorders. Mental disorders in the young. Reactive behavior disorders. Problems of rejectees and veterans. The social worker and treatment. Selected reading list. Index.

Note. A concise, well-written summary of psychiatry and abnormal psychology. It describes the major psychological disorders and summarizes what is known about their causation, pathology, prognosis, and treatment. Psychoanalytic concepts and techniques are not discussed in detail. Instead the book presents the clinical knowledge that will be useful to the social worker in her contacts with disordered personalities. The first edition was published in 1946. All of the original chapters were revised to some degree in preparing this edition, and some were very extensively rewritten. One chapter, that entitled "The social worker and treatment," was added, and the selected reading list was revised.

McCarthy, Daniel J., and Kenneth M Corrin

Medical treatment of mental disease: the toxic and organic basis of psychiatry. With sections by seven contributors. Philadelphia J B Lippincott Company, 1954 653 p illus 24 cm $12 00 3931

Contents: Part I, General considerations. The physical basis of psychiatry. Causes of mental disorders. Occurrence of mental disorders. Examination of the patient. Terminology. Part II, Mental disorders—A, mental disorders of known etiology and pathology: Mental disorders due to infection of brain tissue. Mental disorders due to exogenous toxins. Mental disorders due to endogenous toxins (disorders essentially producing delirium). Mental and nervous disorders due to endocrine imbalance. Mental disorders due to nutritional and vitamin deficiencies. Mental disorders due to the anemias. Mental disorders due to intracranial space-taking lesions. Mental disorders due to brain (head) injury. Mental disorders due to intracranial vascular disease. Mental disorders due to senility. B, Mental disorders of unknown etiology but known symptomatology and pathology: The degenerative diseases. C, Mental disorders of unknown etiology, mechanism or pathology but with constant and uniform symptomatology: The adolescent psychoses. The manias (prolonged excitement). The depressions. Paranoid conditions and paranoia. Part III, Disorders not psychotic in character: The mental deficiencies. Convulsive states (epilepsy). Psychopathic personalities. Autonomic visceral (psychophysiologic) disorders—(nervous tension states). Part IV, Basic treatment methods. General treatment measures. Psychotherapeutic measures. The drastic therapies. Part V, Medicolegal aspects of psychiatry. Index.

Note. The special viewpoint of this book is indicated by its title. Although the psychological aspects of mental disease and psychiatric treatment are not excluded, the major emphasis is on medical treatment and on the kind of elementary psychiatric guidance that general practitioners of medicine have traditionally given their patients. The authors state: "The concepts and treatment of mental disease are dealt with as a matter of disordered chemical, physiologic and pathologic processes affecting brain function. We recognize that emotional factors are important, constituting a part of the illness, but we believe that they represent effects of disease, not causes." Although useful background material is presented in the first part, the second and third parts, which together account for 422 of the total number of pages, are the heart of the book. In these parts, mental disorders are described in medical terminology for the benefit of physicians who are not specialists in psychiatry. The descriptions cover the clinical picture, etiology, and treatment. The fourth section fills out the picture on treatment by supplying descriptions and discussions of applicable therapies. Psychoanalysis is not included, because the authors feel that it is beyond the scope of the general medical practitioner. However, references to the principal books on psychoanalysis are furnished.

Masserman, Jules Hyman

The practice of dynamic psychiatry. Philadelphia W B Saunders Company, 1955. 790 p 24 cm $12 00 3932

Contents. Part I, The clinical investigation of human behavior: Principles of the psychiatric examination. The psychiatric examination of neurotic dysfunctions. The techniques of securing a psychiatric history. Current behavioral or "mental status" examination. Special aspects of the psychiatric examination. An introduction to psychodiagnostic testing (with the collaboration of J. H. Pathman and D. R. Stieper). Review of the rationale and techniques of the psychiatric examination. Part II, Dynamic evaluation of clinical syndromes: General considerations of psychiatric diagnosis. The neuroses. Personality pattern disturbances. Thebe obsessive-compulsive reactions. Psychophysiologic dysfunctions. Mental deficiency. Psychotic disorders. Part III, Case studies and communications. Hospital records and medical consultations. Psychiatric reports to nonmedical personnel. Psychiatric liaison with jurists, attorneys and laymen. Part IV, Clinical dynamics of ... The concepts of emotions and feeling. The concept and self. The concepts of ... and ... dynamics of self and universe. Current concepts of ... "libidinal" behavior. Part V, The practice of dynamic psychotherapy. Psychotherapy—its historical development. The evolution of psychoanalytic therapy. Current schools of analytic dynamic psychotherapy. Review of current concepts in psychoanalytic therapy. Biodynamics and psychoanalysis—their therapeutic integration. Therapeutic relevance of experimental biodynamics. Reorientation in psychotherapy—the ur-defenses of man. Clinical therapeutic principles. The functions of the psychiatrist. The initial interview. Preliminary therapeutic techniques. The strategy of therapy. The tactics of therapy. Drug narcosis in diagnosis and psychotherapy. Modern hypnosis. Familial and related group therapies. Military psychiatry. Biodynamics and familial group therapies. Military psychiatry. Index of personal names. Appendices. Bibliography. Index of personal names. Index of subjects.

Note. A companion work to the author's *Principles of dynamic psychiatry*, 1946. In the earlier work, the author attempted an integration of the various physiologic and psychologic concepts of behavior into a comprehensive system which he terms biodynamics. In the present work the integrative approach is applied to clinical psychiatry. In short, this work is a treatise on psychotherapy written from an eclectic viewpoint. It presents a broad

and at the same time detailed [illegible] of contemporary psychiatric theory and practice. More than 100 pages are devoted to the principles and techniques of history-taking and diagnosis, and about 100 pages to the making of hospital records, reports to referring physicians, nonmedical personnel, courts of domestic relations, etc. The fifth part, entitled "The practice of dynamic psychotherapy" [illegible] the heart of the book and accounts for almost half of its length. One hundred fifteen case reports are included. References are made to *Principles of dynamic psychiatry*; however, the two books can be used independently.

MASSERMAN JULES HYMEN

Principles of dynamic psychiatry including an integrative approach to abnormal and clinical psychology With a glossary of psychiatric terms. Philadelphia W B Saunders Company 1946. 322 p. illus. 24 cm. $7.00. 3933

Contents (abridged) Development of behavior theory. Psychologic concepts of behavior. Psychoanalytic concepts of behavior. The dynamics of adaptation. Neurotigenic dynamisms. Psychotic dynamisms. Biodynamics of normal and abnormal behavior. Biodynamic [illegible] of current theories of behavior. Biodynamic formulations of behavior. The principle of [illegible]. Principle of conflict. [illegible] of conflict and modes of therapy. Biodynamic processes of language and of "verbal" therapy. A critique of the biodynamic theory of behavior. Appendices: Illustrative psychoanalysis of [illegible] personality. Psychoanalytic formulations of the psychoses. Some principles of group [illegible]. Bibliography. Glossary. Index.

Note This work is based on material developed by the author and his colleagues in teaching psychiatry at the Northwestern University School of Medicine. It [illegible] designed for use as [illegible] textbook in introductory courses in medical school, and in other courses offered to students who are preparing for professional work in the field. The author has emphasized the [illegible] of the [illegible] of behavior and of the interrelationships of these [illegible] of the living organism. The [illegible], experimental, [illegible], case histories, and the explanatory material is directly related to clinical applications. The bibliography of 1,200 titles is exceptionally long for an introductory work. The glossary, although limited to specialized terms, contains more than 1,000 definitions.

MENNINGER, KARL AUGUSTUS

A guide to psychiatric books with some suggested reading lists. Second revised edition. New York Grune & Stratton, 1956 157 p. 22 cm. (The Menninger Clinic monograph series, No. 7) $4 75 3934

Contents Basic and related disciplines. General psychiatry. Specialized psychiatry. Psychiatric therapies. Preventive psychiatry and mental hygiene. Psychiatric book lists and bibliographies. Reading lists. Index.

Note Approximately 3,000 books are listed in the second edition of this standard bibliography. For each is given the name of the author, short title, place of publication, publisher and the year of publication. There are no annotations, and the stars [illegible] used in the first edition to designate specially recommended titles have been deleted. Also deleted was the "Supplementary list of [illegible] books." However, [illegible] of reading lists for physicians, general practitioners, and clergymen has been added. The index covers names of authors only. In comparison to the first edition published in 1950, many more books are listed and the organization of the list has been changed somewhat.

MENNINGER, KARL AUGUSTUS

A manual for psychiatric case study New York Grune & Stratton 1952 355 p 23 cm. (The Menninger Clinic monograph series. No. 8) $6 75 3935

Contents Part I. The collection and organization of case material. The approach to the psychiatric patient. The collection and recording of historical data. The collection and recording of examinational data. The analysis of the collected data. Part II. Treatment records. The prescription of [illegible] therapeutic program. The record of treatment, developments, and complications. The nature and purpose of case summaries. The [illegible] of [illegible] patient to the referring physician. Part III. Case reports. The writing of psychiatric reports and papers. Illustrative case records. Appendix: New American Psychiatric Association nomenclature. Standard Veterans Administration nomenclature (1951). List of personality types. Adjunctive therapy guidelines. Model commitment law. References and reading list. Index.

Note A practical work on orderly procedures in studying psychiatric patients. It deals with methods of history taking; recording of physical, neurological, laboratory and psychological data; the prescribing of therapy and the recording of therapeutic progress and complications. Special problems such as the recording of especially confidential data are discussed in [illegible] helpful manner. A long series of illustrated case histories is included. The book is aimed at medical graduates who are beginners in the specialty of psychiatry or [illegible] are preparing for this specialty.

MEYER, ADOLF

The commonsense psychiatry of Dr Adolf Meyer fifty-two selected papers edited, with biographical narrative by Alfred Lief New York McGraw Hill Book Company Inc., 1948 677 p illus. 24 cm. (McGraw Hill series in health science Amos Christie consulting editor) $9.50 3936

Contents (abridged) Introduction. The contribution of psychiatry to the understanding of life problems. Preparation in Europe. The American setting. Action in Kankakee. Action in Worcester. Action in New York. Dynamic psychiatry established. Reaching to the public. Action in Baltimore. Training the doctors. Social aspects. A science of man. Reference notes. Glossary of medical and philosophical terms. Index.

Note A representative collection of the published work of [illegible] psychiatrist who contributed greatly to the improvement of psychiatric training and the treatment of mental patients in the United States of America. Dr Meyer's own [illegible] are interspersed with appropriate biographical narrative, supplied by the editor. The papers range from interpretations of purely psychiatric problems, through such topics as eugenics, teaching, [illegible] problems, and the role of psychiatry in relation to science. The author's pragmatic approach to the human being as [illegible] psycho-biological [illegible] is the dominant theme. The book is of interest not only to persons in this medical specialty, but also to general readers [illegible] are interested in psychiatry. The glossary is intended to aid the latter group.

MODERN ATTITUDES IN PSYCHIATRY The march of medicine, 1945 New York Columbia University Press, 1946 154 p. 21 cm. (The New York Academy of Medicine. Lectures to the laity No x) $2 00. 3937

Contents Foreword, by C. P. Rhoads. Introduction, by E. G. Zabriskie. Psychiatry in the history of medicine (The Lindsley R. Williams memorial lecture) by I. Galdston. The development of modern psychiatry by J. H. Wall. The patient as [illegible] person: the social aspects of illness, by O. C. Robinson. Present trends in psychiatry and the future outlook, by F. Alexander. Psychiatry and the war by W. C. Menninger. Psychotherapy in everyday practice (The George E. [illegible] memorial lecture) by E. Weiss. Index.

Note A series of lectures planned to present [illegible] survey of the status of psychiatry and psychotherapy at the close of World War [illegible]. They are addressed primarily to persons outside the medical profession and therefore are free of technical terminology.

NIELSEN JOHANNES MAAGAARD AND GEORGE N THOMPSON

The engrammes of psychiatry Springfield, Ill. Charles C Thomas, 1947 509 p. illus. 23 cm. $6 75 3938

Contents (abridged) Consciousness. [illegible] tion. The instincts. The emotions. The will. Personality. Perception—association—recall (hallucinations, illusions, delusions). Intelligence, judgment, [illegible]. Cerebral function with relation to [illegible]. Some defense mechanisms of the mind. Psychoneuroses. Addiction and habituation. Psychopathic personality. Schizophrenia. Manic-depressive psychosis (cyclothymic reaction types). Involutional disorders (psychoses). Paranoia. Syphilitic psychoses. Mental symptoms due to general [illegible] disorders. Congenital mental deficiency. Geriatric psychiatry. Psychosomatic medicine. Treat-

ment in psychiatry Technique of psychiatric examination. References. Index.

Note Directed primarily toward psychiatrists, anatomists, and physiologists, *this work is a study* of the physiological aspects of abnormal behavior The authors are unwilling to accept much of the superstructure of current psychiatric theory because it is to them not demonstrable by scientific observation or proof accordingly the thesis of the book is insistence upon the anatomy and physiology of the brain as the source of behavior The first 10 chapters explain the correlation of specific brain areas and functions with the major psychological activities, and in the second half of the book the results of abnormal brain physiology are traced in the common psychiatric disturbances, illustrated by numerous case histories. The authors' wide experience and thorough study are evident in treatment and presentation, and there is a substantial list of references in the appendix.

Noyes, Arthur P

Modern clinical psychiatry Fourth edition Philadelphia W B Saunders Company 1953 621 p 24 cm. $7 00 3939

Contents (abridged) Development of dynamic psychiatry Personality development and structure. Mental mechanisms and their functions. The causes and nature of mental disorders. Symptoms of mental disorder Examination of the patient. Disorders caused by or associated with impairment of brain tissue function—intracranial infection Brain syndromes due to drug or poison intoxication. Alcoholism and alcoholic psychoses. Mental disorders due to or associated with head trauma. Brain syndromes associated with circulatory disturbances. Acute brain syndromes associated with metabolic disturbances. Brain syndromes associated with cerebral arteriosclerosis with convulsive disorders (epilepsy) Senile psychoses. Chronic brain syndrome associated with disturbance of metabolism, growth or nutrition—with intracranial neoplasm—with diseases of unknown or uncertain cause Mental deficiency Disorders of psychogenic origin. Psychotic disorders—involutional psychotic reactions—affective reactions. Psychotic depressive reaction—schizophrenic reactions—Paranoid reactions. Psychophysiologic autonomic and visceral disorders. Psychoneurotic disorders. Sociopathic personality disturbances. Drug addiction. Child psychiatry Shock and other physical therapies. Psychotherapy Pharmacological therapy Index.

Note A standard text, the first edition of which was published in 1934 and the third edition in 1948 It is used as an introduction to the subject for advanced medical school students and medical school graduates who are preparing for the specialty of psychiatry and as book of orientation and reference for general practitioners of medicine. It provides an eclectic view of modern psychiatry with emphasis on problems most likely to arise in general practice. Much emphasis is placed on the underlying causes of mental disease and on descriptions of specific disorders. Diagnostic techniques and *therapy are discussed adequately in view of the book' purposes.* Important changes were made in preparing this fourth edition The classification of mental disorders was revised to bring it into accord with the standard nomenclature adopted by the American Psychiatric Association More emphasis was placed on the roles of psychological influences and motivations and mental disease, and revisions were made to cover important developments such as psychosurgery and pharmacological therapy A selection of the literature published from approximately 1948 through 1953 has been added to the bibliography

Overholser Winfred and Winifred V Richmond

Handbook of psychiatry Philadelphia J B Lippincott Company 1947 252 p 24 cm. $4 00 3940

Content What this book is about The cause of mental disorders. The mental hospital and modern methods of treatment. Mental defect and the problems that grow out of it. Psychoses associated with organic conditions. Alcohol and its role in the psychoses. Psychoses associated with drugs and other toxic agents. Psychoses of middle life and old age The functional psychoses—the manic-depressive psychosis—dementia-praecox schizophrenia. The paranoias. The psychoneuroses The psychopathic personality Mental aberrations and war Crime and mental disorder Psychiatric conditions in children. Psychiatry and the layman. Index.

Note. This work is not reference manual, as the title might imply but clearly written description of the scope of psychiatry and of the mental disorders with which psychiatry deals. It is addressed to laymen and to such groups as nurses and social workers, but the subject is not "written down. The discussions have professional tone and fair amount of technical terminology is introduced. Good lists of additional reading are appended to the chapters for the benefit of those readers who wish to pursue specific topic further

Pearson, Gerald Hamilton Jeffrey

Emotional disorders of children, a case book of child psychiatry New York W W Norton & Company, Inc., 1949 368 p. 22 cm. $5 95 3941

Contents. Introduction. The methods of studying a psychiatric problem in a child. The diagnosis and classification of psychiatric problems in children. Anxiety states. Anxiety hysteria. Conversion hysteria. The interrelationships of organic and psychic illnesses. The obsessional neurosis. The child who is intellectually retarded The sexual perversions. Psychoses in children. Character neuroses in children. *General considerations of the treatment of psychic disorders* in children. Index.

Note A treatise organized around an extensive series of case histories. The histories are used not only to demonstrate the types of neuroses and psychoses to which children are subject but also to show how children's emotional disorders may be diagnosed and managed according to the principles and methods of psychoanalysis. The author has assumed that his readers will have some understanding of basic concepts and terminology of normal and abnormal psychology The presentation is not highly technical, but the book is more suitable for psychologists and physicians than for general readers and parents.

Perry, John Weir

The self in psychotic process, its symbolization in schizophrenia. Foreword by C. G. Jung Berkeley University of California Press 1953 184 p illus (part col'd) 24 cm. $5 00 *3942*

Contents. Part I Introduction. Case history Initial delusions. Development of the problem. The resolution Nature of the material. Amplification of the symbol. Psychological concepts. Interpretation of the process. Conclusions. Part II *Introduction.* The symbolism of the quadrated circle. The quadrated circle in the East. The *quadrated* circle in the West. Symbolism of opposites. Symbolism of rebirth. The psychology of the symbolism. Appendix Detailed account of the patient's history and material. Notes. Bibliography Index.

Note A study of the self as an entity of highly irrational character which, when activated, is found already delineated and symbolically represented in the unconscious" in short, the self according to the teachings of C. G. Jung. In the first part, the drawings produced by patient suffering from acute catatonic schizophrenia, the remarks she made in explanation of them to the therapist, and pertinent elements from a case history are recorded and analyzed. The second part is both description and psychological *analysis* of such symbols from mythology as the quadrated circle, the Chinese T'ai-chi, and symbols of rebirth after death. The importance of an acquaintance with these symbols to therapists treating such cases as the one described is stressed. The book is both study of an unusual case and plea for wider attention on the part of psychotherapists to the ideas of Dr Jung.

Ruesch, Jurgen and Gregory Bateson

Communication the social matrix of psychiatry New York W W Norton & Company Inc 1951 314 p *illus* 22 *cm.* $6 00 3943

Contents. Values, communication, and culture Communication and human relations Communication and mental illness. Communication and American values. American perspectives. Communication and the system of checks and balances. Information and codification. Conventions of communication. *Psychiatric thinking.* The convergence of science and psychiatry Individual, group, and culture. *References.* Index.

Note In this book authored by psychiatrist and by an authority on cultural anthropology the society which presses upon every individual person and the means (communication) by which the impress is made are studied from the standpoint of their effect upon psychiatric theory and techniques. The authors state, "What in the past, theories of personality are concerned with one single individual, modern psychiatrists have come to the realization that it is necessary to see the individual in the matrix of social

studies. The author also pays attention to the effects of society upon psychiatrists and especially upon contemporary psychiatric thinking. The book is addressed primarily to psychiatrists and secondarily to sociologists.

SACKLER, ARTHUR M AND OTHERS editors

The great physiodynamic therapies in psychiatry an historical re-appraisal. Editors Arthur M. Sackler Raymond R. Sackler Mortimer D Sackler Felix Marti Ibañez. With personal contributions by Ugo Cerletti and others. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1956 190 p. illus. 26 cm. $5 75 3944

Contents: The philosophy of organicism in psychiatry by F Marti-Ibañez and others. The classical Sakel shock treatment—a reappraisal, by M. J. Sakel. The convulsive treatment—a reappraisal, by L. J. Meduna. Electroshock therapy by U Cerletti. Histamine therapy, by H. C. Hinsie. How I succeeded in performing the prefrontal leukotomy by E. Moniz. The carbon dioxide treatment—a review, by L. J. Meduna. Contemporary physiodynamic therapeutic trends in psychiatry by A. M. Sackler and others. Bibliographical notes. Index.

Note: In this interesting volume, the discoverers or "chief proponents" of the Sakel shock treatment, electric shock therapy, histamine therapy and the other therapies mentioned in the chapter titles, tell how they came to discover or to advocate the therapy associated with their names, then they assess its importance in the light of the subsequent clinical experience and developments of psychiatric knowledge. Following the chapters on the great therapies is a paper on contemporary trends and developments, including the relatively new pharmacodynamic agents, written by the editors of the volume. All of the articles were first published in journals, but have been corrected and revised.

SADLER, WILLIAM S

Practice of psychiatry St. Louis The C. V Mosby Company 1953 1 183 p. 25 cm. $10.00. 3945

Contents (abridged) Part i, General psychiatric considerations. Part ii, The patient. Part iii, The neuroses. Part iv, The psychoses. Part v, Personality disorders. What is personality? Normal and abnormal personalities. Adjustment and maladjustment. Childhood psychology. The adolescent personality. The adult personality. Family relationships. Sex problems. The psychopathic personality. Alcohol problems. Crime and delinquency. Part vi, Psychosomatic diseases. Psychosomatic medicine. The cardiovascular system. The gastrointestinal system. The nervous system. Skin disorders and sundry ailments. Part vii, General psychotherapeutics. The general management of mental and nervous disorders. Psychiatry in general practice. Suggestion and hypnotism. Ventilation—catharsis. Therapeutic study program. Socialization—group therapy. Occupational therapy. Medicinal treatment. Shock treatment. Psychosurgery. Appendix. Schools of psychiatry. Bibliography. Glossary. Index.

Note: This work supersedes the author's *Modern psychiatry*, 1945. It presents a broad, eclectic view of psychiatry without being bound to any particular school of thought. There is considerable emphasis on diagnosis and treatment. The book is directed to graduate physicians and is of special value to those who are not specialists in psychiatry but wish to be informed about it. The bibliography is limited to books. About 900 terms are defined in the glossary.

SAUL, LEON JOSEPH

Bases of human behavior a biologic approach to psychiatry Philadelphia J B Lippincott Company 1951 150 p. 24 cm. $4.00 3946

Contents: Part i, The power of the emotional forces—psychodynamics as a basic science. The place, the scope and the goals of dynamic psychiatry. Part ii, Motivation and its effects: Emotional forces can alter the physiology. Emotional forces can affect the physiology to produce symptoms. Emotional forces can affect the physiology to produce tissue damage. Emotional forces can affect perception, thinking, feeling and behavior. Scheme of operation of emotional forces. Part iii, Elements of psychodynamics: The organism as a unit. The structure of the mind. Development of the mind. Basic biologic forces in the mind. Appendix: The nature of neurotic reactions. Index.

Note: Primarily an introduction to psychiatry this work can be viewed also as an introduction to the study of behavior of all personality. The author views it as a book on dynamic psychiatry or "psychodynamics," and he defines the latter term as "the science of motivations of biologic organisms. The study of the living organism, the roots of behavior in basic physiological processes, and the interactions of psychologic and physiological reactions are emphasized. Only the main ideas of the field are discussed, and the book is written in style that makes it available to a wide circle of readers both within and without the professions of psychology and psychiatry.

SHELDON WILLIAM HERBERT

Varieties of delinquent youth an introduction to constitutional psychiatry with the collaboration of Emil M Hartl and Eugene McDermott. New York Harper and Brothers 1949 899 p. illus. 23 cm $8 00. 3947

Contents (abridged) Part i, Orientation for biological humanics. Orientation. Glossary i—definitions basic to the constitutional approach. The psychiatric variables, outline for an operational psychiatry. Part ii, Two hundred biographies. Glossary ii—glossary for the Hayden abridgement for biography. The biographies. Part iii, *Psychiatry of delinquency.* Biological delinquency. The social psychiatry of delinquency. Epilogue. Index.

Note: An elaborate technical presentation of a thesis which says essentially that a person's behavior is closely related to his bodily structure or somatic type. "Constitutional psychiatry" is thus diametrically opposed to the Freudian concept of the mind and its effects upon behavior and personality patterns. It leads to a view that delinquency is a result of the weakness of the human stock—stock which is currently declining in quality according to the author. The text is illustrated with 200 case histories, each one of which is accompanied by three photographs which show the body type of the subject. The work is based on a 10-year study of delinquent youths at the Hayden Goodwill Inn, a Boston social agency. The author is director of the College of Physicians and Surgeons, Columbia University.

SHIRLEY HALE FOREMAN

Psychiatry for the pediatrician. Cambridge, Mass Harvard University Press, 1948. 442 p. 24 cm. $4.50 3948

Contents: Basic concepts in child guidance. Development and habit training. Physical factors and problems. Intellectual factors and problems. Emotional factors and problems. Sexual factors and problems. Environmental factors and problems. Investigation of behavior problems. Treatment of behavior problems. Mental health in a changing world. Glossary. Index.

Note: This book discusses the common psychiatric problems of children that are likely to come to the attention of pediatricians and general practitioners, and outlines corrective techniques. It originated in lectures given to medical students at the Stanford University Medical School, and is intended for advanced students and practicing physicians, especially the latter. A considerable part of the material is based on a study of the first 1,000 cases seen in the pediatric clinic operated by Stanford University and known as the Stanford *Pediatric-Psychiatric Unit.* The author has made a special effort to keep his presentation simple and free of issues that are still the subject of controversy among psychiatrists. Brief bibliographies are appended to the chapters.

STRECKER, EDWARD ADAM AND OTHERS

Practical clinical psychiatry By Edward A. Strecker Franklin G Ebaugh and Jack R. Ewalt. Section on Psychopathologic problems of childhood by Leo Kanner. Seventh edition. New York. McGraw Hill Book Company Inc. 1951 506 p. illus. 24 cm. $7.00. 3949

Contents: Personality development and function. Methods of psychiatric examination. The organic reaction type. Toxic psychoses. The affective reaction types. The schizophrenic reaction types. The constitutional psychopathic inferior. Reactions of developmental and

constitutional defects. Paranoid reaction types and paranoia. Traumatic reactions. Psychoneuroses. Psychosomatic medicine. Support psychotherapy. Pathologic drinking. Psychopathologic problems of childhood. Index.

Note. A standard, widely used medical college textbook. It presents a broad, fairly detailed view of the subject in a relatively small space. Case histories are used freely in the presentation and the areas of contact among psychiatry, internal medicine and other specialties are indicated. The book is useful also to general medical practitioners as an authoritative source of information about contemporary clinical psychiatry. The sixth edition was published in 1947. In this edition the major changes are a revised statement of classification in the second chapter and the addition of the chapter on support psychotherapy. Less extensive changes have been made in other chapters and recent literature has been added to the bibliographies. An eighth edition was published in 1957. 457 p., $8.00.

SULLIVAN, HARRY STACK

Conceptions of modern psychiatry the first William Alanson White memorial lectures With a foreword by the author and a critical appraisal of the theory by Patrick Mullahy Second edition New York W W Norton & Company Inc, 1953 298 p 21 cm. $5 00 3950

Content Basic conceptions. The human organism and its necessary environment. Developmental syndromes. Explanatory conceptions. Therapeutic conceptions. A theory of interpersonal relations and the evolution of personality by P Mullahy. Index.

—— The interpersonal theory of psychiatry Edited by Helen Swick Perry and Mary Ladd Gawel With an introduction by Mabel Blake Cohen New York W W Norton & Company Inc 1953 393 p 21 cm $6 00 3951

Content Part I Introductory concepts. The meaning of the developmental approach. Definitions. Postulates. Part II The developmental epochs. Infancy—beginnings—the concept of dynamism—interpersonal situations. The infant as a person. Learning—the organization of experience. Beginnings of the self-system. The transition from infancy to childhood—the acquisition of speech as learning. Childhood. Malevolence, hatred, and isolating techniques. From childhood into the juvenile era. The juvenile era. Preadolescence. Early adolescence. Late adolescence. Part III, Patterns of inadequate or inappropriate interpersonal relations. The earlier manifestations of mental disorder—matters schizoid and schizophrenic. Sleep, dreams, and myths. The later manifestations of mental disorder—matters paranoid and paranoiac. Part IV Towards a psychiatry of peoples. Index.

—— The psychiatric interview Edited by Helen Swick Perry and Mary Ladd Gawel With an introduction by Otto Allen Will New York W W Norton & Company, Inc. 1954 246 p 21 cm $6 00 3952

Contents Basic concepts in the psychiatric interview. The structuring of the interview situation. Some general technical considerations in interviewing. The early stages of the interview. The detailed inquiry—the theoretical setting. The interview as a process. The developmental history as a frame of reference in the detailed inquiry. Diagnostic signs and patterns of mental disorder, mild and severe. The termination of the interview. Problems of communication in the interview. Conclusion. Index.

—— Clinical studies in psychiatry Edited by Helen Swick Perry, Mary Ladd Gawel and Martha Gibbon With a foreword by Dexter M Bullard New York W W Norton & Company Inc 1956 386 p 21 cm $6 00 3953

Contents Part I, Dynamisms of living and their relevance in mental disorder. The interpersonal theory of mental disorder. Sublimation, obsessionalism, and the early referential processes. Selective inattention. Hypochondria, algolagnia, and the personal development. The dynamisms of emotion. Envy and jealousy. Precipitating factors in the major mental disorders. The paranoid dynamism. Dissociative processes. The schizophrenic dynamism—a tripartite view. Part II, Therapeutic approaches to patterns of difficulty—the clinical entities. Clinical entities as a frame of reference in therapy. Hysteria. Obsessionalism. The manic-depressive psychosis. Schizophrenia, paranoid states, and related conditions. Therapy with schizophrenic patients. Index.

Note: Harry Stack Sullivan, who died in 1949, achieved recognition during his lifetime as one of the outstanding American contributors to psychiatry. Among his other contributions he developed the idea that psychiatry must take into account the complex of interpersonal relations in which personalities develop. All of the books had their origin as lectures given under the auspices of the William Alanson White Psychiatric Foundation. *Conceptions of modern psychiatry* was first published by the Foundation in response to many requests for Sullivan's 1939 lectures. It was reprinted several times during Sullivan's lifetime by the Foundation, but the edition listed here is the first regularly published one. The other books were prepared after Sullivan's death from notes and recordings of his lectures. This edition of *Conceptions of modern psychiatry* contains a helpful 56-page interpretation of Sullivan's theories written by Patrick Mullahy. In *The psychiatric interview*, the interview is presented as a special type of interpersonal situation and is discussed from both theoretical and practical viewpoints. The author's later views on personality are presented formally in *The interpersonal theory of society* and the clinical studies on which the interpersonal theory was based are included in *Clinical studies in psychiatry*. There are substantial differences in the author's style from the earlier books to the later ones, it being more technical and formal in *Conceptions of modern psychiatry* and *The interpersonal theory of psychiatry* than in *Clinical studies in psychiatry*. However all of the books are addressed to medical graduates and others with some previous introduction to psychiatry.

TULANE UNIVERSITY DEPARTMENT OF PSYCHIATRY AND NEUROLOGY

Studies in schizophrenia a multidisciplinary approach to mind brain relationships Reported by Robert G Heath and others Cambridge Mass Published for the Commonwealth Fund by Harvard University Press 1954 619 p illus. 24 cm $8.50 3954

Content (abridged) Definition of the septal region, by R. G. Heath. Section I, Theoretical concepts. The theoretical frame and for a multidisciplinary approach to human behavior, by R. G. Heath. Section II, Animal studies. *Ablation studies*. Metabolic changes following destructive lesions in the forebrain in cats, by R. G. Heath and others. Behavioral changes following destructive lesions in the subcortical structures of the forebrain in cats, by R. G. Heath. Acute experiments with animals: Inhibition and facilitation of motor activity from forebrain stimulation in cats, by R. Hodes and others. Chronic experiments with animals: Connections between the cortex and the septal region in rhesus monkeys, by C. D. Hendley and others. Effects of stimulation with electrodes chronically implanted in rhesus monkeys, by R. G. Heath and R. Hodes. Cortical and subcortical electrical activity in sleep, by R. Hodes and others. Section III, *Human studies*. Surgical techniques. Implantation of subcortical electrodes in man by the open method, by F. G. Bengochea and others. Implantation of subcortical electrodes in man by a stereotaxic method, by R. Hodes and others. Physiological data. Electroencephalograms and subcorticograms before stimulation, by R. Hodes and others. Subcortical stimulation techniques (including stimulation data sheets) by H. C. Becker and S. M. Peacock, Jr. Physiological responses to subcortical stimulation, by S. M. Peacock, Jr. Electroencephalograms and subcorticograms following stimulation of subcortical structures, by R. Hodes. Biochemical data. Biochemical studies on the patient group, by R. G. Heath and others. Psychological data. Psychological observations before and after stimulation, by H. E. King and others. Clinical data. Psychiatric observations on the patient group, by R. R. Monroe and R. G. Heath. The medical and neurological status of the patient group, by S. W. Epstein and others. Section IV, Case reports. Individual summaries of clinical and laboratory data, by R. G. Heath and others. Section V, Discussions. Section VI, Addenda. Index.

Note This work is concerned with the psychological and physiological investigation of the forebrain, with particular attention to surgery. It is composed primarily of reports of studies conducted by the Department of Psychiatry and Neurology at Tulane University and related case reports. Forty specialists, representing psychiatry, psychology, biochemistry, neurology and neurosurgery participated.

in the Tulane project, and fifteen others contributed comments on the papers. Certain of the chapters have useful summaries, and most of them provide brief lists of published literature. The work is not a manual of clinical procedures; rather it presents problems (and thoughts on them) met in active research.

ULETT, GEORGE A. AND D WELLS GOODRICH

A synopsis of contemporary psychiatry St. Louis The C. V Mosby Company 1956 243 p. 20 cm. $5.25 3955

Contents: Introduction. History of psychiatric thought. History taking and diagnostic procedures: Examination of the patient. The initial psychiatric interview The complete case study General physical and neurological examination. The problem of examining the patient for aphasia, apraxia, and agnosia. Electroencephalographic examination. Psychological examination. Psychodynamic concepts of personality development. Clinical syndromes The problem of classification. Standard nomenclature, disorders of the psychobiologic unit as prepared by the Committee on Nomenclature and Statistics of the American Psychiatric Association. Disorders caused by or associated with impairment of brain tissue function. Disorders of psychogenic origin (or without clearly defined physical cause or structural change in the brain) Mental deficiency Child psychiatry Therapeutic measures The psychiatric treatment team Intensive psychotherapy Group therapy The convulsive therapies Insulin therapy Psychosurgery Drug therapies Hydrotherapy Management of suicidal patients. Management of chronic disorder Management of psychiatric problems in the military setting Forensic psychiatry The psychiatrist and mental health. Index.

Note A very compact reference book useful to medical graduates in preparing for examinations and to nurses, general practitioners of medicine, etc. for concise information on psychiatric topics, including not only descriptions of such things as the Rorschach test, but also condensed information on treatment of psychiatric disorders. The chapter titles are listed above. Lists of suggested readings are included in each one.

WITMER, HELEN LELAND

Psychiatric clinics for children, with special reference to state programs. Cambridge, Mass. Harvard University Press, 1940. 437 p. 23 cm. $2.50. 3956

Contents The background theoretical and historical. The birth of clinical child psychiatry psychiatric theory and social attitudes and limitations. Evolution of psychiatric clinics for children. A survey of state-financed clinics. Sources and plan of the study. Clinics conducted by state hospitals for mental diseases. Case studies of two state hospital clinics. Clinics conducted by psychopathic hospitals. Clinics conducted by central departments of state governments. Principles for future programs. Organization on the basis of function. Prevention of psychoses and crime as clinic objectives. Psychiatric service for the feeble-minded and neurologically disabled. Modern child guidance as a means of promoting mental health. Planning effective psychiatric service for small communities. Index.

Note This study and evaluation of programs which offer child guidance clinic service on a state-wide basis included a review and reconsideration of the philosophy, the practice, the objectives, and the achievements of clinical child psychiatry. Part I describes the background of clinical child psychiatry in the United States of America and the cultural setting in which it operates. Part II discusses clinics financed by state governments, tells how they are conducted, and describes and evaluates typical policies. Part III suggests that many of the present difficulties of such clinics are traceable to lack of well-defined objectives, and examines the alternative possibilities in the light of modern psychiatric theory and practice. Some parts of the book are now out of date, but the discussions of philosophy, objectives, etc. are still valuable.

WITMER HELEN LELAND editor

Psychiatric interviews with children. Cambridge Mass. Harvard University Press, 1946 443 p illus. 26 cm. $5 00. 3957

Note The 10 case records reproduced in this book were selected as representative of the principles by which recognized therapists have effectively dealt with difficulties that are typically present in child guidance work. They show in detail what went on between therapist and patient and are preceded by the individual therapist's own analysis of the main factors operative in the cases and the methods and objectives of treatment. In addition to the therapists' comments, Dr. Witmer gives a description of the general content of psychotherapy in child guidance clinics and shows how the principles have been applied in these cases. The contributing therapists were Frederick H. Allen, Phyllis Blanchard, Lydia N. G. Dawes, Hyman S. Lippman, Martha W MacDonald, H. B. Mayle, Beata Rank, and Robert A. Young.

PSYCHOANALYSIS MEDICAL HYPNOSIS AND PSYCHOTHERAPY

ALEXANDER, FRANZ

Fundamentals of psychoanalysis. New York W W Norton & Company Inc., 1948 312 p. 22 cm. $5 00 3958

Contents. The position of psychoanalysis in medicine. The nature of psychological understanding. The basic principles of psychodynamics. The concept of sexuality. The functions of the ego and its failures. Sociological considerations. The psychology of dreaming. Unconscious factors in wit and aesthetic appeal. Psychopathology The principles of psychoanalytic therapy Index.

Note A relatively concise presentation of current psychoanalytical concepts. It has been developed from lectures given by the author in an introductory course at the Chicago Institute of Psychoanalysis, and it is so presented as to be clear not only to students but to lay readers as well.

ALEXANDER FRANZ

Psychoanalysis and psychotherapy devel opments in theory technique, and training. New York W W Norton & Company Inc. 1956 299 p. 22 cm. $5.50. 3959

Contents Psychoanalysis in Western culture. Development of the theory of psychoanalytic treatment. Some earlier modifications of technique Later developments in theory and technique. Two forms of regression and their therapeutic implications. Technical problems concerning the corrective revision of pathogenic conflicts. Some controversial issues. Psychoanalysis and psychotherapy Teaching of psychoanalysis. Opinions of contemporary teachers in psychiatry Discussion of prevailing practices and views. Summary and future outlook. Bibliography Index.

Note In this book the Director of the Chicago Institute for Psychoanalysis restates his views on relationships between psychoanalysis and psychotherapy, or to be more precise the relationships between classical psychoanalysis and psychoanalytical-oriented psychotherapy. Also included are apt discussions of developments in psychotherapeutic techniques that fit into this movement. The chapter on the teaching of psychoanalysis deals specifically with problems and needs in the training of psychoanalysts, and the residency training of psychiatrists. The chapter entitled, "Opinions of contemporary teachers in psychiatry" quotes the opinions of 30 eminent psychiatrists regarding the teaching of psychoanalysis to psychiatrists. The book is a landmark in the movement toward wider application of psychoanalysis and psychotherapeutic techniques directed toward the reaching of a larger number of patients. The bibliography cites 84 books and articles bearing on the problems discussed in the book.

ALEXANDER, FRANZ AND OTHERS

Psychoanalytic therapy principles and application by Franz Alexander and others. New York The Ronald Press Company 1946 353 p. 22 cm $5.50 3960

Contents: Part I, Principles of psychoanalytic therapy: The scope of psychotherapy. The development of psychoanalytic therapy. The principle of flexibility. The principle of corrective emotional experience. The transference phenomenon. Indications for therapy. Planning psychotherapy. The dynamics of the therapeutic process. Part II, Application of psychoanalytic therapy: Efficacy of brief contact. Emotional readjustment in supportive therapy. Control of the transference relationship. Analysis of character disturbance. Alleviation of rigid standards. Corrective emotional experience through rapport. Variations in goal and technique. The use of brief psychotherapy in war neuroses. Conclusions and outlook. Selected reading list. Index

Note The introductory chapters of this work constitute a concise account of the evolution of psychotherapy through the years, leading to the development of Freud's "transference neurosis. This latter principle, considerably expanded and refined in recent years, is shown throughout the remainder of the book to be the dominant feature of modern therapy Stress is laid on the importance of flexibility in all procedural aspects of treatment, and some 20 case histories are included in moderate detail to illustrate the principles set forth. Though not difficult reading, the book is directed toward a more specialized public than the layman and should be of greatest value and interest to students and professional workers in the various psychiatric areas.

ALEXANDER, FRANZ, AND HELEN ROSS, editors

20 years of psychoanalysis, a symposium in celebration of the twentieth anniversary of the Chicago Institute for Psychoanalysis New York W W Norton & Company, Inc., 1953 308 p 21 cm $5 00 3961

Contents Part I, Twenty years of psychoanalysis A review of two decades, by F Alexander. The place of psychoanalysis in medicine, by A. Gregg. The impact of psychoanalysis on training in psychiatry by M. Levine. Present trends in psychoanalytic training, by M Grotjahn. Psychoanalysis as a basic science, by L. S. Kubie. Psychoanalysis and the biological sciences, by I. A. Mirsky Psychoanalysis and social science, by T Parsons. Part II, Training and research at the Chicago Institute for psychoanalysis. Psychoanalytic training, by G J Mohr Psychoanalytic therapy by A. M. Johnson. Psychoanalytic psychology by G. Piers. Psychosomatic research, by T S. Szasz. Publications, 1932 1952 Faculty 1952

Note The twentieth anniversary of the Chicago Institute for Psychoanalysis was the occasion for a review of developments in psychoanalysis during two decades, of the impress of psychoanalysis on other sciences, and of the activities of the Chicago Institute of Psychoanalysis in training and research during the period 1932 1952 The authors and titles of the papers in which this survey was embodied are given above. Five of the papers are accompanied by discussions. The list of Publications 1932–1952 includes all the publications, individual and collective, of members of the staff of the Chicago Institute for Psychoanalysis during the period of their association with the Institute.

BACH, GEORGE R

Intensive group psychotherapy New York The Ronald Press Company, 1954 446 p 22 cm. $6 00 3962

Contents Part I, Clinical techniques Introductory orientation to group psychotherapy Diagnosis and selection of therapy group members. Preparation and introduction of new patients. Management of early resistance Combining individual and group sessions. Media for vehicles and themes of group communication. Spontaneous discussions—facts relating to personal history Spontaneous activities—advising and socializing. Clinically instigated projective communications—dreams and drawings. Impromptu role playing. Group awareness—reaction and self-regulation. Observations of therapeutic growth processes. Overt aspects of the therapist's role. Part II, Therapeutic effects Analysis of contact operations. Ego growth and individual self-differentiation. Developmental phases in the therapeutic growth process. Resistance against group pressure. Part III Factors of group dynamics in the therapeutic processes Models and concepts of group life. Application of group dynamic principles. Clinical significance of group tension. Group tensions raised by leaders and by isolates. Subgrouping and majority consensus. Bibliography Index of names Index of subjects.

Note This book is based on extensive experience in both individual psychotherapy and group psychotherapy and is addressed to practicing psychologists. During his postgraduate study the author was associated with the late Kurt Lewin, and the book reflects the influence of Lewin and his school in the integration of psychoanalytic theory and group dynamics. The techniques used by the author with two groups in attempting to reach deep levels of psychotherapy are discussed in terms of this orientation. Methods and effects on patients are described in detail with due attention to the role of the therapist. The functions of subgroups are discussed in one chapter Literature references are given.

BENDER, LAURETTA

Child psychiatric techniques diagnostic and therapeutic approach to normal and abnormal development through patterned, expressive, and group behavior Springfield, Ill., Charles C Thomas, 1952 335 p. illus. (part col'd) 26 cm $8 50 3963

Contents Techniques in child psychiatry—a survey Form as a principle in the play of children. Form principles in the abstract drawings and games of children. Genesis and maturation in visual motor gestalten. Deviations in visual motor gestalten in children. Theories of art and its relation to the psychology and psychopathology of childhood. Abstract art as an expression of human problems. The drawing of a man by children with chronic encephalitis. The art of high grade mental defective children depicting their struggle with emotional disorganization and their primitive perceptual experiences. Boats in the art and fantasy of children. Animals in the art and fantasy of children. Group activities on a children's ward as methods of psychotherapy The use of plastic art in psychotherapy Clay modeling as a projective technique in child psychiatry Puppet shows as a psychotherapeutic method. Creative dance. Special school room attitudes and activities for the problem child. The therapy of a child. The art of children and the problems of modern art. Bibliography Name index. Subject index.

—— Aggression, hostility and anxiety in children Springfield, Ill Charles C Thomas, 1953 184 p illus. 26 cm. $5 50 3964

Contents Studies on aggression in children. Children's attitude toward death. Children preoccupied with suicide. Children with homicidal aggression. Firesetting in children. Genesis of hostility in children. Anxiety in disturbed children. Bibliography Subject index. Name index.

—— A dynamic psychopathology of childhood. Springfield Ill. Charles C Thomas, 1954 275 p illus. 26 cm. $7.50 3965

Contents. The psychology of the development of language and the symbol. Hallucinations in children. Imaginary companions. Internalization of fantasy objects in the development of children. Impulsions, compulsions and obsessions. Sexual expression of identification conflicts. Children's reaction to death in the family Psychoanalytic remarks on Alice in Wonderland and Lewis Carroll. Comic books and the ideology of children. Children's reactions to art. Bibliography Index.

—— Psychopathology of children with organic brain disorders. Springfield, Ill. Charles C Thomas 1956 151 p illus. 26 cm. $5 50 3966

Contents The psychological implications of motor development. The psychology of children with organic disturbances of the cerebellum. Psychiatric problems in the organic brain disorders of children. Personality problems of the child with head injury. The psychological Body image problems of the brain-damaged child. The psychological problems and their management in the brain-damaged child—a summary Bibliography Author index. Subject index.

Note. These four books comprise the series "Bellevue Studies of Child Psychiatry" so named because it is based largely on the clinical experience of the Psychiatric Division of Bellevue Hospital Dr Bender is Senior Psychiatrist in charge of the Children's Service of the Psychiatric Division of Bellevue Hospital. The authors are Dr Bender Paul Schilder and other psychiatrists now or formerly associated with the Psychiatric Division of this hospital. The chapters in the books are essentially independent studies except for their common origin and common subject. Most of them appeared first in professional journals. However they have not been merely reprinted, but have been revised and sometimes augmented. In some instances, a chapter consists of an edited synthesis of several papers. The series is a combination of clinical reports and illuminated thought.

BENEDEK, THERESE

Insight and personality adjustment, a study of the psychological effects of war Revised printing New York The Ronald Press Company 1948 305 p 22 cm. $4 50. 3967

Contents Part I, The individual The development to love. Marriage. Psychodynamics of separation. Part II, The soldier Adjustment in the service—the double orientation. Development after

ences of army life. The emotional situation at returning. Failures of adaptation after returning. Part III, The family in war: Mothers and sons. Fathers and sons. Siblings and the veterans. Soldiers and wives—during separation. Veterans and wives—marital readjustment after war-time separation. Mourning for the soldier. The disabled veteran. Parenthood in war. Fathers and children. Part IV Men, women—the changing sexual mores: Adolescents in war-time. The background of the woman of today. Women in the armed forces. The struggle between the sexes. Index.

Note: A book with World War [illegible] in its background. It is written mainly as [illegible] guide for social workers, psychologists, vocational guidance counselors, teachers, and physicians, [illegible] professional duties include those of helping others, particularly soldiers and recently returned veterans, to achieve harmonious emotional balance. The work, however, is so simply and clearly written that it can be readily understood and used to advantage by the average individual concerned with his own mental health. The author is associated with the Institute of Psychoanalysis of Chicago.

BRENMAN MARGARET AND MERTON M GILL

Hypnotherapy a survey of the literature. With appended case reports and an experimental study New York International Universities Press, 1947 276 p. 24 cm. (The Menninger Foundation monograph series. No. 5) $4.50. 3968

Contents Introduction The historical development of hypnotherapy Methods of inducing and terminating hypnosis. Susceptibility to hypnosis. Therapeutic applications. The theory of hypnosis. Summary and statement of problems. Four case studies. An experimental [illegible] Bibliography to Hypnotherapy—a survey of literature. Bibliography to Four case studies. Bibliography to An experimental [illegible] Index

Note The first part of this work is [illegible] survey and digest of the international literature pertaining to the use of hypnotic techniques in psychotherapy It was published separately in 1944 by the Josiah Macy Jr., Foundation and distributed to psychiatrists and psychologists in the United States armed forces. The four case studies illustrate the use of hypnosis in four various types of mental disorders. These cases have been published separately in periodicals. The third part contains [illegible] hitherto unpublished report of an investigation conducted by the senior author into the effects of the "[illegible] system" created in hypnosis upon behavior in the normal state. The experiments described were conducted and the report was prepared as [illegible] thesis in partial fulfillment of the requirements for [illegible] Ph D degree at the University of Kansas.

BRENNER, CHARLES

An elementary textbook of psychoanalysis. New York International Universities Press, Inc. 1955 219 p. 22 cm. $4 00 3969

Contents Two fundamental hypotheses. The drives. The psychic apparatus Parapraxes and wit. Dreams Psychopathology References. Index

Note A well-written, brief account of modern psychoanalytic theory It had its origin in courses given by the author to psychiatric residents in [illegible] large hospital and to graduate students at Yale University Medical School, and is directed to such readers as psychologists social workers, and physicians rather than laymen In addition to explaining the fundamental concepts of contemporary psychoanalysis, [illegible] outlines their development, particularly in the writings of Freud, and provides [illegible] guide to the basic books in English

BROWER, DANIEL AND LAWRENCE E ABT editors

Progress in clinical psychology Volume II. New York Grune & Stratton, 1956. 364 p. 23 cm. $7 75 3970

Contents Part [illegible] Introduction. The development of clinical psychology [illegible] Interactional approach, by L. E. Abt. Part II, Assessment and appraisal processes Introduction. Rorschach method in review, by Z. A. Piotrowski. Thematic apperception and fantasy tests, by F Wyatt, and J B Veroff. Validity of sentence completion tests and human figure drawings, by H. Zimmer Part III, Psychotherapeutic and counseling processes *Introduction. Psychoanalytic* techniques, by K. Eissler. Client-centered therapy by J. Seeman. Current trends in group psychotherapy by G. R. Bach. Reading and other subject disabilities, by A. J Harris. Diagnosis and treatment of speech disorders, by O. W Gens. Play therapy and related techniques, by A. G. Woltmann. Music therapy by E. Podolsky The use of art in therapy by R. E. Hartley and E. L. Gondor. Bibliotherapy, by D. Brower. Progress in psychodrama, by J L. Moreno and L. Yablonsky Hypnosis and clinical psychology by J. M. Schneck. Current trends in research on dreams, by C. S. Hall. Part IV Special applications of clinical psychology: Introduction. Clinical psychology in correctional institutions, by R. J. Corsini. Progress in rehabilitation of the physically handicapped, by M. A. Seidenfeld. Administrative aspects of clinical psychology in state institutions, by M. G. Kott. Part [illegible] Approaches to clinical psychology: Introduction. Neuropsychology of higher processes Cerebral damage and visual perception, by W S. Battersby Statistics in clinical research, by L. S. Kogan. Research in counseling and psychotherapeutic processes, by I. M. Mensh. Index.

Note. The second volume of [illegible] continuing series in [illegible] hich new volumes [illegible] appear at intervals of "every second or third year. The purpose is to record progress in the field of clinical psychology and the method is to publish review articles written by experts on various areas of the field. The articles contained in the second volume are listed by title and author above. Each article includes an extensive list of references to the literature. Volume one of the series was published in two parts in 1952 and [illegible] still in print.

BYCHOWSKI, GUSTAV AND J LOUISE DESPERT editors

Specialized techniques in psychotherapy New York Basic Books, Inc., 1952 371 p. illus. 22 cm. $5.00 3971

Contents (abridged) Narcodiagnosis and narcotherapy by P H. Hoch and P Polatin. Hypnoanalysis as [illegible] psychotherapeutic technique, by R. M. Lindner. The use of the telepathy hypothesis in psychotherapy by J Ehrenwald. Free painting as an auxiliary technique in psychoanalysis, by M. M. Stern. Group therapy as [illegible] specialized psychotherapeutic technique, by H. Spotnitz. Simultaneous treatment of both parents and their child, by B. Mittelmann. Adaptation of the psychoanalytic technique for the treatment of young children with atypical development, by B. Rank. Treatment in child schizophrenia—presentation of [illegible] case, by J L. Despert. Notes on the development of treatment of schizophrenics by psychoanalytic psychotherapy by F Fromm-Reichmann. Psychotherapy with the crippled and disabled, by G. Bychowski. Dynamic therapy for the stutterer by I. P Glauber. Psychotherapeutics of alcoholism, by R. Fox. Some aspects of treatment of sex offenders, by D. Abrahamsen. Psychotherapeutic techniques in psychosomatic medicine, by M Sperling. Differential psychotherapy of borderline states, by V W Eisenstein. The emergency psychotherapy of depression, by L. Bellak. Rorschach perceptanalytic measurement of personality changes during and after intensive psychoanalytically oriented psychotherapy by Z. Piotrowski and M. Schreiber Index.

Note A collection of original papers written by prominent psychiatrists, psychoanalysts and psychologists associated with such organizations as the New York State Psychiatric Institute, New York University-Bellevue Medical Center and the College of Physicians and Surgeons of Columbia University Most of the papers are concise descriptions of recently developed techniques or of the applications of psychoanalytic techniques to the treatment of special groups such as sex offenders. Literature references are included with each paper The viewpoint is Freudian.

COLBY KENNETH MARK

A primer for psychotherapists. New York The Ronald Press Company 1951 167 p. 21 cm. $3.25 3972

Contents Psychotherapy—its aim and its basic theory The patient. The therapist. Time and space conditions for the interview Behavior during the interview Beginning the therapy The middle course of therapy Ending the therapy Schizophrenics. Index of subjects. Index of names.

Note. A small book presenting in simple and readable form the elementary principles of psychotherapy Although especially intended for beginners in the field of psychotherapy its contents should prove of interest and value to all those with professional duties in this field—interns in psychiatric hospitals and clinics, practicing psychiatrists, clinical psychologists, and psychiatric social workers. Information is provided on such matters as office arrangement, how to begin and end the interview how to determine whether the patient is suitable for psychotherapy and behavior during the interview. Much of the text is illustrated by actual quota-

tions from the records of the author's own practice. Except for the last chapter on schizophrenias, the book is directed to the treatment of neuroses.

DOLLARD, JOHN, AND OTHERS

Steps in psychotherapy study of a case of sex fear conflict. By John Dollard, Frank Auld, Jr, Alice Marsden White. Dael Wolfle, editor New York The Macmillan Company, *1953* 222 p 21 cm $4 50 3973

Contents (abridged) Brief psychotherapy—its aims and strategy The interactive episode—a tentative way of dividing psychotherapy into natural units for scientific description. Notes on the supervision of psychotherapy The case of Mrs. B—the patient's defensive story—therapy focused on relationship to husband—the patient struggles with sex fear conflict. *Strategy—interactive episodes in* the case of Mrs. B Tactics—examples of therapeutic techniques in this case. The psychological tests given to Mrs. B. The test reports. Bibliography Glossary Index.

Note Although much of this important book is devoted to the history of a single case, *it is an exposition of the technique of* psychotherapy applicable to selected cases of neurosis which can be carried to completion in about 6 to 30 hours of contact between patient and the therapist. The essentials of the method, which is based on modern learning theory are outlined briefly then the record *of* a specific case carried out by an experienced therapist under the supervision of psychiatrist with more training in psychoanalysis than the therapist *is presented in detail with* transcripts of the 17 interviews bet een therapist and patient and with the supervisor's running comments on the therapist's conduct of the case. One interview is presented verbatim the others are somewhat condensed. After her second interview the patient in this *case was given a battery of personality tests by a* clinical psychologist. Transcripts of the completed tests and two analyses by clinical psychologists of the results are included. The tests are discussed from the standpoint of their usefulness in psychotherapy The book is of interest to clinical psychologists and *psychiatrists as an explicit exposition of the author's technique of* brief psychotherapy and to lay readers as a detailed account of a particular case of psychoanalysis.

DORCUS ROY M, editor

Hypnosis and its therapeutic applications New York The Blakiston Division Mc Graw Hill Book Company, Inc., *1956* 23 cm. $7 50 3974

Contents Theories of hypnosis, by F A. Pattie, Methods of induction susceptibility of subjects, and criteria of hypnosis, by F A. Pattie, Control of memory and perceptive functions by hypnosis, by F J Kirkner Physiological effects of hypnotic stimulation by T R. Sarbin The influence of hypnosis on learning and habit modifying, by R. M Dorcus. The genuineness of some hypnotic phenomena, by F A. Pattie. The use of hypnosis as diagnostic tool, by R. M Dorcus Symptom control by direct suggestion including the control of pain, by M. V Kline. *Hypnosis in supportive therapy* by G. W Shaffer *Hypnoanalysis*—methods and techniques, by H. Lindner Hypnosis in general hospital service, by F J Kirkner Hypnosis in dentistry *by G F Kuehner Index.*

Note A graduate-level textbook developed in courses given by the authors in the Division of Postgraduate Medical Education of *the University* of California at Los Angeles. The over-all approach to hypnosis *is* an eclectic one, and the papers deal separately with various theoretical experimental and therapeutic aspects as well as ith the use of hypnosis to alleviate pain in dentistry *Essentially* the chapters are independent lectures or papers. Each is paged separately and has its own bibliography This feature *facilitates* the use of the book for reference by practicing psychologists and psychoanalysts.

FEDERN, PAUL

Ego psychology and the psychoses Edited with an introduction by Edoardo Weiss New York Basic Books Inc 1952 375 p 24 cm. $6 00 3975

Contents. Introduction. Part I, On ego psychology Some variations in ego feeling. Narcissism in the structure of the ego. Ego feeling in dreams. The awakening of the ego in dreams. A dream *under general anesthesia.* Part II, On the treatment of psychoses. Psychoanalysis of psychoses. Principles of psychotherapy in latent schizophrenia. Mental hygiene of the ego in schizophrenia. *Sexual* certainty Ego psychological aspect of schizophrenia. The ego in schizophrenia. Depersonalization. Ego response to pain. Manic-depressive psychosis. Part III, Narcissism The ego as subject and object in narcissism. On the distinction between healthy and pathological narcissism. *Writings of Paul Federn.* Index.

Note The author of the papers in this book was among the earliest followers of Sigmund Freud, and in 1924 when Freud retired he succeeded to Freud's practice in Vienna. He came to the United States of America in 1938 and practiced and taught here until his death in May 1950. Some of the papers were written in English and are here printed for the first time. Notable in the group is a series of three lectures on schizophrenia originally delivered in June, 1949 at Winter's Veterans Hospital in Topeka, Kansas.

FISHER, VIVIAN EZRA

The meaning and practice of psychotherapy New York The Macmillan Company, 1950 411 *p* 22 cm $5 00 *3976*

Contents Part I A general orientation: Concerning approach *and procedure. Part II, Some psychotic and closely related disorders* Early schizophrenic reactions. Manic-depressive reactions. Early paranoid trends. Involutional-melancholic reactions. Psychopathic reactions. Hypochondriacal reactions. Part III, Psychoneurotic reactions Neurasthenic neurosis. Neurotic anxiety reactions. Some anxiety-equivalent reactions. Anxiety hysteria. *Simple phobias.* Obsessive-compulsive reactions. Conversion hysteria. Mental regression. Reactive depression. Part IV Some maladjustive psychosocial tendencies and reactions: Suicidal tendencies. Compulsive drinking. Symptomatic feelings of inferiority Homosexual tendencies. *Psychical impotence.* Sexual frigidity *Marital discord.* Selected readings. Glossary Index.

Note. The special value of this book lies in its detailed account of psychotherapeutic procedures. The author has drawn from his 20 years of practice cases hich are typical of the various classes of psychotic and psychoneurotic disorders *and has shown* how he treated them and what the outcome of the treatment was. The *cases* are a fair cross-section of what psychotherapist encounters in practice, and they include even such everyday problems as marital discord. Although the author's viewpoint is essentially Freudian, his *therapeutic methods are also tempered* by common sense. The book is potentially of interest not only to psychoanalysts and to medical *graduates preparing for this specialty,* but also to general practitioners who encounter neurotic patients in their general practice.

FROMM REICHMANN *FRIEDA*

Principles of *intensive* psychotherapy Chicago University of Chicago Press 1950, *146* p. 21 cm. (*The University of Chicago* Committee on Publications in *Biology* and Medicine) *$3 75* *3977*

Contents Part I, The psychiatrist—personal and professional requirements. Insight into the emotional aspects of the doctor-patient relationship. The psychiatrist's part in the doctor-patient relationship. The psychiatrist's attitude *toward cultural and ethical values* in its relatedness to the goals of *psychotherapy* Considerations of the psychiatrist in the establishment of the treatment situation. Part II, The psychotherapeutic process—the patient *and the* therapist. The initial interview Introductory remarks on the psychiatrist. The initial interview. Physical therapeutic procedure. *Associations,* marginal thoughts, physical sensations, and their usage in psychotherapy *Interpretation* and its application How to begin and how to terminate psychotherapeutic interview Termination of treatment. *Part III, Adjuncts to intensive* psychotherapy The attitude of the psychiatrist toward intercurrent *events in the lives of the patient* and of the therapist. Contacts with relatives. Reference list. Index.

Note A standard ork on the psychotherapy of severe cases. A principal theme is the importance of the *interpersonal relationship* between psychiatrist and patient. After exploring the phase of psychotherapy *in the first part,* the author then turns to more specific aspects of interviewing and finally she discusses the importance of the psychiatrist attitude towards such disturbing events in the life of the patient as the death of close relatives, divorce, and severe illness. Also, she discusses *briefly the effects of such events* on the psychotherapeutic process, hen they occur. *The book is addressed* not to the patient but to the psychiatrist, *The book is addressed* primarily to practicing psychiatrists.

Fromm-Reichmann, Frieda, and J. L. Moreno editors

Progress in psychotherapy 1956 New York Grune & Stratton, 1956 352 p. 23 cm. $8.50. 3978

Contents (abridged) Part I, Introduction. Notes on the history and philosophy of psychotherapy by F. Fromm-Reichmann. Part II, Principles of psychotherapy. Philosophy of the third psychiatric revolution, with special emphasis on group psychotherapy and psychodrama, by J. L. Moreno. Some unsolved problems of psychoanalytic psychotherapy by L. S. Kubie. Part III, Schools of psychotherapy. Adlerian psychotherapy by R. Dreikurs. Jung's psychologic concepts, by J. Wheelwright. Existential analysis and psychotherapy by L. Binswanger. The whole patient in therapy (Horney) by A. R. Martin. Client-centered therapy—a current view, by C. R. Rogers. Current practices in hypnotherapy by L. R. Wolberg. Psychoanalysis and group psychotherapy by I. Ziferstein and M. Grotjahn. Processes and treatment methods for psychotic children, by O. Shugart. Part IV. Present psychotherapeutic developments in European and South American countries. Part V. Summary. Psychotherapy, present and future, by J. L. Moreno. Author index. Subject index.

Note: Papers presented at the first organized meeting of the Section on Psychotherapy of the American Psychiatric Association in May 1956, were the nucleus of this volume. In addition to these papers, the volume contains contributed papers on the current status of psychotherapy in various European and South American countries and [illegible] contributed paper summarizing the volume and surveying the present and future of psychotherapy written by J. L. Moreno. Altogether, there are 31 papers and discussions of four of them. A selection of the papers is listed by title and author in the abr. contents.

French, Thomas M

The integration of behavior Chicago University of Chicago Press, 1952–54 2 v illus. 21 cm. Vol. 1 $5.00 vol. 2 $6.50. 3979

Contents (abridged) Volume I. Basic postulates. Section I, Our problem and our method. Section II, Systematic analysis of common-sense assumptions. Patterns of motivation. Analysis of the goal-seeking mechanism. Quantitative analysis of the integrative function. Dreams, hopes, wishes, and the unifying effect of an integrative field. Hypotheses and facts. Section III, Integration and disintegration of purposive behavior. Dreams and rational behavior. Case report. Interpretations. A clinical analysis of purposive behavior. Freud's theory of personality structure. Section IV. Effects of frustration. Reactions to obstacles. The nature and effects of frustration. Mitigation of frustration effects. The need for activity and stimulation. Theories about the drives and about play. Experimental studies of frustration. Section V. Present and past. Present and past. Report of further therapeutic sessions. Interpretive comments. Two dream sequences compared. Changing patterns of hopes and fears. The learning process in psychoanalytic therapy. Section VI, The unifying influence of sleep. Section VII, Reconstruction of the integrative process. Appendix. Bibliography. Author index. Subject index. Volume II, The integrative process in dreams. Section I, Cognitive structure. The pattern of dream organization. Reconstructing dream cognitive structure. Section II, Pattern of dream organization. Our case report continued. Checks on our reconstructions. Section III, Historical background of the water symbolism. Systematic interpretation of symbols. Historical analysis of [illegible] dream. Interpretation of the [illegible] [illegible] fantasy. Section IV. Other recurring patterns. Section V. Physiological pattern and interpersonal field. Hand and tool. Cognitive aspects of social integration. Functional significance of [illegible] symbols. Complementary substitution mechanisms. Section VI, The span of the interpersonal field. Dreams and rational behavior. Activating drama and reintegration of pattern. Consequences of inadequate integrative capacity. Expansion and shrinkage of goal in social behavior. Internal drama disintegrating reorganization of an interpersonal field. The present and the pattern of dream organization. Section VII, Pattern of the water dreams. Section VIII, Attempts at internal mastery. Section IX, Survey of relations between dream patterns. A survey of interrelations between physiological patterns. Recapitulation and preview. Appendix. Bibliography. Author index. Subject index. Index of dreams.

Note: A detailed analysis of the thoughts and acts of one person during two years of analytic treatment. The volumes are the first two of its projected volumes on the subject of human behavior the objects of which are to analyze human behavior into elementary reaction patterns and then to show how these elementary reaction patterns are combined and co-ordinated. The author assumes as working hypotheses that rational behavior, neuroses, and dreams have much in common, and that in irrational behavior are found fragments of the integrative mechanism which account for rational behavior. In the first volume the author starts with the commonsense notions of motivation and insight, constructs a picture of the integrative apparatus and how it works, then checks this picture against the clinical data of the case history. In the second volume the author studies intensively the integrative process in dreams and shows that dreams have logical structures and that the integrative patterns in different dreams of the same person are related to one another and to the structure of the dreamer's personality. A third volume is scheduled for publication in 1957.

Harrower, Molly

Appraising personality the use of psychological tests in the practice of medicine. New York W W Norton & Company Inc., 1952 197 p. illus. 24 cm $1.89 3980

Contents: Part one. What does the clinical psychologist do? Tools which the clinical psychologist uses. Some unnecessary misunderstandings. Part two. The creation of miniature psychological worlds (Rorschach inkblot test). Contrasting psychological worlds (Rorschach inkblot test). There's more to it than the I.Q. (Wechsler-Bellevue intelligence scale). Projection via the pencil point (figure drawings and most unpleasant concept test). What's in a face (Szondi test). Psychological barometers (Szondi test). The self in sentences (Miale-Holsopple sentence completion test). Part three. Which twin has epilepsy? Are psychogenic factors involved? Can this girl be helped by psychotherapy? Schizophrenia or the adolescent struggle? Fate and personality. Concluding remarks. Suggested reading. Index.

Note: An interesting, somewhat informal presentation of the methods of clinical psychology and of their uses in medicine. It describes the scope of clinical psychology and its techniques, especially the standard tests such as the Rorschach. The explanations are cast in the form of conversations between psychologist and physician. In the third part, several case histories are included as concrete illustrations of co-operation between physicians and clinical psychologists in the treatment of patients. The author is an eminent psychologist. The book is directed primarily to graduate practitioners of medicine.

Heron, William T

Clinical applications of suggestion and hypnosis. Second edition. Springfield, Ill. Charles C Thomas, 1953 137 p. 20 cm. $3 75 3981

Contents: Introduction. Suggestion and suggestibility. The professional use of hypnosis. How to approach your patient. Degrees of the hypnotic state. Methods of induction. Posthypnotic suggestions. Precautions in the use of hypnosis. Group hypnosis. Case histories. Bibliography. Index.

Note: A practical manual directed to members of such professions as medicine, dentistry, and psychology. It provides a relatively brief but nevertheless useful introduction to the uses of suggestion and hypnosis in these professions. The chapter on suggestion and suggestibility deals mainly with the use of suggestion when the patient is in the state of complete wakefulness. The principles of controlling by suggestion are then applied to the induction of the hypnotic state. Methods of induction which the author has found practical and effective are explicitly described. The case histories included all illustrate the use of hypnosis in dentistry but the discussions of related information and descriptions of technique apply as well to uses in other professions, particularly clinical medicine and psychotherapy. The bibliography is selected and annotated.

Hill, Lewis B

Psychotherapeutic intervention in schizophrenia. Chicago University of Chicago Press 1955 216 p. 23 cm. (The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $5.00. 3982

Contents. On becoming a psychotherapist. What is schizophrenia? Acute schizophrenia—the experience and the treatment. On being a person prone to schizophrenic episodes. On infancy—the period of becoming a person. The mothers of schizophrenics. On the infancy of the potential schizophrenic. Psychotherapy—the patient's contribution—the therapist's contribution.

Note. The author, a member of the faculty of the Johns Hopkins School of Medicine, has based this book on his many years of experience in the practice of psychotherapy. The volume is addressed to readers who are familiar with the picture of schizophrenia and are in contact with schizophrenic patients, such as medical graduates who are preparing for the specialty of psychiatry. The book contains many penetrating observations on schizophrenia such as the following: "Rather than predicate theoretical brain disorder which permits random, meaningless associations, I would guess that schizophrenic processes of association are blocked according to their explicit interdictions against the occurrence of specific categories of thought. . . . I have come to feel that schizophrenics, like everyone else, try to make sense, try to express their sense of the nature of things."

HINCKLEY, ROBERT GEORGE, AND LYDIA HERMANN

Group treatment in psychotherapy: a report of experience. Minneapolis: University of Minnesota Press, 1951. 136 p. 24 cm. $3.00 3983

Contents. The origins and aims of this study. The functions of the group. The function of the therapist. The role of the patient. Dynamics of group movement. Functional mechanics in the group. Highlights from a group. Appendix—case load. Index.

Note. A study of group therapy in practice. It is based on extensive experience in the Students' Mental Hygiene Clinic of the University of Minnesota. The presentation is designed to illustrate practical techniques in group therapy and to indicate both the limitations and potentialities of this type of treatment. The text includes numerous transcripts of the conversations of groups undergoing therapy. The authors conclude that ". . . well planned and utilized group therapy is a very valuable method and tool. It differs from individual treatment, but discreetly and skillfully employed it can be well used for many patients as the complete mode of treatment."

HORNEY, KAREN

New ways in psychoanalysis. New York: W. W. Norton & Company, Inc., 1939. 313 p. 22 cm. $3.95 3984

Contents. Introduction. Fundamentals of psychoanalysis. Some general premises of Freud's thinking. Libido theory. Oedipus complex. Concept of narcissism. Feminine psychology. Death instinct. Emphasis on childhood. Concept of transference. Culture and neuroses. The "ego" and the "id." Anxiety. Concept of the "super-ego." Neurotic guilt feelings. Masochistic phenomena. Psychoanalytic therapy. Index.

Note. This book represents the outcome of the author's dissatisfaction with therapeutic results obtained by accepted psychoanalytical therapy, her doubts as to the validity of some of Freud's concepts, and consequent elimination of the debatable elements and the development of her own theories. Psychoanalysis, she believes, should outgrow the limitations set by its being an instinctivistic and a genetic psychology and should center its attention on actual character structure. The book is directed to specialists in this field, but also to all other persons seriously interested in applying psychoanalysis to education, social work, and anthropology.

HORNEY, KAREN

Self analysis. New York: W. W. Norton & Company, Inc., 1942. 309 p. 22 cm. $3.95 3985

Contents. Introduction. Feasibility and desirability of self analysis. The driving forces in neuroses. Stages of psychoanalytic understanding. The patient's share in the psychoanalytic process. The analyst's share in the psychoanalytic process. Occasional self analysis. Systematic self-analysis: preliminaries. Systematic self analysis of a morbid dependency. Spirit and rules of systematic self-analysis. Dealing with resistances. Limitations of self-analysis. Index.

Note. Professional analytical help cannot reach everyone whom it is capable of benefiting; for that reason the question of the extent to which the individual can psychoanalyze himself becomes important. The author discusses the various aspects of the potentialities, as well as the limitations, of self-analysis.

HUNT, WILLIAM A.

The clinical psychologist. Springfield, Ill.: Charles C Thomas, 1956. 206 p. 21 cm. $5.50. 3986

Contents. Part I, What is a clinical psychologist? Part II, How the clinical psychologist came to be. Part III, The problems and future of clinical psychology. References.

Note. Written by a psychologist, he is Chairman of the Department of Psychology of Northwestern University, this book is an expert examination of the development of clinical psychology and of its relationships to medicine, particularly to psychiatry. It is a readable book that throws much light on the current status of clinical psychology in the United States of America and at the same time offers sound suggestions for the resolving of tensions between clinical psychologists who usually have no medical training and psychiatrists with medical training. Its contents were originally delivered as the Thomas William Salmon lectures for 1954 at Northwestern University.

INGHAM, HARRINGTON V., AND LEONORE R. LOVE

The process of psychotherapy. New York: McGraw Hill Book Company, Inc., 1954. 270 p. 23 cm. $5.50 3987

Contents. The place of psychotherapy in our society. The psychotherapist. The dynamic aspects of psychotherapy. The rational part of the relationship—rapport. The irrational part of the relationship—transference. The therapist's use of the relationship. The patient's emotional response. The therapist's procedure in insight development. The patient's procedures in insight development. Optional methods in psychotherapy. Planning therapy—evaluation of the patient—organization of treatment. Adjuncts to psychotherapy. Illustration of principles. Index.

Note. A straightforward presentation of the methods of psychotherapy in the treatment of adults on an individual basis. There is little attempt to explain theory, even for purposes of background. Instead, the space is devoted to the relationship between psychotherapist and patient, to the ways in which the therapist uses this relationship to aid the patient, and to other aspects of psychotherapy of interest to patients and potential patients. Two cases are presented in detail, with authors' comments explaining the changing attitudes of the patients and the strategy of the therapists as these are illustrated in the case transcripts. The book is written in a readable style that contains few technical terms. It is suitable for beginning students and educated lay readers.

KLAPMAN, JACOB W.

Group psychotherapy: theory and practice. New York: Grune & Stratton, 1946. 344 p. illus. 23 cm. $4.50 3988

Contents. Part I, Historical and anthropological considerations. Historical. Mental, moral, and cultural origins. Part II, Dynamics. Group transferences and formations—dynamics of therapy. Interrelationship of group and individual psychotherapy. Re-education. Part III, Therapy. Methods of administration. Affective re-education—psychodrama. Affective re-education in the outpatient clinic. Group psychotherapy with "problem children" and their mothers. Group psychotherapy in private psychiatric practice. Affective re-education in the mental hospital. Methods of affective re-education. Orientation re-educational psychotherapy. Ancillaries in group psychotherapy. Bibliography. Index.

Note. An attempt at a summation of current usages in group psychotherapy. It also indicates some guiding, although admittedly tentative, principles for those who contemplate the use of group psychotherapy as a re-educational process—psychiatrists and physicians especially. The therapy of a number of representative groups is depicted. The author draws upon experiences during and after World War II when group psychotherapy was widely, because of the large numbers of military psychiatric casualties, recognized generally as an effective type of psychotherapy.

KROUT, MAURICE H., editor

Psychology, psychiatry and the public interest. Minneapolis: University of Minnesota Press, 1956. 217 p. 22 cm. $4.00. 3989

Contents. Psychology and psychiatry—an introduction to a modern social problem. Psychotherapy and the American public, by M.

land. The roots of psychology and psychiatry, by A. Ellis. Psychology and psychiatry—a problem of identity, by H. Kelger. The psychiatrists' position on the role of psychology in society. The relation of medicine and psychology—a statement by organized psychiatry. The role of the clinical psychologist as presently conceived by the Veterans' Administration Program. A psychiatrist's observations on the education of clinical psychology, by F. E. [illegible]. The relations of psychiatry and psychology to man, by A. [illegible]. The relation... by P. E. Kasten. The psychologists' position on their role in collaborative situations. The psychologist's orientation in the clinical field, by P. W. Hoffman. A basic problem of psychology and psychiatry, by W. [illegible]. The functions of psychology in medical situations, by G. K. Yacorzynski. The psychologist and the psychiatrist in a psychological clinic, by R. M. Collier. Psychology and psychiatry in educational contexts, by F. McKinney. The psychologists' position on their role in independent practice. Can psychologists and psychiatrists share their responsibility to the public? by M. H. Krout. Is there need for psychology in psychotherapy? by L. K. Schwartz. A physician-patient or therapist-client relationship? by C. R. Rogers. Psychotherapeutics, psychological and medical, by H. Rome. Who shall practice psychotherapy? by R. M. Lindner. The work and training of the psychological therapist, by R. May. Evolving standards for practicing psychologists, by A. Ellis. Bibliography. Notes on contributors. Index.

Note: Currently there is considerable controversy in the United States of America as to whether the practice of psychotherapy should be the prerogative of physicians trained in medicine and specializing in psychiatry or whether graduate psychologists who lack training in medicine should also be permitted to practice it. This collection of papers is an attempt to present all sides of the issue. The papers grouped in the first section deal with aspects of the interrelationships of psychologists and psychiatrists working together. The second part consists of the text of a resolution on relations of medicine and psychology approved by the Board of Trustees of the American Medical Association, the Council of the American Psychiatric Association, and the Executive Council of the American Psychoanalytic Association; a letter stating the policy of the U. S. Veterans' Administration; and six papers written by psychiatrists. All of the other papers were written by psychologists.

LAW STANLEY GUY

Therapy through interview New York McGraw Hill Book Company Inc., 1948 313 p. 21 cm. (McGraw Hill series in health science Amos Christie, consulting editor) $5.50 3990

Contents (abridged) The personality of the doctor. Medicine versus psychiatry. The therapeutic situation. Supplementary reading. Index.

Note. This book is intended to aid the general practitioner in the technique of psychiatric interviewing for the treatment of borderline neurotic patients encountered during his general practice work. While psychological and physiological background material is contained throughout the text major emphasis is given to the techniques of the interview. The dialogue method of interview is stressed, and the procedures used are illustrated by a series of composite case histories describing the typical features of common cases of psychoneuroses.

LEWIN BERTRAM DAVID

The psychoanalysis of elation. New York W W Norton & Company Inc. *1950. 200* p. 21 cm. $3.50 3991

Contents Introduction—a psychoanalytic approach to elation. Literary survey of depression and elation. Denial, other defense mechanisms, and the analytic process of cure. Mania and sleep. Addenda to the theory of oral erotism. The oral triad in the elations. Elation and the sense of reality. Bibliography. Index.

Note A study of elation or "pathological happiness." It is written in the terminology of psychoanalysis and is addressed primarily to specialists in that field. The bibliography is comprehensive.

LORAND SÁNDOR

Technique of psychoanalytic therapy New York International Universities Press Inc. 1946 251 p. 22 cm. $4 50 3992

Contents Introduction. Interpretation. Anxieties and phobias. Sexual difficulties in the male. Sexual difficulties in the female. Compulsion neurosis. Character neurosis. Neurotic depression. Dream analysis. Problems of counter transference. Termination. Bibliography. Index.

Note: Based upon an advanced seminar in the technique of psychoanalysis given at the New York Psychoanalytic Institute over a period of years, this book discusses technical procedures and special technical problems of psychoanalytic therapy. The author, who acknowledges his indebtedness to Freud and his associates, draws upon his own experiences as a clinical analyst to illustrate the methods of technique. The bibliography is 11 pages in length.

LORAND SÁNDOR editor

Psychoanalysis today New York International University Press, 1944 404 p. illus. 23 cm. (Medical war books) $6.00 3993

Contents: Preface, by S. Lorand. Foreword, by S. E. Jelliffe. Freud's influence on medicine, by S. Ferenczi. Psychoanalysis and internal medicine, by S. E. Jelliffe. Psychosomatic medicine, by F. Dunbar. Therapeutic approach to psychosomatic problems, by O. S. English. Child analysis, by M. Kris. The early development of conscience in the child, by M. Klein. Child-parent relationship, by C. P. Oberndorf. Prevention of mental disease in childhood, by T. H. Ames. Juvenile delinquency, by I. T. Broadwin. Psychoanalytic social work, by M. E. Kenworthy. Mental hygiene, by J. [illegible]. Development of the ego-psychology, by F. Alexander. Dream mechanisms and interpretations, by Monroe A. Meyer. Sexuality and its role in the neuroses, by A. A. Brill. Hysterias and phobias, by A. Kardiner. Obsessional neuroses, by B. D. Lewin. Character formation, by S. Lorand. Pathological character formation, by E. Glover. War neurosis, by E. Simmel. Neuroses and psychoses, by P. Schilder. Manic-depressive psychoses, by G. Zilboorg. Schizophrenias, by L. E. Hinsie. Organic psychoses, by J. H. W. Van Ophuijsen. The technique of psychoanalytic therapy, by S. Lorand. Psychotherapy and psychoanalysis, by H. A. Bunker. The psychology of religion, by E. Jones. Psychoanalysis and sociology, by H. Hartmann. Problems of crime, by P. Schilder. Approaches to art, by E. Kris. Psychoanalysis and literature, by F. Wittels. Psychoanalysis and anthropology, by G. Róheim.

Note A collection of papers by well known authorities.

MAY ROLLO

The meaning of anxiety New York The Ronald Press Company *1950. 376* p. *22* cm. $5.00. 3994

Contents (abridged) Part I. Modern interpretations of anxiety. Philosophical forerunners to modern theories of anxiety. Anxiety interpreted biologically. Anxiety interpreted psychologically. Anxiety interpreted culturally. Summary and synthesis of theories of anxiety. Part II. Clinical analysis of anxiety. Case studies demonstrating anxiety. Appendix: Anxiety check-lists. Bibliography. Index of names. Index of subjects.

Note. A comprehensive study in which the author examines the various theories of anxiety and finally presents conclusions based partly on a synthesis of this material and partly on his own observations. The first part in which the theories are stated and discussed runs to 214 pages. The remainder of the book is devoted to the analysis of typical cases and to the author's conclusions. The book is written in a lucid style which makes it available to anyone with an elementary knowledge of psychological terms. However the level of treatment and subject content make it of interest to professional clinical psychologists to whom it is actually addressed.

MEEHL PAUL E.

Clinical versus statistical prediction a theoretical analysis and a review of the *evidence*. Minneapolis University of Minnesota Press, 1954 149 p illus. 22 cm. $3.00. 3995

Contents: The problem. Some preliminary distinctions. The rationality of inference from class membership. The special powers of the clinician. The theoretical argument of T. R. Sarbin. The problem of the logical reconstruction of clinical activity. Remarks on clinical intuition. *Empirical* comparisons of clinical and actuarial prediction. General remarks on quantification of clinical material. A final word—unavoidability of statistics. References. Index.

Note: The conflict between advocates of the clinical and the statistical methods of predicting human behavior is a major one in the field of clinical psychology, and it crops up also in other behavioral sciences. It is examined in detail in this book. The factual material bearing on it is reviewed and analyzed. The author states

his own thesis as follows "There is no convincing reason to assume that explicitly formalized mathematical rules and the clinician's creativity are equally suited for any given kind of task, or that their comparative effectiveness is the same for different tasks. Current clinical practice should be much more critically examined with this in mind than it has been. His remarks on the problem of logical reconstruction of clinical activity and on clinical intuition merit reading by anyone concerned with the problem. In the chapter Empirical comparisons of clinical and actuarial prediction, he critically examines the previously published studies bearing on the clinical-actuarial issue.

MOWRER, O HOBART

Psychotherapy, theory and research By O Hobart Mowrer and twenty-one contributors New York The Ronald Press Company, 1953 700 p illus. 24 cm. $10 00 3996

Contents Introduction—psychotherapy as service and research. Part I, Theory concepts, and applications Historical and philosophical presuppositions for understanding therapy by R. May Some directions and end points in therapy by C. R. Rogers. Neurosis and psychotherapy as interpersonal process—a synopsis, by O. H. Mowrer The collaboration of client and counselor by W G. Perry jr and S. G. Estes. Some observations on psychotherapy and the learning process, by E. J Shoben, jr Neurosis, psychotherapy and two-factor learning theory by O. H. Mowrer The structural problem in schizophrenia—therapeutic implications, by M. Wexler. Psychotherapy and its public health implication, by J M. Robbitt. Part II, Research methods and results Research perspectives in client-centered therapy by J Seeman and N J Raskin. A method of measuring tension in written documents, by J Dollard and O H. Mowrer Further studies utilizing the discomfort-relief quotient, by O H. Mowrer and others. Quantitative studies on the role of therapists feelings toward their patients, by F E. Fiedler. "Q technique"—description, history and critique, by O. H. Mowrer. Correlations between persons as a research tool, by L. J Cronbach. Intraindividual repetitive measurements (P technique) in understanding psychotherapeutic change, by L. Luborsky A statistical method for studying personality integration by L. L. McQuitty Changes in verbal behavior during psychotherapy by O. H. Mowrer Tension changes during psychotherapy with special reference to resistance, by O H. Mowrer and others. Physiological changes during psychotherapy by L. I. O'Kelly Bibliography Index of names. Index of subjects.

Note. Written largely by clinical psychologists experienced in psychotherapy this volume represents a serious effort to present a substantial body of contemporary thought of clinical psychologists on theory and technique of psychotherapy as well as to present results of recent and current research. It contains the chapters and papers whose titles and authors are listed above. All of the papers but two are original ones written especially for this volume. The bibliography is an extensive one that includes references to work on psychotherapy written from the psychoanalytic viewpoint as well as from the viewpoint of clinical psychology

OBERNDORF, C P

A history of psychoanalysis in America. New York Grune & Stratton, 1953 280 p 21 cm $5 75 3997

Contents Early nineteenth century precursors of Freud's thinking. Anticipations of Freud" thinking by novelists and others in New England. Psychoanalytic theory crystallizes and reaches America. A personal account of psychiatry in medicine at the turn of the century Psychoanalytic psychiatry takes root at Manhattan State Hospital Clinical practice and organization of psychoanalysis expand, 1910–1920. The impact of psychoanalysis on medical education and the public, 1910–1920. Recollections of psychoanalysts in Vienna, 1921 1922 Status of psychoanalysis at the beginning of the third decade Stormy years in psychoanalysis under New York leadership, 1920–1930 Formal instruction in psychoanalysis develops, 1930–1940. Post World War II deviations in psychoanalytic conceptions. Comments on current tendencies. Appendix. Index.

Note An account in detail written by a psychiatrist who took an active part in the psychoanalytic movement in the United States of America. It combines both readability and reference value. American precursors of psychoanalysis early reactions to Freud" with legs, organizations, publications, and personalities are all covered. The appendix includes a chronological outline of psychoanalysis in America, brief biographical notes on leading contributors to psychiatry both European and American, and information on associations, societies and congresses.

PENNINGTON, L A, AND IRWIN A. BERG, editors

An introduction to clinical psychology Second edition. New York The Ronald Press Company, 1954 709 p. illus. 23 cm. $7.00. 3998

Contents Part I, Introduction The meaning of clinical psychology by R. B. Cattell. Theoretical frames of reference in clinical psychology by E. J Shoben, jr What is normal behavior? by O. H. Mowrer Part II, Clinical methods: The clinical interview and the case record, by I. A. Berg. Intelligence testing and clinical practice, by A. M. Garner Interest and personality measurement, by R. F Berdie. Projective methods, by H. D. Sargent. Part III, The problem approach in the clinic Problems of childhood and adolescence, by B. R. McCandless. Mental and educational retardation by W L. Wilkins. Psychosexual and marital problems, by A. Ellis. Psychosomatic medicine and the psychologist, by G. Saslow. The physically handicapped, by S. S. Maradi Speech disorders, by C. Van Riper. The psychoneuroses, by G. R. Pascal. The psychoses, by R. M. Dorcus. Psychopathic and criminal behavior, by L. A. Pennington. Psychological trends and problems in later maturity, by R. G. Kuhlen. Part IV Treatment approaches: Psychotherapy—an overview by J C. Watkins. Direct approaches to treatment, by F McKinney Client-centered therapy by W U Snyder. Psychoanalytically oriented therapy by J H. Pathman. Group psychotherapy by H. S. Colley Therapeutic techniques with children, by S. W Dillon. Rehabilitative approaches, by L. A. Pennington. Part V, The clinician and research: Research in clinical psychology, by L. S. Kogan. Index of names. Index of subjects.

Note. A textbook and collection of readings for college students who are preparing for the profession of clinical psychology One of the authors is a physician specializing in psychiatry All of the other contributors and the editors are psychologists. The chapters were written especially for the book, that is to say they are not reprints from other publications. The first edition was published in 1948. Ten new chapters have been added in this second edition, and the chapters carried over from the first edition have been revised. A selection of literature published since the first edition was written has been added to the lists of references.

PHILLIPS, E LAKIN

Psychotherapy, a modern theory and practice. Englewood Cliffs, N J Prentice-Hall, Inc., 1956 334 p illus. 22 cm. (Prentice-Hall psychology series, Paul Meehl, editor) $5.50. 3999

Contents Interference theory—examples of therapy The idiographic-nomothetic controversy Is the concept of the unconscious necessary? The conflict paradigm—psychopathology and psychotherapy Psychotherapy—general considerations. Psychotherapy—special topics. Psychotherapy as communicative act. Summary. Special studies. The interaction paradigm in psychotherapy—a study Three protocols. Index.

Note In this book, a new theory of behavior is proposed, and its applications in psychotherapy are discussed and illustrated in condensed case histories, and more fully in three case protocols included in the terminal chapter Two chapters are devoted to examining the basic ideas on which present-day psychotherapy is based. The new theory is described by the author in these words: "Very briefly considered, interference theory constitutes the viewpoint that behavior—pathological or otherwise—is a result of the own assertions made by the individual about himself or about his relationship with others. The person chooses now one kind of behavior now another depending on what kind of behavior seems likely to bring (from the environment) confirmation of his assertions. Certain behavior possibilities 'interfere' with each other. the whole process with which we are concerned goes on in the open. Depth views, which regard the mental life of people as having a kind of deep-going reservoir from which dialectical forces spring, are entirely anathema to the present viewpoint.

THE PSYCHOANALYTIC STUDY OF THE CHILD. Volume VIII. Managing editors Ruth S. Eissler, and others. New York International Universities Press, Inc., 1953 412 p. 23 cm. $10 00 4000

Contents. Problems of early development: Some remarks on infant observation, by A. Freud. The study of variations of early

Medicine

RADO SANDOR, AND GEORGE E. DANIELS, editors

Changing concepts of psychoanalytic medicine. Proceedings of the Decennial Celebration of the Columbia University Psychoanalytic Clinic, March 19 and 20 1955 New York Grune & Stratton, 1956 248 p. illus. 22 cm. $6.75 4005

Contents: History of the Columbia Psychoanalytic Clinic, [illegible]

Ackerman. A family study unit, by L M. Marcus. Clinical papers The adaptational technique of psychoanalytic therapy by L. Ovesey and J Jameson. Psychopathology of hunger and appetite, by H. Bruch. Psychodynamic patterns in the sexual offender mechanisms of conscience formation, by B C. Glueck Jr Research in schizophrenia. Multidisciplinary research in psychiatry by R. G. Heath and B K. Leach. Schizotypal organization—preliminary report on a clinical study of schizophrenia, by S. Rado and others. Index.

Note Most of the papers in this volume pertain to the history and work of the Psychoanalytic Clinic, unit of the College of *Physicians and Surgeons* of Columbia University The clinic is primarily a graduate school of psychoanalytic medicine. All but six of the contributors to the volume are members of its faculty One of the exceptions is the paper *by Heath and Leach* which describes a research program of the Department of Psychiatry and Neurology of Tulane University School of Medicine.

RADO, SANDOR

Psychoanalysis of behavior, collected papers New York Grune & Stratton, 1956 387 p illus 24 cm. $7 75 4006

Contents (abridged) Contributions to classical psychodynamics. Quest for a basic conceptual scheme. Development of adaptational psychodynamics. Index.

Note Twenty-eight of the author's papers first published in German, English and American periodicals and books from 1933 to 1956 are reprinted in this volume. Four of the papers have been somewhat revised the texts of the others are unchanged except for translation into English of those originally published in German. The papers are grouped under the four headings listed above.

RICHARDS, THOMAS WILLIAM

Modern clinical psychology New York McGraw Hill Book Company, Inc., 1946 331 p 23 cm (McGraw Hill publications in psychology J F Dashiell, consulting editor) $5 00 4007

Contents Introduction to clinical psychology as a specialty Orientation to clinical psychology Methods of psychological appraisal. Approach to the patient. *Physical examination. Appraisal* of capacity—methods of study Appraisal of capacity—inadequacies of capacity Appraisal of motivation—methods of study Appraisal of motivation—inadequacies of motivation. Appraisal of control—general considerations and clinical methods of study Appraisal of control—anxiety and its solutions. Appraisal of control—the series of inadequate solutions from the socially oriented to the personally elaborated. Precipitation and predisposition. Readjustment. Appendix. Bibliography *List of visual aids. Index.*

Note A compact introduction to this branch of psychology It is designed especially for third-year undergraduate college students who are preparing to specialize in psychology or in some other profession where a knowledge of clinical psychology will be useful The major portion of the text consists of *descriptions of methods* which are used in the appraisal of the intellectual capacities, motivation, and control of maladjusted persons. For an introductory book the bibliography is extensive.

ROGERS, CARL R

Client-centered therapy its current practice implications and theory With chapters contributed by Elaine Dorfman Thomas Gordon Nicholas Hobbs Boston Houghton Mifflin Company 1951 560 p 22 cm. $5 00 4008

Contents Part I, A current view of client-centered therapy The developing character *of* client-centered therapy *The attitude* and orientation of the counselor The therapeutic relationship as experienced by the client. *The process of therapy Three questions* raised by other viewpoints—transference, diagnosis, applicability Part II, The application of client-centered therapy *Play therapy* by E. Dorfman. Group-centered psychotherapy by N Hobbs. Group-centered leadership and administration, by T Gordon. Student centered teaching. The training of counselors and therapists. Part III, Implications for psychological theory A theory of personality and behavior References. Index.

Note. The author's *Counseling and psychotherapy*, 1942 described below was *the first statement* in book form of a then new approach to psychotherapy which has since been refined and broadened in its applications. *Client-centered therapy* presents an up-to-date exposition reflecting these developments and incorporating more than a decade of experience with it. The book is basic one for this school of psychotherapy The author is Professor of Psychology and Executive Secretary of the Counseling Center of the University of Chicago.

ROGERS, CARL R

The clinical treatment of the problem child. Boston Houghton Mifflin Company, 1939 393 p 22 cm. $4 50 4009

Contents (abridged) Part I, Ways of understanding the child. A point of view Methods of diagnosis. The component-factor method of diagnosis. Part II, Change of environment as treatment: The foster home as a *means of treatment. Institutional* placement as treatment for behavior problems. The advisability of removing child from home. Part III, Treatment through modifying the environment Family attitudes as a focus of treatment. The school's part in changing behavior The intelligent use of clubs, groups, and camps. *Part IV Dealing with the individual: Treatment interview* techniques education persuasion, release. Treatment interviews: deeper therapies. Making treatment effective. Appendix. Index.

Note. A well-written book based on wide clinical experience in the treatment of disturbed children. Its viewpoint is eclectic and practical. The emphasis is on *how* problem children are treated and the effects of the treatment. Numerous case histories are discussed. Professional workers with children including psychologists, pediatricians, and social workers rather than laymen are the intended audience.

ROGERS, CARL R

Counseling and psychotherapy, newer concepts in practice. Boston Houghton Mifflin Company, 1942 450 p. 22 cm. $5 00. 4010

Contents, Part I, An *overview* The place of counseling. Old and new viewpoints in counseling and psychotherapy Part II, Initial problems faced by the counselor: When is counseling indicated? *The creation of* counseling relationship. The directive versus the non-directive approach. Part III, The process of counseling: Releasing expression. The achievement of *insight. The closing phase.* Some practical questions. Part IV The case of Herbert Bryan. Recent trends in therapy—a selected bibliography Index.

Note A pioneer work when it was first published, this book is still valuable to any student of clinical psychology It was the first full-scale statement of "non-directive" therapy now better known as "client-centered therapy It provided also a view of broad area of psychologic counseling and psychotherapy that was not based on psychoanalysis.

ROGERS, CARL R., AND ROSALIND F DYMOND, editors

Psychotherapy and personality change. Coordinated research studies in the client centered approach. Chicago University of Chicago Press 1954 447 p. 24 cm. $7.50. 4011

Contents I, Introduction Developing program of research in psychotherapy by *T Gordon* and others. *Design*, procedures, and subjects for the first block, by D L. Grummon. II, *Findings*: Changes in the relation between *self-concepts* and ideal concepts consequent upon client-centered counseling, by J. M. Butler and G. V Haigh. Adjustment changes over therapy *from self-sorts*, by R. F Dymond. A comparative study of the changes in the concepts of the self the ordinary person, and the ideal in eight cases by E. C. Rudikoff *Counselor judgments of therapeutic process* and outcome, by J Seeman. *Adjustment* changes over therapy from thematic apperception by R. F Dymond. *Changes* over client-centered therapy evaluated on psychoanalytically based thematic apperception test scales, by D L. Grummon and *E. S. John.* Changes in *self-awareness during* client-centered therapy by M. J. Vargas. The effect of psychotherapy upon certain attitudes toward others, by T Gordon and D *S. Cartwright. Ethnocentrism as* limiting factor in verbal therapy by R. E. Tougas. Changes in the maturity of behavior as related to therapy by C. R. Rogers. Personality changes as function of time in persons motivated for

therapy, by D. L. Grummon. III. Case studies: The case of Mrs. Oak—a research analysis, by C. R. Rogers. The case of Mr. Bebb—the analysis of a failure case, by C. R. Rogers. IV. Conclusion—An overview of the research and some questions for the future, by C. R. Rogers. Index.

Note: The Counseling Center of the University of Chicago instituted a large-scale coordinated research program in psychotherapy. The results of its first four years are presented and analyzed in this book. The plan of the program, its design and procedures are described in the introductory chapters. Briefly, the program was planned to discover the changes in patients before and after therapy and to determine which changes were due to the therapy. The research was well designed and carefully controlled. Results bear out the value of psychotherapy to individual patients, and the book as a whole demonstrates that psychotherapeutic results are capable of scientific evaluation. Approximately 150 pages are devoted to the detailed analysis of two cases, one that was successful and one in which the psychotherapy failed.

ROSEN, JOHN N.

Direct analysis: selected papers. New York, Grune & Stratton, 1953. 184 p. 23 cm. $4.25 4012

Contents: Direct analysis—general principles. A method of resolving acute catatonic excitement. The treatment of schizophrenic psychosis by direct analytic therapy. The perverse mother. The several faces of schizophrenia. The prognostic outlook with direct analysis. [illegible] of [illegible] techniques. [illegible] Some observations on [illegible] conceptions of [illegible]. Index.

Note: The papers in this book describe an analytic technique developed by the author primarily for the treatment of psychotic patients and illustrate its application in specific cases. The essence of the technique is that a direct method of deep interpretation is employed without the usual preparation of the patient. The theoretical basis is the dream psychology of Freud. Some of the papers were previously published in journals, but others were written for the book.

SCHEIDLINGER, SAUL

Psychoanalysis and group behavior: a study of Freudian group psychology. New York, W. W. Norton & Company, Inc., 1952. 245 p. 22 cm. $4.50. 4013

Contents: Part I. The Freudian concepts of group behavior. The social tendencies of man—a historical background. The Freudian theory of the crowd and social tendencies. Basic group phenomena. The role of the leader. Intra- and inter-group conflicts. Part II. Implications and applications. The Freudian concepts of group behavior—a reappraisal. Some implications of Freudian group psychology. The Freudian concepts and other fields of group study. Psychoanalysis and educational practice. The relationship of psychoanalysis to group psychotherapy. Bibliography. Index.

Note: The author believes that the emotional factors in group behavior have not been given sufficient importance by the psychologists. The purpose of his book, written for social psychologists, group workers, and teachers, is to examine the contributions of the orthodox Freudians to our understanding of group psychology. The author does not favor the point of view of one school over others. He has merely assembled and clarified the concepts of the Freudians in the field. In his examination of psychoanalytic concepts methods of therapy and research have not been discussed. There are thirteen pages of bibliography including books, pamphlets, and periodical literature with full author and title notations.

SCHILDER, PAUL

Psychoanalysis, man, and society. Arranged by Lauretta Bender. New York, W. W. Norton & Company, Inc., 1951. 382 p. 22 cm. $5.50 4014

Contents: Psychoanalysis and philosophy. Personality in the light of psychoanalysis. The somato-psyche in psychiatry and social psychology. The relation between social and personal disorganization. The analysis of ideologies as a psychotherapeutic method. Social [illegible] and [illegible]. Psychological considerations in [illegible]. Psychoanalysis of alcoholism. A study in crime and [illegible] in [illegible]. [illegible] in [illegible]. Studies in [illegible]—a summary. The problem of crime. The cure of criminals and the prevention of crime. The sociological implications of neuroses. Introductory remarks on groups. Social organization and psychotherapy. Psychoanalysis of economics. Cultural patterns and psychotherapy. Remarks on the psychology of war. Bibliography. Index.

Note: Collected in this volume are a number of papers in which the late author applied the concepts and techniques of psychoanalysis to the analysis of a variety of sociological problems, including crime, alcoholism, and economic problems. Most of the papers were originally published in professional journals of psychiatry and sociology.

SCHILDER, PAUL

Psychotherapy. Enlarged and revised edition arranged by Lauretta Bender. New York, W. W. Norton & Company, Inc., 1951. 396 p. 22 cm. $5.00. 4015

Contents: Some general principles. The psychology of organic symptomatology. The symptomatology of mental suffering. Somatic health as an experience. Psychic health as an experience. Technical tools of psychotherapy. The relation between physician and patient. The psychotherapeutic systems. Group psychotherapy. The treatment of specific types of neuroses and psychopathies. Psychoanalysis and psychotherapy of the psychoses and the psychology of shock treatment. Bibliography. Index.

Note: A basic text in psychoanalytically oriented psychotherapy. It draws from all schools of psychiatric thought in an effort to construct a foundation for effective and practical psychotherapy. The late author's techniques are described in specific detail. The first edition was published in 1938. In this edition, the author's wife, an eminent psychiatrist in her own right, has revised and extended the book largely by inserting at appropriate points excerpts from Dr. Schilder's papers published after the first edition was written.

SCHNECK, JEROME M., editor

Hypnosis in modern medicine. Springfield, Ill., Charles C Thomas, 1953. 323 p. 24 cm. $7.50. 4016

Contents: History of medical hypnosis, by G. Rosen. Hypnosis in internal medicine, by B. B. Raginsky. Hypnosis in surgery, by H. Rosen. Hypnosis in anesthesiology, by A. Owen-Flood. Hypnosis in dermatology, by M. McDowell. Hypnosis in obstetrics and gynecology, by W. S. Kroger. Hypnosis in psychiatry, by J. M. Schneck. Hypnosis in child psychiatry, by G. Ambrose. Hypnosis in dentistry, by J. H. Wasserman. Physiologic aspects of hypnosis, by R. E. Gorton. Instruction in hypnosis, by W. T. Heron. Index.

Note: The chapters of this volume were contributed by specialists in various sectors of medicine who have used hypnosis in their specialties. The contributor of the chapter on hypnosis in obstetrics and gynecology, for example, Dr. William S. Kroger, is a specialist in obstetrics and gynecology. Each of the chapters is an essentially independent monograph with its own bibliography. The book is suitable for use as a medical college textbook. It is also potentially of interest to graduate practitioners who wish to explore the possibility of using hypnosis in their practices. The editor, who holds the position of Clinical Associate in Psychiatry in the College of Medicine of the State University of New York, is an eminent authority on medical hypnosis.

SILVERBERG, WILLIAM V.

Childhood experience and personal destiny: a psychoanalytic theory of neurosis. New York, Springer Publishing Company, Inc., 1952. 289 p. 22 cm. $4.50 4017

Contents: Introduction—the need for a theory of personality. Toward a theory of personality and neurosis. The nature of early experience. The first experiential area—problems of security and dependence. The second experiential area—problems of discipline. The third experiential area—problems of reality and passivity. Psychotherapeutic aims. Bibliography. Index.

Note: A new theory of neurosis based upon the theories of Freud but going beyond them in broadening the range of childhood experiences which may cause psychic trauma. The categories of experience which the author believes affect mental health are named in the sub-titles of the third, fourth and fifth chapters above. The author stresses the importance of the experiences of the first six years of life. The book is written in the technical terminology of Freudian psychoanalysis.

Slavson, Samuel Richard

Analytic group psychotherapy with children, adolescents, and adults New York Columbia University Press, 1950 275 p illus. 23 cm. $3 75 4018

Contents Historic backgrounds and current practices. Transference and substitution in *group psychotherapy* Catharsis, regression, and anxiety Direct and derivative insight. Ego strengthening, catharsis displacement, sublimation, and reality testing. Some specific dynamics in analytic group therapy Functions of the group therapist. Play group psychotherapy with pre-school children. Activity-interview psychotherapy with children in latency Analytic group psychotherapy with girls in puberty Analytic group psychotherapy with adolescent girls. Analytic group psychotherapy with adults. Analytic group psychotherapy in an institution. Selection and grouping of patients. The use of groups in the treatment of psychotics. Glossary Index.

Note Three types of group psychotherapy are described and illustrated in this work group play psychotherapy for pre-school age children, activity-interview group psychotherapy for certain older children, and interview group psychotherapy for adolescents and adults. A generous portion of the volume is given over to records of actual sessions at the Jewish Board of Guardians, a child guidance agency in New York City *Short extracts from records are selected to illustrate or heighten the meaning of theoretic statements.* Full records of six sessions are included with condensed interpretations and brief discussions of dynamics as related to the therapeutic process. The book is a companion work to the author's *An introduction to group therapy* New York, 1943.

Slavson, Samuel Richard, editor

The fields of group psychotherapy New York International Universities Press, Inc., 1956 338 p 24 cm. $6 00 4019

Content Syndrome versus symptom in group psychotherapy by S. R. Slavson. Mental hospitals, by T P Rees and M. M. Glatt. Psychosomatic disorders, by A. Stein. Addicts, by J J Thorpe. Alcoholics, by M. Brunner-Orne and M. T Orne. Stutterers, by M. W Brody and S. I. Harrison. Allergies, by H. Miller and D Baruch. Geriatrics, by M E. Linden. Mothers, by H. E. Durkin. Unmarried mothers, by S. R. Slavson and R. MacLennan. Delinquents, by I. Schulman. Child guidance, by L. Rosenthal. Family services, by S. Scheidlinger and H. Freeman. Sex and marriage problems, by L. Levine. Private practice, by W C. Hulse. Community mental health, by S. R. Slavson. Industry by M. A. Klemes and V Kallejian. Training, by S. B. Hadden. Research, by B. Kotkov Index.

Note A complementary work to the editor's *The practice of group therapy* 1947 Although it is composed of contributed monographic chapters—whose authors and titles are given above—it presents broad and integrated view of group psychotherapy at the present time. Most of the chapters are based on extensive experience with group therapy as well as on the literature. In comparison with earlier works on the subject, the book reflects both an extension of group therapy and evolution in techniques.

Symonds, Percival M

Dynamics of psychotherapy the psychology *of personality change* Volume I Principles New York Grune & Stratton, 1956 211 p 23 cm $5 50 4020

Content Introduction. Process of psychotherapy Indications for counseling. Indications for psychotherapy Contraindications for psychotherapy Nature and definition of psychoneurosis. *Dynamics* of psychoneurosis. Neurotic trends and the neurotic symptom. Predisposing and precipitating factors in psychoneurosis. Goals of psychotherapy Spontaneous recovery from psychoneurosis. Some theoretical issues. Bibliography Index.

Note. The first volume published of a projected three-volume text book on psychotherapy It deals with principles and other basic aspects. The viewpoint is an eclectic one, for the author holds that there is merit in all of the major approaches to psychotherapy and that the practicing psychotherapist, and his patients will benefit most from an integration of them. It is addressed to advanced college students and to graduate practitioners of psychotherapy including both psychiatrists and clinical psychologists. However certain features, including its lack of emphasis on medical aspects, give it more appeal to clinical psychologists and students preparing for this field than to graduate physicians. A useful annotated bibliography is included. Volume II, subtitled *Process*, was published in 1957 $4.50.

United States Veterans Administration

Group psychotherapy, studies in methodology *of research* and therapy Report of a group psychotherapy research project of the U S Veterans Administration. By Florence B Powdermaker and Jerome D Frank, in collaboration with Joseph Abrahams and others. Cambridge, Mass Published for the Commonwealth Fund by Harvard University Press, 1953 615 p 25 cm. $6.50 4021

Contents Part I, Group therapy with clinic patients. Introduction. Studying the processes of therapy General description of the research *With clinic patients. Group composition. Early meetings.* Group functioning in later stages. Dealing with patients in the group setting. Resolving tension through rallying topics. Hostility toward the doctor Antagonism between group members. Forms of resistance and their resolution. Introduction of new members. Replacement of a doctor *Relations between individual and group* therapy Doctors' characteristics *in relation* to therapy Part II, Group therapy with hospitalized schizophrenic patients. General description of the research with schizophrenic patients. Statistical summaries. Composing groups of schizophrenic patients. Problems of the early meetings. Rivalry resulting from patient-to-doctor relationships. Dealing with prolonged silences in schizophrenic groups. Dealing with hostility and sexuality The large group. Appendices. List of references. Index.

Note. The research project mentioned in the title of this volume was well organized and well financed. The professional staff included 17 psychiatrists, four clinical psychologists and three psychiatric social workers. As the part titles indicate, group therapy was tried on psychiatric outpatients, most of whom were neurotic and on schizophrenic patients confined in the hospital. The book is a rather full report of the techniques used and of the experience including the problems that developed. *Extensive running accounts* of group meetings are included. Many of the chapters conclude with section entitled *Summary* and implications for therapy The volume is of interest to graduate clinical psychologists and psychiatrists.

Wallen, Richard W

Clinical psychology the study of persons New York McGraw Hill Book Company Inc., 1956 388 p. illus 23 cm. (McGraw Hill series in psychology Clifford T Morgan, consulting editor) $6 00 4022

Contents The study of persons. Prediction in clinical psychology. Clinical sensitivity and hypothesis making. The first meeting—expectations and orientation. Interviewing—observational data—the report. The medical assessment of the person, by R. M. Whitman. The Rorschach method. The thematic apperception test. A variety of supplementary methods. The *clinical use of psychometric tests.* Individual *psychotherapy*—initial steps and aims. Psychotherapeutic methods. Index.

Note An introductory presentation of the techniques of practical clinical psychology It is directed to college students, both advanced undergraduate and graduate, who have completed basic courses in psychological testing, the psychology of personality etc. It includes expert and full discussions of such facets of clinical practice as the first meeting between the therapist and clients. The discussions of standard clinical tests include such statements as the following. "The Rorschach is not very satisfactory but it does kind of job which our traditional psychometric tests do not do. And clinicians find that in their work it is job that ought to be done. Selected literature references are included. *The author is Associate Professor of Psychology on the faculty of Western Reserve University*

Watson, Robert Irving

The clinical method in psychology New York Harper & Brothers, 1951 779 p. 22 cm $5 00 4023

Contents (abridged) Part I, Introduction. The clinical method. Observation *Part II, Diagnostic appraisal* The function of diagnosis. Observation and rating in clinical diagnosis. The diagnostic interview Tests as diagnostic instruments. Procedures in diagnostic testing. The Wechsler Bellevue intelligence scale. *Revised Stanford-Binet* tests of intel-

lignes. Performance tests of intelligence. The Vineland social maturity scale. Diagnostic testing of infants and preschool children. Tests of memory and conceptual thinking. The projective approach to personality evaluation. The Rosenzweig picture-frustration study. The thematic apperception test. Part III, Psychotherapy: The psychotherapeutic values to be found in diagnostic materials. The common factors in psychotherapy. Some systematic approaches to psychotherapy. Psychotherapy with children. Group psychotherapy. Indirect methods of treatment. Name index. Subject index.

Note: This text on the application of psychological principles and techniques to the problems of the individual is designed primarily for advanced college students. The treatment of diagnosis is more detailed and written on a higher level than that of psychotherapy where the author has been intentionally descriptive rather than critical. Projective techniques other than those listed in the contents are treated only sketchily, and case studies are used only when needed to complete understanding of basic methods. However, the extensive, up-to-date bibliographies included with each chapter refer to much additional material.

WHITAKER, CARL A. AND THOMAS P MALONE

The roots of psychotherapy New York The Blakiston Division, McGraw Hill Book Company 1953 236 p. illus. 24 cm. $4.50. 4024

Contents: Foundation. Science as a creative method. Research in psychotherapy. The biological basis of psychotherapy. Adaptation. Cultural repair. The community and psychotherapy. Implicit and explicit psychotherapy. Dynamic psychiatry and psychotherapy. Process. The patient as a person. The process of psychotherapy. Anxiety and psychotherapy. The therapist as a person. Patient vectors in the therapist. Restatement of the problem of psychotherapy. Technique. Some techniques in brief psychotherapy. Glossary. Bibliography.

Note: A study of the essential nature of psychotherapy. The authors believe that there is an underlying process common to all types of psychotherapy and they attempt to identify and describe it. In the eight chapters under Foundation, the concepts of human behavior, including mental illness, are related to general biology, especially to growth and adaptation. In the chapters under Process, the phases and dynamics of the relation between patient and therapist in psychotherapy are delineated. The chapter on technique describes some of the methods of the authors, who are, respectively, Chairman of the Department of Psychiatry and Assistant Professor of Psychiatry and Director of Research, Department of Psychiatry, in the School of Medicine of Emory University.

WITMER, HELEN LELAND editor

Teaching psychotherapeutic medicine an experimental course for general physicians, given by Walter Bauer Douglas D Bond, Henry W Brosin, Donald W Hastings, M. Ralph Kaufman, John M Murray Thomas A. C. Rennie John Romano and Harold G. Wolff Introductory chapter by Geddes Smith. Cambridge, Mass. Harvard University Press, 1947 484 p. 24 cm. $4.00 4025

Contents: Introductory: the course, by G. Smith. General orientation, by T. A. C. Rennie and W. Bauer. Clinical problems. The patient-physician relationship, by M. R. Kaufman. Normal personality development, by J. M. Murray. Clinical problems. Psychotherapy, by J. Romano. The meaning of [illegible] psychoneurosis, by M. R. Kaufman. Clinical problems. III, Diagnosis of psychoneuroses, by J. Romano. Summary of the first week, by T. A. C. Rennie. Anxiety, by J. Romano. Clinical problems. IV, General principles of psychotherapy, by J. W. Murray and H. W. Brosin. Special therapies, by D. W. Hastings. Common psychopathology, by H. W. Brosin. Common psychopathology, by D. D. Bond. Clinical problems. [illegible] Care of veterans, by D. W. Hastings. Life situations, emotions, and disease, by H. G. Wolff. Case presentation. Case presentation, II. Case presentation, III. List of suggested readings. Index.

Note: An edited account, derived from automatic recordings, of the lectures and discussions which took place during the experimental two-weeks course in psychotherapeutic medicine given at the University of Minnesota in April, 1946. The course was organized to familiarize general medical practitioners with this branch of contemporary medicine, and the present volume is intended not as a textbook in the subject but simply as the record of an experiment in postgraduate medical education.

WOLBERG LEWIS ROBERT

Hypnoanalysis foreword by A. Kardiner New York Grune & Stratton, 1945 342 p. 22 cm. $4.50 4026

Contents: Part I, The hypnoanalysis of [illegible]. Part II, The theory and practice of hypnoanalysis: Psychoanalysis and hypnosis. Hypnoanalytic procedures. The recall of buried memories. Hypnosis and the transference. Hypnosis and resistance. Hypnosis and interpretation. Index.

Note: An introduction to the methods and techniques of using the hypnotic state in psychoanalysis and as a form of therapeutic treatment. The first part of the book is a detailed case history with discussions by the author of the treatment of the patient over a period of months. The second part is devoted to an exposition of the principles and techniques of hypnoanalysis.

WOLBERG LEWIS ROBERT

Medical hypnosis. New York Grune & Stratton 1948 2 v. 22 cm. Vol. I $5.50 vol. II, $6.50. 4027

Contents (abridged): Volume I, The principles of hypnotherapy. Part I, Historical, phenomenologic and theoretic aspects of hypnosis. Part II, The technic of hypnosis: Introduction to hypnotic technic. The first hypnotic session. The second hypnotic session. Subsequent hypnotic sessions. Self hypnosis and group hypnosis. Part III, Applications of hypnotherapy: The principles of psychotherapy. Hypnosis in anxiety neurosis. Hypnosis in compulsion neurosis. Hypnosis in traumatic neurosis. Hypnosis in psychosomatic conditions. Hypnosis in character disorders. Hypnosis in alcoholism. Hypnosis in miscellaneous conditions. Dangers, limitations and failures of hypnosis. Index. Volume II, The practice of hypnotherapy. Part I, Hypnosis in symptom removal. Technics in symptom removal. Limitations of symptom removal. Illustrative case. Part II, Hypnosis in psychobiologic therapy. Technics of hypnosis in psychobiologic therapy. Hypnosis in guidance. Hypnosis in persuasion. Hypnosis in re-education. Hypnosis in reconditioning. Illustrative case. Part III, Hypnosis in psychoanalytic therapy: Hypnoanalytic procedures. Re-education through psychoanalytic insight. Illustrative case. The future of hypnosis. Index.

Note: An authoritative presentation of the nature, techniques, and application of hypnosis in psychotherapy. The exposition is exceptionally detailed. In the first volume, induction techniques are described concisely and are illustrated with excerpts from actual cases. The greater part of the second volume consists of full transcripts, including all of the conversations between doctor and patient, of three case histories. The work is addressed mainly to graduate physicians, particularly psychiatrists.

WOLBERG LEWIS ROBERT

The technique of psychotherapy New York Grune & Stratton, 1954 869 p. 26 cm. $14 75 4028

Contents (abridged): I, The scope, types and general principles of psychotherapy. Varieties of psychotherapy. Supportive therapy. Insight therapy with reeducative goals (reconstructive therapy). The equipment of the psychotherapist. The conduct of the psychotherapeutic interview. II, The beginning phase of treatment: The initial interview. Answering questions patients ask about therapy. Establishing a working relationship. Structuring the therapeutic situation. III, The middle phase of treatment: Identifying important trends and patterns. The uncovering of unconscious material. The handling of resistance to cure. Translating insight into action. Supportive and reeducative techniques during middle treatment phases. IV, The terminal phase of treatment: Goals in terminating treatment. Technical problems in termination. [illegible] Special aspects: Adjunctive aids in psychotherapy. Psychotherapy in special conditions. Supervision of the psychotherapeutic process. Questions therapists ask about psychotherapy. References. Recommended reading. Appendices. Author index. Subject index.

Note: An authoritative and detailed presentation of practical psychotherapeutic techniques. The author is Director of the Postgraduate Center for Psychotherapy of New York Medical College, and the book was developed from material used in training seminars in that institution. It is organized in five parts, the titles of which are given above, and 58 chapters, of which only selected titles are listed above. Its viewpoint is eclectic in the sense that there is no

special bias toward any one school of thought. The primary purpose is to teach practicable techniques of psychotherapy All important steps in the psychotherapeutic process are covered in much detail. For example 10 chapters almost 100 pages in total length are devoted to the initial interview *Transcripts* of therapeutic sessions are introduced at numerous points throughout the volume, and the book is concluded with the *full transcript* of the conversations between the psychotherapist and the patient in a specific case which illustrates many of the techniques described in the book.

Wolstein, Benjamin

Transference, its meaning and function in psychoanalytic therapy New York Grune & Stratton, 1954 206 p 21 cm $5 50 4029

Contents The major shift. Hypnotic roots. Early trauma or total personality Transference—positive and negative. Suggestion in the shape of transference. Past and future in the present. A formulation of the concept. Empirical observations and an operational definition. Freedom in transference and metapsychology Values in the therapeutic situation. Scientific epilogue. Bibliography Index.

Note A study in which the analysis of transference is presented as "the major concern of the science and art of psychoanalysis. The author relates the concept of transference and the techniques of its analysis to Freud's views, but he makes it clear that both the concepts and psychoanalytic techniques have undergone important transformations since Freud. *In fact, the book is a study* of the transference reaction and the analysis of transfer distortion in the light of present-day analytical thought and practice. It is addressed to graduate practitioners of psychoanalysis The author is a clinical psychologist on the staff of the *W A White Institute of Psychiatry* Psychoanalysis and Psychology in New York City

Ziskind, Eugene

Psychophysiologic medicine *Philadelphia* Lea & Febiger, 1954 370 p 24 cm $7 50 4030

Contents. Part I, Viewpoint The problem of psychophysiologic medicine. Pertinent psychopathology Part II, Techniques for physicians Diagnosis of psychological factors—modifications of the traditional procedure—the life history Psychotherapy—preliminary considerations—modifications of standard medical procedure—interview techniques. Part III, Toward broader visions Child-parent relationships and their psychopathology Social factors in psychopathology Differential diagnosis of psychiatric syndromes Psychiatric emergencies in medical practice. Part IV Schools of psychiatric thought Freud—classical thought. Early departures from Freudianism. Cultural psychoanalysts. Meyer—the psychobiologist and eclecticism. Mental adaptive mechanisms. Diseases commonly called psychosomatic. Bibliography Author index. Subject index.

Note A book based on a program of psychotherapy developed by the author and his associates at the Cedars of Lebanon Hospital in Los Angeles The program was directed towards incorporating psychotherapy *in a general program of medical care and the book, in turn,* is directed to general practitioners rather than to specialists. The second part, which *is more than 100 pages long,* describes for physicians who are not specialists in psychiatry techniques of diagnosis and therapy which are practical in the light of the author's experience with parallel programs in general medical clinics. The fourth part also *more than 100 pages long,* is a useful exposition of the basic concepts of the various schools of *psychiatry including those based on the views of Freud, Adler* Jung, Rank, Horney and Meyer The bibliography is an extensive one.

ALCOHOLISM AND NARCOTIC ADDICTION

Diethelm, Oskar

Etiology of chronic alcoholism Springfield Ill Charles C Thomas 1955 227 p. illus. 23 cm $6 75 4031

Contents Research in chronic alcoholism, by *O Diethelm. Psychopathology and character structure in chronic alcoholism,* by M. L Sherfey Biochemical experimental investigations of emotions and chronic alcoholism, by M. F Fleet and. Familial and personal background of chronic alcoholics, by M. Bleuler *A comparative study of the constitutions* of Swiss and American alcoholic patients, by M. Bleuler. Alcoholism in the *Cantonese of New York City*—an anthropological study by M. L. Barnett. Index.

Note A monograph based on a five-year program of investigation carried out under the auspices of the Committee on the Problems of Alcohol of the National Research Council. It is composed of the six studies which are listed by title and author in the above Contents. Five of the authors are *medical graduates, and the sixth* is an anthropologist. Medical, biochemical, psychological and sociological aspects of the etiology of chronic alcoholism were studied, and the results of the studies are reported in detail. References to related literature are included for each study The book is an important contribution to the basic literature on chronic alcoholism.

Fox, Ruth, and Peter Lyon

Alcoholism, its scope, cause and treatment. New York Random House, 1955 208 p. 20 *cm $3 00* 4032

Contents. Introduction. W drink. Some of us shouldn't. And some need help. Sources of help.

Note A well-written popular book. It is concerned mainly with the psychological, especially the psychoneurotic, aspects of alcoholism but is written in a style that makes this knowledge intelligible to typical educated readers. A good deal of case material is incorporated, but this too has been rendered into readable form. The senior author is a graduate physician. The chapter entitled "Sources of help is a directory of organizations in the United States and Canada that aid alcoholics.

Karpman, Benjamin

The alcoholic woman case studies in the psychodynamics of alcoholism. *Sponsored by* Washington Institute of Medicine Research Foundation *Westport, Conn.* Associated *Booksellers, 1948 238 p. 22 cm. $3 75* 4033

Contents. The case of Miss Elizabeth Chesser The case of Mrs. Vera Baschek. The case of Mrs. Frances Elliott. General discussion. Epilogue. Index.

Note. The greater part of this book consists of detailed presentations of the case histories of three alcoholic women who were under the author's care for psychoanalysis and psychotherapeutic treatment. The essential thesis of the book is that alcoholism is in many cases merely one manifestation of neurosis.

Kruse, H D, editor

Alcoholism as a medical problem A conference held under the auspices of the Committee on Public Health of the New York Academy of Medicine and the New York *State* Mental Health Commission. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1956 102 p. 24 cm. $3 00. 4034

Contents The epidemiology of alcoholism, by J. E. Gordon. Views on the etiology of alcoholism—the organic view by H. C Himwich—the psychodynamic view by F Alexander—the behavioristic view by E. J Shoben, Jr —the sociologic view by A. B. Hollingshead. The natural history of alcoholism its onset and course, by A. Z. Pfeffer—its psychopathologic manifestations, by S. M. Small. Evaluation of the treatment of alcoholism, by R. Muench. Index.

Note. A book directed (as was the conference that produced it) to graduate physicians. It provides a broad but concise and up-to-date *view of alcoholism. It is useful as* a source of basic knowledge for purposes of orientation and as a compact presentation of the clinical picture and prognosis of alcoholism Digests of discussion and literature references are included in most of the papers.

Lindesmith Alfred R

Opiate addiction. Evanston Ill The Principia Press of Illinois Inc. 1947 238 p. 23 cm $4 00 4035

Contents Part I, The nature of the opiate habit *Method and purpose of the study* The effects of opiates. Habituation and about

tion. The nature of addiction. The process of addiction. Cure and relapse. A critique of current theories of addiction. Conclusions and implications. Part II. Opiate addiction as a social problem. The beginnings. Part II, Opiate addiction as social problem. The problem in the United States during the nineteenth century. Federal anti-narcotic legislation. The effects of World War II. Needed research. Appendixes. Glossary of addicts' argot. Selected bibliography. Index of names. Index of subjects.

Note: Primarily a socio-psychologic study, this book contains, nevertheless, an extended analysis of physiological mechanisms involved in the opiate habit and includes much medical case material. Among the reforms proposed by the author is one that physicians be allowed to prescribe narcotics for addicts according to their judgment of the best way of treating the patient.

MAURER, DAVID W AND VICTOR H. VOGEL

Narcotics and narcotic addiction. Springfield, Ill. Charles C Thomas, 1954 303 p. illus. 24 cm. (American lecture series. Publication no. 169 A monograph in the Bannerstone division of American lectures in public protection edited by Le Moyne Snyder and others.) $7.50. 4036

Contents: Introduction. The nature of drug addiction. Opiates and their synthetic equivalents. Non-opiate analgesics considered addicting. Stimulant drugs. Identification of drugs and proof of addiction. Treatment of narcotic addiction. Legal controls for drugs of addiction. Narcotic addiction and crime. Drug addiction and youth. The argot of narcotic addicts. Index.

Note: A broad survey directed to readers with special interests in the subject, including social workers, personnel of reformatories, attorneys, the clergy and physicians who desire only a general knowledge of the subject. It is not intended as a guide to the therapy of narcotic addiction. It presents a wide range of medical, sociological and legal information. Literature references are included in all of the chapters. The chapter on argot includes an extensive glossary of words and phrases peculiar to narcotic addiction.

NYSWANDER, MARIE

The drug addict as a patient. New York Grune and Stratton, 1956 179 p. 22 cm. $4.50. 4037

Contents: Drug addiction in the United States—past and present. Pharmacology. Physiology. Psychology. Social pathology. Clinical diagnosis. The withdrawal treatment. Rehabilitation. The British approach. Looking forward. Appendix: An addict's glossary. Index.

Note: Written by a psychiatrist who is also a recognized authority on narcotic addiction, this book is addressed primarily to practicing physicians who treat narcotic addicts in private practice. It covers the subject broadly, including the social as well as the medical aspects in order to provide the necessary background for the intended readers. The various methods of treatment are fully described, including the methods followed in Great Britain. The importance of treating each patient as an individual person with due regard to his social situation and psychological difficulties is emphasized. Literature references are included.

PODOLSKY EDWARD editor

Management of addictions. New York Philosophical Library 1955 413 p. 21 cm. $7.50 4038

Contents: Part I. Alcohol addiction. Psychodynamics in the excessive drinking of alcohol, by J. W. Kappas. A pragmatic approach to the control of "chronic alcoholism," by C. J. Katz. On "therapeutic success in alcoholism," by G. Laird. The concept of genetotrophic disease, by R. J. Williams. Nutrition and alcoholism—the genetotrophic approach, by R. Woods. Alcoholism—recent advances in its treatment, by H. W. Lovell and J. W. Tintera. Constructive approach to the treatment of alcoholism, by J. Thimann. Psychotherapy of the problem drinker, by R. R. Gottesfeld and H. L. Yager. The treatment of alcoholism with adrenal steroids and ACTH, by W. A. Voegtlin. Endocrine treatment of alcoholism, by J. W. Tintera and H. W. Lovell. The use of Metharol in the treatment of alcoholism, by J. A. Smith and W. T. Brown. An evaluation of the present treatment of alcoholism, by F. LeMere and W. L. Voegtlin. Carbon dioxide inhalation therapy in neuroses in alcoholism (preliminary report), by A. A. LaVerne and M. Herman. Calcium therapy in the treatment of alcoholism, by C. C. O'Brien. Hospital and ambulatory cases of alcoholism—intensive calcium therapy, by C. C. O'Brien. Sedation of alcoholic patients with non-sedative drugs—a preliminary report, by J. Thimann. A new adjuvant in post-alcoholic psychomotor agitation, by M. D. Klaus and others. Tolserol in the treatment of the postalcoholic state, by M. Herman and A. S. Ellner. A clinical evaluation of tetraethylthiuramdisulfide (Antabuse) in the treatment of problem drinkers, by K. Bowman and others. Disulfiram as a sedative in alcoholism, by F. LeMere. Psychological factors in the conditioned-reflex treatment of alcoholism, by F. LeMere. Conditioned-reflex treatment of alcoholism, by J. Thimann. Treatment of chronic alcoholism by intravenous barbiturates, by F. LeMere and P. O'Hollaren. Thiopental U.S.P. (Pentothal) treatment of alcoholism, by F. LeMere and P. O'Hollaren. Hypnotherapy and the treatment of alcoholism, by A. Paley. The alcohol problem, by O. Diethelm. Part II. Drug addiction: Hypoadrenocorticism in alcoholism and drug addiction, by H. W. Lovell and J. W. Tintera. An experiment in group psychotherapy with the narcotic addict, by M. Johnston. A study of results of hospital treatment and drug addiction, by R. O. Knight and C. T. Prout. Drug addictions (a review), by R. R. Arora and Y. N. Sharma. Treatment of drug addiction, preliminary report, by K. Y. Williams. Morphine withdrawal in addicts by the method of prolonged sleep, by G. M. Schlomer. Benadryl—its uses in the narcotic withdrawal syndrome and other conditions, by M. Vanberg. Use of electro-convulsive therapy in morphine, meperidine and related alkaloid addictions, by F. R. Thigpen and others. The problem of narcotic drug addiction, by M. J. Pescor. Index.

Note: A collection of papers, most, if not all, of which have previously appeared in professional journals of pharmacy, psychiatry, neurology, general medicine, etc. The volume is of interest to such readers as medical practitioners and clinical psychologists.

SMITH JACKSON A.

Alcoholism. Philadelphia J B Lippincott Company 1953 72 p. 19 cm. $3.00. 4039

Contents: Behavior leading to the diagnosis of chronic alcoholism. Psychotherapy as applied to the chronic alcoholic. Delirium tremens. Antabuse. Other types of treatment. The treatment of alcoholism in general practice. Index.

Note: Originally published in the *American practitioner and digest of treatment*, in 1953, this small book is addressed primarily to medical practitioners, particularly practitioners of general medicine and internal medicine. For such readers it is a compact and authoritative survey of alcoholism. Most of the space is given to the various methods of treatment. These are discussed concisely but with much specific detail. Fairly extensive references to the literature are included. The author is Director of the Alcoholic Clinic of the Jefferson Davis Hospital in Houston, Texas, and a specialist in psychiatry.

THOMPSON GEORGE N., editor

Alcoholism. Springfield, Ill. Charles C Thomas, 1956. 548 p. illus. 24 cm. $9.50. 4040

Contents: Public health and social aspects of alcoholism, by J. Hirsh. The pharmacology of alcohol, by R. N. Harger and H. R. Hulpieu. Pathology of alcoholism, by E. A. Edmondson and others. Alcohol and brain physiology, by H. E. Himwich. Alcoholism in internal medicine, by A. T. Olson. The neurology of alcoholism, by J. M. Nielsen. The psychiatry of alcoholism, by G. N. Thompson. Electroencephalography in alcoholism, by A. A. Marinacci. Index.

Note: An authoritative and comprehensive monograph, in which both the medical and social viewpoints are represented. It is addressed primarily to professional social workers and medical practitioners. The medical chapters are written in technical terminology but the first chapter is written in a style that can be comprehended by educated laymen. The authors of the various chapters have incorporated a considerable number of case histories and have abstracted a wide range of literature to which references are given.

YALE UNIVERSITY LABORATORY OF APPLIED PHYSIOLOGY

Alcohol, science and society twenty-nine lectures with discussions as given at the Yale Summer School of Alcohol Studies. Second

edition New Haven Quarterly Journal of Studies on Alcohol, 1954 473 p 23 cm $6 00 4041

Contents Introduction to the curriculum, by E. M. Jellinek. The problems of alcohol by E. M Jellinek. Metabolism of alcohol, by H W Haggard. The concentration of alcohol in the blood and its significance ith a demonstration of the alcoholometer by L. A. Greenberg. The physiological effect of large and small amounts of alcohol by H. W Haggard. Alcohol and nutrition—the diseases of chronic alcoholism, by N Jolliffe. Effects of small amounts of alcohol on psychological functions, by E. M. Jellinek. Drinking mores of the social classes, by J Dollard. Heredity of the alcoholic, by E. M Jellinek. Children of alcoholic parents raised in foster homes, by A. Roe. Theories of the alcoholic personality by C. Landis. Alcohol and aggression, by R. S. Banay The functions of alcohol in primitive societies, by D Horton. Alcohol and complex society by S. D Bacon. Some economic aspects of inebriety by B. Y Landis. Excessive drinking and the institution of the family by S. D Bacon. Alcohol and pauperism, by A. J Murphy Alcohol and traffic, by D S. Berry Philosophy of the temperance movement a panel discussion by R. S. Warner and others. The hurches and alcohol by R. H. Ralston. Control consumption of alcoholic beverages, by E. G. Baird. Legal aspects of prohibition by E. B Dunford. Analysis of et and dry propaganda, by D Anderson Penal handling of inebriates a panel discussion by W M Maltbie and others. Medical treatment of the inebriate, by R. Fleming. The role of religious bodies in the treatment of inebriety in the United States, by F W McPeek. Social casework with inebriates, by S. M Baker Pastoral counseling of inebriates, by O. R. Rice The fellowship of Alcoholics Anonymous, by W W (one of the founders)

Note Published in this volume is a selection of lectures originally given at the Summer School of Alcohol Studies of Yale University As indicated by the titles, there is a strong social slant to the collection. However the physiological and medical aspects of alcoholism are discussed in several of the lectures. Since it was first published in 1945 the collection has enjoyed a wide circulation and a seventh printing of the book was made in June, 1957

GYNECOLOGY AND OBSTETRICS

ATLEE, H. B

Chronic iliac pain in women Springfield Ill Charles C Thomas 1954 65 p illus. 22 cm (American lecture series Publication no 198 A monograph in American lectures in gynecology and obstetrics edited by E C Hamblen) $2 50 4042

Content The apologia. The approach. Chronic appendicitis. Adhesions. Painful ovary and/or fallopian tube. "Cysts of the ovary Conditions of the cervix and uterus causing pain. Painful conditions of the ureter Abdominal wall neuralgia. The cecal syndrome Psychic pain. The summing up.

Note A short book—essentially long essay—on common gynecologic complaint. The author who is Head of the Department of Obstetrics and Gynecology of Dalhousie University has written from the viewpoint of his own extensive experience. In pungent style that is easy to read, he offers sound advice on differential diagnosis and management of iliac pain in women.

BECK ALFRED C AND ALEXANDER H ROSENTHAL

Obstetrical practice Sixth edition. Baltimore The Williams & Wilkins Company 1955 1 066 p. illus. 26 cm. $12 00. 4043

Contents (abridged) Relation of menstruation to ovulation, fertilization, and nidation Chronological development of pregnancy Physiology of the fetus. Changes in the maternal organism Diagnosis of pregnancy Management of pregnancy The essential factors in labor The mechanism of labor Clinical course of labor Management of labor The puerperium Lactation Posterior position of the occiput Face presentation Breech presentation. Transverse presentation. Compound presentation and prolapse of the umbilical cord. Multiple pregnancy Diseases of the decidua and fetal membranes. Abortion. Ectopic gestation Hyperemesis gravidarum. Preeclampsia and eclampsia. The pathology of labor Early passages. Placenta previa and abruptio placentae. In uterus of the uterus. Retained and adherent placenta. Postpartum hemorrhage. Puerperal infection. Artificial interruption of pregnancy. Methods used to hasten or complete the dilatation of the cervix. Forceps. Cesarean section. Repair of lacerations. Resuscitation of the newborn child. Analgesia, amnesia and anesthesia. Appendix. Index.

Note One of the leading American textbooks in its field. It is noted for the clarity of both its text and drawings. The first edition was published in 1935 and the fifth edition in 1951. The sixth edition is the first to bear the name of co-author. No change was made in the scope and plan of the book in preparing it. However revisions, including deletions, augmentations and rewritten sections, were made in many chapters in order to incorporate the modern viewpoint and the new advances in obstetrics without destroying the conservative viewpoint of the original work. In the text there are now 947 figures, many of which contain several illustrations, and 22 reproductions of roentgenograms in the appendix.

BERMAN, ROBERT

Obstetrical roentgenology 486 illustrations Philadelphia F A. Davis Company, 1955 599 p illus. 25 cm. (Obstetrics & gynecology, a series of monographs edited by Claude E Heaton) $12 50 4044

Content Introduction. Historical considerations. Clinical aspects of X-ray pelvimetry Technical aspects of X-ray pelvimetry Pelvic diameters and X-ray measurements. The prognostic method of X-ray pelvimetry The inlet view of the pelvis. The lateral view of the pelvis. The outlet view of the pelvis. The lateral view of the uterus. Classification of the pelvis. The fetus. The placenta. Additional methods of X-ray pelvimetry Practical application of X-ray pelvimetry Bibliography Index.

Note. The author of this book is distinguished in both the specialties of obstetrics and roentgenology Although his primary purpose was to inform obstetricians about the potentialities of X-ray pelvimetry he has also paid much attention to the interaction between the two specialties. He makes it clear that the roentgenologist's responsibility is to provide useful roentgenographs which the obstetrician interprets from the standpoint of diagnosis and clinical management. Standardization of roentgenographic technique is therefore given some emphasis. The book is based on about 1500 obstetrical cases and on visits to many leading maternity homes of the United States of America and of Europe. There are several hundred illustrations and comprehensive bibliography

BERNSTINE, J B AND A E RAKOFF

Vaginal infections infestations, and discharges. New York The Blakiston Division McGraw Hill Book Company Inc. 1953 [illegible] p illus (part col d) 23 cm $10 00 [illegible]

Contents Embryologic factors. Anatomy Histology Physiology Examination of the patient Bacteria [illegible] natal period. Gonococcal infections in child [illegible] vulvovaginitis. Vulvovaginitis in the acute [illegible] Infestations with worms Infestations with [illegible] Foreign bodies in the vagina. Menstrual [illegible] charges. Vaginal discharges in the adult [illegible] cervical disease to vaginal infection [illegible] vaginitis. Vulvovaginal mycoses. For the [illegible] fection Plaut Vincent disease) [illegible] of [illegible] venereum. Granuloma inguinale S [illegible] Vaginitis Emphysematosa (colpo [illegible] to physical agents. Chemical [illegible] the adult. Pregnancy Vaginal in [illegible] partum period. Atrophic vaginit [illegible]

Note A specialized treatise [illegible] cussed in more detail than is [illegible] accorded the subject in tre [illegible] covers these conditions in ch [illegible] adults. Diagnosis and treatm [illegible] the book contains several [illegible] physiology etc. and in th [illegible] some space is devoted to [illegible] factors. In many of the ch [illegible] described and the author [illegible] most successful. The book [illegible] partly on clinical experie [illegible] Gynecology of the Jeff [illegible] Philadelphia. Literature [illegible] Contents [illegible]

BREWER, JOHN I.

Textbook of gynecology Baltimore The Williams & Wilkins Company 1953 532 p. illus. 24 cm. 4046

Contents. Part I: Diseases of the vulva. Tumors of the vagina. Carcinoma of the cervix. Uterine fibroids. Carcinoma of the endometrium. Sarcoma of the uterus. Pelvic inflammatory disease. Ectopic pregnancy. Ovarian tumors. Endometriosis. Congenital anomalies. Part II: Leukorrhea. Asymptomatic pelvic tumors. Abnormal uterine bleeding. Bleeding and pain. Pelvic pain. Dyspareunia. Amenorrhea. Sterility. Dysmenorrhea. Bearing-down discomfort. Mass protruding from the vagina. Incontinence of urine. Incontinence of feces. The climacteric. Index.

Note: Intended for the instruction of undergraduate students in medical colleges taking [illegible] first course in gynecology this textbook [illegible] shorter and less elaborate than some other texts on the subject. It [illegible] arranged in two parts as shown above. The first part is devoted to description of disease entities, while in the second part the approach [illegible] from the standpoint of symptoms. This organization [illegible] based upon the teaching method used in the Medical School of Northwestern University where the author is Chief of Obstetrics and Gynecology. The author[illegible] style is lucid and direct, making the book easy to read. There are 146 figures, but no literature references. A second edition was published in 1958, 742 p., $13.00.

BURCH JOHN C AND HORACE T LAVELY

Hysterectomy Springfield, Ill. Charles C Thomas 1954 94 p illus. 27 cm. (American lecture series. Publication no. 226 A monograph in American lectures in gynecology and obstetrics edited by E. C. Hamblen) $5.50 4047

Contents: The hysterectomy problem. An approach to hysterectomy. Some conditions requiring hysterectomy. The choice of operation. Technique. Intraoperative complications. Results. Index.

Note: The section entitled "Technique" in this book is actually an atlas of full-page drawings of surgical techniques divided as follows: abdominal hysterectomy 17 figures [illegible] vaginal hysterectomy 7 figures; radical hysterectomy 6 figures. The seven chapters which precede and follow the atlas section present [illegible] full and expert discussion of the hysterectomy operation, including the problem of unnecessary hysterectomy and the opposite problem of failure to perform the operation when [illegible] is indicated. The psychological aspects are thoroughly discussed in the second chapter and the terminal chapter summarizes, largely in the form of statistical graphs and tables, the results of 1,[illegible] hysterectomy cases performed by the authors and their former students. The authors are members of the faculty of the School of Medicine of Vanderbilt University

CALKINS LEROY A.

Normal labor Springfield, Ill. Charles C Thomas 1955 128 p. illus. 22 cm. (American lecture series. Publication no. 246. A monograph in American lectures in gynecology and obstetrics edited by E. C Hamblen) $4.00 4048

Contents: Etiology of onset of labor. Onset of labor. First stage of labor. Second stage of labor. Third stage of labor. Rectal [illegible] Analgesia and anesthesia. Summary. Appendices. On predicting the length of labor. The second stage of labor—internal rotation. The second stage of labor—the descent phase. The second stage of labor. Factors governing blood loss in the third stage of labor. The third stage of labor. Management of the third stage of labor. Literature cited.

Note: In this small book, basic facts about normal labor gleaned from the detailed records of about 1,000 cases are presented. The case records have been kept by the author during [illegible] practice of 25 years. Data gathered from them are presented in [illegible] tables in the appendices. The chapters that precede the appendices contain no tables and few statistics, but are devoted to critical discussions of the current knowledge pertaining to normal labor, and to the author' personal observations and conclusions. They contain such passages as the following: "In general, we still like the regional over the general anesthetic, whether [illegible] be the simple, pudendal infiltration or something more extensive. At the moment we feel that the possibilities of pudendal block anesthesia have not been sufficiently probed. A complementary work, Abnormal labor 70 p., $3.75, was issued by the same publisher in 1958.

CASTALLO MARIO ALBERTO AND CECILIA L. SCHULZ

Woman's inside story New York The Macmillan Company 1948. 203 p. illus. 21 cm. $3.50 4049

Contents: The miracle of you. Nursery interlude. You grow up to be [illegible] woman. Your sex life. Approach to marriage. Tumors—and rumors. Some day you're going to be forty! You can't have [illegible] baby? Affections, afflictions, and infections! Happy expectations! Obstetrical postscript. Glossary. Index.

Note: An informative and rather lightly written exposition of reproduction and related subjects from the viewpoint of the average woman. Chiefly it outlines in popular terms woman's special psychology and physiology from conception and gestation through stages of infant, girl, young woman, wife, mother, and the menopause. While stressing the nature and function of the feminine reproductive system, there are also general medical information and advice for women on physical ailments, health, and diet. The senior author is Clinical Professor at Jefferson Medical College.

CROSSEN ROBERT JAMES

Synopsis of gynecology Based on the text book Diseases of women. Fourth edition. 132 illustrations including frontispiece in color St. Louis The C. V. Mosby Company 1956. 255 p. illus. (part col d) 20 cm. $5.25 4050

Contents: Anatomy and physiology. Gynecologic examination and diagnosis. Diseases of the external genitals and vagina. Relaxation and fistulas. Displacements of the uterus. Inflammatory and metabolic disturbances of the uterus. Non-malignant tumors of the uterus. Malignant disease of the uterus. Pelvic inflammation. Other diseases of fallopian tube, pelvic peritoneum, and pelvic connective tissue. Diseases of the ovary and parovarium. Malformations. Disturbances of function. Sterility and sexual disturbances. Miscellaneous disturbances. Medicolegal points in gynecology. Index.

Note: This concise handbook was first published in 1932; the third edition appeared in 1946. As indicated in the title, it is based on H. S. and R. J. Crossen: Diseases of women, 10th edition, St. Louis, 1953. Its purposes are two (1) to provide general practitioners who are not specialists with the basic facts on gynecological principles, diagnosis, and treatment, and (2) to serve as [illegible] study guide and review for medical students. The organization of the material remains the same in this edition. Newly added information includes some new concepts, new diagnostic techniques, and more information on aspects of therapy such as the use of antibiotics in infections. There is [illegible] detailed subject index.

CURTIS ARTHUR HALE, AND JOHN WILLIAM HUFFMAN

A textbook of gynecology Sixth edition with 466 illustrations, chiefly by Tom Jones including 37 in color Philadelphia W B Saunders Company 1950 799 p. illus. (part col d) 26 cm. $11.00. 4051

Contents (abridged): Section I, Anatomy. Section II, Physiology (including of the endocrine glands). Section III, The endocrines. Section IV, History and examination. Section [illegible] Infectious processes: Gonorrheal disease of the female genitalia. The "[illegible] group" of pelvic infections. Genital tuberculosis. Syphilis. "Nonspecific" infections. Section VI, Tumors of the uterus. Section VII, Tumors of the ovary. Tumors of fallopian tubes, ligaments and pelvic cellular tissues. Section VIII, Displacements and relaxations. Section IX, Disturbances of function. Section X, Endometriosis. Ectopic pregnancy. Leukorrhea. Genital fistulas. Backache. Disturbances of the pelvic veins. Endometritis. Lesions of the cervix. Inversion of the uterus. Congenital malformations. The early months of pregnancy (from gynecological aspect). Urinary tract problems in gynecology. Radiotherapy. Index.

Note: The first edition of this standard text for medical college students appeared in 1930. This sixth edition is the first one to bear the name of [illegible] collaborating author. The scope and purpose

edition New Haven Quarterly Journal of Studies on Alcohol, 1954 473 p 23 cm $6 00 4041

Contents Introduction to the curriculum, by E. M. Jellinek. The problems of alcohol, by E. M. Jellinek. Metabolism of alcohol by H. W Haggard. The concentration of alcohol in the blood and its significance with demonstration of the alcoholometer by L. A. Greenberg. The physiological effect of large and small amounts of alcohol, by H. W Haggard. Alcohol and nutrition—the diseases of chronic alcoholism, by N Jolliffe. Effects of small amounts of alcohol on psychological functions, by E. M. Jellinek. BERNSTINE, J B, AND A E RAKOFF

Vaginal infections, infestations, and discharges. New York The Blakiston Division, McGraw Hill Book Company, Inc., 195[illegible] 4[illegible] p illus (part col d) 23 cm. $10 00 4045

Contents Embryologic factors. Anatomy Histology [illegible] Physiology Examination of the patient. Bacteriology [illegible] natal period Gonococcal infections in children [illegible] vulvovaginitis Vulvovaginitis in the acute inf[illegible] of childhood Infestations with orms Infestations with protozoa in children Foreign bodies in the vagina. Menstruat[illegible] and menstrual discharges. Vaginal discharges in the ad[illegible] Relationship of cervical disease to vaginal infection Trichomonas [illegible] vaginitis. Vulvovaginal mycoses Fusospirochetosis (Vincent infection Plaut Vincent's disease) Chancroid. Lymphogranuloma venereum. Granuloma inguinale Syphilis. Tuberculosis. Condylomata [illegible] Vaginitis Emphysematosa (colpiti s emphysematosa). [illegible] to physical agents. Chemical vaginitis [illegible] the adult. Pregnancy Vaginal infections in the puerperal and postpartum period. Atrophic vaginiti Index.

Note A specialized treatise in hich vaginal infections are discussed in more detail than is possible in the few chapters usually accorded the subject in treatises on gynecology in general. It covers these conditions in children and adolescents as well as in adults. Diagnosis and treatment are the primary topics. However, the book contains several chapters on basic anatomy, histology, physiology etc. and in chapters on specific disorders, some space is devoted anatomic, histologic, and physiologic factors. In many of the aspects, several methods of treatment are described, and the authors indicate which one they have found most successful. The book is based partly on the literature and partly on clinical experience in the Department of Obstetrics and Gynecology of the [illegible] Medical College and Hospital Philadelphia. Literat references are given, and there are 132 illustrations.

Pathology of the puerperium. Section IX, Abnormalities of the newborn. Section X, Operative obstetrics. Index.

Note This book is one of the *standard American* textbooks on obstetrics. It is used both for instruction in medical schools and for reference in the offices of practicing physicians. The first edition was published in 1902. The first six editions were written by J. Whitridge Williams; the next three were the work of Henricus J. Stander. This *eleventh* edition is the second one prepared by Eastman, who is *Professor* of Obstetrics in Johns Hopkins University and Obstetrician-in-Chief to the Johns Hopkins Hospital. In comparison to the 10th edition, this edition contains a number of chapters which have been rewritten in whole or in part, and new chapter, Psychiatric aspects of pregnancy and childbirth, by Leo Kanner has been added to Section III. Recent literature has been added to the bibliographies which, in this edition as in previous ones, are an important feature. Some new illustrations have been added.

Everett Houston Spencer

Gynecological and obstetrical urology Second edition. Baltimore The Williams & Wilkins Company 1947 539 p. illus. 23 cm. $6.00. 4058

Contents (abridged) The relation of female urology to allied specialties. General study of the urological patient. Cystoscopic technique. Diseases of the urethra. Inflammation of the bladder. Neoplastic. Cancer and the bladder. Other bladder conditions. Incontinence of urine. Retention of urine. Diversion of the urinary stream. Congenital anomalies of the kidneys and ureters. Intrinsic ureteral obstructions. Extrinsic ureteral obstructions arising in the genital organs. Extragenital extrinsic obstructions. Hydronephrosis. The etiology and pathology of nontuberculous infections of the upper urinary tracts. Clinical forms of renal infection. Tuberculosis of the urinary tract. Calculous disease of the kidneys and ureters. Tumors of the kidney and ureter. Traumatic injury of the kidneys and ureters. Index.

Note Based largely on the activities and experiences of the Gynecological Department of the Johns Hopkins Hospital and University, this treatise covers thoroughly the special urological diseases and conditions of women. It is designed for medical college students, general medical practitioners, and for gynecologists and obstetricians. Cystoscopic techniques, especially Kelly's, are described in detail, but other surgical techniques are not, generally speaking, described so thoroughly. In the second edition a discussion of indirect cystoscopy and material on penicillin therapy have been added, and the bibliographies have been brought down to date. There are now 132 figures.

Fish John S

Hemorrhage of late pregnancy Springfield, Ill. Charles C Thomas 1955 160 p. illus. 22 cm. (American lecture series. Publication no. 225 A monograph in the Bannerstone division of American lectures in gynecology and obstetrics edited by E. C Hamblen) $5.50 4059

Contents Introduction. Anatomy. History. Clinical characteristics. Clinical diagnosis. Placental diagnosis. Theory of mechanism of marginal sinus rupture. Treatment. Bibliography. Appendix. Index.

Note A contribution to the understanding and management of hemorrhage in the third trimester of pregnancy. It is based on the opinion and experience of a group of five members of the faculty of Emory University. This experience is not solely hospital experience, but includes the long private practice of Dr R A Bartholomew and an extensive group private practice. The theory is advanced that the rupture in the placenta that causes hemorrhage usually involves the marginal sinus of the placenta and only rarely is due to true marginal placental separation. A probable mechanism of the rupture of the marginal sinus is explained in the terminal chapter. Aside from this theory the book contains much information useful to practicing obstetricians on the anatomy, physiology and pathology of the placenta and on the treatment of hemorrhage of late pregnancy and labor.

Fluhmann Charles Frederic

The management of menstrual disorders. Philadelphia W B Saunders Company 1956 350 p. 121 illus. 24 cm. $8.50. 4060

Contents Historical review of concepts of menstruation. The gonadotropins. Steroid hormones. Neural and endocrine control of menstruation. Mammalian reproductive cycles. Age at inception of menstruation. The menarche. *Menstrual disorders of adolescence.* The menstrual cycle. Systemic changes during the menstrual cycle. Systemic disorders of the menstrual cycle. The ovarian cycle. Disorders of the ovulatory phase. The uterine cycle. Cyclic changes of vulva, vagina, fallopian tubes, and mammary glands. A classification of disorders of menstruation and abnormal uterine hemorrhage. Polymenorrhea and oligomenorrhea. Secondary amenorrhea. Diagnosis and treatment of secondary amenorrhea. Hypermenorrhea and hypomenorrhea. Anovulatory menstruation and hyperplasia of the endometrium. Metrorrhagia. The management of pathologic uterine bleeding. Dysmenorrhea. The climacteric and menopause. Clinical usage and commercial preparations of sex hormones. Index.

Note Much information on the clinical management of menstrual disorders together with background information, such as is indicated by the titles of the introductory chapters, is presented in this compactly written book. Graduate general practitioners are the intended audience, and the book is useful also to students who are preparing for the specialty of gynecology. Both rare and common disorders are included, but the emphasis is on the latter. Bibliographies are included in the chapters. The book supersedes the author's *Menstrual disorders*, 1939. It contains some material carried over from the earlier work, but is essentially a new book.

Fluhmann Charles Frederic

Medical treatment in obstetrics & gynecology Baltimore The Williams & Wilkins Company 1951 157 p. illus. 24 cm. $3.00. 4061

Contents Diagnosis and medical therapy in obstetrics and gynecology. Therapeutic measures. Nutrition. Office and hospital procedures. Index.

Note An office reference book which contains concise information on many topics ranging from supporting diets for pregnant women to lists of equipment for treatment rooms associated with a physician's office. A tabulation of useful drugs is included. The miscellaneous material even includes suggested "permission forms" for operations and treatments. Some literature references are supplied. The author is Clinical Professor of Obstetrics and Gynecology in the School of Medicine of Stanford University.

Greenhill Jacob Pearl

Obstetrics. Eleventh edition. 1 170 illustrations on 910 figures, 144 in color Philadelphia W B Saunders Company 1955 1,099 p. illus. (part col'd) 26 cm. $14.00. 4062

Contents (abridged) Part I, The physiology of reproduction, pregnancy, labor and the puerperium: Section I, Physiology and conduct of pregnancy: Ovulation and conception. Physiology of the fetus and the newborn. Endocrine changes and diseases during pregnancy. The diagnosis of pregnancy. Roentgenology in obstetrics. Section II, Physiology and conduct of labor: The passage and the mechanism of labor. The passengers and the mechanism of labor. Mechanism of labor in occiput presentation. Preparations for delivery. Management of the first and second stages. Analgesia and anesthesia. Physiology and management of the third stage. Induction of labor. Section III, Physiology and conduct of the puerperium: General changes in the puerperium. Postpartum care and diagnosis of the puerperium. Psychiatry of pregnancy, labor and puerperium. Part II, The pathology of pregnancy, labor and the puerperium. Section IV The pathology of pregnancy: Minor disturbances in pregnancy. *Hyperemesis gravidarum*—ptyalism—acute yellow atrophy—infectious hepatitis—chloroform poisoning. Toxemias of pregnancy. Ectopic pregnancy. Uterine and vaginal displacements and distortions. Abortion and missed abortion. Placenta previa. Abruptio placentae. Multiple pregnancy. Infectious diseases. Malformations and local diseases. Pregnancy complicated by neoplasms. Fetal erythroblastosis and the Rh factor. Section V Pathology of labor. Anomalies of the powers. Anomalies of the passengers. Prolonged labor and missed labor. Anomalies of the soft parts of the passages. Contracted pelves and other pelvic abnormalities. Conduct of labor in contracted pelves. Accidents of labor—injuries to the parturient canal, bladder, pelvic joints and bones. Prematurity and care of premature babies. Section VI, Pathology of the puerperium. Section VII, Operative obstetrics. General considerations of operative obstetrics. Preparatory obstetric procedures. Breech extraction. Forceps delivery. Cesarean section. Index.

Note A standard medical college text and reference book for

are unchanged the book is still primarily a text and secondarily a reference book for general practitioners and gynecologists. The fifth edition was published in 1946. For this edition, two chapters were extensively revised, some new material was added to other chapters, and a selection of recent literature was added to the reference lists. Before his retirement the senior author was chairman of the Department of Obstetrics and Gynecology in the Medical School of Northwestern University The junior author is currently Associate Professor of Obstetrics and Gynecology in the same school.

DECKER, ALBERT

Culdoscopy, a new technic in gynecologic and obstetric diagnosis With a foreword by Richard W TeLinde Philadelphia W B Saunders Company, 1952 148 p illus. 22 cm $3 50 4052

Contents Culdoscopy its history and development. Anatomy of the vagina. The Decker culdoscope. Culdoscopic technic. Colpoceliocentesis. Ectopic pregnancy Culdoscopy in the management of sterility Culdoscopic uterotubal insufflation. Pneumoperitoneum. Culdoscopy in the diagnosis of endometriosis. Culdoscopic observation of ovulation and ovum transfer Endoscopic photography Case reports. References.

Note A thorough and adequately illustrated presentation of a relatively new instrument and technique which permit visual examination of the pelvic viscera in the course of diagnosis. It is addressed to graduate obstetricians and gynecologists. The bibliography is comprehensive.

DECKER, ALBERT, AND WAYNE H DECKER

Practical office gynecology 103 illustrations 19 in color Philadelphia F A Davis Company, 1956 388 p illus (part col'd) 25 cm (Obstetrics & gynecology a series of monographs edited by Claude E Heaton) $10 50 4053

Contents. The office record and case history The physical examination Instrumental examination. Special examinations. Hysterosalpingography Other examinations. Disorders of the vulva. The menstrual cycle. Disorders of menstruation. Abnormal genital tract bleeding. Endometriosis. Infertility Hormone therapy in gynecology Premenstrual tension. Psychosomatic gynecology The office management of stress incontinence of urine. The vaginal douche. The vaginal pessary Leukorrhea. Backache. Palpable pelvic tumors. Inflammatory diseases of the tubes and ovaries. Indications for gynecologic surgery Cancer detection in women. Premarital consultation Culdoscopy Axioms. Bibliography Index.

Note Addressed primarily to general practitioners of medicine and limited to medical and surgical techniques that may be employed in doctor's offices, this book covers in straightforward style the gynecologic disorders and the techniques of diagnosis and treatment that are mentioned in the chapter titles. In surgery only simple techniques are specifically described. Conditions requiring major surgery are discussed in the chapter entitled "Indications for gynecologic surgery" Illustrations are adequate and clear The father-son authors are specialists in obstetrics and gynecology associated with New York Medical College and the College of Medicine of New York University

DENNEN, EDWARD H.

Forceps deliveries. 91 illustrations by Alfred Fineberg Philadelphia F A. Davis Company, 1955 228 p illus 25 cm (Obstetrics & gynecology a series of monographs, edited by Claude E Heaton) $6 50 4054

Contents Introduction. Prerequisites for forceps deliveries. A classification of forceps operations according to station of head in pelvis. Classical instruments. Technic of application. Traction. Transverse positions of the occiput. Posterior positions of the occiput. Special instruments, Kielland forceps. Barton forceps. Piper forceps for the aftercoming head. Choice of instrument. Conclusion. Index.

Note. A manual of specific and explicit information. The author has stated, "The ultimate object of this book is to show that there is a choice of instruments in delivery with forceps, depending upon the existing conditions; that one should choose the type of forceps that suits the case rather than try to make all cases fit one type of forceps. Both the types of instruments which are in common use and special instruments are described, from the standpoint of the kinds of cases to which they are suited. Techniques of use are described for each. The book is clearly written and is adequately illustrated. The majority of the illustrations are reproductions of simplified diagrams that illustrate techniques.

DIECKMANN, WILLIAM JOSEPH

The toxemias of pregnancy, with fifty text illustrations and three color plates. St. Louis The C. V Mosby Company, 1941 521 p. illus. (part col'd) 25 cm. $10 00 4055

Contents Section I, Classification, incidence, and pathology Classification, etc. Incidence of eclampsia and other toxemias of pregnancy Pathology II Normal and abnormal physiology Physicochemical determinations. Blood pressure. Renal physiology Liver. Ocular system. Placenta. Endocrine glands. Estrogens and gonadotropins. Edema in pre-eclampsia and eclampsia. III, Etiology Factors influencing eclampsia in pregnant animals. In pregnant women. Constitutional and environmental factors. IV Clinical aspects Signs and symptoms. Hypertensive disease. Diseases of the kidney acute chronic. Types of eclampsia. Pre-eclampsia and eclampsia. Complications. V Treatment: Historical résumé. Pharmacodynamics. Procedures and methods. Termination of pregnancy Obstetric treatment of eclampsia. Of nonconvulsive toxemias of pregnancy VI, Maternal and fetal prognosis and prenatal care: Mortality maternal fetal. Maternal and fetal sequelae. Prenatal care. Monographs. Index.

Note This book has two objectives. (1) to acquaint the obstetrician with some of the recent contributions on physiology pertaining to obstetrics (2) to acquaint the investigator, untrained in obstetrics, with some of the physiology and pathology of obstetrics. Because the pathologic picture of toxemia is not clear-cut and the etiology is still obscure, the literature on this subject is voluminous, and in this book the author has condensed and discussed investigations, clinical observations, etc., which have appeared in the literature. The material was thus limited in order to supplement previous monographs on this subject. The opinions, theories, and conclusions expressed by the author are based on his personal work.

DILL, L V

The obstetrical forceps Springfield, Ill. Charles C Thomas, 1953 156 p. illus. 22 cm. (American lecture series. Publication no. 150. A monograph in the Bannerstone division of American lectures in gynecology and obstetrics edited by E C Hamblen) $5 25 4056

Contents. Historical. The development of the forceps in its present form. Indications for the use of the forceps. Prerequisites for application of forceps. The mechanism of the forceps. Application of the forceps. Traction on forceps. Failures of rotation. Application of forceps for the posterior and transverse positions. Abnormalities of flexion. The Tarnier forceps. The Kjelland forceps. The Barton forceps. The Piper forceps. The choice of forceps. Injuries associated with forceps deliveries. Summary Bibliography. Index.

Note. A small but comprehensive monograph. It outlines the history of the obstetrical forceps, and describes the special features of the types currently used or of significance in the historical development. It provides longer discussions of indications for use of forceps and of the techniques of application and traction than are found in most treatises on obstetrics. The descriptions of techniques are explicit and fully detailed. There are 24 figures.

EASTMAN NICHOLSON J

Williams' obstetrics Eleventh edition. New York Appleton-Century Crofts, Inc., 1956 1,212 p illus. (part col'd) 25 cm. $14 00. 4057

Contents (abridged) Section I, Orientation Section II, Anatomy and physiology of reproduction. Section III, Management of normal pregnancy Section IV Physiology and conduct of labor Section V The puerperium and the newborn. Section VI, Abnormalities of pregnancy Section VII, Abnormalities of labor Section VIII,

[illegible] and recto-vaginal fistula. Culdoscopy, by A. Decker. Removal of cyst of the vagina, by H. C. Falk. An improved method of the construction of an artificial vagina, by L. R. [illegible]. The [illegible]. Repair of enterocele, by J. C. Ward. The Fothergill operation, by H. W. Johnston. The Manchester operation for correction of uterine prolapse, by L. E. Phaneuf. Section iv, Operations by [illegible] of urinary fistulas and for the correction of stress urinary incontinence. Surgical operation for correction of stress urinary incontinence, by W. T. Kennedy. Closure of urinary fistulas, by J. C. Moir. Section [illegible], Operations designed chiefly for correction of vaginal prolapse. Le Fort operation for advanced prolapse, by D. N. [illegible]. The modified Le Fort operation for correction of eversion of the vagina following hysterectomy, by C. J. Andrews. Correction of vaginal vault prolapse after previous hysterectomy by [illegible] vaginal operation which does not obliterate the vaginal canal, by J. R. [illegible]. Correction of prolapse of the vagina following hysterectomy, by L. Brady. Abdominal cystourethropexy, by C. B. Marsh. Watkins' interposition (transposition) operation, by R. J. Lowrie. Section vi, Operations on the cervix, [illegible] Conization of cervix, amputation and trachelorrhaphy, by R. J. Lowrie. Electrocauterization and [illegible] of the cervix, by M. C. [illegible]. Trachelotomy by M. C. [illegible]. Removal of cervical polyps, by H. H. [illegible]. [illegible] (excision) of the uterus, by R. J. Lowrie. Section vii, Abdominal hysterectomy. Technic of total abdominal hysterectomy by W. J. Koch and M. J. Nechtow. Radical hysterectomy for cancer of the cervix with bilateral pelvic lymph node dissection, by J. V. Meigs. Fundectomy and [illegible] of uterus, by W. T. Kennedy. Section viii, Vaginal hysterectomy, vaginal-abdominal hysterectomy and operations for correction of prolapse of the uterus. Vaginal hysterectomy by ligature method, by V. B. Green-Armytage. Vaginal hysterectomy by clamp method, by A. M. [illegible]. Complete removal of pelvic viscera for advanced carcinoma, by A. Brunschwig. Section ix, Operations on the fallopian tube and ovary. Cornual resection of the fallopian tubes, by H. C. Falk. The surgery of ectopic pregnancy, by R. B. [illegible]. [illegible] and exploratory operations on the fallopian tubes for correction of infertility by [illegible]. Therapeutic sterilization, by C. T. Javert. Section x, Miscellaneous operations. Operations for relief of intractable pain, by W. P. [illegible]. Subcutaneous implantation of [illegible] in [illegible] therapy, by R. B. Greenblatt. Cesarean section, by R. J. Lowrie. Subject index. Author index.

Note: This book contains 78 chapters contributed by 72 specialists. It provides clear and concise descriptions of [illegible] full range of gynecologic operations. However, it is not [illegible] cyclopedia of such operations, but presents instead the techniques used by the contributing authors in their own practices. There is due emphasis on basic principles, preoperative preparation, etc. Illustrations are numerous and clear. Literature references are included in the chapters. There [illegible] companion volume available from the same publisher: Lowrie, R. J. editor, *Gynecology: diseases and minor surgery*, second edition, 195[illegible].

LULL, CLIFFORD B., AND ROBERT A. KIMBROUGH, editors

Clinical obstetrics. By members of the staff of the Pennsylvania Hospital. With 392 illustrations and 8 color plates. Philadelphia J B Lippincott Company 1953 732 p. illus. (part col'd) 26 cm. $10.00. 4069

Contents: Section [illegible], Anatomy and physiology of reproduction. Anatomy by C. W. Mackie and F. M. Kerr. Embryology and physiology by C. W. Mackie. Abnormalities of the genital tract, by C. W. Mackie. Endocrinology of pregnancy by C. W. Mackie. Fertility by C. W. Mackie. Section ii, Normal pregnancy. Signs and symptoms of pregnancy by R. M. Mitchell. Clinical laboratory methods in obstetrics, by A. B. Crane. Antenatal care and management of pregnancy by W. T. Tompkins. Nutrition and nutritional deficiencies in pregnancy by W. T. Tompkins. Section iii, Complications of pregnancy. Hemorrhages of pregnancy by R. A. Kimbrough. Toxemias of pregnancy by R. M. Mitchell. Medical complications of pregnancy by F. MacNeal and J. B. Vander [illegible]. The surgical complications of pregnancy by C. C. [illegible]. Obstetric [illegible] by F. A. [illegible]. Pathology of pregnancy and labor by A. R. [illegible]. Section iv, Normal labor. Physiology and mechanism of normal labor by J. C. Ullery. The management of normal labor by J. C. Ullery. Obstetric analgesia and anesthesia by R. A. Hingson. Section [illegible], Abnormal labor. Dystocia, by J. C. [illegible]. Abnormal presentations, by J. V. [illegible] and J. C. Ullery. Section vi, Operative obstetrics. Forceps, episiotomy and version, by R. C. McElroy. Cesarean section, by J. C. Ullery. Destructive operations on the fetus, by C. C. [illegible]. Multiple pregnancy by J. [illegible]. Section vii, Puerperal period. Normal puerperium, by C. E. [illegible]. Complications of the puerperium, by R. B. Wilson. Section viii, The newborn: Management of the normal infant in the neonatal period, by H. F. Lee. Hemolytic disease of the newborn, by H. F. Lee. Section ix, Other aspects. Maternal and neonatal mortality by R. M. Mitchell. Outline of obstetric nursing practices, by M. H. Madden. Legal aspects, by E. B. Hodge. Index.

Note: A collaboration among 23 present and former members of the staff of the Pennsylvania Hospital, this book describes the methods used in this hospital. Division of Obstetrics and Gynecology. It is organized as shown in the above contents. Each of the chapters is [illegible] rather full discussion of the facts of the subject covered as it [illegible], and is directed to medical college students and to graduate practitioners. Tabulations of statistical data representing the experience of the Pennsylvania Hospital on the point under discussion are included in some of the chapters. Literature references are given in all.

MACK, HAROLD C.

Plasma proteins in pregnancy: a clinical interpretation. Foreword by Nicholson J Eastman. Springfield, Ill. Charles C Thomas 1955 113 p. illus. 22 cm. (American lecture series. Publication no. 252. A monograph in American lectures in gynecology and obstetrics, edited by E. C. Hamblen) $3.75 4070

Contents: The basic proteins—their structure and functions. The plasma proteins in normal pregnancy. The plasma proteins in toxemia and other disorders of pregnancy. Fetal plasma proteins. Summary. References.

Note: This book is based on an extensive series of electrophoretic and [illegible] determinations of plasma protein levels in normal and complicated pregnancies. The determinations were made in the Research Laboratory of the Children's Fund of Michigan, and the results were interpreted clinically by the author and his colleagues in the Department of Obstetrics and Gynecology of Harper Hospital in Detroit and the College of Medicine of Wayne University. It is addressed primarily to graduate practitioners of medicine, both those [illegible] specialize in obstetrics and those [illegible] treat obstetric patients in the course of general practice. Most of its text is written in narrative form for straightforward reading. However, there are some tables of data. Among the author's conclusions: Although blood protein analyses do not demonstrate specifically that nutritional inadequacy is responsible for the breakdown in the maternal economy which results in toxemias of pregnancy, there is strong supporting evidence to indicate that [illegible] relationship exists between the nutrition of the human mother, the health and survival of her offspring and her own ability to perform the function of reproduction without disease. The list of literature references runs to eight pages.

MEIGS, JOE VINCENT, AND SOMERS H. STURGIS, editors

Progress in gynecology. Volume ii. New York Grune & Stratton, 1950. 821 p. illus. 24 cm. $9.50 4071

Contents (abridged): Growth and physiology: Embryology and development of the human reproductive tract, by W. Schiller. Functioning ovarian neoplasms, by M. R. Dockerty. The morphological and endocrine bases for menstrual bleeding, by J. E. Markee. The hormonal mechanism of the endometrium of the uterus, by E. C. Hughes. Diagnostic methods. Endometrial biopsy, by J. C. Burch and D. Phelps. The clinical evaluation of the vaginal smear, by R. M. Graham. Diagnostic tests for pregnancy by [illegible]. Functional disorders: Functional causes of uterine bleeding, by E. C. Hamblen. Dysmenorrhea, by F. M. [illegible]. The premenstrual syndrome of [illegible], by M. E. [illegible] and H. [illegible]. The psychiatric component in gynecology, by H. Deutsch. Interrelationship of endocrine glands: Hormones in relation to the [illegible] of the female, by I. T. Nathanson. The corpus luteum hormone in gynecology by J. S. L. Browne and others. The thyroid in gynecology by J. [illegible]. Gonadotropins in gynecology, by W. E. Brown and J. T. Bradbury. The function of the adrenal cortex in gynecology by E. C. [illegible]. Androgen therapy in gynecology by C. J. [illegible]. Sterility and reproduction: Diagnostic techniques and treatment of the sterile couple, by F. A. [illegible]. [illegible] and management of threatened abortion, by E. D. [illegible]. Ectopic pregnancy by W. D. [illegible]. Hydatidiform mole and chorionepithelioma, by A. T. Hertig. Infections and their treatment. The treatment of vulvovaginitis in children, by [illegible]. Trichomonas vaginalis vaginitis, by S. J. [illegible]. The

practitioners. Its first edition was published in 1913 and in its various editions it has been used for more than four decades. It covers the care of obstetrical cases from conception to the puerperium. Surgical procedures associated with delivery are fully covered. The illustrations are numerous and exceptionally clear. The 10th edition was published in 1951 and represented a very extensive revision in comparison to the preceding edition. The 11th edition is the result of another wide revision. Revised sections and new data appear in most of the chapters, including those written by the contributors. A number of illustrations were deleted, and 115 new ones were added. A selection of literature published since the 10th edition was written was added to the bibliographies.

GREENHILL, JACOB PEARL

Office gynecology. Sixth edition, revised and enlarged Chicago The Year Book Publishers, Inc., 1954 517 p illus. 21 cm. $7 75 4063

Contents (abridged) Office equipment necessary for gynecologic practice. The gynecologic examination. Postpartum care—prophylactic gynecology. Trichomonas vaginalis vaginitis. Vaginal and vulvar discharges due to mycotic and similar organisms. Vulvovaginitis in children—gonorrheal and nonspecific. Gonorrhea in adults. The uterine cervix—its disturbances and their treatment. Dyspareunia and frigidity. Sterility. The Rubin test—transuterine insufflation of gas. Artificial insemination. Culdoscopy. Vaginal douches. Backache. Control of conception. General anesthesia for office procedures. Office treatment of Bartholin's gland abscess and cyst. Gynecologic and obstetric endocrinology. Menstrual irregularities. The climacteric or menopause. Pruritus vulvae. Diagnosis of preinvasive uterine carcinoma by vaginal and cervical smears. The Schiller test for carcinoma of the cervix. Office urology. Office proctology. Obesity. Premarital examination and advice. Index.

Note. A concise manual directed to general practitioners of medicine and to young doctors beginning to practice in gynecology. In its various editions, it has been widely used in the United States of America and in other countries since the publication of the first edition in 1939. It covers both the medical aspects of gynecologic ailments and also the techniques of most minor operations that can be performed in doctors' offices. The fifth edition was published in 1948. In preparing this sixth edition, two chapters were deleted, and seven new chapters were added. The chapters carried over from the fifth edition were all revised, some of them very extensively. The book is now organized in 47 chapters, of which a selection is listed by title above. There are 127 figures in the sixth edition.

GREENHILL, JACOB PEARL

Surgical gynecology, including important obstetric operations. Illustrated by Angela Bartenbach. Chicago The Year Book Publishers Inc., 1952 350 p illus 21 cm 4064

Contents Preoperative preparation and postoperative care and complications. Vulvar and perineal operations. Vaginal operations. Abdominal operations. Index.

Note In this book the first chapter is 70 pages long and the remainder of the space, except that occupied by the index, is devoted to 101 plates, most of which contain reproductions of several drawings. The book is organized so that a plate on a left-hand page faces a page of printed text of description of the particular plate. The illustrations were made from original drawings of techniques employed by the author who is Professor of Gynecology in Cook County Graduate School of Medicine. The book is potentially of interest to general surgeons and to beginners in gynecology. A second edition was published in 1957 377 p., $9.50.

HERBUT, PETER A

Gynecological and obstetrical pathology 428 illustrations on 246 figures and 2 colored plates. Philadelphia Lea & Febiger 1953 683 p illus (part col d) 24 cm $12 00 4065

Contents Embryology of female genital system. Physiology by A. E. Rakoff. Cytology by A. E. Rakoff. Vulva. Vagina. Uterine cervix. Body of uterus. Fallopian tubes, broad ligaments, and round ligaments. Ovaries. Fetal membranes. Rh factor and blood groups, by L. A. Erf. The mother—anemias of pregnancy by L. A. Erf. Index.

Note Primarily a text for undergraduate medical college students, this book provides an inclusive, adequately illustrated survey of its subject. The chapter titles listed above show the arrangement. In dealing with the pathology of a specific region, the normal growth and microscopic anatomy is first described, then the diseases of the region are considered under the headings "Congenital anomaly," "Tumors," and "Mechanical disturbances." In dealing with individual disorders, the arrangement of the material is the standard one of: definition, incidence, cause, gross appearance, microscopic appearance, complications, clinicopathologic correlation, diagnosis, treatment and prognosis. Rather extensive lists of references to the literature are included.

HERSHENSON, BERT B

Obstetrical anesthesia, its principles and practice Springfield, Ill. Charles C Thomas, 1955 403 p illus. 23 cm. $9 50 4066

Contents Historical background. Reflex irritability. Pain. Labor. Premedication. Signs and stages of general anesthesia. Respiratory and circulatory derangements. Asphyxia neonatorum. Selection of anesthetic agent and technic—inhalation anesthesia (ether)—regional anesthesia. Complications. Index.

Note: A well-written presentation of fundamental knowledge and technical information. It is addressed to medical college students, general practitioners of medicine, and obstetricians rather than to specialists in anesthesia. In accordance with the author's thesis that "the skill and judgment of the obstetrician and anesthesiologist are of more significance than the anesthetic agent employed," more space is devoted to clinical physiology and pharmacology than to anesthetic techniques. However the latter are described explicitly and adequately for the book's purpose. Special consideration is given to complications, such as heart disease or poliomyelitis, and the handling of emergencies are discussed, in addition to standard cases. The author is Director of Anesthesia for the Boston Lying-In Hospital.

HINGSON, ROBERT A., AND LOUIS M HELLMAN

Anesthesia for obstetrics, labor delivery infant care. Philadelphia J B Lippincott Company, 1956 344 p illus (part col d) 26 cm. $12 50 4067

Contents Obstetric amnesia, analgesia and anesthesia in broad perspective. Obstetric amnesia, analgesia and anesthesia in historical perspective. Anatomic and physiologic considerations. Technics in obstetric amnesia, analgesia and anesthesia. Psychological principles of pregnancy and delivery. Control of pain in maternal and fetal complications. Anesthesia mortality. Infant mortality and morbidity. Maternal and infant safeguards, by V. Apgar. Organization of obstetric anesthesia service on 24-hour basis. Index.

Note A specialist in anesthesia and a specialist in obstetrics and gynecology are the authors of this thorough, up-to-date book. The historical development of the use of anesthetics and analgesics to ease the pain of labor is outlined in the first chapter. Most of the remainder of the book is devoted to correlation of the mechanisms of the various stages of labor with the principles and techniques of anesthesia. The actions of various anesthetics on the organs of the mother and of the unborn child are shown graphically in a series of 17 charts in color. All the methods currently in use are considered and their advantages and disadvantages discussed in detail. Techniques of administration are precisely described. Psychological aspects, including natural childbirth, are discussed. The book is directed to graduate anesthetists and obstetricians. The chapter on organization of obstetric anesthesia services on a 24-hour basis is also of interest to hospital administrators.

LOWRIE, ROBERT J, compiler and editor

Gynecology surgical techniques. Foreword by J P Greenhill Springfield Ill. Charles C Thomas 1955 523 p. illus 26 cm. $17 75 4068

Content (abridged) Section I, General principles of operative gynecology pre- and postoperative care. Section II, Operations on the vulva and its component structures. Incision and drainage of Bartholin's gland abscess, by G. L. Bowen. Treatment of Bartholin's gland cyst or abscess by marsupialization by P. Jacobson. Excision of the glands of the female urethra, by W. T. Kennedy. Vulvectomy for malignant disease, by C. White. Section III, Operations on the vagina, including repair of cystourethrocele, rectocele, enterocele.

Parmelee, Arthur Hawley

Management of the newborn. Chicago The Year Book Publishers, Inc., 1952 358 p. illus. 21 cm. $7.00. 4076

Contents: Introduction. The fetus. Birth and neonatal adjustments. Characteristics of the newborn. The premature infant. Care and management of the newborn. Disturbances directly due to birth processes. Disturbances due to abnormal variations of physiologic [illegible]. Disturbances due to prenatal factors. Disturbances due to acquired infections and other postnatal hazards. Index.

Note: A [illegible], short treatise designed mainly for general practitioners. It makes available to the nonspecialist many of the advances in knowledge that have been published in recent years in such books as Potter and Adair, *Fetal and neonatal death*, 2nd edition, 1949, and Smith, *The physiology of the newborn infant*, 1945. Also, much material has been included from the author's own extensive experience at Cook County and Presbyterian hospitals in Chicago. The diagnosis and treatment of disorders and unusual conditions are stressed. The chapters are supplemented by useful lists of references, and there are 47 figures.

Potter, Edith Louise, and Fred L. Adair

Fetal and neonatal death a survey of the incidence, etiology and anatomic manifestations of the conditions producing death of the fetus in utero and the infant in the early days of life. Second edition. Chicago The University of Chicago Press, 1949 173 p. illus. 22 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $6.00. 4077

Contents: The normal fetus and infant. Postmortem examination. Survey of the principal causes of fetal and neonatal death. Special pathology. Statistical data pertaining to births, maternal deaths, infant deaths, and stillbirths. Index.

Note: A compact handbook on the nature, importance, and identification of the principal causes of death of human infants before birth or in the days immediately following birth. Normal anatomy and standards are first covered, then the authors describe techniques of the postmortem examination, outline the principal causes of death, cover the pathology in some detail, and finally summarize the statistical data of the fetal and infant deaths in the United States of America. Literature references are included. The first edition was published in 1939. For this edition the book was extensively revised, especially in the bibliographies and statistical data. Material was added on topics such as the effects of rubella and other virus infections of the mother during the first few months of pregnancy.

Potter, Edith Louise

Pathology of the fetus and the newborn. Chicago The Year Book Publishers, Inc., 1952 574 p. illus. 27 cm. $19.00. 4078

Contents: Early development of fetus and placenta. Rate of intrauterine growth. Chorionic villi and placenta. Abortion. Causes of fetal and infant death. Postmortem examination. Prematurity. Anemia. Birth trauma. Infections. Malformations. Tumors. Multiple pregnancies and conjoined twins. Heart and blood vessels. Lungs and trachea. Thymus and glands of internal secretion. Mouth, esophagus, stomach and intestine. Diaphragmatic and abdominal hernias. Liver and gallbladder. Pancreas. Spleen. Kidneys, ureters, urinary bladder and urethra. Sex organs, gonads and mammary glands. Central nervous system. Skeleton. Muscles, tendons and joints. Skin. Ears. Index.

Note: A notable contribution to the knowledge of abnormalities, physiological disorders, and certain diseases of infants from time of conception to about one year of age. A considerable part of the material pertains to conditions that result in prenatal death or death soon after delivery. The book is based on an intensive study of many thousands of autopsies performed at Chicago hospitals, particularly the Chicago Lying-in Hospital where the author holds the position of Pathologist. There are 621 figures, nearly all of which are reproductions of photographs. Each chapter is accompanied by lists of references.

Reich, Walter J., and Mitchell J. Nechtow

Practical gynecology With 187 illustrations, including 55 subjects in color Philadelphia J B Lippincott Company 1950. illus. (part col'd) 449 p. 24 cm. 4079

Contents: Psychosomatics of gynecology. Practical approach to gynecologic diagnosis. Biopsy and the early detection of cancer. Laboratory findings in gynecology. Reproductive endocrinology. Menstruation. Disturbances of menstrual function. Anomalies and malpositions of the female pelvis. Inflammatory lesions. Infections. Traumatic lesions. Neoplasms. Common gynecological complaints. Genital fistulas. Technics and operations. Low fertility and sterility. Premarital examination and counsel. Index.

Note: Although limited mainly to procedures which can be carried out in the general practitioner's office, this modern manual covers a wide range of gynecologic disorders and related matters. Both medical and minor surgical treatments are included. There is more than the usual emphasis on diagnostic techniques and on psychosomatic aspects, but most of the space is devoted to clear, explicit descriptions of techniques. The book is based on extensive experience in the outpatient clinics of Cook County Hospital in Chicago and on teaching the subject in the Cook County Graduate School of Medicine. A second edition was published in 1957 ($12.50).

Reynolds, S. R. M., and others

Clinical measurement of uterine forces in pregnancy and labor By S. R. M. Reynolds, Jerome S. Harris, and Irwin H. Kaiser Springfield, Ill. Charles C Thomas, 1954 328 p. illus. (part col'd) 24 cm. $9.50. 4080

Contents: Part one, Background and bases: Historical background. Physiological basis of tokodynamometry. Part two, Methods: Internal tokodynamometry. External tokodynamometry. Analysis of records. Internal uterine pressures during pregnancy and labor. Part three, Uterine contractions during pregnancy and labor: Development of uterine contraction patterns during pregnancy. Uterine contraction patterns during normal labor. Uterine contractions in abnormal labor. Part four, Effects of psyche and drugs on uterine contractions. General considerations—controls and routes of injection. Effect of [illegible] and [illegible] on uterine contractions. The psyche and uterine contractions. The effect anesthesia and analgesia on labor. The effect of pitocin on uterine contractions. Author index. Subject index.

Note: A book of outstanding importance for obstetricians and other physicians who conduct research on the mechanisms of labor and on the effects of hypnosis, drugs, etc., on labor. In a brief but informative first part, the history and physiological bases of tokodynamometry are outlined. The remainder of the book is devoted to detailed presentations of measurement techniques and to what has been learned by the techniques of tokodynamometry about uterine contractions in normal and abnormal labor and the effects of the patient's psychological state and of drugs on these contractions. The three-channel tokodynamometer developed by Sanborn Laboratories, Inc. is described and pictured. The discussions of the effects of psychological preparation for labor, of spinal anesthesia, and the administration of pitocin are of interest also to practicing obstetricians who are not concerned with research. Literature references are included in all the chapters.

Ricci, James Vincent and James Pratt Marr

Principles of extraperitoneal Caesarean section. New York. McGraw Hill Book Company Inc., 1942 224 p. illus. (part col'd) 23 cm. $4.50. 4081

Contents: The extraperitoneal principle of Caesarean section. Intra-abdominal lower segment, exclusion and extraperitoneal types of Caesarean. Anatomy and histology of the isthmus and lower segment. Anatomy and histology of the fascia and its relationship to the bladder, lower segment and peritoneum. Isthmus, zone and rupture of the lower segment. Methods of delivery in the extraperitoneal Caesarean. Wound infections and methods of drainage. Technique of the extraperitoneal types of Caesarean. Essential factors in the execution of the Physick-Latzko extraperitoneal

management of uterine abortion complicated by infection, by W E. Studdiford. Benign growths Treatment of the fibroid uterus, by W T Dannreuther Endometriosis, by W R. Holmes. Malignant growths Treatment of carcinoma of the ovary by H. C. Taylor Jr. Adenocarcinoma of the uterus, by C. L. Randall. The present-day status of noninvasive cervical carcinoma, by R. W Te Linde and G. A. Galvin. Cancer of the cervix—principles of radiation treatment, by A. N Arneson. Radical hysterectomy for cancer of the cervix with bilateral pelvic lymphadenectomy (the so-called Wertheim operation) by J V Meigs. Radiotherapy in uterine cancer by H. L. Kottmeier The surgical problem of advanced pelvic cancer—partial and complete pelvic exenteration, by A. Brunschwig and V K. Pierce. Carcinoma of the vulva, by L. Parsons. Super voltage radiation in gynecology by L. L. Robbins and M. D Schulz. Cancer of the cervix in pregnancy by A. R. Hunt and R. D Mussey Operative technique Vaginal hysterectomy by A. D Campbell. The management of prolapse of the uterus and vagina, by L. E. Phaneuf The Manchester Fothergill operation, by T L. Montgomery Complete tear of the perineum, by B. P Watson. The treatment of stress incontinence of urine, by C. D Reed. Enterocele, by J V Meigs. Vaginal atresia and construction of the vagina, by L. R. Wharton. Preoperative and postoperative care Anesthesia for gynecological procedures, by H. K. Beecher Antibacterial therapy in gynecological surgery and pelvic infections, by C. Lyons. Surgical treatment of the pain of pelvic disease, by B. Selverstone and J C. White. Commercial preparations of endocrine products used in gynecology by P H. Benedict. Index.

Note The pattern of the first volume published in 1946 (now out of print) has been followed in Volume II of this series. Again there are 70 short monographs, each of which has been written by a specialist who has made a "hobby" of the subject about which he writes. Most of the monographs are therefore summaries of the current status of the topic rather than reviews of progress during the period of arbitrary length. Short lists of literature references accompany many of the papers, but no author has attempted a comprehensive bibliography The series is addressed to graduate medical practitioners. The editors are members of the faculty of Harvard Medical School. Volume III was published in 1957 $15.50.

National Committee on Maternal Health

Menstruation and its disorders Proceedings of the Conference. Edited by Earl T Engle Springfield, Ill Charles C Thomas, 1950 358 p illus 24 cm. $6 50 4072

Contents Studies on the effects of steroid sex hormones on alkaline phosphatase in the endometrium, by W B Atkinson. The chemical histology of the human uterine cervix with supplementary notes on the endometrium, by G. B Wislocki and others. Methods of study for these lipase, by G. Gomori. Enzymes in the ovarian tissues of rats, by R. K. Meyer and W H. McShan Aborting human ova and associated endometria, by A. T Hertig and J. Rock. The histophysiology of the human endometrium, by H. Okkels. The relation of blood flow to endometrial growth and the inception of menstruation, by J E. Markee. Menstrual toxin—experimental studies, by O. W Smith. Menstrual toxin—clinical significance, by G. V S. Smith. Humoral factors related to peripheral vascular homeostasis, by E. Shorr and B W Zweifach Endometrial pathology of functional bleeding, by R. W TeLinde The atypical secretory phase, by C L. Buxton The physiology and pharmacology of the myometrium, by R. A. Woodbury Summary of proceedings, by J Rock. List of members of the conference on menstruation.

Note A collection of original papers, most of which present information based on recent investigations and not published hitherto. Excerpts from the discussions at the conference are included for some of the papers, and literature references are appended to most of them.

Novak Emil

Gynecologic and obstetric pathology with clinical & endocrine relations. Third edition With 630 illustrations 19 in color Philadelphia W B Saunders Company, 1952 595 p illus (part col d) 26 cm. 4073

Contents (abridged) The endocrinology of the menstrual cycle and pregnancy Diseases of the vulva. Diseases of the vagina. Benign lesions of the cervix, cervicitis, cervical erosion and cervical polyp. Carcinoma of the cervix. Histology of the endometrium. Hyperplasia of the endometrium. Endometritis, endometrial polyp, myometritis. Myoma and other benign tumors of uterus. Adenomyosis (adenomyoma) uteri. Sarcoma of the uterus. Carcinoma of the endometrium. Salpingitis. Tumors of the tube, parovarium, and uterine ligaments. Inflammatory diseases of the ovary Nonneoplastic cysts of ovary Cystadenoma of ovary Primary carcinoma of the ovary Metastatic ovarian carcinoma. Brenner tumor of ovary Dysgerminoma of the ovary Arrhenoblastoma of the ovary adrenal tumors of ovary masculinovoblastoma, hilus cell tumor (masculinizing tumors) Ectopic pregnancy Pelvic endometriosis. Hydatidiform mole and chorionepithelioma malignum. Abnormalities and diseases of the placenta and appendages (other than hydatidiform mole and chorionepithelioma) by L. M. Hellman. Common breast lesions of gynecologic interest. Index.

Note. A comprehensive textbook designed for medical students, practitioners, pathologists, and specialists. The subject is covered in terms of all the important features, such as gross and microscopic characteristics, malignancy and histogenesis of neoplasms, and histology of the female genital organs. Special attention is given to the correlation of pathology with clinical practice, and to endocrinologic aspects. The third edition has been extensively revised, and the book now includes material on many uncommon lesions not discussed in previous editions. About 90 illustrations have been added. The chapter on common breast lesions of gynecologic interest has been added. References to recent literature have been incorporated in some of the bibliographic lists. A fourth edition was published in 1958, 650 p., $14.00.

Novak, Emil, and Edmund R. Novak

Textbook of gynecology Fifth edition. Baltimore The Williams & Wilkins Company, 1956 840 p illus (part col'd) 23 cm. $11 00 4074

Content (abridged) Anatomy Embryology of the female generative organs. The gynecological history and examination. Physiology and endocrinology of menstruation. Cyclical histology of the genital tract. Clinical features of menstruation. Congenital anomalies of the female generative organs. Gynatresia. Diseases of the vulva. Diseases of the vagina. Cervicitis and cervical polyp. Carcinoma of the cervix. Displacements of the uterus. Myoma of the uterus. Sarcoma of the uterus. Chronic pelvic inflammatory disease. Tuberculosis of female generative organs. Benign tumors of the ovary Malignant tumors of the ovary Endometriosis. Ectopic pregnancy Leukorrhea. Backache in women. Problems of sex life Management of the menopause. Uterine bleeding. Sterility Pregnancy conditions in gynecological practice. Common disorders of the female urinary organs. Index.

Note A standard work in which diagnosis and treatment are emphasized, but in which there is also much information on endocrinology and other biological aspects of gynecology The book is used both by undergraduate students in medical colleges and by graduate practitioners. The fourth edition was published in 1952 and, like the fifth, was co-authored by the author's son and associate in Johns Hopkins Medical School. The chapters dealing with uterine cancer and with tuberculosis of the female generative organs were rewritten for this fifth edition, and numerous less extensive changes were made in other chapters. A selection of new literature has been added to the chapter bibliographies. There are 543 figures, including more than 40 in color

Papanicolaou, George Nicholas, and others

The epithelia of woman's reproductive organs a correlative study of cyclic changes, by George N Papanicolaou Herbert F Traut and A A Marchetti Cambridge Mass. Harvard University Press 1948 53 p. illus. (part col'd) 28 cm $10 00 4075

Contents Introduction. The material and methods. The classification of the menstrual cycle. The ovaries. The epithelium of the fallopian tubes. The epithelium of the uterine mucosa. The epithelium of the endocervical glands. The epithelium of the vagina and the portio vaginalis of the cervix (ectocervix) The cytology of the vaginal fluid and the vaginal smear The cytology of the endometrial and endocervical fluids. Correlation of cyclic changes. Bibliography Plates.

Note The principal aim of this detailed study is clarification of existing knowledge covering cell structures and their physiologic morphologic relationships in the epithelial portions of human female genitalia. Cytologic changes that occur during all phases of the menstrual cycle are minutely described, illustrated, and tabulated. Twenty-one pages of colored plates containing photomicrographs and drawings are included. The bibliography contains references to 90 articles and books selected from the international literature.

tions, fistulas, and displacements. Management of menstrual disorders. Endocrinopathic primary and secondary amenorrhea and [illegible]. The menopause, dysmenorrhea, [illegible], and hypermenorrhea. [illegible]. Sterility. The use of hormone preparations in gynecology and [illegible] as to proprietary hormone products. Index.

Note: The essentials of contemporary gynecology are covered very [illegible] in this work, which is addressed primarily to medical students [illegible] and secondarily to general practitioners. The [illegible] brief but abbreviated text [illegible] supplemented by brief references to the readily available recent literature. The author is head of the Department of Obstetrics and Gynecology in the School of Medicine of the University of Colorado.

TE LINDE, RICHARD W

Operative gynecology [illegible] figures and 7 color plates. Second edition. Philadelphia. J B. Lippincott Company 1953. 92[illegible] p. illus. (part col d) 26 cm. $[illegible].52 [illegible]

Contents: Preoperative care and [illegible]. Anesthesia in gynecology. Opening and closing the abdomen. Postoperative care and complications. [illegible] of uterus. Prolapse of uterus. Prolapse of the vagina, with or without cervix, following hysterectomy. The use of pessaries. Urethrocele, cystocele and stress incontinence of urine. Urinary incontinence not curable by sphincter plication. [illegible] and [illegible] fistulas. Relaxed vaginal outlet, rectocele and enterocele. Complete perineal lacerations and rectovaginal fistulas. The anus and the rectum in relation to gynecology. Myomata uteri. Operative injury of the ureter. Surgery of the double uterus. [illegible] cervical lesions and their treatment. Dilatation of the cervix and curettage of the uterus. Cancer of the cervix uteri. Carcinoma-in-situ of the cervix. Carcinoma of the corpus uteri. Sarcoma of the uterus. Functional uterine bleeding. Endometriosis. Presacral neurectomy. Gonorrhea and its complications. Abortions. Tuberculosis of the female genital organs. Sterility. Hysterectomy and [illegible]. Sterilization. Ectopic pregnancy. Cul-de-sac. Ovarian tumors. Retroperitoneal tumors encountered in gynecology. Congenital absence of the vagina. Surgical conditions of the vulva and the vagina. Surgery of the abdominal [illegible]. Appendicitis. The [illegible] in relation to gynecology. [illegible] therapy of the menopause. Index.

Note: A treatise of high merit. The author is Gynecologist-in-Chief of the Johns Hopkins Hospital, and the book reflects but is not strictly limited to methods of that institution. It presents a [illegible] and up-to-date view of surgical gynecology. The text [illegible] and clearly written and is well illustrated. The first edition was published in 1946. For the second edition, many sections were rewritten in order to incorporate such recent advances as the use of antibiotics in the treatment of infections and the development of the smear technique for the detection of uterine cancer as well as progress in operative techniques. Four chapters were added and more than 100 illustrations.

THOMS HERBERT

Pelvimetry New York. Paul B. Hoeber Inc., Medical Book Department of Harper & Brothers, 1956 120 p. illus. [illegible] cm. $5.00. 4088

Contents: General considerations. Methods and accuracy of pelvic measurements. The important pelvic diameters. Development of the pelvis. Nutrition and pelvic conformation. Male and female pelvis. Clinical significance of pelvic variations. Pelvic midplane contraction. Pelvic outlet contraction. Roentgenometry of the pelvis. Pelvic abnormalities caused by disease. [illegible] pelvis. Rare forms of pelvic abnormality: spondylolisthetic, [illegible], kyphotic, scoliotic, and coxalgic pelves. Injuries to the [illegible] of the symphysis pubis. Conclusions. A single film screening survey. Index.

Note: The title of this book is somewhat modest, for it deals as much with variations and abnormalities of the human pelvis as it does with measuring it. It [illegible] addressed to graduate practitioners of obstetrics and [illegible] compactly written. The author points out that roentgenometry is essential for measurements of the upper pelvis, but should be combined with palpatory measurements of the lower pelvis. Both the manual and the radiographic techniques are completely described. Pelvic abnormalities are included so that the practitioner can recognize and assess their importance [illegible] he discovers them. The author, Emeritus Professor of Obstetrics and Gynecology in the Yale University School of Medicine, has based the book partly on the literature and partly on [illegible] long series of combined clinical and roentgenological surveys made by the University Service of the Grace-New Haven Community Hospital, as part of the routine for all primigravidas. There are 43 figures.

TITUS, PAUL

The management of obstetric difficulties. Revised by J Robert Willson. Fifth edition With [illegible]48 text illustrations and one color plate. St. Louis The C. V Mosby Company 1955. [illegible]37 p. illus. (part col d) 25 cm. $12.50 4089

Contents: Introduction. Section I, Infertility. The [illegible] factors in infertility and their detection. Treatment of infertility. Section II, The diagnosis of pregnancy and prenatal care. The diagnosis and duration of pregnancy. Prenatal care and minor complications of pregnancy. Section III, Complications of pregnancy: Anomalies and diseases of the generative tract during pregnancy. General surgical conditions during pregnancy. Infectious diseases, skin diseases, and disorders of the nervous system during pregnancy. Diseases of the urinary system during pregnancy. Diseases of the heart and blood-forming organs, the gastrointestinal tract, and the endocrine organs during pregnancy. Abnormalities and diseases of the placenta and the fetal membranes. Abortion and premature labor. Ectopic pregnancy. Bleeding during late pregnancy. Multiple pregnancy. Toxemias of pregnancy. Section IV, Complications of labor. Normal labor. Dystocia from anomalies of uterine contractile force. Dystocia from developmental anomalies and gynecologic abnormalities. Pelvimetry and the recognition of contracted pelvis. Dystocia from contracted pelvis. Dystocia due to fetal complications. Postpartum hemorrhage and complications of the third stage of labor. Injuries to birth passages and adjacent organs. Section [illegible], Obstetric operations: Induction of abortion, sterilization and induction of labor. Breech delivery—breech extraction—version and extraction. Forceps delivery. Cesarean section. Mutilating operations of the fetus (embryotomy). Section [illegible], Complications of the puerperium. The normal puerperium. [illegible] and the management of puerperal complications. Puerperal infection. Section VII, Special therapy. Obstetric analgesia and anesthesia. Preparation for obstetric operations. Special examinations and treatment. Section VIII, The newborn infant. Care of the infant during labor and at delivery. The newborn infant. Index.

Note: As the table indicates, this book deals with obstetric difficulties and emergencies primarily and only incidentally with the management of normal pregnancy and labor. It is designed for the instruction of graduate medical students during their internships and to serve as [illegible] reference book by general practitioners. Much of the information presented is of interest also to specialists in obstetrics, particularly during their early years of growth. The first edition [illegible] published in 1937 and the fourth edition in 1950. This fifth edition is essentially [illegible] new book. [illegible] by Professor Willson [illegible] head of the Department of Obstetrics and Gynecology of Temple University Hospital, and Professor of Obstetrics and Gynecology in Temple University School of Medicine. A [illegible] range of conditions is covered, but the author has not attempted to be encyclopedic in inclusion of techniques for dealing with them. Instead, he has described methods which [illegible] for the most part represent those which are used in the Temple University Hospital and which are taught to the house staff and the medical students.

UNITED STATES CHILDREN'S BUREAU

Prenatal care. Completely rewritten Washington, D C. Government Printing Office 1949 76 p. illus. 22 cm. (United States. Children's Bureau. Publication no. 4) $0 15 4090

Contents: Planning your care. How the baby grows. Thoughts and feelings. This is [illegible] family affair. If this is not your first child. How to keep well. Some discomforts. Some problems. Getting ready for the baby. Preparing for delivery. When the baby arrives. Getting back on your feet. The newborn baby. Appendix. Glossary. Index. Suggested reading on pregnancy and baby care.

Note: A helpful, widely used booklet of information and advice for parents, especially mothers. It is intended to supplement physicians' instructions, especially in the answering of common questions on such matters as diet, exercise during pregnancy, and the beginning of labor. It is written in [illegible] simple, very readable style.

YEAR BOOK OF OBSTETRICS AND GYNECOLOGY (1956–1957 Year book series) Edited by J P Greenhill. Chicago. The Year Book Publishers, Inc., 1956 592 p. illus. 20 cm. $6.00. 4091

Caesarean. Extraperitoneal Caesarean in patients previously Caesar ezized or laparotomized. Complications. Appendix. Index.

Note This book gives in full detail the technique of all types of extraperitoneal Caesarean. The object is primarily to advance the extraperitoneal principle of Caesarean section, particularly the Physick-Sellheim principle. This operation, which exposes the entire lower segment with no possible danger to the ureter nor to the bladder in its vaginal area, giving the maximum margin of safety to the mismanaged parturient, is proposed to supplant the outmoded Porro section and craniotomy It argues that since it prevents peritonitis, it should displace all other types f Caesarean in infected or mismanaged cases. The literature dealing with extraperitoneal, transperitoneal and exclusion procedures has been reviewed with meticulous care in order to give the eader broad historical perspective, an orderly sequence of events, and balanced rationale.

RUBIN, I C, AND JOSEF NOVAK

Integrated gynecology, principles and practice New York The Blakiston Division, McGraw Hill Book Company, Inc 1956 3 v illus. 24 cm $60 00 4082

Contents Volume I Introduction. Anatomy Evolution and involution. Physiology Gynecologic examination. Congenital anomalies of the genitourinary organs. Injuries of the female sex organs. Effect of toxic agents on the female genital organs. Deformities and displacements of the internal genital organs. Inflammatory diseases of the female genitals. Index. Volume II Tumors of the female sex organs. Constitutional disorders and gynecology Disorders of reproduction. Index Vol me III Relationship between reproductive and other body systems Gynecologic symptomatology Operative gynecology Physiotherapy Female hygiene. Index.

Note A comprehensive ork based on extensive clinical experience in Austria and the United States of America. The authors emphasize the importance of correlating gynecology with other branches of medicine their discussion of physiology is 171 pages long, their discussions of relationships between the reproductive system and other body systems, 361 pages long, etc. Both medical and surgical treatments are covered. Operative techniques are fully described. There are 218 figures in Volume I, 163 in Volume II, and 129 in Volume III. Extensh bibliographies, hich are especially strong in citations of literature in German and in English, are included. The work is suitable for use as text for advanced medical students and as reference book for general practitioners. It is also of interest to established specialists in gynecology

SCHAEFER, GEORGE

Tuberculosis in obstetrics and gynecology With 58 halftone illustrations Boston Little Brown and Company 1956 307 p illus 22 cm $8 75 4083

Contents General aspects of tuberculosis and its treatment. Part I, Tuberculosis in obstetrics Incidence of tuberculosis complicating pregnancy and childbirth. Antepartum are of the tuberculous woman. Management of labor in tuberculosis Management of the puerperium Effects f pregnancy and childbirth on tuberculosis. Fate of infants f tuberculous mothers. Extrapulmonary tuberculosis and pregnancy Therapeutic abortion in tuberculosis. Tuberculosis f the breast Part II Tuberculosis in gynecology (tuberculosis of the female genital tract) Incidence and localization. Pathogenesis of genital tuberculosis. Pathology Clinical diagnosis. Laboratory aids in diagnosis. Treatment of tuberculosis of the female genital tract. Index.

Note The present status of diagnosis and treatment of tuberculosis in obstetrics and in gynecology is reviewed in this book, hich is directed to specialists in gynecology and obstetrics and t general practitioners of medicine. Much information not previously published in book form is included Both pulmonary and extrapulmonary tuberculosis are considered in the obstetrical part of the olume hile the gynecological part is limited to tuberculosis of the female genital tract. In the obstetrical part the uthor makes definite recommendations on treatment of tuberculosis in the pregnant patient and discusses the effect of lobectomy and other lung operations on the course of pregnancy Both parts of the olume are compactly written and include selected though extensive bibliographies. The author is specialist in clinical obstetrics and gynecology on the staff f Cornell University Medical College I New York City and is in charge of the Obstetric Pulmonary Clinic of the New York Lying-In Hospital.

SNOW, WILLIAM

Roentgenology in obstetrics and gynecology Second edition. With 273 illustrations. Springfield, Ill Charles C Thomas, 1951. 363 p illus. 24 cm $10.50 4084

Contents. General discussion of Roentgen study of pregnancy. Technic of Roentgen study of pregnancy Pelvic architecture. The usual occiput presentations and parturition. Some factors which influence position, engagement, and delivery Atypical presentations. The fetus. Roentgen study of the soft parts of pregnancy Placenta previa. Premature placental separation. Extra-uterine pregnancy The size of the uterus in pregnancy Utero-salpingography The internal genitalia and the urinary tract. The internal genitalia and the gastro-intestinal tract. Growths in the pelvis, review Roentgen study in bleeding with pregnancy Recovery of these from X-radiation. Index.

Note. Obstetric and gynecologic roentgenology is a special field attended by difficulties in interpretation because the soft tissues under study produce roentgenograms of low contrast. This book by a radiologist who has had extensh experience in this specialty is an introductory but comprehensh text. As might be expected, most of the illustrations are reproductions of roentgenograms. The illustrations are carefully and specifically interpreted in the text. In numerous instances where it was not possible to make clearly contrasted reproduction, the roentgenogram is supplemented by drawing.

SPEERT, HAROLD, AND ALAN F GUTTMACHER

Obstetric practice. New York Landsberger Medical Books Inc. Distributed solely by the Blakiston Division of the McGraw Hill Book Co Inc., 1956 478 p 22 cm. $7 00 4085

Content (abridged) Diagnosis of pregnancy Obstetric pelvis. Pregnancy hygiene. Minor complaints of pregnancy Spontaneous abortion and fetal death in utero. Ectopic pregnancy Hydatidiform mole and choriocarcinoma. Cardiovascular diseases in pregnancy Metabolic disorders in pregnancy Neurological disorders in pregnancy Diseases of the urinary organs in pregnancy Surgical complications f pregnancy Gynecological complications of pregnancy Therapeutic abortion. Multiple pregnancy Toxemia of pregnancy Bleeding complications of lat pregnancy Normal labor and delivery Operath obstetrics. Obstetrical and analgesia and anesthesia. The normal puerperium and lactation. Postpartum and puerperal hemorrhage. The newborn. The postpuerperal survey Index.

Note. An unusual kind of text on obstetrics It is intended for graduate practitioners, particularly physicians in rural areas and other localities where the general practitioner manages fairly large umber of obstetric cases It contains no illustrations, no bibliography and omits the customary basic information on anatomy and physiology On the other hand, it provides ide range of useful and practical information and advice on the management of pregnancy and labor Bleeding complications of pregnancy to cite an example, are discussed uthoritatively and clearly Both uthors are members of the faculty of the College of Physicians and Surgeons of Columbia University and Dr Guttmacher Director of the Department of Obstetrics and Gynecology of Mt. Sinai Hospital in New York City

TAYLOR, E STEWART

Manual of gynecology With 70 illustrations Philadelphia Lea & Febiger 1952 204 p illus. 24 cm. $4 50 4086

Content History taking and physical examination. Anatomy and embryology of the female generative organs. Physiology and endocrinology of the female generath tract. Cyclic histology of the female generative tract and menstruation. Congenital anomalies of the female genital tract. Diseases of the external genitalia. Diseases of the vagina. Benign conditions of the cervix. Malignant diseases of the cervix. Benign conditions of the uterus. Malignant diseases of the uterus. The use of biopsy and the smear in gynecology by V P Isbell. Acute pelvic inflammatory disease. Pelvic abscess and chronic inflammatory disease. Benign tumors of the ovary Malignant and potentially malignant tumors of the ovary and tube. Endometriosis. Ectopic pregnancy Hydatidiform mole and chorionepithelioma. Abortion. Genital lacerations, ...

tors. Proceedings of the association, December 10 and 11 1954, New York, N Y With 63 illustrations and 21 tables. Baltimore The Williams & Wilkins Company 1954 504 p. illus. 24 cm. (Research publications. Vol. xxxiv) $11.00. 4098

Contents (abridged) Part I, Infections of the central nervous system. Treatment of pyogenic meningitis, by H. E. Alexander. Tuberculous meningitis, by E. M. Fisher and J. H. Arnold. Encephalitides and postinfectious encephalomyelitides, by H. L. Rader. Part II, Developmental and traumatic aspects. Intracranial hemorrhage in infancy and childhood, by D. D. Matson. Developmental defects of the skull and spine associated with lesions of the central nervous system, by E. A. Kahn. Hydrocephalus, by D. S. Russell. Part III, Functional and degenerative disturbances. The cerebral palsies and encephalomalacias of infancy and childhood, by A. Wolf and D. Cowen. Myasthenia gravis in infants and children, by R. P. Walker. Part IV Roentgenographic aspects. Some radiological features of traumatic lesions in the growing skull, by J. Caffey. Part V Psychiatric aspects. The epidemiology of behavior disorders of childhood, by B. Pasamanick. The psychiatric approach to posttraumatic and postencephalitic syndromes, by A. Blau. Affective deprivation and early institutional placement, by J. F. Kahmann. The role of the clinical psychologist in the evaluation of children with specific handicaps, by S. J. Beck. Part VI, Symposium on juvenile schizophrenia. Problems in the differential diagnosis of childhood schizophrenia, by J. C. Mlenberg and E. M. Bryant. Treatment of juvenile schizophrenia, by L. Bender. List of members. Index.

Note Twenty-two papers, of which the selection is listed above by title and author, are published in this volume. The authors are graduate psychologists and physicians specializing in pediatrics, neurology, psychiatry, etc. and most of them are associated with colleges of medicine in the United States of America. They addressed themselves primarily to other participants in the meeting, in short, to graduate physicians and scientists interested in neurology. The papers deal with areas of medical and psychological research in which significant advances have recently been made. They are accompanied by transcripts of the discussions and by literature references.

Bridge, Edward M

Epilepsy and convulsive disorders in children. New York McGraw Hill Book Company Inc., 1949 670 p. illus. 24 cm. (McGraw Hill series in health science Amos Christie, consulting editor) $12.00 4099

Contents Part I, Introduction and general concept. The hereditary factor. The factor of brain injury. Physiological factors. Personality factors. Environmental factors. The total background of epilepsy. Part II The onset of epilepsy. Major seizures. Minor seizures. General management. Dietary treatment. Psychotherapy. Outcome. Community aspects and prevention. Part III Diagnostic procedures. Appendix. Outlines for [illegible] study. Evaluation of etiologic factors. Screening tests of maturity and intelligence. Statistical recording of data. Care of patients. Prescriptions and preparations in common use. Determination of bromide in blood. Normal data. Reference data. Dehydration diets. Creative activities for children with epilepsy. Occupations for persons with epilepsy. Alphabetical list of references. Index.

Note An important work which is based principally on material accumulated at the Epilepsy Clinic organized in 1928 at Johns Hopkins Hospital where a group of pediatricians, psychiatrists, neurosurgeons, social workers, laboratory technicians, and representatives from community agencies formed a team to study the various aspects of the problem. The clinical problems of causation and diagnosis, the sociological and psychiatric aspects, and details of practical care of affected children are considered. Each chapter opens with a pictorial table of contents which, with the other excellent illustrations, are aids in assimilating the material. The style is technical, and the book is intended for physicians, social workers, and others with professional training rather than lay readers. A 1-page bibliography is appended.

Campbell Meredith

Clinical pediatric urology. With a section on nephritis and allied diseases in infancy and childhood by Elvira Goettsch and John D Lyttle Philadelphia W B Saunders Company 1951 1 113 p. illus. 26 cm. $18.00. 4100

Contents: Methods of examination and diagnosis. Urinary obstruction. Embryology and anomalies of the urogenital tract. Urinary infections. The male genital tract and the female urethra. Urogenital injuries. Urinary calculous disease. Tumors of the urogenital tract. The adrenals. Neuromuscular uropathy. Enuresis. Urologic surgery. Operative procedures. Nephritis and allied diseases in infancy and childhood. Index.

Note A comprehensive treatise based both on the author's own experience in the urology of infants and children and on the pertinent literature. Although much information that is necessarily basic to adult urology as well, has been necessarily included, the book is special also because in its full discussion of the special diagnostic and operative techniques required in urologic practice with children. The long chapter (183 pages) on embryology and anomalies is of special interest to pediatricians and to urologists with pediatric practices. There are 843 figures, a considerable number of which contain reproductions of more than one drawing or photograph. Long bibliographies accompany all of the chapters. The author is emeritus Professor of Urology in New York University Post-Graduate Medical School.

Chobot Robert

Pediatric allergy New York McGraw Hill Book Company Inc., 1951 284 p. illus. 21 cm. $6.00. 4101

Contents: Forms of hypersensitivity. Diagnostic procedures. Asthma. Food allergy. Vasomotor rhinitis. Hay fever pollens—molds and fungi. Skin allergies. Serum reactions and drug allergy. Allergy of the eye. Migraine. Physical allergy. ACTH, cortisone, and the future. Appendices. Anaphylaxis and human sensitivity. Common allergens. A typical allergen test table. Cases. Index.

Note A relatively brief text and manual. The author has made no attempt to include something on every phase of the subject or to illustrate the range of cases. Instead, he has presented a simple, to-the-point survey of topics most useful to the pediatrician and the general practitioner who is not a specialist in allergy. Selected literature references are included in most chapters. Synopses of 28 cases are given in an appendix. The author is a member of the faculty of New York University-Bellevue Center.

DeSanctis Adolph G

Handbook of pediatric medical emergencies. Second edition. By Adolph G DeSanctis. With the collaboration of Charles Varga and ten contributors. With 73 illustrations. St. Louis The C. V Mosby Company 1956 389 p. illus. 23 cm. $6.25 4102

Contents: Cardiovascular emergencies. Metabolic emergencies. Genitourinary emergencies. Neurological emergencies. Respiratory emergencies. Respiratory paralysis in poliomyelitis. Care of the premature infant. Miscellaneous emergencies. Pediatric procedures. Dosages. Poisoning. Accident and poison prevention. Appendix. Index.

Note A useful and authoritative reference manual developed in the Pediatric Department of the Post-graduate Medical School of New York University-Bellevue Medical Center. It is organized largely in outline form, with most of the space given to very concise indications and descriptions of therapeutic techniques. A certain amount of basic information is included also, usually in the form of introductory paragraphs in the various chapters. There are 73 figures and more than 70 tables. The first edition of the book was published in 1951 and has been translated into several languages, in addition to wide use in the original language. This second edition is a very extensive revision, with several newly added chapters, tables and illustrations.

Dunham Ethel C.

Premature infants a manual for physicians. Second edition completely revised and reset. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1955 459 p. illus. 24 cm. $8.00. 4103

Contents Obstetrics. Pregnancy Labor Puerperium. The new born. Gynecology General principles. Diagnosis. Infertility Operative technic. Infections. Nonmalignant tumors. Malignant tumors. Menstrual disorders. Endocrinology Index. Index to authors.

Note An annual publication similar in scope and organization to others in the publishers' *Year book* series. The chapters are composed chiefly of abstracts of articles selected by the editor from the world literature. The abstracts are long enough to give the gist of the article without reference to the source publication however reference to the source is always given. Some of the abstracts are supplemented by comments written by the editor In some cases these comments are aimed at evaluating the contents of the article in others they relate the article to other writings. *Illustrations* and tables taken from the source articles are sometimes included. The period of time covered by each annual in the series is one year which, however does not correspond to a calendar year In the case of the issue noted here, the articles abstracted appeared in journals which were received by the editor between *July 1955 and July* 1956.

PEDIATRICS

ADVANCES IN PEDIATRICS Volume III Editorial Board S Z Levine, Allan M Butler, L Emmett Holt, jr , A. Ashley Weech Chicago *The Year Book Publishers* Inc., 1948 363 p illus 24 cm. $7 50 4092

Content Effects of birth processes and obstetric procedures upon the newborn infant, by C. A. Smith. Retrolental fibroplasia, by T L. Terry Emotions and symptoms in pediatric practice, by M. J E. Senn. Therapeutic agents in the treatment of epileptiform seizures, by W G. Lennox. Viral hepatitis, by J Stokes, jr Abnormalities and variations of sexual development during childhood and adolescence, by L. Wilkins. Puberty and adolescence—psychologic considerations, by H. Bruch. The osteochondroses, by B. Howorth. Author index. Subject index. Cumulative indexes, Volumes I–III.

—— Volume V Editor, S Z. Levine associate editors Allan M Butler, Margaret Dann L Emmet Holt jr and A Ashley Weech. Chicago The Year Book Publishers Inc , 1952 272 p illus. 24 cm $7 00 4093

Contents Advances in the treatment of bacterial meningitis, by H. E. Alexander The nephrotic syndrome in children, by H. L. Barnett and others. The relation of vitamin K deficiency to hemorrhagic disease of the newborn, by H. Dam and others. Angiocardiographic studies in children, by J Lind and C. Wegelius. Iron metabolism in infants and children—serum iron and iron-binding protein—diagnostic and therapeutic implications, by C. H. Smith and others. BCG vaccination, by A. J Wallgren. Subject index. Author index.

—— Volume VI Editor S Z. Levine associate editors John A. Anderson Margaret Dann L Emmett Holt jr A Ashley Weech, and Myron E Wegman. Chicago The Year Book Publishers, Inc 1953 323 p illus. 23 cm. $7 50 4094

Contents. Lymphosarcoma in childhood, by H. W Dargeon. Preventive prenatal pediatrics, by T H. Ingalls. Intestinal obstruction in the neonatal period, by C. E. Koop. Hemolytic disease of the newborn, by P Levine and others. Pulmonary pathology in the newborn by E. L. Potter The lipoidoses, by S. van Creveld. Megaloblastic anemia of infancy by W W Zuelzer and J Rutzky Subject index. Author index.

—— Volume VII. Editor S Z Levine, associate editors John A. Anderson Margaret Dann A Ashley Weech Myron E Wegman and Warren E Wheeler Chicago The Year Book Publishers Inc. 1955 351 p illus. 23 cm. $8 00 4095

Contents On fibrous defects in cortical walls of growing tubular bones, by J Caffey The urinary tract in childhood, by M. F Campbell. Malnutrition in infancy and childhood, with special reference to Kwashiorkor by F Gómez and others. Pneumoencephalography in children, by E. Mannheimer Infantile cerebral palsy by M. A. Perlstein. Mucoviscidosis, by H. Shwachman and others. Congenital megacolon by O. Swenson. Subject index. Author index.

—— Volume VIII Editor, S Z. Levine associate editors John A. Anderson, Margaret Dann, A Ashley Weech, Myron E. Wegman, and Warren E Wheeler Chicago. The Year Book Publishers Inc., 1956, 273 p. illus 23 cm. $8 00 4096

Contents. The etiology of infantile diarrhea, by H. L. Bain. Isosexual precocity in boys including a case of gonadotropin-producing teratoma, by S. Z. Levine and others. True isosexual precocity Sarcoidosis in childhood, by J P McGovern and D. E. Merritt. Offspring of diabetic and prediabetic mothers, by H C. Miller Subdural lesions in childhood, with special reference to infectious processes, by M. H. D Smith. Prevention of accidents in childhood, by G. M. Wheatley Mental deficiency by H. Yannet. Subject index. Author index.

Note. The series in which the volumes listed above appear is devoted to the publishing of monographic reviews in which recent advances are emphasized. Authors of the reviews are not limited to the literature of one year or of a stated period, as in the case of some review series. The individual monographs are based on a body of literature, most of it recent but it is not uncommon for an author to cover the literature of 25 years or even longer if necessary in order to round out the treatment of his topic. The series is designed for graduate practitioners of medicine, including specialists in pediatrics. Volumes I, II and IV are out of print. Volume IX was published in 1957 $9.00.

THE AMERICAN ACADEMY OF PEDIATRICS. COMMITTEE FOR THE STUDY OF CHILD HEALTH SERVICES

Child health services and pediatric education. Report of the *Committee for* the Study *of Child Health Services of the American Academy of Pediatrics with the cooperation* of the United States Public Health Service and the United States *Children's* Bureau. Cambridge Mass Harvard University Press, 1949 270 p illus 23 cm $3 50 4097

Contents (abridged) Part I, Child health services. The study of child health services. Total volume of child health services. Private practice. Hospitals. Community health services. Health supervision for the preschool child. Part II, A, Undergraduate education. Part II, B Graduate education *Staff in hospitals* approved for pediatric residency General inpatient training. Outpatient training. Ward rounds and conferences. Part III, General summary References. Appendix. Tables referring to pediatric *education List of 70 approved* medical schools in the United States, 1946–1947 Staff of pediatric departments in each of three groups of medical schools. Clinical facilities for pediatric teaching *in each of three groups* of medical schools. Content of pediatric course in each of three groups of medical schools. Pediatric department and medical school budgets in each of three groups of medical schools.

Note. This volume reports the results of a three-year study the objective of which was to bring attention to deficiencies in child health service and pediatric education in the United States of America, with a view to correcting them. As the task assigned to the Study Committee was to collect the *facts* and report them, the Committee did not attempt to *formulate* recommendations based upon the findings. The Committee's supplement to this report, *Child health services and pediatric education—methodology and tabulations on services*, Cambridge, Mass., Harvard University Press, 1949 39 p., $1.50, contains statistical tables and a survey of the methods pursued in gathering the data.

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASE

Neurology and psychiatry in childhood. Rustin McIntosh and *Clarence* C Hare edi

available for reference. It also makes possible the incorporation of background information on child psychology and on other matters not strictly medical, at points where the relation of these topics to clinical medicine is apparent. The essays are written in a direct and readable style, and they include selected literature references. There are only a few illustrations, and most of these are graphs and diagrams. The first-named author is a member of the faculty of the Yale University School of Medicine and the co-author is Chairman of the Department of Pediatrics of the State University of New York College of Medicine at Syracuse.

HAAS SIDNEY VALENTINE AND MERRILL PATTERSON HAAS

Management of celiac disease. Philadelphia. J B Lippincott Company 1951. 188 p illus. 24 cm. $5.00 4108

Contents Scope and purpose of the work. History Definition. Incidence. Etiology Clinical symptoms. Pathology Roentgenographic evidence. Digestion and absorption. Digestive juices, enzymes, etc. Endocrine system. Nervous system and psychological considerations. Allergy Diagnosis. Treatment. Prognosis. Celiac disease today—a concept based on the authors' experience. Course. An etiologic hypothesis. Summary Bibliography Index.

Note A monograph on a specific dysfunction of infancy and early childhood, defined by the authors in the following words: ". . . we define celiac disease as a condition, seen primarily in infancy and childhood, where there exists a prolonged intestinal disturbed state resulting in various degrees of malnutrition." The authors' viewpoint is primarily clinical. They point out that the etiology of the disease is still unknown, and there is "no chemical diagnostic test or procedure." Prognosis, however, is excellent if polysaccharides (complex carbohydrates) are removed from the diet and monosaccharides, together with proteins and fats, substituted. The book is based both on the authors' extensive experience and on a review of the literature. There is a bibliography of 446 references.

HILL, FONTAINE S

Practical fluid therapy in pediatrics. Philadelphia W B Saunders Company 1954 275 p. illus. 25 cm. $6.00. 4109

Contents Glossary. Section I, Basic physiologic principles and their clinical significance. Role of water in body physiology. Normal electrolyte composition of blood plasma. Interstitial fluid. Intracellular fluid, and gastrointestinal secretions. Abnormalities of electrolyte patterns. Renal regulation of fluid and electrolyte balance. Dehydration and water conservation. Section II, Diagnosis and treatment of clinical conditions. Solutions for parenteral administration. Diarrhea. Diabetic coma. Fluid therapy in renal disease. Pyloric stenosis and nonobstructive vomiting. Fluid therapy in acute infections. Salicylate poisoning. Fluid therapy in surgical conditions. Fluid therapy in burns. Respiratory acidosis and alkalosis. Section III, Technical procedures. Techniques for obtaining blood specimens. Techniques for parenteral fluid administration. Bibliography Index.

Note A book directed to graduate physicians, including general practitioners and pediatricians. Over 90 pages are devoted to the basic physiology and its clinical significance. One hundred forty-five pages are devoted to the diagnosis and treatment of clinical conditions of fluid and electrolyte imbalance. The book is organized in short chapters with several subdivisions within each chapter, thus making it convenient for both reading and reference. The importance of an understanding of fluid requirements and fluid therapy in the treatment of infants and children is fully emphasized. Clinical manifestations, pathophysiology, interpretation of laboratory findings, and treatment are adequately covered. Most of the 22 figures show techniques of obtaining blood specimens and of administration of fluid to infants.

HILL LEWIS WEBB

The treatment of eczema in infants and children. With 39 illustrations. St. Louis The C V Mosby Company 1956. 79 p. illus. 26 cm. $4.00. 4110

Contents General principles of treatment. Seborrheic dermatitis. Leiner's disease. Fungus infections. Secondary infection. Infectious eczematoid dermatitis. Nummular eczema. Circumscribed neurodermatitis. Contact dermatitis. Atopic dermatitis. Index.

Note A small but valuable book based on the author's long experience and interest in eczema in infants and children. It is directed to almost any physician who is interested in the subject, but is of particular interest to general practitioners and specialists in pediatrics. It covers the subject thoroughly with primary emphasis on treatment and prognosis. Medicaments and other treatments are discussed explicitly in the light of the author's experience. He lists them. References are made to related literature which the author considers reliable. The material was first published in the *Journal of pediatrics* in the latter half of 1955.

HOLT L. EMMETT JR. AND RUSTIN MC INTOSH

Holt pediatrics. Twelfth edition. New York Appleton-Century-Crofts, Inc., 1953 1 485 p. illus. (part col d) 25 cm. $15.00. 4111

Contents General considerations. The newborn infant. Premature infants. Nutrition and nutritional disturbances. Deficiency diseases. The eyes. The mouth, nose throat and ears. The alimentary tract. The lungs. The circulatory system. The blood and blood-forming organs. The spleen, lymph nodes and thymus. The ductless glands. The bones and joints. Collagen diseases. The genitourinary system. The skin. Allergy Psychopathologic problems. The nervous system. The muscles. The specific infectious diseases. Miscellaneous diseases. Accidents and poisonings. Appendix. Index.

Note Formerly entitled *Diseases of infancy and childhood*, the lineage of this book goes back to 1897 when the first edition, authored by L. M. Holt, sr. was published. The present authors have been responsible for the book since 1936. This 12th edition is the first to appear under the present title. The book provides encyclopedic coverage of the diseases to which infants and children are subject, and, in addition, contains general chapters on such matters as infant mortality, biochemical aspects of early life, and general aspects of growth. The field is covered from the standpoint of practice, and due attention is given to such aspects of each disease as diagnosis, prognosis and treatment. Literature references are given for each general topic and each disease. Although the names of two authors only appear on the title page, 72 other authorities contributed to this 12th edition, and their contributions are identified by means of initials appended to the sections of the book to which they contributed. In comparison to the 11th edition published in 1940, the 12th edition is the result of a thorough revision. New and revised sections appear throughout the volume, and recent literature has been added to the bibliographies. There are now 109 figures in monochrome and 11 colored plates.

JEANS PHILIP C AND OTHERS

Essentials of pediatrics. By Philip C. Jeans F Howell Wright, and Florence G. Blake. 103 illustrations, including 3 color plates. Fifth edition. Philadelphia J B Lippincott Company 1954 808 p illus. (part col d) 21 cm $5 50 4112

Contents (abridged) Unit I, Orientation: Introduction to pediatric nursing. Preventive pediatrics. Unit II, Growth, development, care and guidance of the infant and the child. Unit III, General nursing care. The nurse-child and nurse-parent relationships. Pediatric therapy. Unit IV Nursing in the care of the sick infant and child. Care of the newborn. Diseases of the digestive system—Respiratory system—Circulatory system—Genito-urinary system—Nervous system—Skin—Eye—Glands of internal secretion—Blood. Viral and rickettsial infections. Bacterial, fungous, spirochetal and protozoal infections. Unit V Nutrition and the nutritional diseases. The essential constituents of the diet and the amounts required. Nutrition of the normal infant. Digestion—breast feeding—artificial feeding. Nutrition of the child. Digestive and nutritional diseases. Deficiency diseases. Index.

Note. A nursing school textbook which enjoys wide use in the United States of America. The nursing care of infants and children is the principal subject, but in order to provide the nurse with the necessary background, children's diseases are described at length, and there are also discussions of child psychology and general principles of care and guidance. Carefully selected literature references are included in the chapters.

KIESEWETTER, WILLIAM B editor

Pre and post operative care in the pediatric surgical patient. Chicago The Year Book Publishers, Inc., 1956 347 p. illus. 20 cm. $7.00 4113

Contents. Part I, General considerations. Definitions and criteria of prematurity. Incidence. Causes and prevention. Development. Prognosis. Part II, Clinical considerations. Care. Feeding. Abnormal conditions. Part III, Public health considerations. Deaths of premature infants. Programs for premature infant care. Appendixes. Author index. Subject index.

Note. The first edition of this work was published in 1948 as Publication no. 325 of the United States Children's Bureau, and it soon acquired the status of the standard work on the subject. It is addressed primarily to general practitioners of medicine and to obstetricians, but is of value also to hospital administrators, nurses specializing in infant care, and public health authorities. Each of the topics named in the above chapter titles is covered in some detail, and those topics listed under clinical conditions are covered comprehensively. References to related literature are included in all chapters. The appendixes include a variety of reference information, such as "Recommendations for developing comparable statistics on prematurely born infants and neonatal mortality," "Growth charts," "Technics of feeding," "Special standards and recommendations for hospital care of premature infants." In comparison with the first edition, there has been considerable revision and augmentation.

GARDNER, LYTT I., editor

Adrenal function in infants and children: a symposium. New York, Grune & Stratton, 1956. 221 p. illus. 22 cm. $6.75 4104

Contents. Histophysiology of the adrenal cortex in fetal and prepuberal rats, with comments on the carbonyl reactivity in the cortical lipide droplets, by H. W. Deane. Dehydroepiandrosterone and androsterone levels in maternal and cord plasma, by C. J. Migeon. Chromatographic studies of urinary steroids in term and premature infants, by R. A. Ulstrom and D. Doeden. ACTH response in newborn infants, by R. Klein and A. Rovnanek. The origin of dehydroisoandrosterone, by S. Lieberman. Certain aspects of steroid metabolism in the adrenogenital syndrome, by A. M. Bongiovanni and W. R. Eberlein. Chromatographic studies on urinary 17-ketosteroids in children with hyperadrenocorticism, by J. W. Jailer. Round-table discussion on the present status of therapy of hyperadrenocorticism, by L. Wilkins. Hermaphroditism, gender and precocity in hyperadrenocorticism—psychologic findings, by J. Money. Hermaphroditic genital appearance, rearing and eroticism in hyperadrenocorticism, by J. G. Hampson. The influence of testosterone and cortisone on growth, by E. H. Sobel. Excretion of aldosterone in normal children and children with nephrosis, by J. A. Luetscher, Jr. The significance of plasma corticosteroids as a measure of adrenal cortical function, by D. H. Nelson. Blood ACTH and 17-hydroxycorticosteroids in children, with special reference to rheumatic fever, by V. C. Kelley. Plasma neutral 17-ketosteroids in pregnancy, by L. I. Gardner. Appendix. Index.

Note. Published in this volume are papers written by eminent specialists in pediatrics practicing in the United States of America and Canada. The papers were originally contributed to a symposium held under the auspices of the Department of Pediatrics of the University of the State of New York, at Syracuse, in November 1954. Several of them are reports of recent studies carried out under research grants. Accompanying the papers are transcripts of the discussion at the symposium. The volume is of interest to graduate pediatricians and endocrinologists.

GESELL, ARNOLD, AND CATHERINE S. AMATRUDA

Developmental diagnosis: normal and abnormal child development, clinical methods and pediatric applications. Second edition, revised and enlarged. New York, Paul B. Hoeber, Inc., Medical Book Department of Harper & Brothers, 1948. 496 p. illus. 24 cm. $7.50 4105

Contents. Part I, Principles and methods. The development of behavior. The developmental examination of behavior. Norms of development. The conduct of the examination. Part II, Defects and deviations of development. Problems of differential diagnosis. Amentia and retardation. Amentia of high grade. Low grade amentia. Endocrine disorders. Convulsive disorders. The neurological diagnosis of infant behavior. Cerebral injury. Blindness. Deafness. Prematurity. Precocity. Environmental retardation. Clinical aspects of child adoption. Part III, The protection of early child development. Diagnosis and guidance. Developmental pediatrics. Appendices. Examination technique. Growth trend chart. Examination equipment. Cinematic case studies. Readings on developmental guidance. Professional training for developmental pediatrics. Index.

Note. A manual whose purpose is to provide family physicians and pediatricians with practical guidance in diagnosing normal and abnormal behavior patterns in infants and children up to five years of age. It is based on 35 years of investigation and experience on the part of Dr. Gesell and his associates. A considerable amount of material, much of it based on experience at the Yale Clinic of Child Development, has been added in this revised edition, particularly in the discussions of blindness, deafness, low grade amentia, prematurity, convulsive disorders, and adoption. The final chapter on developmental pediatrics and the last two appendices are entirely new in this edition.

GLASER, JEROME

Allergy in childhood. Springfield, Ill., Charles C Thomas, 1956. 529 p. illus. (part col'd) 24 cm. (American lecture series. Publication no. 272. A monograph in the Bannerstone division of American lectures in allergy, edited by Max Samter) $12.50. 4106

Contents (abridged). General characteristics of the allergic child. History taking and the physical examination. Skin testing. Gastrointestinal allergy. The celiac syndrome. Atopic dermatitis. Seborrheic dermatitis. Contact dermatitis. Eczematoid dermatitis of bacterial origin. Nummular eczema—circumscribed neurodermatitis. Bronchial asthma in infants and children. Management of the child with chronic asthma. The treatment of allergic diseases with corticotropin (ACTH) and cortisone. Corticotropin (ACTH) and cortisone in pregnancy. Pollinosis (seasonal allergic rhinitis—tree pollinosis—rose fever—hay fever). Recurrent upper respiratory disorders of allergic origin and perennial allergic rhinitis. Allergy to drugs. Allergy to vaccines. The antihistamines. Anaphylactoid purpura (Schönlein, Henoch syndrome). Neuroallergy in childhood. Migraine. Allergy to insect bites and stings. Ocular allergy. Physical allergy. Eosinophilic pneumonopathy (Löffler's syndrome—tropical eosinophilia). The allergic tension-fatigue syndrome. The collagen diseases. Psychosomatic aspects of allergic disease in infancy and childhood. Dietary treatment of allergic disease. Substitutes for cow's milk in infant feeding. Climate and altitude. The allergic child in camp. Routine prophylaxis in allergic children. Index.

Note. An introductory text written by one of the leading contemporary specialists in pediatric allergy in the United States of America. It is based on a course given by the author for many years at the School of Medicine and Dentistry at the University of Rochester and is directed primarily to medical college students. It is of interest also to general practitioners of medicine who treat children and to pediatricians who have not studied courses in allergy. It is written from the viewpoint that many facets of allergy in children differ essentially from allergy in adults and require different techniques of administration and management. It is organized in 68 short chapters, of which the titles of only a few could be given above. Only the common allergies of children are included, and there is emphasis on the more common of these. Approximately 90 pages are devoted to bronchial asthma. Selected literature references are furnished.

GREEN, MORRIS, AND JULIUS B. RICHMOND

Pediatric diagnosis. Philadelphia, W. B. Saunders Company, 1954. 436 p. illus. 26 cm. $10.00 4107

Contents (abridged). Section I, Introduction. The pediatric history. Section II, Physical examination. The pediatric physical examination. Examination of the head—the eyes—the ears—the nose—the mouth—the teeth—the throat—the chest—the heart—the abdomen—genitalia—the skeletal system. The neurologic examination. Examination of the skin. Section III, Signs and symptoms. Disturbances in growth. Fever. Edema. Cyanosis. Symptoms referable to the urinary tract. Symptoms related to sexual development. Convulsions. Intellectual retardation. Leg pains. Obesity. Anorexia. Regurgitation and vomiting. Constipation. Diarrhea. Symptoms referable to the respiratory tract. Pallor. Hemorrhagic purpura. Jaundice. Section IV, Health supervision. Infancy. Preschool period (1 to 5 years). The school years. Adolescence. Appendix. Percentiles for weight and length—birth to 5 years. Percentiles for weight and height—5 to 18 years. Percentiles for selected measurements—birth to 5 years—in centimeters. Percentiles for selected measurements 5 to 18 years—in centimeters. Index.

Note. A useful, carefully written book which is addressed to advanced students in medical colleges and to graduate physicians, including pediatricians as well as general practitioners. It is organized in three sections and a series of short essays. The titles of the sections and of a selected number of the essays are listed above. The organization makes the contents of the book readily

annotative for reference. It also makes possible the incorporation of background information on child psychology and on other matters not strictly medical, at points where the relation of these topics to clinical measures is apparent. The essays are written in a direct and readable style, and they include selected literature references. There are only a few illustrations, and most of these are graphs and diagrams. The first-named author is a member of the faculty of the Yale University School of Medicine and the co-author is Chairman of the Department of Pediatrics of the State University of New York College of Medicine at Syracuse.

HAAS, SIDNEY VALENTINE, AND MERRILL PATTERSON HAAS

Management of celiac disease. Philadelphia. J B Lippincott Company 1951 188 p. illus. 24 cm. $5.00. 4108

Contents: Scope and purpose of the work. History. Definition. Incidence. Etiology. Clinical symptoms. Pathology. Roentgenographic evidence. Digestion and absorption. Digestive juices, enzymes, etc. Endocrine system. Nervous system and psychological considerations. Allergy. Diagnosis. Treatment. Prognosis. Celiac disease today—a concept based on the authors' experience. Course. An etiologic hypothesis. Summary. Bibliography. Index.

Note: A monograph on a digestive dysfunction of infancy and early childhood, defined by the authors in the following words: "... we define celiac disease as a condition, seen primarily in infancy and childhood, where there exists a prolonged intermittent diarrheal state resulting in various degrees of malnutrition." The authors' viewpoint is primarily clinical. They point out that the etiology of the disease is still unknown, and there is "no clear-cut diagnostic test or procedure." Prognosis, however, is excellent if polysaccharides (complex carbohydrates) are removed from the diet and monosaccharides, together with proteins and fats, substituted. The book is based both on the authors' extensive experience and on review of the literature. There is a bibliography of 648 references.

HILL, FONTAINE S

Practical fluid therapy in pediatrics. Philadelphia. W B Saunders Company 1954 275 p. illus. 25 cm. $6.00. 4109

Contents: Glossary. Section I, Basic physiologic principles and their clinical significance. Role of water in body physiology. Normal electrolyte composition of blood plasma, interstitial fluid, intracellular fluid, and gastrointestinal secretions. Abnormalities of electrolyte patterns. Renal regulation of fluid and electrolyte balance. Dehydration and water intoxication. Section II, Diagnosis and treatment of clinical conditions. Solutions for parenteral administration. Diarrhea. Diabetic coma. Fluid therapy in renal disease. Pyloric stenosis and nonobstructive vomiting. Fluid therapy in acute infections. Salicylate poisoning. Fluid therapy in surgical conditions. Fluid therapy in burns. Respiratory acidosis and alkalosis. Section III, Technical procedures. Techniques for obtaining blood specimens. Techniques for parenteral fluid administration. Bibliography. Index.

Note: A book directed to graduate physicians, including general practitioners and pediatricians. Over 60 pages are devoted to the basic physiology and its clinical significance. One hundred forty-five pages are devoted to the diagnosis and treatment of clinical conditions of fluid and electrolyte imbalance. The book is organized in short chapters with several subdivisions within each chapter thus making it convenient for both reading and reference. The importance of an understanding of fluid requirements and fluid therapy in the treatment of infants and children is fully emphasized. Clinical manifestations, pathophysiology, interpretation of laboratory findings, and treatment are adequately covered. Most of the 22 figures show techniques of obtaining blood specimens and of administration of fluid to infants.

HILL, LEWIS WEBB

The treatment of eczema in infants and children. With 39 illustrations. St. Louis The C. V. Mosby Company 1956 79 p. illus. 26 cm. $4.00. 4110

Contents: General principles of treatment. Seborrheic dermatitis. Leiner's disease. Fungus infections. Secondary infection. Infectious eczematoid dermatitis. Nummular eczema. Circumscribed neurodermatitis. Contact dermatitis. Atopic dermatitis. Index.

Note: A small but valuable book based on the author's long experience and interest in eczema in infants and children. It is directed to almost any physician who is interested in the subject, but is of particular interest to general practitioners and specialists in pediatrics. It covers the subject thoroughly, with primary emphasis on treatment and prevention. Medicines and other treatments are discussed especially in the light of the author's experience with them. References are made to related literature, which the author considers valuable. The material was first published in the *Journal of Pediatrics* in the latter half of 1955.

HOLT, L. EMMETT, JR., AND RUSTIN MC INTOSH

Holt pediatrics. Twelfth edition. New York Appleton-Century-Crofts, Inc., 1953 1485 p. illus. (part col'd) 25 cm. $15.00. 4111

Contents: General considerations. The newborn infant. Premature infants. Nutrition and nutritional disturbances. Deficiency diseases. The eyes. The mouth, nose, throat and ears. The respiratory tract. The lungs. The circulatory system. The blood and blood-forming organs. The spleen, lymph nodes and thymus. The ductless glands. The bones and joints. Collagen diseases. The genitourinary system. The skin. Allergy. Psychopathologic problems. The nervous system. The muscles. The specific infectious diseases. Miscellaneous diseases. Accidents and poisonings. Appendix. Index.

Note: Formerly entitled *Diseases of infancy and childhood*, the lineage of this book goes back to 1897 when the first edition, authored by L. M. Holt, Sr., was published. The present authors have been responsible for the book since 1936. This 12th edition is the first to appear under the present title. The book provides encyclopedic coverage of the diseases to which infants and children are subject, and, in addition, contains general chapters on such matters as infant mortality, biochemical aspects of early life, and general aspects of growth. The field is covered from the standpoint of practice, and due attention is given to such aspects of each disease as diagnosis, prognosis and treatment. Literature references are given for each general topic and each disease. Although the names of two authors only appear on the title page, 72 other authorities contributed to this 12th edition, and their contributions are identified by means of initials appended to the sections of the book to which they contributed. In comparison to the 11th edition published in 1940, the 12th edition is the result of a thorough revision. New and revised sections appear throughout the volume, and recent literature has been added to the bibliographies. There are now 160 figures in monochrome and 11 colored plates.

JEANS, PHILIP C., AND OTHERS

Essentials of pediatrics. By Philip C. Jeans, F. Howell Wright, and Florence G. Blake. 103 illustrations, including 3 color plates. Fifth edition. Philadelphia J B Lippincott Company 1954 808 p. illus. (part col'd) 21 cm. $5.50. 4112

Contents (abridged): Unit I, Orientation. Introduction to pediatric nursing. Preventive pediatrics. Unit II, Growth, development, care and guidance of the infant and the child. Unit III, General nursing care: The nurse-child and nurse-parent relationship. Pediatric therapy. Unit IV, Nursing in the care of the sick infant and child: Care of the newborn. Diseases of the digestive system—Respiratory system—Circulatory system—Genito-urinary system—Nervous system—Skin—Eye—Glands of internal secretion—Blood. Viral and rickettsial infections. Bacterial, fungous, spirochetal and protozoal infections. Unit V, Nutrition and the nutritional diseases: The essential constituents of the diet and the amounts required. Nutrition of the normal infant. Digestion—breast feeding—artificial feeding. Nutrition of the child. Digestive and nutritional diseases. Deficiency diseases. Index.

Note: A nursing school textbook which enjoys wide use in the United States of America. The nursing care of infants and children is the principal subject; but in order to provide the nurse with the necessary background, children's diseases are described at length, and there are also discussions of child psychology and general principles of care and guidance. Carefully selected literature references are included in the chapters.

KIESEWETTER, WILLIAM B., editor

Pre and post operative care in the pediatric surgical patient. Chicago The Year Book Publishers, Inc., 1956. 347 p. illus. 20 cm. $7.00. 4113

Contents Section I, General preoperative considerations The child's emotions and surgery by E. A. Loocak, Jr Fluid and electrolyte balance, by T S. Danowski. Anesthesia, by J H. Marcy Section II, General postoperative considerations The normal postoperative period, by W K. Sieber The abnormal postoperative period, by W K. Sieber Care f wound by W L. White. Oxygen therapy by J H. Marcy Section III, Specific pre and postoperative considerations Abdominal, by W R Kiesewetter Thoracic, by E. M. Kent and others. Orthopedic, by A. R Ferguson, Jr Neurosurgical, by A. F Susen. Plastic, by S. M. Dupertuis and R. H. Musgrave. Urologic, by S. H. Johnson, III. Otorhinolaryngologic, by H. K. Sherman. Ophthalmic, by M. F McCaslin and L. A. Lloyd. Appendices. Index.

Note. The editor and all of the contributors to this manual are on the staff f the Children's Hospital of Pittsburgh, and the practices described in it are those currently followed in that institution. All of the chapters are compactly written, and many are organized in outline form. Literature references to more detailed treatments are included. The 79 figures are reproductions of photographs of equipment and techniques.

LEIDER, MORRIS

Practical pediatric dermatology With 280 photographs and 13 drawings St. Louis The C V Mosby Company, 1956 433 p illus (part col'd) 26 cm $10 50 4114

Contents Basic science aspects of dermatology (with particular reference to the skin f the infant and child) Principles of dermatologic diagnosis—therapy Dermatoses attributable to physical causes. Dermatoses caused by pyogenic bacteria. Superficial fungous infections of the skin, hair and nails. Dermatoses caused by viruses (exclusive of the ...ial exanthemata) Zoonoses—dermatoses caused by metazoal ("animal") parasites. Dermatoses based principally on allergic mechanisms. Dermatoses caused by the mycobacteria (tuberculosis cutis, leprosy) by the actinomyces and nocardia (actinomycosis and nocardiosis) and by the so-called deep fungi (deep cutaneous mycoses) Reciprocal relationships between cutaneous diseases, other organ diseases and systemic diseases. Hereditary congenital, dysplastic, nevoid, and neoplastic processes. Important dermatoses not etiologically classifiable A miscellany of minor or uncommon dermatoses of infants and children. Glossary Index.

Note The word "practical" in the title of this book is significant. The book is expressly designed as a guide and reference manual for practicing physicians, including general practitioners and pediatricians. Because it is devoted to the special problems of diagnosis and treatment of dermatoses in children, it is of interest also to dermatologists. Although it is not cyclopedic work in the sense that every disease of the skin that has been found in children is discussed, wide range of disorders is covered by compact writing and extend use f tabular presentations of information. Some rare conditions such as the Ehlers-Danlos syndrome are included, but the greater part of the space is given to more common disorders. Practically all of the photographs are pictures of patients with skin disorders. The principal exceptions are few photographs showing methods of applying dressings and insects that produce dermatoses. Not shown in the abov contents is a 28-page formulary of dermatologic preparations There are no literature references. The author is Associate Professor of Dermatology and Syphilology in the New York University Post-Graduate Medical School.

LIVINGSTON SAMUEL

The diagnosis and treatment of convulsive disorders in children Springfield Ill Charles C Thomas 1954 314 p illus 26 cm $9 50 4115

Content Diagnosis of convulsions. Treatment of the isolated convulsion. Cryptogenic epilepsy Secondary epilepsy Disorders simulating epilepsy Classification of epileptic seizures. Precipitating factors. Cranial roentgenography Electroencephalography General plan of treatment f epilepsy Drug therapy Dietary treatment Social management of epilepsy by F F Sch enker Surgical treatment of epilepsy by A. E. Walker Inheritance and predisposition. Appendices Author index Subject index.

Note A outstanding work based on studies of over 4,000 epileptic children observed in the Epilepsy Clinic of the Johns Hopkins Hospital. It is directed to graduate practitioners of medicin particularly general practitioners who treat children and specialists in pediatrics. It covers the subject broadly containing some discussion of all of the topics named in the chapter titles given abov and at the same time covers many aspects in considerable detail. T cite examples, the chapter on disorders simulating epilepsy is more than 30 pages long, that on electroencephalography is 30 pages long, and the one on drug therapy runs to 48 pages. Diagnostic techniques are fully described, and special problems such as the risk of pertussis immunization are discussed. Literature references are included in the chapters.

LOWENBERG, MIRIAM E

Food for young children in group care. Revised Washington, D C Government Printing Office, 1947 40 p. 22 cm. (United States Children's Bureau. Publication no. 285) $0 15 4116

Contents (abridged) Good eating habits. Meeting the food needs of children. Buying food. Storing food. Preparing food. Suggested menus. Serving meals. Community resources—workers and food. References.

Note A booklet of practical advice, cooking directions, suggested menus, etc. useful in the feeding of children two to five years of age who are fed in groups as in nursery schools.

MAY, CHARLES D

Cystic fibrosis of the pancreas in infants and children Springfield, Ill Charles C Thomas 1954 93 p illus. 22 cm. (American lecture series. Publication no 234 A monograph in American lectures in pediatrics edited by John A. Anderson) $3 00 4117

Contents Definition. Orientation and plan of presentation. Historical. The pancreatic lesion. The pulmonary lesion. Physiological consequences of the pancreatic and pulmonary lesions. Clinical manifestations. Diagnosis. Treatment. The cause and pathogenesis of cystic fibrosis of the pancreas. Bibliography

Note A useful summary of current knowledge of familial disorder hich though having an incidence of 0.7 to 1.0 case per thousand live births attracted little attention until 1938. It is directed to general practitioners and pediatricians rather than to specialists. In spite of its brevity it presents the essential information pertinent to the physiology clinical picture and diagnosis of this disorder The chapter on treatment is based on critical survey of 10 years of clinical experience in managing the disease The bibliography lists 83 literature references.

MICHAL SMITH, H., editor

Pediatric problems in clinical practice special medical and psychological aspects. New York Grune & Stratton 1954 310 p. illus. 21 cm. $6 00 4118

Contents: The normal child, by A. L. Gesell. The sick child by L. W Slobody The emotionally disturbed child, by W C. Hulse. The schizophrenic child, by L. Bender The mentally retarded child, by H. Michal-Smith. The brain-injured child, by K. Goldstein. The cerebral palsy child, by W M. Phelps. The orthopedically handicapped child, by G. Deaver The allergic child, by B Ratner The cardiac child, by J F. Dammann Jr. The diabetic child, by P White. The epileptic child, by W G. Lennox. The tuberculous child, by C. K. Cayley Recommended reading for parents. Index.

Note A book of medical and psychological information on the care of handicapped children. It contains the contributed chapters whose titles and authors are listed above and is directed to such readers as social workers, teachers and practicing physicians, especially general practitioners and pediatricians. The chapters may be read independently of one another for orientation and guidance on special problems. Each chapter is accompanied by literature references for physicians and members of other professions. At the end of the volume there is a selected list of books for recommendation to parents.

MORSE, KENNETH T editor

Epidemic and endemic diarrheal diseases of the infant. Editor in chief Kenneth T Morse. Associate editor Franklin N Furness Conference co-chairmen James A. Baker and Erwin Neter Consulting editor

Erwin Neter New York Published by the Academy 1956 230 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 66 art. 1) $3.50 4119

Contents: Introductory remarks, by H. Koprowski. Preface, by E. Neter. Diarrheal diseases of man—a historical review and global appraisal, by A. V. Hardy. Diarrheal diseases of animals—an appraisal, by W. A. Hagan. Host-parasite relationships, by W. J. Kempster. Genetics and nutrition of the host in relation to susceptibility to infection, by R. A. Schneider. Active and passive immunity of the infant, by G. Edsall. *Salmonella* and *Salmonellosis*, by P. R. Edwards. An epidemic of *Salmonella panama* infections in infants, by F. S. Leeder. Enteropathogenic *Escherichia coli* serotypes, by W. H. Ewing. Experimental diarrheal disease of human volunteers due to *Escherichia coli*, by W. W. Ferguson. *Escherichia coli* associated with infantile diarrhea, by M. L. Cooper and others. Infantile diarrhea due to *Escherichia coli*, by C. S. Stulberg and W. W. Zuelzer. Observations on enteropathogenic *Escherichia coli*, by E. B. Lindberg and V. M. Young. Epidemiologic studies on enteropathogenic *Escherichia coli* diarrhea, by A. H. Stock and M. E. Shuman. Spread and control of *Escherichia coli* diarrheal disease, by W. E. Wheeler. Control of epidemic diarrhea of the newborn in hospital nurseries and pediatric wards, by A. M. Harris and others. *Escherichia coli* as a cause of diarrhea in calves, by H. W. Dunne and others. The role of *paracolobactrum* and *proteus* in infantile diarrhea, by C. D. Graber and M. C. Dodd. The bacterial hemagglutination test for the demonstration of antibodies to enterobacteriaceae, by E. Neter and others. Hemagglutination with red cells sensitized with extracts of enteropathogenic *Escherichia coli*, by C. D. Graber and M. C. Dodd. The role of clostridia in diarrheal diseases of man, by I. D. MacLennan. *Clostridia* in diarrheal diseases of cattle, by K. M. [illegible], Jr., and L. A. Grace. Gamma globulin deficiency in infancy, by D. M. Speck and others. Epidemic diarrheal disease of viral origin of newborn calves, by C. A. Mebus and A. W. McClurkin. Epidemic diarrheal disease of viral origin in newborn mice, by K. O. Habermann and L. M. Kirchenge. Propagation of transmissible gastroenteritis virus in tissue culture, by K. M. Lee. Epidemic diarrheal disease of suckling mice, by F. S. Cheever. Diarrhea in puppies caused by distemper virus, by J. H. Gillespie and others. *Mycoplasma* bovis infection in calves, by C. J. York and J. A. Baker. Diarrhea of newborn and older infants due to viruses, by H. L. Hodes. Virus diarrhea of adults and their possible relationships to infantile diarrhea, by I. Gordon and E. Whitney. The significance of viruses recovered from the intestinal tracts of healthy infants and children, by A. B. Sabin.

Note: Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in December, 1955, have been made available in this publication. They are listed by title and author above. A principal subject is diarrhea of the human infant. However, some studies from experiments on animals and on adult human patients are also included. Clinical experience rather than experimental investigation was the basis for many of the papers. Literature references are included in the individual papers.

MYKLEBUST HELMER R.

Auditory disorders in children a manual for differential diagnosis. New York Grune & Stratton, 1954 367 p 21 cm. $6.50 4120

Contents: Part I, Introduction. The problem. Auditory disorders and language development. Professional specialization and auditory disorders in young children. Part II, the history: Differential history taking. History interpretation. Part III, Behavioral symptomatology: Auditory disorders due to peripheral deafness—due to aphasia—due to psychic deafness—due to mental deficiency. Part IV: The examination: methods and procedures. The use of tests. Examination of auditory capacity. Psychological examination. Part V: Illustrative cases and recommendations. Case studies. Summary and recommendations for training. Index of authors. Index of subjects.

Note: An authoritative manual written by the Director of the Children's Hearing and Aphasia Clinic of Northwestern University. It is intended for graduate students of such professions as psychology and practitioners of such medical specialties as otolaryngology and pediatrics. It describes methods which the author and his colleagues have found useful in the differential diagnosis of auditory disorders in infants and young children and in older children who do not talk or who lack the ability to make reliable responses to standard tests of hearing, particularly those based on the use of tuning forks and the audiometer. There is considerable emphasis on the interpretation of patients' histories and behavior as well as on the specific tests of auditory capacity. Literature references are included.

NELSON, WALDO E., editor

Textbook of pediatrics Sixth edition. With the collaboration of seventy contributors Philadelphia W B Saunders Company 1954 1,581 p. illus. (part col d) 26 cm. $15.00 4121

Contents (abridged): An introduction to the medical problems of infants and children, by W. E. Nelson. Care and evaluation of well children: Physical growth and development, by H. C. Stuart and S. S. Stevenson. Mental and emotional development, by M. J. E. Senn. Nutritional requirements, by A. E. Hansen. General factors in the care of sick children: History and physical examination, by F. K. Stevenson. Disturbances of fluid and electrolyte equilibrium, by G. M. Guest. Parenteral fluid therapy, by K. Dodd. Anesthesia for children, by C. R. Ilchner. Prenatal disturbances: Prenatal factors in diseases of children, by J. Warkany. Inborn errors of metabolism, by M. Rapoport. The newborn infant: Introduction to neonatal pediatrics, by C. A. Smith. Diseases of the newborn infant—full term and premature, W. E. Nelson and H. H. Gordon. Unexpected death, by S. S. Gellis. Nutritional disturbances: Malnutrition, W. E. Nelson. Infectious diseases: Infection, immunity and allergy in relation to pediatrics, by C. A. Janeway. Bacterial infections, A. T. Wilson and others. Viral infections, including those presumed to be caused by viruses, by J. Stokes, Jr. and others. Rickettsial diseases, J. Stokes, Jr. Mycotic infections, by D. S. Martin and others. Parasitic diseases, by E. C. Faust and others. Protozoan diseases, by A. J. Walker and others. Diagnosis of poisoning, by J. A. Anderson. The digestive system: The oral cavity, by J. B. Richmond and others. The gastro-intestinal tract, by W. E. Nelson and others. Anus, rectum and sigmoid, by H. E. Bacon. The liver, by M. Rapoport. The respiratory system: The upper respiratory tract. The ear, by D. Myers. The thoracic cavity. The cardiovascular system: The heart and circulation in health and disease, by R. A. Lyon and S. Kaplan. Rheumatic fever, by A. G. Kuttner. Diseases of the blood: Disorders of red blood cells, by L. K. Diamond and others. The anemias. Diseases of the blood associated with defects in hemostasis. The spleen, by N. J. Smith. The lymphatic system. Diseases of the lymph vessels, by L. K. Diamond and others. Disturbances of cellular lipid metabolism and related conditions, by S. Gellis. The genitourinary system: Urine and urination, by M. L. Rubin. Malformations and diseases of the male and female genital organs. Psychologic disorders. Disorders in language function. The nervous system: Examination, by F. C. Ivey. Convulsive disorders. Cerebral palsy, by W. M. Phelps. The endocrine system. Diabetes mellitus: Diabetes mellitus, by W. E. Nelson. Infants of diabetic mothers, by S. S. Gellis. Hypoglycemia, by M. Rapoport. The bones and joints: Skeletal defects, by J. Warkany. Metabolic bone disorders simulating rickets, by L. I. Gardner. The muscles. The skin. Burns, by R. H. Hoch. The eye. Allergic diseases. Neoplasms and other tumors, by J. B. Arey. Radiation injury, by R. W. Miller. Adolescence: Physical aspects of adolescence, by J. A. Johnston. Psychologic aspects of adolescence, by M. J. E. Senn. Appendix. Index.

Note: A standard work used as a text for students of medical colleges and as an office reference book by medical practitioners. It is essentially a systematic treatise on pediatrics as currently practiced in the United States of America. A selection only of the chapter titles is listed above. The contributors are outstanding teachers and practitioners in pediatrics and in allied fields, such as neurology, pathology and dermatology. The fifth edition was published in 1950. Revisions were made in most of the chapters in preparing this sixth edition. They were designed to keep the book up to date, rather than to effect a change in its scope.

PATERSON DONALD AND JOHN FERGUSON McCREARY editors

Pediatrics With 36 contributing authors. Philadelphia J B Lippincott Company 1956 654 p. illus. (part col d) 26 cm. $14.00 4122

Contents: History taking and physical examination. Normal growth and development. Diseases due to prenatal factors. The newborn baby. Infant feeding. Fluid and electrolyte balance. Nutritional disturbances. Diseases of the alimentary tract. Accidents, burns, poisoning and sudden death. Diseases of the cardiovascular system. Diseases of the ear, nose and throat. Diseases of the respiratory system. Allergies. Diseases of the liver and the pancreas. Diseases of the blood, the spleen, the lymph glands and the thymus. Diseases of the genito-urinary system. Pediatric gynecology. Diseases of the endocrine glands. Diseases of the

nervous system. Mental retardation and behavior disorders. Disturbances of adolescence. Diseases of the skin—muscles—bones and joints. Inborn errors of metabolism and storage diseases. Diseases of the eye. Immunization. Public health service. Infectious diseases. Rickettsial diseases and those caused by helminthes, arthropods and protozoa. Tuberculosis. Syphilis. Therapy and procedures. Appendix Drug therapy Normal values as determined by laboratory technics. Diets. Index.

Note With one exception, the editors and authors of this volume are Canadians. Dr McCreary is Head of the Department of Pediatrics at the University of British Columbia, and many of the contributors are from the same university however other Canadian universities and hospitals are represented. Chapters and sections within chapters bear the initials of the contributing authors. The book is essentially a reference volume addressed to general practitioners. Diagnosis and treatment are emphasized. There are 34 tables of reference data in addition to recipes and menus for special diets and 192 figures. Literature references ar included in all of the chapters.

PEDIATRIC CLINICS OF NORTH AMERICA. Symposium on the Child's Mouth, November, 1956 Philadelphia W B Saunders Company 1956 292 p illus. 24 cm $15 00 per year of 4 numbers. 4123

Contents Foreword, by J B Richmond. The mouth of the newborn, by A. H. Parmelee, Jr Examination of the mouth, by R. E. McDonald. The diagnosis and management of oral infections, by P F Wehrle. Oral neoplasms of children, by H. B G. Robinson. Trauma in and about the mouth in children, by L. K. Pickett and D B Stark. Clinical problems related to the tongue, by E. Cheraskin and R. T Blaiford, Jr Salivary gland infection, by J A. Bigler The pediatrician's responsibility in dental examination by P L Leach and W R. Simon. Caries control in pediatric practice by M. Massler The orthodontist and the pediatrician, by M. B Engel. The fractured incisor by B. Z. Rabinowitch. Cleft lip and cleft palate—perspectives in management, by E. F Lis and others. Cleft lip and cleft palate—surgical considerations, by W B. Slaughter and others. Psychological and psychophysiological aspects of oral activities in childhood, by D G. Prugh. Index of authors. Index to Volumes 1 2 and 3 (1954, 1955 and 1956)

Note. Pediatric clinics of North America is published six times year and is continuously paged through the annual volumes as a periodical. However each issue is devoted to symposium-in-print on topic of current interest, and the issues are available bound in cloth as books. The November 1956 issue contains the papers whose authors and titles are listed above. Most of the contributors to this issue are eminent teachers and practitioners of pediatrics and dentistry The symposium is directed to graduat pediatricians and is of interest also to dentists.

SCHAUFFLER GOODRICH C

Pediatric gynecology with sections on urology and proctology Third edition. Chicago Year Book Publishers Inc, 1953 318 p illus. 23 cm 4124

Contents 1, General considerations. Embryologic development of the female genital system, by G G Robertson. Special methods of investigation. The external genitalia. The vagina and vaginal cervix. Management of agitatio. The uterus. Disorders during adolescence—the onset of menstruation Surgical aspects of the pelvic viscera. General surgical considerations, with C. W Brunkow Special urologic considerations, with E. Belt and C. V Hodges. Special proctologic considerations, with D R. Laird Social connotations and social service aspects, with S. R. Stimmel. Medicolegal aspects, with D H. Northup and S. R. Stimmel. Appendix. Index.

Note A standard, well-established manual of a branch of pediatrics on which there is relatively little literature in book form The author is specialist in obstetrics and gynecology he for more than 25 years has gathered information from the literature and from clinical experience The book is directed to practicing physicians. It covers the subject from the clinical standpoint and includes much practical information, including even the names of drugs which the author has found useful. The first edition was published in 1942 and the second edition in 1947 Comparing the second edition to the third, the book has been rather extensi ely reorganized and revised. The chapter on embryologic dev lopment has been newly added, and many of the other chapters ha been revised or augmented. A fourth edition was published in 1958, 349 p.

SLOBODY, LAWRENCE BORIS

Survey of clinical pediatrics. Second edition New York The Blakiston Division, Mc Graw Hill Book Company, Inc., 1955 502 p. 24 cm $9 50 4125

Contents. Growth and development. Feeding of infants and children. Vitamins. Preventive pediatrics. Psychologic problems. Treatment. Fluid and electrolyte balance. The normal newborn infant. Diseases of the newborn. Prematurity Infectious diseases. Respiratory diseases. Heart disease. Gastrointestinal diseases. Surgical conditions of the abdomen. Genitourinary diseases. Neurologic conditions. Diseases of the skeletal system. Blood disorders. Neoplasms of infancy and childhood. Endocrine diseases. Allergy Skin disorders. Appendix. References. Index.

Note. Based on material previously used in teaching by the pediatric staff of the New York Medical College, this textbook covers the subject for medical students and general practitioners who wish to have the facts of modern pediatric practice in a convenient format. The outline form is the principal method of presentation and, together with the 22 tables in the text, is skillfully used to give wealth of essential information in relatively little space. Most of the book is made up of condensed monographs on specific diseases and abnormalities. In general, the material on a specific disease covers etiology clinical features, diagnosis, prognosis, and treatment. The bibliography lists six books for general collateral reading and 36 books for additional readings on particular subjects. The first edition as published in 1952. New and revised information on a variety of topics was added in this second edition. Dr Slobody received the 1950 award of the Association for Help of Retarded Children.

SMITH, CLEMENT ANDREW

The physiology of the newborn infant. Second edition. Springfield, Ill. Charles C Thomas, 1951 348 p illus. 24 cm. $8.50. 4126

Contents. Introductory Respiration—fetal aspects—neonatal aspects. The circulatory system. The blood. Icterus neonatorum. Metabolism and heat regulation. The physiology of the digestive tract. Fetal and neonatal utilization—assimilation and metabolism of specific food substances. Minerals and vitamins. Renal physiology—regulation of water and electrolytes. Neonatal endocrinology Neonatal immunology Index.

Note The physiology of the period of life in hich more physiological alterations and adjustments occur than in any other comparable span is the subject of this book. Except for the omission of a discussion of the nervous system, the subject is covered thoroughly with careful cross-referencing bet een the text and the literature citations in the extensi chapter bibliographies. Some data based on animal experimentation are included, but most of the information has been derived from observations on human infants. The book is of primary interest to obstetricians and pediatricians. The first edition was published in 1945. Revisions have been made in the text of most chapters, and the length of the book has been extended by 25 pages. Recent literature has been added to the bibliographies.

STONE, EMERSON LAW

The new born infant a manual of obstetrical pediatrics Third edition, thoroughly revised Philadelphia Lea & Febiger, 1945. 314 p 21 cm $3.25 4127

Contents. The immediate care of the new-born. The physiology and development of the new-born. The ursing care of the normal infant. The technique of ursing. The pathological aspects of birth. Modified feeding. The dietary disorders of infancy. Birth injuries—cranial. Birth injuries—extracranial. Infections. Disorders of special systems. The premature infant. Index.

Note This little olume is the outgrowth of short course of lectures given to senior students at the Johns Hopkins Medical School. It is written primarily for the obstetrician and discusses the care and treatment of the infant during the first month or six weeks of life, a period which does not normally fall within the jurisdiction of either the obstetrician or pediatrician. The present revision takes into account the latest obstetric and pediatric principles and practices relating to the newborn infant, as evidenced by many small alterations, condensations, eliminations, and additions to the text.

Pediatrics

TALBOT NATHAN BILL AND OTHERS

Functional endocrinology from birth through adolescence. By Nathan B Talbot, Edna H. Sobel, Janet W McArthur and John D Crawford. Published for the Commonwealth Fund. Cambridge, Mass. Harvard University Press, 1952 638 p. illus. 26 cm. $10.00. 4128

Contents: The thyroid. The parathyroids. The adrenal cortices. The adrenal medulla. The ovaries. The testes. The anterior pituitary. The posterior pituitary. The pancreatic islets. Appendix. Index.

Note: This book covers (to use the words of the authors) "the actions of endocrine systems in health and ordinary disease and the management of endocrinopathies as they appear in young people." It is addressed to graduate practitioners, particularly pediatricians and general practitioners, but the authors have not assumed any previous knowledge of endocrinology on the part of the reader. Within the age limitations as stated, the field is covered comprehensively with particular emphasis on diagnostic and clinical aspects. Although for practical purposes the book is self-contained, literature references are included. The first-named author is Associate Professor of Pediatrics in the Medical School of Harvard University.

THOMAS, LEWIS, editor

Rheumatic fever. A symposium held at the University of Minnesota on November 29 30 and December 1 1951 under the sponsorship of the Minnesota Heart Association. Minneapolis University of Minnesota Press, 1952 349 p. illus. 24 cm. $6.50 4129

Contents: The natural history of rheumatic fever, by T. D. Jones and E. F. Bland. The epidemiology of rheumatic fever, by F. F. Schwentker. The histopathology of rheumatic fever—a critical review, by G. E. Murphy. Inflammatory complications of congenital heart disease, by T. J. Dry and D. C. Connolly. The biology of group A hemolytic streptococci, by M. McCarty. Studies on the epidemiology of rheumatic fever in the armed services, by C. H. Rammelkamp and others. Infection and reinfection by hemolytic streptococci in early childhood, by L. A. Rantz and others. Non-rheumatic [illegible], by H. L. [illegible]. Acute-phase reactions in rheumatic fever, by R. A. Good. The antibody response in rheumatic fever, by M. McCarty. Attempts to induce rheumatic fever in experimental animals—a critical review with particular reference to the Aschoff bodies in the myocardium, by G. E. Murphy. Experimental [illegible] and glomerulonephritis—a description of a method of production utilizing [illegible], and summary of the results of antibiotic therapy, by C. W. Lillehei and others. Tissue factors in streptococcal infections, by D. W. Watson and W. J. Cromartie. The biochemistry of connective tissue and rheumatic fever, by A. Dorfman. The penetration of antigens into connective tissue, by A. H. Coons. The pathogenesis of the Shwartzman and Arthus phenomena and their relation to human rheumatic fever, by C. A. Stetson, Jr. The generalized Shwartzman reaction in rabbits injected with group A hemolytic streptococci, by L. Thomas. The surgical problem in rheumatic valvular heart disease, by R. L. Varco and C. D. Rosenzweig. Subacute bacterial endocarditis, by W. R. Harrell and F. R. Hollinger. Acute rheumatic fever treated with cortisone and corticotropin, by A. R. Barnes and others. Therapy of rheumatic fever—a discussion, by A. G. Kuttner. The prevention of rheumatic fever, by C. H. Rammelkamp and others. The management of rheumatic fever, by M. J. Shapiro. Bibliography.

Note: Many of the papers collected in this volume describe recent advances in the understanding and therapy of rheumatic fever, including the results of studies carried out by the United States Armed Forces. Several of the papers are accompanied by transcripts of the discussions which took place at the symposium. Some include extensive bibliographies.

UNITED STATES. CHILDREN'S BUREAU

Infant care. Tenth edition. Washington, D C. Government Printing Office 1955 106 p. illus. 22 cm. (United States. Children's Bureau. Publication no. 8) $0.15 4130

Contents (abridged): The newborn baby. Feeding your baby. Satisfying your baby's sleep needs. Clothing for your baby. Bathing your baby. How your baby develops and learns. Accidents and their prevention. Immunizations. The sick baby. Illnesses. Common communicable diseases. Appendixes. Cow's milk feeding. Foods necessary for nursing mother. The premature. Index.

Note: A perennial "best seller" of the United States Government Printing Office, this helpful pamphlet is designed as a guide to parents in taking care of babies. It provides sane and practical advice on all the points mentioned in the chapter titles listed above and on many others.

WILKINS LAWSON

The diagnosis and treatment of endocrine disorders in childhood and adolescence. Springfield, Ill. Charles C Thomas, 1950 384 p. illus. 29 cm. 4131

Contents (abridged): Endocrine relationships and their influences upon growth and development. Methods of endocrine study and diagnosis. Thyroid disorders. Dwarfism. Variations in the pattern of adolescent development. Sexual precocity of isosexual pattern. Sexual infantilism. Adrenal cortex—hormones and their actions—adrenal insufficiency—hyperadrenocorticism—adrenogenital syndrome and Cushing's syndrome. Hermaphroditism. Pituitary tumors and intracranial lesions causing endocrine disorders. Diabetes insipidus. Calcium and phosphorus metabolism. Carbohydrate metabolism and spontaneous hypoglycemia. Obesity. Congenital anomalies sometimes mistaken for endocrinopathies. Index.

Note: The emphasis in this work is on clinical diagnosis, and special attention is given to recently developed diagnostic tests and techniques. Differential diagnoses are discussed. Current methods of treatment are outlined. The book is based largely on studies done at the Johns Hopkins Hospital. There are more than 400 illustrations, including six reproduced in color. A considerable number of the illustrations are photographs of endocrine cases. Each chapter concludes with a list of references to selected literature. A second edition was published in 1957 [illegible] p., $17.50.

WILSON MAY GEORGIANA

Rheumatic fever: studies of the epidemiology, manifestations, diagnosis, and treatment of the disease during the first three decades. Cambridge, Mass. Harvard University Press 1940 595 p. illus. (part col d) 26 cm. $4.50. 4132

Contents (abridged): Historical summary. Epidemiology of rheumatic fever. Familial epidemiology of rheumatic fever. Consideration of etiological hypotheses. Bacteriological investigations relative to the etiology of rheumatic fever. Immunological response of rheumatic subjects to streptococcal infections; and relation of rheumatic fever to other infections. Summary. Symptoms and signs of infection in rheumatic fever. Involvement of the heart and great vessels in rheumatic fever. Involvement of organs and tissues—cutaneous lesions; small peripheral arteries of systemic circulation, arterioles, capillaries, and veins. Bacterial endocarditis. Age and type of manifestation at onset. Recurrence of manifestations of rheumatic activity. Prognosis related to manifestations of rheumatic activity. Mortality and life expectancy. Graphic presentation of the course of rheumatic fever in 447 individual rheumatic patients. Criteria of diagnosis and differential diagnosis. Diagnostic significance of symptoms of physical signs. Diagnostic value of the roentgenogram examination of the heart. Diagnostic value of other tests. Diagnostic value of the vital capacity measurement. Diagnostic significance of the electrocardiogram in rheumatic fever. General therapeutic measures. "Specific" therapy. Symptomatic treatment and sedatives. Bibliography. Appendixes. Illustrations.

Note: Dr. Wilson presents in this volume the results of more than 20 years' study she has given to the etiology, epidemiology, manifestations, course, diagnosis, prognosis, and treatment of childhood rheumatism. She has followed many cases of rheumatic fever and rheumatic heart disease from onset of the illness in childhood through the years of adolescence and early adult life. In preparing this book she has drawn upon the important literature relating to the subject as a setting for the presentation of her own experience.

YEAR BOOK OF PEDIATRICS. (1956–1957 Year book series.) Edited by Sydney S. Gellis,

Chicago The Year Book Publishers, Inc., 1956 480 p illus 20 cm $6 00 4133

Contents The premature and the newborn. Nutrition and metabolism. Infectious disease and immunity Allergy Dentistry and otolaryngology Ophthalmology Respiratory tract. Gastrointestinal tract. Genitourinary tract. The heart and blood vessels. Blood. Endocrinology Orthopedics. Dermatology Neurology and psychiatry Tumors. Therapeutics and toxicology Miscellaneous. Index. Index to authors.

Note. An annual volume organized and edited on essentially the same plan as the other books in this publisher's *Year book series.* The chapters consist of fairly long abstracts of important articles selected from the medical periodicals of the world, published during the period of one year In the issue reviewed here, the abstracts are based on articles in journals received by the editors from June, 1955 through May 1956. The abstracts are arranged under the headings given above. References are given in all cases to the original publications. In addition to the abstracts, illustrations and tables are sometimes reproduced, and there is often a short note by the editor criticizing the author's conclusions or relating them to other studies on the subject. There are 134 figures in the present issue.

ZAHORSKY, JOHN

Synopsis of pediatrics By John Zahorsky, assisted by T S Zahorsky Sixth edition. With 158 text illustrations and 9 color plates St. Louis The C V Mosby Company 1953 470 p illus. (part col'd) 20 cm $7 50 4134

Contents (abridged) Growth and development. The incidence of diseases—prophylaxis—mental hygiene. Nutrition. Natural feeding. Artificial feeding of infants. Feeding the sick infant. Diagnosis. Diseases of the newborn. Malformations of the newborn. Nutritional disorders. Deficiency diseases. Disorders of growth. Disorders of metabolism Infectious diseases. Rheumatism—acute rheumatic fever Infestations. Allergy Diseases of the endocrine glands. Diseases of the blood. Diseases of the alimentary tract. Diseases of the respiratory organs. Diseases of the circulatory system. Diseases of the genitourinary organs. Diseases of the brain and meninges. Diseases of the nervous system. Diseases of the bones and joints Diseases of the skin. Diseases of the eyes and ears—disorders of speech. Poisons and bites. Appendix The management of medical emergencies. Drugs and doses. Index.

Note A condensation of the important principles, facts and techniques of pediatrics, presented in handbook form. It is used by students in medical colleges, internes in hospitals, and general practitioners of medicine who are not specialists in pediatrics. There are no literature references. The first edition was published in 1934 and the fifth in 1948. The appendix on the management of medical emergencies was added in this sixth edition.

ZIEGLER, ROBERT F

Electrocardiographic studies in normal infants and children Springfield Ill Charles C Thomas, 1951 207 p illus 29 cm $10.50 4135

Contents Introduction and review of the literature. Material and method. The cardiac mechanism Auricular activation and auriculoventricular conduction. Ventricular activation. Electrical axis of QRS and T and the ventricular gradient. The initial ventricular deflections The final ventricular deflections. Representative electrocardiograms at various ages. Appendix Statistical data in the study of electrocardiograms of normal infants and children. Definition of terms. Index.

Note This work is the result of a planned effort to establish standards of normal for the electrocardiogram of infants and children without heart disease. It is based on the electrocardiograms of three groups of children ranging in age from birth to 15 years and totaling 635 in number A series of electrocardiograms identified with the sex and age of the subject are reproduced. The appendix contains a series of charts on which the observed percentage incidence and the predicted distribution of values for such measurements as heart rate duration of P-wave measured in seconds and amplitude of T-wave in precordial lead V6, measured in 1/10 millivolt. Both the observed and the predicted charts are arranged by age groups.

GERIATRICS

BOAS, ERNST PHILIP

Treatment of the patient past fifty Third edition Chicago The Year Book Publishers, Inc, 1947 479 p illus. (part col'd) 21 cm. $6 50 4136

Contents Aging and disease. The aging process. General management of the aging and aged person. Principles of diagnosis and treatment. Diseases of the cardiovascular system. Diseases of the cardiovascular system—hypertension. Diseases of the cardiovascular system—syphilis. Diseases of the cardiovascular system—valvular diseases and irregularities. Diseases of the cardiovascular system—general management. Diseases of the lungs. Diseases of the gastrointestinal tract. Diseases of the bile passages, liver and pancreas. Diseases of the genito-urinary tract. Diseases of the bones and joints, and gout. Infectious diseases. Diabetes. Diseases of the thyroid gland. Disorders of the blood. Diseases of the eyes. Diseases of the skin. Diseases of the nervous system. Index.

Note The special approach required in treating aging and aged patients is explained in this standard guide to geriatrics for general physicians, surgeons, industrial physicians, and internists.

KAPLAN, OSCAR J, editor

Mental disorders in later life. Second edition Stanford Stanford University Press, 1956 508 p illus. 24 cm $7.50 4137

Contents. Introduction, by K. M. Bowman. A statistical survey of mental disorders in later life, by B. Malzberg. Genetic aspects of mental disorders in later life, by F J Kallmann. Physiological aspects of mental disorders in later life, by H. E. Jones and O J. Kaplan. Sociological aspects of mental disorders in later life, by H. W Dunham. Food for the later years, by C. M. McCay. Neuroses of later maturity by N Cameron. The involutional psychoses, by E. Davidoff The presenile dementias, by G. A. Jervis. Senile psychoses and psychoses with cerebral arteriosclerosis, by D Rothschild. The toxic delirious reactions of old age, by G. W Robinson Jr Older mental patients after long hospitalization, by E. Hanfmann. The aged subnormal, by O. J. Kaplan. Psychosomatic medicine and the older patient, by B. Mittelmann. Psychotherapy in the older individual, by F V Rockwell. The use of electric shock therapy in older patients, by C. T Prout and others. Mental hygiene in later maturity by N D C Lewis. Orientation of the problems, by E. J Stieglitz. Index.

Note This book is a collection of original essays on various phases of the problem of mental disorders in later life rather than a comprehensive study Most of the authors discuss their specific topics in relation to physical conditions, illness, and previous mental history with emphasis on causes, prevention and treatment. Bibliographies, some of them very extensive, are included in most of the chapters. The volume is of interest to professional workers who are concerned with the care of the aged, including not only specialists in psychiatry but also psychologists, public health authorities, and general practitioners of medicine. The first edition was published in 1945 The chapters on genetic aspects and on electric shock therapy were added in this second edition, and some of the chapters carried over were revised.

LANSING, ALBERT INGRAM editor

Cowdry's Problems of ageing biological and medical aspects Third edition edited by Albert I Lansing Baltimore The Williams & Wilkins Company 1952 1 061 p. illus. $15 00 4138

Contents Section I, Biological and cellular problems of ageing General physiology by A. I. Lansing Ageing of tissue fluids, by E. V Cowdry Ageing of individual cells, by E. V Cowdry Ageing processes considered in relation to tissue susceptibility and resistance, by W deB. MacNider Quantitative histochemical changes in ageing, by O. H. Lowry and A. B Hastings. Chemical aspects of ageing and the effect of diet upon ageing, by C. M. McCay Longevity in retrospect and in prospect, by L. I. Dublin. Section II, Clinical and organic problems of ageing: Ageing in the nervous system, by J. L. O'Leary The eye, by J S. Friedenwald The ear by W P Covell. The heart and great vessels in old age, by P D. White. Arteriosclerosis in the aged, by J B. Shapleigh and others. Arteriosclerosis (lipid metabolism) by J M. Steele. Experimental hypertension, by W S. Hartroft. The thyroid, pancreatic islets, parathyroids, adrenals,

thymus, and pituitary by A. J. Carlson. Cytologic changes in the cells of the pituitary thyroids, adrenals, and sex glands of ageing birds, by F Payne. Homeostatic and histochemical aspects of the endocrine glands, by E. W Dempsey Ageing of homeostatic mechanisms, by N. W Shock. Teeth and jaws, by H. B. G. Robinson and L. R. Boling. Digestive system, by A. C. Ivy and M. I. Grossman. Lymphatic tissue, by W Andrew. The respiratory system in the aged, by H. A. Bickerman. Age changes in renal function, by N. W Shock. Urinary system, by J. R. Oliver. Female reproductive system, by W H. Masters. Male secondary sexual organs, by R. A. Moore. Male reproductive system, by E. T. Engle. Metabolism of mineralized tissues and changes associated with ageing, by J. E. Kirk and P F Hansen. Ageing of the skin, by Z. K. Cooper. Skeleton, by W M. Cobb. Surgical problems in the aged, by R. Elman. Anesthesia in the aged, by E. Apgar. Degeneration and regeneration, by W B. Kountz. Cosmetological aspects of ageing, by M. Cheek. Rehabilitation for the chronically ill and aged, by H. A. Rusk and E. J. Taylor. Cancer and ageing, by J. A. Saxton, Jr. Section III, Social and economic problems of ageing: Trends in the ageing population, by P. M. Hauser and E. Shanas. The older worker in industry by R. K. Burns and L. B. Brown. Roles and status of older people, by R. J. Havighurst. Personal adjustment in old age, by R. S. Cavan.

Note A distinguished and useful work in which specialists in gerontology and related subjects cover the developments of the last decade and also discuss significant trends. As the section and chapter titles show, the book is not limited to the biological and medical aspects, but includes also papers on social and economic phases. The first two editions were edited by Edmund Vincent Cowdry who is contributor to the third edition. The book is of interest to general practitioners, specialists in geriatrics, graduate physicians, and other persons with professional interests in the medical and socio-economic questions generated by the ageing process and the increasing numbers of the aged.

MONROE, ROBERT THORNHILL

Diseases in old age a clinical and pathological study of 7941 individuals over 61 years of age. Cambridge, Mass. Harvard University Press 1951 407 p. 22 cm. (Harvard University monographs in medicine and public health editorial committee, A. Baird Hastings, chairman. Number 11) $5.00. 4139

Contents: General features of the group. Diseases of the nervous system. The cardiovascular system. Diseases of the respiratory system. Diseases of the gastrointestinal system. Diseases of the kidney, ureter, and bladder. Diseases of the blood. Diseases of the endocrine system. Venereal diseases. Nutritional disorders and alcoholism. Diseases of the bones and joints. Malignant disease. Summary of medical findings. The community resources essential for old people. References. Index.

Note A study based chiefly on the records of the Peter Bent Brigham Hospital, Boston, from 1913 to 1943. Approximately 100 tables of statistical data are accompanied by critical interpretative text. Included are social and psychological factors as well as pathological findings and therapy. Tentative conclusions are drawn, but the author points out the need for many more such studies before geriatrics can be established as distinct field of medicine.

SHOCK NATHAN WETHERILL

A classified bibliography of gerontology and geriatrics. Prepared for Stanford University under a grant from The Forest Park Foundation, Peoria, Illinois. Stanford Stanford University Press, 1951 599 p. 28 cm. $10.00 4140

Contents (abridged): Biology of aging. Cellular biology and physiology. Climate. Exercise. Longevity. Metabolism. Nutrition. Physiological age. Rejuvenation. Theories. Organ systems: Blood. Cardiovascular system. Connective tissue and cartilage. Endocrine system. Gastro-intestinal tract. Kidney. Lymphatic system. Muscular system. Nervous system. Reactions of the body as whole. Reproductive system. Respiratory system. Sense organs. Skeletal system. Skin and integument. Urogenital system. Geriatrics: Medical care. Diagnosis and physical examinations. Disease. Surgery. Psychological processes. Intellectual functions. Motor functions. Personality. Social and economic aspects. Miscellaneous. Historical references. Lay items. Research methods, organizations, programs and institutions. Abbreviations of journals cited. Index of authors. Index of subjects.

Note A comprehensive, international bibliography. The classification is detailed. Shown above are part-titles and the titles of main subdivisions. However, the larger subdivisions, for instance endocrine system, are broken down into appropriate subgroups. Titles are given for the cited publications in addition to other usual bibliographical data. The number of references exceeds 18,000. The United States Public Health Service, Stanford University and the Forest Park Foundation shared in the work preparation.

STIEGLITZ EDWARD JULIUS editor

Geriatric medicine medical care of later maturity Third edition. 205 figures. Philadelphia J B Lippincott Company 1954 718 p. illus. 26 cm. $15.00. 4141

Contents: Section I, Basic considerations. Foundations of geriatric medicine, by E. J Stieglitz. Principles of geriatric medicine, by E. J. Stieglitz. Anatomic changes of normal senescence, by J. Oliver Physiologic changes of normal senescence, by A. J. Carlson. Intellectual changes of normal senescence, by O. J. Kaplan. Medical care of normal senescents, by E. J Stieglitz. Mental hygiene in later maturity by E. J Stieglitz. Medical care of the normal aged, by F D Zeman. Medicolegal aspects of senility by A. W Brown. Essentials of geriatric surgery by F C. Fishback. Essentials of geriatric anesthesia, by R. T Knight. Essentials of geriatric nursing, by L. L. Roland. Section II, Disorders of metabolism: Malnutrition, by W H. Sebrell, Jr and J M. Hundley Diseases of the blood, by C.-S. Wright and C. A. Doan. Diabetes mellitus, by E. L. Bortz. Gout, by J. H. Talbott. Dysfunctions of the thyroid, the gonads and the adrenals, by W B. Kountz. Section III, Disorders of the mind and the nervous system. Mental diseases, by W Overholser and T C. C. Fong. Organic diseases of the brain, the spinal cord and the peripheral nerves, by C. D. Camp. Diseases of the eye, by R. Rosen. Diseases of the ear by C. A. Hardy. Section IV Disorders of the respiratory system. Diseases of the upper respiratory tract, by A. W Proetz. Chronic diseases of the lungs, by J. A. Myers. Acute diseases of the lungs and the pleura, by H. A. Bickerman. Section Disorders of the circulatory system. The normal senile heart, by H. B. Sprague. Cardiac decompensation, by G. Sharpe and E. J. Stieglitz. Angina pectoris, myocardial infarction and acute coronary failure, by W S. Priest. Arteriosclerosis, by I. S. Wright. Diseases of the aorta, by C. S. Keefer and W E. R. Greene. Hypertensive arterial disease and hypotension, by E. J. Stieglitz. Diseases of the veins, by R. R. Linton. Section VI, Disorders of the alimentary system Diseases of the mouth and the teeth, by J R. Rowe and M. P Fryer. Diseases of the esophagus, the stomach and the small intestine, by H. C. Bockus and J B. Kirsner. Diseases of the colon, the rectum and the anus, by R. S. Smith, and others. Diseases of the liver and the biliary passages, by G. M. Piersol. Section VII, Disorders of the genitourinary system. Gynecology of senescence and senility by M. E. Davis. The nephropathies, by E. J. Stieglitz. Surgical renal disease, by J. M. Mericks and F B. Papierniak. Diseases of the bladder, the prostate and the urethra, by V. J. Herbst. Section VIII, Disorders of the skeletal system and the integument. Diseases of the joints, by W M. Solomon. Diseases of the bones, by L. J. Lacroix and others. Diseases of the skin, by H. Rattner. Index.

Note A standard treatise on the medical care of the aged. Earlier editions published in 1943 and 1949 had the title *Geriatric medicine, the care of the aging and the aged.* General principles and specific disorders are covered from the standpoint of general medical practice, with attention to the clinical picture, diagnosis and treatment. The range of diseases covered is not greatly different than in comprehensive texts on general medicine, but the manifestations and other aspects which are different in the aged are pointed out. In such passages as: "The course of acute pulmonary disease in the aged often does not follow the pattern observed in younger patients. Many changes, both systemic and locally in the lungs, which come with advancing years bring about lessened reactivity of the patient and often mask the presence of infection. In this third edition, the book has been very extensively revised and rewritten.

STIEGLITZ, EDWARD JULIUS

The second forty years. Philadelphia J B Lippincott Company 1946 327 p. illus. 22 cm. $4 95 4142

Contents: How old is old? The biology of senescence. What senescence means to us. The hazards of senescence. Life with handicapped heart. High blood pressure. Nutrition in later years. Sex and age. The question of cancer. The point of view Wise investment of leisure. An aging people. Constructive medicine. Post-script.

Note The increasing numbers of older people in the United States has turned attention to the special health and psychical problems of the aged and has resulted in an increasing production of books and technical articles dealing with these subjects. Most of this published material has been written for the physician and biologist directly concerned with problems of gerontology. The author of this book, however feels that what is now known about aging successfully belongs in the hands of the aging adult himself. Accordingly he has written a simple direct book for laymen who are interested in establishing and maintaining optimum conditions of mental and physical health during the years after forty

THEWLIS, MALFORD WILCOX

The care of the aged (geriatrics) Fifth edition thoroughly revised, with 65 illustrations St. Louis The C V Mosby Company, 1946 500 p illus 25 cm. $9 50 4143

Contents (abridged) Part I, General considerations. History of geriatrics. Part II Geratology: Life extension. Hygiene (gerocomia) Hobbies. Part III, Medicolegal relations. Part IV Miscellaneous geriatric problems. Anatomic changes. Physiologic and pathologic changes. Therapeutics. Geriatric nursing. Part V Diseases of metabolism and endocrine disorders. Part VI, Infectious diseases and focal infection. Part VII, Systemic pathologic conditions Special senses. Respiratory system. Cardiovascular system. Alimentary tract. Neurology Muscles, bones, and joints. Genitourinary disease. Diseases of the skin. Part VIII, Special topics Alcoholism. Allergy Cancer Anesthesia. Surgery Index.

Note The author of this text, using the experience of his own practice as background, has produced practical and concise guide to the clinical problems of the aged. Particular attention is given to the special problems arising from the diagnosis and treatment of disease in the aged person. This edition has undergone considerable revision and reorganization and, new material has been added on stress and longevity congestive heart failure, venous pressure, the kidneys during infections, mental hygiene, psychotherapy and preventive geriatrics. References are included at the end of each chapter.

CHRONICALLY ILL

COMMISSION ON CHRONIC ILLNESS

Chronic illness in the United States Volume II Care of the long term patient. Cambridge Mass Published for The Commonwealth Fund by Harvard University Press 1956 606 p illus 24 cm $8 50 4144

Contents The long-term patient. The patient at home. Rehabilitation at home and in institutions. The patient in an institution Personnel and education. Coordination and integration. Research for planning and administration. Financing. Summary—conclusions and recommendations. National Conference on Care of the Long-term Patient. Appendixes Prevalence of long-term disabling illness. Characteristics of special groups of long-term patients. Job definition and recommended qualifications for supervisor of homemaker service. The patient in an institution Health personnel and education. Coordination and integration. Definitions. Index.

Note This book is the first volume published of an authoritative four volume report on chronic illness in contemporary United States of America. The other volumes will be titled as follows Volume I, *Prevention of chronic illness* Volume III, *Chronic illness in rural area* and Volume IV *Chronic illness in large city* The present volume is concerned with the whole problem of the care of chronically ill patients, whether the patients are cared for in their own homes or in institutions such as hospitals. It is written from the social and public health viewpoints rather than the medical and, as the chapter titles indicate considers costs, financing, and research as well as care. It was based in part on reports of 28 study groups set up by the commission who first reported at the *National Conference on the Care of the Long Term Patient* held in 1954 and in part on the literature and other sources.

HARROWER, MOLLY editor

Medical and psychological teamwork in the care of the chronically ill. Springfield Ill. Charles C Thomas, 1955 232 p. 22 cm. (American lecture series. Publication no. 276. A monograph in the Bannerstone division of American lectures in psychology, edited by Molly Harrower) $5 75 4145

Contents (abridged) Care and treatment of the chronically ill. Psychological problems of the chronically ill. Problems of teamwork in the care of the chronically ill. Problems in teaching and training medical and psychological personnel for care of the chronically ill. The pros and cons of new medical discipline. Problems of interdisciplinary research in the care of the chronically ill. General discussion. Communication in teamwork for the chronically ill. Bibliography Index.

Note: The proceedings of a conference jointly sponsored by the Josiah Macy Jr Foundation and the University of Texas Medical Branch at Galveston, Texas, in March, 1954 are published in this volume. The conference was concerned with the psychological problems of chronically ill patients and with the question of what could be done to assist physicians, particularly general practitioners and internes, in the handling of such problems. This question pointed to the profession of clinical psychology and there is much discussion in the book of the present and potential roles of clinical psychologists in the psychological care of the chronically ill. The seven chapters of the book are composed of short papers and reports of committees of participants in the conference. The typical chapter is composed of about six short, signed papers and one report. An exception is the fifth chapter, "The pros and cons of new medical discipline, which consists entirely of paper by Lawrence S. Kubie. The volume is cross section of thought rather than a formal monograph.

HOMBURGER, FREDDY

The medical care of the aged and chronically ill, with particular emphasis on degenerative disorders, advanced cancer and other as yet incurable diseases. Boston Little, Brown and Company 1955 253 p. illus. 22 cm. $5 75 4146

Contents. The role of the modern physician in the management of chronic illness. Osteoporosis. Arthritis. Malnutrition and debilitation. Management of advanced cancer. Management of hemiplegia. Management of paraplegia. Management of distressing complications of chronic illness. Nursing problems in chronic illness. Index.

Note. A practical book directed to advanced medical students, nurses, and general practitioners of medicine. Its purpose is to furnish reliable guidance on the care outside of hospitals of chronically ill and aged patients. It provides reliable and explicit information on those illnesses and conditions mentioned in the chapter titles given above, and includes information not known to the average general practitioner such as techniques of administering the nitrogen mustards to patients with incurable cancers. Much of the space is devoted, of course, to less spectacular information on routine matters, for example guide for rational cathartic therapy, which is presented in the form of full-page table. The author is Director of the Cancer Research and Cancer Control Unit of Tufts College Medical School.

INFECTIOUS DISEASES

BAUER, JULIUS

Constitution and disease applied constitutional pathology Second edition, revised and enlarged. New York Grune & Stratton, 1945 247 p 22 cm $4.50 4147

Contents. Introduction. Constitutional pathology and its general significance. Constitutional biologic inferiority of organs and tissues. The integrative systems of individual constitution—I. The integrative systems of individual constitution—II. Classification of normal and abnormal constitution. Some major diseases with chiefly constitutional etiology Principles of treatment, nonspecific therapy pitfalls. Bibliography Index.

Note: A somewhat militant expression of the view that the proper approach in medicine is to consider the patient's whole personality rather than to concentrate attention only on the organ that appears to be the seat of his disease, view that is more in accord with European than with American medical tradition. The literature that supports this thesis is summarized, and the text is

lay ed to the chapters of the original articles. In this revised edition, an index has been provided. Many parts of the text have been rewritten or expanded, and the bibliography has been extended.

BODANSKY MEYER

Biochemistry of disease, by M Bodansky and O Bodansky Second edition, thoroughly revised and enlarged by Oscar Bodansky New York The Macmillan Company 1952 1,208 p. illus. 24 cm. $12 00. 4148

Contents: Diseases of the blood. Diseases of the heart and cardiovascular system. Diseases of the respiratory tract. Diseases of the kidney and genitourinary tract. Disorders of the digestive system. Disorders of the liver and biliary tract. Diseases of the pancreas. Diseases of the adrenals. Diseases of the pituitary. Diseases of the thyroid. Diseases of the parathyroids. Diseases of bone. Diseases of muscle. Diseases of the male gonads. Applications of biochemistry in obstetrics and gynecology. Miscellaneous disorders of nutrition. Miscellaneous disorders of metabolism. Biochemical aspects of neurological and psychiatric disorders. Appendix. Index of subjects.

Note: As the title indicates, this treatise is concerned with the biochemical aspects of clinical medicine. It is addressed to upper class medical college students and to practicing physicians. It is of interest also to the upper ranks of technical personnel in diagnostic laboratories. The scope is comprehensive. Thus, there is not only discussion of the biochemistry of thyroid disease, but also of such matters as the biochemical aspects of electric shock used in the treatment of psychoses. Extensive bibliographies are included. The first edition appeared in 1940. This edition represents an almost complete rewriting and considerable expansion. Many diseases are now included which were not mentioned in the first edition.

HAGAN WILLIAM ARTHUR, AND OTHERS

The relation of diseases in the lower animals to human welfare. New York New York Academy of Sciences, 1947 226 p. illus. 24 cm. (New York Academy of Sciences. Annals. Vol. 48 p. 351–576 1947) $2.50. 4149

Contents: Introduction to the conference, by W A Hagan. Rabies, by H N Johnson. Equine encephalomyelitis, by R. A. Kelser. Psittacosis, ornithosis, and related viruses, by H. R. Cox. The relation of brucellosis to human welfare, by I. F Huddleson. The prevention of plague in the light of newer knowledge, by K F Meyer. Animal tuberculosis and its relation to the disease in man, by W H Feldman. Anthrax in animals and its relationship to the disease in man, by C D Stein. Erysipelothrix rhusiopathiae infection in swine and in human beings, by J V Klauder. Animal parasites transmissible to man, by W H Wright.

Note: The papers comprising this volume are the work of prominent veterinarians, public health workers, bacteriologists, and pathologists. Various animal diseases which are transmissible to man are discussed on the basis of etiology, diagnosis, susceptibility, treatment, and control. Particular attention is given to critical appraisal of existent preventive measures. Formal bibliographies or foot-note references are included in each paper. There is no index.

HUDDLESON, IRVIN FOREST

Brucellosis in man and animals. Contributing authors A. V Hardy J E. Debono and Ward Giltner Revised edition. Cambridge, Mass. Harvard University Press, 1943 379 p. illus. (part col d) 23 cm. $3.50 4150

Contents: The genus Brucella. Methods of isolating Brucella. Differentiation of the species of the genus Brucella. Brucellosis in human beings. Historical survey. Brucellosis in the United States. Brucellosis in Malta. Treatment. Brucellosis in animals. *Brucellosis bovis*. *Brucellosis suis*. *Brucellosis caprinus* and *ovium*. Brucellosis in the guinea pig. Laboratory diagnosis of brucellosis. Allergic methods. The opsonocytophagic test. The blood picture in brucellosis in human beings and in bovine animals. Eradication or control of sources of brucellosis infection. Appendix: Case reports. Bibliography. Index.

Note: The 1943 edition of this well-known treatise on the history, nature, diagnosis, treatment, and control of the disease includes more complete description of the virulent or dissociated types of the organism and detailed discussion of the simple and rapid method, recently developed, of determining the virulence of the species of Brucella. The value of new agents such as sulfa and drug therapy in the treatment of human brucellosis, and recent information on the epidemiology and diagnosis of human brucellosis, are set forth. There is detailed presentation of information pertaining to the nature of the disease in animals and as to immunization in cattle.

HULL, THOMAS G

Diseases transmitted from animals to man. Fourth edition. Springfield, Ill. Charles C Thomas, 1955 717 p. illus. 25 cm. $12.50 4151

Contents: Part I, Diseases of domestic animals and birds and occasionally of wild animals and rodents: Tuberculosis, by W H. Feldman. Anthrax, by C. D Stein. Brucellosis, by C. M. Carpenter. Vibriosis, by C. M. Carpenter. Glanders, by W E. Jennings. Swine erysipelas, by J. D. Klauder. Salmonella food infections, by G. M. Dack. Listeriosis, by R. Graham. Rabies, by R. A. Kelser. Psittacosis (ornithosis) by H. J. Shaughnessy. Vesicular stomatitis, by R. P Hanson. The pox diseases of man and animals, by W A. Hagan. Milker's nodules, by W A. Hagan. Contagious ecthyma of sheep, by T G. Hull. Newcastle disease, by C. H. Cunningham. Regional lymphadenitis—benign lymphoreticulosis (cat fever, cat scratch disease) by L. Foshay. Pseudotuberculosis, by W H. Feldman. Hemorrhagic septicemia—pasteurella multocida infection, by T G. Hull. Arthropod-borne viral encephalitides, by W McD. Hammon. Rift valley fever by J. H. R. Gear. Milk sickness, by T G. Hull. Infections produced by animal parasites, by E. C. Faust. Fungous diseases, by L. Z. Saunders. Part II, Diseases of rodents and wild animals and occasionally of domestic animals: Plague, by K. F Meyer. Tularemia, by L. Foshay. Leptospirosis, by W L. Jellison, and K. Reinhard. Rat-bite fever—Sodoku and Haverhill fever, by W L. Jellison. The endemic relapsing fevers, by G. E. Davis. Murine typhus fever by R. E. Dyer. Rocky Mountain spotted fever by R. E. Dyer. Tsutsugamushi disease, by R. E. Dyer. Q fever, by R. E. Dyer. Rickettsialpox, by R. E. Dyer. Jungle yellow fever by F L. Soper. Lymphocytic choriomeningitis, by C. Armstrong. Part III, The relation of human and animal diseases. Human diseases spread by animals, by T G. Hull. Animals as passive carriers of disease organisms, by T G. Hull. The role of different animals and birds in diseases transmitted to man, by T G. Hull. Index.

Note: A standard manual, the first edition of which was published in 1930 and the third edition in 1947 It is used primarily for reference by medical practitioners, public health officers, medical research workers and veterinarians. Information is included on identification, history, prevalence, etiology, prevention and control of the diseases mentioned in the above chapter titles. Salient points are summarized at the end of each chapter and references are furnished to the more important literature. In this fourth edition, the length of the work has been increased by approximately 143 pages. Several of the chapters of the third edition have been consolidated and one chapter omitted, and seven new chapters have been added. Most of the chapters carried over from the third edition have been revised in part.

PULLEN ROSCOE LE ROY, editor

Communicable diseases 253 figures, 35 illustrations on 20 color plates. Philadelphia Lea & Febiger 1950 1,035 p illus. (part col d) 26 cm. $20 00 4152

Contents (abridged): General considerations. Communicable diseases with predominant skin manifestations: Exanthemata. Primary diseases of the skin. Deep fungous infections of skin with devastating systemic manifestations. Venereal diseases. Communicable diseases with predominant respiratory manifestations. Communicable diseases with predominant involvement of the eye. Communicable diseases with predominant central nervous system manifestations. Communicable diseases with predominant enteric manifestations. Communicable diseases of uncertain origin. Communicable diseases capable of becoming potential menaces. Appendix. Index.

Note: A comprehensive treatise composed of 60 signed chapters written by prominent physicians, pathologists, bacteriologists, and public health workers. It is based both on the literature and on experience in the Charity Hospital of Louisiana. The typical chapter deals with a single disease or group of diseases, is approximately 15 pages long, and concludes with an extensive bibliography. In most instances a particular disease is discussed under the following headings: definition, geographic distribution, etiology, epidemiology, pathology, symptomatology, diagnosis, treatment and prevention. The changes which the development of effective antibiotics and other

chemotherapeutic agents have made possible in the management of communicable diseases are reflected throughout the book. The editor is a Professor of Medicine and Dean of the School of Medicine at the University of Missouri.

SPINK, WESLEY W

The nature of brucellosis. Minneapolis University of Minnesota Press, 1956 464 p illus (part col'd) 23 cm $8 00 4153

Contents The evolution of the concept that brucellosis is disease of animals and man. The brucella cell. The reservoir of brucellosis. The dissemination of brucella organisms from the animal reservoir Epidemiological studies on human brucellosis. The pathogenesis of brucellosis. The natural course of brucellosis. The complications of brucellosis. The diagnosis of human brucellosis. The therapy of brucellosis. The prevention of brucellosis. What of the future? Appendixes. Protocols of 244 cases of brucellosis. The serum agglutination test for Bang's disease. Report of committee on brucellosis, December 4 1947 United States Livestock Sanitary Association. Report of committee on brucellosis, September 25 1953 United States Sanitary Livestock Association—uniform methods and rules for the establishment and maintenance of certified brucellosis-free herds of cattle and modified certified areas. Report of swine brucellosis committee, November 1954 United States Livestock Sanitary Association. Bibliographical index of authors. Subject index.

Note. A comprehensive monograph written by an internationally recognized authority on brucellosis. The results of two decades of study on this disease in animals and in man by the author and his colleagues are incorporated in it, together with related results from the literature. The original studies were carried out largely at the University of Minnesota Hospital and the Veterans Administration Hospital in Minneapolis where an abundance of cases were available among farmers and employees of meat-packing plants. The book is devoted primarily to human and animal brucellosis caused by *Brucella abortus*, but some information is included on brucellosis due to *Brucella melitensis* and *Brucella suis*. One hundred twenty-one of the bacteriologically proved cases described in the appendix were due to *Brucella abortus* 13 were due to *Brucella suis*, and five were due to *Brucella melitensis*. In the terminal chapter titled "What of the future?" the author surveys the prospects for control of brucellosis throughout the world and points out aspects of the problem that require further investigation. The Bibliographical index of authors, which is both a list of references cited and index to cited authors, contains 906 entries.

STIMSON, PHILIP MOEN, AND HORACE LOUIS HODES

A manual of the common contagious diseases. Fifth edition, thoroughly revised 84 illustrations and 10 plates, 8 in color Philadelphia Lea & Febiger 1956 624 p illus (part col'd) 21 cm. $8 50 4154

Contents Principles of contagion. Serum reactions. The antibiotics and the sulfonamides. Diphtheria. Vincent' angina. Beta hemolytic streptococcal infections of the respiratory tract, including scarlet fever Measles. Rubella. Whooping cough. Mumps. Chickenpox. Smallpox. Vaccination against smallpox. Acute bacterial meningitis. Poliomyelitis. General management of contagious diseases. Glossary Index.

Note A standard compendium of clinical information which has been used in its various editions since 1931 It is useful for general practitioners, public health officers, school physicians, nurses and others whose professional work requires knowledge of children's and other contagious diseases. The typical discussion of disease covers synonyms, definitions, etiology epidemiology pathology immunity incubation period, clinical manifestations, complications, diagnosis and differential diagnosis, mortality and prognosis, period of infectivity isolation and quarantine, prophylaxis and treatment. In addition, selected references to the pertinent literature are furnished. The fourth edition was published in 1947 This fifth edition is the first to bear the name of co-author previous editions having been written by Dr Stimson alone. It is accurately described as an extensive revision with much information newly added on antibiotics, viruses, new developments in treatment. The chapter on poliomyelitis has been completely rewritten. Recent literature has been added to the bibliographies.

TOP, FRANKLIN H.

Communicable diseases by Franklin H. Top, and collaborators. With 109 text illustrations and 15 color plates Third edition. St. Louis The C V Mosby Company 1955 1,208 p illus (part col'd) 23 cm. $13.50. 4155

Contents (abridged) Section I General considerations applicable to communicable diseases Infection and immunity Epidemiology Specific prevention of certain communicable diseases. Serums and serum reactions. Antibiotics, by M. Clapper Management of communicable diseases in the home by L. P Campbell. Management of communicable diseases in the hospital, by P L. Clarke nursed by E. Anderson. Section II, Communicable and infectious diseases classified by common portal of entry A, The respiratory tract Coccidioidomycosis, by C. E. Smith. Histoplasmosis, by A. Christie. Leprosy by C. H. Binford. Meningitis. Pneumococcal pneumonia, by G. B Myers. Streptococcal infections, hemolytic. Rheumatic fever by D D Rutstein. Tuberculosis, by P T Chapman. Chickenpox. The common cold. Infectious encephalitis. Influenza, by J E. Salk. Lymphocytic choriomeningitis. Measles. Mononucleosis, infectious. Mumps. Primary atypical pneumonia, by W S. Jordan, Jr Poliomyelitis. Psittacosis. Rubella. Smallpox. B, The gastrointestinal tract Brucellosis. Dysentery amebic—bacillary Food poisoning. Hepatitis, viral, by J R. Neefe. Trichinosis. Typhoid fever C, The mucous membranes or skin (contact, trauma, bites) Chancroid, by L. W Shaffer Gonorrhea, by G. Stuart. Lymphogranuloma venereum, by L. W Shaffer Ophthalmia neonatorum, by W E. Wheeler Syphilis, by L. W Shaffer Keratoconjunctivitis, epidemic, by J G. Molner. Trachoma, by P Heath. Impetigo. Granuloma inguinale, by L. W Shaffer Pediculosis. Ringworm of the scalp by J G. Molner and L. W Shaffer Scabies. Anthrax, by I. H. Borts. Cat-scratch fever. Hookworm disease. Leptospirosis, by J G. Molner. Tetanus. Tularemia. Malaria, by L. T Coggeshall. Rickettsial diseases, by J C. Snyder Rabies. Section III, Appendix. Glossary Index.

Note. A standard reference book which is not cyclopedic, but in which most diseases of interest to general practitioners of medicine are adequately covered. A few relatively rare diseases such as leprosy are included along with the common ones. In this edition the first part, devoted to general considerations, is 272 pages long. In contrast, the second section, exclusive of the appendix, is 816 ... definition, history infectious agent, epidemiology immunity pages long. In it individual diseases are arranged according to the most common portal of entry and each is discussed in the pattern pathology symptoms, complications, diagnosis, prognosis, treatment, and prevention. The discussions are somewhat fuller than in the average textbook. The second edition was published in 1947 In this third edition, five new chapters have been added, and several chapters carried over from the preceding edition have been rewritten by new authors. Changes have been made in the illustrations, and the literature references and the suggested reading included in the chapters have been revised to include selection of literature published since the 1947 edition was prepared. The author is Head of the Department of Hygiene and Preventive Medicine of the Medical School of the University of Iowa.

TROPICAL DISEASES

COATNEY, G ROBERT, AND OTHERS

Survey of antimalarial agents chemotherapy of *Plasmodium gallinaceum* infections toxicity correlation of structure and action. By G Robert Coatney W Clark Cooper Nathan B Eddy and Joseph Greenberg. Washington D C. Government Printing Office 1953 322 p illus. 26 cm (United States Public Health Service. Public health monograph no 9) $1 25 4156

Contents List of tables. Introduction Procedure. Phenanthrene derivatives. Naphthalene derivatives. Acridine derivatives. 8-amino quinolines. 4-aminoquinolines. Other quinoline derivatives. Benzene and cyclohexane derivatives. Diphenyl derivatives. Sulfonamides Compounds Other ring structures. Aliphatic amines and diamines. Antibiotics and antimetabolites containing metallic component. General summary Appendices List of salts or other form of compounds tested. Sources of test compounds. List of publications on compounds mentioned in the text and in the tables. Index to compounds, by survey number (SN) or drug repository number (DR)

Note. Chiefly presented in tabular form, this publication gives some of the results of research study of various chemical compounds effective for antimalarial activity against *Plasmodium gallinaceum*, in which study over period of about 10 years nearly

1,000 substances were screened by the authors. The compounds are arranged according to chemical relationships, and the data analyzed to indicate the relation between antimalarial activity and chemical structure. The tabulated data show the degree of toleration of the drugs by otherwise normal laboratory chicks, the degree of antimalarial activity and the therapeutic index.

GRADWOHL RUTHERFORD BIRCHARD HAYES, AND OTHERS editors

Clinical tropical medicine. R. B H. Gradwohl, editor-in-chief Luis Benitez Soto Oscar Felsenfeld editors. With 473 illustrations and 6 color plates. St. Louis The C. V Mosby Company 1951 1,647 p. illus. (part col'd) 26 cm. $10.00. 4157

Contents (abridged) Intestinal protozoa of man, by E. Bohrin. Amebic dysentery, hepatic abscess, and other intestinal conditions caused by protozoa, by O Felsenfeld and V M. [illegible]. Malaria, by L. W Colvin. Chagas' disease, by S. Mazza. Pinta, and [illegible], by F. León-Blanco and E. Sánchez-García. Relapsing fever, by A. A. Pachecheme. Weil' disease, by A. A. Pachecheme. Fevers due to rickettsia (excluding [illegible]) by A. Carballo Hernandez. Yellow fever, by H. de Azevedo Penna. Poliomyelitis (poliomyelitis, [illegible]) by E. F Meyer. Lymphogranuloma venereum, by J. L. Soto Rangel. Tularemia, by L. Foshay. Plague, by A. Macchiavello, translated by A. Donovan. Cholera (Asiatic cholera) by E. Henderson and H. [illegible]. Leprosy by F Pardo Castelló. Tropical phagedenic ulcer (Vincent's ulcer) by O. Pardo-Eckstein, by M. Greenberg. Dermatitis or Guinea worm disease, by A. E. A. Hudson. Schistosomiasis japonica, by F. R. [illegible]. Tropical mycoses, by A. González-Ochoa. South American blastomycosis, by F. Paula de Almeida. Histoplasmosis and toxoplasmosis, by R. B. H. Gradwohl. Diseases caused by ticks, mites, centipedes, and bees, by L. Vargas. Snake poisoning (ophidism) by A. do Amaral. Diseases due to nutritional disturbances, by A. Chaves Rios. Sprue, by E. M. Suárez. Beriberi, by R. R. Williams. Pellagra, by R. E. Butler. Therapeutics of tropical diseases, by R. J. [illegible]. The use of antibiotics in tropical diseases, by O. Felsenfeld and R. J [illegible]. Rapid frozen section methods in tropical diseases, by A. A. Koslow. Index.

Note A very comprehensive work in 73 chapters written by more than 80 leading specialists in the various fields of tropical medicine. The authors include the citizens of several South American countries as well as citizens of the United States of America. Although the organization and scope of the chapters vary considerably each one, which is devoted to specific disease or group of diseases, summarizes the current information regarding etiology epidemiology pathology symptomatology laboratory tests, diagnosis, treatment, and prophylaxis. The book is suitable for use both as text in graduate courses and as reference manual by graduate physicians practicing in the tropics and subtropics. Extensive bibliographies are included.

MACKIE, THOMAS TURLAY AND OTHERS

A manual of tropical medicine prepared under the auspices of the Division of Medical Sciences of the National Research Council. By Thomas T Mackie, George W Hunter III and C Brooke Worth. Second edition. 304 illustrations, 7 in color Philadelphia W B Saunders Company 1954 907 p. illus. (part col'd) 24 cm. $12.00 4158

Contents (abridged) Section Virus diseases. Section II, Rickettsial diseases. Section III, Spirochetal diseases. Section IV Bacterial diseases. Section Mycotic diseases. Section VI, Protozoal diseases. Section VII Helminthic diseases. Section VIII, Nutritional diseases. Section IX, Miscellaneous conditions. Section X, Medically important molluscs. Section XI, Medically important arthropods. Section XII, Some laboratory diagnostic methods. Index.

Note A concise reference book of tropical medicine which was originally prepared under the auspices of the National Research Council to meet the needs of medical personnel with the Armed Forces of the United States of America who were engaged in military and naval operations in tropical regions during World War [illegible]. However it [illegible] fully as useful in the practice of civilian medicine and public health not only in the tropics but also in other geographical regions where the characteristic tropical diseases are encountered. It covers wide range of information which is organized into the 12 sections whose titles are given above, and 74 chapters. A considerable part of this volume is devoted to information on incidence, transmission and control of specific diseases. Each disease is discussed as to distribution, etiology epidemiology pathology diagnosis, treatment, and prophylaxis. The first edition was published in 1945. In preparing this second edition, much new information was added and the length of the book was increased by nearly 200 pages.

SHATTUCK GEORGE CHEEVER

Diseases of the tropics. New York Appleton-Century-Crofts Inc. 1951 803 p. illus. 25 cm. $12.00. 4159

Contents (abridged) Part I, Protozoa of the blood and tissues. Part II, Spirochetoses. Part III, Rickettsial diseases. Part IV Bacterial diseases. Part Viral diseases. Part VI, Helminthic diseases. Part VII, Intestinal protozoa. Part VIII, The mycoses. Part IX, Miscellaneous diseases. Part X, Disorders of nutrition. Part XI, Tropical climates and health. Part XII, Noxious animals, plants and arthropods. Index.

Note A compact presentation in which the emphasis is on prevalent and potentially epidemic diseases. The discussions of specific diseases are organized under the following subheadings: synonyms, definition, geographical distribution, epidemiology etiology transmission, prevention, pathology symptoms, diagnosis, prognosis, treatment, and literature references. The discussions of some diseases include, in addition, information on insect vectors, sanitation, quarantine practice, diagnostic laboratory tests, etc. The book is suitable for use as text and also as reference guide for physicians concerned with the care of either military or civilian personnel in tropical regions. It is of interest also to public health officials in those regions.

UNITED STATES PUBLIC HEALTH SERVICE. MALARIA CONTROL HEADQUARTERS (ATLANTA) AND UNITED STATES TENNESSEE VALLEY AUTHORITY HEALTH AND SAFETY DEPARTMENT

Malaria control on impounded water Washington, D C. Government Printing Office, 1947 422 p. illus. 24 cm. $2.00 4160

Contents (abridged) Malaria and its relation to impounded water. Planning malaria control. Reservoir preparation. Permanent marginal measures. Water level management. Shore-line maintenance. Larviciding. Mosquito-proofing. Reservoir [illegible]. Facilities and operation procedures. Malaria measures. Malariology. The relation of plants to mosquito control. Interrelationships of malaria control and wildlife conservation. Personnel training and public relations. Small reservoirs. Appendices: Example of hydraulic analysis for prediction of the frequency and duration of flooding in flood control storage reservoirs. Chemicals employed in malaria control. Equipment, tools, and supplies. Design of airplane larviciding equipment. Methods of determining the recovery of larvicides on water surface. The more important anopheline mosquitoes transmitting malaria in the principal regions of the world with typical breeding places and usually applicable control measures. Malaria survey diagnostic techniques.

Note The purpose of this manual is to present the basic principles and the modern practices of malaria control on impounded water. It arranged so as to provide ready reference for engineers, medical officers, and others concerned with malaria control measures on such impoundments. In considering the various phases of malaria control, such as the epidemiological, engineering, and biological aspects, the volume places emphasis upon their practical application to the problem as whole.

INDUSTRIAL MEDICINE

DRINKER, PHILIP AND THEODORE HATCH

Industrial dust hygienic significance measurement and control. Second edition. New York McGraw Hill Book Company Inc., 1954 401 p illus. 24 cm. $10 00 4161

Contents Physical properties of dust, fumes, and mists. Effects of dusts and fumes upon man. Dust and toxic dusts. Physical and chemical factors in pneumoconiosis. Dust retention by man. The dusty trades. Appraisal of dustiness. Determination of dust con-

centration. Determination of particle size. Chemical and mineralogical analysis of dust. Methods for the control of industrial dust. Design of local exhaust systems. Air cleaning. Air cleaning by filtering. Scrubbing and electrical precipitation. Dust respirators and air masks. Bibliography Author index. Subject index.

Note In this standard book, the dust hazard in industry is discussed chiefly from the viewpoint of engineers in charge of the design or management of processes in which hazardous dusts are procured. How dusts are produced, their properties and how to control them are the main topics. Much information on the health aspects, including case histories from industry is included also. Such matters as techniques for the determination of concentrations of dust—which are of interest both to engineers and industrial physicians—are covered very thoroughly The first edition appeared in 1936 This second edition represents very extensive revision with several new chapters including the chapters on dust retention, the dusty trades, and scrubbing and lectrical precipitation. The bibliography now runs to 458 citations and includes some references to literature published in 1953 and 1954

ELKINS, HERVEY BERTRAND

The chemistry of industrial toxicology New York John Wiley & Sons, Inc., 1950 406 p illus 23 cm. $8 00 4162

Contents (abridged) Evaluation of hazards. The elements. Inorganic compounds. Organic compounds. Natural and industrial products. Preventive measures. Industrial operations and processes. Maximum allowable concentrations. Fallacies and unsol ed problems. Air sampling devices. Analytical methods and procedures. Bibliography Index.

Note A reference manual of chemical information about harmful substances encountered in industry It describes the properties of the various elements and compounds, indicates their harmful physiological facts, states the maximum allowable concentrations, and describes tests and other methods of evaluating concentrations and contaminations. However it does not cover pathology and other medicinal topics which usually constitute the main content of books on industrial toxicology It ill be useful to plant physicians, industrial health engineers, public health workers, and others concerned professionally with industrial hygiene.

FAIRHALL, LAWRENCE TURNER

Industrial toxicology Baltimore The Williams & Wilkins Company 1949 483 p illus. 24 cm 4163

Contents (abridged) Part I, Inorganic substances. Part II, Carbon compounds. Index.

Note A reference manual f information on substances handled in industry that ha some toxicological interest although they may not be poisonous. Iron and tin, for instance, are discussed under inorganic substances along ith arsenic, fluorine etc. Each of the two major parts consists of series of short essays arranged alphabetically under the name of the substance. The following points are covered in the typical essay on an individual substance chemical and physical properties, industrial uses, toxicity analysis, and literature references. The verage length of an essay is slightly over tw pages. A second edition was published in 1957 $10 00.

FLEMING, A. J , AND C A D'ALONZO, editors

Modern occupational medicine Associate editor, J A. Zapp 44 illustrations 1 in color Philadelphia Lea & Febiger 1954 414 p illus (part col d) 24 cm. $10 00 4164

Contents Section I, Organization The evaluation of medical services in industry by G. H. Gehrmann. History of industrial medicine—Administration, function, location, personnel, layout, and equipment—Medical history and physical examinations—Medical records, their purpose, value, and study by C. A. D Alonzo. Section II, Industrial preventive medicine Preventive medicine in industry by J H. Foulger Research, toxicological methods, and plant surveys, by J A. Zapp. Protective clothing for the chemical industry by E. E. E ans and others. The functions of the industrial hygiene laboratory by E. E. Evans and others. Immunizations in industry by J P Griffin. Section III, The physical environment and occupational health Temperature, humidity and air movement, by L. Brouha. Industrial noise by J A. Zapp. Radiological hazards, by P E. Smith. Fatigue, by L. Brouha. Section IV Services allied to occupational medicine Medicolegal aspects of occupational medicine, by C. E. Gruber The rehabilitation of the alcoholic in industry by G. H. Gehrmann. The occupational back, by J. P Griffin. Surgical considerations in industry by T J Bulger Inplant feeding in industry by D. A. Milavetz. The nurse in industry by E. Mayer Sanitation, water supply and pollution, washing facilities, toilet facilities, sewage disposal, and atmospheric pollution, by C. L. Savage. The chemist and occupational medicine, by A. J Fleming. Safety in industry, by J S. Queener Section V Psychiatry Practical application of psychiatry to industry by G. Gordon. Effective discipline promotes mental health, by F W Dershimer. Section VI, Toxicology Chemical health hazards, by A. J Fleming. Insecticides, by J. A. Zapp. The carotid sinus and chemicals hich affect it, by C. A. D'Alonzo. Tetraethyl lead, by S. L. Rankin. Section VII, Acute poisoning The problem of acute poisoning, by C. A. D'Alonzo. Index.

Note When this book was published, all the editors and contributors were associated with E. I. du Pont de Nemours & Company Not surprisingly there is some emphasis on techniques of dealing with the special hazards of the chemical industry However the range of topics covered is wide one, as the above chapter titles indicate. Most of the chapters are compactly written and are supplemented by literature references. Tabular presentations of data are common. The book is of interest to such readers as executives of industrial corporations, safety engineers and physicians on the staffs of such firms.

FORBES, JOHN JOSEPH VINCENT, AND OTHERS

Review of literature on dusts, by J J Forbes, Sara J Davenport, and Genevieve G Morgis Washington, D C. Government Printing Office, 1950 333 p 23 cm. (United States. Bureau of Mines. Bulletin 478) $0.65 4165

Content Introduction. Definition and classification of dusts. Exposure to dust. Physiological effects of breathing dust. Historical résumé. Incidence of dust diseases. Types of dust injuries to health. Terminology of dust diseases. Pneumoconiosis. Silicosis. Prevention of dust diseases Principal dust factors producing pulmonary pathology Determination of dust in air Engineering control in prevention of dust diseases. Medical control in prevention of dust diseases. General recommendations for control of dust diseases in industry Economic and legal aspects of dust diseases in industry Cost of compensation for silicosis. Determination of working capacity Bibliography Index.

Note. This revision of Bureau of Mines Bulletin 400, 1937 assembles information in convenient form on arious phases of the dust problem especially in the mining and allied industries. Because of the large amount of literature ailable on the subject the authors ha not attempted to include all published material or all types of dust diseases, but have limited their assemblage of data t certain aspects of the subject, ith particular reference to lung affections.

HYSLOP, FRANCES L , AND W M GAFAFER

Bibliography of occupational health. Occupational health and related publications from the Public Health Service, 1909–1953 U S Department of Health Education, and Welfare Public Health Service, Division of Occupational Health of the Bureau of State Services. SCHWARTZ, LOUIS, AND OTHERS

Occupational diseases of the skin, by Louis Schwartz, Louis Tulipan, and Samuel M. Peck. Second edition, thoroughly revised with 146 illustrations and a colored plate. Philadelphia Lea & Febiger, 1947 964 p. illus. (part col'd) 24 cm. 4171

Contents (abridged): [illegible]

apparel. Cosmetics. Electroplating. Dermatoses caused by explosives. Dermatoses caused by furs. Dermatoses from glass manufacture. Dermatoses caused by insecticides and fungicides. Dermatoses in leather manufacture. Dermatoses caused by paints, varnishes and lacquers. Dermatoses caused by resins and waxes. Dermatoses in the manufacture of rubber. Dermatoses caused by organic solvents. Sugar industry Irritant plants and woods. Dermatoses caused by animal parasites. Dermatoses caused by bacterial infections. Occupational dermatoses from mycotic infections. Occupational cancer Analysis of skin hazards in one hundred and fourteen occupations. Medico-legal aspects of occupational dermatitis. Chemicals which are known to be skin irritants. Index.

Note This detailed and comprehensive work discusses dermatoses arising in industrial environments and also those resulting from the use of the products of industry by the consumer The authors point out that skin afflictions are of more frequent occurrence than the total of all other industrial diseases. Despite somewhat technical language, the book is directed at a wide audience including plant physicians, employers, safety engineers, and insurance men. It is well illustrated, and contains extensive bibliographies and a glossary of known chemical skin irritants. This edition has been considerably revised. A third edition was published in 1957 981 p., $18.00.

STONE, ROBERT SPENCER, editor

Industrial medicine on the plutonium project survey and collected papers. New York McGraw Hill Book Company, Inc., 1951 511 p illus. 24 cm (National nuclear energy series Manhattan Project technical section Division IV—Plutonium project record Vol 20) $7 00 4172

Contents Introduction General introduction to reports on medicine, health physics, and biology by R. S. Stone. Part A, Survey: Medical services of the plutonium project, by J E. Wirth. Biological bases for maximum permissible exposures, by S. T Cantril. Protective measures for personnel, by J J Nickson Clinical laboratory examination of plutonium project personnel, by L. O. Jacobson and E. K. Marks. Hematological effects of ionizing radiations, by L. O. Jacobson and others. Biochemical studies relating to the effects of radiation and metals, by S. Schwartz. Uranium excretion studies, by R. J Ferretti and others. Distribution and excretion of plutonium, by E. R. Russell and J J Nickson. Management and treatment of exposed personnel, by J E. Wirth. Requirements of an adequate health service in relation to atomic research and industrial development, by S. T Cantril and others. Part B Collected papers: Industrial medical program—Hanford Engineer Works, by S. T Cantril. Blood changes in human beings following total-body irradiation, by J J Nickson. Hematological studies on patients treated by total-body exposure to X-rays, by B V A. Low Beer and R. S. Stone. Changes in mean blood levels of metallurgical laboratory employees during the first year of employment as related to working conditions, by N Pearlman and G. A. Sacher Biometric investigations of blood constituents and characteristics in a population of project workers, by G. A. Sacher and others. Effect of exercise on leucopenia a statistical analysis, by E. K. Marks and others. Determination of radium in excreta, by E. R. Russell and G. W Reed, jr Treatment of plutonium poisoning by metal displacement, by J Schubert. Status of health and protection at the Hanford Engineer Works, by S. T Cantril and H. M Parker Tolerance to whole-body irradiation of patients with advanced cancer by L. F Craver Index.

Note A collection of summarized reports and papers based on original research (and to a lesser extent on experience) carried out in connection with the production of the atomic bomb. The style of presentation is technical. The book is suited to such readers as graduate scientists who are concerned with programs of research into the effects of radioactive substances upon living tissue and physicians whose duties include the protection of industrial and laboratory personnel from exposure to excessive radiation.

AVIATION MEDICINE

AERO MEDICAL ASSOCIATION

Aviation toxicology an introduction to the subject and a handbook of data. Prepared under the direction of the Committee on Aviation Toxicology Aero Medical Association New York McGraw Hill Book Company, Inc., 1953 120 p illus 21 cm $4 00 4173

Contents (abridged) Part I, General features of the problems of aviation toxicology Allowable degree of bodily impairment in airmen performing their duties. Duration and intensity of exposure Effects of high altitude on toxicity Methods for expressing gaseous concentrations in relation to altitude. Part II, Specific problems of aviation toxicology: Antifreezing agents. Exhaust gases and smoke. Fire extinguishants. Hydraulic fluids. Propellants. Refrigerants. Insecticides. Transportation of toxic materials by air Part III, Chemicals important in aviation toxicology Carbon monoxide. Carbon dioxide. Gasoline. Major classes of organic compounds. Inorganic compounds. Appendixes. Time-concentration curves of toxicity Calculation of the concentration of carboxyhemoglobin in the blood stream at high altitude. Toxicity data for individual compounds. References. Index to chemicals.

Note The conditions of airplane flight give particular importance to the hazards of exposure of crew and passengers to toxic substances while in flight. Some of the kinds of toxic materials present on aircraft are named above in the subtitles of Part II. Other toxic agents may be generated by fire, or excessive heat, acting on the components of aircraft equipment. This book is a carefully prepared presentation of the subject that covers both the general problems and those associated with specific kinds of exposure. Besides describing the hazards, it provides useful information on the toxicity of the individual compounds and permissible concentrations. The list of references contains 75 literature citations.

ARMSTRONG, HARRY GEORGE

Principles & practice of aviation medicine. Third edition. Baltimore The Williams & Wilkins Company, 1952 476 p. illus. (part col'd) 24 cm. $9 00 4174

Contents Historical (to 1900) Historical (twentieth century). Principles and practice. Introduction to pilot selection. Examination of the eye. Cardiovascular examination. Ear nose and throat examination. General physical examination. Neuropsychiatric examination. Objective aptitude tests for flying training. Various substances in aviation. The atmosphere. Altitude sickness. Oxygen in aviation. Aerotitis media and aerosinusitis. Effects of aircraft noises. Aerial equilibration. Airsickness. Decompression sickness. Pressure cabin aircraft. Speed and acceleration. Accidents in aviation. Emotional reactions to flight. Air rescue and air evacuation. Aerial hygiene and sanitation Protective flying equipment. Index.

Note A standard treatise which provides a general survey of the scope and contents of aviation medicine and is addressed to both advanced students in medical colleges and graduate practitioners of medicine. In many parts the terminology is only semitechnical, hence the book has some utility as a source of information for technically trained persons in fields other than medicine. Four new chapters have been added in the present edition, and there have been considerable revision and rearrangement of the material carried over from preceding editions. The author is the Surgeon-General of the United States Air Force, Europe.

BENFORD, ROBERT J

Doctors in the sky the story of the Aero Medical Association Springfield Ill. Charles C Thomas, 1955 326 p illus. 23 cm. $8.75 4175

Contents Medicine goes aloft. Aviation medical journalism. Birth of a tradition. Guests from overseas. Medicine and air commerce. Flight surgeons for airlines. The war years. Awards for achievement. The specialty of aviation medicine. By-laws and branches. The silver wing. Doctors in the sky Appendixes. Index.

Note Written to mark the twenty-fifth anniversary of the Aero Medical Association, this book is a narrative history of the society development from its organization in 1929 to its present status as an international organization of wide influence and sponsor of the important *Journal of aviation medicine.*

FULTON, JOHN FARQUHAR

Aviation medicine in its preventive aspects an historical survey New York Oxford University Press 1948 174 p. illus. 23 cm. (University of London. Heath Clark lectures, 1947) $3 50 4176

Contents Altitude sickness and acclimatization the history of oxygen. Decompression sickness the genesis of the inert gas... Pressure cabins and explosive decompression the spread of the air...

Aviation Medicine

Effects of acceleration: dim-out and black-out, protective measures. Man and the machine: problems of safety in flight. Index.

Note: These lectures are devoted chiefly to outlining the development of the current knowledge of the physiological effects of [illegible] and excessive gravitational forces upon human beings. Mechanical devices and other techniques for preventing or ameliorating adverse effects from these causes are described also. Selected results from research carried on during World War II are discussed, and there [illegible] rather full account of the development of the antig-suit. The lecture texts are supplemented in the book with illustrative matter and literature references.

MCFARLAND ROSS A.

Human factors in air transportation occupational health and safety New York McGraw Hill Book Company Inc., 1953 830 p. illus. 26 cm. $13.00 4177

Contents: Part I, Introduction. Nature and extent of airline operations. Part II, Selection and training of flight personnel. Psychological factors in the selection of airmen. Role of the physical [illegible] in selection. Indoctrination and training of flight personnel. Part III, Maintenance of health and efficiency of flight personnel. Periodic examinations for airmen. Maintenance of physical [illegible]. Operational aspects of fatigue, and psychological factors in aircrews. Part IV, Selection, placement and [illegible] and efficiency in airmen. Part V, Selection, placement of ground [illegible] health of ground personnel. Selection and placement of ground personnel. Maintenance of health of ground personnel. Part [illegible] Prevention of industrial accidents on the ground and in flight. Prevention of industrial accidents in ground operations. Survival and rescue in aircraft accidents. Part VI, Sanitation and health in airline operations. Sanitary [illegible]. Health and quarantine control of airports and ground facilities. Health and quarantine regulations in air travel. Part VII, Passenger and service problems. Care and contentment of passengers. Transportation of patients by air. Part VIII, Health and medical services in air transportation. Organization and functions of air transport medical programs. Appendix. Index.

Note: An encyclopedic treatment of psychological, medical and public health aspects of airplane piloting and air transportation. The phases of the subject that are treated in the chapter titles are treated rather fully and each chapter has its own selected and rather extensive bibliography. The style [illegible] and the book [illegible] addressed to the scientific and technical personnel of airlines, to public health authorities and to specialists in aviation medicine. It is complementary to the author's *Human factors in air transportation design*, New York, 1946. The author is [illegible] member of the faculty of the Harvard School of Public Health.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON AVIATION MEDICINE

Decompression sickness caisson sickness diver's and flier's bends and related syndromes. Compiled under the auspices of the Subcommittee on Decompression Sickness, Committee on Aviation Medicine, Division of Medical Sciences, National Research Council, Washington, D C Philadelphia W B Saunders Company 1951 437 p. illus. 24 cm. $8.50 4178

Contents: Historical introduction, by J. F. Fulton. The clinical nature of high altitude decompression sickness, by E. B. Ferris, Jr and G. L. Engel with [illegible] note on psychologic reactions, by J Romano. Decompression sickness following exposure to high pressures, by A R Behnke. Physical factors in bubble formation, by E N Harvey. Animal experiments on bubble formation. Part I, Bubble formation in cats, by E N Harvey. Part II, Bubble formation in frogs and rats, by L A Blinks and others. Decompression sickness—physical factors and pathologic consequences, by I Gersh and H Catchpole. Constitutional factors affecting susceptibility to decompression sickness, by J B Gray. Environmental factors affecting decompression sickness. Part [illegible] A physical theory of decompression sickness, by L F Nims. Part II, Role of exercise temperature, drugs and water balance in decompression sickness, by S F Cook. Preoxygenation and nitrogen elimination. Part [illegible] Review of data on value of preoxygenation in prevention of decompression sickness, by J B Bateman.—Part II, Gas exchange and blood-tissue perfusion factors in various body tissues, by H B Jones. Prediction tests, by F M. Henry and A. C [illegible] Decompression sickness in actual flights, by C. A. Tobias. Explosive decompression, by F A. Hitchcock. Addendum, by R. B. Livingston. References. Index.

Note: The major work on its subject. Essentially its chapters are detailed reports of studies carried out for the Subcommittee on Decompression Sickness in [illegible] program designed to study the problem from [illegible] broad biological standpoint with [illegible] view to elucidating the factors involved in bubble formation in tissues and devising ways and means of eliminating the dangers arising from aeroembolism. Most of the chapters contain data from original experiments on animal or human subjects and also data from the published literature. The bibliography contains 345 citations.

UNITED STATES. DEPARTMENT OF THE NAVY BUREAU OF MEDICINE AND SURGERY AVIATION MEDICINE DIVISION

Aviation medicine practice. Prepared by Bureau of Medicine and Surgery Published by Bureau of Naval Personnel. Washington D C. Government Printing Office, 1955 288 p. illus. 26 cm. (Navpers 10839–A) $1 00 4179

Contents: The beginnings of aviation medicine. The problems of reduced barometric pressures. The problem of acceleration. Ophthalmology in aviation medicine. Otolaryngology in aviation medicine. The cardiovascular system in aviation medicine. Aviation psychology. The psychology of adjustment. Neuropsychiatry in [illegible] Aviation physical standards and the [illegible] to aviation medicine. A [illegible] physical examination. Aviation dentistry. Operational problems in aviation medicine. Aviation safety and allied problems. Appendix. Death procedures. Index.

Note: This publication consists of 13 monographs written by specialists in the various fields of aviation medicine together with [illegible] section on death procedures and an index. The monographs are designed primarily for naval medical officers lacking special training in the ramifications of aviation medicine. With one exception, each of the monographs contains [illegible] bibliography. The book is [illegible] completely revised version of [illegible] publication of the same title issued in 1949

WHITE, CLAYTON S AND OTIS O BENSON JR. editors

Physics and medicine of the upper atmosphere a study of the aeropause. The proceedings of a Symposium on the Physics and Medicine of the Upper Atmosphere held at San Antonio Texas, November 6 7 8 9 1951, sponsored by the Air University School of Aviation Medicine, Randolph Field, Texas. Arranged by The Lovelace Foundation for Medical Education and Research. Albuquerque The University of New Mexico Press 1952 611 p. illus. 26 cm. $10.00 4180

Contents. Basic environmental problems relating man and the aeropause, by A. M. Mayo. Basic environmental problems relating man and the highest regions of the atmosphere as seen by the biologist, by H. Strughold. Physical characteristics of the upper atmosphere of the earth, by E. O. Hulburt. Temperatures and motions of the upper atmosphere, by W W Kellogg. Adiabatic compression and friction, by F Haber. Thermal aspects of travel in the aeropause—problems of thermal radiation, by K. Buettner. The chemosphere, by J. Kaplan. Atmospheric ozone, by V H. Regener. Gravity inertia, and weight, by H. Haber. Meteoritic phenomena and meteorites, by F L. Whipple. Toxicology of travel in the aeropause, by H. Specht. Solar physics and the atmosphere of the earth, by M. Nicolet. Ultraviolet radiation and X-rays of solar origin, by T. R. Burnight. The nature and intensity of the cosmic radiation, by J A. Van Allen. The biologic effects of laboratory radiation, by A. T Krebs. The biologic effects of cosmic radiation, by H. J. Schaefer. Genetic effects of cosmic radiation, by H. J Muller. Discussion of physics of the upper atmosphere, by J. Kaplan. Meteoroids, meteorites, and hyperbolic meteoritic particles, by L. LaPaz. Methods and vehicles for research in the high atmosphere, by J A. Van Allen. Plastic balloons [illegible] platform for experiments in the upper atmosphere, by C. B. Moore. Characteristics of the high-altitude rocket as [illegible] research tool, by H E.

Newell, jr The angular motion of high-altitude rockets, by J A. Van Allen. The return of a winged rocket vehicle from a satellite orbit to the earth, by W von Braun. The physical recovery of instruments and data from a rocket flight, by C. P Smith, jr High-altitude parachute recovery by T W Kaache. Radio telemetering, by W J Mayo-Wells. Methods of assessing the biologic effects of ionizing radiation by A. T Krebs. Cosmic ray ionization and the methods of measuring it, by E. P Ney Known and predicted problems of human travel in the aeropause, by P A. Campbell. Engineering techniques in relation to human travel at upper altitudes, by R. M. Salter Human orientation during travel in the aeropause, by P A. Campbell. The effect on vision produced by stimulation of the semicircular canals by angular acceleration and stimulation of the otolith organs by linear acceleration, by A. Graybiel. A survey of present techniques for emergency escape from aircraft, by R. L. Christy Problems of escape during flight above 50,000 feet, by J P Henry A discussion of the potential effects on man of ionizing radiation present in the upper atmosphere, by T C. Evans. The biological effects of power plant radiation, by J M. Talbot. Biological effects of radiation of possible extraterrestrial origin, by K. Buettner Human tolerance for temperature extremes, by C. L. Taylor Retinal adaptation applicable to visual problems in flight at increasing altitudes, by P A. Cibis. Physiological limitations in cabin environment and human adaptations, by U Luft. Phasing and co-ordination of medical research with technical and environmental development, by H. Haber Appendix. Plates. Index.

Note The papers collected in this volume are addressed primarily to scientists and engineers. Together they constitute a broad survey of the physical and physiological problems of flight into and beyond the atmosphere, and of the knowledge already in hand pertaining to their solution. The papers are accompanied by substantial bibliographies which include papers published down to about July 1951

NAVAL AND MILITARY MEDICINE

ADAMS, GEORGE WORTHINGTON

Doctors in blue the medical history of the Union Army in the Civil War New York Henry Schuman, 1952 253 p illus. 22 cm. $4 00 4181

Contents The medical confusions of 1861 Reformers vs. regulars. The Barnes regime and the army surgeons. Beginnings of an ambulance system. Improvement in field tactics. Wartime surgery Operations and infections. The general hospitals. Nurses, staffs, and convalescents. Army sanitation and hygiene. Diseases and treatments. A note on the sources. Appendix. Index.

Note. A detailed and graphic picture of military medicine as practiced during the Civil War period in the United States of America. Despite the advances that had been made in medicine up to that time, the descriptions of camp conditions, facilities for hospitalization care of the wounded on the battlefield, surgical methods and general medical care, indicate rather appalling conditions. Although limited to one phase of medical practice the book provides a general picture of the state of medical knowledge in the United States in the 1860's. A long list of source materials is included however statements and data in the text are not directly related to the sources.

BEEBE, GILBERT WHEELER, AND MICHAEL E DEBAKEY

Battle casualties, incidence mortality, and logistic considerations Springfield Ill. Charles C Thomas 1952 277 p illus. 24 cm. $10 50 4182

Contents. Introduction. Incidence of hits and wounds. Death from wounding. Effectiveness of weapons. Location of hits and wounds. Logistic problems of personnel, hospitalization, and evacuation in forward areas. Appendices. Glossary Index.

Note. A work based on data contained in official records of the Army Medical Service, United States Army It contains analyses of United States experience in World War II. The experience is analyzed in discussions and also in about 100 tables. The work is of interest to military surgeons, especially those who are in charge of planning for the surgical care of men wounded in battle.

BEECHER, HENRY KNOWLES

Early care of the seriously wounded man. Springfield Ill Charles C Thomas, 1952 32 p 22 cm. (American lecture series. Publication no 138 A monograph in American lectures in surgery, edited by Michael E. DeBakey and R. Glen Spurling) $0.75 4183

Contents. Introduction. General considerations. Field care prior to hospital admission. Specific preoperative procedures. Care of men with specific wounds. Morphine and other narcotics. Anesthesia for wounded men. Summary

Note. This monograph is based on actual experience with men wounded in battle. The emphasis is on treatment of the patient in the interval between the actual wounding and the final repair. The author weighs the various levels of resuscitation in their application at different times and under many conditions. He describes anesthetic action to be taken in variety of wounded conditions, with emphasis first on general conditions and finally on specific procedures. In each instance the effects of specific remedies are described. Where certain anesthetics should not be used, that information is also presented.

BRILL, NORMAN Q, AND GILBERT W BEEBE

A follow up study of war neuroses. The work reported herein is part of the program of studies of the Follow up Agency of the National Research Council developed by the Committee of Veterans Medical Problems in cooperation with the Veterans Administration, the Army, and the Navy This investigation was supported by the Veterans Administration upon the specific advice of the Committee on Veterans Medical Problems of the National Research Council. It was begun while the senior author was Assistant Chief Neuropsychiatry Division, Department of Medicine and Surgery, Veterans Administration and was conducted under contracts with George Washington University School of Medicine (Winfred Overholser, M. D., Professor Psychiatry, being the responsible investigator) and the National Research Council. Washington, D C. Government Printing Office, 1956 393 p illus. 24 cm. (VA Medical Monograph) $2.25 4184

Contents: Introduction. Part I, The basic findings Military and sociological characteristics of the population sampled. Psychiatric aspects of the preservice history Period of military service. Follow up status. Part II, Analysis of follow up data. Disability Diagnosis at follow-up. Adjustment at follow-up. Treatment since separation from service. Improvement since separation from service. Man's own comparison of health at follow-up and at entry [illegible] pensation for psychiatric disability Part III, Analysis of military experience: Nature of stress. Location at first breakdown. Severity of illness at first breakdown. Treatment in service. Pattern of [illegible] position. Part IV Analysis of preservice period Family history Preservice personality Preservice adjustment. Part [illegible] Implications for induction, utilization, and disposition policies. Appendices Abstracting form for military personnel history Abstracting form for medical history military period. Form letters used in follow-up Examination booklet used by psychiatrist. Sample case summaries based on psychiatric interviews. History outline used by Red Cross social worker Health questionnaire used in follow-up. Index.

Note: One of series of volumes reporting on major follow-up study comparing the medical records of certain persons during their time in the armed services in World War II with the subsequent medical history of the same persons as recorded in the 172 hospitals and 69 regional offices of the Veterans Administration. The practical need for the study was partly to consider the correctness of the decision that psychoneurosis in itself was no cause for discharge from the services and partly to determine compensability for neuroses which clearly antedated military service and for those which first occurred while the individual was in the armed forces. Approximately 225 psychiatrists, whose names are listed in the text, participated in the extensive survey and analysis beginning in

1946 by examining each of the selected veterans for 4-hour period and reporting on them. The findings in the study are based upon the results of these examinations from all over the United States of America and their correlation with the original medical records.

BUNNELL, STERLING editor

Hand surgery in World War II. Edited by Sterling Bunnell. Associate editor Mary E. McDonald. Assistant editor Janie W Williams. Office of the Surgeon General Department of the Army Washington, D C. Government Printing Office, 1955 447 p. illus. 26 cm. (United States. Army Medical Service. Office of the Surgeon General. The Medical Department of the United States Army. Surgery in World War II) $3 75 4185

Contents: The overall picture in Zone of Interior by C. W Cutler, jr. Conclusions on the care of injured hands in World War derived from the experiences of the civilian Consultant for Hand Surgery to the Secretary of War, by S. Bunnell. Incidence. Observations on organization of special hand centers. Report on hand defects and recommendations for improved care. Clinical principles in management of hand injuries. Nerve injuries. Plastic surgery on the hand. Injuries of bones and joints. Construction of new digits for prehension. Injuries of tendons and muscles. Vasomotor and trophic conditions. Splinting. Occupational therapy and rehabilitation. Hand injuries in theaters of operations. Hand injuries in the Mediterranean (North African) Theater of Operations, by H. S. Allen. Hand injuries in the European Theater of Operations, by M. Cleveland. Hand injuries in debarkation hospital (Lawson General Hospital) by D. R. Pratt. Hand surgery at nine hand centers in the Zone of Interior. Hand surgery at Newton D. Baker General Hospital, by S. B. Fowler. Hand surgery at William Beaumont General Hospital, by W. H. Frackelton. Hand surgery at Crile General Hospital, by G. L. Hyroop. Hand surgery at Cushing General Hospital, by J W Littler. Hand surgery at Dibble General Hospital, by D. R. Pratt. Hand surgery at Northington General Hospital, by A. J. Barsky. Hand surgery at O'Reilly General Hospital, by G S Phalen. Hand surgery at Valley Forge General Hospital, by W C. Graham. Hand surgery at Wakeman General Hospital, by L. D. Howard, jr. Index.

Note: In this volume is contained an official record of the surgical treatment of wounded hands by United States Army surgeons in World War. Because of the large numbers of hand injuries requiring surgical attention, centers for this work were set up in the United States of America, and major portion of this book contains series of illustrated surveys of the accomplishments of nine of these centers compiled by the respective surgical officers in charge. Details of hand surgery at scores of cases as well as general procedures are described. Administrative problems are also recorded.

CLEVELAND MATHER editor

Orthopedic surgery in the European Theater of Operations. Editor Mather Cleveland. Associate editor Elizabeth M. McFetridge. Office of the Surgeon General, Department of the Army Washington, D C. Government Printing Office, 1956 387 p. illus. 26 cm. (United States. Army Medical Service. Office of the Surgical General. The Medical Department of the United States Army Surgery in World War II) $4.00. 4186

Contents: Introduction, by M. Cleveland. Part Administrative and related considerations, by M Cleveland. The consultant system. Types of hospitals. Training of personnel. Hospital facilities and orthopedic equipment. Mass management of casualties with bone and joint injuries. Management of bone and joint injuries in prisoners of war. Representative hospital experiences. Part II, Clinical policies and practices, by M. Cleveland. General clinical policies. The management of compound fractures—initial and reparative wound surgery. The management of compound fractures—techniques of fracture management. Regional injuries. Amputations. Adjunct therapy. Postoperative complications. Rehabilitation. Noncombat lesions. Part III, Special types of bone and joint injuries, by M. R. Urist and M. Cleveland. Complete dislocations of the acromioclavicular joint. Battle-incurred compound fractures about the hip joint. Jeep injuries of the hip joint. Injuries of the knee joint. Appendixes: Pertinent directives. Proposed revision of Manual of therapy (Orthopedic Section). Index.

Note: Of the 161,180 Americans wounded and injured in action in Europe during World War II, the largest single group, approximately two-thirds of the total, suffered battle injuries of the extremities including bones and joints. The orthopedic care of this enormous number of wounded was task which required careful and detailed planning and execution. This volume is an administrative and clinical record of this phase of the war, edited by one of the senior Army consultants in orthopedic surgery he had an active part in the work in the European Theater during the war.

ELKIN DANIEL C AND MICHAEL E. DE BAKEY editors

Vascular surgery in World War II. Office of the Surgeon General, Department of the Army Washington D C. Government Printing Office, 1955 465 p. illus. (part col d) 26 cm. (United States. Army Medical Service. Office of the Surgeon General. The Medical Department of the United States Army Surgery in World War II) $4 25 4187

Contents: Specialized centers for the management of vascular injuries and diseases, by D. C. Elkin. Experiences of the vascular center in traumatic and arteriovenous lesions of the blood vessels, by A. H. Storck. Acute battle-incurred arterial injuries, by M. E. DeBakey and F A. Simeone. Arterial aneurysms and arteriovenous fistulas—general considerations, by D. C. Elkin and H. B. Shumacker, jr. Arterial aneurysms and arteriovenous fistulas—circulatory effects of arteriovenous fistulas, by D. C. Elkin. Arterial aneurysms and arteriovenous fistulas—alterations in the cardiac size in arteriovenous fistulas, by H. B. Shumacker jr. Arterial aneurysms and arteriovenous fistulas—technical considerations in their surgical management, with special reference to exposure of the blood vessels, by D. C. Elkin and H. B. Shumacker, jr. Arterial aneurysms and arteriovenous fistulas—maintenance of arterial continuity by N. E. Freeman and H. B. Schumacker, jr. Arterial aneurysms and arteriovenous fistulas—successful suture of the abdominal aorta for arteriovenous fistula, by N E. Freeman and A. H. Storck. Arterial aneurysms and arteriovenous fistulas—collateral therapy in reparative surgery by H. B. Shumacker, jr. and others. Arterial aneurysms and arteriovenous fistulas—sympathectomy as an adjunct measure in operative treatment, by H. B. Shumacker, jr. Arterial aneurysms and arteriovenous fistulas—spontaneous cure, by H. B. Shumacker, jr. Peripheral vascular disturbances—thromboangiitis obliterans, arteriosclerosis, and arterial thrombosis and embolism, by N E. Freeman. Peripheral vascular disturbances—vasospastic disorders, Raynaud's syndrome and Raynaud-like disorders, by H. B. Shumacker, jr., and D. I. Abramson. Peripheral vascular disturbances—posttraumatic vasomotor disorders, by H. B. Shumacker jr., and D. I. Abramson. Sympathectomy in circulatory disturbances of the extremities, by N. E. Freeman. Index.

Note: During World War II, the United States Army solved the problem of supplying competent specialized surgical care for the large numbers of soldiers who suffered wounds of the major arteries by the establishment, within the United States of America, of three vascular centers to which surgeons in this specialty were attached and to which the wounded personnel were sent. These also became centers for the training of surgeons in vascular work. This volume gives an account of the problems faced and the methods of treatment undertaken at these centers. Included are statistical data and numerous case study reports. The low mortality rate reflected the efficiency of the procedures adopted, which are covered in detail.

HAMPTON OSCAR P , JR.

Wounds of the extremities in military surgery With 131 illustrations. St. Louis The C. V Mosby Company 1951 434 p. illus. 26 cm. $6.50 4188

Contents: General considerations of military surgery. First-aid measures and emergency splinting. Initial wound surgery including preoperative preparation and transportation splinting. Reparative wound surgery. Special types of injury I, Vascular and nerve injuries—II, Compound fractures—III, Wounds of the joints—IV Am-

Newell, jr The angular motion of high-altitude rockets, by J A. Van Allen. The return of a winged rocket vehicle from a satellite orbit to the earth, by W von Braun. BEECHER, HENRY KNOWLES

Early care of the seriously wounded man. Springfield, Ill. Charles C Thomas, 1952 32 p 22 cm. (American lecture series. Publication no 138 A monograph in American lectures in surgery, edited by Michael E. DeBakey and R. Glen Spurling) $0.75 4183

Contents Introduction. General considerations. Field care prior to hospital admission. Specific preoperative procedures. Care of men with specific wounds. Morphine and other narcotics. Anesthesia in wounded men. Summary

Note This monograph is based on actual experience with men wounded in battle. The emphasis is on treatment of the patient in the interval between the actual wounding and the final repair. The author weighs the various levels of resuscitation in their application at different times and under many conditions. He describes anesthetic action to be taken in a variety of wounded conditions, with emphasis first on general conditions and finally on specific procedures. In each instance the effects of specific remedies are described. Where certain anesthetics should not be used, that information is also presented.

BRILL, NORMAN Q, AND GILBERT W BEEBE

A follow-up study of war neuroses. The work reported herein is part of the program of studies of the Follow up Agency of the National Research Council developed by the Committee of Veterans Medical Problems in cooperation with the Veterans Administration, the Army, and the Navy This investigation was supported by the Veterans Administration upon the specific advice of the Committee on Veterans Medical Problems of the National Research Council. It was begun while the senior author was Assistant Chief Neuropsychiatry Division, Department of Medicine and Surgery, Veterans Administration, and was conducted under contracts with George Washington University School of Medicine (Winfred Overholser, M. D., Professor Psychiatry being the responsible investigator) and the National Research Council. Washington D C. Government Printing Office, 1956 393 p. illus. 24 cm. (VA Medical Monograph) $2 25 4184

Contents. Introduction. Part I, The basic findings: Military and sociological characteristics of the population sampled. Psychiatric aspects of the preservice history Period of military service. Follow-up status. Part II, Analysis of follow-up data. Disability Diagnosis at follow-up. Adjustment at follow-up. Treatment since separation from service. Improvement since separation from service. Man's own comparison of health at follow-up and at entry VA compensation for psychiatric disability Part III, Analysis of military experience: Nature of stress. Location at first breakdown. Severity of illness at first breakdown. Treatment in service. Pattern of disposition. Part IV Analysis of preservice period Family history Preservice personality Preservice adjustment. Part Implications for induction, utilization, and disposition policies. Appendices. Abstracting form for military personnel history Abstracting form for medical history military period. Form letters used in follow-up. Examination booklet used by psychiatrist. Sample case summaries based on psychiatric interviews. History outline used by Red Cross social worker Health questionnaire used in follow-up. Index.

Note One of a series of volumes reporting on major follow-up study comparing the medical records of certain persons during their time in the armed services in World War II, with the subsequent medical history of the same persons as recorded in the 171 hospitals and 69 regional offices of the Veterans Administration. The practical need for the study was partly to examine the correctness of the decision that psychoneurosis in itself is no cause for discharge from the services and partly to determine compensability for neuroses which clearly antedated military service and for those which first occurred while the individual was in the armed forces. Approximately 223 psychiatrists, whose names are listed in the text, participated in the extensive survey and analysis beginning in

Naval and Military Medicine

[illegible]-oxygen mixtures in diving, by E. H. Lanphier. Some theoretical aspects of the use of multiple-gas mixtures for deep-sea diving, by A. P. Webster. Fixed-time [illegible] of decompression [illegible], by A. P. Webster. [illegible] Introduction to respiratory [illegible] and [illegible]. Respiratory problems in diving, by H. Rahn. Breath holding, by A. B. Dubois. The respiratory dead space, by J. R. Pappenheimer. Resistance to breathing at increased ambient pressures, by J. Mead. The role of carbon dioxide in [illegible] gas narcosis, by F. G. Carpenter. [illegible] by K. E. Schaefer. Symposium [illegible]. Bibliography.

Note: Although the symposium of which this volume is the product was sponsored by the Committee on Undersea Warfare, most of the topics covered are basic, and applications to military operations are not stressed. For the most part, the papers describe the techniques and report the results of scientific experiments. They are accompanied by what are apparently full transcripts of the discussions at the meeting. The bibliography, which is a list of the literature cited in all of the papers, includes 126 references.

Sheets, Lawrence M.

The initial management of thoracic and thoraco-abdominal trauma. Springfield, Ill. Charles C Thomas, 1956. 121 p. illus. 26 cm. (American lecture series. No. 265. A monograph in the Bannerstone division of American lectures in surgery edited by Michael E. DeBakey and R. Glen Spurling. Thoracic surgery division editor Brian B Blades) $6.50. 4194

Contents: Resuscitation. Thoracic wounds. Thoraco-abdominal wounds. Thoracic wall wounds and closed thoracic and thoraco-abdominal trauma. [illegible] cases. Bibliography. Index. Name index. Subject index.

Note: Written by a military surgeon and based largely on experience with battlefield wounds, this book describes techniques of [illegible] and emergency procedures which are applicable also to wounds incurred in civilian accidents. In addition, some types of wounds peculiar to civilian life, such as [illegible] wounds with [illegible], are discussed. The importance in many cases of adequate [illegible] procedures before surgery is emphasized. The book is designed for straightforward reading rather than reference. There are only 18 figures, but they are carefully chosen and well reproduced.

United States Army Medical Service

Surgery in World War II. Editor-in-chief John Boyd Coates, jr Editor for general surgery Michael E DeBakey Associate editors B. Phillip Giddings, Elizabeth M Mc Fetridge. Prepared under the direction of The Surgeon General, United States Army in the Historical Unit, Army Medical Service, Office of the Surgeon General, Department of the Army Washington, D C. Government Printing Office, 1955 417 p. illus. 26 cm. (United States. Army Medical Service. The Medical Department of the United States Army in World War II) Vol. 2 $4.25 4195

Contents: Volume II, General surgery. Part I, Resuscitation, control of pain and anesthesia, by H. K. Beecher. Resuscitation of men severely wounded in battle. The control of pain in men wounded in battle. Anesthesia for men wounded in battle. Part II, Abdominal injuries and the initial surgery of abdominal wounds, edited by W. P. Giddings. Derivation of data, source material, and methods of analysis, by W. P. Giddings. Distribution of injuries and other statistical data, by L. H. Wolff and others. Wounding agents, by L. H. Wolff and others. Timing and the [illegible] factor in abdominal injuries, by L. H. Wolff and others. Associated (extra-abdominal) wounds, by L. K. Haynes and F. D. Taylor. Shock therapy, by B. T. Towery and J. D. Welch. Traumatic evisceration, by R. B. Childs. Diagnosis and preoperative routine, by W. P. Giddings and L. H. Wolff. Anesthesia, by O. K. Dennedy and others. Laparotomy incisions and closure, and wound dehiscence, by H. F. Swingle and D. S. Condie. Postoperative complications and sulfonamide therapy, by J. C. Dryer. Postoperative complications—prophylaxis and therapy, by J. C. Dryer and W. P. Giddings. Factors of mortality, by W. P. Giddings and L. H. Wolff. Wounds of the stomach, by L. H. Wolff. Wounds of the jejunoileum and [illegible], by W. H. Cave. Wounds of the colon and [illegible], by W. P. Giddings and J. R. McDaniel. Wounds of the liver [illegible], by C. F. Chunn and R. V. Harver. Wounds of the [illegible] and of the extrahepatic biliary tract, by O. F. Madding and others. Wounds of the pancreas, by H. L. Poole. Wounds of the spleen, by H. L. Poole. Wounds of the kidney, by W. L. Ryan. Wounds of the ureter, by W. L. Ryan. Wounds of the urinary bladder, by L. M. Michels. Wounds of the great vessels of the abdomen, by H. F. Swingle and D. S. Condie. Retroperitoneal [illegible], by H. F. Swingle and D. S. Condie. Special types of [illegible], by H. F. Swingle and K. R. Lawrence. Part [illegible] abdominal injury, by O. F. Madding and K. R. Lawrence. The management of colostomies, by D. H. Farr [illegible], Colostomy. Index.

Note: This is the first volume to be issued of a set of books on the history of surgery in World War II. It is primarily an analysis of the surgical treatment of 3,154 abdominal injuries [illegible] in combat in the North African and European campaigns in 1944 and 1945. All the surgery was urgent and was performed on non-transportable cases in forward Army medical units. Operations of this nature were carried out on a larger scale than had been possible in previous wars, the chapters of the book revealing [illegible] what success. The analysis of cases was planned in advance, and the result is apparently the largest series of combat injuries of the abdomen to be analyzed in such detail. The practice of preoperative transfusion, with the liberal use of whole blood as its central feature, is described in the first part of the book. The statistical and other analyses presented in the second part of the volume are based upon special clinical records from the field for each case. Each of the chapters in the second part is signed by one or more medical doctors and generally consists of the following parts: general introduction, diagnosis, nature of injury, clinical considerations, treatment, postoperative complications, factors of mortality. The final part of Volume II is based upon Army experience with 2,378 colostomies performed in World War II.

United States. Army Medical Service. Graduate School

Recent advances in medicine and surgery (19–30 April 1954) based on professional medical experiences in Japan and Korea 1950–1953 Army Medical Service Graduate School Walter Reed Army Medical Center Washington, D C. Washington, D C. Government Printing Office, 1955 2 v illus. 23 cm. (United States. Army Medical Service. Graduate School. Medical science publication no. 4) Vol. 1 $1 75 vol. 2 $1.50. 4196

Note: These two volumes contain a wealth of up-to-date material on all phases of military medicine and military surgery. They contain the texts of lectures delivered in 1954 at a two-week course conducted by the Army Medical Service Graduate School covering medical experiences of the physicians and surgeons and problems encountered and lessons learned by the Army Medical Service during the Korean War. Authors of the lectures are given. The publication constitutes a history of the professional and clinical activities of the Army Medical Service in Korea during the years 1950–1953.

United States Department of the Navy Bureau of Medicine and Surgery

Combat and field medicine practice. Prepared by Bureau of Medicine and Surgery Published by Bureau of Naval Personnel, Department of the Navy Washington D C. Government Printing Office, 1956 191 p. illus. 26 cm. (Navpers 10819–A) 4197

Contents: Amphibious warfare. Medical and dental service in amphibious operations. The amphibious troops medical and dental service. The amphibious task force medical and dental service. Medical and dental service planning. Problems of casualty evacuation. Medical and dental service procedures in amphibious operations. Management of battle casualties. Care of neuropsychiatric

casualties in combat areas. The clinical aspects of shock. Medical aspects of tropical warfare. Medical aspects of warfare in climates of extreme cold. Prevention and control of disease. Combat casualty reporting. Index.

Note. This manual was prepared to meet two needs, (1) to present a comprehensive text for training Reserve Medical Department personnel by correspondence work, and (2) to provide a convenient manual for regular and active-duty Reserve personnel assigned to duty involving medical and dental support of the Marine Corps in landing operations. Significant medical problems incident to amphibious landing operations are considered in the order of their importance. Prevention and control of disease in the field, as well as the treatment and evacuation of battle casualties, are covered.

UNITED STATES DEPARTMENT OF THE NAVY BUREAU OF MEDICINE AND SURGERY

Submarine medicine practice. Prepared by Bureau of Medicine and Surgery Published by Bureau of Naval Personnel Washington, D C Government Printing Office, 1956 357 p illus 26 cm (NavMed P–5054) $2 00 4198

Contents Part I, Section I, Deep sea diving and underwater medicine practice. General information. Medical aspects of diving. Navy standard decompression tables. The dive. Helium-oxygen diving. Diving accidents and safety precautions. Part I, Section II, Diving with self-contained underwater breathing apparatus Diving with self-contained underwater breathing apparatus. Types of self-contained underwater breathing apparatus. Selection and training for the use of self-contained underwater breathing apparatus. Safety considerations in the use of SCUBA. Specific medical problems in the use of SCUBA. Physiological considerations in the design and evaluation of breathing apparatus. Decompression in air diving with self-contained apparatus. Oxygen tolerance. Gas mixtures in self-contained diving. Protective clothing and other accessories. Diving without breathing apparatus. Part II Submarine medicine practice Submarine habitability and clothing. Submarine personnel selection and assessment. Medical problems in submarines. Escape from submarines. Medical problems of future submarines. Index.

Note A manual designed to serve as a guide for the training of regular and reserve United States Navy Medical Department personnel in the various problems connected with submarine medicine practice. Bibliographical references appear at the ends of Chapters 11–14 16–18, and 21

UNITED STATES DEPARTMENT OF THE NAVY BUREAU OF NAVAL PERSONNEL

Standard first aid training course. Prepared by Bureau of Naval Personnel Washington, D C Government Printing Office, 1955 262 p illus 20 cm. (United States. Department of the Navy Bureau of Naval Personnel Navy training courses Navpers 10081) $1 00 4199

Contents General instructions. Hemorrhage. Asphyxiation. Shock. Poisoning. Wounds. Injuries to bones, joints, and muscles. Injuries from heat and cold. Defense against ABC agents. Survival at sea. Rescue and transportation procedures. Appendixes. Index.

Note A basic reference manual on first aid, with primary emphasis on shipboard first aid problems. The course is designed for individual study by both officers and enlisted men of the Navy but the manual may also be used as a basic text for group instruction in first aid procedure The appendixes consist of tabulated summaries of the contents of the chapters to serve as reviews of the information given in the body of the book and to serve as readily available sources of information for emergency use.

WATKINS, JOHN GOODRICH

Hypnotherapy of war neuroses a clinical psychologist's casebook. New York The Ronald Press Company 1949 384 p. illus. 23 cm $6 00 4200

Contents. Part I, Military neuroses Introduction. Psychotherapy in a military setting. Theoretical bases of treatment. Strategy and tactics. Part II, Hypnotherapy: Hypnosis, past and present. Inducing trance states. Hypnotherapeutic technique. Advanced hypnotherapeutic techniques. Part III, Individual case studies: Forward to the case studies. Aphonia. Amnesia. Stuttering. Suicidal depression. Phobia. Psychogenic skeleto-muscular reaction. Tremor. Conversion hysteria. Camptocormia. Hysterical paralysis. Part IV The hypnoanalytic treatment of an entrenched phobia. Margaret was an old man. The problem is much deeper Conflict One body—two personalities. The knife of Mr X. Dreams of fear. X approaches Y The masquerade is ended. Part V Evaluation Summary Glossary: Military terms. Professional terms. Bibliography Author index. Subject index.

Note A report of psychotherapy done by the author in the neuropsychiatric division of an Army convalescent hospital during and immediately after World War II. The men whose treatment is described in the case studies were men of various backgrounds who became neurotically ill during their army service as a result of the stress of war. The cases were selected from a much larger number in order to illustrate the different forms which war neurosis—the shellshock of 1918—may take and the variations of therapeutic attack necessary to bring about improvement. The cases are introduced by an account of the nature and purpose of wartime psychotherapy the theoretical basis of the author's work, and the nature of hypnotherapeutic techniques. The case studies include the quoted transcripts of extended sessions between hypnotherapist and patient.

RADIATION MEDICINE

BLOOM, WILLIAM, editor

Histopathology of irradiation from external and internal sources. New York Mc Graw Hill Book Company, Inc., 1948. 808 p. illus (part col'd) 23 cm (National nuclear energy series) $10 75 4201

Contents Introduction, by W Bloom. Materials and methods, by R. G. Murray and others. The cell, by W Bloom. The skin, by R. S. Snider Bone, by M. Heller Bone marrow by M. A. Bloom The spleen, by R. G. Murray Lymph node and intestinal lymphatic tissue, by P P H. De Bruyn. The thymus, by R. G. Murray The gastrointestinal tract, by M. Pierce. Structures accessory to the gastrointestinal tract, by R. P Rhoades. The testis, by M. Heller The ovary by W Bloom. The kidney by W. Bloom. The lung, by R. P Rhoades. The vascular system, by R. P Rhoades. The adrenal, by R. P Rhoades. The nervous system, by R. S. Snider. Summary by W Bloom. Appendix—Experiments listed by agent, animal species, and mode of administration. Bibliography Alphabetical list of experiments. Index.

Note. A condensed account of fundamental research carried out as part of the program of the Manhattan District Project during the years 1942 1945 The experiments were carried out on small animals, and the purpose was to accumulate knowledge of the histological effects of various types of radiation applied in various ways. Although there is some description of methods, most of the text is devoted to reports and evaluations of findings. There are several hundred reproductions of microphotographs.

BUSCHKE, FRANZ AND OTHERS

Supervoltage roentgentherapy By Franz Buschke Simeon T Cantril, and Herbert M. Parker Springfield Ill Charles C Thomas 1950 297 p illus 24 cm $10 50 4202

Contents Physical considerations of supervoltage roentgentherapy at the Tumor Institute. Carcinoma of the oral cavity Malignant tumors of the pharynx. Carcinoma of the oesophagus. Carcinoma of the maxillary sinus. Carcinoma of the larynx. Carcinoma of the bladder Carcinoma of the breast. Carcinoma of the cervix uteri. Pituitary adenoma. Conclusions. Index.

Note In this book, three members of the Tumor Institute of the Swedish Hospital in Seattle, Washington, summarize the experience with this hospital's high-voltage X-ray apparatus which was installed in 1932 and has been in use since that year The installation which operates at about 800 K. V. is described in the first chapter. The remainder of the book is made up chiefly of detailed discussions of case histories. Although the authors avoid hard and fast conclusions, they have found some advantages in the use of X-ray voltages above 800 K. V. The book contains 150 illustrations, some of which are colored. Bibliographies are included with the chapters.

Medicine

Radiation Medicine

CRONKITE, E. P AND OTHERS editors

Some effects of ionizing radiation on human beings. A report on the Marshallese and Americans accidentally exposed to radiation from fallout and a discussion of radiation injury in the human being. From the Naval Medical Research Institute, Bethesda 14 Maryland, U S. Naval Radiological Defense Laboratory San Francisco, California, and Medical Department, Brookhaven National Laboratory Upton New York. Edited by E. P Cronkite, V P Bond and C. L. Dunham. United States Atomic Energy Commission. Washington, D C. Government Printing Office, 1956 106 p illus (part col d) 27 cm. (United States. Atomic Energy Commission. TID 5358) 4203

Contents Introduction. Radiation characteristics of the fallout material and the determination of the dose of radiation, by C. A. [illegible] and others. Clinical observations and treatment, by [illegible] and others. Skin lesions and epilation, by R. A. Conard and others. Hematologic observations, by V P Bond and others. Internal deposition of radionuclides in human beings and animals, by S. H. Cohn and others. Human radiation injury resulting from the use of nuclear devices, by E. P Cronkite and V P Bond.

Note A detailed report summarizing the findings of medical team organized to treat 239 Marshallese and 28 Americans [illegible] were exposed to radioactive fallout due to unexpected wind changes following the experimental thermonuclear explosion on March 1, 1954, at the Eniwetok Proving Grounds of the United States Atomic Energy Commission. The initial data were supplemented by field surveys [illegible] and 24 months after the original investigation. The accident resulted in substantial increases in the fundamental knowledge of radiation injury and improvement in medical techniques for caring for persons exposed to large doses of radiation. Each of the chapters [illegible] accompanied by [illegible] bibliography

DELARIO A. J

Roentgen, radium and radioisotope therapy With 65 illustrations and 155 tables. Philadelphia Lea and Febiger 1953 371 p. illus. 25 cm. $7.50. 4204

Contents The composition of matter. The production of ionizing radiation from matter. The nature of Roentgen rays. Roentgen rays—why they penetrate and how they are absorbed. The heterogeneity of Roentgen rays. Methods of measuring ionizing radiation. Physical factors which influence the radiation dose. Physical and chemical changes produced in tissues by ionizing radiation. Biological changes produced by ionizing radiation. The recovery of tissues from ionizing radiation. The erythema dose. The therapeutic radiation dose, and diseases amenable to radiation therapy. Injuries caused by ionizing radiations. Various Roentgen therapeutic modalities (low voltage to megavoltage Roentgen therapy). The natural radioactive substances—(radium). Radium therapy doses. Protection from ionizing radiation. New radiotherapeutic modalities (neutron and electron therapy—the cyclotron and the betatron). Radioactive isotopes. The biological use of radioactive isotopes. The safe handling of radioactive isotopes. Ionizing radiation from atomic bombs and fission (uranium 235). Index.

Note The value of this book lies in the wide range of practical information presented in it. The author [illegible] practicing radiologist of many years' experience, based [illegible] largely on [illegible] file of journal articles and other literature which he found useful in his own practice. The knowledge so accumulated has been organized and presented very compactly with references to the sources. The concisely written text is supplemented by 148 tables and [illegible] considerable number of graphs. In some of the chapters, for example that on radiation from atomic bombs, the author has ventured into fields [illegible] here he could not have had extensive experience. However, these passages are [illegible] minor part of the volume. The bibliography contains 330 references.

HAHN, PAUL F., editor

A manual of artificial radioisotope therapy New York Academic Press, Inc., 1951 310 p. illus. 23 cm. $6.80 4205

Contents Introduction to radiation therapeutic problems, by A. [illegible] Evans. Criteria for [illegible] H. Dowdy Terminology and standards, by P F Hahn. Dosimetry of [illegible] the use of therapeutic isotopes, by E. H. Quimby. Radio [illegible] administered radioactive isotopes, by E. H. Quimby [illegible] phosphorus in the treatment of polycythemia vera and the leukemias, by C. F Stroebel and R. E. Hall. Radioactive iodine in the diagnosis and treatment of hyperthyroidism, by J. B. Hursh and J. [illegible] Radioactive iodine in the study and treatment of carcinoma of the thyroid, by R. W Rawson and J R. Trunnell. Radioactive colloids in the treatment of lymphoid-macrophage diseases, by P F Hahn. Tumor therapy by direct infiltration of radioactive colloidal metallic gold, by P F Hahn. Radiological instrumentation [illegible] therapeutic program employing artificial radioactive isotopes, by [illegible] Autoradiography [illegible] R. L. Weiland. Health physics, by K. Z. Morgan. [illegible] used in medical research, by C. P Leblond and [illegible] Availability of isotopes and means of procurement, by P C. Aebersold. Planning the radioisotope program in the hospital, by E. H. Quimby and C. B. Braestrup. Author index. Subject index.

Note A book made up of short monographic chapters [illegible] by [illegible] eminent American scientists and physicians [illegible] are active in the production of radioactive isotopes or in their therapeutic application. As the chapter titles show therapeutic rather than physical aspects are emphasized. The book is directed for biologists, radiologists, and physicians, and it serves both as [illegible] manual of tested therapeutic techniques and [illegible] guide to the pertinent literature. The editor is associated with the Cancer Research Laboratories of Meharry Medical College, and the contributors are mostly members of the faculties of outstanding medical schools.

KAPLAN IRA I

Clinical radiation therapy With 614 illustrations. Second edition. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1949 844 p. illus. 24 cm. $15.00 4206

Contents Historical development of radiation therapy. Radiation physics. Principles of radiation therapy. General considerations in the use of radiation therapy. Radiation in skin conditions. Radiation in ear, nose, and throat conditions. Radiation in eye conditions. Radiation in chest conditions. Radiation in inflammatory conditions. Radiation in breast conditions. Radiation in gastrointestinal conditions. Radiation in gynecologic conditions. Radiation in genitourinary conditions. Radiation in neurologic conditions. Radiation in bone conditions. Radiation in soft tissue sarcomas. Radiation in blood dyscrasias. Radiation of specific diseases of the lymph nodes. Radiation of specific diseases of the reticuloendothelial system. Radiation in endocrinology. Complications and injuries associated with X-ray and radium therapy. Trauma and cancer. The legal aspects of radiation therapy. Index.

Note The author of this work is Clinical Professor of Radiology in New York University Medical College and Director of the Radiation Department of Bellevue Hospital in New York City. The book is based on an extensive [illegible] experience and [illegible] large file of case histories. A wide range of diagnostic and therapeutic techniques is included, and each is extensively described. The illustrations include reproductions of numerous roentgenograms as [illegible] all as photographs. The first edition was published in 1937. Numerous changes in [illegible] parts of the book were made in preparing the present edition, and the chapter on the legal aspects of radiation therapy was added.

OAK RIDGE INSTITUTE OF NUCLEAR STUDIES INC. MEDICAL DIVISION

Radioisotopes in medicine a course given by the Oak Ridge Institute of Nuclear Studies, September 1953 Work done under contract with the United States Atomic Energy Commission. Edited by Gould A. Andrews Marshall Brucer and Elizabeth B Anderson. Washington, D C. Government Printing Office, 1955 817 p. illus. 26 cm. (United States. Atomic Energy Commission. ORO-125) $6.00 4207

Contents (abridged) Part I, Availability and uses of isotopes Philosophy and policies of the Atomic Energy Commission control of radio isotope distribution, by P C. Aebersold. Part II, Problems in radiation Some aspects of the pathology of radiation, by R. M Kniseley Radiological safety by E. E. Anderson. Biochemical considerations of distribution, by G. C. Kyker Part III, Radiation measurement and dosimetry: Some problems of theory of radiation dosimetry by H. H. Rossi. Techniques of dosimetry by G. L. Brownell. Calculation of radiation dosage in internal therapy with I 131 by R. Loevinger New developments in instrumentation for medicine, by P R. Bell. Part IV Tumor localization External counting and localization, by B Cassen. The use of radioactive isotopes in the detection and localization of brain tumors, by W H. Sweet and G. L. Brownell. The localization of radioactive potassium in human breast neoplasms, by W H. Baker. Part V Diagnostic and therapeutic uses of radioiodine Diagnostic uses of I 131 by H. C. Allen, Jr Iodine 131 in the treatment of hyper thyroidism studies I dosage and metabolism, by A. S. Freedberg. Iodine 131 in the treatment of intractable angina pectoris or congestive failure, by A S. Freedberg. Iodine therapy in thyroid carcinoma, by J B. Trunnell. Pathologic changes produced in the thyroid by I 131 by R. M. Kniseley and G A. Andrews. Part VI, Metabolic and vascular studies Blood volumes—methods and results, by N I. Berlin. A method for measuring cardiac and peripheral vascular flow utilizing serum albumin labeled with radioactive iodine, by H. L. Friedell and W J MacIntyre. Body composition—an introduction to the clinical and investigative use of isotope dilution methods, by F D. Moore. Part VII, Isotopes in the study and treatment of hematologic disorders The use of radioisotopes in the therapy of blood diseases, by W F Beihard. The use of radioactive colloidal gold (Au-198) in chronic myelogenous and lymphatic leukemia, by G. R. Meneely Part VIII, Therapy with radioactive colloids The clinical utilization of artificially radioactive suspensions of particles of different sizes, by J H Muller Treatment of carcinoma of the prostate with gold 198, by R. H. Flocks and H. B Elkins. Interstitial use of radioactive chromic phosphate in therapy by H. L. Jaffe. Experiences with the use of Au-198 in the treatment of carcinoma of the cervix, by A. I Sherman. Part IX, Therapy with external and implanted sources Teletherapy by C. B. Braestrup. The potentialities of radiotherapy of malignant neoplasms, by J A. del Regato. The external and internal use of radioactive phosphorus, by B. V A. Low-Beer Radiotherapy (especially of bladder cancer) by means of rubber balloons filled *in situ* with solutions of radioisotopes, by J. H. Muller Cobalt 60 as an interstitial plaque-like, intracavitary gamma ray medium a review by I. Meschan. Bibliography Subject index.

Note The Medical Division of the Oak Ridge Institute of Nuclear Studies sponsored in September 1953 an advanced medical course to cover clinical uses of radioisotopes. The speakers were asked to present reviews of current information on their special topics, with emphasis on practical clinical techniques. The speakers were subsequently requested to put their contributions into publishable form, and this volume, abundantly illustrated and with a 59-page bibliography is the result. It is addressed primarily to graduate physicians.

OUGHTERSON, ASHLEY W , AND SHIELDS WARREN, editors

Medical effects of the atomic bomb in Japan. New York McGraw Hill Book Company Inc. 1956 477 p illus. 24 cm. (National nuclear energy series Manhattan project technical section Division VIII, vol. 8) $8 00 4208

Contents Summary Prelude to medical investigation Scope of damage and the effects on medical care and facilities. Number and types of casualties Clinical observations in Hiroshima and Nagasaki Hematology of atomic-bomb injuries Pathology of atomic-bomb injuries. Appendixes Organization and personnel of the Joint Commission and collaborating groups. Materials and methods of investigation. Reports of Japanese scientists and physicians. Studies of population and casualties Statistical survey of survivors. Summary tables for Chapters 4 and 5 Index

Note. A book of primary importance in radiation medicine It is based on the six volume report of the Joint Commission for the Investigation of the Effects of the Atomic Bomb in Japan which began work in Japan only a few weeks after the bombs were dropped on Hiroshima and Nagasaki in August 1945. The data gathered by the Joint Commission are here condensed, integrated, and assembled in a form suitable for reading and reference. Several hundred illustrations, many of them reproductions of microphotographs of pathology are included, and there are also several hundred tables of statistical data Literature references are included in all of the chapters.

POHLE, ERNST ALBERT, editor

Clinical radiation therapy Second edition, enlarged and thoroughly revised, with 201 illustrations and a colored plate. Philadelphia Lea & Febiger 1950 902 p. illus. (part col d) 24 cm $15 00 4209

Contents Radiation therapy in diseases of the blood and blood-forming organs, by O O. Meyer. Radiation therapy in diseases of the circulatory system, by R. Golden and H. W Jacox. Radiation therapy in diseases of the respiratory system and of the breast, by G. E. Richards. Radiation therapy in diseases of the gastro-intestinal tract, by G. T Pack and G. McNeer. Radiation therapy in diseases of the female genital organs, by C. L. Martin. Radiation therapy in malignant diseases of the genito-urinary tract, by A. L. Dean and R. J Guttmann. Radiation therapy in diseases of the nervous system, by R. W Burford. Radiation therapy in diseases of the eye and ear by A. U. Desjardins. Radiation therapy in diseases of the muscles, bones, joints and tendons, by H. F Hare and M. I. Smedal. Radiation therapy in diseases and dysfunctions of the glands of internal secretion, by L. J. Menville. Radiation therapy in inflammatory diseases, by E. A. Clark. Radiation therapy in diseases of the skin, by J. J Eller and E. A. Clark. Radiation reactions and injuries, by G. M. MacKee and A. C. Cipollaro. The civil liability of the radiologist, by S. W Donaldson. Supplement I. Low intensity radium needles, by C. L. Martin. Supplement II. Dosage calculation in radium therapy Index.

Note. Together the chapters of this work constitute a useful and authoritative guide to the potentialities and techniques of radiation therapy The coverage of techniques is not comprehensive, but those included are described explicitly and in detail. Literature references are included both for the techniques described in full and those only mentioned. In this edition the title was changed from the former *Clinical roentgen therapy* to indicate the inclusion of techniques based on radium, radioactive iodine etc. Revisions of text and additions to the bibliography are found throughout the book.

UNITED STATES. NATIONAL BUREAU OF STANDARDS. NATIONAL COMMITTEE ON RADIATION PROTECTION

Protection against betatron-synchrotron radiations up to 100 million electron volts. Washington D C. Government Printing Office, 1954 52 p. illus. 24 cm. (United States. National Bureau of Standards. Handbook 55) $0.25 4210

Contents Definitions. Protection against operation hazards. Protection against radiation hazards. Installations. Surveys. Working conditions. Appendixes The roentgen and radiation units above 3 Mev Secondary standards for measuring X-ray intensities. Calorimetric method of determining X-ray intensities. Determination of the dose produced in a medium by X-rays. X-ray absorption coefficients for monoenergetic X-rays. Theoretical half-value layers of various materials for 7.5-Mev X-ray photons. Characteristics of the X-radiation from a circular electron accelerator. Neutron production data. Concrete attenuation data.

Note Because electron accelerators, such as electron synchrotrons and betatrons, are sources of high-energy radiations, and because of their widespread applications, they represent a potential hazard to operating personnel, to patients in hospitals, and to others. This publication supplies recommendations for the safety of those who operate these devices. The hazards resulting from the various radiations produced are described, as well as those due to certain associated effects, such as ozone and smoke production. Because much of the experimental data in this field is far from complete, the technical information contained in the appendixes is an essential part of the *Handbook*.

THERAPEUTICS

CURRENT THERAPY 1956 latest approved methods of treatment for the practicing physician. Edited by Howard F Conn. Consulting editors George E. Burch and others.

Therapeutics

Philadelphia. W B Saunders Company 1956. 632 p. 28 cm. $11.00. 4211

Contents (abridged) Section II The infectious diseases. Section III. Diseases of the respiratory system. Section IV. Diseases of the blood and spleen. [illegible] cardiovascular system. Section VI Diseases of the digestive system. Section VI Disorders of metabolism and nutrition. Section VII Diseases of the endocrine system. Section VIII Diseases of the urogenital tract. Section IX The allergic diseases. Section X The venereal diseases. Section [illegible] Diseases of the nervous system. Diseases of the skin. Section XII Diseases of the locomotor system. Section XIV Obstetric and gynecologic conditions. Section XV Diseases due to physical and chemical agents. Section XVI. Appendices and indices. A manual of drugs. Index of authors. Index of subjects.

Note An annual publication, in each volume of which eminent practitioners of medicine and other recognized authorities describe currently used methods of therapy in the whole range of diseases. It consists of many short articles written expressly for it; in other words, it is not a digest of periodical literature. In the 1956 issue there are approximately 250 signed contributions, each one describing one or more methods of treatment for a specific disease or closely related group of diseases. Additional information on drugs mentioned in the articles is supplied in the appendix. The publication is useful for its clear and authoritative descriptions of reliable methods.

GOODMAN LOUIS S AND ALFRED GILMAN

The pharmacological basis of therapeutics a textbook of pharmacology toxicology and therapeutics for physicians and medical students. Second edition. New York The Macmillan Company 1955 1,831 p. illus. 26 cm. $17.50. 4212

Contents (abridged) Section I Introduction. Section II. Central nervous system depressants. History and theories of general anesthesia. General anesthetics. Basal anesthetics. Hypnotics and sedatives. Natural and synthetic narcotics. Analgesics and antipyretics. Section III. Central nervous system stimulants. Section IV. Local anesthetics. Section V. Drugs acting on autonomic effector cells. Anatomical, physiological and general pharmacological considerations. Drugs stimulating structures innervated by cholinergic nerves. Drugs stimulating structures innervated by adrenergic nerves. Adrenergic blocking agents. Section VI, Histamine and its antagonists. Section VII, Cardiovascular drugs. Section VIII, Water, salt, and ions. Section IX, Drugs affecting renal function and electrolyte metabolism. Section X, Drugs affecting uterine motility. Section XI, Gases and vapors. Section XII, Heavy-metal antagonists. Section XIII, Locally acting drugs. Section XIV Antiseptics, disinfectants, and drugs used in the chemotherapy of infectious diseases. Drugs used in the chemotherapy of helminthiasis. Drugs used in the chemotherapy of malaria. Drugs used in the chemotherapy of amebiasis. Penicillin therapy of syphilis. Drugs used in the chemotherapy of tuberculosis and leprosy. Antibiotics. Section XV Drugs used in the chemotherapy of neoplastic disease. Section XVI, Drugs acting on the blood and the blood-forming organs. Section XVII, Hormones and hormone antagonists. Section XVIII, The vitamins. Appendices: Principles of prescription writing. General principles of toxicology. Index.

Note A widely-used, comprehensive work. It is arranged in 18 sections, the titles of all of which are given above, and in 73 chapters. All but a few of the chapters are devoted to specific groups of drugs. In these chapters, the drugs are taken up individually and discussed under such headings as "History," "Chemistry and preparations," "Routes of administration and dosage," "Absorption, fate and excretion," "Pharmacological actions," and "Therapeutic uses." Other sub-headings are used where appropriate; for example, in the discussions of anesthetic drugs there is some emphasis on correlation between chemical structure and physiological and pharmacological actions of specific drugs. Very extensive literature references are included. The first edition was published in 1941. The organization of this second edition is essentially the same. Otherwise the book is the result of a complete revision, approximately [illegible] per cent.

HARDY JAMES D

Fluid therapy 77 illustrations. Philadelphia Lea & Febiger 1954 255 p. illus. 24 cm. $5.50. 4213

Contents General physiology of body fluid metabolism. Methods. Classification of states of water and electrolyte imbalance. The diagnosis of fluid imbalance. Treatment of fluid imbalance. Routine management—fluid therapy in patients who are not dehydrated preoperatively and who have no postoperative complications. Repair solutions. The management of abnormalities of potassium metabolism. The management of [illegible]. Calcium and magnesium—metabolism and therapy. Common surgical problems—pyloric and duodenal obstruction, small bowel obstruction, and pancreatic and small bowel fistulas. Fluid therapy in infants and children. Fluid therapy in the elderly—some guides to management. Heart failure, diabetic acidosis, and adrenocortical insufficiency—some comments on their management. Urology neurosurgery and orthopedics. Renal failure—acute and chronic. The early treatment of burns. The management of blood loss. Liquid alimentation. Complications of intravenous fluid therapy. Index.

Note In this book knowledge pertaining to basic physiology is integrated with practical fluid therapy. Physiologic aspects are discussed in the introductory chapter and, in addition, physiologic considerations are introduced in the specific chapters that form the bulk of the volume. The book is directed primarily to surgeons. The author is Chairman of the Department of Surgery and Director of Surgical Research in the University of Mississippi Medical Center.

HYMAN HAROLD THOMAS

Handbook of treatment. Philadelphia J B Lippincott Company 1955 511 p. 24 cm. $8.00. 4214

Note A compact cyclopedia of internal medicine in which the emphasis is on the common disorders encountered in the general practice of medicine. The main topics are arranged in alphabetical order, ranging from "Acidosis" to "[illegible]." [illegible] such as alcoholism and diabetes are included, along with specific diseases. Related diseases are grouped; for example, scarlet fever is to be found under streptococcal infections. The volume is fully indexed to facilitate the location of topics not in alphabetical order. In general, the articles on individual disorders are subdivided under "General principles," "Immediate care," and "Continuing care." A wide range of drugs is mentioned at appropriate points, and 15 pages are devoted to dietotherapy, including many typical diets.

MINER, ROY WALDO editor

Oral fat emulsions. Consulting editor Fredrick J Stare. New York Published by the Academy 1952 139 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 56 art. 1) $3.00. 4215

Contents Introduction to oral fat emulsions, by F. J. Stare. The importance of fat in the diet, by R. W. Swift. Fat absorption and the experimental basis of oral fat emulsions, by R. P. Geyer. Clinical studies on the use of an oral fat emulsion, by M. [illegible]. Oral fat emulsions in the study of calorie-nitrogen relationships in man, by T. B. Van [illegible] and others. Oral fat emulsions in the feeding of patients with severe burns, by S. M. Levenson and others. Fat ingestion and chylomicrons, by H. [illegible]. The use of oral fat in hyperalimentation and parenteral alimentation, by A. A. Albanese. The use of oral fat emulsions in experimental and clinical medicine, by A. Grollman. The use of oral fat emulsions in surgical patients by mouth, gastrostomy and jejunostomy—clinical and metabolic studies, by [illegible], Jr., and others. The use of an oral fat emulsion in the supportive treatment of pulmonary tuberculosis, by M. E. Dailey. Experimental studies in human gastric physiology—I. The effect of fat upon gastric evacuation after partial gastrectomy, by W. R. Waddell and C. C. Wang. Absorption of orally administered emulsified lipid in pancreatic insufficiency in infants and children, by C. U. Lowe and C. D. May. Oral fat emulsions combined with protein supplements in the management of acute poliomyelitis, by G. J. [illegible]. Laboratory and clinical studies following the use of an oral fat emulsion, by S. D. Jacobson. Forced high-calorie low-protein diet in the treatment of uremia, by W. J. Kolff. Importance of calories in the growth of children, by I. G. Macy. Interrelationships of foodstuffs, by J. P. Peters.

Note Papers presented at a conference held by the Section of Biology of the New York Academy of Sciences in April, 1952, are published in this volume. The authors and titles are given above. Most of the papers include literature references. Generally speaking, the papers report clinical case experience or the results of research.

MODELL, WALTER

The relief of symptoms. Philadelphia W B Saunders Company 1955 450 p. 24 cm. $8.00. 4216

Content (abridged) Part I, Availability and uses of isotopes Philosophy and policies of the Atomic Energy Commission control of radio isotope distribution, by P C. Aebersold. Part II Problems in radiation Some aspects of the pathology f radiation, by R. M. Kniseley Radiological safety by E. K. Anderson. Biochemical considerations of distribution, by G. C. Kyker Part III Radiation measurement and dosimetry Some problems of theory of radiation dosimetry by H. H. Rossi. Techniques of dosimetry by G. L. Brownell. Calculation of radiation dosage in internal therapy with I 131 by R. Loevinger New developments in instrumentation for medicine, by P R. Bell. Part IV Tumor localization External counting and localization, by B Cassen. The use of radioacti isotopes in the detection and localization of brain tumors, by W H. Sweet and G. L. Brownell. The localization of radioacti potassium in human breast neoplasms, by W H. Baker Part V Diagnostic and therapeutic uses of radioiodine Diagnostic uses of I 131 by H. C. Allen Jr Iodine 131 in the treatment of hypert thyroidism studies of dosage and metabolism, by A. S. Freedberg. Iodine 131 in the treatment of intractable angina pectoris or congestive failure, by A. S. Freedberg. Iodine therapy in thyroid carcinoma, by J B Trunnell. Pathologic changes produced in the thyroid by I 131 by R. M. Kniseley and G. A. Andrews. Part VI, Metabolic and vascular studies Blood volumes—methods and esults, by N I. Berlin. A method for measuring cardiac and peripheral vascular flow utilizing serum albumin labeled with radioactive iodin by H. L. Friedell and W J MacIntyre. Body composition—an introduction to the clinical and investigative use of isotope dilution methods, by F D Moore. Part VII, Isotopes in the study and treatment f hematologic disorders The use f radioisotopes in the therapy of blood diseases, by W F Bethard. The use of radioactive colloidal gold (Au-198) in chronic myelogenous and lymphatic leukemia, by G. R. Meneely Part VIII Therapy with radioacti colloids The clinical utilization f artificially radioactive suspensions of particles of different sizes, by J H. Muller Treatment of carcinoma f the prostate ith gold 198, by R. H. Flocks and H. B. Elkins. Interstitial use of radioacti chromic phosphat in therapy by H. L. Jaffe. Experiences with the use of Au-198 in the treatment of carcinoma of the cervix, by A. L. Sherman Part IX, Therapy with external and implanted sources Teletherapy by C. B Braestrup. The potentialities of radiotherapy f malignant neoplasms, by J A. del Regato. The external and internal use of radioactive phosphorus, by B. V A. Low-Beer Radiotherapy (especially of bladder cancer) by means of rubber balloons filled in sit with solutions of radioisotopes, by J H. Muller Cobalt 60 as an interstitial, plaque-like, intracavitary gamma ray medium a review by I. Meschan. Bibliography Subject index.

Note The Medical Division of the Oak Ridge Institute of Nuclear Studies sponsored in September 1953 an advanced medical course to cover clinical uses of radioisotopes. The speakers were asked to present reviews of current information on their special topics, with emphasis on practical clinical techniques. The speakers wer subsequently requested to put their contributions into publishable form and this volume, abundantly illustrated and with a 59-page bibliography is the esult. It is addressed primarily to graduate physicians.

OUGHTERSON, ASHLEY W AND SHIELDS WARREN, editors

Medical effects of the atomic bomb in Japan New York McGraw Hill Book Company Inc 1956 477 p illus. 24 cm (National nuclear energy series. Manhattan project technical section Division VIII, vol 8) $8 00 4208

Contents Summary Prelude to medical investigation. Scope of damage and the effects on medical care and facilities Number and types of casualties. Clinical observations in Hiroshima and Nagasaki. Hematology of atomic-bomb injuries. Pathology of atomic-bomb injuries. Appendixes Organization and personnel of the Joint Commission and collaborating groups. Materials and methods of investigation. Reports of Japanese scientists and physicians. Studies of population and casualties. Statistical survey of survivors. Summary tables for Chapters 4 and 5. Index

Note A book of primary importance in radiation medicine. It is based on the six-volume report of the Joint Commission for the Investigation of the Effects of the Atomic Bomb in Japan which began ork in Japan only few eeks after the bombs were dropped on Hiroshima and Nagasaki in August, 1945 The data gathered by the Joint Commission are here condensed, integrated, and assembled in form suitable for reading and reference Several hundred illustrations, many of them reproductions of microphotographs of pathology are included, and there are also several hundred tables of statistical data. Literature references are included in all of the chapters.

POHLE, ERNST ALBERT, editor

Clinical radiation therapy Second edition, enlarged and thoroughly revised, with 701 illustrations and a colored plate. Philadelphia Lea & Febiger 1950 902 p. illus. (part col d) 24 cm. $15 00 4209

Contents Radiation therapy in diseases of the blood and blood-forming organs, by O. O. Meyer Radiation therapy in diseases of the circulatory system, by R. Golden and H. W Jacox. Radiation therapy in diseases of the espiratory system and of the breast, by G. E. Richards. Radiation therapy in diseases of the gastro-intestinal tract, by G. T Pack and G. McNeer Radiation therapy in diseases of the female genital organs, by C. L. Martin. Radiation therapy in malignant diseases of the genito-urinary tract, by A. L. Dean and R. J Gottmann. Radiation therapy in diseases of the nervous system, by R. W Benford. Radiation therapy in diseases of the eye and ear by A. U Desjardins. Radiation therapy in diseases of the muscles, bones, joints and tendons, by H. F Hare and M. I. Smedal. Radiation therapy in diseases and dysfunctions of the glands of internal secretion, by L. J Menville. Radiation therapy in inflammatory diseases, by E. A. Clark. Radiation therapy in diseases f the skin, by J J Eller and E. A. Clark. Radiation reactions and injuries, by G. M. MacKee and A. C. Cipollaro. The civil liability of the radiologist, by S. W Donaldson. Supplement I. Low intensity radium needles, by C. L. Martin. Supplement II. Dosage calculation in radium therapy Index.

Note. Together the chapters of this work constitute a useful and authoritative guide to the potentialities and techniques of radiation therapy The coverage of techniques is not comprehensive, but those included are described explicitly and in detail. Literature references are included both for the techniques described in full and those only mentioned. In this edition the title was changed from the former *Clinical roentgen therapy* to indicate the inclusion f techniques based on radium, radioacti iodine, etc. Revisions of text and additions to the bibliography are found throughout the book.

UNITED STATES NATIONAL BUREAU OF STANDARDS NATIONAL COMMITTEE ON RADIATION PROTECTION

Protection against betatron-synchrotron radiations up to 100 million electron volts. Washington D C Government Printing Office, 1954 52 p. illus. 24 cm. (United States. National Bureau of Standards. Handbook 55) $0 25 4210

Contents Definitions. Protection against operation hazards. Protection against radiation hazards. Installations. Surveys. Working conditions. Appendixes The roentgen and radiation units above 3 Mev Secondary standards for measuring X-ray intensities. Colorimetric method of determining X-ray intensities. Determination of the dose produced in medium by X-rays. X-ray absorption coefficients for monoenergetic X-rays. Theoretical half value layers of arious materials for 1.5-Mev X-ray photons. Characteristics of the X-radiation from circular lectron accelerator Neutron production data. Concrete attenuation data.

Note Because electron accelerators, such as electron synchrotrons and betatrons, are sources of high-energy radiations, and because of their widespread applications, they represent potential hazard to operating personnel, to patients in hospitals, and to others. This publication supplies recommendations for the safety of those ho operate these devices The hazards resulting from the various radiations produced are described, as well as those due to associated effects, such as noise and ozone production. Because much of the experimental data in this field is far from complete, the technical information contained in the appendixes an essential part of the Handbook

THERAPEUTICS

CURRENT THERAPY 1956 latest approved methods of treatment for the practicing physician Edited by Howard F Conn. Consulting editors George E. Burch and others

Therapeutics

Philadelphia W B Saunders Company 1956. 632 p. 28 cm. $11.00. 4211

Contents (abridged): Section I. The infectious diseases. Section II. Diseases of the respiratory system. Section III. Diseases of the blood and spleen. Section IV. Diseases of the cardiovascular system. Section V. Diseases of the digestive system. Section VI. Disorders of metabolism and nutrition. Section VII. Diseases of the endocrine system. Section VIII. Diseases of the urogenital tract. Section IX. The venereal diseases. Section X. The allergic diseases. Section XI. Diseases of the nervous system. Section XII. Diseases of the skin. Section XIII. Diseases of the locomotor system. Section XIV. Obstetric and gynecologic conditions. Section XV. Diseases due to physical and chemical agents. Section XVI. Appendices and indices. A roster of drugs. Index of authors. Index of subjects.

Note: An annual publication, in each volume of which eminent practitioners of medicine and other recognized authorities describe currently used methods of therapy in a wide range of diseases. It consists of many short articles written expressly for it; in other words, it is not a digest of periodical literature. In the 1956 issue there are approximately 330 signed contributions, each one describing one or more methods of treatment for a specific disease or closely related group of diseases. Additional information on drugs mentioned in the articles is supplied in the appendix. The publication is useful for its clear and authoritative descriptions of reliable methods.

GOODMAN, LOUIS S., AND ALFRED GILMAN

The pharmacological basis of therapeutics: a textbook of pharmacology, toxicology, and therapeutics for physicians and medical students. Second edition. New York: The Macmillan Company, 1955. 1,831 p. illus. 26 cm. $17.50. 4212

Contents (abridged): Section I, Introduction. Section II, Central nervous system depressants. History and theories of general anesthesia. General anesthetics. Basal anesthetics. Hypnotics and sedatives. Natural and synthetic narcotics. Analgesics and antipyretics. Section III, Central nervous system stimulants. Section IV, Local anesthetics. Section V, Drugs acting on autonomic effector cells: anatomical, physiological and general pharmacological considerations. Drugs stimulating structures innervated by cholinergic nerves. Drugs stimulating structures innervated by adrenergic nerves. Autonomic blocking agents. Section VI, Histamine and its antagonists. Section VII, Cardiovascular drugs. Section VIII, Water, salt, and ions. Section IX, Drugs affecting renal function and electrolyte metabolism. Section X, Drugs affecting uterine motility. Section XI, Gases and vapors. Section XII, Heavy-metal antagonists. Section XIII, Locally acting drugs. Section XIV, Antiseptics, disinfectants, and drugs used in the chemotherapy of infectious diseases. Drugs used in the chemotherapy of helminthiasis. Drugs used in the chemotherapy of malaria. Drugs used in the chemotherapy of amebiasis. Penicillin therapy of syphilis. Drugs used in the chemotherapy of tuberculosis and leprosy. Antibiotics. Section XV, Drugs used in the chemotherapy of neoplastic disease. Section XVI, Drugs acting on the blood and the blood-forming organs. Section XVII, Hormones and hormone antagonists. Section XVIII, The vitamins. Appendices: Principles of prescription writing. General principles of toxicology. Index.

Note: A widely-used, comprehensive work. It is arranged in 18 sections, the titles of all of which are given above, and in 5[illegible] chapters. All but a few of the chapters are devoted to specific groups of drugs. In these chapters, the drugs are taken up individually and discussed under such headings as "History," "Chemistry and preparations," "Routes of administration and dosage," "Absorption, fate and excretion," "Pharmacological actions," and "Therapeutic uses." Other sub-headings are used where appropriate; for example, in the discussions of anesthetic drugs, there is some emphasis on correlation between chemical structure and physiological and pharmacological actions of specific drugs. Very extensive literature references are included. The first edition was published in 1941. The organization of this second edition is essentially the same. Otherwise the book is the result of a complete revision, approximately 50 per cent.

HARDY, JAMES D.

Fluid therapy. 77 illustrations. Philadelphia: Lea & Febiger, 1954. 255 p. illus. 24 cm. $5.50. 4213

Contents: General physiology of body fluid metabolism. Methods. Classification of states of water and electrolyte imbalance. The diagnosis of fluid imbalance. Treatment of fluid imbalance. Routine management—fluid therapy in patients who are not dehydrated preoperatively and who have no postoperative complications. Repair of [illegible]. The management of abnormalities of potassium metabolism. The management of abnormalities of [illegible]—acidosis and alkalosis and therapy. Common [illegible]. Calcium and magnesium—metabolism and therapy. Common surgical problems—pyloric and duodenal obstruction, small bowel obstruction, and pancreatic and small bowel fistulas. Fluid therapy in infants and children. Fluid therapy in the elderly—some guides to management. Heart failure, diabetic acidosis, and adrenocortical insufficiency—some comments on their management. Urology, neurosurgery and orthopedics. Renal failure—acute and chronic. The early treatment of burns. The management of blood loss. Liquid alimentation. Complications of intravenous fluid therapy. Index.

Note: In this book knowledge pertaining to basic physiology is integrated with practical fluid therapy. Physiologic aspects are discussed in the introductory chapter and, in addition, physiologic considerations are introduced in the specific chapters that form the bulk of the volume. The book is directed primarily to surgeons. The author is Chairman of the Department of Surgery and Director of Surgical Research in the University of Mississippi Medical Center.

HYMAN, HAROLD THOMAS

Handbook of treatment. Philadelphia: J B Lippincott Company, 1955. 511 p. 24 cm. $8.00. 4214

Note: A compact cyclopedia of internal medicine in which the emphasis is on the common disorders encountered in the general practice of medicine. The main topics are arranged in alphabetical order, ranging from "acidosis" to "xanthoma." Troubles such as alcoholism and malaria are included, along with specific diseases. Related diseases are grouped; for example, scarlet fever is to be found under streptococcal infections. The volume is fully indexed to facilitate the location of topics not in alphabetical order. In general, the articles on individual disorders are subdivided under "General principles," "Immediate care," and "Continuing care." A wide range of drugs is mentioned at appropriate points, and 10 pages are devoted to dietotherapy, including many typical diets.

MINER, ROY WALDO, editor

Oral fat emulsions. Consulting editor Fredrick J Stare. New York: Published by the Academy, 1952. 139 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 56, art. 1) $3.00. 4215

Contents: Introduction to oral fat emulsions, by F J Stare. The importance of fat in the diet, by R. W. Swift. Fat absorption and the experimental basis of oral fat emulsions, by R. P. Geyer. Clinical studies on the use of an oral fat emulsion, by M. Shoshkes. Oral fat emulsions in the study of caloric-nitrogen relationships in man, by T B Van Itallie and others. Oral fat emulsions in the feeding of patients with severe burns, by S. M. Levenson and others. Fat ingestion and chylomicrons, by H. Necheles. The use of oral fat in hyperalimentation and parenteral alimentation, by A. A. Albanese. The use of oral fat emulsions in experimental and clinical medicine, by A. Grollman. The use of oral fat emulsions in surgical patients by mouth, gastrostomy and jejunostomy—clinical and metabolic studies, by I F Stein, Jr and others. The use of an oral fat emulsion in the supportive treatment of pulmonary tuberculosis, by M. E. Dailey. Experimental studies in human gastric physiology—I. The effect of fat upon gastric evacuation after partial gastrectomy, by W. R. Waddell and C. C. Wang. Absorption of orally administered emulsified lipid in pancreatic insufficiency in infants and children, by C. U. Lowe and C. D. May. Oral fat emulsions combined with protein supplements in the management of acute poliomyelitis, by G. J. Balsam. Laboratory and clinical studies following the use of an oral fat emulsion, by S. D. Jacobson. Forced high-calorie low-protein diet in the treatment of uremia, by W. J. Kolff. Importance of calories in the growth of children, by I. G. Macy. Interrelationships of foodstuffs, by J. P. Peters.

Note: Papers presented at a conference held by the Section of Biology of the New York Academy of Sciences in April, 1952, are published in this volume. The authors and titles are given above. Most of the papers include literature references. Generally speaking, the papers report clinical case experience or the results of research.

MODELL, WALTER

The relief of symptoms. Philadelphia: W B Saunders Company, 1955. 450 p. 24 cm. $8.00. 4216

Contents Part I, Theory: An argument for the relief of symptoms. The nature of relief. The complaint. Placebo action of drugs. The trial with the drug. Part II, Practice: Pain. Anxiety Insomnia. Gas. Constipation. Diarrhea. Loss of appetite. Obesity. Palpitations. Edema. Dyspnea. Cough. Fever. Weakness and fatigue. Nausea and vomiting. Vertigo. Itch. Hiccups. Unconsciousness. Convulsions. Skeletal muscle spasm. Menstrual disorders. Frequency and dysuria. Jaundice. Headache. Part III, Counsel: Cortisone and the masking of symptoms. Index.

Note This book is unusual in that it is devoted to the relief of symptoms, pain, or distress rather than to the cure of disease. The five chapters in the 91-page first part are introductory and general. The remainder of the space is devoted to methods for the relief of symptoms or distress in the conditions and disorders named in the chapter titles. The chapters vary in length but one that on the relief of pain, is more than 50 pages long. None of them is a mere tabulation of emergency measures. In most chapters a number of techniques are discussed and compared, and selected references to other literature are given. The author is a member of the faculty of Cornell University Medical College.

MOYER, CARL A

Fluid balance, a clinical manual Chicago The Year Book Publishers, 1952 191 p 18 cm $3 75 4217

Contents. Early studies on body fluids. Chemistry of body fluids. Body fluid equilibrium. Disturbances of body fluid equilibrium. Evaluation of diagnostic signs of fluid imbalance. Clinical and laboratory signs of changes in fluid volume and osmolar concentration. Diagnosis of changes in ionic composition of body fluids. Distributional shift of extracellular fluid. Descriptive diagnoses of fluid imbalance. Treatment of fluid imbalance. Role of fluid therapy in surgical patients and in trauma. Complications of parenteral fluid therapy Index.

Note A short but useful volume on the diagnosis and treatment of fluid and electrolyte imbalances. There is some emphasis on the rapid interpretation of signs and symptoms. Lists of literature references are included. The author is Professor of Surgery in the School of Medicine of Washington University

REHFUSS, MARTIN EMIL, AND ALISON HOWE PRICE

A course in practical therapeutics Third edition. Baltimore The Williams & Wilkins Company 1956 972 p illus. (part col'd) 29 cm $15 00 4218

Contents (abridged) Section I, General therapeutic principles Diagnostic survey Adjustment of the patient. Prescription writing. Dietary principles. Nursing problems of interest to the physician. Contents of the physician's bag Section II, Symptomatic therapy Section III, Treatment of specific disorders Vitamin deficiency states and nutritional disorders. Digestive tract disorders. Diseases of blood and blood-forming organs. Diseases of the heart. Peripheral vascular diseases. Diseases of the kidneys. Venereal diseases. Respiratory diseases. Arthritis. Allergic disorders. Physical agents and poisons. Infectious diseases. Systemic mycoses. Endocrine disorders. Section IV Special treatment Antibiotics. Steroid therapy Psychosomatic medicine. Industrial therapeutics. Preoperative treatment. Body water and electrolytes. Therapeutic use of parenteral solutions. Oxygen therapy Radioactive isotopes. Radiation therapy Index.

Note A comprehensive, well-organized work which was originally developed from material used in instructing medical students in a two-year course in practical therapeutics in Jefferson Medical College in Philadelphia. It is used as a textbook and as an office reference book by general practitioners of medicine. It provides a broad and at the same time detailed presentation of the subject. In this third edition, the third section is 583 pages long. It covers the symptoms, differential diagnoses, and treatment of a large number of diseases classified under 19 headings similar to those quoted under Section III above. The second edition was published in 1951 Many parts of the book, especially in Sections III and IV were rewritten for this third edition in order to incorporate information on new drugs and new methods of treatment There are 101 figures and, again, they include many large-scale reproductions of drawings upon which reference points in diagnosis and therapeutic techniques are marked in color

SNIVELY, WILLIAM D, AND MICHAEL J SWEENEY

Fluid balance handbook for practitioners. Illustrations by Kathleen Calhoun. Springfield, Ill Charles C Thomas, 1956 326 p. illus. (part col d) 23 cm. $6 75 4219

Contents (abridged) Part I, Foundation facts. Body fluid types. Composition of body fluid. Gains and losses of body fluids. Body automation. Part II, Clinical diagnosis Specific fluid imbalances—three basic types. Changes in properties of extracellular fluid. Changes in position of extracellular fluid. Changes in the nutritional status of the body Systematic diagnosis. Part III, Therapy—changes in properties of extracellular fluid Yardstick for dosage. Balanced solutions. Pump priming solutions. Replacement solutions. When body homeostasis is impaired. Part IV Therapy—changes in position of extracellular fluid. Part V Therapy—changes in nutritional status of body Part VI, Therapy—routes of administration. Part VII, Down to cases. Epilogue. References for additional reading. Quotations. Index.

Note. A broad, elementary presentation of basic information on fluid balance and fluid therapy It is addressed, as indicated in the title, to graduate practitioners of medicine and is of special interest to general practitioners who work at some distance from diagnostic laboratories. The elementary basic knowledge is outlined in the first 35 pages. The rest of the book is devoted to clinical aspects, with approximately half of the space devoted to therapy The organization is somewhat unconventional and the style is lighter than in most medical texts. The list of references for additional reading is well selected.

WEISBERG, HARRY F

Water, electrolyte and acid-base balance, normal and pathologic physiology as a basis for therapy Baltimore Williams & Wilkins Company 1953 245 p. illus. 24 cm. $5.00. 4220

Contents Section I, Normal physiology Introduction. Concentration in milliequivalents per liter Body water Body electrolytes. Acid-base (anion-cation) regulation. Section II, Pathologic physiology: Abnormal exchanges of water and electrolytes. Dehydration. Electrolyte alterations. Acidosis and alkalosis. Aids in diagnosis. Nutritional status. Fluids. Electrolyte repair solutions. Adjuvant therapy Compendium. References. Glossary Index.

Note A practical introduction to fluid therapy intended for medical students and practicing physicians. It presents the facts from a large body of journal literature, and, although succinctly done, is readable. The section on normal physiology is 44 pages long and that on pathologic physiology is 132 pages long. The chapter entitled "Compendium" in the latter discusses the application of the basic knowledge to problems in the management of patients. The bibliography gives references to 198 publications. The book was developed from a seminar conducted by the author at Mount Sinai Hospital in Chicago and from material prepared by him and others for an exhibit and symposium sponsored by the College of American Pathologists and the American Society of Clinical Pathologists.

WELT, LOUIS

Clinical disorders of hydration and acid-base equilibrium. Boston Little, Brown and Company 1955 262 p. illus. 22 cm. $6.00. 4221

Contents Part one, Physiologic considerations Definitions. The volumes and composition of body fluids. Internal exchanges of water and electrolytes. Extrarenal external exchanges of electrolytes and water Acid-base relationships. Renal physiology Consequences of expansion and contraction of the body fluids. Part two, Clinical considerations Maintenance requirements for water, salts and carbohydrate General comments on the use of parenteral fluids. Dehydration, general comments. Specific clinical examples of dehydration. Adrenal cortical insufficiency asymptomatic hyponatremia and diabetes insipidus. Disorders of acid-base equilibrium. Pathogenesis and management of edema. Acute renal insufficiency (acute tubular necrosis) Bibliography Index.

Note A concise monograph written by a recognized authority on fluid and electrolyte metabolism. The first 87 pages are devoted to the basic physiologic aspects, while approximately 115 pages are

... over to clinical aspects, including both pathogenesis and treatment. Considerable cost experience is incorporated in the clinical part. The book is based on the literature, including the author's own publications. In both parts references are made from statements in the text to citations of sources articles in the bibliography. The latter contains 437 references to literature in English.

PHARMACOLOGY AND TOXICOLOGY

ANTIBIOTICS ANNUAL 1955–1956 Edited by Henry Welch and Felix Marti Ibañez. New York Medical Encyclopedia, Inc., 1956 994 p. illus. 26 cm. $10.00. 4222

Note: Published in this volume are the proceedings of the Third Annual Symposium on Antibiotics sponsored by the Division of Antibiotics of the United States Department of Health, Education, and Welfare, Food and Drug Administration. More than 150 papers and the proceedings of four panel discussions are included. The symposium was an international one, participated in by scientists from 16 nations including the United States of America. Many of the papers discuss clinical experiences with antibiotics, [illegible] considerable number of them deal with new antibiotics, and [illegible] of four is devoted to the use of antibiotics in the preservation of food. Literature references are included in most of the papers. The volume contains [illegible] subject index and an index to the names of authors of the papers, but not to the names of the authors of cited literature. The 1956–57 annual was published in 1957 1,114 p. $12.00

BECKMAN HARRY

Pharmacology in clinical practice. With 152 illustrations. Philadelphia W B Saunders Company 1952 839 p. illus. 25 cm. $12.50. 4223

Contents: Section [illegible] Clinical use of drugs. Allergy. Anesthesiology. Antibiotics. Autonomic pharmacology. Cardiology (including the vascular diseases). Dentistry. Dermatology. Endocrinology. Gastroenterology. Hematology. Internal medicine. Neuropsychiatry. Obstetrics. [illegible] Ophthalmology. Otorhinolaryngology. [illegible] Surgical specialties. Venereology. Section II. Drug data. A compendium of drugs. Index.

Note: In this the author, director of the Departments of Pharmacology at the Marquette University Schools of Medicine and Dentistry has made [illegible] special effort to present pharmacology from the viewpoint of practitioners of medicine and dentistry. The table of contents given above shows the special arrangement of the material. Under each of the main headings in the first part, diseases and other conditions amenable to drugs are concisely described first, than the pharmacology [illegible] taken up. Drugs are discussed in connection with conditions to which they apply and their dosage and effects are indicated. The second section is [illegible] concise catalogue of drugs in which their chemical nature, physical properties, etc., are briefly stated. It is arranged alphabetically and includes some United States of America proprietary names. Instead of referring to an extensive literature, the author mentions books for supplementary reading. An excellent index covering nearly 70 pages facilitates reference use of the volume.

BEYER, KARL H.

Pharmacological basis of penicillin therapy Springfield, Ill. Charles C Thomas, 1950. 214 p. illus. 22 cm. (American lecture series. Publication number 77 American lectures in pharmacology edited by Chauncey D Leake) $4.50. 4224

Contents (abridged): Penicillin pharmacology. Mode of action of penicillin. Repository penicillin preparations. Penicillin excretion. Addendum—[illegible]. Index.

Note: The reactions of the body to penicillin rather than the reactions between drug and organisms with which the body may be infected are the subject of this monograph. The physiological reactions to aqueous solutions and to [illegible] suspensions, for example are described and those [illegible] which determine the methods of delaying the elimination of penicillin from the body. One chapter is devoted to [illegible] discussion of the enzymological bases of the inhibitory effect of compounds on the renal excretion of the drug. There [illegible] bibliography of 47 references. The book is of interest both to general medical practitioners and to pharmacologists.

BLOCK WALTER D., AND KORNELIUS VAN GOOR

Metabolism, pharmacology and therapeutic uses of gold compounds. Springfield, Ill. Charles C Thomas 1956 76 p. 22 cm. (American lecture series. Publication no. 282 A monograph in American lectures in dermatology edited by Arthur C. Curtis) $2.75 4225

Contents: Historical. Chemistry of gold compounds. Metabolism. Mode of action of gold salts in therapy. Therapeutic results with gold compounds. Toxicity. Prevention of toxicity and detoxification. Conclusion. Bibliography. Index.

Note: A concise survey of the history and present status of gold compounds in therapy. Primarily [illegible] is an exploration of the present unsatisfactory state of knowledge on the mode of action of gold compounds and on their toxicity. The author concludes, "The mode of action of gold salts in therapy is not known. The occurrence of toxic reactions [illegible] is for the most part unpredictable. [illegible] Such limitations certainly justify the severe criticism to [illegible] which gold therapy has been subjected. The bibliography provides 214 references to the international literature.

BURGER, ALFRED

Medicinal chemistry: chemistry biochemistry therapeutic and pharmacological action of natural and synthetic drugs. New York Interscience Publishers, Inc., 1951 2 vols. 23 cm. $11.50 per vol. 4226

Contents (abridged): Volume I: Historical development of medicinal chemistry. Relation of chemical structure and biological activity. Biological [illegible] of drugs. Physical properties and biological activity. [illegible] Anticonvulsant drugs. Analgesics. Hypnotics and sedatives. [illegible] Parenteral fluid therapy. [illegible] Analeptics. Cardiovascular drugs. [illegible] Drugs eliciting symptoms in the gastrointestinal tract. Adrenergic drugs. Parasympathetic stimulants. Curare and curareform drugs. Antispasmodics. Histamine and antihistaminic drugs. Diagnostic agents. Thyroxine and antithyroid drugs. Drugs for the treatment of cancer. The vitamins. Subject index. Volume II: The hormones. Essential amino acids and fatty acids. Theories of metabolite antagonism. [illegible] in chemotherapy. The sulfonamide drugs. Antimalarials. Chemotherapy of acid-fast infections. Metal-free drugs used in tropical diseases. Antibiotics. Antifungal agents. Anthelmintics. Antiseptics. Cumulative index. Volumes I–II.

Note: An inclusive treatise in [illegible] which the chief drugs currently used in medicine are discussed and described. The preliminary chapters are brief; for example, the chapter "Relation of chemical structure and biological activity" is only nine pages long. Most of the space is given to chapters on the classes and groups of drugs [illegible] which are named in the table of contents. In these chapters the drugs are described from the chemical standpoint. A formula diagram is usually included; and in addition such points as theory of action, methods of testing, and synthesis are covered. Numerous references to pertinent articles are given as footnotes but the author did not attempt an extensive bibliography.

CANTAROW ABRAHAM AND MAX TRUMPER

Lead poisoning Baltimore The Williams & Wilkins Company 1944 264 p. illus. 23 cm. $1.50. 4227

Contents: Absorption, transportation, deposition and excretion of lead. Pathology and pathological physiology. Clinical manifestations. Lead in blood, body fluids and excretions. Normal intake of lead. Treatment of lead poisoning. Occurrence of chronic lead poisoning. Lead products in industry. Procedures for determination of lead, by M. R. Jacobs. Bibliography. Index.

Note: The authors have sifted the literature on the subject and have presented the data which they believe are essential to [illegible] comprehensive understanding of the nature, prevention, and management of lead poisoning. On controversial issues they have indicated their personal opinions which are based on the study of hundreds of workers exposed to lead hazards. The book is of interest to physicians in industry and to others concerned with the subject, including medical college students.

DRILL, VICTOR A , editor

Pharmacology in medicine a collaborative textbook New York McGraw Hill Book Company, Inc., 1954 1,264 p illus. 28 cm $19 50 4228

Contents (abridged) Introduction. General anesthetics. Local anesthetics. Adjuncts to anesthesia. Sedation, hypnosis, and analgesia. Central nervous system stimulants. The autonomic nervous system The cardiovascular system. Water and salt balance. Allergic manifestations. The gastrointestinal tract. Dermatomucosal agents. The hematopoietic system. The metals and radioactive elements. Gases, vapors, and dusts. The vitamins and other nutritional factors. The endocrine glands and accessory reproductive organs. Specific chemotherapy Index.

Note A comprehensive work composed of 18 parts hose titles are listed above and 87 chapters. Authorship f each chapter is indicated in the book. Most of the 82 contributors are teachers of pharmacology or allied subjects in medical colleges of the United States of America. The typical chapter deals ith a single group of drugs, for example histamine and antihistaminics, and covers the group as to history chemistry physiological effects, absorption, fate and excretion, tolerance and therapeutic uses. Some chapters are devoted to such topics as fluid therapy rather than to drugs. Literature references are given in the chapters. The comprehensive scope of the book makes it useful to graduate physicians as ell as to students.

DUGGAR, BENJAMIN MINGE, AND OTHERS

Aureomycin—a new antibiotic. Consulting editor J H. Williams. New York The New York Academy of Sciences, 1948 168 p illus. (part col d) 24 cm (New York Academy of Sciences Annals. Vol 51, p 175–342, 1948) $2 50 4229

Contents Aureomycin, product of the continuing search for new antibiotics, by B M. Duggar The pharmacology of aureomycin by B K. Harned and others. Bacteriological studies of aureomycin, by C. W Price and others. The determination of ureomycin in serum and other body fluids, by A. C. Dornbush and E. J Pelcak. In vitro studies with aureomycin, by C. A. Chandler and E. A. Bliss. Laboratory studies with aureomycin, by T P Paine Jr and others. Clinical studies with ureomycin, by H. S. Collins and others. Studies on serum concentrations in humans and preliminary observations on the treatment of human infections with ureomycin, by H. F Dowling and others. Use of aureomycin on some experimental infections in animals, by P A. Little. T eatment of experimental infections with aureomycin, by M. S. Bryer and others. The pharmacology and clinical trial of aureomycin a preliminary report, by E. R. Schoenbach and others. Aureomycin in ocular infections, by A. E. Braley and M. Sanders. Action of ureomycin against experimental rickettsial and iral infections, by S. C. Wong and H. R. Cox. Aureomycin—a new antibiotic with antirickettsial properties its effect on experimental spotted fever and epidemic typhus, by L. Anigstein and others. The treatment of lymphogranuloma venereum and granuloma inguinale in humans with ureomycin, by L. T Wright and others. Treatment of Q fever in man with ureomycin, by E. H. Lennette and others.

Note Aureomycin an antibiotic obtained from mold belonging to the streptomyces group, as first isolated at the Lederle Laboratories of the American Cyanamid Company in November 1947 These papers, which were originally presented at a conference held in July 1948 under the uspices of the New York Academy of Sciences, describe and evaluate series of experiments conducted by the authors to determine the effectiveness of ureomycin in treating arious rickettsial and iral diseases The material is addressed to research workers in the fields of medicine pharmacology and bacteriology

FLIPPIN, HARRISON F AND GEORGE M EISENBERG

Antimicrobial therapy in medical practice. Philadelphia F A Davis Company, 1955 284 p 24 cm $5 00 4230

Contents. Antimicrobial agents. Antimicrobial combinations and adjuvants. Laboratory aspects of antimicrobial therapy Complications of antimicrobial therapy and their management Diagnosis of infectious diseases. Antimicrobial therapy of specific infectious diseases. Prophylactic use of antimicrobial agents. Antimicrobial therapy—looking into the future. Appendix: Partial index of commercially available antimicrobial agents. References. Index.

Note A concise and useful manual, designed for the instruction of advanced students of medicine and the guidance of medical practitioners. It identifies the established antibiotics and sulfonamides, describes uses, dosages and complications that may ensue hen they are used therapeutically The chapter on diagnosis is a brief one and is essentially in the nature of a warning to the practitioner not to be rushed into prescribing a therapeutic agent that may modify true disease and confuse the diagnosis. More than 100 pages are devoted to the antimicrobial therapy of specific infections and diseases. In this part of the book, specific diseases are covered from the standpoint of the use of antimicrobial agents in their therapy The physician is told also hen the effectiveness of such agents has not been established, as in treating the common cold. The list of references is a selected but moderately extensive one. The uthors are members of the faculty of the Graduate School of Medicine of the University of Pennsylvania.

GRIFFITH, JOHN Q , JR., AND OTHERS

Rutin and related flavonoids chemistry, pharmacology, clinical applications. By John Q Griffith, jr Charles F Krewson and Joseph Naghski Easton Pa. Mack Publishing Company, 1955 275 p illus. (part col'd) 23 cm $7 50 4231

Contents Introduction. The chemistry of rutin and the technology of its manufacture. General physiology involved in vascular fault. Capillary permeability and movement of lymph. Capillary fragility The pharmacology of rutin and related flavonoids. Evaluation of flavonoids in radiation injury Incidence of capillary fault and effect of rutin therapy The use of mortality statistics in the evaluation of therapy Effect of rutin therapy on mortality The physiology and treatment of retinal hemorrhage Clinical applications of rutin in other vascular abnormalities. Preparation and clinical applications of quercetin. Bibliography Index.

Note A comprehensive though not an exhaustive review of clinical experience with rutin to approximately the close of 1953, together with information on the chemistry and production of the substance, a review of the literature on some other flavonoids, and a chapter reporting the results of preliminary studies on quercetin. It is based both on the authors' extensive work in the field and upon the published ork of others. The bibliography includes 800 citations.

GROLLMAN, ARTHUR

Pharamacology and therapeutics a text book for students and practitioners of medi cine. Second edition, revised and enlarged. 127 illustrations Philadelphia Lea and Fe biger, 1954 866 p illus 24 cm 4232

Contents. Introduction. General anesthetics. The aliphatic alcohols. Morphine and other opium alkaloids. Analgesics and antipyretics. Hypnotics and sedatives. Analeptics or antiepileptics. Stimulants of the central nervous system. Drugs acting on autonomic effector cells. Epinephrine and other drugs stimulating structures innervated by adrenergic nerves. Drugs inhibiting structures innervated by adrenergic nerves. Drugs stimulating structures innervated by cholinergic nerves. Depressants of the postganglionic cholinergic nerves. Drugs inhibiting autonomic ganglia and skeletal muscles. Histamine and antihistaminic compounds. Local and regional anesthetics. Drugs acting primarily on the cardiovascular system. Drugs acting primarily on the gastrointestinal tract. Drugs acting primarily on the kidney—diuretics. Chemotherapy The sulfonamides and related compounds. The antibiotics. Quinine and other antimalarials. Local anti-infectives and other drugs characterized chiefly by their local action The hormones and drugs acting on the endocrine organs The vitamins. Drugs acting on the blood and hematopoietic system. Water and other non-metallic compounds. The metalloids—Arsenic, antimony and bismuth. The heavy metals. Vaccines, sera and miscellaneous biologicals. Appendix A, Prescription riting Appendix B, Classification of drugs according to their therapeutic uses. Index.

Note A modern work in hich the great advances of chemotherapy in recent years are adequately reflected. As is common in books of this kind, most of the space is devoted to discussions and descriptions of groups of drugs and of specific drugs. In general, the information given on each drug includes the chemical name, structural formula (when known) physiological action, therapeutic uses, dosage and methods of administration. Selected literature references are given throughout. The first edition as published

in 1951. The organization of this second edition is the same, but numerous revisions have been made, most of them to include descriptions of new drugs. A selection of literature published since the first edition was written has been added to the bibliography. The author ... Chairman of the Department of Experimental Medicine of the Southwestern Medical School of the University of Texas. A new edition was scheduled for publication early in 1958.

GROVE, DONALD C AND WILLIAM A. RANDALL

Assay methods of antibiotics a laboratory manual. New York Medical Encyclopedia, Inc., 1955 238 p. illus. 23 cm. (Antibiotics monographs no. 2 Under the editorial direction of Henry Welch and Félix Martí Ibáñez) $5.00. 4233

Contents (abridged) Penicillin. Streptomycin and dihydrostreptomycin. The tetracyclines (chlortetracycline, oxytetracycline, and tetracycline) Chloramphenicol Bacitracin Tyrothricin. Polymyxin. Neomycin. Erythromycin Carbomycin. Viomycin Fumagillin. [illegible] Anisomycin. Assay of mixtures of antibiotics in pharmaceutical dosage forms. Identification of the antibiotics: Qualitative tests. Ultraviolet absorption spectra. Infrared absorption spectra. Optical rotations of antibiotics. Optical-crystallographic method for the identification of crystalline antibiotics. Tests for toxicity, pyrogens, histamine, and sterility. Methods for the determination of bacterial susceptibility to antibiotics. Miscellaneous tests and methods. Media, solutions, reagents, and apparatus. References. Index.

Note: The methods described in this reference book are largely those in use in the laboratories of the Food and Drug Administration of the United States Department of Health, Education and Welfare. Methods for the assay of all antibiotics in commercial production in the United States of America when the book was written are included. Several methods are described for each antibiotic, and for the most important, such as penicillin, microbiologic assay methods, chemical methods for the assay of bulk and pharmaceutical dosage forms, and methods for determination of the substance in body fluids and other materials, such as blood, tissue and milk, are included. Laboratory procedures are described explicitly and in adequate detail for the guidance of experienced technicians. Inclusion of methods for the assay of pharmaceutical dosage forms ... noteworthy.

HUSSAR, ALLEN E. AND HOWARD L. HOLLEY

Antibiotics and antibiotic therapy a clinical manual. New York The Macmillan Company 1954 475 p. 21 cm. $6.00. 4234

Contents (abridged) Part I, The fundamentals of antibiotic therapy Mode of action of antibiotics. Antimicrobial spectrum. Indications for use of antibiotics. Complications of antibiotic therapy Combinations of antibiotics. The causes of therapeutic failure. Part II, General description of the antibiotics in clinical use. Penicillin. Streptomycin Aureomycin Terramycin Tetracycline. Chloramphenicol Bacitracin Polymyxin Neomycin Tyrocin Erythromycin. Carbomycin. Part III, The drug of choice: Bacterial infections and diseases. Rickettsial infections and diseases. Parasitic infections and diseases. Infections in the specialized fields—pediatrics—surgery—obstetrics—otolaryngology—ophthalmology [illegible] dentistry. Subject index.

Note: A comprehensive and useful reference book addressed to general practitioners of medicine. The principles of antibiotic therapy are concisely stated in the first part, which is only 14 pages long but contains a selected bibliography of 134 references. About 150 pages are devoted to essays on the individual antibiotics. In these essays information is provided on such matters as the antimicrobial activity of the specific antibiotic, acquired resistance to it on the part of bacteria; absorption, excretion, and blood levels, side reactions; preparations and dosage, and literature references. The third part on the choice of drugs is 170 pages long, and is specifically designed to aid medical practitioners in the choice of antibiotics for specific uses. Well selected bibliographies are included in this part also.

INTERNATIONAL CONFERENCE ON VENOMS

Venoms papers presented at the First International Conference on Venoms December 27–30 1954 at the annual meeting of the American Association for the Advancement of Science Berkeley California. Edited by Eleanor E. Buckley and Nandor Porges. Washington, D C American Association for the Advancement of Science 1956 467 p. illus. 24 cm. $9.50 4235

Note: Fifty-one papers contributed by more than 80 scientists from many nations, including the United States of America, are contained in this publication. The individual papers range in scope from a clinical account of a single case of venomous poisoning to reports of extensive research investigations on the biochemistry and modes of action of specific venoms. The volume contains some information on the venoms of most of the known poisonous animals of the world. A very detailed subject index has been included, thus facilitating its use for reference.

JENKINS, GLENN LLEWELLYN AND WALTER H. HARTUNG

The chemistry of organic medicinal products. Third edition. New York John Wiley & Sons, Inc., 1950 745 p. illus. 24 cm. 4236

Contents. Hydrocarbons. Halogenated hydrocarbons. Hydroxyl derivatives of hydrocarbons. Ethers and other peroxides. Carbonyl group. Carboxyl group. Natural mixtures. Amines and amino derivatives. Cyanides and nitro compounds. Sulfur compounds. Compounds of phosphorus, arsenic, and antimony. Metallic derivatives of organic compounds. Heterocycles containing one heteroatom. Heterocycles containing two or more heteroatoms. Stereoisomerism. Some physico-chemical properties of medicinal products. General bibliography. Index.

Note: An introductory but fairly substantial survey. The organization of the book and much of the discussion are based on the chemical aspects rather than the medical. Usually the material on a substance or product includes its chemical history, one or more structural diagrams, and descriptions of the important methods of synthesis. However physiological reactions and medical uses also are mentioned. In this edition many sections, particularly those on the antibiotics, the antimalarials, the antihistamines, and enzymes, have been rewritten in line with recent advances. Also, there have been extensive changes in the bibliographical footnotes and some additions to the general bibliography. In addition to its use as a text for college students of organic chemistry, medicine, pharmacology etc., the book has some value as reference material. A fourth edition was published in 1957. 569 p., $10.75.

KAREL, LEONARD AND ELIZABETH SPENCER ROACH compilers

A dictionary of antibiosis. New York Columbia University Press 1951 373 p. 25 cm. $8.50. 4237

Note: A reference book of comprehensive scope within its field. It includes not only the names of fungi and other plants from which antibiotic substances have been derived but also the names of those that have been tested, the names of organisms (mostly bacteria) used in tests, and the names of antibiotic substances. Most entries are short and serve only to define the term and provide a literature reference. However, articles of considerable length are included for the successful antibiotics. The article on streptomycin, for instance, runs to eight columns and covers a wide range of chemical and clinical information. There is an extensive bibliography of the international literature.

KAYE, SIDNEY

Handbook of emergency toxicology a guide for the identification, diagnosis and treatment of poisoning Springfield Ill. Charles C Thomas, 1954 303 p. 23 cm. (American lecture series. Publication no. 214 A monograph in the Bannerstone division of American lectures in public protection edited by LeMoyne Snyder and others) $5.75 4238

Contents: Section I, Introduction. Symptoms and signs. Antidotes. Analysis. Evaluation and interpretation of analytical results. Section II, Commercial sources of poisons. Poisons generally found in household articles. Section III, Alphabetical listing of poisons. Index.

Note. The title of this book accurately indicates its purpose. It is designed for reference use by practitioners of medicine, technicians in diagnostic laboratories, law enforcement officers and others who may be called upon to treat victims of poisoning or to identify poisons. The first two sections, which contain tabulations of symptoms and signs, antidotes, a list of commercial and household products containing poisons, and other matters as noted above, occupy the first 72 pages. The remainder of the volume except the few pages occupied by the index is devoted to the alphabetical listing of poisons. In this section a variety of substances are described individually as to chemical composition, synonyms, uses, physical and chemical properties, minimum lethal dose, symptoms, identification and treatment. The author is Toxicologist in the Office of the Chief Medical Examiner of the Commonwealth of Virginia.

KRANTZ, JOHN C, JR., AND C JELLEFF CARR

The pharmacologic principles of medical practice, a textbook on pharmacology and therapeutics for medical students physicians and the members of the professions allied to medicine. Third edition. Baltimore The Williams & Wilkins Company, 1954 1,183 p illus. 24 cm. 4239

Contents (abridged) Part I, The history of pharmacology pharmacologic principles, and an introduction to drugs The scope of pharmacology The nature and source of drugs. The dosage forms of drugs. Drug control—the Pharmacopeia and other compendia. The prescription. General pharmacologic principles and the response of cells to drugs. Part II, The anti-infective drugs The chemotherapy of malaria. Response of bacteria to antibiotics. The use of drugs in the treatment of syphilis. The chemotherapy of tuberculosis. The chemotherapy of infectious tropical diseases. The chemotherapy of amebiasis. The use of drugs in helminthiasis. Part III, The response of the skin and mucous membranes to drugs. Part IV The response of the central nervous system to drugs. Part V The response of the autonomic nervous system to drugs. Part VI, The pharmacologic response of the heart and circulation. Part VII, The pharmacologic response of the reproductive system. Part VIII, Effect of pharmacologic agents on metabolism. Part IX, Miscellaneous Therapeutic aids. Dietary adjuvants. Index.

Note. A standard textbook, the first edition of which was published in 1949 and the second edition in 1951 Principles of pharmacology and therapeutics are emphasized, but as is common in such books, most of the space is devoted to concise discussions of individual drugs. In these the properties and chemical structure of the drug are first described, then the physiologic effects on blood pressure, respiration, muscles, gastrointestinal tract, metabolic processes, are described. Finally the fate of the drug in the body its toxicology and its uses in medicine are covered. The authors are members of the faculty of the School of Medicine of the University of Maryland. In preparing the third edition, the organization and scope of the book were not changed, but one chapter was deleted, one added, and many revisions and augmentations made in those carried over. Most of the changes are concerned with drugs developed since the second edition was written. The information on preparations and dosages is also a new addition, and selected references to recent literature have been added to the bibliographies. The fourth edition was published early in 1958, 1,318 p., $14.00.

LUKENS FRANCIS D W, editor

Medical uses of cortisone including hydrocortisone and corticotropin New York The Blakiston Division The McGraw Hill Book Company Inc, 1954 534 p illus 24 cm. $7 50 4240

Contents Physiology of the adrenal cortex, by J A. Russell and A. E. Wilhelmi. Pharmacologic aspects of adrenocortical hormones in man, and their effects in adrenal insufficiency by G. W Thorn and others. Rheumatoid arthritis and other rheumatic or articular diseases, by P S Hench and L E Ward Rheumatic fever by J. L. Bunim. Other collagen diseases, by G. Baehr and M. F Levitt. Asthma and rhinitis, by B Rose. Allergic reactions to therapeutic agents, by A. M. Harvey Diseases affecting the skin, by D M. Pillsbury and F Urbach. Granulomas—pulmonary granulomatoses, pulmonary fibrosis, other pulmonary conditions, by D W Richards and J H. McClement. Infections, by C. S. Keefer Eye diseases, by T E. Machella. Blood diseases and malignancy by F H. Bethell. Diseases of the kidney by J. A. Luetscher Jr Neuropsychiatric disorders, by S. Cobb and others. Index.

Note. A survey written approximately five years after the announcement of the discovery of the anti-inflammatory effects of cortisone. It is composed of the 15 chapters whose authors and titles are given above. Some of the chapters are essentially critical summaries of the literature with all important statements keyed to citations of the source articles. In contrast, others are based largely on the clinical experience of the author or authors. The book is compactly written, and a wide range of information is included. There is a very detailed subject index, but no author index.

MANSKE, R H F, AND H. L. HOLMES, editors

The alkaloids, chemistry and physiology New York Academic Press, Inc., 1950–55. 5 v illus. 23 cm Vol I–II, $14 50 per vol., vol. III, $11 00, Vol. IV, $8.50 vol. V, $9.50. 4241

Contents Volume I Sources of alkaloids and their isolation, by R. H. F Manske. Alkaloids in the plant, by W O. James. The pyrrolidine alkaloids, by L. Marion. Senecio alkaloids, by N. J. Leonard. The pyridine alkaloids, by L. Marion. The chemistry of the tropane alkaloids, by H. L. Holmes. The strychnos alkaloids, by H. L. Holmes. Author index. Subject index. Volume II: The morphine alkaloids I, by H. L. Holmes—II, by H. L. Holmes and (in part) G. Stork. Sinomenine by H. L. Holmes. Colchicine, by J W Cook and J. D London. Alkaloids of the amaryllidaceae, by J W Cook and J. D. London. Acridine alkaloids, by J. R. Price. The indole alkaloids, by L. Marion. The erythrina alkaloids, by L. Marion. The strychnos alkaloids, Part II, by H. L. Holmes. Author index. Subject index. Volume III The chemistry of the cinchona alkaloids, by R. B. Turner and R. B. Woodward. Quinoline alkaloids, other than those of cinchona, by H. T Openshaw The quinazoline alkaloids, by H. T Openshaw Lupin alkaloids, by N J Leonard. The imidazole alkaloids, by A. R. Battersby and H. T Openshaw The chemistry of solanum and veratrum alkaloids, by V Prelog and O. Jeger β-phenethylamines, by L. Reti. Ephedra bases, by L. Reti. The ipecac alkaloids, by M. Janot. Author index. Subject index. Volume IV The biosynthesis of isoquinolines, by R. H. F Manske. Simple isoquinoline alkaloids, by L. Reti. Cactus alkaloids, by L. Reti. The benzylisoquinoline alkaloids, by A. Burger The protoberberine alkaloids, by R. H. F Manske and W R. Ashford. The aporphine alkaloids, by R. H. Manske. The protopine alkaloids, by R. H. F Manske. Phthalideisoquinoline alkaloids, by J Stanek and R. H. Manske. Bisbenzylisoquinoline alkaloids, by M. Kulka. The cularine alkaloids, by R. H. F Manske. α-naphthaphenanthridine alkaloids, by R. H. F Manske. The erythrophleum alkaloids, by G. Dalma. The aconitum and delphinium alkaloids, by E. S. Stern. Author index. Subject index. Volume V Pharmacology Narcotics and analgesics, by H. Krueger. Cardioactive alkaloids, by E. L. McCawley Respiratory stimulants, by M. J Dallemagne and C. Heymans. Antimalarials, by L. H. Schmidt. Uterine stimulants, by A. K. Reynolds. Alkaloids as local anesthetics, by T P Carney Pressor alkaloids, by K. K. Chen. Mydriatic alkaloids, by H. R. Ing. Curare-like effects, by L. E. Craig. The lycopodium alkaloids, by R. H. F Manske. Minor alkaloids of unknown structure, by R. H. F Manske. Author index. Subject index. Volumes I–IV

Note An exhaustive organization of the accumulated knowledge on the alkaloids. In compact text and numerous tables, it presents in the first four volumes the information on the chemical structures and properties of this large group of substances that is of interest generally to chemists, biochemists and specialists in pharmacology. In the fifth volume—which may be used independently of the other volumes—the pharmacological aspects are dealt with specifically. Here, the approach is from the standpoint of physiological actions rather than chemical structure. Extensive literature lists are a feature of each chapter in all of the volumes. Separate author indexes to the literature citations are included in each volume, and no combined author index is provided. However the two subject indexes in the fifth volume when used together provide a subject key to the entire set.

MARTIN, GUSTAV J

Biological antagonism the theory of biological relativity New York McGraw Hill

Medicine

Pharmacology and Toxicology

Book Company Inc., 1951 516 p. illus. 24 cm. $8.50. 4242

Contents: Enzymatic inhibition by chemicals structurally related to the natural substrate. Pharmacological aspects. Sulfonamides, p-aminobenzoic acid, folic acid. Amino acid analogues, general. Methionine analogues. Tryptophan analogues. Phenylalanine-tyrosine analogues. Glutamic and aspartic acid analogues. Arginine, lysine, and histidine analogues. Proteins and protein antagonists. Metabolite analogues of pantothenic acid. Metabolite analogues of pteroylglutamic acid. Metabolite analogues of thiamine and riboflavin. Metabolite analogues of pyridoxine, nicotinic acid, and biotin. Metabolite analogues of choline, inositol, and vitamin B12. Metabolite analogues of vitamins K, E, A, C, and "P". Metabolite analogues of purines and pyrimidines. Steroid and lipid antagonisms. Thyroxine displacers. Ion antagonisms. Inorganic metabolite antagonists. Miscellaneous biological antagonists. Drug resistance and bacterial adaptation. General comment and the theory of biological relativity. Index.

Note: The concept of structural displacement—which covers the world of the antigen and antibody—is known as a storehouse of chemotherapeutic agents, and this book is published as an outline guide to those concerned with further investigations in this field. Many of the chapters include one or more tables displaying the known effects of various compounds. Molecules and compounds of organic substances are diagrammed throughout. The bibliographies at the ends of the chapters average more than two pages in length. The work is of fundamental interest and value to persons concerned with biological research, especially biochemists, enzyme chemists, immunologists, and pharmacologists.

MEDICINAL CHEMISTRY A series of reviews prepared under the auspices of the Division of Medicinal Chemistry of the American Chemical Society C M Suter editor-in-chief. Volume I. New York John Wiley & Sons, Inc., 1951 473 p. illus. 24 cm. $10.00 4243

Contents: Antithyroid compounds, by G W Anderson. Antispasmodics derivatives of carboxylic acids, by R R Burtner. Anthelmintics from plants, by C J Cavallito. Benzoates and substituted benzoates as local anesthetics, by T P Carney. Analgesics: A. Arylpiperidines, by E J Fellows and G E Ullyot. B. Partial structures related to morphine, by J Lee. Index.

—— Volume II. Editors F F Blicke, C. M. Suter associate editor L. A. Woods assistant editor Harriet Geer New York John Wiley & Sons Inc., 1956 311 p. illus. 24 cm. $10.00 4244

Contents: Some chemical aspects of the cardiac glycosides, by A. Stoll. Supplement by T L Johnson. Synthetic estrogens, by J A Hogg and J Korman. Analgesics: arylpiperidine derivatives, by C M Suter. β-haloethylamine adrenergic blocking agents, chemistry and structure-activity relationships, by G E Ullyot and J F Kerwin. Index.

—— Volume III. Editors F F Blicke, R. H. Cox associate editor L. A. Woods assistant editor Harriet Geer New York John Wiley & Sons Inc., 1956 346 p. illus. 24 cm. $10.50 4245

Contents: Methadone and related analgesics, by T P Carney. Quaternary ammonium germicides, by P L de Benneville. Non-mercurial diuretics, by V Papesch and E F Schroeder. Synthetic analogs of physostigmine, by A. Stempel and J A Aeschlimann. Index.

Note: An authoritative series devoted to the publishing of lengthy monographic reviews of the accumulated knowledge pertaining to groups of chemical compounds of medicinal interest. The three volumes published so far contain the reviews whose titles and authors are listed above. In all of the volumes much information is presented in tabular form and extensive bibliographies are a prominent feature. Some of the volumes include references to patents. The series is of interest to scientists associated with pharmaceutical manufacturing, to graduate physicians, and to biochemists.

MINER ROY WALDO editor

Bioflavonoids and the capillary. Conference co-chairmen Gustav J Martin and Albert Szent Gyorgyi. Consulting editor Gustav J Martin. New York Published by the Academy 1955 637–736 p. illus. (part col'd) 22 cm. (New York Academy of Sciences. Annals. Vol 61 art. 3) $3.00 4246

Contents: Part I. Laboratory studies. Chemistry of bioflavonoids, by W E Baker. Biochemistry of the bioflavonoids, by G. J Martin. Estrogenic activity of some naturally occurring isoflavones, by E. W Cheng and others. Responses of the flavonoids, by F Moreno. Anatomical and functional change in the peripheral vascular system during certain induced increases in vascular fragility, by R. E. Lee and others. Structural makeup of capillary wall, by B. W Zweifach. The role of the flavonoids in coumarin anticoagulant therapy, by C. E. Bramhall. Part II. Clinical studies. Rheumatic fever—observations on the histogenesis, pathogenesis, and use of ascorbic acid and bioflavonoids, by J. F Rinehart. Decidual bleeding in pregnancy, by C. T Javert. The management of habitual abortion, by R. B. Greenblatt. A stimulus for the use of hesperidin and ascorbic acid in the management of purpura, by G. J Boines. Summary of the clinical aspects of bioflavonoids and ascorbic acid, by J B Youmans. Perspective for the bioflavonoids, by A. Szent-Gyorgyi.

Note: Papers originally presented at a conference held by the Section of Biology of the New York Academy of Sciences in February 1955, are published in this monograph and are listed by author and title above. Literature references are included in all of the papers and transcripts of discussion for most of them. The terminal article is a survey of the state of knowledge of the bioflavonoids and ascorbic acid and a summary of the conference. Among the conclusions in this summary is the following: "We might agree that there is evidence, not conclusive but suggestive, and suggestive in varying degrees, that these substances do have some beneficial results in the case of clinical medicine but I think we need additional research, additional indexes involving some of the other chemical and biochemical actions which have been described here to be applied in the case of clinical tests, so that we can come out with a more clear-cut understanding of the action and mechanism of these substances."

MINER ROY WALDO editor

Paul Ehrlich centennial. Conference co-chairmen R. J Schnitzer and E. Grunberg. Consulting editor E. Grunberg New York Published by the Academy 1954 141–276 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 59 art. 2) $3.00 4247

Contents: Portrait busts of Paul Ehrlich and Emil von Behring. Opening remarks, by J A. Aeschlimann. Address and presentation of busts of Paul Ehrlich and Emil von Behring, by H. L. Kretchler. Introductory remarks, by E. Grunberg. Paul Ehrlich's influence on chemistry and biochemistry, by H Bauer. Ehrlich's side-chain theory in the light of present immunology, by E. Witebsky. Ehrlich and problems of immunity, by B Schick. Paul Ehrlich and the cancer problem, by C P Rhoads. The chemotherapy of trypanosome infections, by C H. Browning. Chemotherapy of spirochetal infections, by J A Kolmer. Chemotherapy of bacterial infections, by R J Schnitzer. Drug resistance, by H. Eagle. Vital staining, by N C. Foot. Blood morphology, by P Reznikoff.

Note: Papers originally presented at a conference held in honor of the centennial of the birth of Paul Ehrlich by the Section of Biology of The New York Academy of Sciences in March, 1954, are contained in this publication. In addition to stressing the importance of Ehrlich's work, they present a picture of the current state of chemotherapy. Literature references are included in some of them.

MINER ROY WALDO editor

Tissue culture technique in pharmacology. Conference co-chairmen C. M. Pomerat and Elmer L. Severinghaus. Consulting editor C. M Pomerat. New York New York Academy of Sciences, 1954 971–1326 p. illus. 22

cm. (New York Academy of Sciences. Annals Vol 58, art. 7) $4 50 4248

Contents Introduction—tissue culture, past, present, and future, by M J Kopac. Part I, Pure strain, long-term and mass culture methods commercial and synthetic media virology Responses of a variety of normal and malignant cells to continuous cultivation and some practical applications of these responses to problems in the biology of disease, by G. O Gey and others. Certain factors limiting the size of the tissue culture and the development of massive cultures, by W R. Earle and others. Studies of certain defined media for testing proliferation in replicate tissue cultures, by V J Evans and others. Chemically defined synthetic nutrients for tissue cultures for pharmacological studies, by P R. White and C. Waymouth. The certification of commercial culture media, by K. R. Porter Growth of cells in agitated fluid medium, by O von H. Owens and others. The application of mammalian cells in continuous culture for assays in virology by J T Syverton and W F Scherer The application of tissue cultures to the preparation and assay of viral antibodies, by J. F Enders. Drug action on cells *in vitro* (exhibition of a motion picture) by R. Lettré. Activities and responses of living cells and their components as recorded by cinephase microscopy and electron microscopy by G. O. Gey and others. Part II, Special assay technique comparison between *in vitro* and *in vivo* results Short term cultures for drug assays—general considerations, by C. M. Pomerat and C. D Leake. Assay of carcinolytic and carcinostatic agents, by J J Biesele. Metabolic and chemotherapeutic investigation of human glioblastoma *in vitro*, by M. R. Murray and others. A comparison of *in vivo* and *in vitro* tests for antineoplastic activity of eight compounds, by P A. Eichorn and others.

Note. Papers prepared for a conference held by the Section of Biology of the New York Academy of Sciences and the Tissue Culture Association in January 1954 have been published in this volume and are listed by author and title above.

National Academy of Sciences

The chemistry of penicillin. Report on a collaborative investigation by American and British chemists under the joint sponsorship of the Office of Scientific Research and Development, Washington D C, and the Medical Research Council, London Compiled under the auspices of the National Academy of Sciences, Washington D C pursuant to a contract with the Office of Scientific Research and Development. Princeton Princeton University Press, 1949 1 094 p illus. 28 cm $36 00 4249

Contents (abridged) Brief history of the chemical study of penicillin, by H T Clarke and others. Isolation and characterization of the various penicillins, by O. Wintersteiner and others. Penillic acids and penillamines, by A. H. Cook. Desthiobenzylpenicillin and other hydrogenolysis products of benzylpenicillin, by E. Kaczka and K. Folkers. The thiocyanate derivative of benzylpenicillin methyl ester by V du Vigneaud and D B Melville. The X-ray crystallographic investigation of the structure of penicillin, by D Crowfoot and others. Infrared spectroscopic studies on the structure of penicillin, by H. W Thompson and others. The constitution of penicillins, by J R. Johnson and others. Penicillamine, its analogs and homologs, by H. M. Crooks Penilloaldehydes and penaldic acids, by E. V Brown Biosynthesis of penicillins, by O. K. Behrens. Chemical modifications of natural penicillins, by R. D Coghill and others. Oxazoles and oxazolones, by J W Cornforth. Attempted syntheses of penicillins, by W E. Bachmann and M. W Cronyn. Methyl benzylpseudopenicillinate, by J H. Hunter and others. Thiazolidines, by A. H. Cook and I. M Heilbron. The chemistry of β-lactams, by S. A. Ballard and others. Synthetic benzylpenicillin by V du Vigneaud and others Assay of penicillins, by J V Scudi and H. B. Woodruff. Appendix. Subject index.

Note. A comprehensive survey of the results of an international effort during World War II and later to ascertain the chemical formula of penicillin, and to synthesize it in the laboratory Thirty-nine British and American scientific groups participated in the effort, and some hundreds of progress reports were issued for the information of all participants while the research was going on This book is based on these progress reports. However instead of reprinting the reports, they have been used as the basis of the 29 chapters of the present work. Aside from its major and fundamental significance in chemotherapy the work is a monument to large-scale international collaboration on a scientific problem such as had never been attempted before. It was edited by H T Clarke.

National Research Council. Chemical Biological Coordination Center

First symposium on chemical biological correlation, May 26–27, 1950 sponsored by the Chemical Biological Coordination Center of the National Research Council. Washington, D C. National Academy of Sciences—National Research Council 1951 415 p. illus. 25 cm (National Research Council. Publication 206) $4.00 4250

Contents Welcome, by D W Bronk. Correlations between the chemical structure and biological activity of arsenobenzenes, by G. O. Doak and H. Eagle. Structure—activity relationships in plant growth-regulators, by A. G. Norman and R. L. Weintraub. Review of the structural requirements for sympathomimetic drug action, by A. M. Lands. Organization, objectives, and program of the CBCC, by W R. Kirner The National Research Council chemical code, by H. A. Geer The biological codes, by R. L. Beard. Demonstration of machine biochemorphology correlation of antihistaminic activity and chemical structure by means of the National Research Council Chemical-Biology Coordination Center IBM punch cards, by D F Marsh. A demonstration of the use of the CBCC system in the field of antithyroid compounds, by G. W Anderson. Panel discussion on antimalarials (R. C. Elderfield, moderator) The biological basis for antimalarial tests, by R. J Porter Structure of 4-aminoquinolines in relation to antimalarial activity in avian infections, by R. J Porter Structural types tested for curative activity against lepturus malaria in the chick, by A. M. Moore. The relations between chemical structure and toxicity among the 8-aminoquinolines, by L. H. Schmidt. Primaquine, S N 13 272 a new curative agent in vivax malaria. A preliminary report, by A. S. Alving, et al. 5-aryloxy-2,4-diaminopyrimidines as antimalarials, by G. H. Hitchings and others. Relation of structure of diphenyl compounds to fungistaticity by J. G. Horsfall and others. Effect of structural changes in plant insecticides and related synthetic compounds on their toxicity to insects, by H. L. Haller. The effect of drugs on physiologically active thiol systems, by M. Schubert. Influence of isosteric replacements upon biological activity by H. L. Friedman. Panel discussion on antimetabolites, carcinogenesis, and cancer chemotherapy (M. J. Shear moderator) Antimetabolites, by D. W Woolley Chemical-biological correlation in the field of carcinogenesis, by I. Berenblum. A consideration of chemical-biological correlation in experimental cancer chemotherapy, by C. C. Stock. Antimetabolites, by B. D Davis. Carcinogenesis, by H. P Rusch. Cancer chemotherapy by R. B. Angier Cancer chemotherapy by S. Farber Antimetabolites as chemotherapeutic agents, by G. H. Hitchings. Carcinogenesis, by A. M. Seligman. Cancer chemotherapy by A. Gellhorn. Purines and pyrimidines in experimental cancer chemotherapy by A. Gellhorn. Carcinogenesis, by W C. Hueper Cancer chemotherapy by K. Dobriner Cancer chemotherapy by J. H. Burchenal. Cancer chemotherapy by E. R. Schoenbach. Cancer chemotherapy by A. D. Welch. Cancer chemotherapy by F S. Phillips.

Note. The papers printed in this volume were presented by chemists and biologists at a symposium concerned with the effect of the structure of chemicals on their biological activity and the mechanisms of such activity They are accompanied by transcriptions of the discussions at the meeting.

New York Academy of Medicine. Section on Microbiology

Evaluation of chemotherapeutic agents. Symposium held at the New York Academy of Medicine March 25 and 26 1948 Edited by Colin M MacLeod. New York Columbia University Press 1949 205 p. illus. 23 cm. $4 00 4251

Contents. Foreword, by G Shwartzman. Introduction, by C. M. MacLeod. The significance of drug concentration in the blood, as applied to chemotherapy by E. K. Marshall, Jr Blood levels, renal clearance, and chemotherapeutic activity with particular reference to arsenicals and penicillin, by H. Eagle. The binding of chemotherapeutic agents to proteins and its effect on their distribution and activity by B D. Davis. The problem of microbial resistance to chemotherapeutic agents, by H. E Alexander Defense mechanisms of the host in relation to chemotherapy of acute bacterial infections, by W B. Wood, Jr The nature of the lesion and the response to

antimicrobial therapy, by W. McDermott. Trimethoprim-sulfa [illegible] therapy of bacterial and tumor infections, by E. K. Sanders and J. [illegible] Lockwood. Chemoprophylaxis of streptococcal infections and of bacillary dysentery, by F. B. Cheever. An evaluation of chemoprophylaxis of streptococcal infections, by A. T. Wilson. Evaluation of antimicrobial drugs, by J. A. Bauman. The chemotherapy of the [illegible] diseases, by J. F. Fox. Chemotherapy of viral infections, by F. L. Horsfall, Jr., and H. S. Ginsberg. The experimental evaluation of chemotherapeutic agents in cancer, by C. C. Stock and C. P. Rhoads. The clinical evaluation of chemotherapeutic agents in cancer, by D. A. Karnofsky and J. H. Burchenal.

Note: A collection of original papers prepared for the symposium named in the book title. The symposium was planned as a general evaluation of chemotherapeutic drugs and as a general presentation of evaluatory techniques in relation to particular groups of diseases. No attempt was made to assess the value of specific substances, for example, penicillin. The papers are addressed to graduate workers in fields concerned with chemotherapeutic agents, particularly medicine. Each paper is accompanied by literature references. There is no index to the volume.

OLDHAM FRANCES K., AND OTHERS

Essentials of pharmacology by Frances K. Oldham, F. E. Kelsey and E. M. K. Geiling. Third edition. Philadelphia J B Lippincott Company 1955 520 p. illus. 21 cm. $6.00. 4252

Contents: Historical development of pharmacology. General principles of pharmacology. Control and dispensing of drugs. Administration of drugs. General anesthetics. Regional anesthetics. Hypnotics and sedatives. Antipyretic analgesics. Morphine and allied drugs. Central nervous system stimulants. Autonomic drugs. Histamine and antihistamine drugs. Heart drugs. Diuretics. Blood, blood derivatives and blood substitutes. Drugs affecting the blood and the blood-forming organs. Oxytocics. Endocrines. Drugs affecting the gastro-intestinal tract. Vitamins. Diagnostic agents. Local anti-infectives. Anthelmintics. Amebicides. Antimalarial drugs. Antimony compounds. Antitrypanosomal drugs. Sulfonamides. Antibiotics. Chemotherapy of tuberculosis and leprosy. Index.

Note: An established, introductory textbook. Directed primarily to students of medical sciences. It is not encyclopedic, but does provide adequate discussion for the intended readers of the general principles of pharmacology and the administration of drugs, together with descriptive surveys of the chief classes of substances of pharmaceutical interest—those named in the above chapter titles. In the discussions of the individual drugs date of discovery and mode of discovery, physiological action, method of administration, side effects and toxicity are the chief points covered. Classified literature references are included in all of the chapters.

PRATT ROBERTSON AND JEAN DUFRENOY

Antibiotics. Second edition. 87 illustrations including one plate in full color Philadelphia J. B. Lippincott Company 1953 398 p. illus. (part col'd) 24 cm. $7.50. 4253

Contents: Part I, Fundamental aspects: Antibiotic spectra. Biologic significance of fields of diffusion. Antibiotics and chemotherapy. Part II, Industrial aspects: Industrial production of antibiotics. Screening and assaying. Part III, Applied aspects: Penicillin. Bacitracin, subtilin and tyrothricin. Streptomycin. Viomycin, neomycin and polymyxin. Chloromycetin, aureomycin and terramycin. Erythromycin and carbomycin. Mixed antibiotic therapy. Antibiotics in dental practice and oral surgery. Antibiotics in agriculture. Part IV, Modification of biologic and neural systems: Emergence of resistant strains of micro-organisms. Mechanisms of antibiotic action. Some social and economic aspects of antibiotics. Appendices: Antimicrobial substances from chlorophyllous plants and from animals. Schematized structures of selected antibiotics derived from micro-organisms. Index.

Note: Matters such as criteria for identification of antibiotics, the concept of antibiotic spectra, and the chemistry, properties and uses of the many important antibiotic substances are given prominence in this book. Lists of suggested reading are included in most of the chapters. The book is used as a text in schools of pharmacy and is potentially useful also to any reader with a background in chemistry and biology who is in need of a broad introduction to the field. The first edition was published in 1949. Five new chapters were added in this second edition. New information was added in most of those carried over, and the book was reorganized.

PRATT ROBERTSON, AND HEBER W YOUNGKEN JR.

Pharmacognosy the study of natural drug substances and certain allied products. Second edition. 70 illustrations, including 3 plates in full color Philadelphia J B Lippincott Company 1956 694 p. illus. (part col'd) 24 cm. $10.00. 4254

Contents: Part I, Fundamentals: Sources and uses of natural drug products. Biosynthesis as the source of drugs. Part II, Biosynthetic drugs: Biosynthetic drugs affecting the skin and the mucous membranes. Biosynthetic drugs directly affecting the gastrointestinal tract. Biosynthetic drugs producing systemic effects on the muscle and the nervous systems. Biosynthetic drugs affecting components of the circulatory system. Biosynthetic drugs used chemotherapeutically for the treatment of infectious diseases. Biosynthetic products used for diagnosis, prophylaxis, and therapy in specific nonnutritional disorders. Part III, Practices and procedures: Production of crude drug materials. Preservation and protection of crude drugs. Evaluation of crude drugs. Part IV, Pest and weed control, problems in public health: The problem. The control of insects—of rodents—of fungi, weeds, and other pests. Appendix: Common poisonous plants and animals. Index.

Note: An introductory textbook for undergraduate students of pharmacy. It is concerned with drug materials which are biologic in origin, and it deals with their chemical, physical, and physiological properties, and with their evaluation and applications in medicine and public health. Most of the space is given to descriptions of classes of drugs and specific drugs. This information is always presented against a background of basic biochemistry and is related to applications not only in medicine but also in the control of insects, fungi, etc., as noted in the above contents. The last-mentioned topics are included because of their relation to public health. The first edition was published in 1951. In comparison, the second edition contains a considerable range of additional information on new drugs and on the mechanisms of their actions. In addition, there has been some reorganization of the material, and a selection of the literature published since the first edition was written has been added to the bibliography.

SALTER, WILLIAM THOMAS

A textbook of pharmacology principles and application of pharmacology to the practice of medicine. Philadelphia W B Saunders Company 1952 1,240 p. illus. 26 cm. $15.00. 4255

Contents (abridged): Part I, General principles of pharmacology. Part II, Drug action on physiological mechanisms: Section I, The relief of pain and sensory disturbances. Section II, General anesthesia. Section III, Convulsions and coma. Section IV, Drugs acting on the circulation. Section V, Endocrine and vitamin regulation. Section VI, The autonomic nervous system. Part III, The application of drugs in clinical medicine: Section VII, Drugs and body systems. Section VIII, Toxic substances of industrial and hygienic origin. Section IX, Chemotherapeutic and chemoprophylactic agents. Part IV, Toxicology. Epilogue. Index.

Note: The material in this text has been judiciously selected from the standpoint of what is valuable to present-day medical students and practitioners. Nevertheless, the book is a large one with about 830,000 words of text. Information is included on background aspects, such as the development of pharmacological knowledge and the development of our knowledge of drugs, but most of the space is given to discussions of the pharmacological principles of specific drugs and groups of related drugs. In the drug descriptions, the emphasis is on physiological effects and on what becomes of the drug in the human body but information is included also on the occurrence and other properties of the drugs and on dosage. Most of the chapters contain an introductory section on [illegible] problems. The chapters are supplemented by substantial reference lists.

SHILS MAURICE E., AND ROBERT S GOODHART

The flavonoids in biology and medicine a critical review New York The National Vitamin Foundation, Inc., 1956 101 p. 23 cm. (Nutrition monograph series. No. 2) $2.00. 4256

Contents (abridged) Chemistry Investigations employing experimental animals. Metabolism and toxicity of flavonoids. Clinical studies. Bibliography

Note The published literature beginning with the papers of A. Szent-Györgyi and his associates in 1936 and continuing through the literature published in 1955 on the flavonoid substances in biochemistry and medicine is concisely summarized and critically reviewed in this work. Statements in the text are referenced to the citations of the source articles in the bibliography which cites 299 publications. The results of clinical studies and animal experiments bearing on capillary fragility blood clotting, hemorrhages, inflammatory reaction, irradiation effect, etc., are all discussed. The authors state. As result of this review it is our considered opinion that there is no convincing evidence for a nutritional role of these substances. A large number of papers indicate pharmacological role for certain of the flavonoids, however the pharmacological actions are not unique and are relatively weak compared to other drugs which are available. Despite this, the possibility exists that such compounds may have clinical value in the treatment of disorders of the vascular system. Therefore, the clinical literature has been surveyed in great detail to assess the present knowledge and status. We conclude from this survey that the great number of contradictory reports and the sparsity of acceptable clinical evidence in this field place the burden of proof on those who claim therapeutic value to these substances.

SILVERMAN, MILTON

Magic in a bottle. Second edition. New York The Macmillan Company, 1948 386 p 21 cm $4.25 4257

Contents. The conquest of pain—Sertuerner and morphine. The amazing alkaloids—Pelletier and quinine. Housewife's recipe—Withering and digitalis. Blessing from hell—Koller and cocaine. Kill the germs!—Lister to Ehrlich to 205 The fever-fighters—Kolbe to aspirin. Synthetic lullaby—Fischer Von Mering, and the barbitals. Food against death—Eijkman and the vitamins. Magnificent trifles—Brown-Séquard and the hormones. The red amazon—Domagk and the sulfa-drugs. Miraculous accident—Fleming, Florey and penicillin. The devil-slayers—Locock to Lennox, and the drugs against epilepsy Atomic medicine—Becquerel, the Curies, and the atom-smashers. Bibliography Index.

Note. A readable and dramatic account of some of the achievements of chemotherapy It is intended for lay readers.

SPECTOR, WILLIAM S

Handbook of toxicology Volume I Acute toxicities of solids liquids and gases to laboratory animals Prepared under the direction of the Committee on the Handbook of Biological Data, Division of Biology and Agriculture the National Academy of Sciences the National Research Council. Philadelphia W B Saunders Company 1956 408 p. 28 cm. $7 00 4258

Contents Introduction. Abbreviations. Table I, Lethal doses of solid and liquid compounds Laboratory animals. Table II, Lethal concentrations of gases, vapors, and fumes in respired air Laboratory animals. Bibliography abbreviations. Index.

Note The first volume published of handbook scheduled for completion in five or more volumes. It presents in tabular form data on the acute toxicity for laboratory animals of wide range of chemical substances. The data have been selected from the literature and have been carefully reviewed for accuracy References to the source publications are included in the tables. Volume II of the set covering the toxicities of antibiotics was published in 1957 264 p., $6.00.

TANNENBAUM ALBERT, editor

Toxicology of uranium survey and collected papers New York McGraw Hill Book Company Inc. 1951 333 p. illus. 24 cm. (National nuclear energy series Manhattan Project technical section Division IV—Plutonium project record. Vol 23) $4 75 4259

Contents. Part A, Introduction to the toxicology of uranium. Introduction and general considerations, by A. Tannenbaum and H. Silverstone. Nature of uranium poisoning as observed in mice, by A. Tannenbaum and H. Silverstone. Factors affecting uranium poisoning, by A. Tannenbaum and H. Silverstone. Distribution in tissues and excretion of uranium, by A. Tannenbaum and H. Silverstone. Gross and microscopic pathology of uranium poisoning, by A. Tannenbaum. Biochemical effects of uranium poisoning, by S. Schwartz. The mechanism of action of uranium and the transport of uranium to the tissues, by E. S. G. Barron. Summary of experimental studies. Relation to uranium poisoning in man, by A. Tannenbaum and H. Silverstone. Part B, Collected papers. Uranium poisoning. Review of literature to 1942, by S. T Cantril and J. J Nickson. Some aspects of the toxicology of uranium compounds, by A. Tannenbaum and H. Silverstone. Failure to affect toxicity of ingested uranium chloride by dietary acid (HCl) or base ($NaHCO_3$) by A. Tannenbaum and H. Silverstone. Accumulation of uranium in the tissues of mice ingesting uranyl nitrate, by A. Tannenbaum and H. Silverstone. Relation of uranium excretion to the total amount of uranium in the mouse, by A. Tannenbaum and H. Silverstone. Studies on acquired tolerance to uranium, by A. Tannenbaum and H. Silverstone. Distribution of U^{233} in tissues of mice following injection of uranyl nitrate, by A. Tannenbaum and others. Tracer studies of the distribution and excretion of uranium in mice, rats, and dogs, by A. Tannenbaum and others. The transport of uranium to the tissues, by J. A. Muntz and E. S. G. Barron. Tissue metabolism of rats treated with uranyl nitrate, by J Meyer and others. The reversible inhibition of enzymes by uranium, by T P Singer and others. Effect of uranium on the metabolism of yeast and bacteria, by J A. Muntz and others. An introduction to the nonclassified literature dealing with biochemical studies of experimental uranium poisoning, by S. Schwartz and E. J. Katz. Uranium distribution studies, by R. J. Ferretti and S. Schwartz. The effect of uranium exposure on urinary catalase excretion, by E. J. Katz and others. Studies of porphyrin metabolism—the effect of metals on coproporphyrin excretion, by S. Schwartz and R. M. Zagrin. Index.

Note. A volume made up chiefly of reports of original investigations on the toxicology of uranium made in the course of the work on the Manhattan Project during World War II. The findings are summarized in the papers in Part I. In Part II the reports themselves are assembled. Literature references are included with the papers.

THIENES, CLINTON H., AND THOMAS J HALEY

Clinical toxicology Third edition enlarged and thoroughly revised Illustrated. Philadelphia Lea & Febiger 1955 457 p. illus. 20 cm. $6 50 4260

Contents Section I, Convulsant poisons Cerebral convulsants. Medullary excitants. Cord convulsants. Peripherally acting convulsants. Section II, Central nervous system depressants The alcohols. Toxicology of general anesthesia. Miscellaneous depressant vapors. Basal anesthetics and somnifacients. The toxicology of analgetics. Section III, Peripherally acting nerve poisons, Poisons acting on nerve trunks, ganglia and nerve endings Somatic nerves. Poisoning of nerve ends and myoneural junctions of somatic nerves. Poisons of nerves and muscles of the viscera. Section IV Muscle poisons. Smooth muscle excitants and depressants. Cardiac poisons. Section V Protoplasmic poisons Local irritants and corrosives. Poisons causing degenerative lesions of the nervous system. Liver poisons Kidney poisons. Poisoning with symptoms referable to the digestive tract. Toxicology of the lungs. Miscellaneous protoplasmic poisons. Poisons of animal origin. Section VI, Poisons of the blood and hematopoietic organs Bone-marrow erythrocyte and leucocyte poisons. Poisons affecting blood plasma. Section VII, Principles of treatment Measures to decrease absorption Elimination of absorbed poison. Physiological antagonism of poisons. General care. Section VIII, An outline of symptom diagnoses Bone charts. Section IX, Chemical diagnosis of poisoning Preservation of tissues. Special equipment essential for the toxicologist. Separation of poisons—methods of extraction of non-volatile organic poisons. Analysis of acid-ether extract Analysis of alkaline chloroform extract. Metallic poisons. Miscellaneous poisons. Appendix. Special reagents. Index.

Note Used both as text in medical colleges and as reference by general practitioners of medicine, this book provides in compact form range of clinical information about poisons. It is not cyclopedic treatment, but it covers those poisons which are most commonly encountered in practice and which give rise to distressing symptoms or death. The sections and chapter titles listed above show the arrangement. Within the chapters specific poisons are discussed as to toxic dose source and chemistry ethiology, symptoms and actions, diagnosis, prognosis, pathology treatment.

etc. The section on chemical diagnosis, that is to say identification of poisons, is over 150 pages long in this edition and is one of the major features of the book.

THIENES CLINTON H.

Fundamentals of pharmacology New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1947 497 p. illus. 22 cm. (Medical students series Fred C. Zapffe, editor) $5 75. 4261

Contents (abridged) Section Stimulants of the central nervous system. Section II. Depressants of the central nervous system. Section [illegible] Drugs acting on the peripheral nervous system. Section [illegible] Drugs acting on muscles. Section [illegible] Diuretics. Section VI, Antiparasitic drugs. Section VII, Hormones, special minerals, and tissue extracts. Section VIII, Vitamins. Section IX, Drugs used because of local action on body surfaces. Section X, Chemical diagnostic agents. Section XI, Actions of drugs on cells. Section XII, Pharmacy and prescription writing. Index.

Note: A concise introduction specifically designed for students of medicine, dentistry or pharmacy and intended as an exposition of fundamental knowledge rather than an encyclopedic treatment. The greater part of the book consists of systematized and specific information on the most important drugs and preparations. The nature, uses, doses, physiological actions, including absorption, distribution, metabolism and excretion of each drug listed are described concisely but adequately.

TRELEASE, SAM FARLOW AND ORVILLE A. BEATH

Selenium its geological occurrence and its biological effects in relation to botany chemistry agriculture nutrition, and medicine. New York. Published by the authors, 1949 292 p. illus. 24 cm. $5.50 4262

Contents. History Selenium indicator plants. Distribution of selenium in rocks and soils. Accumulation of selenium by plants. Selenium poisoning in animals. Selenium in relation to public health. Prevention and control of selenium poisoning. Chemistry of selenium. Bibliography Author index. Subject index.

Note. The poisoning of cattle as a result of eating vegetation grown on seleniferous soils is a common local problem in some parts of the United States of America. The poisoning of human beings in the same way has not been so clearly established, but some cases appear in clinical literature, and there have been several area studies by public health authorities. This book is a summary of the current knowledge. A considerable part of the space is devoted to background information, such as data on plants that absorb selenium and the quantities absorbed. There is an extensive bibliography.

UNIVERSITY OF CALIFORNIA

Hospital formulary and compendium of useful information. Second edition, completely revised. *Berkeley and Los Angeles* University of California Press, 1952 317 p. 17 cm. $3 75 4263

Contents. Prescription writing and conversion tables. Sizes of prescriptions and orders. Drugs subject to Federal and state regulations. Federal and hospital schedules. Therapeutic index. Drug list. Parenteral solutions. Antiseptics. Pediatric therapeutic index and procedures. Dental formulary. Preoperative procedures. Antigens, serums and their administration. Procedure for X-ray examination. Contrast media used in radiology. Laboratory and clinical procedures. Treatment of acute poisoning. Miscellaneous tables. Index.

Note. The scope of this reference handbook is indicated by the chapter titles. Although designed primarily for the personnel of the University of California Medical Center it is potentially useful to the staff of other hospitals and also to graduate physicians practising independently. Each of the chapters is a compact arrangement of useful information. The drug list contains precise descriptions of not only drugs which are listed in the United States *Pharmacopoeia*, the *National Formulary* and *New and Non-Official Remedies*, but also of many nonofficial drugs used in this medical center. The appendix includes an index of proprietary and common drug names which are different from the official names.

VOEGTLIN CARL AND HAROLD C. HODGE editors

Pharmacology and toxicology of uranium compounds with a section on the pharmacology and toxicology of fluorine and hydrogen fluoride. New York McGraw Hill Book Company Inc., 1949 2 v. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division VI—Vol. 1 pt. I–II) $14.25 4264

Contents: Part I, The pharmacology and toxicology of uranium compounds: The chemistry of uranium compounds, by A. L. Dounce and J. F. Flagg. Analytical methods for determining uranium and fluorine, by J. F. Flagg. Statistical methods, by D. V. Tiedeman and others. *Pathological anatomy following uranium poisoning*, by T. R. Barnett and R. G. Metcalf. Characteristics of uranium poisoning, by J. H. Wills. *Toxicity following parenteral administration* of certain soluble uranium salts, by F. Haven and H. C. Hodge. Studies of toxicity of various uranium compounds when fed to experimental animals, by E. A. Maynard and H. C. Hodge. The toxicology of compounds of uranium following application to the skin, by J. A. Orcutt. The toxicology of uranium compounds following application to the eye, by J. A. Orcutt. Toxicity following inhalation, by H. E. Stokinger and others. The distribution and excretion of uranium, by W. F. Neuman. Tolerance to uranium compounds, by F. Haven. The action of uranium on enzymes and proteins, by A. L. Dounce and T. H. Lan. Catalase as a sensitive test for uranium poisoning, by A. L. Dounce and others. The mechanism of action of uranium compounds in the animal body, by A. L. Dounce. Studies on human exposure to uranium compounds, by J. W. Howland. Part II, The pharmacology and toxicology of fluorine and hydrogen fluoride. Toxicity following inhalation of fluorine and hydrogen fluoride, by H. E. Stokinger. Appendix. Index.

Note: These volumes are based on the work of the Division of Pharmacology of the Manhattan District Project which, during World War II, was charged with the development of the atomic bomb. Much of the information contained in them is derived from original investigations, however, results reported in the literature have been included also.

VOEGTLIN CARL, AND HAROLD C. HODGE, editors

Pharmacology and toxicology of uranium compounds—chronic inhalation and other studies. New York McGraw Hill Book Company Inc., 1953 2 v. illus. 24 cm. (National nuclear energy series. Division VI, vol. 1, pt. III–IV) Set, $14.25 4265

Contents Part III, Chronic studies: Chemistry by W. F. Neuman and Gorman R. Thikoff. Biochemical methods, by N. Glover and others. *Oral toxicity of uranium compounds*, by E. A. Maynard and others. Toxicity following inhalation for 1 and 2 years, by H. E. Stokinger and others. Inhalation studies in rabbits with dusts of uranium compounds, by H. E. Thompson and L. T. Steadman. Part IV, Mechanism and metabolic studies. Metabolic studies, by R. L. Burke and others. Deposition of uranium in bone, by W. F. Neuman. Studies in cell metabolism, by A. Rothstein. Maximum allowable concentration of uranium dust in air, by H. C. Hodge and others. Biological effects of uranium—literature review by A. G. Dunn and L. J. LaFrance. Special materials, by H. E. Stokinger and C. J. Spiegl. Résumé of Chapters 18 to 48, by H. C. Hodge. Appendix. Cumulative index, parts I to IV.

Note The papers in these volumes, together with those presented in the volumes described in the preceding entry present the results of a very comprehensive investigation of uranium and its compounds from the standpoint of their toxicity. Studies of certain substances not containing uranium but of interest in uranium processing were included in the program, which was largely one of animal experimentation. Techniques are fully described and results are presented in much detail. The presentation is so complete that even the summary chapter is nearly 130 pages long. The books in the combined set are published in the format of four thick volumes, however, they are designated as four parts of a single volume.

Contents (abridged) Chemistry Investigations employing experimental animals. Metabolism and toxicity of flavonoids. Clinical studies. Bibliography

Note. The published literature beginning with the papers of A. Szent-Györgyi and his associates in 1936 and continuing through the literature published in 1955 on the flavonoid substances in biochemistry and medicine is concisely summarized and critically reviewed in this work. Statements in the text are referenced to the citations of the source articles in the bibliography which cites 299 publications. The results of clinical studies and animal experiments bearing on capillary fragility blood clotting, hemorrhages, inflammatory reaction, irradiation effect, etc., are all discussed. The authors state As a result of this review it is our considered opinion that there is no convincing evidence for a nutritional role of these substances. A large number of papers indicate a pharmacological role for certain of the flavonoids, however the pharmacological actions are not unique and are relatively weak compared to other drugs which are available. Despite this, the possibility exists that such compounds may have clinical value in the treatment of disorders of the vascular system. Therefore, the clinical literature has been surveyed in great detail to assess the present knowledge and status. We conclude from this survey that the great number of contradictory reports and the sparsity of acceptable clinical evidence in this field place the burden of proof on those who claim therapeutic value to these substances.

SILVERMAN, MILTON

Magic in a bottle Second edition. New York The Macmillan Company, 1948 386 p 21 cm. $4 25 4257

Contents The conquest of pain—Sertuerner and morphine. The amazing alkaloids—Pelletier and quinine. Housewife's recipe—Withering and digitalis. Blessing from hell—Koller and cocaine. Kill the germs!—Lister to Ehrlich to 205 The fever-fighters—Kolbe to aspirin. Synthetic lullaby—Fischer Von Mering, and the barbitals. Food against death—Eijkman and the vitamins. Magnificent trifles—Brown-Séquard and the hormones. The red assassin—Domagk and the sulf-drugs. Miraculous accident—Fleming, Florey and penicillin. The devil-slayers—Locock to Lennox, and the drugs against epilepsy Atomic medicine—Becquerel, the Curies, and the atom-smashers. Bibliography Index.

Note. A readable and dramatic account of some of the achievements in chemotherapy It is intended for lay readers.

SPECTOR, WILLIAM S

Handbook of toxicology Volume I Acute toxicities of solids, liquids and gases to laboratory animals Prepared under the direction of the Committee on the Handbook of Biological Data, Division of Biology and Agriculture the National Academy of Sciences the National Research Council. Philadelphia W B Saunders Company 1956 408 p 28 cm. $7 00 4258

Contents Introduction. Abbreviations. Table I, Lethal doses of solid and liquid compounds Laboratory animals. Table II, Lethal concentrations of gases, vapors, and fumes in respired air Laboratory animals. Bibliography abbreviations. Index.

Note The first volume published of a handbook scheduled for completion in five or more volumes. It presents in tabular form data on the acute toxicity for laboratory animals of a wide range of chemical substances. The data have been selected from the literature and have been carefully reviewed for accuracy References to the source publications are included in the tables. Volume II of the set covering the toxicities of antibiotics was published in 1957 264 p., $6.00.

TANNENBAUM, ALBERT, editor

Toxicology of uranium survey and collected papers. New York McGraw Hill Book Company Inc. 1951 333 p illus 24 cm (National nuclear energy series Manhattan Project technical section Division IV —Plutonium project record Vol 23) $4 75 4259

Contents. Part A, Introduction to the toxicology of uranium. Introduction and general considerations, by A. Tannenbaum and H. Silverstone. Nature of uranium poisoning as observed in mice, by A. Tannenbaum and H. Silverstone. Factors affecting uranium poisoning, by A. Tannenbaum and H. Silverstone. Distribution in tissues and excretion of uranium, by A. Tannenbaum and H. Silverstone. Gross and microscopic pathology of uranium poisoning, by A. Tannenbaum. Biochemical effects of uranium poisoning, by S. Schwartz. The mechanism of action of uranium and the transport of uranium to the tissues, by E. S. G. Barron. Summary of experimental studies. Relation to uranium poisoning in man, by A. Tannenbaum and H. Silverstone. Part B, Collected papers Uranium poisoning. Review of literature to 1943 by S. T Cantril and J. J. Nickson. Some aspects of the toxicology of uranium compounds, by A. Tannenbaum and H. Silverstone. Failure to affect toxicity of ingested uranium chloride by dietary acid (HCl) or base ($NaHCO_3$) by A. Tannenbaum and H. Silverstone. Accumulation of uranium in the tissues of mice ingesting uranyl nitrate, by A. Tannenbaum and H. Silverstone. Relation of uranium excretion to the total amount of uranium in the mouse, by A. Tannenbaum and H. Silverstone. Studies on acquired tolerance to uranium, by A. Tannenbaum and H. Silverstone. Distribution of U^{233} in tissues of mice following injection of uranyl nitrate, by A. Tannenbaum and others. Tracer studies of the distribution and excretion of uranium in mice, rats, and dogs, by A. Tannenbaum and others. The transport of uranium to the tissues, by J A. Muntz and E. S. G. Barron. Tissue metabolism of rats treated with uranyl nitrate, by J Meyer and others. The reversible inhibition of enzymes by uranium, by T P Singer and others. Effect of uranium on the metabolism of yeast and bacteria, by J A. Muntz and others. An introduction to the nonclassified literature dealing with biochemical studies of experimental uranium poisoning, by S. Schwartz and E. J. Katz. Uranium distribution studies, by R. J Ferretti and S. Schwartz. The effect of uranium exposure on urinary catalase excretion, by E. J. Katz and others. Studies of porphyrin metabolism—the effect of metals on coproporphyrin excretion, by S. Schwartz and R. M. Zagaria. Index.

Note. A volume made up chiefly of reports of original investigations on the toxicology of uranium made in the course of the work on the Manhattan Project during World War II. The findings are summarized in the papers in Part I. In Part II the reports themselves are assembled. Literature references are included with the papers.

THIENES, CLINTON H, AND THOMAS J HALEY

Clinical toxicology Third edition enlarged and thoroughly revised Illustrated Philadelphia Lea & Febiger 1955 457 p illus. 20 cm. $6 50 4260

Contents. Section I, Convulsant poisons Cerebral convulsants. Medullary excitants. Cord convulsants. Peripherally acting convulsants. Section II, Central nervous system depressants The alcohols. Toxicology of general anesthesia Miscellaneous depressant agents. Basal anesthetics and somnifacients. The toxicology of analgetics. Section III, Peripherally acting nerve poisons, poisons acting on nerve trunks, ganglia and nerve endings Somatic nerves. Poisoning of nerve ends and myoneural junctions of somatic nerves. Poisons of nerves and muscles of the viscera Section IV Muscle poisons. Smooth muscle excitants and depressants. Cardiac protoplasmic poisons. Section V Protoplasmic poisons Local irritants and corrosives. Poisons causing degenerative lesions of the nervous system. Liver poisons. Kidney poisons. Poisoning with symptoms referable to the digestive tract. Toxicology of the lungs. Miscellaneous protoplasmic poisons. Poisons of animal origin. Section VI, Poisons of the blood and hematopoietic organs Bone-marrow erythrocyte and leucocyte poisons. Poisons affecting blood plasma. Section VII, Principles of treatment Measures to decrease absorption. Elimination of absorbed poison. Physiological antagonism of poisons. General care. Section VIII, An outline of symptom diagnosis Bone lesions. Section IX, Chemical diagnosis of poisoning Preservation of tissues. Special equipment essential for the toxicologist. Separation of poisons—methods of extraction of non-volatile organic poisons. Analysis of acid-ether extract Analysis of alkaline chloroform extract. Metallic poisons. Miscellaneous poisons. Appendix Special reagents. Index.

Note Used both as a text in medical colleges and as a reference by general practitioners of medicine, this book provides in compact form a range of clinical information about poisons. It is not encyclopedic treatment, but it covers those poisons which are most commonly encountered in practice and which give rise to distressing symptoms or death. The section and chapter titles listed above show the arrangement. Within the chapters specific poisons are discussed as to toxic dose, source and chemistry, history, symptoms and actions, diagnosis, prognosis, pathology, treatment,

etc. The section on chemical diagnosis, that is to say identification of poisons, is over 150 pages long in this edition and [illegible] one of the major features of the book.

THIENES, CLINTON H.

Fundamentals of pharmacology New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1947 497 p. illus. 22 cm. (Medical students series Fred C. Zapffe editor) $5 75 4261

Contents (abridged). Section I, Stimulants of the central nervous system. Section II, Depressants of the central nervous system. Section III [illegible] Drugs acting on the peripheral nervous system. Section IV, Drugs acting on muscles. Section [illegible] Section VI, Antipyretic drugs. Section VII, Hormones, special minerals, and tissue extracts. Section VIII, Vitamins. Section IX, Drugs used because of local action on body surfaces. Section X, Chemical diagnostic agents. Section XI, Actions of drugs on cells. Section XII, Pharmacy and prescription writing. Index.

Note: A concise introduction specifically designed for students of medicine, dentistry or pharmacy and intended as an exposition of fundamental knowledge rather than an encyclopedic treatment. The greater part of the book consists of systematized and specific information on the most important drugs and preparations. The [illegible], dosage, physiological actions, including absorption, distribution, metabolism and excretion of each drug listed are described concisely but adequately.

TRELEASE, SAM FARLOW AND ORVILLE A. BEATH

Selenium its geological occurrence and its biological effects in relation to botany chemistry agriculture nutrition, and medicine New York Published by the authors 1949 292 p. illus. 24 cm. $5.50 4262

Contents. History. Selenium indicator plants. Distribution of selenium in rocks and soils. Accumulation of selenium by plants. Selenium poisoning in animals. Selenium in relation to public health. Prevention and control of selenium poisoning. Chemistry of selenium. Bibliography. Author index. Subject index.

Note. The poisoning of cattle as [illegible] result of eating vegetation grown on seleniferous soils [illegible] a serious local problem in some parts of the United States of America. The poisoning of human beings in the same way has not been so clearly established, but many cases appear in clinical literature and there have been several [illegible] studies by public health authorities. The book is [illegible] summary of the current knowledge. A considerable part of the space is devoted to background information, such as data on plants that absorb selenium and the [illegible] absorbed. There [illegible] an extensive bibliography.

UNIVERSITY OF CALIFORNIA

Hospital formulary and compendium of useful information. Second edition, completely revised. Berkeley and Los Angeles University of California Press 1952 317 p. 17 cm. $3 75 4263

Contents: Prescription writing and conversion tables. Items of [illegible] and [illegible]. Drugs subject to Federal and state regulations. [illegible] Therapeutic index. Drug list. [illegible] Pediatric therapeutic index and [illegible]. Dental [illegible]. [illegible] agents and their [illegible]. Procedure for X-ray [illegible]. Contrast media used in radiology. Laboratory and clinical procedures. Treatment of acute poisoning. Miscellaneous tables. Index.

Note: The scope of the reference handbook is indicated by the chapter titles. Although designed primarily for the personnel of the University of California Medical Center [illegible] useful to the staff of other hospitals and also to graduate physicians practising independently. Each of the chapters is [illegible] compact presentation of useful information. The drug list contains precise descriptions of not only drugs which are listed in the *United States Pharmacopoeia*, the *National Formulary* and *New and Non-Official Remedies*, but also of some nonofficial drugs used in this medical center. The appendix includes an index of proprietary and common drug names which are different from the official names.

VOEGTLIN, CARL, AND HAROLD C HODGE, editors

Pharmacology and toxicology of uranium compounds with a section on the pharmacology and toxicology of fluorine and hydrogen fluoride. New York McGraw Hill Book Company Inc. 1949 2 v illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division VI—Vol. 1 pt. I–II) $14.25 4264

Contents: Part I, The pharmacology and toxicology of uranium compounds. The chemistry of uranium compounds, by A. L. Dounce and J. F. Flagg. Analytical methods for determining uranium and fluorine, by J. F. Flagg. Statistical methods, by D. [illegible] and others. Pathological anatomy following uranium poisoning, by T. R. Barnett and R. G. Metcalf. Characteristics of uranium poisoning, by J. H. Wills. Toxicity following parenteral administration of certain soluble uranium salts, by F. Haven and H. C. Hodge. Studies of toxicity of various uranium compounds [illegible] fed to experimental animals, by E. A. Maynard and H. C. Hodge. The toxicology of compounds of uranium following application to the skin, by J. A. Orcutt. The toxicology of uranium compounds following application to the eye, by J. A. Orcutt. Toxicity following inhalation, by H. E. Stokinger and others. The distribution and excretion of uranium, by W. F. Neuman. Tolerance to uranium compounds, by F. Haven. The action of uranium on enzymes and proteins, by A. L. Dounce and T. H. Lan. Catalase [illegible] test for uranium poisoning, by A. L. Dounce and others. The mechanism of action of uranium compounds in the animal body, by A. L. Dounce. Studies on human exposure to uranium compounds, by J. W. Howland. Part II, The pharmacology and toxicology of fluorine and hydrogen fluoride. Toxicity following inhalation of fluorine and hydrogen fluoride, by H. E. Stokinger. Appendix. Index.

Note: These volumes are based on the work of the Division of Pharmacology of the Manhattan District Project [illegible], during World War II, [illegible] charged [illegible] the development of the atomic bomb. Much of the information contained in these [illegible] derived from original investigations, however results reported in the literature have been included also.

VOEGTLIN, CARL, AND HAROLD C. HODGE, editors

Pharmacology and toxicology of uranium compounds—chronic inhalation and other studies. New York McGraw Hill Book Company, Inc., 1953 2 v illus. 24 cm. (National nuclear energy series. Division VI, vol. 1, pt. III–IV) Set $14.25 4265

Contents: Part III, Chronic studies: Chemistry, by W. F. Neuman and [illegible]. Biochemical methods, by [illegible] and others. Oral toxicity of uranium compounds, by E. A. Maynard and others. Toxicity following inhalation for 1 and 2 years, by H. E. Stokinger and others. Inhalation studies in rabbits [illegible] of uranium compounds, by H. E. Thompson and L. T. Steadman. Part IV, Mechanism and metabolic studies: Metabolic studies, by H. L. Barke and others. Deposition of uranium in bone, by W. F. Neuman. Studies in cell metabolism, by A. Rothstein. Maximum allowable concentration of uranium dust in air, by H. C. Hodge and others. Biological effects of uranium—literature review, by [illegible] and L. J. LaFrance. Special materials, by H. E. Stokinger and C. J. Spiegl. Résumé of Chapters 11 to 24, by H. C. Hodge. Appendix. Cumulative index, parts [illegible] to IV.

Note: The papers in these volumes, together with those presented in the volumes described in the preceding entry, present the results of [illegible] very comprehensive investigation of uranium and its compounds from the standpoint of their toxicity. Studies of certain substances not containing uranium but of interest in uranium processing were included in the program, which [illegible] largely one of animal experimentation. Techniques are fully described and results are presented in much detail. The presentation is so complete that even the summary chapter is nearly 120 pages long. The books in the complete set are published in the format of four thick volumes; however, they are designated as four parts of [illegible] single volume.

VON OETTINGEN, WOLFGANG FELIX

The halogenated aliphatic, olefinic, cyclic, aromatic, and aliphatic-aromatic hydrocarbons, including the halogenated insecticides, their toxicity and potential dangers. Washington, D C Government Printing Office 1955 430 p. illus. 24 cm (United States Public Health Service Publication no 414) $2 50 4266

Contents. Halogenated aliphatic hydrocarbons Halogenated methane derivatives. Halogenated ethane derivatives. Halogenated propane derivatives. Halogenated butane derivatives. Halogenated pentane derivatives. Halogenated hexane derivatives. Halogenated olefinic hydrocarbons. Halogenated ethene derivatives. Halogenated propene derivatives. Halogenated butene derivatives. Halogenated pentene derivatives. Comparison of the physical-chemical properties of halogenated olefinic hydrocarbons. Halogenated diolefinic hydrocarbons. Halogenated cyclic hydrocarbons. Halogenated aromatic hydrocarbons Halogenated benzene derivatives. Halogenated toluene derivatives. Methyl-halogenated derivatives of toluene (benzyl derivatives) Halogenated xylene derivatives. Halogenated diphenyl derivatives. Halogenated naphthalene derivatives. Halogenated indene derivatives. Halogenated terpene derivatives. Halogenated aliphatic-aromatic hydrocarbons. Index.

Note This is an extensive pharmacological review and study of the toxicity of the various halogenated hydrocarbons. The author discusses the chemistry analytical procedures, investigative and clinical toxicology and the prophylaxis and treatment of poisonings from the halogenated hydrocarbons. The purposes of the publication are to help reduce the incidences in industry and elsewhere of such poisonings, to facilitate their diagnosis and treatment, and to stimulate further research in the field. Bibliographies appear at the ends of the sections.

WAKSMAN, SELMAN ABRAHAM

The literature on streptomycin 1944–1952 New Brunswick Rutgers University Press, 1952 553 p 24 cm. $6 00 4267

Contents Actinomycetes General references. Streptothricin. Streptomycin. Author index. Subject index.

Note. This second edition contains 5,500 references to the literature of streptomycin as compared with 3,171 in the 1948 edition. Uses of the antibiotic other than in the treatment of diseases are now included, such as in animal feeding and in the preservation of semen and foods. A more detailed and enlarged index has also been provided. As in the previous edition the arrangement is chronological.

WELCH, HENRY

Principles and practice of antibiotic therapy Specially edited by Félix Martí Ibáñez. New York Medical Encyclopedia, Inc. 1954 699 p illus 22 cm $12 00 4268

Contents Part I, The antibiotics Isolation and development of the antibiotics Tyrothricin. Penicillin Streptomycin and dihydrostreptomycin. Bacitracin. Polymyxin, neomycin, viomycin, subtilin, and fumagillin. Erythromycin and carbomycin. Chlortetracycline Chloramphenicol. Oxytetracycline. Tetracycline Synergism, antagonism, and hormesis with reference to antimicrobial substances, by G. L. Hobby Part II, Antibiotic therapy of infectious diseases Pneumococcal and streptococcal infections, by H. F Dowling. Staphylococcic infections, by M. Finland. Meningococcal and gonococcal infections, by H. F Dowling Treponemal diseases, by C R. Rein. Spirochetal diseases other than the treponematoses, by C R. Rein. Surgical infections, by E. J Pulaski. Urinary tract and intestinal tract infections, by C. Keefer and L. Weinstein. Brucellosis, plague and tularemia, by V Knight. Antibacterial drugs in treatment of tuberculosis, by H. C. Hinshaw Virus and rickettsial diseases, by T Woodward and J E. Smadel. Miscellaneous diseases, by W Herrell. Part III, Antibiotic therapy in medical specialties Antibiotic therapy in ophthalmology by A. E Braley Antibiotic therapy in pediatrics, by S. Ross. Antibiotic therapy in oral surgery and dentistry by H. A. Zander and H. B Clark Index

Note. A successor to H. Welch and C. N Lewis, *Antibiotic therapy* 1951 It is a broad survey of the antibiotics and their uses in medicine. The first part, devoted to the discovery development, spectra, and pharmacology of the antibiotics that have found extensive application in medicine, is 284 pages long. The remainder of the space is devoted to the 14 contributed chapters on the uses of various antibiotics in the treatment of specific classes of infections and to the applications of the same substances in specialized fields of medicine, including dentistry The chapters in this part describe a considerable range of clinical experience. Throughout the book, the chapters are accompanied by extensive bibliographies.

WHITELOCK, OTTO V ST , editor

Experimental methods for the evaluation of drugs in various disease states. Editor in chief Otto V St. Whitelock. Associate editor Franklin N Furness Conference chairman and consulting editor Bradford N Craver New York Published by the Academy 1956 463–732 p illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 64 art. 4) $4 00 4269

Contents. Introductory remarks, by B. N Craver Part I, Collagen diseases. On the localization of steroid hormones in connective tissue, by T F Dougherty and others. Assay of drugs on connective-tissue permeability by J Seifter and D. H. Baeder. Screening of possible therapeutic agents by means of experimental replicas of connective-tissue diseases, by H. Selye and G Jasmin. Part II, Angina pectoris Introductory remarks, by D. K Gross. Clinical aspects for the appraisal of drugs used for the treatment of the anginal syndrome, by R. C. Batterman. The design of proper experiments to investigate clinical angina pectoris and the importance of knowing the determinants of coronary flow in considering therapy of angina pectoris, by L. N Katz. Neurohumoral factors in the origin and treatment of angina pectoris, by W Raab. Evaluation of drugs used in the treatment of angina pectoris by means of exercise-electrocardiographic tests, by H. I Russek. Part III, Cardiac arrhythmias Introductory remarks, by G. K. Moe. Arrhythmias following experimental coronary occlusion and their response to drugs, by B. B. Clark and J R. Cummings. Screening of drugs for antiarrhythmic activity by C. H. Ellis. Relation between atrial and ventricular antiarrhythmic assay methods—rationale for a screening program, by M. M. Winbury Correlation between pharmacological tests and clinical trial, by L. L. Terry. Part IV Atherosclerosis Inhibitors of cholesterol biosynthesis and the problem of hypercholesteremia, by D. Steinberg and D. S Fredrickson. Serum lipoproteins and the evaluation of atherosclerosis, by J W Gofman. Experiences in assaying estrogen antiatherogenesis in the chick, the rabbit and man, by J. Stamler and others. Atherosclerotic complications in hypertensive disease, by A. C. Corcoran and others. Part V Disorders of the central nervous system Introduction, by J. E. P Toman. A comparative approach to the evaluation of drug effects upon affective behavior by J V Brady Use of intracerebral electrodes to evaluate drugs that act on the central nervous system, by J M. R. Delgado and L. Mihailovic. The experimental evaluation of ataractic agents in animals, by R. K. S. Lim and others. The predictable value of anticonvulsant indices, by E. H. Jenney and C. C. Pfeiffer. The experimental evaluation of antiparkinsonian compounds, by V G. Vernier and K. R. Unna. The correlation between animal testing procedures and clinical effectiveness of centrally acting muscle relaxants of the mephenesin type by E. F Domino Concluding remarks, by J E. P Toman.

Note Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in March, 1956, have been made available in this monograph. A variety of techniques for the assay of drugs and for evaluation of their pharmacological activities are explicitly described Most of the techniques are recent developments. Apparently restriction of the conference (and the papers) to experimental methods pertinent to diseases primarily of the aged was only a device for setting necessary limits to the scope of the conference.

YEAR BOOK OF DRUG THERAPY (1955–1956 Year Book series) Edited by Harry Beckman. Chicago The Year Book Publishers, Inc. 1956 560 p illus. 20 cm $6 00 4270

Contents Introduction. Allergy Antibiotics and sulfonamides. Cardiovascular diseases. Dermatology Endocrinology Gastroenterology Hematology Internal medicine Neuropsychiatry Obstetrics and gynecology Ophthalmology Otorhinolaryngology Pediatrics Surgery Venereology Index to authors. Index.

Note Organized similarly to the other annuals in this publisher's medical Year Book series, this annual volume consists of abstracts of articles selected from the periodical literature of the world. The period covered in the issue at hand is August, 1954, to August, 1955. The typical abstract is several hundred words in length. In many instances, it is supplemented by a brief editorial comment which adds to the information given in the abstract or critically evaluates the author's methods or conclusions. References to the source articles are given in all cases. In this issue there are 64 illustrations.

MEDICAL EMERGENCIES AND FIRST AID

AMERICAN RED CROSS

American Red Cross first aid textbook prepared by the American Red Cross for the instruction of first aid classes. Revised. With 264 illustrations. New York The Blakiston Division, McGraw Hill Book Company 1945 254 p. illus. 20 cm. 4271

Contents The why and how of first aid. Shock. Dressings and bandages. Wounds and their care. Artificial respiration and the treatment of common asphyxial accidents. Poisons. Injuries to bones, joints, and muscles. Injuries due to heat or cold. Transportation. First aid for common medical emergencies. The human body—how it is put together and how it works. First aid kits. Index.

Note A standard textbook for classes in first aid and a reference guide for the emergency treatment of injuries. It is carefully written in collaboration with various medical and surgical experts, but is couched in a plain, direct style that anyone who reads can understand. Furthermore, it is adequately illustrated. The fourth revised edition was published by Doubleday and Company in 1957 241 p. $1.00.

AMERICAN RED CROSS

First aid textbook for juniors with an appendix on safety information. Second edition. Garden City N Y Doubleday & Company Inc., 1953 145 p. illus. (part col d) 22 cm. $1.00. 4272

Contents (abridged) Need for first aid. Shock. Wounds. Dressings and bandages. Bruises. The circulatory system. First aid for bleeding. Special wounds and eye injuries. The breathing system. Artificial respiration. Artificial respiration and rescue. Poisoning. Body framework. Fractures: signs of and first aid for fractures. Dislocations and sprains. A general plan for giving first aid. Moving injured or sick persons. Injuries due to heat and cold. Unconsciousness. Common illnesses. First aid kits. Other common illnesses. Appendix: Safety information. Index.

Note This textbook varies from the standard first aid course of the American Red Cross in that it is specifically designed for young people from 12 to 1[illegible] years old. The descriptions are written in simpler language, and the range of injuries covered is less extensive. The book is designed for use in organized classes, and the chapters are accompanied by review questions. The appendix on safety information was added in this edition.

COLE, WARREN HENRY AND CHARLES B PUESTOW

First aid surgical and medical. Illustrated by Carl Linden and Tom Jones. Fourth edition. New York Appleton-Century-Crofts, Inc., 1951 432 p illus. 22 cm. $4 00. 4273

Contents Procedures and limitations in first aid work, by W H Cole. General principles of first aid—common conditions requiring first aid—general method, by W H. Cole. Anatomy and physiology by C B Puestow. Bandaging, by W H Cole. Wounds, by W H. Cole. Shock—blood transfusions, by C B. Puestow. Injuries to large blood vessels, by Oscar de Takats. Burns—frost bite, by F W Gowdy. Transportation of the injured, by L. Reed. Fractures, dislocations and sprains, by H. B. Thomas and F W Hark. Compound fractures—compound dislocations, by H. B. Thomas and C. N. Lambert. Gas and bomb raids, by H. C. Lueth. Respiratory emergencies, by W H. Cassels. Injuries of the head, by W Van Wagenen. Abdominal emergencies, by W C. Beck. Emergencies of the genito-urinary tract, by C. M. McKenna and J. H. Kiefer. Wounds of the mouth, face and neck, by L. W Schultz. Injuries of the scalp, skull, spine and nervous system, by E Oldberg and F Barry. Medical emergencies, by R. W Keeton and M. H. Montgomery. The poisoned patient, by W H. Cole. Chronic or remote military casualties, by C. B. Puestow. Miscellaneous conditions frequently requiring first aid care, by W H. Cole. The feet, by C. B. Puestow. First aid in industry by W F Lyon and R. C. Kilbourne. References. Index.

Note A book which is inclusive enough to be of practical value not only to laymen who are taking training in first aid but also to nurses and physicians. Some of the material is more advanced than is commonly included in books on first aid treatment, but care has been taken to point out where first aid treatment should be given only as a precautionary measure or not at all and the injured or ill person turned over to a physician. Some of the information on treatment is addressed specifically to the physician rather than to the lay worker. The third edition was published in 1948. Much of its text has been carried over to this edition. However revisions have been made wherever advances in medicine have made them necessary. A chapter has been added on first aid in industry; a section has been added on first aid in atomic warfare and recent literature has been added to the bibliography.

CULLEN, STUART C. AND E. G GROSS

Manual of medical emergencies. Second edition. Chicago The Year Book Publishers Inc., 1953 278 p. illus. 18 cm. $4.50 4274

Contents General principles in emergency treatment. Airway and artificial respiration. Oxygen therapy. Circulatory emergencies. Acute poisoning. Local anesthetic drug reactions. Head injuries. Allergic disturbances. Emergencies due to central nervous system stimulation. Care of patient in acute and chronic comatose states. Miscellaneous emergencies. Technics of venepuncture. Drugs, preparations and dosages. Index.

Note This pocket-size manual has been expressly prepared for the general medical practitioner who must act, rather than "search the literature," in meeting an emergency. It is concerned with techniques of dealing with acute emergency situations, rather than with prolonged therapy. The authors have confined their recommendations to drugs, equipment and procedures that are readily available. The style is didactic in keeping with the purpose of the volume, although tested alternative treatments are sometimes suggested. The authors are faculty members of the College of Medicine of the University of Iowa.

FICARRA, BERNARD J editor

Emergency surgery 578 illustrations. Philadelphia F A. Davis Company 1953 1,000 p illus. 26 cm. $18.00. 4275

Contents (abridged) Section I, Emergencies encountered in the region of the head and neck. Management and treatment of acute injuries to skull and brain, by J. E. Adams. Treatment of wounds and lacerations of the face, by H. May. Emergency treatment of facial bone fractures, by L. R. Rubin. Ligation of carotid arteries for active hemorrhage from cancer of the head and neck, by A. J. Vendier. Tracheotomy by H. von Leden. Immediate treatment of ocular injuries, by J. J. La-Frenll. Section II, Emergencies encountered in the thoracic region. Acute breast abscess, by B. J. Ficarra. Foreign bodies in the air and food passages, by M. S. Lloyd. Traumatic lesions of the thorax (exclusive of the heart) by R. H. Betts. Emergency surgery of the esophagus with special reference to stricture, by R. Adams. Section III, Diagnosis and treatment of acute abdominal emergencies: Pathologic conditions causing acute abdominal symptoms and physical signs, by B. J. Ficarra. Traumatic rupture of the spleen and liver, by C. E. Welch. Management of penetrating abdominal injuries, by E. R. Best. Emergency surgery for acute intestinal obstruction, by O. E. Moore. Section IV. Emergencies of gynecological organs. Section [illegible] Management of acute conditions of the osseous and neuromuscular systems: Emergency treatment of fractures of the arm and leg, by R. E. Bowers. Acute nonfracture injuries of the shoulder by A. F DePalma and H. E. Snodden. Acute nonfracture injuries of the knee and ankle, by D. J. Magilligan. The management of acute orthopedic problems in children, by H. C. Fett and H. C. Fett, Jr. Athletic injuries by B. J. Ficarra. Fractures of the spine and pelvis, by S. J Coleman, Trauma, by R. S. Dean Rivera. Section VI, Emergencies of the vascular system: Venous thrombosis and arterial embolism,

by J L. Madden. Cardiac arrest during anesthesia and surgery by J Johnson and C. K. Kirby Shock, by J Scudder Section VII, Urological emergencies. Section VIII, Acute surgical problems the result of unforeseen complications Postoperative hemorrhage, by J D Martin, Jr Wound disruption, by S. A. Localio. Emergencies in the course of anesthesia, by R. T Patrick and J S. Lundy Section IX, Surgical emergencies seen in certain groups of patients, and the treatment of human and animal bites Subphrenic abscess, by K. C. Sawyer Acute surgical emergencies in infancy and childhood, by R. J Coffey and H. S. Madigan, Emergent surgery in the aged, by W E. Branch. Section X, Management of casualties resulting from bombing and similar catastrophies. Index.

Note A cyclopedic work composed of 70 contributed chapters organized in 10 sections. The titles of all of the sections and of a few of the chapters are listed above. Most of the 79 contributors are eminent teachers in medical colleges in the United States of America. It is directed to all physicians and surgeons, but is of special value to general practitioners and to surgeons in the emergency wards in hospitals. The volume is fully indexed for quick reference.

FLINT, THOS, JR

Emergency treatment and management. Philadelphia W B Saunders Company, 1954 303 p 24 cm $5 75 4276

Content (abridged) General medical principles and procedures Barbiturate prescriptions. Death cases. Drug dosage in children. Narcotic prescriptions. Serum sensitivity and desensitization. Somnifacients. X-rays. Emergency treatment of specific conditions. Abdominal pain. Abortions. Abrasions. Allergic reactions. Asphyxiation. Bites Bleeding. Bullet wounds. Burns. Cardiac emergencies. Concussion of the brain. Convulsions. Dislocations. Drowning. Eye conditions. Foreign bodies. Fractures. Head injuries. Heat exhaustion. Hemorrhoids. Hiccup Insulin shock. Intestinal obstruction. Neck injuries Nosebleed. Paralysis. Pneumonia. Poisoning, Acute Pregnancy Pulmonary edema. Rectal complaints. Respiratory tract complaints. Shock. Snake bites. Spinal cord injuries Stab wounds. Suicide Toxic reactions to average doses of commonly used drugs Urinary and genital tract problems. Venereal diseases. Vertigo. Administrative, clerical and medicolegal procedures. Birth, stillbirth and death certificates. Emergency case log. Photographing of patients Public liability cases. Release of information Responsibilities of the physician treating emergency cases Unusual occurrence reports Appendix. Index.

Note A reference book of concise and explicit directions for treatment and related procedures in a wide variety of medical emergencies. One hundred four conditions are listed in the section on emergency treatment of specific conditions The directions under each heading range in length from only a few lines, as for the emergency treatment of abscesses, to two pages or more under such headings as cardiac emergencies. The information is conveyed in a very concise style and is organized for quick reference by the use of numerals, letters, distinctive type, etc. A special section on acute poisoning and poisons is arranged in two parts, one of four pages on general emergency procedures and a 112-page section on the symptoms and treatment of poisoning by specific substances. The author is Chief of the Emergency Department of the Permanente Medical Group, Kaiser Foundation Hospital, Richmond, California.

MURPHY, FRANCIS D AND OTHERS

Medical emergencies diagnosis and treatment By Francis D Murphy and associate authors Paul G LaBissoniere Edwin G Olmstead Anthony V Pisciotta Joseph W Rastetter Burton A Walsbren Illustrated fifth edition Philadelphia F A Davis Company 1955 603 p illus 24 cm $7 50 4277

Contents Vascular disease, by F D Murphy Diseases of the blood, by A V Pisciotta The heart by F D Murphy Collagen diseases, by F D Murphy and J W Rastetter Metabolic disorders, by F D Murphy The nervous system, by E G Olmstead. The kidneys, by F D Murphy The lungs, by B A Walsbren Acute abdominal emergencies, by P G LaBissoniere. The liver by J W Rastetter Acute infections, by B A Walsbren Tropical diseases, by F D Murphy and W L Coffey Jr Acute poisoning, by F D Murphy Drugs, by F D Murphy and B A Walsbren Appendix by B A Walsbren Index

Note A standard manual of diagnosis and treatment in medical emergencies. It is designed for use in the instruction of medical college students taking advanced courses and as an office reference book for medical practitioners. A wide range of emergencies is covered under the headings noted above. Generally speaking, information is given on the following points for each emergency etiology pathology signs and symptoms, diagnosis, prognosis, and treatment. Techniques of emergency treatment are covered explicitly and in considerable detail. The other points are covered concisely The principal author is head of the Department of Medicine, of the Marquette University School of Medicine. He was the sole author of the first four editions of the book. He was joined by six colleagues in the writing of this fifth edition, which is a substantially revised edition containing much newly added material. A new edition was scheduled for publication in 1958.

YOUNG, CARL B, JR

First aid and resuscitation. Emergency procedures for rescue squads, firemen, policemen, ambulance crews, interns and industrial nurses. Springfield, Ill Charles C Thomas, 1954 338 p illus 24 cm $8.50 4278

Content (abridged) Shock. The unconscious patient. Resuscitation. Transportation of the seriously ill and injured. Procedures to be carried out at the scene of an emergency Proper equipment for an emergency ambulance. Acute heart emergencies. Acute indigestion. Cerebral vascular accidents. Common respiratory emergencies following injury Acute drug intoxication. Acute alcohol intoxication Electric shock. Submersion. Various cases. Asphyxia of the newborn and related emergencies. Bronchial asthma. Pneumonia. Burns, hemorrhage, shock, and the use of oxygen. Sterilization of equipment. Suicide. Oxygen therapy Records and statistics. Apparent death and death. Glossary Index.

Note. A reference manual that goes beyond the usual layman book on first aid measures, both in the kinds of emergencies covered and in the range of procedures described. As noted in the subtitle, it is addressed to non-medical personnel who has official responsibility for some emergency care of injured persons and persons struck with acute medical disorders. Furthermore, it describes good procedures in cases where the victim is dead and the primary consideration is protection of the body and the immediate surroundings from curious onlookers. The recommended procedures are described clearly and specifically Also, there is considerable discussion of the organization and management of ambulance services. The majority of the 169 figures are reproductions of photographs. The author has had extensive experience in both military and civilian first-aid work.

PHYSICAL THERAPY AND REHABILITATION

BIERMAN, WILLIAM AND SIDNEY LICHT

Physical medicine in general practice With twenty two contributors. Third edition. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers 1952 798 p illus $12 50 4279

Contents Part I, Methods Heat and cold, by C. S. Wise Hydrotherapy by W Bierman. Climatotherapy and spa therapy by W S. McClellan Visible and infrared radiation, by W D. Paul Diathermy by F B Moor and W Bierman. Surgical diathermy by W Bierman Galvanic and low frequency current, by W Bierman and S. Licht. Ultraviolet radiation, by W Bierman. Ultrasound, by F Friedland. Massage by W Bierman Manipulation, by J Bastow Functional muscle testing, by H. O. Kendall and F P Kendall Exercise by T L. DeLorme Occupational therapy by S. Licht. Medical rehabilitation, by S Licht. Part II, Clinical applications The conduct of treatments, by W B. Snow Diseases of the locomotor system, by W Bierman Arthritis and rheumatic conditions, by W M. Solomon. The lower extremity amputee by S. Brunnstrom. Neurologic diseases, by S. Mead. Anterior poliomyelitis, by M E Knapp. Neuromuscular reeducation for paralysis, by H. Kabat Cardiovascular diseases, by K. Harpuder Diseases of the digestive system, by C O. Molander Genitourinary diseases, by S. Dick. Gynecologic diseases, by W Bierman Eye, ear nose and throat diseases, by W Bierman Respiratory diseases, by W Bierman. Dermatologic diseases, by S M Peck and G. Klein Index.

Note A standard manual for general practitioners of medicine and beginners in the field of physical therapy In the first part, methods which are currently considered to have therapeutic ... are described explicitly In the second part, the uses of physical ...

Physical Therapy

of therapy in various types of diseases are discussed. Literature references are included in each chapter. The preceding edition was published in 1944 and was written by Dr. Bierman. In preparing this edition the contributors named in the Contents above have revised or completely rewritten the chapters now signed with their names. Without changing the purpose or level of the book, much obsolete material was eliminated and a wide range of new material added.

BRYCE, MARGARET

Physical therapy after amputation the treatment of the unilateral lower-extremity amputee. Madison University of Wisconsin Press, 1954 93 p. illus. 17 cm. $1.50. 4280

Contents: Introduction. Bed positioning. Bandaging. Exercises. Prosthetic training. Legs. Prostheses. Suction socket. Sequence of events. Bibliography

Note. A small, useful manual directed to students preparing for careers in physical therapy and to working physical therapists. Its limitation to the therapy of one class of amputee is indicated in the subtitle. It covers the training of this class of amputee in specific detail, beginning with rest in bed immediately after the operation and continuing until walking has been mastered. Patients' difficulties in learning to use prostheses are described, and the reader is told what the therapist must do about them in the way of training and advice. A two-page bibliography lists a selection of recent American literature.

BUCHWALD EDITH AND OTHERS

Physical rehabilitation for daily living by Edith Buchwald in collaboration with Howard A. Rusk, George G. Deaver and Donald A. Covalt. New York McGraw Hill Book Company Inc. 1952 183 p. illus. 29 cm. $7.50. 4281

Contents: Functional training. Bed and mat exercises. Wheelchair exercises. Self-care. Ambulation. Elevation and travel on crutches. Special problems. Wheel chairs. Braces. A D L testing. Equipment and furniture for A D L. Index

Note. Based upon the program developed at New York University-Bellevue Medical Center, this manual is intended for physical therapists, physicians, and nurses who are concerned with teaching the skills necessary for physical independence to persons who have lost the proper use of their legs and must rely upon braces, crutches, wheel chairs. The volume outlines the step-by-step procedures for such activities of daily living (A.D.L.) as toilet activities, dressing activities, eating activities, getting from place to place, walking, climbing stairs, and use of the wheel chair. Nearly half of the pages of the book contain photographic illustrations showing the recommended steps and positions. While primarily intended for hospital programs of rehabilitation, the publication is written in nontechnical language and should be valuable also to patients themselves and their families.

CRUICKSHANK WILLIAM M., AND GEORGE M. RAUS editors

Cerebral palsy its individual & community problems. Syracuse Syracuse University Press, 1955 560 p. illus. 24 cm. $7 50. 4282

Contents: Part I. Diagnosis and assessment: Size and scope of the problem, by W. M. Cruickshank and G. M. Raus. Cerebral palsy—medical aspects, by E. Denhoff. Evaluation of intelligence, by H. V. Bice and W. M. Cruickshank. Personality characteristics, by W. M. Cruickshank and H. V. Bice. Hearing and speech problems among cerebral palsied children, by L. M. DiCarlo and W. W. Amster. Part II, Planning for life adjustment: Physical therapy, by E. E. [illegible]. Occupational therapy, by R. [illegible]. Educational planning, by W. M. Cruickshank. Mental retardation and cerebral palsy, by G. O. Johnson. Parent education and counseling, by H. V. Bice. Realistic vocational guidance and placement, by J. A. Garrett. Social casework in relation to cerebral palsy, by G. White. Total community planning for the cerebral palsied, by M. Abbott. The rehabilitation process, by G. M. Raus. Index

Note. The contributors to this volume include specialists in physical therapy, speech pathology, clinical psychology, physical medicine, vocational rehabilitation, pediatrics, medical social work, and education. Together their contributions constitute an authoritative and comprehensive professional-level text and reference book on the diagnosis, assessment, care and rehabilitation of cerebral palsy children. A truly interprofessional survey of the problem is achieved. The various aspects of the subjects which are named in the chapter titles are treated in most instances in considerable detail. More space is given to psychological and social aspects than to medical, however, the chapter on medical aspects is one of the longest in the book. Literature references are included in all chapters.

DI CARLO LOUIS M AND OTHERS

Speech after laryngectomy a comparative study of the breathing and speech coordinations of laryngectomized and normal subjects, and the relationships between the breathing and speech coordinations and articulatory errors of laryngectomized subjects to their speech intelligibility By Louis M Di Carlo Walter W Amster Gilbert R. Herer Syracuse Syracuse University Press 1955 184 p. illus. 24 cm. (Syracuse University Special education and rehabilitation monograph series 1 edited by William M Cruickshank) $4.00 4283

Contents (abridged): Introduction. Survey of the literature. Experimental design of procedures. Results and discussion: Speech breathing. Articulation analysis. Rhythm analysis. High and low intelligibility groups. Correlations of intelligibility criteria and intelligibility predictors. Report of surgical data. History information. Summary and conclusions. Appendix. Bibliography

Note. A report in considerable detail of a study of the speech of 18 laryngectomized males between the ages of 36 and 74 years and 13 normal speaking males between the ages of 37 and 70 years. Examined were such aspects of the problem as the breathing and speech coordinations of the laryngectomized compared to those of normal speakers and factors in the intelligibility of the speech of laryngectomized speakers. The techniques of the study are fully described. In their conclusions, the authors recommend among other things that laryngectomized individuals should learn good breath control and voice production before attempting speech. The volume contains 31 tables and 70 figures, most of the latter being graphical representations of the results of tests. The bibliography runs to four pages.

EWERHARDT F H AND GERTRUDE F RIDDLE

Therapeutic exercise Philadelphia Lea & Febiger 1947 152 p. illus. 24 cm. $2.50 4284

Contents: Introduction to therapeutic exercise. Analysis of joint motion. Brief review of muscles participating in joint movements. Physiology of skeletal muscle. Plexuses of nerves controlling the upper and lower extremities. Physiology of therapeutic exercise. Special applications of therapeutic exercise. Application of therapeutic exercise in medicine. Poliomyelitis. Spastic paralyses. Index.

Note. A brief description of special exercises and the manner of their application in the treatment of various diseases, in the re-education of muscles, and in the correction of faulty posture. The anatomy of muscles and the physiology of muscle contraction are discussed in outline, but considerable attention is given to the characteristics and mechanism of muscular action. The book is written primarily for the use of students of physical education, occupational therapy, and physical therapy, but the methods discussed will also be of value to the general practitioner. A short bibliography is included.

GOLDTHWAIT JOEL ERNEST AND OTHERS

Essentials of body mechanics in health and disease. By Joel E. Goldthwait Lloyd T Brown, Loring T Swaim John G Kuhns. 135 illustrations. Fifth edition. Philadelphia J B Lippincott Company 1952 356 p illus. 20 cm. $6.00 4285

Contents: The problem of chronic illness. Body types. Body mechanics. Developmental deformities. Backache and other spinal sprains. The circulatory system. Diseases of the abdominal [illegible]. Diseases of the nervous system. Chronic arthritis. Treatment. The foot and body mechanics. Public health aspects of body mechanics. Geriatrics and body mechanics. Index.

Note. A practical discussion of the relationship between body structure and chronic illness. The book is written for the general practitioner and stresses the need for therapeutic measures which will correct faulty body mechanics and the resultant diseases. Case studies, photographs of patients before and after treatment, and chapter bibliographies are included.

GRAHAM, EARL C, AND MARJORIE M MULLEN, compilers

Rehabilitation literature 1950–1955, a bibliographic review of the medical care, education employment, welfare, and psychology of handicapped children and adults. New York The Blakiston Division, McGraw Hill Book Company, Inc., 1956 621 p 26 cm $13 00 4286

Note More than 5,000 journal articles, pamphlets and books pertaining to the medical care, psychology rehabilitation and welfare of the handicapped are listed in this bibliography Each listing provides the name of the author the title name of the journal, date of issue, volume number and page number for journal articles, and name of author price of publication, publisher year of publication, and number of pages for books and pamphlets. Every entry includes also a short annotation. The arrangement is alphabetical by topic and an author index is provided. Supplementary lists appear currently in the journal *Rehabilitation literature.*

KENDALL, HENRY O, AND OTHERS

Posture and pain. By Henry O Kendall, Florence P Kendall, and Dorothy A. Boynton Baltimore The Williams & Wilkins Company 1952 204 p illus. 29 cm. $7 00 4287

Contents: Part I, Alignment The standard posture. Postural faults. Part II, Mobility Joint and muscle analysis and relation to posture. Tests for muscle length. Tests for muscle strength. Procedure for postural examination. Part III, Treatment Pain associated with faulty body mechanics. Painful conditions of the low back, leg, knee, foot. Painful conditions of the upper back, neck, arm. Part IV Prevention of postural faults Developmental factors and environmental influences affecting posture. Index.

Note. The title of this work is somewhat misleading, for postural faults not associated with pain are considered as well as those that are painful. The authors are all associated with the Physical Therapy Department of the Children's Hospital School in Baltimore, and the book is based on approximately 12,000 cases on file in that department Nevertheless, it is not a highly technical treatment for specialists. Instead, the analysis, treatment, and prevention of postural faults are discussed simply and practically There are 159 figures, some of which contain several illustrations. The book is of interest not only to physical therapeutists but also to general practitioners of medicine and to teachers and others interested in the promotion of good posture

KESSLER, HENRY HOWARD

The principles and practices of rehabilitation By Henry H Kessler in collaboration with other authors With 132 illustrations and a colored plate Philadelphia Lea & Febiger 1950 448 p illus. (part col d) 24 cm. $9 00 4288

Contents: Part I, Principles. General considerations, by H. H. Kessler Physical restoration, by H. H. Kessler Rehabilitation with plastic surgery by J B. Brown and M P Fryer Rehabilitation with plastic surgical prosthetic restorations, by A. M. Brown. Physical therapy in rehabilitation, by F. Krusen. Physical conditioning, by D A. Covalt. The principles of occupational therapy in the rehabilitation of the physically handicapped, by W. L. West. Physical rehabilitation of the industrial injured, by H. D. Storms. A rehabilitation center by B. Greve. Disability evaluation, by F A. Hellebrandt. Guidance training, and placement, by M. E. Odoroff. Placement, by B. Hanman. Part II, Practices Rehabilitation of the amputee, by H. H. Kessler Psychiatric disabilities including epilepsy and mental deficiency by V H. Vogel. The rehabilitation of cerebral palsy by W M. Phelps. Physical rehabilitation of neurological disabilities, by A. B. C. Knudson. Rehabilitation in poliomyelitis, by R. L. Bennett. Rehabilitation of the patient with heart disease, by M. C. Becker Rehabilitation and the tuberculous, by H. Hahn. Rehabilitation of the blind, by E. C. McKay Hearing rehabilitation, by R. E. Marcus and F L. Lederer. Index.

Note. A practical, inductive manual. It is addressed primarily to graduate nurses and medical practitioners who are entering rehabilitation work from other specialties or who need fundamental and practical information about it because they occasionally have rehabilitation cases. The typical chapter is a compact outline of a specific rehabilitory technique, supplemented by selected literature references which serve to guide the nonspecialist to books and papers where fuller discussions of particular techniques are available.

KESSLER, HENRY HOWARD

Rehabilitation of the physically handicapped. Revised edition New York Columbia University Press 1953 275 p. 24 cm. $4 00 4289

Contents: Part I, Problems of the physically handicapped. General considerations. Problems of the disabled. The crippled child. The injured worker The disabled veteran. The chronic disabled. Part II, Principles of rehabilitation Physical restoration. Rehabilitation centers. Vocational guidance. Vocational training. Placement. Part III, Rehabilitation in practice The mentally and emotionally disabled. The orthopedic patient. The blind and the deaf. Medical and surgical invalids. Part IV A national program. Legislation and administration. A national challenge. Major centers and agencies for the handicapped. Index.

Note. This book by an internationally recognized authority is a standard general survey of rehabilitation. It discusses the problems of rehabilitation of all types of physically handicapped persons, not only war veterans, children, but also the blind, the deaf, and those with mental and emotional disorders. It deals with the problems and needs of the disabled with the principles of their rehabilitation and specifically with some of the rehabilitation techniques that have proved successful. A major premise is that the physically handicapped individual can often be restored to his full productive capacity in society when aided by intelligently directed medical and social therapy The final part describes the present organization of the rehabilitation of the handicapped in the United States of America, points out serious gaps in it, and suggests remedies. The first edition was published in 1947 The scope and organization of the book are unchanged in this second edition, but revisions have been made throughout in order to incorporate changes in the status of the physically handicapped and in efforts toward their rehabilitation that have occurred since the first edition was written. As would be expected, many of the revisions pertain to organization and legislation.

KNOTT, MARGARET, AND DOROTHY E. VOSS

Proprioceptive neuromuscular facilitation. Foreword by Sedgwick Mead. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1956. 135 p. illus. 27 cm $5.50 4290

Contents (abridged) Part I, Techniques of proprioceptive neuromuscular facilitation. Part II, Patterns of facilitation Part III, Reference tables. Evaluation and treatment program Part IV Reference tables. Index.

Note Rehabilitation methods developed by the authors at the Kabat Kaiser Institute are the basis of this manual, which is directed to graduate physical therapists. Some of the ideas basic to the methods are that better response is obtained from stretched muscle, stimulation of reflexes assists in neuromuscular movement, and that spiral and diagonal patterns of motion are the most effective Specific techniques for the stimulation and facilitation of specific patterns of movement are described in detail in the second and major part of the volume Each technique is described under the following subheadings "Antagonistic pattern," "Components of motion," "Normal timing," "Timing for emphasis," "Manual contacts," "Commands," "Pattern analysis," and "Limiting factors." Diagrammatic illustrations are included.

Kóvacs Richard

Electrotherapy and light therapy with essentials of hydrotherapy and mechanotherapy Sixth edition, thoroughly revised with 363 illustrations and a color plate. Philadelphia. Lea & Febiger 1950. 739 p. illus. (part col'd) 24 cm. $10.00. 4291

Contents (abridged) Part i, Electrophysics. Part ii, General electrotherapy and electrodiagnosis. Electromedical currents, apparatus and accessories. Electrophysiology Electrodiagnosis. The galvanic current and ion transfer. Medical diathermy Hyperthermy Electrosurgery. Electrical injuries. Part iii, Light therapy Physics of radiant energy Infrared and luminous radiation. Ultraviolet radiation—physics and effects. Heliotherapy Part iv Essentials of hydrotherapy and mechanotherapy Hydrotherapy Hypotherapy Massage. Exercise. Part v Applied physical therapy Cardiovascular conditions. Chronic arthritis and fibrositis. Affections of the central nervous system. Affections of bones, joints, muscles and tendons. Gynecological and genito-urinary conditions. Proctological conditions, by R. T Gorsch. Dermatological conditions. Diseases of the ear, nose and throat, by W Mezzana. Physical therapy in office practice. Physical therapy in institutional practice. Physical medicine and rehabilitation in general practice, by A. B. C. Knudson. Appendix. Glossary. Author index. Subject index.

Note A standard reference manual of physical medicine. Although there is some emphasis on electrotherapy and light therapy as indicated by the phrasing of the title, all of the physical therapies are included. The material is presented from the viewpoint of graduate physicians and physical therapists. Techniques are described separately first in general, then in relation to particular diseases. Selected literature references are included. The fifth edition was published in 1945. In this edition, there are new chapters, and many sections of those carried over have been revised or augmented. Seventy-five of the illustrations are new.

Kovács Richard

Light therapy Springfield, Ill. Charles C Thomas, 1950. 112 p. illus. 22 cm. (American lecture series. Publication no. 57 A monograph in American lectures in physical medicine edited by W A. Selle) $2.25 4292

Contents The history of light therapy Physics of radiant energy Infrared and luminous radiation. Ultraviolet radiation. Bibliography Index.

Note A brief survey of the current techniques in the therapeutic use of light and of infrared and ultra-violet radiation. Literature published as late as 1947 appears in the bibliography hence, there is some information in the book which is not to be found in older books on the subject. Essentially however it is a book to be used by graduate physicians who are not specialists in physical medicine but desire to know something about the status of light therapy The techniques discussed are those used in hospitals, doctors' offices, etc., in fact, warning against home use of "sunlamps" without the supervision of a physician is included in the book.

Rusk, Howard and Eugene J Taylor

Living with a disability By Howard A. Rusk and Eugene J Taylor in collaboration with Muriel Zimmerman and Julia Judson. New York The McGraw Hill Book Company Inc., 1953 207 p. illus. 22 cm. $3.50. 4293

Contents Taking advice. Three meals a day Looking your best. Keeping up appearances. Doing things differently Getting around indoors and out. Conquest of the kitchen. Living with your home. Time out to read. Picture credits. Index.

Note Written by staff members of the Institute of Physical Medicine and Rehabilitation in New York City the purpose of this book is to enable handicapped persons to achieve the greatest possible degree of independence, efficiency happiness, and comfort" in their daily lives. It is directed to the handicapped, and it provides ideas and specific instructions on performing the routines of living in spite of physical disabilities. It contains many pictures of devices and equipment and of unusual but practical ways of performing common tasks. Although some commercially developed aids, such as wheel chairs, are illustrated and their uses described, the main emphasis is on the adaptation of standard devices and utensils, that is to say adaptation of equipment available for the use of persons without disabilities. There are 213 illustrations, and the majority are reproductions of photographs.

Shestack, Robert

Handbook of physical therapy Foreword by I William Nachlas. New York Springer Publishing Company Inc. 1956. 212 p. illus. 21 cm. $4.25 4294

Contents. Part i, General considerations. History of physical therapy Ordering physical therapy Part ii, Physical therapy modalities: Radiant heat and infrared radiation. Diathermy (high frequency currents) Microwave diathermy Ultrasonics. Ultraviolet irradiation. Galvanic current (direct current). Low frequency currents. Electrodiagnosis. Faradic current. Paraffin baths. Hydrotherapy Massage. Exercise. Part iii, Physical therapy for medical conditions. Arthritic and rheumatic conditions. Degenerative joint disease (osteoarthritis). Peripheral nerve conditions. Neurological conditions. Peripheral vascular conditions. Acute joint injuries, allied conditions and orthopedic disorders. Fractures. Hand injuries. Poliomyelitis. Genitourinary conditions. Dermatologic conditions. Burns. Eye, ear, nose and throat conditions. Part iv Movements produced by muscles. Bibliography Index.

Note This book, written by a physical therapist of long experience, is well organized for both study and reference. It is limited to information on fundamentals and techniques, and is written in a concise style. The part devoted to modalities is 84 pages long; that on physical therapy for various medical conditions is 91 pages long. Both the modalities and their applications are specifically described for the benefit of both physicians who prescribe therapy and students of physical therapy Information is included on dosages, precautions and contraindications. The bibliography is a selected one designed as a guide to further reading rather than a list of references supporting the text.

Shriner, Mildred

Foundations for walking a practical guide for therapists, teachers and parents of cerebral palsied children. Chicago The National Society for Crippled Children and Adults, Inc., 1951 93 p. illus. 23 cm. $1.00. 4295

Contents Locomotion goals. The child needs the proper chair for sitting. The child needs other equipment to aid sitting balance. The child sits and gets around on all fours. The child is lifted and carried. The child stands. The child walks. The author. Bibliography

Note An authoritative booklet of practical techniques in the teaching of walking to children affected with cerebral palsy Most of the illustrations show special apparatus such as chairs, skate shoes, crawlers, specially adapted tricycles, parallel bars, and practice stairs. There is a bibliography of 21 references.

Soibelman Doris

Therapeutic and industrial uses of music a review of the literature. New York Columbia University Press, 1948 274 p. 20 cm. $3.25 4296

Contents Introduction. Opinions based on empirical methods. Experiments on physiological effects. Experiments on mood effects. Some interpretations. The application of music. Music in occupational and physical therapy Music and anesthesia. Music in industry Summary Bibliography Index.

Note Essentially a summation of the more important findings regarding the medical uses of music, as reported in the rather extensive literature of the subject. The mode of treatment is selective, and only those papers which report factual data and actual experiments are discussed. An appraisal of the arguments for and against the use of music as a therapeutic agent is presented in the final chapter. The majority of the references cited in the 14-page bibliography fall within the period 1940 to 1947

Steindler, Arthur

Kinesiology of the human body under normal and pathological conditions. Spring

field Ill Charles C Thomas 1955 708 p illus. 26 cm $19 75 4297

Contents (abridged) Part I, General kinetics The aims and purposes of kinesiology On the physical properties of bone. On functional adaptation of bone under pathological conditions. On the physical properties of cartilage, muscles, fascia and tendons. On the mechanics of joint and muscle action. On body balance and body equilibrium. On measurement and computation of bodily motion. Part II, The trunk Dynamics of the normal spine. Normal and pathological mechanics of the pelvis. Mechanics of respiration introduction and definition. Mechanics of posture. Part III, The extremities. Pathomechanics of the paralytic hip joint. Mechanics of the knee joint. Pathomechanics of the paralytic knee. Mechanics of foot and ankle. The lower extremity as a whole. Mechanics of shoulder-arm complex. Pathomechanics of paralysis of the shoulder Mechanics of the elbow joint. Mechanics of hand and fingers. The arm as a whole. Sprains of the joints of the upper extremity The pathomechanics of the more common fractures of the upper extremity The pathomechanics of the more common fractures of the lower extremity Part IV The gait. Author index. Subject index.

Note. A comprehensive and thorough presentation of the area of knowledge defined as "that part of physiology of motion which describes and analyzes locomotor events so far as they reflect the action of mechanical forces." It supersedes the author's *Mechanics of normal and pathological locomotion* 1935 It is organized in four parts, whose titles are given above, and in 38 "lectures" of which a selection is listed by title above. Except for the first part, which is devoted to basic aspects, discussions of the mechanics of normal joints and other locomotor and postural elements are followed by discussions of the mechanics of diseased ones. For example, the lecture on the mechanics of the normal knee joint is followed by 2 lectures on the mechanics of knee joints affected by deformity and paralysis. Although containing less mathematics and somewhat simpler in style than the earlier work, the book is still a very technical presentation suitable for specialists in physical medicine and orthopedics. Selected bibliographies are included and there is an adequate number of illustrations.

DIET THERAPY

BARBORKA, CLIFFORD JOSEPH

Treatment by diet. Fifth edition. 14 plates including 13 in color Philadelphia J B Lippincott Company 1948 784 p illus. (part col d) 26 cm $12 50 4298

Content (abridged) Part I, Diet in health. Part II, The application of diet therapy Part III, Diet in disease, Section A, Diseases in which diet is of paramount importance Diabetes mellitus. Gout. Overweight—obesity Underweight—emaciation. Nephritis. Diseases of the digestive tract. Deficiency diseases. Section B, Conditions in which diet is of varying importance Diseases of circulation. Febrile diseases. Diseases of esophagus and stomach. Diseases of the liver Diseases of the gallbladder Diseases of the intestines. Food allergy Diseases of the urinary tract. Addison's disease. Hyperinsulinism. Protein and amino acids in nutritional therapy Chronic arthritis. Pregnancy and lactation. Ketogenic diet. Diet and skin diseases. Part IV Routine hospital diets—preoperative and postoperative dietary management. Part V Appendix. Bibliography Index.

Note An encyclopedic manual of nutrition and diet, which has been specifically designed for the use of general practitioners of medicine. A brief description of each disease precedes the discussion of dietary considerations and principles in connection with it A large part of the text consists of tables of dietary information and menus which have been worked out to suit specific disorders or nutritional requirements There are brief mentions of certain other therapies used with dietary treatment. In this edition the work has been very substantially revised. There is a new chapter on deficiency diseases and another on diseases of the skin Changes in the illustrations include a new series of color plates which show comparative servings of various kinds of food as recommended by the Food and Nutrition Board of the National Research Council. The bibliography is exceptionally full.

GOODHART ROBERT S , editor

Nutrition in the practice of medicine with comments on nutrition disease and geography Proceedings of the Nutrition Symposium held at the University of California School of Medicine, San Francisco October 30 1951 Edited by Robert S Goodhart, New York The National Vitamin Foundation, Inc, 1952 163 p illus. 23 cm. (Nutrition symposium series. No 4) $1 50 4299

Contents. Some factors related to intestinal absorption, by P J Culver Nutritional aspects of liver disease in man, by R. M. Kark. Influence of pancreatic insufficiency on nutrition, by H. Necheles. Nutritional and metabolic disturbances in ulcerative colitis, by J. A. Bargen. Some aspects of nutrition in relation to tissue development and maintenance by F J Stare. Some features of tissue changes induced by nutritional deficiencies, by P R. Cannon. Some international economic aspects of nutrition, by J. R. Condliffe.

Note Each of the papers in this book is original and is written at the research level. In most instances the results of recent investigations and observations are described, and in some of the papers particular stress is laid on problems still awaiting solution. A transcript of the discussion which followed the presentation of each paper is included, and literature references are supplied.

MCLESTER, JAMES SOMERVILLE, AND WILLIAM J DARBY

Nutrition and diet in health and disease. Sixth edition. Philadelphia W B Saunders Company 1952 710 p. 24 cm. $10 00. 4300

Contents (abridged) Part I, Nutrition in health Utilization of food. The vitamins. Inorganic nutrients. Milk and milk products. Meat, fish and eggs. Other foods. Feeding of infants. Nutrition in pregnancy and lactation. Part II, Nutrition in disease. Deficiency diseases. Diabetes mellitus. Gout. Obesity and leanness. Diseases of the kidney and urinary tract. Diseases of the digestive organs. Febrile diseases. Diseases of the heart and arteries. Diseases of the joints. Diseases of the nervous system. Endocrine disorders. Diseases of the skin. Nutrition in surgery Special methods of feeding. References. Supplementary tables. Composition of foods. Index.

Note. A technical survey of the available information on nutrition both in health and in disease. Although it contains much information which is valuable to physicians, nurses, and public health workers, it is addressed not only to such readers but intended also for nutritionists, teachers of home economics, etc. It is based on the literature, and both the text and the tables are referenced to the bibliographies. The first edition was published in 1927 and the fifth edition in 1949 The sixth edition is the first one to bear the name of a collaborator on the title page. In comparison with the preceding edition it is a very extensive revision with newly added information in practically every chapter There are now 143 tables, some of which are statements of recommended menus for patients for use in the treatment of specific diseases The bibliographies are not comprehensive but include the classical references and the more useful modern studies.

MAYO CLINIC COMMITTEE ON DIETETICS

Mayo Clinic diet manual Second edition. Philadelphia W B Saunders Company, 1954 247 p illus. 24 cm. $5 50 4301

Note A reference manual of specific information and detailed descriptions of specified diets developed and used at the Mayo Clinic and associated institutions. It is designed for persons with training in medicine or dietetics rather than for patients and the general public.

RICE, THURMAN BROOKS

Low sodium diet a manual for the patient. Philadelphia Lea & Febiger 1951 103 p. 24 cm $2 75 4302

Contents The forms of sodium found in food. Why sodium may be injurious. Where and how does one get low-sodium food? Eating out. Originality and ingenuity in the low-sodium diet. The psychology of dieting. Errors and penance. Body weight in relation to the low-sodium diet. The use of sodium compounds in the processing of foods. Suggestions for the preparation of low-sodium menus. Food lists rated by content of natural sodium. Typical charts for study and consideration. Water supplies in relation to sodium content. Appendix. Index.

Note A graduate physician who is on a low-sodium diet himself wrote this practical guide for those who must also follow such diet and for those who prepare menus for them.

Wohl, Michael G., and Robert S. Goodhart editors

Modern nutrition in health and disease dietotherapy 55 contributors. 80 illustrations and 127 tables. Philadelphia. Lea & Febiger 1955 1,062 p. illus. 24 cm. $18.50 4303

Contents (abridged) Part I, Normal nutrition. The physiology of the gastro-intestinal tract and its bearing on nutrition, by J. L. Bowman and E. E. Wasinger. The hormonal control of metabolism, by E. P. Ralli and M. E. Dumm. The psychology of appetite, by E. W. Brown. Physiology of hunger, appetite and satiety by J. R. Brobeck. Digestion, absorption and metabolism of protein, by E. Geiger. The role of carbohydrates in the diet, by S. Soskin and R. Levine. The absorption, digestion, and metabolism of fats and of related lipids, by H. J. Deuel, jr. Iron and the essential trace elements, by C. V. Moore. The vitamins, by R. M. Kagan and others. Fluid and electrolyte balance, by C. Alper. The relation of diet to oxidative enzymes, by R. A. Harte and B. F. Chow. Dietary interrelationships, by B. Sure. Part II, Nutrition in disease. Nutrition in relation to infection and immunity by J. A. Kolmer. Principles of dietotherapy by M. G. Wohl. Dietary treatment in diabetes mellitus, by H. F. Root and C. C. Bailey. Nutrition in renal disease, by H. M. Odel. Nutrition in endocrine disease, by B. Hudson and M. Rapaport. Nutrition in cardiovascular disease, by H. M. Odel. Nutrition in the anemias, by W. C. Spain and others. Nutrition in rheumatism, arthritis and gout, by T. B. Bayles. Nutrition in the care of the surgical patient, by I. S. Ravdin and H. A. Zintel. Part III, Nutrition in periods of physiologic stress. Nutrition in pregnancy by W. T. Tompkins. Nutrition in the aged, by E. J. Stieglitz. Emergency feeding, by R. S. Goodhart. Appendix. Index.

Note A successor to M. G. Wohl, editor, *Dietotherapy*, 1945. It provides a comprehensive view of nutrition from the viewpoint of preventive medicine and clinical medicine. There are three parts and 57 chapters, of which selections are listed above by author and title. The space is almost evenly divided between the section on normal nutrition and the section on nutrition in disease. In both parts the chapters are compactly written. Many of them are essentially literature surveys containing the gist of cited articles but referring to the periodical literature for full details. To cite an example, diseases in relation to dental caries are discussed in only four pages, but there are 10 references to the literature. Summary data are included in some of the chapters. Most of the contributors are associated with the faculties of medical schools.

SURGERY

Ackerman, Lauren V

Surgical pathology With 913 illustrations. St. Louis The C. V Mosby Company 1953 836 p. illus. 26 cm. $11.00. 4304

Contents Introduction. Skin. Oral cavity. Mandible and maxilla. Respiratory tract. Mediastinum. Parathyroid. Thyroid. Gastrointestinal tract. The major and minor salivary glands. Liver. Gall bladder. Pancreas and periampullary region. Adrenal gland. Genitourinary tract. Male reproductive system. Female reproductive system. Breast. Lymph nodes. Spleen. Bone and joint. Soft tissues. Peritoneum and retroperitoneum. Vessels. Central nervous system, by D. E. Smith. Index.

Note Primarily a textbook directed to medical college students who have acquired a knowledge of general pathology, this book deals with the pathology of conditions for which surgery is the indicated therapy. It is devoted largely to the more common of such conditions, although a few rare diseases are described. As would be expected, there is much description of tumors, both benign and malignant. The illustrations which include many reproductions of microphotographs as well as photographs of gross pathology are an outstanding feature. Literature references are included for all of the chapters. The author is Professor of Surgical Pathology and Pathology at the School of Medicine of Washington University.

American College of Surgeons. Committee on Trauma

Early care of acute soft tissue injuries. Chicago American College of Surgeons, 1954 192 p. illus. 21 cm. $1.00. 4305

Contents General principles of care of open wounds. First aid and early care. Physical examination of the injured. Management of acute head injuries. Management of acute injuries of the spinal cord. Principles of treatment in severe facial injury. Initial treatment of acute injuries of the eye. Management of acute injuries to the neck. Initial management of patients with thoracic injuries. Early care of injuries to the abdomen. Early care of injuries of the genito-urinary tract. Injuries to the soft tissues of the extremities. Management of acute peripheral nerve injuries. Care of hand injuries. Amputations. Open wounds of joints. Vascular injuries. Treatment of burns. Early recognition and management of shock. Use of antibiotics and sulfonamides in treatment of acute injury. Anesthesia in care of the injured. Immunization in prophylaxis for tetanus and gas gangrene.

Note A complementary work to the American College of Surgeons' *Outline of the treatment of fractures*. It is equally authoritative. The selection of topics and the writing of the separate chapters were carried out under the College's Committee on Trauma. Authorship of the various chapters is given in the book's Foreword. It is addressed to all physicians who may be called upon for the first treatment of persons injured in accidents, whether the physician be a general practitioner or a specialist required to render a kind of surgical aid which is outside his specialty. Specific and reliable advice is given on immediate and early care of a full range of acute injuries to the soft tissues of the body.

Anson, Barry Joseph, and Walter G Maddock

Callander's surgical anatomy Third edition, with 929 illustrations. Philadelphia W B Saunders Company 1952 1,074 p. illus. 26 cm. $14.00. 4306

Contents (abridged) Part I, The head. Part II, The neck. Part III, The thorax. Part IV, Abdomen. Part V, The pelvis. Part VI, Male perineum and external genitalia. Part VII, Female perineum and external genitalia. Part VIII, The vertebral column, vertebral canal, and spinal cord. Part IX, Upper extremity. Part X, Lower extremity. Index.

Note One of the standard American texts for medical college students preparing for surgery. The primary emphasis is on anatomy but the basic material is carefully related to surgical technique and to related topics, such as anesthesia. The preceding edition appeared in 1939 and was the work of Dr. C. L. Callander. In this edition, the work is substantially enlarged, and there are many new illustrations. The authors are members of the faculty of Northwestern University Medical School.

Bacon, Harry E., and Stuart T Ross

Atlas of operative technic anus, rectum, and colon. With 403 illustrations. St. Louis The C. V Mosby Company 1954 301 p. illus. 30 cm. $13.50 4307

Contents (abridged) General considerations. Part I, Anorectal operations. Part II, Colonic operations. Index.

Note The authors of this book are eminent American specialists in proctology and the surgical techniques described have all been tested in their own practice. Seventy pages at the beginning of the work are devoted to general and background information on regional anatomy, preoperative and postoperative care of patients, anesthesia, instruments, and surgical methods of opening and closing the abdomen. This preliminary section is followed by the atlas proper which consists of large-scale reproductions of drawings and concise explanatory text. The material is organized so that in most cases the drawings showing the steps in a specific operation are printed on a right-hand page with the text pertaining to them on the facing left-hand page. However, more pages are devoted to complicated operations, for example, to the Miles technique for abdominoperineal excision of the rectum, which is described in 13 illustrations and accompanying text which together occupy 12 pages. The drawings are clear and are reproduced in large scale.

Beal, John M., editor

Manual of recovery room care. By members of the Department of Surgery the New York Hospital—Cornell Medical Center New York. The Macmillan Company 1956. 111 p. illus. 24 cm. $3 75 4308

Contents: General considerations, by R. B. Stark. Administrative considerations, by T. F. Stark. Recovery room nursing, by G. Jones. Respiration, circulation, and pain in the recovery room,

by J F Artusio, Jr The administration of intravenous fluids in the recovery room, by D M. Hays. Care of the general surgical patient, by J. M. Beal. Care of the patient following thoracotomy by W D O'Sullivan. Care of the neurosurgical patient, by R. A. Clark Jr and H Parsons. Care of the ophthalmological patient, by S. S. Snyder Care of the plastic surgical patient, by R. B. Stark. Care of the urological patient, by R. M. Spellman. Care of the ear nose and throat patient, by J. M. Holman. Care of the orthopedic patient, by L. R. Straub. Cardiac arrest in the recovery room, by G. R. Holswade. References. Index.

Note. The management of surgical patients in the hours immediately following operation is described in this authoritative and useful book. The subject is covered from a viewpoint that makes the book of interest to hospital administrators and nurses as well as to surgeons. Organization, equipment and record-keeping are discussed from the administrative viewpoint, while the chapters on patient care are written from the viewpoint of nurses in charge of recovery rooms and surgeons, especially the latter. The book is based on the experience and practices of the New York Hospital—Cornell Medical Center which has had recovery rooms as part of its operating theater since 1907

Beneventi, Francis A.

Retropubic prostatectomy for benign enlargement of the prostate gland. Art direction and 44 original drawings by William P Didusch. Springfield, Ill. Charles C Thomas, 1954 227 p illus (part col'd) 29 cm $11 00 4309

Contents Anatomy Vascular anatomy Prostatic enlargement. Preoperative management. Technique of retropubic prostatectomy Discussion of the steps of the operation and variations in technique. Postoperative management. Postoperative complications. Osteitis pubis. Evaluation. History Author index. Subject index.

Note. An important work on the surgical technique of retropubic prostatectomy A detailed and fully illustrated description of the surgical technique as the author has developed it in a long series of cases is a principal feature. The anatomy and pathology are described at length and the chapters on postoperative management and complications are adequate. The chapter on osteitis pubis is an extensive and careful review of the relation of this disorder to retropubic prostatectomy Literature references are included in all of the chapters, and the names of the authors of the cited literature are brought out in the index. There are 74 figures, including eight in color Most of the figures are reproduced in large scale.

Bleck, E E., and others

Atlas of plaster cast techniques By E E Bleck, Nellie Duckworth and Nancy Hunter Chicago The Year Book Publishers, Inc. 1956 128 p illus. 25 cm $4 75 4310

Contents Plaster of paris. Plaster room equipment. General technique. Lower extremity casts. Body casts. Upper extremity plaster casts. Wedging casts. Plaster cast complications Removal of plaster casts. Appendix. Bibliography Index.

Note. In this book, the techniques of making plaster casts are explained largely by photographs, which are arranged in step-by-step sequence for each kind of cast. To cite an example the various steps in making the kind of cast known as the long leg cast is shown in a series of 15 reproductions of photographs, and each photograph is accompanied by a short legend in which the step depicted is described verbally Altogether there are 347 illustrations. The book is intended for the instruction of technicians and medical graduates, who are new to the art of making plaster casts, and to graduate physicians, surgeons and nurses who make them only occasionally and therefore need a simple book for reference.

Bowers Warner F, editor

Surgery of trauma. With forewords by Melvin A. Casberg and Surgeons General of the Army the Navy and the Air Force 284 illustrations. Philadelphia J B Lippincott Company 1953 605 p illus 26 cm $15 00 4311

Contents (abridged) Section I. Physiologic aspects of the management of trauma Basic factors in wound healing, by W F Bowers. Wound healing in specialized tissues, by W F Bowers and others. Healing of wounds due to special agents, such as thermal, chemical and electrical injuries, by G. K. Lewis and others. Responses of the body to wound, by W F Bowers and others. Wound infections, by W A. Altemeier and others. Section II. Regional wound surgery Craniocerebral trauma, by D D. Matson. Penetrating wounds of the spinal cord, by E. Campbell and A. Meirowsky Peripheral nerve wounds, by B. Woodhall and F Nulsen. Early and late care of the traumatic maxillofacial wound, by B. N Soderberg. Eye wounds, by F Harbert. Neck wounds, by M. E. Lichtenstein. Thoracic wounds, by J H. Forsee. Abdominal wounds, by R. M. Zollinger and H. D Sisk. Wounds of perineum, rectum and buttocks, by F B. Berry and R. H. Wylie. Vascular wounds, by G. H. Pratt. Fractures occurring in war wounds, by M. Cleveland. Wounds of the hand, by O. S. Lentz. Amputations, by L. T Peterson. Wounds of joints, by O. P Hampton, Jr. Genito-urinary wounds, by J. C. Kimbrough. Cold injuries, by H. B Shumacker Burns, by C. P Artz and others. Section III. Military considerations in wound management Surgical implications of the evacuation and the distribution of war casualties, by W F Bowers. Classification and nomenclature of wounds, by R. H. Holmes. Wound ballistics, by C. M. Herget. Management of the wounded soldier, by F K. Hagman and others. General wound management, by O. B. Bolibaugh. Section IV Study methods and research problems. Study methods and research problems, by W F Bowers. Bibliographic index. Subject index.

Note. A treatise of primary importance. It is based largely on experience during World War II and the conflict in Korea, and it covers not only first aid, but definitive treatment, both medical and surgical, and for some types of trauma such as wounds of the hand, rehabilitation. Altogether there are 28 chapters written by 43 authors. Some of the chapters include advice on psychological aspects of management of patients. The illustrations include many photographs of severe wounds as well as drawings and radiographs pertaining to their therapy Preparation and publication of the work was sponsored by the Medical Policy Council of the Armed Forces of the United States of America. Its usefulness is not limited to military medicine, but is applicable also to the care of civilians injured in war or in other large-scale catastrophes.

Boyd, William

Pathology for the surgeon Seventh edition. With 547 illustrations including 10 in color Philadelphia W B Saunders Company 1955 737 p. illus. (part col d) 26 cm. $12.50. 4312

Contents. General surgical pathology The surgeon and the pathologist. Inflammation and repair Wound infections. The granulomata. Gangrene. Shock and burns. Coagulation, thrombosis and embolism. General pathology of tumors. Special surgical pathology: The mouth and jaws. Neck, salivary glands and esophagus. The thyroid gland. The stomach and duodenum. The small intestine. The colon and rectum. The vermiform appendix. The gall bladder and liver. The pancreas. The peritoneum. The upper urinary tract. The lower urinary tract. The male reproductive system. The female reproductive system. The breast. The spleen. The lymphatic system. The cranium and its contents. The spine, spinal cord and nerves. The bones. The joints. The soft tissues. The skin. The endocrine glands. The cardiovascular system. The lungs and mediastinum. Index.

Note Originally entitled *Surgical pathology* this book passed through six editions between 1925 and 1947 It has been retitled in this seventh edition because it has been completely rewritten and its scope changed somewhat It is still a survey of pathology from the surgeon's viewpoint, but there is more emphasis on basic anatomy physiology and clinical manifestations. Important terms in the text are italicized. Undoubtedly the purpose of this feature is to facilitate the use of the book for review In fact, the book is now directed primarily to medical college graduates who are preparing for examinations in specialty boards. The chapters include selected and classified references for further study The index is an exceptionally detailed one.

Brown James Barrett, and Frank Mc Dowell

Neck dissections. Springfield Ill. Charles C Thomas 1954 163 p. illus. (part col d) 22 cm. (American lecture series. Publication no. 207 A monograph in the Bannerstone division of American lectures in surgery edited by Michael E. De Bakey and others) $7 50 4313

Surgery

Contents: General considerations. Special considerations in cancer of the lip. Treatment of primary lesions as it may affect neck dissection. Preoperative considerations, anesthesia, and keeping the mortality low. Operative technique for complete unilateral neck dissection. Operative technique of bilateral upper dissection (supra-omohyoid dissection). Combined neck dissection and jaw resection. Special considerations in the treatment of some lesions. Postoperative care, late results of operation. Bibliography. Index.

Note: Surgical operations on the neck for the eradication of metastases from cancer of the mouth and lip are the subject of this book. Although the surgical techniques are the principal subject, considerable space is devoted also to background information on such aspects as physical examination, diagnosis, the resistance of metastatic neck carcinoma to radiation, and preoperative and postoperative care. The book is based on extensive experience with the operations described and on the literature. There is a bibliography of 217 references. The figures, of which there are 82, include photographs of gross pathology, before-and-after photographs of patients, and drawings of surgical techniques. The authors are teachers of clinical surgery in Washington University School of Medicine.

BUNNELL, STERLING

Surgery of the hand. Third edition. 1,047 illustrations and 9 color plates. Philadelphia J B Lippincott Company 1956 1 079 p. illus. (part col d) 26 cm. $22.50. 4314

Contents: Part one. The hand. Phylogeny and comparative anatomy. The normal hand. Part two. Reconstruction of the hand. Examination of the hand. Skin and flexion contractures. Bones. Joints. Nerves. Tendons. Intrinsic muscles of the hand—loss of the thumb—methods of supplying. The arm in its relation to the hand. Part three. Injuries and infections of the hand. Injuries of the hand—fractures and dislocations. Infections of the hand. The hand in industry. Part four. Other conditions of the hand. Congenital deformities. Tumors and trophic conditions. Tetanus of the hand, by L. D. Howard, Jr. Index.

Note: An authoritative and comprehensive treatise, widely recognized as the leading work on its subject since the publication of the first edition in 1944. The composite nature of hand surgery embracing segments of orthopedic, plastic and neurologic surgery is stressed, and the book is written from this viewpoint. Surgical techniques are described in full detail. However, the book is not limited to them, but includes related material such as medical treatment for burns. The illustrations are outstanding. All are clearly reproduced, and many of them are in large scale. The second edition was published in 1948. More than 170 new illustrations have been added in this third edition, and the verbal text has been revised to include the advances in hand surgery made since the second edition was written.

CATTELL, RICHARD B., AND KENNETH W WARREN

Surgery of the pancreas. Philadelphia W B Saunders Company 1953 374 p. 100 illus. 26 cm. $10.00. 4315

Contents: The anatomy and physiology of the pancreas. Congenital malformations of the pancreas. Acute pancreatitis. Chronic relapsing pancreatitis. Pancreatic cysts. Pancreatic injuries. Islet cell adenoma and hyperinsulinism. Carcinoma of the pancreas and periampullary area. Total pancreatectomy. Index of authors. Subject index.

Note: A monograph based in part on the literature and in part on experience with over 1,000 patients with surgical diseases of the pancreas treated at the Lahey Clinic in Boston. Although surgical procedures are described, and there are some discussions of chosen operative procedures, congenital abnormalities and diseases of the pancreas are the principal subjects. Diseases are described in regard to etiology, pathology, diagnosis, differential diagnosis, complications, and treatment. Medical treatment is included where applicable, as in acute pancreatitis. The authors' experience with different operative procedures is described. Numerous case reports, supplemented in some instances by special comments by the authors, are included. The chapter on total pancreatectomy analyzes the known cases, presents the results in two tables, and concludes with an appraisal of this technique. Bibliographies are extensive. There are 100 figures.

COLE, WARREN HENRY editor

Operative technic in general surgery. Second edition. With 67 contributing authors. New York Appleton-Century-Crofts Inc., 1955 973 p. illus. 25 cm. $20.00. 4316

Contents: Introduction, by F. H. Lahey. Wound healing and the care of wounds, by E. L. Howes. Hemorrhage and shock, by J. D. Stewart. Blood transfusion and fluid problems, by J. G. Allen. Burns, by C. C. Lund and S. M. Levenson. Preoperative and postoperative care, by R. Elman. Amputations, by F. M. McKeever. The esophagus, by W. E. Adams. Abdominal incisions, by F. A. Coller and K. F. Maclean. Surgery of the stomach and duodenum, by W. Walters and E. A. Gray. Gastric vagotomy in the treatment of peptic ulcer, by L. R. Dragstedt. Surgery of the small intestine, by C. Dennis and P. E. Lane. Gastrointestinal surgery in infancy and childhood, by W. L. Riker. The pancreas and the adrenals, by A. Brunschwig. The gallbladder and bile ducts, by W. H. Cole. The liver and subphrenic space, by A. Ochsner and M. E. DeBakey. The colon, by R. R. Graham and J. Gray. The appendix, by J. T. Reynolds. The lower part of the sigmoid, the rectum and anus, by C. F. Dixon and A. L. Lichtman. The lymphatic system, by R. K. Gilchrist. The spleen, by W. H. Cole. Abdominal hernia, by E. P. Lehman and C. E. Davis, Jr. The breast, by T. G. Orr. The thyroid and parathyroid glands, by J. deJ. Pemberton and B. M. Black. The muscles, tendon sheaths, tendons, and bursae, by H. L. McLaughlin. Surgery of the hand and its tendons, by H. S. Allen and S. L. Koch. The skin and subcutaneous tissue, by F. Glenn and R. B. Stark. Index.

—— Operative technic in specialty surgery. Second edition. With 67 contributing authors. New York Appleton-Century-Crofts Inc. 1956. 967 p. illus. 25 cm. $20.00 set $37.50 4317

Contents: Introduction, by A. O. Whipple. The blood vessels, by M. E. DeBakey and others. The heart and pericardium excluding congenital and valvular lesions, by C. S. Beck. Congenital malformations of the heart and great vessels, by J. H. Gibbon, Jr. and H. C. Land. Cardiac septal defects and open cardiotomy; hypothermia and the heart-lung machine, by J. H. Gibbon, Jr. and H. C. Land. Intracardiac surgery for acquired valvular heart disease, by J. C. Jones and R. W. Meyer. The surgery of portal hypertension, by N. A. Womack. Thoracic wall, pleural cavity, lungs, and diaphragmatic hernia, by J. M. Dorsey. *The face, mouth, jaws, and neck,* by J. B. Brown and F. McDowell. Plastic surgery, by P. W. Greeley. Fractures, by J. A. Key. Hematogenous osteomyelitis, by F. Dickson. Deformities and neoplasms of the bone, by C. E. Badgley. Surgical approaches to the joints, by L. R. C. Abbott and others. The orthopedic surgical treatment of spastic paralysis and anterior poliomyelitis, by F. A. Chandler. The autonomic nervous system, by R. H. Smithwick. Peripheral nerves, by R. G. Spurling. Scalp, cranium, and brain, by M. A. Brown and [illegible]. The spinal cord, by Cobb Pilcher and W. F. Meacham. Lesions of the cranial nerves, by B. S. Ray. Gynecologic surgery, by J. V. Meigs and L. Parsons. The male genitourinary system, by D. K. Rose. Index.

Note: The two volumes of this work are uniform in format and are edited and written from the same viewpoint. The editor is Head of the Department of Surgery of the College of Medicine of the University of Illinois, and the contributors are eminent teachers and practitioners of surgery in the United States of America and Canada. The books are essentially graduate-level textbooks, used primarily in the instruction of medical college graduates who are preparing for the specialty of surgery. They are useful also to practicing surgeons as reference books. Despite the length of the respective volumes, they are not cyclopedic. The contributors have not attempted to cover their topics historically but have limited themselves largely to describing techniques which they themselves use. These techniques are described concisely and in detail. Related matters such as etiology, clinical picture, and diagnosis also are discussed. The first edition of both volumes was published in 1949. Each volume contains approximately 500 illustrations. Several chapters were added in both volumes in the second edition, and some of the chapters carried over were revised, in some cases by the original author and in others by a collaborating author.

COLE, WARREN HENRY AND ROBERT ELMAN

Textbook of general surgery. Foreword by Evarts A. Graham. Sixth edition. New York Appleton-Century-Crofts, Inc., 1952 1 154 p. illus. 24 cm. $12.50. 4318

Contents (abridged) Inflammation and repair Acute surgical infections. Ulcer gangrene sinus, fistula. Surgical methods. Anesthesia. Wounds. Amputations. Surgery in diabetes. Shock and hemorrhage. Thermal, chemical and electrical trauma. Fractures, dislocations and sprains. Blood vessels. The lymphatic system. The nervous system. Liver gallbladder pancreas and spleen. The alimentary tract. The peritoneal cavity Hernia. Surgical diseases of the chest, by E. A. Graham and T H. Burford. The endocrine glands. Gynecology Military surgery by F B Berry Index of authors. Index of subjects.

Note A standard textbook for medical college courses. It covers the physiological and pathological bases of surgery and describes the main surgical diseases with emphasis on their etiology and clinical manifestations. The treatment of each disease is also outlined, and nonsurgical therapies are considered, along with surgical ones. Numbers inserted in the text lead the reader to citations of related literature where fuller discussions of particular therapies can be found. The fifth edition was published in 1948. Important though moderate revisions and additions were made in preparing this edition. The revised and added material relates to such fields as thoracic surgery cardiac surgery gastrointestinal surgery and vascular surgery

Cutler, Elliott Carr, and Robert M Zollinger

Atlas of surgical operations Second edition. Illustrated by Mildred B Codding New York The Macmillan Company, 1949 225 p. illus 38 cm. $12 00 4319

Contents (abridged) I. General considerations Surgical technic. Anesthesia. Preoperative and postoperative care. II. Surgical operations Neck. Chest. Abdominal wall. Gastro-intestinal system. Pilonidal sinus. Spleen. Gynecologic system. Extremities. Genito-urinary system. Central nervous system.

Note In this work, the common surgical operations are described by means of brief text, and fairly detailed drawings arranged in sequence for each operation. The book is made up so that the drawings are on right-hand pages and the explanatory text is on facing left-hand pages. It is not work for specialists, but it is a useful one for advanced medical students, young surgeons, and general practitioners doing occasional surgery In the present edition 30 procedures have been added. New illustrations are of course included for these, and in addition many of the illustrations that were in the original edition have been redrawn.

Davis, Loyal, editor

Christopher's textbook of surgery Sixth edition. Edited by Loyal Davis 1,359 illustrations on 716 figures Philadelphia W B Saunders Company 1956 1 484 p. illus. 26 cm. $15 50 4320

Content History of surgery by A. O Whipple Physiology of wound healing, by W A. Altemeier and J M. Stevenson. Surgical bacteriology chemotherapy and antibiotic therapy by F L. Meleney Shock, by I. S Ravdin and J E. Eckenhoff Principles of pre- and postoperative care, by R. L. Varco and B Zimmermann Endocrinology and metabolism in surgical care by F D Moore and R W Sternburg. Anesthesiology by J Adriani. Basic principles of technique in surgical care by F Lounsbury The principles of the surgical care to the soft tissues, by H S Allen. Thermal and irradiation injuries, by H. S. Allen and others The head, by L Davis and others The neck, by W W Carroll and F J Putney The thyroid and parathyroid glands, by G Crile Jr and R W Schneider The breasts, by L MacDonald The mediastinum, by J M Dorsey The thoracic wall, pleura and lungs, by W E. Adams and others. The heart and pericardium by C. A Hufnagel The abdominal wall and peritoneum, by M E Lichtenstein. Hernia, C B McVay The alimentary canal, by T H. Lanman and others. The liver and biliary system, by F Glenn and A H Blakemore The pancreas, by J M Waugh and G A Hallenbeck The adrenal glands, by J H. Harrison and R E. Dennstein The spleen, by R. M Zollinger and R D Williams The urinary system, by R. M Nesbit and others. The male reproductive system, by L W Riba. The female reproductive system, by J C Burch and others. The bones and joints, by R H Kennedy and others Surgery of the hand, by M L. Mason Surgery of the foot, by P Lewin Amputations and artificial limbs, by R. H Alldredge Physical medicine and rehabilitation by L. B Newman. The vascular system, by H. Laufman and others. The nervous system, by L. Davis and others. The qualifications of surgeon, by P R. Hawley Index.

Note. First published in 1936 this book has enjoyed the use of a standard medical-college textbook for two decades. The present edition is the first to be edited by Dr Loyal Davis, he Chairman of the Department of Surgery of Northwestern University Medical School. The book has been extensively reorganized and revised. It is now more than ever presentation of basic information, facts and principles which underlie the practice of surgery including the practice of surgical specialties. There are 55 chapters whose titles are given above. Many of the chapters consist of separate sections written by various contributors. For example, the chapter on the head is composed of six signed subsections. The subsections vary in style, but none is overly compressed. Literature references designed as guides to further study are included, and there is fully detailed subject index.

Dodson, Austin Ingram

Urological surgery With contributions by R. Carl Bunts and others. Third edition. With 664 illustrations St. Louis The C. V Mosby Company, 1956 868 p. illus. 26 cm. $20 00 4321

Contents (abridged) Diagnosis. Preoperative and postoperative care of the urological patient, by C. M. Nelson. Anesthesia in urological surgery by W E. Pembleton. Congenital anomalies of the kidney and their treatment. Renal tuberculosis and its treatment, by T L. Howard. Injuries of the kidney and their treatment, by G. C. Prather Nephroptosis and its treatment. Renal calculi and their treatment. Hydronephrosis—surgical treatment of obstruction at the ureteropelvic junction. Cysts of the kidney and their treatment. Nephrectomy The adrenal glands, by A. I Dodson, Jr Surgical diseases of the ureter and their treatment. Ureteral calculi and their treatment. Injuries of the ureter and their treatment, by G. C. Prather Ureteral anastomoses and implantations. Injuries of the bladder and their treatment, by G. C Prather Surgical treatment of urinary tract dysfunction due to disease or injury of the nervous system, by R. C. Bunts. Surgical treatment of bladder tumors. Surgical treatment of strictures and fistulas of the male urethra, and perineal defects. Injuries of the urethra and their treatment, by G. C. Prather Surgical conditions of the female urethra and their treatment. Surgical conditions of the scrotum and their treatment. Surgical conditions of the testis and their treatment Endocrinology and endocrine therapy of the prostate, by L. D Keyser The prostate gland. Postoperative urinary incontinence Index.

Note. Exceptionally detailed descriptions of surgical techniques are a principal feature of this standard work. These descriptions are based largely on the author's own practice, and they cover not only the incision to be made but also such matters as the suture to be used and the types and diameters of sutures. In addition to the surgical techniques, information is included on the diseases and disorders for which surgical therapy is indicated, and on necessary pre- and postoperative care, etc The illustrations include many clear reproductions of excellent drawings. The second edition published in 1950. Numerous changes including the deletion of three chapters, the addition of two, and the revision of several others, were made in preparing this third edition.

Donaldson, Joy Kenneth

Surgical disorders of the chest diagnosis and treatment. Second edition thoroughly revised With 146 illustrations and 2 color plates Philadelphia Lea & Febiger 1947 485 p illus. (part col d) 24 cm. $8.50 4322

Contents (abridged) Part I, Inflammations, tumors, congenital anomalies of the thoracic wall and thoracic injuries. Part II, Nontuberculous intrathoracic infections, pleurisy including tuberculous empyema pulmonary embolism and infarction intrathoracic tumors and congenital abnormalities. Part III, Surgical therapy in pulmonary tuberculosis—comments on anesthesia and prevention and treatment of postoperative pulmonary complications—resuscitation and inhalation therapy Index.

Note Written for nonspecialists in thoracic surgery this work nevertheless presents very inclusive account of modern techniques in this field. Etiology pathology diagnosis, and treatment, both surgical and nonsurgical, are covered compactly but adequately The purpose is twofold (1) to aid general practitioners and diagnosticians in diagnosis and in deciding when reference to a specialist is indicated and (2) to aid general surgeons in performing operations on patients who cannot be sent to specialist. To aid the latter group, modern operative techniques are described in considerable detail. In preparing the present edition the work ...

thoroughly revised and is now about 100 pages longer. In addition to considerable reorganization, there are several new chapters, and most of the older ones have been revised. Good bibliographies accompany the chapters. There are now 145 illustrations. Many of them, unfortunately, are poorly reproduced.

FERGUSON L. KRAEER

Surgery of the ambulatory patient. With a section on fractures by Louis Kaplan. Third edition. 664 illustrations. Philadelphia J B Lippincott Company 1955 866 p illus. 24 cm. $12.00. 4323

Contents: Part I, Surgical principles and technic: A survey of the field of ambulatory surgery. Equipment for surgery of the ambulatory patient. Anesthesia, by H. H. Stone. Preparation for and conduct of operations on ambulatory patients. Postoperative care. Dressings and bandages. Treatment of inflammation due to infection, by E. J. Pulaski. Specific surgical lesions, by E. J. Pulaski. Open wounds. Burns and frostbite. Foreign bodies. Superficial cysts and tumors. Part II, Regional surgery: The scalp. Face, nose, ear, eye. Mouth and salivary glands. The neck. Chest and breast. The abdomen. The back. Perineal region, anus and anal canal. The genito-urinary system. Arm and shoulder. Hand and fingers. The leg. Foot and ankle. Part III, The musculoskeletal system: General considerations. The thoracic region, clavicle and scapula. The upper extremity. The lower extremity. Index.

Note: A comprehensive and practical reference book of surgical therapy and related matters pertaining to the surgical treatment of patients who do not require hospitalization. It is designed for the guidance of general practitioners of medicine, physicians practicing in industrial and military establishments, and medical school graduates who are studying surgery or beginning to practice. It covers general aspects such as instruments and other equipment needed, anesthesia and techniques of anesthesia, dressings and bandages. Most of the space is devoted to surgery in specific disorders or in special regions of the body. The discussions of disorders are arranged on a conventional pattern with attention to etiology, symptoms, and treatment. The part which is entitled "Regional surgery" is primarily a discussion of diseases and disorders, their etiology, symptoms and treatment of the regions named in the chapter titles of this part. The third part is long and is concerned primarily with the treatment of fractures. The number of illustrations is exceptionally high, but most of them are small. The first edition was published in 1942 and the second edition in 1947. Extensive changes involving both revisions and additions of information were made in preparing this third edition. The principal author is Professor of Surgery in the Graduate School of the University of Pennsylvania. Literature references are included in the chapters.

FLOCKS, R. G AND DAVID CULP

Surgical urology a handbook of operative surgery Illustrated by Paul Ver Vals. Chicago The Year Book Publishers, Inc., 1954 392 p. illus. 22 cm. $9 75 4324

Contents (abridged): Section I, The kidney: Surgical approach to the kidney. Renal and perirenal surgery. Surgical treatment of conditions of the kidney. Section II, The ureter: Surgical procedures on the ureter. Surgical treatment of conditions of the ureter. Section III, The bladder: Open surgical procedures on the bladder. Surgical treatment of conditions of the bladder. Section IV, The prostate: Surgical access to the prostate. Prostatectomy. Section V, The urethra: Surgical approach to the urethra. Surgery of the urethra. Section VI, The penis. Section VII, The scrotum. Section VIII, The testis. Section IX, The epididymis and vas deferens. Section X, Transurethral surgery. Index.

Note: Although surgical techniques are the principal topic of this book, anatomy and physiology are covered also. Each of the sections but two begins with a short discussion of basic anatomy or anatomy and physiology. The book is organized in 30 chapters, and most of them consist of full-page plates illustrating surgical techniques and descriptions and discussions of the individual techniques. The arrangement is such that each technique is illustrated step by step in a plate on the right-hand page, while a verbal description of the technique, keyed to the illustration, is on the facing left-hand page. The drawings are sharp and uncommon enough to merit making the book to an atlas, though a small one. The book is useful to surgical residents in hospitals and to general practitioners of surgery who are not specialists in urological surgery but occasionally perform urological operations.

FORSEE JAMES H.

The surgery of pulmonary tuberculosis. 59 illustrations 1 in color 11 graphs and 46 tables. Philadelphia Lea & Febiger 1954 208 p. illus. (part col d) 24 cm. $6.50 4325

Contents: Part I, Principles in the application of surgery in pulmonary tuberculosis: The patient and his disease. Pulmonary tuberculosis as a surgical disease. Part II, Operative surgical procedures: Collapse therapy. Extirpative surgical therapy. Part III, Experience with surgical therapy in pulmonary tuberculosis: General considerations in surgical therapy. Experience with collapse therapy. Extirpative surgical therapy. Results of surgery in the treatment of pulmonary tuberculosis. Index.

Note: A monograph based in part on the experience of the author and his associates at Fitzsimons Army Hospital in Denver, Colorado, and in part on the modern literature. It reflects the emergence of surgery as a therapy in the treatment of pulmonary tuberculosis which has taken place since the end of World War II. It deals with the principles and applications of surgery in the treatment of tuberculosis, not with the techniques of operations. The two chapters on collapse therapy and extirpative therapy account for approximately one-half of the length of the book, and both are reports of extensive experience. The terminal chapter is a statistical account of seven years' experience at Fitzsimons Army Hospital with surgery in the treatment of pulmonary tuberculosis. Literature references are included.

FRANTZ, VIRGINIA KNEELAND, AND HAROLD DORTIC HARVEY

Introduction to surgery Third edition. New York Oxford University Press 1954 233 p. illus. 19 cm. $5 00. 4326

Contents: Introduction. History. Injury and inflammation. Repair. Degeneration, hypertrophy, atrophy, regeneration. Deformities. Cysts. Neoplasms. Contusions. Abrasions. Incised wounds. Wounds with loss of substance. Repair of accessory skin structures. Repair of mucous membrane—muscle—tendon—hollow and solid viscera—nervous system—vessels and synovial surfaces—cartilage—bone. Foreign bodies. Calculi. Infection. Specific infections. Infection in tissues and synovial spaces. Infection in bone. Drainage. Operative wounds. Accidental wounds. Ulcers. Burns. Gangrene. Hemorrhage. Shock. Contact with the patient. Surgical technique. Anesthesia. Plastic surgery. The new surgery. Lavoisier. Appendix. Bibliography. Index.

Note: A short, lucid and useful presentation of information about the injury, inflammation, surgical repair, and natural healing of tissues. It is intended for student surgeons, and it presents background knowledge rather than detailed descriptions of surgical techniques. The second edition was published in 1951. Although the book has the same organization and the same number of pages as in the second edition, errors have been corrected and some sections have been rewritten so as to incorporate new advances in such areas as infection and burns. Also a few references are added to the bibliography.

GECKELER EDWIN OSCAR

Plaster of Paris technic. Second edition. Baltimore The Williams & Wilkins Company 1948 220 p. illus. 23 cm. $3.00. 4327

Contents (abridged): Forms of plaster of Paris used in surgery. General technic (bandage method). Application of plaster of Paris (bandage method): Spine. Shoulder and upper limb. Pelvis and lower limb. Plaster of Paris in war surgery. Plaster for injury and inflammation of soft tissues—the use of plaster of Paris for burns. References. Index.

Note: A practical manual which deals thoroughly with the construction, care, and removal of plaster-of-Paris casts. It contains nothing on other orthopedic techniques. In the present edition, the changes in the text are relatively minor, but the legends under the illustrations have been rewritten in many instances, and about 20 illustrations have been added which did not appear in the previous edition. There are now 214 illustrations, and most of them are reproduced from photographs which show details of techniques or show completed casts.

GROSS ROBERT E.

The surgery of infancy and childhood Its principles and techniques. With 1 488 illus-

trations on 567 figures Drawings by Etta Piotti. Philadelphia W B Saunders Company 1953 1,000 p illus. 26 cm. $16 00 4328

Contents The field of children's surgery Preoperative and post operative care. Anesthesia for pediatric surgery Disruption of abdominal wounds. Surgery in premature infants. Atresia of the esophagus. Esophageal stenosis or stricture. Cardio-esophageal chalasia. Congenital hypertrophic pyloric stenosis. Peptic ulcer—gastrostomy Congenital atresia of the intestine and colon. Congenital stenosis of the intestine and colon. Intestinal obstruction in the newborn resulting from meconium ileus. Malrotation of the intestines and colon. Annular pancreas producing duodenal obstruction. Meckel's diverticulum. Duplications of the alimentary tract. Foreign bodies in the alimentary tract. Appendicitis. Intussusception. Polyps of intestine and colon. Chronic ulcerative colitis. Congenital megacolon (Hirschsprung's disease) Malformations of the anus and rectum. Rectal bleeding in infants and children. Omental cysts and mesenteric cysts. Primary peritonitis. Iliac adenitis. Omphalitis. Rare conditions of the umbilicus and abdominal wall. Omphalocele (umbilical eventration) Umbilical hernia. Congenital hernia of the diaphragm. Intra-abdominal hernia. Inguinal hernia. Hydrocele. Undescended testicle (cryptorchidism) Torsion of the testis and the appendix testis. Tumors of the testicle. Diseases of the female genital tract. Obstructive jaundice in infancy Miscellaneous conditions of the liver and biliary passages. Diseases of the spleen. Hypoglycemia. Embryoma of the kidney (Wilms' tumor) Neuroblastoma sympatheticum. Retroperitoneal teratoma. Uretero-pelvic obstruction. Double ureters. Ectopic ureter Ureterocele. Exstrophy of the bladder. Epispadias. Hypospadias. Urinary obstruction from posterior urethral valves. Urinary and fecal incontinence of neurogenic origin. Pectus excavatum (funnel chest) Cysts and primary tumors of the thorax. Bronchiectasis. The patent ductus arteriosus. Coarctation of the aorta. Interauricular septal defect. Tetralogy of Fallot. Congenital pulmonary stenosis. Vascular anomalies in the thorax producing compression of the trachea or esophagus. Thyroglossal cysts and sinuses. Cysts, sinuses, and other anomalies of the branchial apparatus. Cystic hygroma. Wringer injuries of the arm. Index.

Note Written by the Chief of the Surgical Service of the Children's Hospital in Boston and based largely on the clinical experience in that great hospital, this book is an outstanding contribution to the literature of surgery The titles of the chapters given above outline its scope. It does not cover neurosurgery orthopedic surgery or plastic surgery but aside from these exceptions, it is probably the most comprehensive work available on pediatric surgery As could be expected, it deals primarily with the surgical correction of congenital abnormalities. Surgical techniques are fully described and related matters including medical treatment are discussed where they are appropriate. Numerous tabulations of case experience in the Children's Hospital are included and short lists of literature references are included in most of the chapters.

HARDY, JAMES D

Surgical physiology of the adrenal cortex. Springfield, Ill Charles C Thomas 1955 191 p illus 22 cm. (American lecture series Publication no 266 A monograph in the Bannerstone division of American lectures in surgery edited by Michael E De Bakey and R. Glen Spurling) $5 75 4329

Contents. An outline of adrenocortical function. Effect of single operation and other forms of stress upon adrenocortical activity—correlation with other aspects of metabolism. The physiologic reaction to multiple staged operations in man. Adrenocortical activity following extensive thermal burns in man Adrenocortical function in malnourished cancer patients, with observations on the relative dependability of the ACTH-eosinophil test and the epinephrine-eosinophil test as measures of adrenocortical reserve. Adrenocortical hyperplasia—case report with physiologic studies. Masculinizing adrenocortical carcinoma—case report with physiologic studies. Hyperadrenocorticism. Adrenalectomy for essential hypertension and for malignant neoplasms—survey of current status. ACTH and cortisone therapy Index.

Note. Written by the Chairman of the Department of Surgery of the University of Mississippi and addressed to surgeons, this book presents much information useful in the management of surgical operations. It deals with adrenocortical function in surgical stress, in extensive burns, and in malnutrition with disease of the adrenals, with the responses to adrenalectomy and finally with ACTH and cortisone therapy These topics are covered essentially from the standpoint of applied physiology Much of the information presented was derived from physiologic studies on human patients. A number of case histories are included and discussed. The literature has also been searched and is cited in bibliography of 274 references.

HARTWELL, SHATTUCK W

The mechanisms of healing in human wounds Springfield Ill. Charles C Thomas, 1955 166 p illus. 22 cm. (American lecture series Publication no. 250 A monograph in the Bannerstone Division of American Lectures in Surgery edited by Michael E. De Bakey and R. Glen Spurling) $4 75 4330

Contents A practical approach to the consideration of human wounds and their repair Epithelial healing in human surgical wounds. Fibrous healing in human surgical wounds. Burns, abscesses, donor sites and ulcers. A new concept of the basal cells of human epithelium related to carcinoma. Summary References. Index.

Note. In the early years of his career the author surgeon, made an extensive microscopical study of the mechanisms of healing in human wounds. In subsequent years, he observed the healing of surgical wounds, burns, ulcers, skin grafts, etc., in the light of what he had learned in his research. In this book he presents synthesis of research results and surgical experience. He points out that his findings differ from those in most textbooks, and indicates that the difference is due to the fact that the textbooks are based upon histological findings in wounds in laboratory animals. Practical applications of his theories in wound closure are pointed out.

HERBUT, PETER A.

Surgical pathology Second edition, thoroughly revised, with 528 illustrations. Philadelphia Lea & Febiger, 1954 893 p. illus. 24 cm. $14 00 4331

Contents Skin and subcutaneous tissue. Breast. Nose and sinuses. Larynx. Trachea, bronchi and lungs. Neck. Mediastinum. Mouth, pharynx and salivary glands. Esophagus. Stomach. Small intestine. Appendix. Large intestine and anus. Peritoneum and retroperitoneum. Liver biliary system and pancreas. Lymphatic system and spleen. Adrenals. Urinary system. Male genital system. Female genital system. Bones, joints, tendons, bursae and skeletal muscles. Central nervous system, by B J Alpers. Index.

Note. A clearly-written discussion of a broad group of conditions emphasizing gross and microscopic pathology but including also definition, embryology anatomy etiology diagnosis, treatment, and associated diseases. The book is suitable for two types of uses. (1) as a medical college textbook and (2) as a reference manual for surgical pathologists and surgeons. The material presented under each heading has been rigidly selected and compactly presented, and there are extensive lists of references to related material for use when a particular subject must be pursued further The first edition was published in 1948. In this second edition the length of the book has been extended by nearly 100 pages and the number of illustrations increased by more than 100 There are two new chapters and many revised and extended sections in chapters carried over A selection of the literature published since the first edition was written has been added to the bibliographies.

HIRSCH, EDWIN F

Pathology in surgery Photography by I M Porter Baltimore The Williams & Wilkins Company 1953 474 p. illus. (part col'd) 24 cm $10 00 4332

Contents. Respiratory system. Digestive system Urinary system. Female reproductive system. Male reproductive system. Nervous system. Liver gallbladder bile ducts and pancreas. Bones, joints and skeletal muscle tissues. Lymph nodes and spleen. Ductless glands. Skin. Addendum. Index.

Note. The illustrations, of which there are [illegible]—all of them being reproductions of photographs of gross or micropathology are the principal feature of this book. The illustrations are accompanied by short, identifying legends and by somewhat longer comments. The preface to the volume contains an extended discussion of methods of keeping records of pathology and specimens in the hospital pathology department. The book is based on the author's hospital pathology department.

patients, records and collections as pathologist at St. Luke's Hospital in Chicago. It is, in effect, a pathology collection in print with such comments as would be made in teaching. It is of interest to resident graduates in hospitals who are preparing for specialty surgery and to graduate pathologists and surgeons.

HOLMAN EMILE

New concepts in surgery of the vascular system. Springfield Ill. Charles C Thomas, 1955 108 p. illus. 22 cm. (American lecture series. Publication no. 271 A monograph in American lectures in surgery edited by Michael E De Bakey and R. Glen Spurling) $3.50. 4333

Contents: The immediate and late treatment of arterial injuries. The significance of segmental stenosis and poststenotic dilatation in the development of arterial injuries. Index.

Note: This small volume contains two lectures written by a surgeon who has been one of the leading contributors to the modern development of vascular surgery. The first lecture is an informative review of recent advances in techniques and in the understanding of physiology associated with injuries to the vascular system. The second lecture presents the results of experimental investigations of hydrodynamic forces and structural fatigue in man's circulatory system, in short, with important factors in the production of aneurysms. Literature references are included with both lectures.

HORSLEY GUY W AND ISAAC A. BIGGER

Operative surgery Sixth edition. Illustrations by Helen Lorraine. St. Louis The C. V Mosby Company 1953 2 v illus. 26 cm. $20.00. 4334

Contents (abridged): Volume I: Technic, sutures, and instruments, by G. W Horsley. Principles underlying operations for malignant tumors. Anesthesia, by W R. Pendleton. Collateral circulation, aneurysms and ligation of arteries, by I. A. Bigger. Amputations. General principles of plastic surgery, by H. J Warthen, Jr. Transplantation of flaps containing skin, by H S Jackson. Free grafts of skin and mucous membranes, by L. Smith. Deep tissue grafts, by L. Smith. Cleft lip and palate, by L. Smith. Plastic operations on nose and ear by L. Smith. Operations for carcinoma of the floor of the mouth, palate, tongue and upper jaws, by L. Smith. Operations on the neck, by H. J Warthen, Jr. The thorax, by F P Coleman. The lungs and bronchi, by I A Bigger. Pharynx and cervical esophagus, by F P Coleman. Thoracic esophagus, by F P Coleman. Diaphragmatic hernia, by I A. Bigger. Pericardium and heart, by I A Bigger. The mammary gland, by G W Horsley. Hernia, by R. C. Lee. Volume II: Abdominal incisions, by B W Rawles, Jr. Acute conditions of the abdomen, by C Williams, Jr. Peritonitis, by C Williams, Jr. Operations on jejunal or gastrojejunal ulcer, by G. W Horsley. Operations on the small intestine, by G W Horsley. Appendectomy, by G. W Horsley. Operations on the colon and rectum, by C. Williams. The liver gall bladder, and bile tracts, by B W Rawles, Jr. The pancreas and spleen, by B W Rawles, Jr. Operations for fractures, by M J Hoover, Jr. Operations on tendons, by M. J. Hoover, Jr. Operations on joints, by M. J Hoover Jr. General principles governing amputations, by M J Hoover Jr. The kidney and ureter, by A. I. Dodson. The prostate gland, by A I. Dodson. The uterus cervix—curettage and operations for benign lesions, by E. H. Hage. The uterus. The ovaries. The head. Injuries and infections, by C E Troland. Spinal cord, by C E Troland. Surgery of peripheral nerves, by C E Troland. Surgery of the sympathetic nervous system, by C. E. Troland. Index.

Note: A collaborative textbook and reference treatise edited and written by members of the faculty of the Medical College of Virginia. Earlier editions were written by John S. Horsley, Isaac A. Bigger, and contributors. The book is designed for the instruction of surgical residents who are preparing for careers in general surgery and for reference use by practicing general surgeons. In this sixth edition, there are 87 chapters, a selection of which are listed by title and author above. In the typical chapter surgical techniques are described, and considerable space is given to background knowledge, particularly to the clinical picture of the disorder for which the particular technique is indicated. Some chapters contain also considerable discussion of the associated pathology and physiology. There are 1,274 figures in the two volumes. Selected literature references are included in the chapters.

HOSLER, ROBERT M

A manual on cardiac resuscitation Springfield Ill. Charles C Thomas, 1954 183 p. illus. 16 cm. $4.00. 4335

Contents: Introduction. History. General considerations. Incidence. Etiology. Mechanism of the heart beat. Oxygen and the brain. Equipment. Preventive measures. Danger signals of cardiac arrest. Methods of cardiac massage. Steps in cardiac resuscitation. Results for resuscitation. Closure of the chest. Post-operative management. Legal aspects. Bibliography. The course in cardiac resuscitation. Index.

Note: A small but valuable handbook devoted to practicing surgeons and anesthesiologists. It deals explicitly and in detail with cardiac resuscitation in the operating room. Early signs of cardiac failure, equipment needed for resuscitation, the exact steps in reestablishment of the oxygen system and restoration of the heart beat, and the techniques of cardiac massage are fully described. Also described are allied matters, such as post-operative management. The author was one of the founders of the course in cardiac resuscitation which has been given by the Cleveland Area Heart Society in Cleveland, Ohio, since 1950.

JOHNSON JULIAN AND CHARLES K. KIRBY

Surgery of the chest a handbook of operative surgery Illustrated by Edna Hill Chicago The Year Book Publishers Inc., 1952 387 p. illus. 22 cm. $9.00 4336

Contents: Introductory considerations. The management of chest injuries. Operations for empyema and lung abscess. Incisions. Surgical anatomy of the lungs. Pneumonectomy. Lobectomy. Segmental resection. Special problems arising during major thoracic operations. Surgery of the esophagus. Surgery of the heart and great vessels. The surgery of pulmonary tuberculosis. Miscellaneous operations. Index.

Note: A compact atlas which contains 84 plates of clear drawings of operative techniques including some used in diagnosis. The authors have selected techniques of clearly established value, and they have described them for general surgeons who are beginners in thoracic surgery or who only occasionally perform operations in this region. The drawings are supplemented by both general and specific description. Each plate is accompanied by at least one page of discussion. A second edition was published in 1958, 398 p.

JONAS KARL C editor

Babcock's principles and practice of surgery With 1,006 illustrations and 10 colored plates. Philadelphia Lea & Febiger 1954 1,543 p. illus. (part col d) 26 cm. $18.00. 4337

Contents (abridged): Inflammation and repair, by V Menkin. Fluid and electrolyte therapy, by J. Humphrey-Long. Shock, cause and detection, by W W Babcock. The bacteriologic approach to acute surgical infections, by E. H. Spaulding. Anesthesia, by LeR. Krumperman and S Mercator. Wounds, by W W Babcock. Burns, by R W McNealy and F W Mumma. Military surgery, by F M. Cooke. Plastic, maxillofacial and reconstructive surgery, by K. L. Pickrell. Orthopedic surgery, by J. R. Moore, and others. Amputations, by W W Babcock. Neurosurgery, by M. Scott and others. Autonomic nervous system, by H. R. Shumacker. Urologic surgery, by K. R. Conger and others. Pediatric surgery, by E. C. Koop and W Kiesewetter. The lymphatic system, by M. Thorek. The skin and cutaneous appendages, by C. S. Wright. The jaws, by J Cameron. The pharynx, larynx and trachea, by C. L. Jackson. Thyroid gland, by A. Jackson. The pituitary and adrenal glands, by W H. Perloff. The esophagus, by G. E. Lindskog. The thoracic wall, by W W Babcock. The mammary gland, by C. D Haagensen. Surgery of the lungs, by E. R. Kay and others. Surgery of the heart and great vessels, by R. M. Glover and T. J. O'Neill. Peripheral vascular system, by G. H. Pratt. Hemorrhage and hemostasis, by W W Babcock. Thrombosis and embolism, by O P Large. Necrosis and gangrene, by W W Babcock. Hernia, by K C. Jonas. The peritoneum, by A. S. Cannon-Dunn. Stomach and duodenum, by K. C. Jonas and H. M. Stauffer. Surgery of the small intestine, by A. J. Kremen. The liver and biliary system, by I. S. Ravdin and R. Roberts. The pancreas, by K. W Warren and R. B. Cattell. The spleen, by R. M. Zollinger and R. D. Williams. The vermiform appendix, by F A. Fiske. The colon, by H. E. Bacon and H. D. Trimpi. Surgery and diabetes, by C. R. Shuman. Cardiac considerations in the surgical patient, by

H. Roesler Psychiatric considerations in the surgical patient, by K. Fischer Index.

Note A successor to W W Babcock, *Principles and practice of surgery* 1944. The book is now composed of 49 chapters, written by 57 contributors, most of whom are members of faculties of medical colleges in the United States of America. A selection of the chapter titles is listed above. The book is directed primarily to students in medical colleges and secondarily to graduate practitioners. It presents a broad view of surgery and an introduction to surgical specialties. Basic information rather than surgical techniques is emphasized, although some techniques are described. In comparison to the original work, the book has been extensively revised in both text and illustrations. It has been printed from reset type in new format with two columns to page.

LAHEY CLINIC, BOSTON

Surgical practice of the Lahey Clinic, by members of the staff 784 illustrations on 509 figures. Philadelphia W B Saunders Company 1951 1,014 p illus. 26 cm. $15 00 4338

Contents (abridged) The thyroid gland and neck. Experience with the preoperative use of the antithyroid drugs, by F H. Lahey and E. C. Bartels. Technic of subtotal thyroidectomy by F H. Lahey Surgical treatment of hyperthyroidism, by R. B. Cattell. The surgical treatment of progressive exophthalmos, by J L. Poppen. Malignancy in adenomas of the thyroid, by F H. Lahey and H. F Hare. Radical dissection of the neck, by F H. Lahey Tracheotomy after thyroidectomy by F H. Lahey and W B Hoover Tumors of the neck, by F H. Lahey Trends in surgery for carcinoma of the larynx, by W B. Hoover The esophagus, lungs and heart. The surgical management of obstructing lesions of the esophagus, by H. D Adams. The technic of total pneumonectomy by D P Boyd. The surgical treatment of extrapulmonary neoplasms, by D. P Boyd and J. M. Moseley Treatment of portal hypertension and associated acute hemorrhage, by H. D Adams. The stomach and duodenum The surgical treatment of diaphragmatic hernia—clinical report of 73 cases, by D P Boyd and J N Clausen. Partial gastric resection for peptic ulcer by S. F Marshall. Should total gastrectomy be employed in early carcinoma of the stomach? Experience with 139 total gastrectomies, by F H. Lahey and S. F Marshall. The small intestine, colon, sigmoid and rectum Resection of the small intestine, by K. W Warren. Technic of ileostomy by B. P Colcock. Indications for surgical intervention in ulcerative colitis, by F H. Lahey Polyps of the colon and rectum, by N W Swinton and J H. Holt. Prognosis in carcinoma of the colon and rectum, by B. P Colcock. Abdominoperineal resection for carcinoma of the rectum, by R. B. Cattell. The biliary tract Experience with the operative management of 280 strictures of the bile ducts, with description of new method and complete follow-up study of the end results in 229 of the cases, by F H. Lahey and L. J Pyrtek. The spleen, adrenal gland and pancreas Splenectomy when is it indicated? by F H. Lahey and J W Norcross. Partial pancreatectomy by R. B. Cattell. An appraisal of pancreatoduodenal resection follow-up study of 61 cases, by R. B. Cattell and L. J Pyrtek. Pheochromocytoma—its diagnosis and treatment, by E. C. Bartels and R. B Cattell. The pelvis Presacral neurectomy by C. E. Sedgwick. Treatment of prolapse of the uterus, by B. P Colcock. The management of vesicovaginal fistula, by E. E. Ewert. The bones and joints The treatment of primary malignant bone tumors of the humerus, by G. E. Haggart. The management of chronic suppurative osteomyelitis of the femur by G E Haggart and M T Hurley The brain, spinal cord and nerves Treatment of tumors of the pineal body by G. Horrax. The end results of complete extracapsular removal of acoustic tumors, by G. Horrax and J L. Poppen. Meningiomas and neurofibromas of the spinal cord, certain clinical features and end results, by G. Horrax and others. The herniated intervertebral disk 400 proven cases 18 months to 10 years following operation, by J L Poppen. Relief of angina pectoris by sympathectomy by J A. Evans and others. The technic of lumbar sympathectomy by J L. Poppen Anesthesia Preoperative preparation and premedication, by M J Nicholson. Technic of endotracheal anesthesia, by M. J Nicholson. Complications of spinal anesthesia, by U H. Eversole. Experiences with cardiac arrest, by F H. Lahey and E R Ruzicka. Miscellaneous Surgery of Ménière's disease, by F D Lathrop. The practical anatomical and surgical considerations for exposure of the facial nerve, by F D Lathrop. Anticoagulant treatment of postoperative venous thrombosis and pulmonary embolism, by J A. Evans and J F Dee. Surgical management of arteriovenous aneurysms, by H. D Adams. Repair of incisional hernia, by R. B Cattell. The repair of inguinal hernias, by K. W Warren. Index.

Note. Surgical procedures which have become standardized at the Lahey Clinic are described and illustrated in this work. Dr. Lahey has stated in the book preface " w has continued to be impressed with the fact that, with allowances for the natural variations in anatomy and pathology the employment of standardized operative procedures by all of the surgeons in the clinic makes for refinement of operative details and understanding cooperation on the part of the operating nurses and assistants. Altogether there 70 papers of which only a selection is noted above by author and title. The book is of interest to students of surgery and to practitioners individually and to the staffs of surgical clinics.

LEITHAUSER, DANIEL JAMES

Early ambulation and related procedures in surgical management. Springfield Ill. Charles C Thomas, 1946 232 p. illus. 23 cm. $5 00 4339

Contents. Introduction. History of early ambulation. General physiologic principles relating to early ambulation after surgery. Prevention of pulmonary complications. Prevention of complications related to the circulation. Prevention of gastro-intestinal complications. Prevention of wound complications. Prevention of dehydration and nutritional disturbances. Psychological factors. Preoperative care. Surgical technic. Postoperative management. Surgical nursing care of ambulatory patients. Clinical results of early ambulation after surgery with case reports and follow-up. Economic factors. Index.

Note. This volume presents the case for a method of surgical management which the author has found most successful in preventing post-operative complications. It discusses the reasons for and desirability of early ambulation, and describes the special surgical techniques and post-operative care which must be followed for variety of operations. Also included is a review of the results obtained in 2,047 surgical cases, many of which are presented in the form of case histories. References are given at the end of each chapter

LINDSKOG, GUSTAF E, AND AVERILL A. LIEBOW

Thoracic surgery and related pathology New York Appleton Century-Crofts Inc., 1953 644 p. illus. (part col d) 24 cm. $15.00 4340

Contents (abridged) Trauma to the chest. Diseases of the chest wall. Diseases of the pleura. Surgical anatomy of the lung. Embryology and developmental abnormalities of the lungs. Respiratory function and its clinical evaluation, by W E. Hiesner Pulmonary abscess. Bronchiectasis. The pathology of tuberculosis. The treatment of pulmonary tuberculosis. General considerations, by F C. Warring, Jr—Therapeutic pneumothorax, oleothorax, pneumoperitoneum, by F C. Warring, Jr—Phrenic nerve paralysis—Pneumonolysis and apicolysis—Thoracoplasty—Cavity drainage—Resection. Tuberculous empyema. Infections caused by actinomycetes, yeasts and fungi. Thoracic manifestations of echinococcus disease. Emphysematous blebs and bullae, giant air cysts of the acquired type Spontaneous pneumothorax Tumors of the trachea, bronchi and lungs. Trauma to the pericardium and heart, cardiac resuscitation. Diseases of the pericardium. Congenital lesions of the heart. Diseases of the aorta and great vessels. Acquired heart disease. Diseases of the mediastinum and thoracic duct. Mediastinal tumors. Diseases of the esophagus. Other diseases of the esophagus. Diseases of the diaphragm. Preoperative preparation, operative and postoperative care of the thoracic surgical patient, by R. D. Way Postoperative pulmonary complications. Index

Note The title notwithstanding, surgical techniques are not the primary subject of this distinguished text. Basic physiology pathology and disorders and diseases in which surgical measures may be the best therapy are fully discussed. Alternative or supplementary therapeutic measures, for example, chemotherapy are covered in equal fullness in relation to the diseases to which they are applicable. Discussions of individual diseases are thorough, typical discussion being organized under the following subheadings pathogenesis, symptoms and physical signs radiographic findings laboratory findings clinical course treatment and literature references. Surgical techniques are concisely described but are not illustrated. Various therapies are compared in such statements as "The best available treatment at present for ulcerative bronchostenosis and bronchiectasis is pulmonary resection. When anatomic considerations and functional reserve will permit it. When the diffuseness of the disease and limited respiratory reserve render this approach impossible the alternative local treatment by dilatation of the strictures and streptomycin-PAS therapy. Literature references are given, and there are 215 figures. The authors are members of the faculty of the School of Medicine of Yale University and much of the book is based on an extensive series of cases treated in Grace-New Haven Community Hospital.

MARKOWITZ J

Experimental surgery including surgical physiology In collaboration with J Archibald and H. G Downie. Third edition. Baltimore The Williams & Wilkins Company 1954 851 p. illus. 24 cm. $10.00. 4341

Contents Introductory remarks. The animal lecture amphitheater. Care and feeding of animals, revised by J. Archibald. Anesthesia, revised by J. Archibald. Equipment, technic, sutures and instruments, revised by J. Archibald. Surgical exercises, revised by J. Archibald. Standard technical procedures in the surgery of the alimentary canal. Gastric fistulae. Intestinal fistulae—jejunostomy. The experimental production of chronic peptic ulcer. Exteriorization of an intestinal loop. Surgical physiology of intestinal obstruction. Absorption, excretion and motility of the isolated colon. Experimental surgery of the esophagus. Some features of experimental peritonitis. Experimental surgery of the pancreas. Total biliary fistula. Experimental surgery of the gall-bladder. Transplantation of ducts. Facial transplantation. Transplantation of organs, revised by H. G. Downie. Experimental surgery of joints. The experimental surgery of bone, revised by J. Archibald. Several standard intracranial operations. Experimental surgery of the lung, trachea and bronchi. The experimental surgery of the heart. The mechanical heart—cardiac arrest. Experimental surgery of the involuntary or autonomic nervous system. Vascular surgery. Experimental hematology. Experimental surgery and physiology of the kidney including the artificial kidney. The experimental surgery of the liver. Epilogue. Index.

Note When first published in 1937 this book was the pioneer text in its field, and [illegible] now enjoys the status of being the standard work on experimental surgery in the English language. The operative techniques described are for use on animals, particularly dogs. The [illegible] purpose is primarily physiologic, that is to say many of the techniques described are valuable in studying the functions of organs. However they are valuable also in gaining practice in surgery. The second edition was published in 1949. References to the literature including the author's own papers are given in all of the chapters. The illustrations of which there are 614 in the third edition are of high quality. Comparing the third edition with the second edition published in 1949 the total length of the work has been increased by approximately 300 pages. A number of the chapters have been revised by collaborating authors as noted in the above contents. A selection of the literature published since the second edition was written has been added to the bibliography. The book is useful as an introduction to surgery for medical and veterinary students and as [illegible] guide for research physiologists who are outside in experimental work.

MAYO CHARLES W

Surgery of the small & large intestine a handbook of operative surgery Illustrated by Russell Drake Chicago The Year Book Publishers, Inc. 1955 340 p. illus. 22 cm. $9.00 4342

Contents Section [illegible] Introductory considerations. Diet, instruments, sutures. Diet. Surgical instruments. Incisions. Section II. The small intestine. Blood supply and lymphatic drainage of the small intestine. The duodenum. The jejunum. The ileum. Obstruction in the small intestine. Section III. The colon. Surgical considerations of the vascular system. Preoperative preparation. Postoperative care. Benign lesions. Surgical treatment. Malignant lesions—surgical treatment. Colostomy—surgical technic. Intestinal anastomoses—surgical technics. Section IV. The rectum and anus. Benign lesions—congenital malformations of the rectum and anus. Prolapse of the rectum. Anal surgical technics. Index.

Note A concise presentation, devoid of extraneous information. It deals with surgical instruments and surgical techniques only and these are described as concisely as possible. Essentially the book is [illegible] small atlas in which the 94 plates containing probably three times as many illustrations are the principal feature. The material [illegible] arranged so that in most instances [illegible] plate appears on [illegible] right-hand page while the discussion of it [illegible] on the facing left-hand page. The author, who is associated with the Mayo Clinic and Mayo Foundation, has selected the techniques carefully and described them clearly.

MOHS FREDERIC E.

Chemosurgery in cancer gangrene and infections featuring a new method for the microscopically controlled excision of cancer Springfield Ill. Charles C Thomas, 1956 305 p. illus. (part col d) 26 cm. $13.50 4343

Contents (abridged) Experimental background. Part I, Malignant tumors of the skin and other accessible structures. Chemosurgical technic. Carcinoma of the face, scalp and neck. Carcinoma of the nose. Carcinoma of the ear. Carcinoma of the eyelids. Carcinoma of the extremities and trunk. Carcinoma of the skin—a summary of therapeutic results with comments. Carcinoma of the lips. Carcinoma of the larynx. Neoplasms of the parotid and other salivary glands. Carcinoma of the penis and scrotum. Carcinoma of the vulva, vagina, urethra and cervix. Carcinoma of the anus and lower rectum. Malignant melanoma. Modes of spread of cancer. Part II, Benign tumors and precancerous lesions. Benign tumors of epithelial origin. Benign tumors of connective tissue origin. Hemangiomas. Tumors of infectious origin. Precancerous conditions. Part III, Gangrenous conditions. Part IV. Infections. Infectious granulomas. Pilonidal sinuses and other infected tracts. Miscellaneous infections. Part [illegible] Chemosurgery as [illegible] specialty. Why chemosurgery should be practiced as [illegible] specialty. Setting up the chemosurgery clinic. References. Index.

Note A pioneer work on [illegible] special method of removal of diseased tissue, particularly external malignant, gangrenous or infected tissue. The tissue is first fixed *in situ* by chemical means, then surgically excised. In the treatment of cancer—which is the principal use of the technique—the excision is guided by microscopic examination of frozen sections of the fixed tissue, [illegible] technique that makes possible the precise location of even minute cancerous areas. Although the first comprehensive monograph on the method, the book is based on extensive animal experimentation, followed by treatment of over 4,000 human patients. Many of the 221 figures consist of before-and-after pictures of cancers and other lesions treated by chemosurgical techniques. The author is Associate Professor of Chemosurgery on the faculty of the Medical School of the University of Wisconsin and Head of the Chemosurgery Clinic of the General Hospital of the State of Wisconsin.

MOORE, FRANCIS D AND MARGARET R. BALL

The metabolic response to surgery Metabolic diagrams by Mildred B Codding. Springfield Ill Charles C Thomas 1952 156 p. illus. 29 cm. (American lecture series. Publication number 132 A monograph in American lectures in surgery edited by Michael E De Bakey and R. Glen Spurling) $7.50 4344

Contents Technique—subjects and methods, presentation and charting, terminology and interpretation. The response to [illegible] single trauma. The disturbance, being [illegible] separate consideration of starvation, immobilization and endocrine factors in the operative response. Further responses to trauma and depletion. Complex problems in metabolic response. Changing the balance. Facts and corollaries; being [illegible] summary of the book, together with clinical corollaries which may be drawn in applying these concepts to the care of surgical patients. Appendix. Surgical diets and parenteral supplements. Bibliography.

Note A work based partly on original studies made by the authors at Peter Bent Brigham Hospital and Massachusetts General Hospital, Boston, and partly on the literature. The original studies were made on "everyday surgical patients" with the use of healthy persons for control studies. The book is addressed to practicing surgeons, and its purpose is to provide authoritative information on the metabolic factor in the responses of patients to surgery. It includes rather full documentation of [illegible] variety of case histories. The last chapter in which the knowledge is compactly summarized is [illegible] useful feature. The bibliography runs to 18 columns and includes not only literature cited in the text but also other studies which the authors believe has potential usefulness for their readers.

MOSELEY H. F

An atlas of musculoskeletal exposures. With 376 illustrations in color and 63 figures in black and white. Illustrated by Helen T MacArthur with 5 plates by Frank Netter

Philadelphia J B Lippincott Company, 1955 235 p illus (part col'd) 29 cm. $22.50 4345

Contents General considerations. The face. The upper extremity Clavicle and its articulations. Shoulder Arm. Elbow Forearm. Wrist. Hand. The trunk. The lower extremity Hip. Thigh. Knee. Leg. Ankle. Foot. Index.

Note. A complementary work to the author's *Shoulder lesions*, second edition New York, 1953. Its principal feature is an extensive series of colored plates in which are depicted the detailed anatomic relations of the bones and joints of the parts of the body named in the above chapter titles. In addition to showing clearly the anatomic relations, the pictures show the steps in the surgical exposure of individual joints. In many instances several surgical approaches to the same joint are pictured to cite an example, eight approaches and variations are shown for the shoulder The pictures of anatomy and surgical incisions are supplemented by photographs showing techniques of positioning and draping for surgery The illustrations are accompanied by a short but clear explanatory text and by literature references. The author is a member of the faculty of McGill University and of the staff of Royal Victoria Hospital in Montreal.

MOSELEY, H F , editor

Textbook of surgery With a foreword by G Gavin Miller With 571 text illustrations and 79 color plates. Second edition. St. Louis The C V Mosby Company, 1955 1,136 p illus (part col'd) 26 cm $16 50 4346

Contents The evolution of modern surgery by E. W Workman. Reaction to injury and repair by T R. Waugh. Surgical bacteriology and chemotherapy by G. G. Kalz. Shock and blood transfusion, by P G. Weil. Preoperative and postoperative care, by J F Hopkirk and R. C. Long. Injuries due to physical agents. Thermal, irradiation, electrical, and chemical trauma, by H. A. Baxter Injuries due to cold, by D R. Webster Radioactive isotopes in diagnosis and treatment, by C. B Peirce and P L. Cox. Anesthesia, by R. G B Gilbert and F A. H. Wilkinson. Surgical technique, by D W MacKenzie, Jr and M. G. Warnock. Plastic surgery by H. A. Baxter Neurosurgery by A. R. Elvidge. Diseases of the face, mouth, and neck, by H. L. Dawson and E. J Tabah. Surgery of the endocrine glands, by S. Baxter and others. The breast, by R. Lawson. Thoracic surgery by S. Baxter Heart and pericardium, by C. B Ripstein and A. M Vineberg. Esophagus, by A. M. Vineberg. The stomach, duodenum and small intestine, by D R. Webster Liver and portal hypertension by J F Hopkirk and R. C. Long. The biliary system, by J F Hopkirk and R. C. Long Pancreas, by H. S. Dolan and J F Hopkirk. Surgery of the spleen, by D W MacKenzie Jr and L. Lowenstein. The peritoneum, omenta and mesenteries, by J R. McCorriston. Intestinal obstruction, by J R. McCorriston. Appendix, by H. S. Morton. Colon by H. S. Morton. Rectum and anus, by H. S. Morton. Abdominal aspects of gynecology by G. A. Simpson. Hernia, by W M. Cooper Genitourinary system, by J T MacLean. The diagnosis of acute abdominal conditions, by J R. McCorriston Peripheral vascular diseases, by J C. Luke. The lymphatic system, by J C. Luke. Amputations, by J C. Luke. Fractures, by H. F Moseley Joints, by H F Moseley Bursae, by H. F Moseley Fractures and other disorders of the upper extremity—lower extremity by H F Moseley Infections of bone, by H. F Moseley Tumors of bones and joints, by J G. Petrie. Disorders of the vertebral column, by A. A. Butler and J G. Petrie. Index.

Note. In the foreword of this volume, its contributors are termed "the younger men of the surgical staff of the Royal Victoria Hospital. The book is based on the postgraduate course in surgery conducted by McGill University and taught largely at Royal Victoria Hospital at Montreal. It is introductory and basic although surgical techniques are described, the primary emphasis is on descriptions of diseases for which surgery is indicated and on other topics closely related to surgery such as anesthesia. The full-page color illustrations are a primary feature. The text figures are also an important part of the exposition. The first edition was published in 1952 In this second edition, two chapters were added and most of the others revised in some degree.

NICHOLS, H MINOR

Manual of hand injuries. Chicago The Year Book Publishers Inc 1955 352 p illus. 23 cm. $9 50 4347

Contents. Anatomy General technic pre- and postoperative care. Minor injuries. Amputations. Burns. Skin grafting. Losses of skin—primary flap grafts. Tendon and muscle injuries. Nerve injuries. Fractures and dislocations. Infections. Secondary tendon repairs—tendon grafting. Elective and reconstructive procedures. Index.

Note. A compact introduction to the care of wounds and infections of the hand. It is addressed primarily to graduate general practitioners of medicine and surgery who are not specialists in hand surgery but are sometimes charged with the management of hand cases. The basic anatomy is outlined in the first chapter and the chapters that follow cover general and specific techniques of emergency care, repair and reconstruction. Most of the surgical techniques included are described in detail, but the discussions of reconstructive procedures are not explicit and intended only as background information for the general surgeon who is expected to refer patients requiring plastic surgery to a specialist. There are 180 figures in the book representing a higher number of illustrations however the illustrations are small. The author is a member of the faculty of the Medical School of the University of Oregon, and many of the injuries discussed are of the kind suffered by workers in the lumber and woodworking industries.

NISSEN, RUDOLF

Duodenal and jejunal peptic ulcer technic of resection New York Grune and Stratton, 1944 150 p illus. 22 cm. $4 75 4348

Contents. Foreword. Preface. Part I, Duodenal ulcer: General considerations. Anatomic features. Technics of resection. Evaluation of procedures. Part II, Jejunal peptic ulcer: General considerations. Anatomic features. Two stage resection. Radical operation for marginal ulcer secondary to anterior gastro-enterostomy Radical operation for marginal ulcer secondary to posterior gastroenterostomy Radical operation for marginal ulcer following gastrectomy Gastrojejunocolic fistula. Bibliography Index.

Note Mainly a book of drawings that illustrates certain surgical maneuvers and techniques. The brief text is designed to supplement and amplify the legends that accompany the illustrations. The author claims that 50 per cent of all peptic ulcer cases admitted to surgery can be handled by the procedures described.

OCHSNER, ALTON, AND MICHAEL E. DE BAKEY editors

Christopher's Minor surgery Seventh edition Philadelphia W B Saunders Company, 1955 547 p 251 illus. 24 cm. $9 00. 4349

Contents Part I, General considerations Equipment, by O. Creech, Jr Surgical considerations, by O. Creech, Jr. Dressings and bandages, by O. Creech, Jr Anesthesia and resuscitation, by J. Adriani. The surgical resident, by F P Boyce. Part II, Skin and subcutaneous (adjacent) tissues. Anomalies, by J. M. Howard. Tumors, by D. A. Cooley and others. Mechanical injuries, by J M. Howard. Thermal, chemical and electrical injuries, by E. W Haynes, Jr Infections, by C. Lyons. Part III, Musculoskeletal system Deformities and anomalies, by G. A. Caldwell and H. D. Morris. Injuries, by G. A. Caldwell and H. D Morris. Part IV Alimentary tract Diseases of the mouth, by A. Ochsner. Anal, perianal and rectal regions, by P Hanley and M. G. Hines. Part V Peripheral vascular diseases Arterial diseases, by M. E. DeBakey and O. Creech, Jr Diseases of veins and lymphatics, by P T DeCamp. Tumors of the blood and lymph vessels, by H. E. Kahle Part VI, Genito-urinary system Male genito-urinary organs, by J C. Reed. by W K. Kittredge. Female genito-urinary organs, by J H. Allen. Part VII, The head Minor surgery of the eye, by J H. Allen. Ear nose and throat, by M. G Lynch Part VIII, The nervous system Diseases of the nervous system, by D H. Echols. Index.

Note. A standard work of which six editions were published between 1929 and 1948. This is the first edition to be prepared by the present editors who are in order of their names in the title Chairman of the Department of Surgery of Tulane University School of Medicine and Chairman of the Department of Surgery of Baylor University College of Medicine. The book has been completely reorganized and rewritten and now consists of the several parts and chapters whose authors and titles are given above. It is still essentially a reference book, and its scope is not easy to define. In the main, it deals with "the management of surgical conditions which are usually associated with no immediate and little potential threat to life Surgical techniques are described, but most of the space is given to basic anatomy physiology diagnosis, etiology clinical course etc. of diseases and disorders for which minor surgery is the indicated therapy Selected literature references are included.

Medicine

Surgery

ORR, THOMAS GROVER

Operations of general surgery Second edition. With 1700 step-by-step illustrations on 721 figures. Philadelphia W. B. Saunders Company 1949 890 p. illus. 27 cm. $14.50 4350

Contents: Wound healing. Treatment of fresh wounds. Sutures and knots. Amputations. The skin and subcutaneous tissues. Muscle, fascia, and bursae. Tendons and tendon sheaths. Thorax and respiratory system. The breast. Circulatory system. Abdominal incisions. Digestive system. Hernias. Bones and joints. The nervous system. The sympathetic nervous system. Lymphatic system. Endocrine system. Congenital anomalies. Genito-urinary system. Female reproductive system. Index.

Note: A successful textbook for students in medical colleges and manual for practicing surgeons. Surgical technique is of course the main subject matter but surgical anatomy, dangers, and safeguards, as well as other practical information, are included also. All surgical techniques are not described; instead, only one or two proven techniques for each operation are given. The illustrations are of high quality and include a number of step-by-step sequences. The first edition was published in 1944. In the present edition the work has been enlarged by 160 pages, and the number of illustrations substantially increased. Additions have been made to the chapter bibliographies.

OVERHOLT, RICHARD HOLLIS AND LAZARO LANGER

The technique of pulmonary resection. Revised second printing Springfield, Ill. Charles C Thomas, 1951 216 p. illus. (part col d) 24 cm. $9.50. 4351

Contents: Pre-operative preparation. Operative preliminaries. General considerations pertaining to all resections. Intrapulmonary and hilar surgical anatomy. Specific resections. Post-resection management and complications. Post-resection thoracoplasty. Afterword. Bibliography. Index.

Note: A well-rounded treatise for students and general surgeons preparing for thoracic surgery. The techniques described are those actually used by the authors, including their new technique for segmental excision which was first presented in May 1946 before the American Association for Thoracic Surgery. Pathology, diagnosis and other topics not directly related to surgery are not covered; instead, the book is limited to those topics of direct concern to the surgeon. The style is direct and explicit and the illustrations are of excellent quality. In the "Afterword," developments between January 1947 and January 1951 are reviewed concisely.

PARSONS, LANGDON AND HOWARD ULFELDER

An atlas of pelvic operations. Illustrated by Mildred B. Codding. Philadelphia W. B. Saunders Company 1953 231 p. illus. 29 cm. $18.00 4352

Contents: Section I. Abdominal operations: Considerations preliminary to all abdominal surgery. Helpful hints for hysterectomy. Modifications of total hysterectomy. Conservative operations. Operations on tube and ovary. Operations involving the intestine. Operations involving the urinary tract. Operations on the abdominal wall. Complications following abdominal operations. Section II. Vaginal and perineal operations: Considerations preliminary to all vaginal and perineal operations. Vaginal plastic procedures. Combined abdominal and vaginal procedures. Operations for repair of fistulae. Minor operations. Section III. Operations for malignant disease. Index.

Note: A fully illustrated graduate-level text and reference book. It consists primarily of 197 plates, each of which contains several illustrations—sometimes as many as 10—arranged in the order followed in actual operations. Illustrations in each series are numbered consecutively, a device that makes it easy to study the entire operation, step by step in proper sequence. The illustrations are accompanied on the same page by short legends in which the steps depicted are described verbally. Included in these descriptions are warnings and notes on precautions to be taken; for example, "This [illegible] exposes the vessels at the mid portion of the muscle which cause troublesome bleeding when divided. These vessels should be identified, clamped and ligated with silk or cotton." Although most of the operations described can be classified as gynecological surgery, the scope of the book is not strictly limited to that branch of surgery but includes other operations involving the pelvis, such as an operation for umbilical hernia.

PARTIPILO, A. V.

Surgical technique and principles of operative surgery. Fifth edition thoroughly revised. With 548 figures containing 998 illustrations. Original illustrations by W. C. Shephard and Hooker Goodwin. Philadelphia Lea & Febiger 1953 704 p. illus. 27 cm. 4353

Contents (abridged): General principles of operative surgery. Fluid therapy in surgery, by T. A. Tesluk. Sutures and ligature material. Knots and methods of tying. The abdominal wall. The peritoneum and peritoneal cavity. Inguinal hernia. Femoral hernia. Abdominal hernias. Hydrocele. Varicocele. Gastric surgery. Gall bladder and extra hepatic bile ducts, by H. A. Oberhelman. Surgery of the pancreas, by J. L. Keeley. Surgery of the small intestine. Aseptic gastrointestinal anastomoses. Vermiform appendix. Surgery of the large bowel, by C. L. Martin. Ano-rectal diseases, by C. L. Martin. Surgery of the kidney, by H. E. Landes. Peripheral vascular diseases. Chest surgery, by R. M. Dorsey. Principles of plastic surgery, by W. R. [illegible], by W. J. Pickett. Blood transfusions, by E. [illegible]. Surgery of the thyroid gland. Index.

Note: Emphasis upon physiology as well as upon anatomy and pathology is one of the distinguishing qualities of this standard textbook. Another noteworthy feature is the inclusion of a high number of illustrations, most of which are reproduced in large scale. There are 34 chapters of which selections are listed above. Those listed by title only were written by Dr. Partipilo. The others were contributed by the authors whose names are given. The sixth edition of the book was published in 1957: 944 p. $20.00.

PRATT, GERALD H.

Cardiovascular surgery 358 illustrations on 261 figures and 4 color plates. Philadelphia Lea & Febiger 1954 843 p. illus. (part col d) 24 cm. $15.00. 4354

Contents (abridged): Nomenclature, case history and physical examination of the patient. Ancillary surgical procedures. Surgery of the heart. The arterial system. The venous system. The lymphatic circulatory system. Ancillary surgical procedures. Special cardiovascular technics. Index.

Note: A successor to the author's "Surgical management of vascular diseases," 1949. It presents a comprehensive view of cardiovascular surgery with emphasis on surgical therapies currently in use, many of which were developed in recent years. It is organized in eight sections, the titles of which are given above, and 45 chapters. Surgical techniques are not described in detail. Rather, the book is concerned with the abnormalities and diseases for which surgery is indicated and with the principles and applications of surgical therapies. Rather extensive bibliographies are included in the chapters. The author is Chief of the Vascular Clinic of St. Vincent's Hospital in the City of New York, and the book reflects the practice of this clinic at the time of writing.

PUESTOW, CHARLES B.

Surgery of the biliary tract, pancreas & spleen a handbook of operative surgery Illustrated by Jessie W. Phillips. Chicago The Year Book Publishers, Inc., 1953 370 p. illus. 22 cm. $9.00 4355

Contents: Section I, The liver: General considerations. Anatomy and physiology of the liver. Surgical diseases of the liver. Complications of liver disease. Portal hypertension. Section II, The extrahepatic biliary system: Anatomy and physiology of the extrahepatic biliary tract. Diseases of the gallbladder. Complications of cholecystic disease. Preoperative and postoperative management. Anesthesia for biliary tract surgery. Gallbladder surgery. Surgery of the bile ducts. Factors causing symptoms after biliary tract surgery. Section III, The pancreas: Anatomy and physiology of the pancreas. Benign surgical lesions of the pancreas. Carcinoma of the head of the pancreas. Section IV, The spleen: Anatomy and

physiology of the spleen. Indications and contraindications for splenectomy Splenectomy Index.

Note. A concise work designed for surgical residents in hospitals and for practicing surgeons who are not specialists in the surgery of the biliary tract, pancreas, and spleen. It is useful for study review and reference. Its principal feature is series f 72 full-page plates, each of which contains reproductions of two or more illustrations. The plates are complemented by a concise but clear text on general considerations, as well as by legends of some length. The author is Clinical Professor of Surgery in the College of Medicine of the University of Illinois and specialist in the regional surgery covered by the book.

PULASKI, EDWIN J

Surgical infections, prophylaxis—treatment—antibiotic therapy Springfield Ill Charles C Thomas 1954 332 p illus. 23 cm. (American lecture series. Publication no 170 A monograph in the Bannerstone division of American lectures in surgery, edited by Michael E De Bakey and R. Glen Spurling) $7 75 4356

Contents Part i, Antibiotic therapy General considerations of antibiotic therapy The special antibiotics. Part ii, The management of surgical infections Wound infections—prophylaxis and management. Specific infections. Regional infections and wounds. Appendix References for tables. General references. Index.

Note. An authoritative and thorough manual on the control of infections. A principal thesis is that antibiotic therapy should be viewed only as an adjunct to proved surgical measures and other supportive therapies. Even so, one of its useful features is the information given on the use of antibiotics in controlling infection, both in general and in the treatment of specific types of ounds and infections. The problem of superinfection is discussed. About one-third of the space is devoted t the general principles and techniques of antibiotic therapy and discussions of the individual antibiotics while two-thirds is used for discussions of specific kinds of infections and wounds, including surgical ounds, and directions for their management by the administration of antibiotics and other measures.

RICHARDS VICTOR

Surgery for general practice. With 476 illustrations St. Louis The C V Mosby Company 1956 947 p illus. 25 cm. $17 50 4357

Contents (abridged) Local anesthesia. Hemorrhage blood replacement, blood substitutes, shock. Infection and chemotherapy in surgery Anticoagulants—venous thrombosis—pulmonary embolism. Burns Plastic surgery Ear nose, and throat, by R. Mc Naught. Visible and palpable tumors of soft parts. Mouth, oropharynx, lip jaw tongue Neck. Breast, by C. J Matheson Chest disorders, by R. B Cohn Acute abdominal disorders, by R. B Cohn. Anal canal and rectum, by R R. Klein. Urology by F Howard Common gynecologic problems, by C. McLennan. Peripheral ascular disease. Veins and lymphatics. Sympathetic nervous system Endocrine problems. Hypertension. The central nervous system Craniocerebral trauma. Infections of the central nervous system Intractable pain Peripheral nerve surgery Surgical lesions of the spinal cord. Injuries to the spinal cord. Neurovascular pain in the cervicobrachial area. Arm and shoulder Elbow Wrist and hand General principles f the surgery of the hand. Low back pain. Hip. Knee Ankle and foot. Bone tumor Fractures, by F J Cox. Index.

Note. An excellent and useful book but ith somewhat misleading title. It is addressed to general practitioners of medicine and is devoted primarily to the management of patients with conditions for hich surgery is indicated. It does not describe the techniques of surgical operations except in general and incidental way nor is it strictly limited to disorders that require surgical treatment. It emphasizes methods of diagnoses that may be carried out in doctors offices, but refers to others Care of patients, and especially ambulatory care, of patients before and after operations is ell covered. The author is Chairman of the Department of Surgery of the School of Medicine of Stanford University and the book is based on experience in the Surgical Outpatient Clinics of Stanford University The contributor chapter on fractures is 138 pages long and deals ith both emergency care and definitive care, with emphasis on the latter

ROEN, PHILIP R

Atlas of genito-urinary surgery Introduction by Clarence G Bandler Illustrations by Charles Stern New York Appleton-Century Crofts, Inc., 1951 325 p illus. 25 cm. $10.00. 4358

Contents (abridged) General principles of urologic surgery Operations on the kidney Operations on the adrenal gland. Operations on the ureter Operations on the bladder. Operations on the prostate Operations on the scrotum and testicle Operations on the urethra. Operations on the penis. Index.

Note: This book is organized so that the right-hand pages contain reproductions of drawings of standard surgical techniques, hile the facing left-hand pages contain concise discussions of the drawings and the techniques illustrated by them. In most instances the drawings on one page illustrate all of the surgical steps in particular operation, but in other instances the author has used several successi pages. Drawings are original and are reproduced in adequately large scale. The book is designed for medical college students and for general surgeons who are not specialists in urological surgery but who must nevertheless occasionally perform urological operations.

RUSTAD, WILLIAM H

The recurrent laryngeal nerves in thyroid surgery Illustrations by Ralph Sweet. Springfield, Ill Charles C Thomas, 1956 47 p. illus. 26 cm. $4 50 4359

Contents. Historical background. Laryngeal muscles and their nerv supply The recurrent laryngeal nerves. Clinical considerations. Illustrations. Bibliography

Note. The results of an extensi series of dissections carried out to obtain representati picture of the anatomy of the extralaryngeal portion of the recurrent laryngeal nerves on the right and left sides of the neck are presented in this small but significant book. On the basis of the findings, ariations of these nerves are arranged in 11 groups hich ar illustrated and described in detail. Among the important findings is the lack of consistency the patterns of these nerves between right and left sides in the same individual. Suggestions as to the application of this study in surgical operations are offered in the chapter entitled "Clinical considerations.

SADOVE, MAX S, AND JAMES H CROSS

The recovery room immediate postoperative management With contributions by 24 authorities. Philadelphia W B Saunders Company 1956 597 p illus. 24 cm $12.00. 4360

Content Introduction, by W H. Cole. An administrator looks at intensi therapy by M J Segall and others. Principles of recovery room management, by M. S. Sadove and J H. Cross Management of circulation, shock, respiration and ... ation, by M S Sadove and J H. Cross. Neurosurgery by O Sugar Surgery of the eye, by M D Pearlman. Surgery of the ear nose and throat, by F L. Lederer and E. M. Skolnik. Surgery of the chest, by H T Langston. Laryngology and bronchoesophagology by P H. Holinger and K. C. Johnston Surgery of the abdomen, by W J. Grove. Surgery for anorectal disease, by C. Porter. Surgery of the soft tissues, by M. Gibbel Orthopedic surgery by T A. Fox. Urological surgery by R. R Cross, Jr Plastic surgery by R. F Stokes The treatment of burns, by R. F Stokes. Oncological surgery by H. W Southwick and D P Slaughter Obstetrics and gynecology by J W Payne and J Wolff. Vascular surgery by W S. Dye Jr and O. C. Julian. Pediatric surgery by J. L. Keeley Management of medical problems, by E. J Wise. Nursing care in the recovery room, by R. Milone and others. Index.

Note A treatise on the care of hospital patients during the initial period of recovery from surgery The authors are all teachers in colleges of medicine in the United States of America or members f hospital staff Most of the chapters of the book describe specifically and in detail procedures for both routine postoperative care and postoperati care when there are complications. The book is of interest to surgeons, urses and hospital administrators.

SCHAFFER, PAUL W

Pathology in general surgery With 495 plates. Chicago The University of Chicago Press, 1950. 581 p. illus. (part col d) 27 cm. (The University of Chicago Committee on Publications in Biology and Medicine edited by Lester R. Dragstedt and others) $20.00 4361

Contents: Perfusion and general aspects. Vascular system. Endocrine glands. Breast. Lung and mediastinum. Head and neck. Esophagus. Stomach. Duodenum and small intestine. Appendix, colon, and rectum. Pancreas. Liver. Gall-bladder and bile ducts. Peritoneum. Index.

Note: The pathology of diseases usually treated by surgery is the subject of this book. The author points out that the duty of surgeons is "to follow resected tissues into the laboratory there to determine their gross and microscopic character. Such clinical-pathologic correlations not only represent the basis for improvement in the practice of medicine, but should also be regarded as the reference point from which may be derived original concepts so vital to the continued advance of the frontiers of medical knowledge." The chapters whose titles are listed above are subdivided by specific diseases. For example, the chapter on the pancreas has the following subheads: "Pancreatic cysts," "Acute pancreatitis," "Chronic pancreatitis," "Islet-cell tumors," "Carcinoma of the pancreas," and "Sarcoma of the pancreas." Each individual disease is discussed in several pages of text, which are accompanied by large illustrations of typical pathological specimens. There are 495 plates, and more than half are reproduced in color. Literature references are included.

SCOTT WILLIAM WALLACE, AND PERRY B HUDSON

Surgery of the adrenal glands. Springfield, Ill. Charles C Thomas, 1954 150 p. illus. 22 cm. (American lecture series. Publication no. 227 A monograph in American lectures in abdominal viscera edited by Lester R. Dragstedt) $3.50. 4362

Contents: Introduction. Development. Structure. Function. Tumors of the adrenal gland. Surgical treatment of adrenal tumors (including Cushing syndrome. Bilateral adrenalectomy in the treatment of disseminated cancer of the prostate and breast. Bibliography. Author index. Subject index.

Note: A condensed but informative presentation of current thought and clinical experience pertaining to surgical treatment of tumors of the adrenal glands. The first four chapters cover very briefly the background information on the development, structure and function of these glands. This introductory material is followed by a 77-page chapter on the tumors and a 6-page chapter on surgical treatment. A considerable range of case material is incorporated: there are 33 figures and extensive citation of the recent literature. The senior author is Urologist-in-Charge, the Johns Hopkins Hospital and Director of the James Buchanan Brady Urological Institute.

SHACKELFORD RICHARD T

Bickham-Callander surgery of the alimentary tract. By Richard T Shackelford assisted by Hammond J Dugan. Philadelphia W B Saunders Company 1955 3 v illus. 26 cm. $60.00 4363

Contents: Volume I. The esophagus. The stomach and duodenum. The liver. The gallbladder and extrahepatic biliary ducts. Volume II. The pancreas. The spleen. The small intestine (jejunal and ileal portions). The peritoneum, omenta and mesentery. The colon. Volume III. The anorectal tract. Excisions of the rectum. Hernias of the gastrointestinal tract. Ileostomy. Index to Volumes I and II.

Note: A cyclopedic presentation of surgical techniques of the alimentary tract. It is based on the section on surgery of the alimentary tract in W S Bickham *Operative surgery* Philadelphia, 1924–31, seven volumes, and on unpublished material prepared by C Latimer Callander who worked for some years on revision of Bickham's work but did not have it ready for publication when he died. The same comprehensive approach that was characteristic of Bickham's work is to be found in this one. All known techniques pertaining to surgery of the alimentary tract are described and detailed in some detail. However, the present author has added evaluatory comments, a feature that was lacking in the original work. In addition, discussions of preoperative and postoperative care and of other topics closely related to the surgical techniques have been added. There are 1,704 figures, most of which contain more than one illustration, in the three volumes. The total number of pages is 2,315 plus 59 pages of index. The index covers the contents of Volumes I, II and III and is included in all three volumes.

SMITH FREDERICK M

Surgery of the elbow Springfield, Ill. Charles C Thomas 1954 340 p. illus. (part col d) 26 cm. $10.75 4364

Contents: Traumatic lesions of the elbow region. Pathology of fractures. Anatomy of the elbow region. Symptoms and signs of fractures and dislocations. Physical examination of the elbow. General principles of fracture treatment. Anesthesia. General considerations of the patient. Classification of fractures and dislocations. *Fracture of lower extremity of humerus. Fracture of upper* extremity of ulna. Fracture of upper extremity of radius. Aspiration of the elbow joint. Complications following elbow injuries. Operative treatment of fractures. Operations on the soft parts associated with fracture or dislocation. Surgical approaches to the elbow region. Early treatment aids following injury. Rehabilitation. The treatment of late deformities and disabilities resulting from fracture or dislocation. Conditions in the elbow region or joint due to trauma other than fracture or dislocation. Non-traumatic conditions of the elbow region or joint. Special operations upon the elbow joint. Bibliography. Index.

Note: A comprehensive monograph on surgical and related therapies of *disorders* of the *elbow* joint and region. Surgical treatment is the principal subject, as the title indicates, but related techniques, such as physical therapy and rehabilitation, are also discussed, though with relative brevity. Most of the space is devoted to surgical management of fractures and dislocations. However, all *disorders of the elbow* are considered, including bursitis, sprains, arthritis, osteomyelitis, and neoplasms. There are 133 figures, and a classified bibliography of 313 references. The author is Associate Professor of Clinical Orthopedic Surgery in the College of Physicians and Surgeons of Columbia University.

SPIVACK JULIUS L.

The surgical technic of abdominal operations. Fifth edition. 1,037 illustrations on 495 figures, mostly original. Springfield, Ill. Charles C Thomas, 1955 931 p. illus. 26 cm. $17.50 4365

Contents (abridged): Part I. General surgical technic in the abdominal cavity. Abdominal incisions. Anatomy of the small and large bowel—intestinal localization. Methods of suturing the stomach and bowel. Intestinal anastomoses. Enterostomy—enterotomy. Aseptic methods in gastro-intestinal surgery. Surgery of the large bowel. Malformations of the intestinal tract—atresia and stenosis of the intestinal tract. Part II. Anatomy of the stomach. Gastrostomy. Operations for congenital pyloric stenosis. Gastropexy. Excision of gastric ulcer—exclusion of gastric ulcer—repair of perforated ulcer. Part III. Gastroenterostomy. Gastro-duodenostomy. Gastrectomy. Other surgical procedures on the stomach. Part IV. Surgery of the gall-bladder and biliary passages. Surgery of the liver. Surgery of the spleen. Surgery of the pancreas. Part V. Hernia. Internal hernia. Gynecological operations. Index.

Note: A standard text and reference book, the first edition of which was published in 1934 and the fourth edition in 1946. It is outstanding for its clear, step-by-step descriptions of surgical techniques. No prior knowledge of surgery is assumed. Such elementary details as knot-tying are not only explained in the text, but are shown in sequence in clear drawings. In most instances, several modern techniques for the same operation are described. Drawings are clear and well reproduced, and lengthy bibliographies are included. The fourth edition was very thoroughly revised in the preparation of this fifth edition. One chapter was deleted, three new ones added, and many of the chapters carried over were revised, and in many instances, extended. The illustrations also were substantially increased in number.

SURGICAL CLINICS OF NORTH AMERICA

Symposium on pediatric surgery Philadelphia W B Saunders Company 1956.

1439–1713 p illus 23 cm $18 00 per year of six numbers. 4366

Contents Foreword, by W J Potts, consulting editor Anesthesia for pediatric surgery by W O. McQuiston. Fluid and electrolyte therapy in the surgery of infants and small children, by T G. Baffes. Congenital atresia of the esophagus with tracheo-esophageal fistula, by C. A. Stephens and others. Malrotation of the intestine, by W H. Snyder and L. Chaffin. The nonoperative treatment of intussusception hydrostatic pressure reduction by barium enema, by M. M. Ravitch. Intussusception—surgical treatment, by P F Fox. Hirschsprung' disease during infancy by O. Swenson and J H. Fisher Atresia of the intestinal tract, by O. S. Wyatt and others. Meconium ileus, by R. Seidenberg and E. S. Hurwitt. Imperforate anus, by W B Kiesewetter The diagnostic laparotomy in obstructi jaundice in infants, by H. W Clatworthy Jr., and V G. McDonald. The treatment of hypospadias, by D W Mac Collum, and others. Lumbar myelomeningocele, by F D Ingraham and F D Fowler Cleft lip and cleft palate, by H. E. Coe. Cysts and sinuses of the eck of thyroglossal and branchial origin by A. H. Bill, Jr Lung cysts and pneumothorax in infants and children by W L. Riker The management of pectus excavatum, by C. E. Koop. Criticism of operations for pulmonary stenosis, by H. T Bahnson and M. W Brown. Hemangiomas in infancy and childhood report based on 6479 cases, by D W MacCollum and L. W Martin. Index to volumes XXXIV XXXV and XXXVI (1954 1955 and 1956)

Note. Surgical clinics of North America is published six times a year and is continuously paged through the volume as periodical. However each issue is devoted to a symposium on a topic of current interest, and the issues are valuable bound in cloth as books as well as in paper The December 1956, issue contains the papers whose uthors and titles are listed above. The authors are teachers and practitioners f surgery and they have addressed themselves to graduate pediatricians and graduate surgeons, especially the latter

SUTTON, JOHN E

Minor surgery With over one hundred illustrations. New York Landsberger Medical Books Inc., distributed solely by the Blakiston Division of the McGraw Hill Book Company Inc., 1955 334 p illus 21 cm. $7 00 4367

Contents Inflammatory reactions, infections, and abscesses. Traumatic lesions and ounds. Lesions of the skin and subcutaneous tissue Sprains. Bursitis. Antimicrobials. Equipment and technique. Anesthesia and analgesia. First aid bandaging and splinting. Preoperati preparation and post operative care. Miscellaneous conditions. Routine procedures. Minor surgery in infants and children. Index.

Note A readable handbook intended for the guidance of general medical practitioners. It deals with conditions that can be treated in patients' homes or in physicians' offices without the use of elaborate equipment. Simple surgical treatments applicable to such conditions as are named in the chapter titles are described fully A few case histories that illustrate the application of the procedures described in the book are included However there are no references to other literature, and the umber of illustrations is fewer than might be expected in book f this nature. The uthor is member of the faculty of the Medical College of Cornell University

SWEET, RICHARD H

Thoracic surgery Second edition Illustrations by Jorge Rodriguez Arroyo Philadelphia W B Saunders Company 1954 381 p 159 illus (part col d) 26 cm $10 00 4368

Contents Surgical anatomy of the thorax. General technical considerations. Thoracic incisions. Operations on the thoracic wall. Operations concerning the pleural cavity Operations on the lung. Operations within the mediastinum. Operations on the esophagus. Abdominal operations performed through thoracic incisions. Surgery of the diaphragm. Index.

Note. A manual of established technique. It is addressed primarily to graduat general surgeons, nevertheless, each operation included is described in full detail and the erbal descriptions are supplemented by clear drawings which are based mainly on sketches made of actual operations. Included also are rather full discussions of such matters as choic of method, complications and postoperative care of patients. The first edition was published in 1950. Descriptions of several new techniques ha been added in this second edition and there has been some revision and ugmentation of the illustrations, including new set of illustrations of instruments used in thoracic surgery The second edition has been printed from re-set type. Changes ere extensive enough to require resetting of the type. The uthor is Associate Clinical Professor of Surgery in the Harvard University Medical School.

THOREK, MAX

Modern surgical technic. With a foreword by Fred W Rankin Second edition. 2,590 illustrations including 57 full color plates. Philadelphia J B Lippincott Company, 1952 4 v and index. illus. (part col d) 26 cm. $89 00 4369

Contents (abridged) Volume I. Part I, General operative considerations. The surgeon and his art. Selection and management of "poor-risk" patients. Postoperati considerations. Anesthesia, by C. J Betlach. Blood transfusion. Electrosurgery Part II, Surgery of head and neck and principles of plastic surgery Surgery of the orbit and eye, by J. Igersheimer. Surgery of the ears and adjacent structures, by W L. Gatewood. Surgery of the face. Surgery of the jaws. Surgery of the sinuses and tonsils, by W L. Gatewood. Surgery of the neck and the cervical endocrine glands. Principles of plastic surgery and skin grafting. Volume II. Part III, Surgery of the nervous and vascular systems: Surgery of the central nervous system, by H. C. Voris. Surgery of the arteries, by R. W McNealy Surgery f the eins, by H. O. McPheeters. Part IV Surgery of the chest, by R. Nissen. Part V Surgery of the bones and joints Orthopedic surgery by K. Eikelbaum and H. E. Turner Fractures, dislocations and sprains, by J J Callahan. Volume III. Part VI, Surgery of the breast. Part VII, Surgery of the abdomen Surgery of the stomach and the duodenum. Surgery of the intestines. Surgery of the liver gallbladder and biliary passages. Surgery of the pancreas. Surgery of the spleen. Volume IV Part VIII, Hernia. Part IX, Gynecology and genito-urinary surgery Index.

Note A cyclopedic work of reference nature. The techniques described are those in fairly wide, current use. Each technique included is covered explicitly in considerable detail. The textual descriptions are supplemented by illustrations, and many of these are arranged in step-by-step series. Short lists of selected references are included in most chapters. The book is well suited to use as reference work in the offices of general medical practitioners and general surgeons. It is useful also to surgeons practicing specialties who are sometimes called upon to perform operations outside their own fields. The first edition was published in 1938 in three volumes and was reissued in 1942 in one-volume edition for the use of medical officers of the Armed Forces. In this second edition, more than 400 pages of text have been added, and the number of illustrations has also been substantially increased.

THOREK, PHILIP

Surgical diagnosis With drawings by Carl T Linden. Philadelphia J B Lippincott Company 1956 320 p. illus. 26 cm $12 00. 4370

Contents Head The oral cavity Neck. Chest. The breast. Esophagogastro-intestinal tract Liver gallbladder and bile ducts. Pancreas. Spleen. Hernia. Genito-urinary conditions. Gynecologic conditions Abdominal injuries. Superior extremity—the hand. Inferior extremity—varicose veins. Index.

Note A compactly written textbook of the diagnosis of conditions hich require surgical therapy Physical techniques are emphasized, but there is also stress on the study of symptoms and the interpretation of laboratory tests. There are 391 figures representing somewhat higher umber of illustrations, and most of these illustrate physical manifestations or physical diagnostic techniques. The book is designed for use in medical school courses, both undergraduate and graduate The author is Professor of Surgery on the faculty of the Cook County Graduate School of Medicine in Chicago.

THORNDIKE AUGUSTUS

A manual of bandaging strapping and splinting Second edition with 119 illustrations. Philadelphia Lea & Febiger 1950. 148 p illus. 19 cm. $2 00 4371

Medicine

Anesthesia

Contents: The dry sterile dressing for clean wounds. Septic wound dressing. Sprains, strains, and contusions. Dislocations and emergency splinting. Transportation of fractures. The use of plaster of Paris and similar bandages in splinting. Bibliography. Index.

Note: A brief, illustrated manual addressed primarily to medical students, student nurses, and hospital orderlies. The second edition has been revised to incorporate the changes in practice brought about as [illegible] result of experience and research stimulated by World War II, including, among other new forms and types of useful bandaging materials, the plastic impregnated bandage used as substitute for plaster of Paris bandage.

Walter, Carl W

The aseptic treatment of wounds. Illustrated by Mildred B Codding. New York The Macmillan Company 1948 372 p. illus. 29 cm. $9.50. 4372

Contents: The importance of the aseptic treatment of wounds. The development of the concept of asepsis. Chemical destruction of bacteria. Chemical disinfection of instruments. Physical destruction of bacteria. Sterilization by boiling water. Sterilization by steam. The control of steam sterilization. Sterilization by dry heat. Sterilization of dressings and dry goods. Care and sterilization of instruments. Disinfection of the skin. Air-borne contamination. Operating room technic. Terminal sterilization of instruments and utensils. Aseptic care. Preparation of parenteral fluids. Blood and plasma transfusion. Central supply room technic. Hospital infection of wounds. Control of communicable diseases. Maintenance of sterilizing equipment. Index.

Note: A practical and detailed exposition of the principles of asepsis and of the techniques of sterilization, disinfection etc. [illegible] contribute to surgery as surgical and hospital procedures. Concrete information on the effectiveness of various methods [illegible] given. Good techniques are illustrated step by step. There are 233 figures, many of which contain reproductions of six or more drawings. Pertinent literature is cited in footnotes. The work is addressed particularly to surgeons and nurses, but it contains much material of interest also to hospital administrators and to manufacturers of hospital equipment and supplies.

Welch Claude E.

Surgery of the stomach & duodenum a handbook of operative surgery Second revised edition. Illustrated by Muriel Mc Latchie Miller Chicago The Year Book Publishers, Inc., 1955 370 p. illus. 22 cm $9.00 4373

Contents: Anatomy of stomach and duodenum. Historical summary. Pre- and postoperative treatment, anesthesia. Special instruments. Incisions and closure. Congenital abnormalities. Perforating wounds. Gastrotomy and duodenotomy. Gastrostomy. Diverticula of the stomach and duodenum. Hiatus hernia. Pyloroplasty and cardioplasty. Side-to-side anastomoses. Duodenal and gastric ulcer. Other operations for complications of ulcer. Gastric cancer. Tumors of the duodenum. Complications of gastric resection. Late complications of gastric operations. Anastomoses [illegible] special clamps. Duodenal fistula. Appendices. Bibliography. Index.

Note: Essentially an atlas, this book contains 79 plates, most of which contain reproductions of several drawings. The drawings are accompanied on facing pages by short, specific descriptions and discussions. They have been made from original sketches based chiefly on operations at the Massachusetts General Hospital in Boston. There are [illegible] few pages of background information at the beginning of the book, particularly [illegible] description of the anatomy of the stomach and duodenum and [illegible] brief summary of the development of surgical techniques on these organs. The first edition was published in [illegible] 951. The book was not widely changed for the second edition, but the changes are important. [illegible] The author is [illegible] member of the faculty of Harvard Medical College.

Wilder, Joseph R

Atlas of general surgery With 101 plates. St. Louis The C. V Mosby Company 1955 222 p illus. 32 cm. $13.50. 4374

Note: Devoted to advanced [illegible] students in medical colleges, interns and graduate surgeons, this book shows in illustrations and descriptions in concise explanatory legends, the step-by-step procedures for [illegible] variety of surgical operations including tracheostomy, thyroidectomy, radical mastectomy, hernia repair (several procedures), cholecystostomy, closure of ulcer perforation, splenectomy, appendectomy, anterior resection of the colon, total hysterectomy and subtotal hysterectomy. Approximately 40 procedures are covered. The descriptions are arranged [illegible] ith the illustrations and the pertinent text on facing pages. The author is [illegible] member of the faculty of New York Medical College.

Year book of general surgery (1956–1957 Year book series) Edited by Evarts A. Graham. With a section on anesthesia, edited by Stuart C. Cullen. Chicago The Year Book Publishers, Inc., 1956 647 p. illus. 20 cm. $6 75 4375

Contents: Introduction. General considerations. Technical considerations. Nutrition. Shock. Fluids and electrolytes. Wounds and wound healing. Antibiotics. Neoplasms. The head. Neck. Thyroid. Breast. Lungs and pleura. Thorax and mediastinum. Heart. Aorta and peripheral arteries. Peripheral veins. Lymphatic system. Abdomen—general. Liver and spleen. The biliary tract. Pancreas. Esophagus. Stomach and duodenum. Small intestine. Appendix. Colon and rectum. Pilonidal cysts and sinuses. Hernia. Adrenal glands. Genitourinary system. Extremities. Anesthesia: Depressant drugs. Ventilation. Inhalation anesthesia. Muscle relaxants. Barbiturates. Spinal anesthesia. Regional anesthesia. Hypothermia. Circulation. Miscellaneous. Index. Index to authors.

Note: This annual publication is edited and organized similarly to other volumes in the publisher's Year book series. Significant articles are selected from the medical literature of the world, and are reduced to abstracts [illegible] hich average 500 words in length. The abstracts are classified under the various headings given in the contents above. They are not highly condensed summaries, but are written in narrative fashion so that they can be read [illegible] ith ease. A reference to the original source is given, and in numerous instances the abstract is supplemented by an evaluatory note written by the editor. Each issue covers the journals of approximately one year and in the issue reviewed here the abstracts are of articles appearing in journals received by the editors between April, 1955, and May 1956. There are 117 figures in the present issue.

Zimmerman Leo M and Barry J Anson

Anatomy and surgery of hernia. Baltimore The Williams & Wilkins Company 1953 274 p. illus. (part col d) 26 cm. $10.00 4376

Contents: Hernia through the ages. Hernia in general. Anatomy of the abdominal wall. Indirect inguinal hernia. Direct inguinal hernia. Inguinal hernia—etiology—pathology. Clinical manifestations of inguinal hernia. Treatment of inguinal hernia. Special forms of inguinal hernia. Recurrent inguinal hernia. Femoral hernia—anatomy—surgery. Umbilical hernia. Ventral hernia. Diaphragmatic hernia, by R. R. Bettman. Internal hernias. Pelvic hernias. Medicolegal aspects of inguinal hernia. Index.

Note: This monograph is the product of collaboration between [illegible] specialist in surgery and [illegible] specialist in anatomy. It is [illegible] broad presentation [illegible] hich covers the historical development of hernia operations, general and statistical information on the incidence, etiology, pathology, treatment, and complications of hernia; detailed anatomy of the abdominal wall, and the techniques of surgical operations for the correction of hernia. The latter are described in detail. The book is written in [illegible] lucid style, and the illustrations are excellent in quality and are reproduced in an adequately large scale. Selected literature references are included in the chapters.

ANESTHESIA

Adriani John

The chemistry of anesthesia. Springfield Ill. Charles C Thomas, 1946 536 p. illus. 23 cm. $8.50 4377

Contents: Inorganic chemistry related to anesthesia: The physical behavior of gases. Clinical applications of the physical laws of gases. The chemistry of inorganic gases. The chemical absorption of carbon dioxide in rebreathing appliances. Organic chemistry related to anesthesia. The chemical nature of anesthetic drugs. Hydrocarbons. Alcohols. Aldehydes and ketones. Acids, acyl derivatives, and esters. Ethers, alkene oxides, and acetals. Halogenated compounds. Sulphur-containing substances—sulphonmethanes. Aromatic and heterocyclic

compounds. Opium and opium alkaloids. Amides, ureides, and related compounds—barbiturates. Local anesthetic drugs. Drugs affecting the autonomic nervous system. Stimulating drugs used as analeptics. Standards of purity of drugs. Inflammability of anesthetic mixtures. Biochemistry related to anesthesia. Chemical basis of proposed mechanisms [illegible] narcosis. Effects of anesthesia upon composition of body fluids. The effects of anesthesia on liver function. Effects of anesthesia upon formation and composition of urine. Effects of anesthetic drugs on lipoid and nervous tissues. Enzymes, vitamins and hormones. Metabolism during anesthesia. Detoxification and elimination of anesthetic drugs. Toxicology. Biochemical aspects of local anesthesia. Bibliography. Glossary. Appendix. Index.

Note A basic work for practicing anesthesiologists and for postgraduate medical students who are preparing for this specialty. As the title indicates, it deals, not with the uses and administration of anesthetic drugs, but with their chemistry, chemical and pharmacological descriptions, and their chemical effects in the body. Its purpose is to enable the practitioner to understand the drugs he uses and perhaps to stimulate him to undertake fundamental research. Extensive literature references are provided for each of the chapters.

Adriani, John

Nerve blocks, a manual of regional anesthesia for practitioners of medicine. Springfield, Ill. Charles C Thomas, 1954. 265 p. illus. 26 cm. $6.50 4378

Contents General considerations of regional anesthesia. Paravertebral block anesthesia. Block of cranial nerves. Blocks of peripheral nerves. Field blocks. Spinal anesthesia. Epidural anesthesia. Blocks used to perform surgical procedures. Index.

Note Limited to the more important and commonly used blocks, this book is organized for reference use by general practitioners of medicine and other physicians who are not specialists in anesthesia. It is introductory to the subject of regional anesthesia, but contains full descriptions of the techniques included in it. The information on specific blocks is organized in outline form under such subheadings as "Definition, Indication, Anatomy, Technique, Complications, Precautions" and "Contraindications." Most of the 168 figures illustrate techniques of administering anesthetic or locate essential anatomic landmarks. Some of the material has been taken from the first edition of the author's *Techniques and procedures of anesthesia*, 1946, but has been revised and augmented. Selected literature references are included.

Adriani, John

The pharmacology of anesthetic drugs, a syllabus for students and clinicians. Third edition completely revised. Springfield, Ill. Charles C Thomas, 1952. 179 p. illus. 28 cm. $9.50 4379

Contents Effects of physical and chemical properties on pharmacological activity. Administration, absorption and elimination of anesthetic drugs. General systemic effects. Administration of volatile drugs. Gaseous agents. Volatile agents. Inorganic non volatile agents. Aliphatic non volatile agents. Barbiturates and other non volatile agents derived from urea. Opium alkaloids and synthetic analgesics. Local anesthetics. Non anesthetic drugs used in conjunction with anesthesia. Inorganic gases used in conjunction with anesthesia. Some clinical considerations. Glossary. References. Index.

Note An illustrated digest of fundamental facts about the properties, actions, and technics of administration of anesthetic drugs in current use. It is organized in chapters whose titles are given above. Within most of the chapters the drugs are taken up one by one. The history, preparation, properties, administration, uses, advantages, contraindications are all covered concisely. In addition, the physiological actions are summed up in diagrams based on the human figure. The book contains a number of auxiliary reference aids, such as a glossary, tabulation of dosages, literature references, and a very detailed index. The second edition was published in 1947. For this edition the work was revised and expanded throughout and is now almost twice as long.

Adriani, John

Selection of anesthesia, the physiological and pharmacological basis. Springfield, Ill. Charles C Thomas, 1955. 327 p. illus. 26 cm. $6.50 4380

Contents (abridged) Part I, Pharmacological basis for the selection of anesthesia. Classification of the types of anesthesia. Volatile anesthetics. Gaseous anesthetics. Volatile liquids. Non volatile drugs. Local anesthetics. Muscle relaxants. Analeptics and antinarcotic drugs. Vasopressors and vasoconstrictors. Hypotensive anesthesia and hypothermia. Endotracheal anesthesia. Causes of operating room deaths. Part II, Relationship of anesthesia to nonsurgical diseases complicating surgery. Cardiovascular disease. Diseases of respiratory system. Metabolic diseases. Genito-urinary system. Diseases of the skeletal system. Disturbances of the endocrine system. The extremes of age. Part III, Relationship of anesthesia to type of operation. Operations about the head. Intra- and extra-thoracic operations. Operations on the abdominal wall, pelvis, perineum and rectum. Operations on the vertebral column and extremities. Autonomic nervous system, skin and blood vessels. Anesthesia for obstetrical patients. Index.

Note An introduction to modern anesthesia, addressed to surgeons and recent medical graduates beginning the study of anesthesia. It is elementary in level and broad in scope. The 14-page first part is devoted to background information, such as basic factors in the selection of anesthesia, the pharmacology of the currently used anesthetic drugs, the techniques of administering them to patients, etc. In the third part specific operations are discussed from the standpoint of the anesthetic requirements, definite recommendations as to choice of anesthetic drug and methods of administration are made, and other useful information is given such as an estimate of time required for specific operations. Brief lists of references to other literature are included in other chapters.

Adriani, John

Techniques and procedures of anesthesia. Second edition. Springfield, Ill. Charles C Thomas, 1956. 568 p. illus. 26 cm. $8.75 4381

Contents (abridged) Part I General considerations. Part II, Inhalation anesthesia. Type and methods. Techniques of inhalation anesthesia. Part III, Complications of anesthesia. Complications during general anesthesia. Circulatory complications. Neurological complications. Technical complications. Care of patient at termination of anesthesia. Part IV Basal narcosis and analgesia by intravascular injection. Part V Rectal anesthesia. Part VI, Regional anesthesia. General considerations of regional anesthesia. Spinal anesthesia. Epidural anesthesia. Paravertebral block anesthesia. Nerve blocks. Field blocks. Part VII, Specialized procedures. Pediatric anesthesia. Anesthesia in aged (geriatric) patients. Thoracic surgery. Obstetric analgesia and anesthesia. Hypothermia during anesthesia. Intentional hypotension (hypotensive anesthesia). "Controlled" respiration. Postanesthetic recovery room. Tracheobronchial aspiration with catheter. Part VIII, Resuscitation. Artificial respiration. Analeptic drugs. Part IX, Inhalation therapy. Oxygen therapy. Carbon dioxide-oxygen therapy. Helium-oxygen therapy. Appendix. Index.

Note A thorough and detailed manual of the administering of anesthetics. The information given in the parts devoted to specific types of anesthesia covers such matters as definition of the type, synonyms, uses, drugs employed, materials required, premedication, preparation and position of the patient, the procedure, factors influencing duration, advantages and disadvantages of the type, complications and their treatment, contraindications, and references to related literature. Most of the exposition is in outline, step-by-step form. The book is used as a text for medical courses, students and as a reference aid for general practitioners of medicine and young anesthetists. The first edition was published in 1946. This second edition represents a very extensive revision and expansion of the original edition. Although some material was deleted, the book's length has been increased by 160 pages. There are now 194 figures.

Burstein, Charles L

Fundamental considerations in anesthesia. Second edition. New York. The Macmillan Company, 1955. 219 p. illus. 22 cm. $5.50 4382

Contents The autonomic nervous system. The respiratory pattern during general anesthesia. Respiratory disturbances. Altered respiratory patterns. Laryngeal spasm. Circulatory disturbances. Shock. Celiac plexus reflex. Pressoreceptor reflexes. During spinal anesthesia. Cardiac arrhythmias. Acute circulatory arrest. Parasympathetic reactions. Other than vagal. Vagal respiratory. Vagal cardiac. Gastrointestinal autonomic reactions. Pulmonary. Skeletal-muscle relaxants. Autonomic ganglionic blockade. Control.

Note A compact but valuable monograph of value to surgeons, anesthesiologists and teachers of anesthesia. It includes the results

Medicine

Anesthesia

[illegible] experimentation as well as extensive clinical experience. [illegible] and analyzes, with reference to the fundamental [illegible] anatomy, the complications and physiology involved and [illegible] the treatments for various reactions. The first edition was published in 1950. Much information on new anesthetic drugs and other topics has been added in this second edition, and the bibliographies have been revised to include references to literature published since the first edition was written.

CLEMENT FREDERICK WALTER

Nitrous oxide-oxygen anesthesia. Third edition, thoroughly revised, with 129 illustrations. Philadelphia Lea & Febiger 1951 369 p. illus. 24 cm. $6.50. 4383

Contents (abridged): Part I. General considerations: Properties and [illegible] of gases. Theory of nitrous oxide-oxygen [illegible]. Signs of nitrous oxide-oxygen anesthesia. Metabolism and [illegible]. Part II. Premedication. Charting and shock. Classification of patients. Part III. The administration of N_2O-O_2 anesthesia. The gas apparatus. [illegible] Obstruction, airways and [illegible]. Nitrous oxide-oxygen and [illegible]. Oxygen [illegible]. Part III. [illegible] Special techniques. Primary and secondary [illegible]. Pressure. [illegible] Endotracheal anesthesia. Part IV. [illegible] Carbon dioxide absorption. [illegible] Advantages and disadvantages of [illegible] of N_2O-O_2 anesthesia. [illegible] other N_2O for anesthesia. Comparison of nitrous oxide-oxygen [illegible]. Part V. [illegible] anesthesia. Part [illegible] Dental anesthesia [illegible]. Part VI. Some physical factors in the administration of [illegible] anesthetics, by E. I. McKesson. Index.

Note: The standard treatise on this kind of anesthesia. The author, in association with the late E. I. McKesson, [illegible] an appreciable part in its development. The first [illegible] editions of the book were largely limited to [illegible] the McKesson-Clement technique, but in this considerably expanded edition the [illegible] subject is covered, including the advances in the fundamental knowledge of anesthesia and the [illegible] in techniques [illegible] have taken place in recent years. The book is of interest not only to anesthetists but also to surgeons and to dentists. Literature references are included.

CULLEN STUART C

Anesthesia in general practice. Fourth edition. Chicago The Year Book Publishers, Inc., 1954 312 p. illus. 21 cm. $5.00. 4384

Contents: Use of depressant drugs. Airway. Ventilation. Inhalation anesthesia [illegible]. Spinal analgesia. Regional [illegible]. [illegible] and topical analgesia. Signs of anesthesia. Choice of anesthetic agent and technic. Recognition and treatment of shock. Oxygen therapy. Pre- and postanesthetic care of the patient. [illegible] Appendix: Anesthetic agents available for office use. Index.

Note: A short manual addressed to general practitioners and part-time anesthesiologists. Although anesthetic drugs are described, the emphasis [illegible] on basic matters and standard techniques. The third edition was published in 1951. Additions and revisions in this fourth edition include [illegible] newly added chapter on ventilation and an extensively revised discussion of muscle relaxants. The author is Chairman of the Division of Anesthesiology of the State University of Iowa Hospitals and Professor of Surgery at the College of Medicine of the University of Iowa. A fifth edition, entitled *Anesthesia, [illegible] manual for students & physicians*, was published in 1957 [illegible] p., $[illegible].

GILLESPIE, NOEL ALEXANDER

Endotracheal anaesthesia. Second edition, revised and enlarged. Madison The University of Wisconsin Press, 1948 237 p. illus. (part col'd) 21 cm. $4.50 4385

Contents: Introduction. The history of endotracheal anaesthesia. Advantages and disadvantages of endotracheal anaesthesia. Intubation [illegible] endotracheal anaesthesia. Equipment and apparatus for intubation. Intubation. Miscellaneous technical considerations during [illegible]. Sequence of endotracheal anaesthesia and their influence on the choice of route. The practical applications of endotracheal anaesthesia. The uses of intubation for purposes other than anaesthesia. Bibliography. Index.

Note: Essentially [illegible] practical guide to the techniques of endotracheal anaesthesia, the work also covers succinctly the history of the subject and provides [illegible] key to the literature. Most of the space [illegible] given to explicit descriptions of the ways in which the technique is applied under various conditions and in various operations. This edition [illegible] larger by about 50 pages than the preceding one. The newly added material relates to thoracic operations, tactile oral intubation, and [illegible] other developments reported since 1940.

GRAUBARD DAVID J., AND MILTON C PETERSON

Clinical uses of intravenous procaine. Springfield Ill. Charles C Thomas 1950 104 p. illus. 22 cm. (American lecture series. Publication no. 73 A monograph in American lectures in anesthesiology edited by John Adriani) $2.50. 4386

Contents: Introduction. Chemistry and pharmacology. Intravenous local anesthesia. Pruritus. Serum sickness and other states of [illegible]. Analgesia in burns and postoperative pain. Acute [illegible]. Pain in traumatic and inflammatory [illegible] arrhythmias during anesthesia. [illegible] Acute anterior poliomyelitis. Other indications. Index to [illegible] authors.

Note: Rather than [illegible] brief survey based on [illegible] selection of the pertinent literature, the work is [illegible] comprehensive review of its subject. The text is very concise; nevertheless, the essential data in the [illegible] articles are stated. Some transcripts of case histories are included. The bibliographies appended to the chapters are international in scope. About 743 names appear in the author index, indicating the comprehensiveness of the literature coverage.

GROSS, E. G AND M J SCHIFFRIN

Clinical analgetics. Springfield, Ill. Charles C Thomas, 1955 101 p. illus. 22 cm. (American lecture series. Publication no. 273 A monograph in American lectures in pharmacology edited by Chauncey D Leake) $3.00 4387

Contents: General considerations. Salicylates, para-aminophenols and pyrazolones. Opiates. Opioids. Opiate antagonists. Local anesthetics. Index.

Note: A manual of very specific information on analgetics and local anesthetics. The selection is not comprehensive. Instead, the compounds included were selected on the basis of their usefulness in medicine. The individual compounds are discussed as to their chemistry, pharmacology, indications, contraindications, and dosages. Preparations available from pharmaceutical manufacturers in the United States of America are listed.

GUEDEL ARTHUR ERNEST

Inhalation anesthesia a fundamental guide. Second edition. New York The Macmillan Company 1951 143 p. illus. 22 cm. (Macmillan surgical monographs) $4.25 4388

Contents: Part I. Principles of inhalation anesthesia. Mechanism of inhalation anesthesia. Stages of anesthesia. Signs of anesthesia. Depth of anesthesia. The mechanism of various anesthetic requirements. Part II. Anesthetic accidents. Accidents due to changes in blood pressure during anesthesia. Ventricular fibrillation. Central respiratory failure. Accidents due to peripheral respiratory interference. Aspiration of debris. Miscellaneous accidents. Cyanosis. Anesthetic explosions. Selected references. Index.

Note: A concise, authoritative guide addressed to students and teachers in medical colleges, [illegible], physicians and surgeons as well as to anesthetists. Special attention has been given to describing the signs of anesthesia. The anesthetic requirements for various operations are stated explicitly. The second part, which is devoted to anesthetic accidents, constitutes half of the book. Although [illegible] few cases are discussed, this part consists mainly of discussions of techniques and precautions that guard against accidents.

HALE, DONALD E., editor

Anesthesiology By forty American authors. 149 illustrations. Philadelphia F A. Davis Company 1955 756 p. illus. 27 cm $15.00. 4389

Contents. Physiology in anesthesia, by H. E. Hoff and C. G. Breckenridge. Pharmacology by B. H. Robbins. Complications of anesthesia, by C. E. Wasmuth. Selection of the anesthetic, by A. Faulconer Jr and J S. Lundy Preanesthetic preparation and premedication, by M. J Nicholson. Management of the anesthesia, by R. T Knight and A. B Tarrow Liquid anesthetics, by H. J Shields and R. A. Gordon. Nitrous oxide, by K. C. McCarthy Ethylene, by P R. Woodbridge. Cyclopropane, by L. H. Taylor Endotracheal anesthesia, by D E. Hale. Pentothal sodium, by C. F McCuskey and D A. Rovenstine. Intravenous procaine, by J W Winter Rectal anesthesia, by H. M. Livingstone. Topical anesthesia, by R. M. Tovell and others. Conduction anesthesia, by D. E. Hale. Spinal anesthesia, by R. J Whitacre. Continuous spinal anesthesia, by E. B Tuohy Continuous caudal analgesia, by R. A. Hingson. Epidural anesthesia, by F P Haugen. Refrigeration anesthesia, by P H. Lorhan. The muscle relaxants, by M. Brotman and R. C. Cullen. Anesthesia in obstetrics, by B. B. Sankey Pediatric anesthesia, by W Bourne and C. R. Stephen. Anesthesia for intrathoracic surgery by D E. Hale. Anesthesia for the poor-risk patient, by L. H. Mousel. Management of anesthetic emergencies, by V Apgar Control of pain, by F A. D Alexander Resuscitation, by J Krebelman and D A. Holaday Inhalation therapy by M. Saklad. Blood and blood substitutes, by T H. Seldon. Anesthesia records and statistics, by M. Saklad. Fires and explosions, by C. B. Hickcox. Index.

Note. A comprehensive treatise composed of the 33 contributed chapters whose titles and authors are given above. It presents basic knowledge on physiology pharmacology etc., and describes from practical viewpoint the currently important anesthetic and techniques of anesthesia. The chapter on physiology is 33 pages long and includes an extensive classified bibliography The chapter on pharmacology is almost as long. It contains bibliography of 304 citations. In the chapters on techniques, preparation of the patient including pre-medication the techniques of the administration of the anesthetic including the apparatus used, precautions and dangers, supplements and adjuncts, are all discussed in considerable detail. Safety is constantly reiterated theme.

KEOWN, KENNETH K

Anesthesia for surgery of the heart. Springfield Ill Charles C Thomas 1956 109 p illus 22 cm (American lecture series. Publication no 304 A monograph in the Bannerstone division of American lectures in anesthesiology, edited by John Adriani) $3 75 4390

Contents (abridged) History The selection of the patient. Preliminary medication. Anesthesia management. Cardiac irregularities with which the anesthesiologist should be familiar Future developments. Summary Bibliography

Note A handbook which is useful both to medical graduates who are preparing for the specialty of anesthesiology and practicing anesthetists in need of specific information on anesthesia for heart surgery Most of the space is devoted to essays on the cardiac abnormalities for which surgical therapy is indicated. Each of these essays includes background information on the nature of the disorder its etiology signs and symptoms, and diagnosis but is primarily concerned with evaluation of the patient as a subject for anesthesia, preliminary medication, choice of anesthetic and anesthetic technique during surgery The author is an eminent specialist in anesthesiology holding the position of Associate Professor of Anesthesiology in Hahnemann Medical College and Hospital, Philadelphia.

LITTLE, DAVID M

Controlled hypotension in anesthesia and surgery Springfield Ill. Charles C Thomas 1956 159 p illus 22 cm (American lecture series Publication no 283 A monograph in the Bannerstone division of American lectures in anesthesiology edited by John Adriani) $4 50 4391

Contents. Introduction. Bleeding during surgery The control of bleeding during surgery Induction of hypotension Postural ischemia Reduction of circulating blood volume Reduction of peripheral resistance—conduction anesthesia—ganglionic blockade. Physiological considerations. Fatal and non-fatal complications Contraindications. Indications. Requirements. Bibliography Index.

Note. For purposes of this monograph the generic term controlled hypotension was defined as being a condition of 1. The deliberate induction of hypotension 2. The employment of Dale's 'postural ischemia. The advantages and disadvantages of "controlled hypotension are clearly presented, but the main purpose of the book is to show how the risk is great it may be lessened. The various techniques of achieving reduction in blood pressure are described in detail. Physiological aspects, complications, and contraindications are adequately discussed. The comprehensive bibliography contains 317 references to the periodical literature.

LORHAN, PAUL H.

Geriatric anesthesia Springfield Ill. Charles C Thomas, 1955 90 p. 22 cm. (American lecture series. Publication no. 245. A monograph in American lectures in anesthesiology, edited by John Adriani) $3.25. 4392

Contents. General consideration. Physiologic changes in the aged Preoperative preparation. Surgical management. Preanesthetic medication. Anesthetic. Anesthetic management. Postoperative management. Summary References.

Note. Special considerations in administering anesthetics to aged patients are the primary subject of this small book. Included also are discussions of anesthetics especially suited to aged persons. As the chapter titles show considerable attention is given also to other aspects of surgical operation on the aged. Physiologic changes in the aged are summarized because of the importance of taking them into account in planning surgery and anesthesia. Also included are such comments as the following. A factor of great importance, but one which is often lightly considered by the anesthesiologist and the surgeon, is the patient comfort on the operating table. Due to their infirmities, mental laxness, and fusion of joints, it is difficult for elderly patients to rest comfortably for any length of time in one position. There are 39 entries in the list of references. The author is Professor of Anesthesiology in the University of Kansas Medical Center

MOORE, DANIEL C

Complications of regional anesthesia etiology signs and symptoms, treatment. Springfield Ill. Charles C Thomas 1955 291 p. illus (part col d) 26 cm $10 50. 4393

Contents (abridged) Part I, Complications of local infiltration and peripheral nerve block Systemic reactions to high blood levels of local anesthetic drugs. Systemic allergic reactions to local anesthetic drugs. Systemic reactions to vasoconstrictor drugs used to prolong the effect of local anesthetic drugs. Primary oxygen want and hypotension. Pneumothorax. Death and cardiac failure. Bleeding following puncture of blood vessels. Lesions of the peripheral nerves. Puncture of organs and large blood vessels during block procedures. Dermatitis. Part II, Complications of spinal (subarachnoid) block and epidural (peridural) block Hypotension from spinal or epidural block. Nausea and vomiting. Headache. Backache. Meningitis and meningeal irritation. Lesions of the spinal cord following regional block procedures. Part III, Incidental complications Broken needles or catheters. Amnesia in outpatient locations. Retention of urine. Reactions following regional block procedures. Retention of urine. Paralytic ileus. Appendix Complications of specific regional nerve blocks. Index.

Note A concise, comprehensive survey of the complications of regional anesthesia. It was based on review of the literature and on the author's own experience and is addressed to surgeons, anesthesiologists and medical graduates preparing for these specialties. In spite of the book's wide scope most topics are discussed in detail and numerous points of special importance are set in distinctive type. Extensive lists of references to the literature are included.

MOORE DANIEL C

Regional block a handbook for use in the clinical practice of medicine and surgery Springfield Ill Charles C Thomas, 1953 373 p 27 cm. 4394

Contents (abridged) Part I, Fundamental considerations. Part II, Nerve block analgesia. Part III, Spinal (subarachnoid) and caudal (epidural) analgesia. Index.

Anesthesia

Note A practical introduction to regional anesthesia, suitable for use as a text for the instruction of medical graduates who are preparing for the specialty of anesthesia. It is organized in 44 chapters of which nine are devoted to fundamental aspects, such as drugs used in regional block, instruments used, and factors in the selection of regional analgesia. All of the remaining chapters are devoted to specific blocks, such as block of the mandibular nerve, block of the psoas, and block of the sciatic and femoral nerves. Each block is discussed as to indications, anatomy, premedication, drugs, instruments and other equipment, technique, effects, and complications. Only one technique is described for each block. The book is fully illustrated. The author is Director of the Department of Anesthesiology of the Mason Clinic in Seattle. A second edition was published in 1957 416 p., $10.00.

MOORE, DANIEL C.

Stellate ganglion block techniques—indications—uses. Springfield, Ill. Charles C Thomas, 1954 280 p. illus. 27 cm. $10.50 4395

Contents (abridged) Part I, General considerations Fundamentals. Blocking agents of short duration. Blocking agents of long duration. Vasoconstrictor drugs. Equipment. Hyaluronidase. The use of X-ray and radiopaque materials. Part II, Techniques, reactions and sequelae, and complications. Part III, Clinical indications and uses of stellate ganglion block. Appendix Techniques of stellate ganglion block other than those used by the author. Index.

Note A fully detailed exposition of the technique of stellate ganglion block used by the author. Different techniques used by other anesthesiologists and surgeons are described in the 19-page appendix. The book is organized in three parts. [illegible] tables are given there, and 45 chapters. Eighty pages are devoted to the background anatomy physiology pharmacology etc., then follow approximately 100 pages on the author's techniques and on indications for the use of stellate ganglion block in specific disorders. There are 128 figures. Literature references are included in the chapters.

PITKIN GEORGE P

Conduction anesthesia. Edited by James L. Southworth, Robert A. Hingson, and Winifred M. Pitkin. Second edition. With 585 illustrations. Philadelphia J B Lippincott Company 1953 1,005 p. illus. 26 cm. $22.50. 4396

Contents Inherited concepts concerning conduction anesthesia. The vertebral canal and its contents. Anatomy of the cranial nerves. Anatomy of the spinal nerves. The autonomic nervous system. The clinical pharmacology of the local anesthetics. Fundamentals of conduction anesthesia. Anesthesia of the head. Blocking the trigeminal nerve Cervical block Brachial-plexus block Intercostal block. Segmental block for visceral surgery. Conduction anesthesia of the extremities Local anesthesia. Topical and refrigeration anesthesia. Extradural anesthesia. Spinal anesthesia. Therapeutic conduction anesthesia. Complications of conduction anesthesia. *Bibliography* Bibliographic Index Index.

Note A cyclopedic treatise on the various types of anesthesia whose mechanism consists of interruption of nerve conduction. As the titles of the chapters listed above indicate, it includes techniques known as "block" or "nerve blocking," local anesthesia, refrigeration anesthesia, and spinal anesthesia. It was planned by Dr George C Pitkin (1885–1943) and was partly written by him. However, two of the editors of this second edition, Southworth and Hingson, edited the first edition. Furthermore, the first edition had a number of contributors whose names do not appear in this second edition. The principal features of the second edition are, however the same as the first. The anatomy of the nervous system is presented in great detail, always in relation to specific anesthetic techniques. The placing of anesthetics so as to block the innervation of various sections of the body is minutely described. The illustrations are exceptional in scope and in rendering of detail. The first edition was published in 1946. In this second edition, some chapters of the first edition have been condensed and others have been extensively revised and augmented. The chapter on complications has been added. Several illustrations showing newly developed techniques have been added. The bibliography has been revised to include literature published since the first edition was written.

SAKLAD MEYER

Inhalation therapy and resuscitation. Springfield, Ill. Charles C Thomas, 1953 343 p. illus. 24 cm. (American lecture series. Publication no. 156. A monograph in the Bannerstone Division of American lectures in Anesthesia edited by John Adriani) $7.50. 4397

Contents History Terminology Physiological considerations. Classification of hypoxia. Pathologic considerations. Symptomatology. The effects of the inhalation of oxygen. Indications. Methods of treatment. Resuscitation. Bibliography *Index.*

Note Both oxygen therapy and ventilatory resuscitation are covered in this comprehensive work. The chapter on pathologic considerations outlines the accumulated knowledge of the effects of oxygen want on various systems of the body such as the cardiovascular system, central nervous system, liver and alimentary tract. The chapter on indications is a compact outline of hypoxic and non-hypoxic conditions in which oxygen therapy is indicated. Techniques and equipment for administering oxygen and oxygen-enriched atmospheres are described. The chapter on resuscitation covers both techniques for which some apparatus is necessary and manual methods such as are used in first aid. When the book was written, the harmful effects of high concentrations of oxygen for premature infants had not been discovered, therefore, the short discussion it contains of this aspect of oxygen therapy is out of date, and it should not be followed in clinical practice. Otherwise, the book contains a wide range of reliable information garnered from an extensive bibliography. The author is Director of the Department of Anesthesiology of Rhode Island Hospital.

STEPHEN C. R.

Elements of pediatric anesthesia. Springfield, Ill. Charles C Thomas, 1954 109 p. illus. 22 cm. (American Lecture series. Publication no. 232 A monograph in American lectures in anesthesiology edited by John Adriani) $3.50 4398

Contents Introduction. Physiological background. The premature infant. The thymic child. Premedication. Basal anesthesia. Techniques. Anesthetic drugs. Anesthesia for surgical procedures. Oxygen therapy The treatment of asphyxia neonatorum. References. Index.

Note A brief but overwhelming, useful presentation of basic information pertaining to physiologic considerations and techniques of administration of anesthetics to infants and children. There are 25 figures, the majority of which are illustrations of equipment and techniques. The book is of interest to beginners in anesthesia, to anesthetists who are not experienced in pediatric anesthesia, and to general practitioners of medicine who occasionally treat child patients.

VIRTUE, ROBERT W

Hypothermic anesthesia. Springfield, Ill. Charles C Thomas 1955 62 p. illus. 21 cm. (American lecture series. Publication no. 275 A monograph in American lectures in anesthesiology edited by John Adriani) $2.50 4399

Contents Introduction. Early observations on animals. Early observations of physiological effects on animals. Ventricular fibrillation. Clinical experiences. Complications of hypothermia. Outline of present clinical procedures. Future developments. Summary

Note A short but informative survey of the historical development and current status of the use of low temperatures to obtain anesthesia. It is addressed primarily to medical graduates, including anesthesiologists who have had no experience with this kind of anesthesia but wish to be informed about it. It includes a bibliography of 64 references. The author is Head of the Division of Anesthesiology of the School of Medicine of the University of Colorado.

WATERS, RALPH MILTON, editor

Chloroform, a study after 100 years Madison The University of Wisconsin Press 1951 138 p illus 22 cm. $2 75 4400

Contents The effect of chloroform on hepatic function, by O. S. Orth and others. The effect of chloroform on renal function, by O S. Orth and E. B Cohen. The effect of chloroform on the cardiovascular system, by O S. Orth and others. A clinical evaluation of chloroform, by N A. Gillespie. Chloroform in blood and respired atmosphere by L. E. Morris. Conclusions, by R. M. Waters. References. Index.

Note. The results of a series of planned studies of chloroform as an anesthetic drug are reported in this short but valuable book. The studies were unusual in that they were made of an old drug rather than a new one. Some of the studies were conducted on experimental animals, but detailed observations were recorded of the results when chloroform was administered in more than 1,000 cases of surgery on human beings.

FRACTURES

AMERICAN COLLEGE OF SURGEONS

An outline of the treatment of fractures By the Committee on Trauma. Revised and amplified sixth edition. Chicago American College of Surgeons, 1956 97 p illus 21 cm. $1 00 4401

Contents Committee on Trauma. Subcommittee on the revision of *An outline of the treatment of fractures* General principles of fracture treatment. Immediate care—first aid. Definitive care. Treatment of specific fractures. Rehabilitation. The operative treatment of fractures. Fracture aphorisms. Bibliography

Note An authoritative and frequently revised reference handbook. It is intended for medical college students and graduate practitioners of medicine who are not specialists in fractures but are nevertheless called upon to treat them occasionally It presents explicitly the fundamentals of fracture treatment and first-aid in fracture cases, and describes in detail the techniques of X-ray examination and diagnosis of specific fractures in adults and in children. It includes also descriptions of treatment, discussions of signs and symptoms, and other useful information. Positioning for X-ray views, application of casts, positioning and devices for traction and motions for the estimation of functioning of joints are shown in diagrams as well as described in the verbal text. On the other hand, operative techniques are described, but not illustrated.

BLOUNT WALTER PUTNAM

Fractures in children. Baltimore The Williams & Wilkins Company 1955 279 p illus. 26 cm $9 50 4402

Contents Introduction. Injuries of the shoulder girdle. Fractures of the shaft of the humerus Injuries about the elbow Fractures of the forearm and wrist Injuries of the hand Injuries of the femur Fractures about the knee Injuries of the leg and ankle Injuries of the foot Injuries of the ribs and sternum. Injuries of the pelvis. Injuries of the spine. Facial bone fractures and dislocations. Skull fractures and craniocerebral injuries. Open (compound) fractures. Pathologic fractures. References. Index.

Note An outstanding work written by a specialist in orthopedic surgery The greater part of it is based on the experience of the Fracture Service of the Milwaukee Children's Hospital. The exceptions are the chapter on "Skull fractures and craniocerebral injuries" written by David Cleveland, a specialist in neurosurgery; the chapter "Injuries of the hand" contributed by William H Frackelton, and the chapter "Facial bone fractures and dislocations," also by William H Frackelton The illustrations, of which there are 311 are a principal feature. These include drawings, roentgenograms and photographs, showing traction devices and set-ups, fractures of many varieties and operative techniques. They are accompanied by a direct, readable text.

COMPERE, EDWARD LYON AND SAM W BANKS

Pictorial handbook of fracture treatment. Third edition Revised with the assistance of Clinton L. Compere. Illustrated by Harold Laufman Chicago The Year Book Publishers, Inc., 1952 414 p illus. 21 cm. (The general practice manuals) $6.50 4403

Contents (abridged) Part I, General considerations of treatment of fractures and dislocations. Fracture pathology Fracture braces The diagnosis of fracture. Emergency treatment of fracture. Anesthesia. Reduction of fractures. Immobilization of fractures. Rate of healing of fractures. After-treatment of fractures. Open and infected fractures. Complications of fractures. Aseptic necrosis of bone Pathologic fractures. Birth fractures. Part II, Fractures and dislocations of the upper extremity scapula and clavicle. Part III, Fractures and dislocations of the lower limbs. Part IV Fractures and dislocations of the trunk. Part V The face and skull. Index.

Note. A concise reference book addressed primarily to the general medical practitioner The text is concise and explicit, and approximately half of the space is devoted to illustrations. Methods of fracture management which have proved successful in the authors own experience and are available to the average general practitioner are described. Only slight reference is made to the wide assortment of gadgets and automatic reducing devices available in large hospitals. The second edition was published in 1945. Important changes were made in preparing this edition, and three chapters have been extensively rewritten. Revisions are made also in the illustrated matter

GECKELER, EDWIN OSCAR

Fractures and dislocations for practitioners. Fourth edition Baltimore The Williams & Wilkins Company, 1948 371 p. illus. 23 cm. $5 00 4404

Contents (abridged) Part I, Fractures. Emergency treatment. Fracture wounds. Reduction. Immobilization. Traction. Follow-up treatment. Bones of the skull and face. Vertebrae. Pelvic bones. Clavicle and scapula. Forearm bones. Bones of wrist and hand. Bones of leg. Bones of ankle. Bones of foot. Part II, Dislocations Temporomandibular joint. Spinal and sacroiliac joints. Shoulder joint. Elbow joint. Wrist and hand. Hip joint. Knee joint. Index.

Note. A standard manual designed not for the specialist but for the advanced student and the general practitioner Instead of covering the subject comprehensively the author has elected to select one method of treatment for each type of fracture and to describe this in adequate detail for practical use. Bibliographies at the ends of the chapters refer to fuller discussions and to other methods. There is considerable emphasis on plaster-of-Paris techniques as a universally popular form of immobilization. The changes in the text of this edition are relatively minor but many new illustrations have been added.

KEY JOHN ALBERT AND H EARLE CONWELL

The management of fractures, dislocations and sprains. Sixth edition. St. Louis The C. V Mosby Company 1956 1 168 p. illus. 27 cm $20 00 4405

Contents Part I, Principles and general aspects General considerations. Repair of fractures. Principles of treatment of fractures. First aid in fractures and associated injuries. Complications of fractures. Pathologic fractures. Compound or open fractures and war wounds Dislocations. Part II, Diagnosis and treatment of specific injuries. Injuries of the spine Fractures and dislocations of the hyoid, larynx, and tracheal cartilages. Injuries of the thorax. Injuries in the region of the shoulder girdle and shoulder Fractures of the shaft of the humerus. Fractures in the region of the elbow Fractures of the forearm Injuries in the region of the wrist and hand. Fractures and dislocations of the pelvis. Injuries in the region of the hip. Fractures of the shaft of the femur Injuries in the region of the knee joint. Fractures of the shafts of the tibia and fibula. Injuries in the region of the ankle. Injuries of the foot. Index.

Note A standard medical college textbook and practitioners reference book. It covers not only injuries to bones but also soft-tissue injuries such as often accompany fractures. The procedures described are selected in other words the authors have not attempted to describe all recorded procedures Nevertheless, the scope is wide, and hundreds of procedures are described. Those included are described with considerable fullness, a helpful feature for the physician

or surgeon who treats only an occasional fracture. The fifth edition was published in 1931. Although it was an extensive revision as compared to the fourth edition, this sixth edition also has been substantially revised both in text and illustrations. The chapters on fractures of the skull and fractures of the jaw and related bones of the face which appeared in the fifth edition have been deleted, because the treatment of fractures of this kind are now specialties. There are now 1,121 figures comprising, as in preceding editions, diagrams, drawings of apparatus, case photographs and roentgenograms.

MAGNUSON PAUL BUDD AND JAMES K. STACK

Fractures. Fifth edition. 323 illustrations. Philadelphia J B Lippincott Company 1949 537 p. illus. 24 cm. $7.00. 4406

Contents: Fundamentals. "Functional" treatment of fractures. Treatment of compound fractures. Pathology and repair of fractures. Anatomic mechanics and physical equipment in the reduction of fractures. Equipment. Fractures and dislocations of the clavicle and the scapula. Fractures about the shoulder. Fractures and dislocations of the humerus. Fractures about the elbow. Fractures and dislocations of the forearm, the wrist and the hand. Injuries of the wrist and hand. Fractures of the ribs and costal cartilages and the sternum. Fractures of the pelvis—dislocation of the hip. Fractures of the neck of the femur. Fractures of the femur below the neck. Fractures of the femur in children—separation of lower epiphysis. Fractures of the patella. Fractures of the tibia. Fractures of bones of the leg. Fractures of the ankle and the foot. Fractures and dislocations of the spinal column. Applied anatomy of the spinal column and the spinal cord, by L. Davis. Fractures of the cervical spine. Fracture-dislocations of the spinal column, by L. Davis. Compression fractures of the spine. Fractures of the spinous, articular and transverse processes of the vertebrae. Fractures of the skull, by L. Davis. Physical therapy in the treatment of fractures, by J. S. Coulter. Exercise in the treatment of fractures, by J. S. Coulter. Index.

Note: A standard manual addressed to general practitioners. Its purpose is to make available to the physicians, who are usually the first to treat fractures, the basic anatomic and physiologic knowledge and to relate this knowledge to practical techniques of diagnosis and treatment. Modern techniques of treatment are described explicitly and in adequate detail. The book is very well illustrated. In comparison to the fourth edition, the greater part of the text is unchanged. However, the second chapter has been added, and the chapter on compound fractures has been revised. A few changes have been made in illustrations.

STIMSON BARBARA BARTLETT

A manual of fractures and dislocations. Third edition, thoroughly revised. 97 illustrations. Philadelphia Lea & Febiger 1956 224 p. illus. 20 cm. $4.50. 4407

Contents: Part I, General considerations: Definition, classification and diagnosis of fractures. Bone repair in fractures. Symptoms and signs of fractures. Principles of treatment of fractures. Details of technique in treatment of fractures. Accidents [illegible] procedure. Part II, The upper extremity: Injuries to the shoulder girdle. Injuries at the shoulder joint. Fractures of the shaft of the humerus. Injuries at the elbow joint. Injuries to the forearm. Injuries at the wrist. Injuries to the hand. Part III, The trunk: Injuries to the chest. Injuries to the spine. Injuries to the pelvic girdle. Part IV, The lower extremity: Injuries at the hip joint. Fractures of the shaft of the femur. Injuries at the knee joint. Fractures of the shafts of the tibia and fibula. Injuries at the ankle joint. Injuries to the foot.

Note: A compact and useful manual intended for medical college students, interns, and general practitioners, rather than specialists. The information typically given for a specific kind of fracture covers briefly the following points: occurrence, displacement, diagnosis, pathology, treatment, period of immobilization, and prognosis. Operative treatments are mentioned in the articles on types of fractures in which they may be indicated, but they are not described in detail. On the other hand, non-operative treatments that are within the scope of general practitioners are described. The textual material is supplemented by simple line drawings. The second edition was published in 1947. In this third edition, there is more emphasis on the common injuries which are usually treated by general practitioners. However, extensive revisions have not been made.

ORTHOPEDICS

BANCROFT FREDERIC WOLCOTT editor

Surgical treatment of the motor-skeletal system. Supervising editor Frederic W Bancroft associate editor Henry C. Marble. Second edition, with 1 049 illustrations and 3 color plates. Philadelphia. J B Lippincott Company *1951 2 v* illus. (part col d) 26 cm. $25.00. 4408

Contents: Part 1, Deformities: Congenital anomalies of upper extremity and shoulder girdle, by F. R. Ober. Congenital deformities of the spine, by J. A. Freiberg. Congenital deformities of lower extremities, by J. H. Kite. Congenital dislocation of hip, by A. H. Brewster. Acquired and static deformities of lower extremities, by E. D. W. Hauser. Surgical treatment of scoliosis, by W. H. von Lackum. Paralytic disorders: Anterior poliomyelitis, by M. Cleveland. Treatment of paralytic disorders exclusive of poliomyelitis, by W. M. Phelps. Affections of back, muscles, fasciae, tendons, bursae and ganglia. Low-back pain, by J. A. Freiberg. Affections of muscles, fasciae, and tendons (except tumors and trauma) by C. R. Murray. Affections of bursae and ganglia, by G. A. Caldwell. New growths: Treatment of bone tumors, by B. L. Coley. Treatment of tumors of joints, by B. L. Coley and J. C. Pierson. Tumors of muscle, fasciae, and tendons, by C. R. Murray. Diseases of bones and joints: Tuberculosis of bones and joints, by F. D. Dickson. Joint infection and arthritis (except tuberculosis) by J. A. Key. Hematogenous osteomyelitis, by F. Buchman. Miscellaneous bone disease and infections, by C. R. Murray. Nontraumatic affections of epiphyses, by R. K. Ghormley. Amputations: Amputations, disarticulations, and prostheses, by P. C. Colonna. Amputations in diabetes and vascular disease, by L. S. McKittrick and T. C. Pratt. Kineplastic amputations, by H. H. Kessler. Part 2, Bone repair: The physiology of bone repair, by M. R. Urist. Fractures and dislocations in general: General discussion of fractures, dislocations, and other trauma, by C. R. Murray. Compound fractures, by W. Darrach and R. H. Schmidt. Fractures and dislocations of head: Fractures of facial bones, by D. B. Brigham. Fractures of jaws, by F. S. McCaffery. Fractures and dislocations of trunk: Injuries to the spine, by A. G. Davis and M. J. Bellinger. Treatment of patients paralyzed after cord injury, by H. S. Talbot. Treatment of fractures of pelvis, sacrum, and coccyx, by F. R. Steele. Fractures and dislocations of upper extremities: Injury to shoulder girdle, by H. C. Marble. Fractures of humerus, by J. A. Caldwell. Fractures and dislocations involving elbow joint, by F. M. Smith. Treatment of fractures of bones of forearm, by P. B. Magnuson. Fractures and dislocations of carpus, by D. W. G. Murray. Fractures and dislocations of metacarpals and phalanges, by J. P. North. Fractures and dislocations of lower extremities: Hip fractures, by L. Thornton. Fractures of shaft of femur by E. K. English and W. K. Lee. Fractures and dislocations involving knee joint, by R. A. Griswold and C. F. Wood. Internal derangements of knee joint, by F. R. Ivins and W. D. Carothers. Fractures of shafts of tibia and fibula, by R. G. Carothers. Fractures of ankle and foot, by O. J. Hermann. Sprains, sprain-fractures, muscle and tendon injuries: Treatment of sprains, including compound joint fractures, by P. M. Harmon. Contusions, strains, ruptures and avulsions of muscles, tendons and ligaments, by T. B. Quigley. Birth injuries of motor-skeletal system. Skeletal birth injuries, by K. D. Trumbull. Bibliographic index. Subject index.

Note: A detailed description of currently useful surgical techniques. Except in a few of the chapters, there is little discussion of etiology or diagnosis or of other methods of therapy. Instead, the space is devoted to surgery. The text is explicit and detailed and liberal use has been made of illustrations. The 1,049 illustrations mentioned in the title refer to figures. Many of the figures contain several illustrations. The first edition was published in 1945. In preparing this edition most of the chapters were revised to some extent, and at least one was completely rewritten.

BANKS SAM W., AND HAROLD LAUFMAN

An atlas of surgical exposures of the extremities. 552 illustrations on 179 plates. Philadelphia W B Saunders Company *1953 391* p. illus. 28 cm. $15.00 4409

Contents: Region of the shoulder girdle. Region of the shoulder joint. Region of the shaft of the humerus. Region of the elbow joint. Region of the radius and ulna. Region of the wrist joint and hand. Region of the hip joint. Region of the femur. Region of the knee joint. Region of the tibia and fibula. Region of the ankle joint and foot. Index.

Note: This book consists of 179 plates, the majority of which contain three or more pictures. Throughout the volume, the plates are printed on the right-hand pages, while on the facing left-hand pages is a concise text giving the title of the exposure, the indications for surgery and step-by-step descriptions of the surgical procedure. Both simple and complicated incisions are described. However, in the book's preface the authors disavow having originated any of the techniques described. The book is suitable for use as a text for advanced students of surgery and as a "refresher" or reference book for general surgeons who are not specialists in orthopedic surgery.

BATEMAN, JAMES E

The shoulder and environs. Drawings by Louise Gordon. St. Louis The C. V Mosby Company, 1955 565 p. illus. 26 cm. $12.50 4410

Contents. Evolution and applied embryology of the shoulder region. Applied, variational, and radiographic anatomy of the shoulder. Applied physiology of the shoulder. Examination and investigation of the shoulder region. Differential diagnosis of shoulder region disorders. Disorders with shoulder neck pain. Disorders with shoulder pain predominating. Conditions producing shoulder pain plus radiating pain. Nerve injuries and paralytic disorders about the shoulder. Tumors of the shoulder region. Fractures and dislocations of the shoulder region. Management and assessment of disability in the shoulder region. Author index. Subject index.

Note. A well-organized and thorough treatise on diseases and disorders of the shoulder. The three introductory chapters on embryology anatomy and physiology of the shoulder total 112 pages and contain 87 figures. Following these chapters are two extended ones on the general techniques of diagnosis and differential diagnosis of this region. The author emphasizes the importance of looking upon the shoulder as a region which includes also the root of the neck, and the interscapular and scapular zones, and this point of view is carried forward to the chapters on specific disorders. Pathology clinical course and treatment as well as diagnosis are covered for each kind of lesion. There are 376 figures including not only drawings but also photographs and radiographs. Literature references are included in most of the chapters.

BICK, EDGAR MILTON

Source book of orthopaedics. Second edition. Baltimore The Williams & Wilkins Company, 1948 540 p illus 23 cm. $8 00 4411

Contents (abridged) Part I, Orthopedic surgery before the 19th century Part II, Contemporary orthopedic surgery and its recent sources Physiology Morphology and genetics. Pathology Bone surgery Fractures. Surgery of the articulations. Congenital dislocation of the hip and special surgery of the hip joint. Surgery of the neuromuscular apparatus. Deformities of the spine. Static deformities of the foot. Mechanical, physical, manipulative, and drug therapy Rise of orthopedic hospitals and institutions. Appendices Orthopedic journals. General bibliography Index.

Note. The gradual development of orthopedic surgery from ancient times is traced in detail in this work, which is both a history and reference guide to the books and papers in which significant contributions were first published. The authors' method is to summarize in a running narrative the important publications appearing on each topic and subtopic, and to refer by means of superior numbers from his text to citations of the original sources. The material is not limited to surgical techniques but includes related material on pathology chemotherapy etc. In this edition the revisions are fairly extensive. New text bearing on the background of techniques which have recently come into prominence and new illustrations have been added.

BURMAN, MICHEL, AND SAMUEL E SINBERG

Injury of the xiphoid. New York Columbia University Press 1952 92 p illus 23 cm $3 50 4412

Contents. Apparent and real xiphoides. The epigastric syndrome and the sometimes malformed but unbroken xiphoid. The referred pain of secondary xiphoidalgia. Primary and secondary disease of the xiphoid. On direct injury to the xiphoid. On the rigid xiphoid and its fracture. Analytic summary of symptoms and signs in the various groups of disability Bibliography. Index.

Note: A monograph based on the literature and on the [illegible] to 100" cases of xiphoid injury and disease encountered by the authors in their own practice. Numerous cases are concisely described. The illustrations include reproductions of 11 [illegible]

COZEN, LEWIS

Office orthopedics. Second edition, enlarged and revised. With 191 illustrations. Philadelphia Lea & Febiger, 1953. 504 p. illus. 24 cm. $5.50 4413

Contents: Section I: Materials. Physical therapy. Local anesthesia. Prosthesis fitting. Section II: The foot. The ankle and the calf. The knee. The thigh and the hip. The back. Coccygodynia. The neck. The shoulder. The elbow. The hand. Section III: Cold foot. Limp in a child. Crooked back in a child. Child with flat-footed. Bowlegs and knock knees. Clumsiness of hands [illegible] Wry neck. Painful arm or leg in a child. Abnormal leg in a child. Inability of a child to sit up. Painful arm or leg in an adult. Deformity of arm or leg in an adult. Weakness of arm or leg in an adult. Coldness and pain in an extremity. Care of painful jaw Myositis. Fractures. Roentgenograms [illegible] orthopedics. How to examine orthopedic cases for the [illegible] Index.

Note: A manual of simple therapeutic procedures in orthopedics. It is compactly but clearly written and is fully illustrated. Generally speaking, it covers those conditions which the general practitioner is often called upon to treat and which he can treat by methods that can be applied in the office or home. Some advice is given on diagnostic procedures. A considerable amount of new text and 45 new illustrations have been added in the new edition.

COZEN, LEWIS, AND ALVIA BROCKWAY

Operative orthopedic clinics. In collaboration with Paul E McMaster 310 illustrations. Philadelphia J B Lippincott Company, 1955 329 p. illus. 26 cm. $10.00. 4414

Contents. The hip. The knee and miscellaneous bone deformities of the lower extremity The spine. The upper extremity Plastic operations. The foot and the ankle. Fractures. Orthopedic Instruments. General bibliography Index.

Note: The greater part of this book is made up of the transcripts of reports on operations dictated by the surgeons who performed the operations. Thus the book is a form of clinical teaching reduced to print. The individual reports are arranged under the subheads Gross findings, Procedure, and Remarks. The "Remarks" were written by one or both of the authors [illegible] The illustrations, which illustrate the techniques discussed in each report, are all reproductions of simple line drawings. Each of the chapters is supplemented by a lengthy bibliography which is a guide to further reading. Drawings of a variety of surgical instruments and prostheses are included in the appendix. The book is of interest to general surgeons and orthopedic surgeons.

DANIEL, EARLE HORACE

Amputation prosthetic service. Foreword by Howard A. Rusk Baltimore The Williams & Wilkins Company, 1950 327 p. illus. 24 cm. $7 00 4415

Contents (abridged) Glossary of prosthetic terms. Care of the [illegible] procedures. Psychological treatment of the amputee. Care of the [illegible] Limb selection and construction. Leg specifications. [illegible] Artificial limbs for children. Limb measurements. Prosthetic clinics. Arm selection. Plastic cosmetic gloves and hands. [illegible] ment of the amputee. Special clothing for arm and leg amputees. Limb shop data. Government research and development of artificial limbs. List of limb and bracemakers. Appendix. [illegible]

Note. A practical manual designed for use by all who are concerned with amputation cases from surgeons to artificial limb makers. The complete care of the patient, including adequate training in the use of artificial limbs, is stressed. The book is also outstanding for the wide range of information on details of artificial limbs, for instance on the mechanisms of artificial hands. The largest [illegible] directory of limb and brace makers included at the end of the book lists only firms in the United States of America.

Orthopedics

DANIELS, LUCILLE, AND OTHERS

Muscle testing techniques of manual examination. By Lucille Daniels, Marian Williams, Catherine Worthingham. Second edition. Format and test illustrations by Harold Black anatomical drawings by Lorene Sigal. Philadelphia W B. Saunders Company, 1956. 176 p. illus. 28 cm. $4 00. 4416

Contents (abridged) Neck. Trunk. Lower extremity Upper extremity Face. Bibliography

Note Evaluation of the residual strength of injured muscles is of importance both in physical therapy and orthopedics. This book describes in detail techniques for the carrying out of systematic examinations to determine muscle strength. After an 11-page introductory section which contains, among other things, comparisons of the various methods which have been offered for the grading of muscle responses in manual tests, the volume is devoted to illustrations of tests of individual muscles and muscle groups. The illustrations are supplemented by directions for classifying the results as "Normal and good, "Fair, "Poor, and "Trace and zero. The first edition was published in 1946, and it has been widely used in both the original English version and in translations. In preparing the second edition, section on the testing of muscles of the face, eyes, and mouth was added, and important changes were made in some of the other sections. Two of the authors are members of the faculty of Stanford University and the third is Director of Professional Education of the *National Foundation for Infantile Paralysis*, Inc.

DEPALMA ANTHONY F

Diseases of the knee management in medicine and surgery 455 illustrations. *Drawings* by Carl Brill. Philadelphia J B Lippincott Company 1954 840 p. illus. 26 cm. $22.50. 4417

Contents: Evolution of the knee joint. Comparative anatomy of the knee joint. Normal anatomy of the knee joint. Mechanics of the knee joint. Affections of the menisci. Disorders of the extensor apparatus of the knee joint. Congenital and acquired deformities of the knee joint. *Traumatic* lesions of the ligaments. Fractures and wounds about the knee joint. Loose bodies. Affections of the synovialis and the bursae of the knee joint. Arthritides. Surgical approaches and procedures. Bone neoplasms in the region of the knee joint. Bibliographic index. Subject index.

Note A comprehensive, fully illustrated treatise. The main subject is diseases of the knee, as the title indicates. However, the first four chapters on the evolution, anatomy and mechanics of the knee joint are valuable discussions in their own right. The chapter on mechanics is especially well written and detailed. In the chapters devoted to abnormalities and diseases, each condition is discussed at length with regard to mechanism of production, clinical features and treatment. Some case records are included The book is based on critical survey of the literature in the light of the author's own experience and research. Extensive bibliographies are included. The author is Head of the Department of Orthopedic Surgery of Jefferson Medical College.

EPSTEIN BERNARD S

The spine a radiological text and atlas. 721 illustrations on 331 figures. Philadelphia Lea and Febiger 1955 539 p. illus. 26 cm. $16.50. 4418

Contents. The normal spine. Malformations of the spine. Diseases of congenital, endocrine or metabolic origin. Inflammatory degenerative and various diseases of the spine Neoplasms of the vertebral column. Spinal traumatic changes. Diseases of the intervertebral discs. Diseases of the spinal cord and its coverings. Diseases of the hematopoietic, collagen and reticulo-endothelial systems. Aortic aneurysms. Bibliography Index.

Note More textbook than atlas, this is thorough work on radiologic examination of the spine. It covers both the normal spine and the spine as affected by various diseases, and the spine in infants and children, as well as in adults. It is written on an advanced level which assumes on the part of the reader the basic knowledge of not only anatomy but also of diagnosis and radiologic techniques. In justification of the term "atlas" there are 331 figures, most of which contain more than one illustration and are reproductions of radiographs. However, all are reproduced on rather small scale. The greater part of the space in the volume is devoted to compact text on diseases of the spine, which is based on the author's experience and on the literature. The bibliography is 38 pages long. Radiologic technique as such is not covered.

FOX HERBERT

Chronic arthritis in wild mammals, being a description of lesions found in the collections of several museums and from a pathological service. Philadelphia The American Philosophical Society 1939 77 p. illus. 30 cm. (American Philosophical Society Transactions. New *series* Vol. 31 part II) $1.00 4419

Contents (abridged) Introduction Intention and plan of work; sources of material. Definition of arthritis applicable to wild mammals. *Description* of each case discovered. Analysis of specimens according to zoological order. Comment on arthritis as physical change. Comment on zoological character of animals. Contrast of animals without arthritis. Ecology and habits of animals showing arthritis. Associated morbidity Consideration of diet and age. *Comment* on body build and arthritis. Summary

Note This article records the results of an investigation of arthritis as seen in the skeletal material from many museums and from the autopsy service at the Zoological Garden in Philadelphia. Apparently this as the first observational study of the spontaneous pathology of this disease in animals to be made. Among the 1,749 skeletons and autopsies which furnished the material, 73 cases were accepted as arthritic. This condition was discovered both in specimens which had been exhibited in menageries and in animals killed in their wild habitat, and the lesions in the two types were entirely comparable. This survey was made primarily in an attempt to increase the available information on the nature and causation of chronic arthritis in man. A further purpose was to throw some light on the functions of muscle and bone. The report is intended for physicians, physiologists, and veterinarians.

GOFF CHARLES WEER AND OTHERS

Legg-Calvé-Perthes syndrome and related osteochondroses of youth. By Charles Weer Goff in association with Ned M. Shutkin and Myerma R. Hersey Springfield, Ill. Charles C Thomas, 1954 332 p. illus. 26 cm. $10 75 4420

Contents: Historical account of the Legg-Calvé-Perthes syndrome. Legg-Calvé-Perthes syndrome—LCPS. Genetics of LCPS. Growth and development. Constitutional aspects. The hip joint. X-ray determinations. End results of LCPS. Other osteochondroses. Sociological aspects of *LCPS*. Differential *diagnosis of LCPS*. Summary Appendix. Bibliography Index.

Note: The history nomenclature, hereditary aspects, sociological aspects, clinical picture, differential diagnosis, and other aspects of the Legg-Calvé-Perthes syndrome, also known as coxa plana, are covered in this comprehensive monograph. An unusual feature is the inclusion of chapter summarizing the social case work in relation to the adjustment to treatment of group of children undergoing therapy for this disease at the Newington Home and Hospital for Crippled Children. The 30-page chapter on other osteochondroses is also *noteworthy. The* book was based on thorough review of the literature and an intensive study of group of children and youths in the Newington Home. There are 124 figures and 16-page bibliography

HART VERNON L.

Congenital dysplasia of the hip joint and sequelae (in the *newborn* and early postnatal life) Springfield, *Ill.* Charles C Thomas, 1952 187 p. illus. 22 cm. (American lecture series, publication number 102 A monograph in American lectures *in* surgery division of orthopedic surgery editor Robert P Kelly) $5.50. 4421

Contents Introduction. The background. Definition. Etiology Pathogenesis. Clinical findings. The "sign of the jerk." Rotational attitude of the extremities. Pathological dislocation. Roentgen features. Differential diagnosis. Treatment. Summary. References.

Note. The fact that this work was originally prepared for delivery as a lecture probably explains its brevity. In effect, it is not only a thorough discussion of the historical aspects of diagnostic and corrective techniques, but also it contains considerable discussion of the relations between congenital dysplasia of the hip joint and hip disorders in later life. There are 83 figures and bibliography of 141 references. It is addressed to pediatricians, roentgenologists, and general practitioners as well as to orthopedic surgeons.

HASS, JULIUS

Congenital dislocation of the hip Springfield, Ill. Charles C Thomas, 1951 405 p illus. 25 cm $13 00 4422

Contents. History Frequency and occurrence. Classification and nomenclature. Pathology Etiology Symptoms. Course. Prognosis. Diagnosis. Prophylaxis. Closed reduction. Open reduction. Reconstruction (shelf) operation. Palliative procedures. Summary of treatment. Treatment of the typical congenital dislocations. Conclusion. Bibliography Author index. Subject index.

Note. All aspects of congenital dislocation of the hip that are of interest in orthopedic surgery are covered in this substantial monograph. However the history and other background topics are treated briefly whereas such aspects as pathology are treated at length. The chapter on closed reduction, for example, runs to 87 pages and contains 38 illustrations. There are 134 illustrations in the whole and 70-page bibliography

JACKSON, RUTH

The cervical syndrome. Springfield, Ill Charles C Thomas, 1956 130 p illus (part col'd) 22 cm. (American lecture series. Publication no 268 A monograph in American lectures in orthopedic surgery, edited by Robert J Joplin) $4 75 4423

Contents Introduction. Anatomy The mechanism of cervical nerve root. Etiology Diagnosis. Differential diagnosis. Treatment. References. Index.

Note. A practical book written by specialist in orthopedic surgery and addressed to physicians who are not specialists in this field. Approximately the first half is devoted to the basic anatomy including the neuroanatomy of the cervical spine, the etiology of the symptoms, and clinical findings designated as the "cervical syndrome. The chapter on anatomy contains more than 30 illustrations. In the second half of the book, diagnosis and treatment are covered in considerable detail.

KENDALL, HENRY OTIS, AND FLORENCE P KENDALL

Muscles testing and function. Baltimore The Williams & Wilkins Company 1949 278 p illus 29 cm. $7 50 4424

Contents Fundamental principles in manual muscle testing. Nerve and muscle charts for recording muscle examinations. Upper extremity and scapular muscles. Lower extremity muscles. Trunk muscles. Facial, neck, and throat muscles. Appendix—muscle origins and insertions. Index.

Note Modern techniques for testing the response and strength of groups of muscles, and major individual muscles are explicitly described in this work. The word descriptions are supplemented by 162 figures, the majority of which are reproductions of photographs. The book is based on an extensive experience in the Physical Therapy Department of the Children's Hospital School in Baltimore. It is organized so that it can be used both as textbook in classes and as reference manual for orthopedic surgeons, physical therapists, etc.

KESSLER, HENRY HOWARD

Cineplasty with a foreword by Ross T McIntire. Springfield Ill Charles C Thomas 1947 201 p illus (part col d) 23 cm. $6 75 4425

Contents. General considerations. Functions of the upper extremity Mechanical prosthesis. Cineplasty—history Cineplasty—physiology and anatomy Cineplasty—surgical technique. Cineplasty—aftercare and complications. Cineplastic prosthesis. Congenital amputations. Double arm amputations. Plastic procedures. Rehabilitation. Bibliography Index.

Note. A description of modern surgical methods of utilizing the tendons and muscles in amputation stumps as motors for the operation of mechanical hands, feet, arms, and legs. The book is thoroughly illustrated with photographs, drawings, and diagrams, and is based on the author's more than 20 years of personal experience in the restoration of amputees to lives of normal activity The volume is addressed to surgeons, physicians, and rehabilitation workers.

KLEIN, ARMIN, AND OTHERS

Slipped capital femoral epiphysis. By Armin Klein, Robert J Joplin, John A. Reidy, and Joseph Hanelin. Springfield, Ill. Charles C Thomas, 1953 130 p. illus. 26 cm. (American lecture series. Publication no. 153 A monograph in American lectures in roentgen diagnosis, edited by Aubrey O. Hampton) $6 75 4426

Contents Roentgenographic standard of "normal" hips. Diagnosis. Treatment. Operative technique. Post-operative treatment. Conclusions. Index.

Note: The authors' technique, developed at the Massachusetts General Hospital, for treatment of slipped capital femoral epiphysis is fully described in this book. As an aid in early diagnosis, which the authors' experience has proved to be important, 35 pages are devoted to an atlas of roentgenograms of normal hips ranging from hips of females six days old to hips of males 18 years old. In a later chapter the operative technique is explicitly described. In the terminal chapter the authors review their experience with the patients treated from January 1931 to November, 1949 and show the results in roentgenograms.

KLEINBERG, SAMUEL

Scoliosis, pathology, etiology, and treatment. Baltimore The Williams & Wilkins Company 1951 286 p illus. 24 cm. $7.50 4427

Contents (abridged) Part I, Anatomy pathology etiology. Anatomy embryology physiology Classification and pathology Etiology. Part II, Treatment. History symptomatology examination, records. Preventive treatment. Treatment of functional and transitional scoliosis. Treatment of structural scoliosis. Gymnastic exercises. Treatment by forcible correction. Surgery in structural scoliosis. References. Index.

Note. Although considerable amount of background is included, this book is essentially practical manual of the modern treatment of scoliosis. All currently used methods of treatment from exercises to surgery are described in detail. Preventive therapy also is discussed. There are 161 figures and bibliography of 102 references. The work is of interest not only to orthopedists but also to general practitioners of medicine. It supersedes another work on the same subject written by the author and published quarter of century earlier

LEWIN, PHILIP

The back and its disk syndromes including injuries, diseases, deformities and disabilities with notes on the pelvis and coccyx. Illustrated with 371 figures and 4 color plates. Line drawings by Harold Laufman. Second edition thoroughly revised. Philadelphia Lea and Febiger, 1955 942 p. illus. (part col d) 24 cm. $18.50 4428

Content (abridged) Part I, Basic considerations. Physiology and biomechanics of the back. Etiological factors in back disturbances. Symptoms of back disturbances. Physical examination of the back. Roentgen-ray findings in back disorders. Laboratory diagnostic aids in back disorders. Basic principles of treatment of back disorders. Surgical back disturbances. Operative treatment of back disorders.

Medicine

Orthopedics

of lateral curvature of the spine. Traumatic and industrial causes of back disorders. Back disorders in the military service. Fractures of the vertebrae—dislocations. Infectious diseases of the vertebrae. Arthritis of the spine—gout—[illegible]. Clavicle—sternum—ribs—scapula. Tumors of the vertebrae. Infantile paralysis—anterior poliomyelitis. Low back disorders. Sacro-iliac joint disorders. The coccyx. The pelvis. Part II. Neurological lesions affecting the back. The spinal arthropathies. Sciatica—neuritis—neuropathy. Part III. Intervertebral disk syndromes: Pathological changes in disks. Physiology and biomechanics. Etiologic factors. History signs and symptoms. Neurologic examination for disk disorders. Myelography. The diagnosis of protruded intervertebral disk. Differential diagnosis. Prognosis. Surgery. Fusion operations. Appendix. References. Index.

Note: A work of broad scope addressed to practicing physicians and surgeons, including specialists in orthopedic surgery. It is based on experience with more than 40,000 back cases. It covers thoroughly disorders of the back caused in the above chapter titles as to their basic anatomy and mechanics, signs and symptoms, diagnosis, prognosis, treatment, and, in appropriate instances, complications. It describes surgical operations on the back for those who are already familiar with the general principles of surgery. Such aspects of diagnosis and management of patients with back complaints as the detection of malingering and the psychosomatic aspects of back disorders are discussed also. The book is written in a somewhat unconventional but effective style. There is a 30-page bibliography of the international literature.

LEWIN PHILIP
The foot and ankle their injuries diseases, deformities and disabilities. Third edition, thoroughly revised. With 389 illustrations line drawings by Harold Laufman. Philadelphia Lea & Febiger 1947 847 p. illus. 24 cm. 4429

Contents (abridged) Embryology and anatomy of the foot and ankle. Physiology and biomechanics of the foot and ankle. Basic principles of foot and ankle disturbances. Basic principles of treatment of foot and ankle disturbances. Congenital defects and deformities. Static defects and deformities. Pes cavus—claw-foot. Affections of the great toe. Disturbances in the region of the heel. Disturbances of the epiphyses of the foot and ankle. Affections of muscles, tendons, fascia, and bursae of the foot and ankle. Fractures of the bones of the foot and ankle. Dislocations of the foot and ankle joints. Military aspects of foot and ankle disorders. Infections of the foot and ankle. Arthritis of the foot and ankle. Neurological lesions affecting the function of the foot and ankle. Anterior poliomyelitis—infantile paralysis. Spastic paralyses involving the foot and ankle. Peripheral vascular lesions of the lower extremities. Gangrene of the foot and ankle. Abnormalities and affections of the toenails. Foot hygiene and sanitation. The relations of back, pelvis, hip, thigh, knee and calf to the foot and ankle. Surgical technic as applied to the foot and ankle. Appendix. Bibliography. Index.

Note A comprehensive treatment of foot and ankle disorders, including both congenital disorders and those due to disease or accident. Relations between foot defects and other troubles such as back-aches, knee pains, and hip pains are also discussed. In the present edition the work is nearly 200 pages longer than in the second edition. Compound fractures, crushing wounds, and osteomyelitis are given new emphasis. Material has been added on chemotherapy and on administration of blood or blood plasma in treatment for shock. Psychosomatic considerations in relation to orthopedic conditions are discussed briefly. There are 85 more illustrations, the total in the present edition being 389. The bibliography has been extended. A fourth edition was in preparation in 1957.

LEWIN PHILIP
The knee and related structures injuries—deformities—diseases—disabilities. Illustrated with 333 figures and 2 colored plates. Philadelphia Lea & Febiger 1952 illus. (part col d) 914 p. 24 cm. $16.00. 4430

Contents (abridged) The anatomy of the knee. Physiology and biomechanics of the knee joint. Etiologic factors in knee disturbances. Physical examination of the knee. Roentgen ray findings in disorders of the knee. The diagnosis of disorders of the knee. Fractures in disorders of the knee. Neurosis in knee disorders. Nonoperative treatment of knee disturbances. Operative treatment of knee disorders. Internal derangements of the knee. Loose bodies in the knee joints—bursae. The ligaments of the knee. External derangements of the knee. The extensor apparatus of the knee and its derangements of the knee. The knee. Industrial knee injuries. Fractures. Deformities of the knee. Dislocations of the knee joint. [illegible] in and around the knee joint. Tuberculosis of the knee. Knee disorders in the military service. Osteomyelitis involving the knee region. The syphilis of the knee. Arthritis of the knee. Operative methods in infections of the knee. Spastic paralysis. Operations for the residual effects of anterior poliomyelitis. Circulatory and vascular disturbances of the knee. Neuropathies involving the knee. Metabolic and endocrine disorders that affect the knee. Neoplastic tumors of the knee. Equalization of length of lower extremities. Appendix. Bibliography. Index.

Note. A comprehensive treatise in which the author has endeavored to incorporate all of the currently valid knowledge pertinent to disorders of the knee and to medical and surgical methods of treating them. Altogether there are 44 chapters and a long appendix. The latter includes discussions of such aspects of the subject as the embryology of the knee and of lower subtopics, such as leg pains in children. The work is based both on the author's 35 years of existing abstracts of the world's literature on orthopedic surgery and his long experience as a teacher and orthopedic surgeon. The bibliography is international in scope.

LUCK JAMES VERNON
Bone and joint diseases pathology correlated with roentgenological and clinical features. Springfield, Ill. Charles C Thomas, 1950. 614 p. illus. 26 cm. $18.50 4431

Contents: The normal skeletal system. Acute infections of bones and joints. Chronic osteomyelitis. Aseptic necrosis. Fractures. Chronic arthritis. Neuroarthropathies. Skeletal manifestations of metabolic disorders. Osteitis fibrosa. Paget's disease. Melorheostosis. Hypertrophic osteoarthropathy. Skeletal manifestations of endocrine disorders. Congenitally defective skeletal ossification. Extraskeletal calcification and ossification. Osseous lesions in the reticulo-endothelioses. Bone changes produced by lead, bismuth, phosphorus, radium, and fluorine. Benign tumors of bones. Malignant primary tumors of bones. Secondary involvement of the bones by malignant disease. Tumors of joints. Index.

Note: Correlation of pathology with clinical manifestations and with the interpretation of roentgenograms is the main theme of this comprehensive work. The subheadings in a typical chapter—that on Paget's disease—will serve to illustrate the approach: historical, skeletal distribution, laboratory findings, etiology, complications, roentgenologic correlation, clinical correlation, references. Although organized as a textbook, the book is also well adapted because of its full coverage and detailed indexes to reference use in personal and institutional libraries. There are more than 450 figures, including several in color, and extensive lists of references to the literature.

MILCH HENRY
Osteotomy of the long bones. Springfield, Ill. Charles C Thomas, 1947 294 p. illus. 24 cm. $7.50 4432

Contents (abridged) Historical review. The objective of osteotomy. Lineal osteotomy. Transverse osteotomy. Parallax test for rotation. The transpositional osteotomy. The angulational osteotomy. On the use of Nelaton's line. The pelvi-femoral angle. The pelvic support osteotomy. The neck of the femur. The post-osteotomy angle. Leg lengthening by abduction osteotomy. The osteotomies. The Schanz versus the Lorenz osteotomies. The abduction osteotomy in the treatment of fractures of the femoral neck—in osteo-arthritis of the hip joint—in tuberculosis of the hip. Author index. Index of subjects.

Note: A practical, thoroughly illustrated discussion of the techniques of osteotomy. Although intended for general surgeons rather than orthopedists, the author's use of trigonometry in corrective measurements and his observations on hitherto unsuspected orthopedic relationships will be of interest to the latter group also. Discussions of theory are directly related to practice by means of case histories which are illustrated with reproductions of both photographs and roentgenograms. There are 115 literature references, all keyed to the text.

MOSELEY H. F
Shoulder lesions. With 43 medical illustrations in full color by Helen MacArthur Second edition, revised and enlarged. New York Paul B Hoeber Inc., Medical Book

Department of Harper & Brothers, 1953 329 p illus (part col d) 27 cm. $12 00 4433

Contents. Anatomical considerations. Examination of the shoulder Ruptures of the rotator cuff. The bicipital syndromes. Calcified deposits in the rotator cuff Subluxations and dislocations of the gleno-humeral joint. Fractures of the proximal end of the humerus and scapula. The clavicle and its articulations. Fibrositis around the shoulder. The stiff and painful shoulder. Operative procedures. Re-education of the shoulder Neurological aspects of shoulder lesions, by F L. McNaughton. X-ray diagnosis and treatment, by C. B. Peirce and J Bouchard. Conclusions. Tables. Acute ruptures of the rotator cuff. Chronic ruptures of the rotator cuff. Index.

Note. A compact, fully illustrated presentation of knowledge pertaining to disorders of the shoulder girdle, including both the humeral joint and the clavicle. It is not exhaustive in scope, but covers a wide range of congenital abnormalities, injuries, and diseases. All are covered from the viewpoint of graduate medical practitioners and surgeons. The first edition was published in 1947 In this second edition, the book is more than 100 pages longer and contains 216 monochrome figures in addition to the 43 color plates mentioned in the title. The total number of illustrations is over 400. The chapters on fractures in the shoulder region and the clavicular articulations are new in this edition. Chapters carried over from the first edition have been revised, some rather extensively

NATIONAL RESEARCH COUNCIL ADVISORY COMMITTEE ON ARTIFICIAL LIMBS

Human limbs and their substitutes, presenting results of engineering and medical studies of the human extremities and application of the data to the design and fitting of artificial limbs and to the care and training of amputees. Prepared under the sponsorship of the Advisory Committee on Artificial Limbs, National Academy of Sciences, National Research Council In summary and correlation of a research program for the Department of Medicine and Surgery U S Veterans Administration and for the Office of the Surgeon General Department of the Army By Paul E Klopsteg and Philip D Wilson New York McGraw Hill Book Company Inc., 1954 844 p illus. 24 cm. $12 00 4434

Contents The amputee and the problem, by P E. Klopsteg and P D Wilson. Part I Medical problems of the amputee The influence of new developments on amputation surgery by R. H. Alldredge and E. F Murphy The techniques of cineplasty The influence of phantom limbs, by B. Feinstein and others. Psychological adjustment of the amputee, by L. E. Abt. The principles of prosthetic prescription, by C. O. Bechtol. Part II, The upper limb and its substitutes The biomechanics of the normal and of the amputated upper extremity by C. L. Taylor New developments in hands and hooks, by M. J Fletcher Cosmetic gloves, by F Leonard and C. L. Milton, Jr New developments in artificial arms, by M. J Fletcher and A. B. Wilson, Jr The mechanics of voluntary muscle, by V T Inman and H. J Ralston. Control design and prosthetic adaptations in biceps and pectoral cineplasty by C. L. Taylor The electric arm, by S. W Alderson. Part III, The lower limb and its substitutes The functional structure of the lower limb, by H. Elftman. The principal elements in human locomotion, by H. D Eberhart and others. The locomotor mechanism of the amputee, by H. D Eberhart and others. New developments in lower-extremity prostheses, by E. M. Wagner and J G. Catranis. Part IV Adjustment of the limb to the amputee The principles of fitting, by C C Haddan Fitting the artificial arm, by L. Carlyle. Suction-socket suspension of the above-knee prosthesis, by H D Eberhart and J C. McKennon Alignment of the above-knee artificial leg, by C. W Radcliffe. The fitting of below-knee prostheses, by E. F Murphy Part Training and evaluation Training the upper-extremity amputee by H Jampol and J. Levy Training the lower-extremity amputee by C Hoppert and H. Kramer The principles of artificial-limb evaluation, by S. Fishman. Appendices. Index.

Note: A ork of primary importance It is product of an extensive research program which included the study of existing prosthetic devices, the analysis of requirements, and experiments directed toward the development of new and better devices. The results of the experimental work are presented in full, along with expert presentations of the medical, psychological, and education aspects. Literature eferences, hich include patents and technical reports as well as articles, are included in many of the chapters. There are several hundred illustrations.

NEW YORK ACADEMY OF MEDICINE

The musculoskeletal system. A symposium presented at the twenty third graduate fortnight of the New York Academy of Medicine, October ninth to twentieth, 1950. Edited by Mahlon Ashford. New York The Macmillan Company, 1952 368 p illus. 22 cm. $6.50. 4435

Contents. The structure and biological reactivity of connective tissue, by J Gross. The chemistry of connective tissue, by M. Schubert. On certain aspects of the physiology of muscle, by J. L. Lilienthal, Jr Diseases and disorders of muscle function, by D. McEachern. Metabolism of calcium and phosphorus in bone, by J. E. Howard. Metabolic bone diseases—facts and theories, by I. Snapper. Skeletal changes associated with diseases of the blood, by M. L. Sussman. The clinical effects of cortisone and ACTH on rheumatic diseases, by J J Bunim. Rheumatoid arthritis—the natural history of the disease and its management, by C. Ragan. Some recent advances in the study of uric acid metabolism and gout, by A. B. Gutman. The collagen diseases, by G. L. Duff. Vascular rheumatism, by R. H. Freyberg. Pyogenic arthritis, by A. Steindler Tuberculosis of bones and joints, by D. M. Bosworth. Tumors of bones and joints, by H. L. Jaffe and G. Selin. The rôle of aseptic necrosis of bone in skeletal diseases and injuries, by C. R. Hatcher

Note. A book composed of original lectures presented on the occasion named in the book title. The lectures are addressed to graduate physicians, and each of them is an up-to-date summary of current knowledge, supplemented by bibliography There is an index.

NICOLA, TOUFICK

Atlas of surgical approaches to bones and joints with a foreword by Norman T Kirk. New York The Macmillan Company 1945. 218 p illus. 28 cm $6 00 4436

Contents. Part I, Shoulder girdle Clavicle. Sternoclavicular joint. Acromioclavicular joint. Scapula. Part II, Upper extremity Shoulder joint. Humerus. Elbow Radius and ulna. Wrist. Fingers. Part III, Trunk. Cervical spine. Cervical rib. Dorsal spine. Lumbar spine. Ilium. Ischium. Part IV Lower extremity. Hip joint. Lesser trochanter of the femur Shaft of the femur Knee joint. Tibia. Fibula. Ankle joint. Calcaneus. First metatarsophalangeal joint. Part V, Skull Temporomandibular joint. Mandible.

Note. A collection of reproductions of original drawings in which the anatomy of surgical approaches to bones and joints is illustrated. The necessary incisions for each operation are shown in sequence, and in each drawing of a series the major muscles, nerves, arteries and veins that will be exposed at the particular stage of the operation are shown. Directions for making incision, isolating nerves, retracting muscles, etc., so as to avoid unnecessary damage, are given in short legends adjacent to the illustrations. The drawings are well executed and are reproduced on a reasonably large scale. The book is intended as reference guide for surgeons.

ROPES MARIAN W AND WALTER BAUER

Synovial fluid changes in joint disease. Cambridge Mass. Published for the Commonwealth Fund by Harvard University Press 1953 150 p. illus. 25 cm. $4 00. 4437

Content Introduction. Variations in characteristics of synovial fluid with disease. Findings in fluids in Group I. Disease of traumatic origin. Findings in fluids resembling both groups in some respects. Findings in fluids in Group II. Rheumatoid arthritis and diseases of infectious origin. Diagnostic value of joint aspiration. Physiological considerations. Bibliography Index.

Note. The results of study carried on over period of 22 years by the Arthritis Group at the Massachusetts General Hospital on synovial fluid in health and disease are reported in the book.

Medicine

Orthopedics

The properties of normal synovial fluid, methods of examining synovial fluid in the laboratory and techniques for obtaining it from joints are described in the first chapter. The other chapters are devoted to those aspects of the study which are treated in their titles. The authors found that information gained from fluid analysis is of value in the diagnosis and prognosis of joint disease. The significant findings are explicitly described, and the application [illegible] illustrated in several case histories. For convenience in using the findings in diagnosis, they are summarized on a separate chart which is supplied with the book. The bibliography contains 212 citations.

RUSH LESLIE V
Atlas of Rush pin technics a system of fracture treatment. Meridian Miss. The Berivon Company 1955 227 p. illus. 32 cm. 4438

Contents (abridged) Section I, Dynamics, stability of fracture and general considerations: The pin story. Temporary treatment. Indications for pinning. Position of patient. Instruments. Inserting the pin. Extraction. Reduction of fracture. Dynamic factors. Stability of fixation. Multiple fragments. Short fragments. Use of bending [illegible]. Bone healing. Delayed healing and non-union. Special [illegible]. Section II, Lower extremity technics: Femur. Arthrodesis [illegible]. Tibia. The ankle. The foot. Section III, Upper extremity technics: Clavicle. Humerus. The elbow. The forearm. The wrist. Metacarpals.

Note The Rush pin is an intramedullary pin of specific design developed by the author of this book. It is widely used in the treatment of fractures, and the book is a fully illustrated presentation of techniques of using it. It consists largely of illustrations: reproductions of drawings and roentgenograms. There are approximately 200 plates, most of which contain several illustrations. Plates are accompanied by legends and short discussions. The book is intended for surgeons who are already familiar with the techniques of general surgery and of fracture treatment, and who need a reference volume primarily on the use of the Rush pin. Some information is included on allied subjects, such as techniques of making removable plaster splints. There are no literature references and no index.

SCUDERI CARLO
Atlas of orthopedic traction procedures. With 124 illustrations. St. Louis The C. V Mosby Company 1954 230 p. illus. 29 cm. $10.00. 4439

Note A reference book covering appliances such as head halters, Crutchfield and Barton tongs, the Bohler-Braun splint, frames and pulleys and procedures such as cervical traction, arm traction, skeletal traction, and traction for fractures of the femur in children. At the beginning of the volume there are approximately 40 pages of discussion of general matters such as the selection of beds and mattresses for orthopedic patients and care of patients under traction. The majority of the illustrations are reproductions of photographs, and all of them show details of appliances and procedures clearly. The author is a member of the faculty of the Medical School of the University of Illinois and of the Cook County Graduate School.

SHANDS ALFRED RIVES JR.
Handbook of orthopaedic surgery In collaboration with Richard Beverly Raney Illustrated by Jack Bonacker Wilson and others. Fourth edition. St Louis The C. V Mosby Company 1952 644 p illus. 23 cm. 4440

Contents (abridged) Congenital deformities. Affections of growing bone. Affections of adult bone. Infections of bone (exclusive of tuberculosis). Infections of joints (exclusive of tuberculosis). Tuberculosis of bones and joints; the spine and pelvis—the extremities. Chronic arthritis. Neuromuscular disabilities—infantile paralysis. Neuromuscular disabilities (exclusive of infantile paralysis). Involvement of the bones and spinal cord—involvement of peripheral nerves and of muscles. Tumors. Fracture deformities. Body mechanics and physical therapy. Affections of the spine and thorax. Affections of the low back. Affections of the hip. Affections of the knee. Affections of the ankle and foot. Affections of the neck and shoulders. Affections of the elbow, wrist, hand, and [illegible]. Bibliography. Index.

Note: A standard work used both as a text in medical colleges and as a reference book in the office libraries of general practitioners. It is not an exhaustive treatise, but all of the common conditions are covered. The third edition was published in 1948. The fourth edition was prepared after consultation with the heads of departments of orthopedics in the medical schools of the United States of America. Although no major change was made in the text, numerous small revisions were made, and 18 sections were added on topics not included in the third edition. More extensive changes were made in the illustrative matter. These are described by the author thus: "There are one hundred and new illustrations as follows: seventy-nine new [illegible], twenty new drawings, two retouched drawings, and three [illegible]; two replacements of drawings from the first edition, forty of the illustrations of drawings from other publications; forty of the illustrations of the third edition have been deleted, most of which were drawings from roentgenograms." A fifth edition was published in 1957 725 p. $8.75.

SNAPPER, ISIDORE
Medical clinics on bone diseases a text and atlas. Second completely revised and augmented edition. New York Interscience Publishers Inc., 1949 308 p. illus. 28 cm. $32.50. 4441

Contents. Hyperparathyroidism. Introduction—Recklinghausen's bone disease—renal and gastrointestinal manifestations—treatment and summary. Hyperplasia of the parathyroids secondary to other [illegible]. Rickets and osteomalacia. Osteoporosis. Paget's disease of bone. Osteogenesis imperfecta. Marble bone (osteopetrosis). Osteopoikilosis. Lipoid granulomatosis of the bones. Letterer-Siwe disease, eosinophilic granuloma. Gaucher's disease. Osteitis fibrosa disseminata (Albright). Fibrous dysplasia (Lichtenstein and Jaffe). Localized or polyostotic fibrous dysplasia. Multiple myeloma. Skeletal lesions [illegible]. Neurofibromatosis of bone. Bone lesions in Hodgkin's disease and in lymphosarcoma. Bone changes in hemolytic anemias. Author index. Subject index.

Note An outstanding treatise in which is presented the knowledge of bone diseases that has developed since Mandl discovered the relation between the function of the parathyroids and Recklinghausen's bone disease. It covers the relations among bone diseases, [illegible] and other conditions generally classified in general medicine. The work is based partly on the author's extensive experience in the Netherlands, China, and the United States of America, and partly on the literature. Extensive lists of references are included. The first edition was published in 1943. For this second edition, the work was thoroughly revised and the order of chapters rearranged. Both the amount of text and the number of illustrations were substantially increased. There are now 44 plates, most of which contain an average of six photographs or roentgenographs each.

SNAPPER, ISIDORE
Rare manifestations of metabolic bone disease their practical importance. 29th annual Beaumont Lecture delivered before the Wayne County Medical Society February 6 1950 Springfield Ill. Charles C Thomas 1952 96 p. illus. 22 cm. (American lecture series. Publication no. 107 A monograph in American lectures in metabolism edited by Paul György and others) $3.00. 4442

Note A group of bone diseases in which metabolic changes are the most prominent feature is covered in this short work. Seven cases are described in detail. The author is an internationally known authority on bone diseases.

SPEED J S editor
Campbell's operative orthopaedics. Associate editor Robert A. Knight. Third edition. With 1323 illustrations, including 2 color plates. St. Louis The C. V Mosby Company 1956. 2 v illus. 26 cm. $40.00 4443

Contents: Volume I: Surgical physiology. Preoperative and postoperative care. Apparatus. Surgical technic. Surgical approaches.

Acute infective (pyogenic) arthritis wounds of joints. Traumatic affections of joints. Dislocations. Fractures. Malunited fractures. Delayed union and nonunion of fractures. Peripheral nerve injuries. Amputations. Author index. Subject index. Volume II Miscellaneous affections of joints. Tuberculosis. Arthrodesis. Ankylosis and deformity. Arthroplasty. Miscellaneous affections of bones. Tumors of bones, joints, and soft tissues. Affections of muscles, tendons, and tendon sheaths—fasciae, bursae, and lymphatic system. Anterior poliomyelitis. Miscellaneous affections of the nervous system. Static or postural affections. Congenital anomalies. Author index. Subject index.

Note One of the very outstanding texts in its field. The first edition was published in 1939 and the second edition in 1949. The original author was Willis C. Campbell, 1880–1941. Dr. Speed, the editor of the current edition, was an associate of Dr. Campbell during the latter's lifetime, and 17 of the 22 specialists who contributed to this edition are members of the Campbell Clinic and the faculty of the College of Medicine of the University of Tennessee. The work provides a broad and detailed coverage of orthopaedic surgery and of associated topics and techniques. It is based not only on the experience of the Campbell Clinic and of the contributors but also on the published literature. In this edition, the editors have placed somewhat greater emphasis on such fundamentals as indications and contra-indications for operation. Although they usually express a preference for a particular technique, they offer in most instances, a choice of methods in operative procedures. The illustrations are both numerous and well reproduced.

STEIN, IRVIN, AND OTHERS

Living bone in health and disease by Irvin Stein Raymond O Stein and Martin L. Beller 387 illustrations. Philadelphia J B Lippincott Company, 1955 510 p illus. 26 cm $16 50 4444

Contents Part I, Living bone in health. Bone and its structure. Inorganic (mineral) metabolism of bone. Organic (protein) metabolism of bone. Enzymes as related to bone. Hormones as related to bone. Vitamins as related to bone. Kidney function as related to bone. Part II, Living bone in disease. Developmental faults. Endocrine disturbances. Physical factors. Defects in matrix calcification. Defects in kidneys affecting the parathyroids and the skeleton. Defects in matrix formation. Hypervitaminoses. Lipoid granulomas. Paget's disease. Inflammatory reactions. Neoplasms. Hematopoietic and lymphatic disturbances. Part III, Diagnostic classification of bone diseases. Index.

Note Essentially this is a monograph on bone diseases. The first part which describes the structure, physiology and biochemistry of healthy bone, although adequate for the book's purpose, is only 87 pages long. The descriptions and discussions of some diseases are extensive. The chapter on Paget's disease, to cite an example, is 74 pages long, contains 39 figures, representing many more illustrations, and a bibliography of 125 references. It is organized under the subheadings "Historical notes, Incidence "Distribution, "Etiology Clinical features, Pathology "Complications" and "Treatment. The same subheads have been used in organizing the material on most of the diseases, although much less space is given to many of them. The illustrations, many of which are reproductions of roentgenograms, are a special and important feature. The authors are members of the faculty of the University of Pennsylvania Medical School and the Hahnemann Medical School. The book is addressed to graduate physicians and surgeons.

STEINDLER ARTHUR

Orthopedic operations indications technique and end results. Springfield Ill Charles C Thomas 1940 766 p illus 26 cm. $14 00 4445

Contents I, General biological, anatomical, pathological, and clinical topics pertaining to orthopedic operations. Biology of functional restoration. Special surgical risks in orthopedic operations. Choice of anesthesia in orthopedic operations. Special orthopedic pre- and postoperative care. Operative approaches. II, Technique of orthopedic operations. Surgery of tendons—tenotomy, tendon lengthening, tendon and stripping. Tendon sutures, tendon plastics and tendon repairs. Tendon transplantations. Fascial surgery and ligamentous reconstruction. Capsular surgery. Orthopedic operations on bone. Surgery of joints. Joint surgery—arthrodesis and arthrorisis. Surgery of the spinal column. Surgery of the bursae and tendon sheaths. Peripheral nerve surgery. Skin plasty operations. III, Indications and end results in specific orthopedic conditions: Operative indication and end results in congenital deformities. Traumatic deformities and disabilities. Operative indications in certain static and constitutional deformities. Operative indications and end results in inflammatory conditions. In chronic arthritis. Operations for deformities and disabilities due to disturbances of the nervous system. Operative indications in degenerative bone diseases. In tumors. In circulatory diseases. Index.

Note. The author's purpose in this book is to record what he has learned of the several phases of operative orthopedic treatment. Because he feels that plan and principle of procedure, technique of execution, and the final judgment rendered by end results, are inseparable and of equal importance, they are presented as equivalent. Thus indications and statistics are given equal prominence with the operative technique. The arrangement of the material is such that the reader is first made acquainted with the patient as a whole; he then learns the operative procedures on the several structures of the locomotor system, and finally the precise clinical situations in which these operations are to be applied. If the text is used as a reference book, the clinical portion will be consulted first, and then the technique of the particular operative procedure advised. The operative procedures have been carefully evaluated before being included in the text. The book is intended for use by students as well as surgeons.

STEINDLER, ARTHUR

Post graduate lectures on orthopedic diagnosis and indications Springfield Ill. Charles C Thomas, 1950–52 4 v 27 cm. Vol. I, $7.50; vol. II, $6 00, vol III, $8 75, vol. IV, $9 75. 4446

Contents (abridged) Volume I: Section A, Propedeutics in orthopedic diagnosis. Symmetry and asymmetry of the body. On contractures. On the interpretation of pain in orthopedic surgery. On the pathology of the gait. Section B, Congenital deformities and disabilities. General observations and remarks on congenital deformities of the locomotor system. On congenital deformities due to disturbance of bone growth—the chondrodystrophies. On congenital deformities of the spine and thorax. On congenital talipes. On congenital defects and malformations of the long bones of the lower extremities. On congenital dislocation of the hip. On congenital deformities of the upper extremity. Index. Volume II: Section A, Paralytic disabilities. On poliomyelitis (pathogenesis and pathology). On anterior poliomyelitis—the clinical pathology. On anterior poliomyelitis—conservative treatment. On anterior poliomyelitis—operative treatment. On the paralytic scoliosis. On spastic paralysis. Section B, Static disabilities: On lumbosacral pain or low back pain. On idiopathic scoliosis. On the internal derangement of the knee. On static deformities of the foot and ankle. Subject index. Author index. Volume III: Section A, Tuberculosis of the skeletal system. On tuberculosis of the skeletal system. On tuberculosis of the spine. On tuberculosis of the hip joints. On tuberculosis of the knee. On tuberculosis of the foot and ankle. On tuberculosis of the upper extremity. Section B, Osteomyelitis. On the pathogenesis and pathology of osteomyelitis. On the clinical pathology of osteomyelitis. On the treatment of osteomyelitis. On osteomyelitis of the spine. On osteomyelitis of the pelvis. On the more unusual types of osteomyelitis. Subject index. Author index. Volume IV: Section A, Arthritis and diseases of muscles, bursae, tendons and fasciae. On chronic nonspecific arthritis. On the general treatment of atrophic arthritis. On the orthopedic treatment of atrophic arthritis. On hypertrophic arthritis. On spondylarthritis. On gout. On pyogenic arthritis. On syphilis of bone and joint. On the inflammatory diseases of the muscles. On Dupuytren's contracture. On diseases of tendons and bursae. On primary neuromuscular diseases—muscular dystrophies and atrophies. Section B, Deficiency and degenerative diseases of the locomotor system. On [illegible]. On [illegible] diseases of the bone. On degenerative bone diseases. On aseptic necrosis or the osteochondritides. On neuro-arthropathies. Subject index. Author index.

Note: A collection of lectures by one of the most eminent authorities on orthopedic surgery in the United States of America. All orthopedic conditions are covered, including rare conditions. A wide range of material from case histories is included. Much attention is given to pathogenesis, pathology and differential diagnosis. Therapy is covered also, but more briefly. Literature references accompany most of the lectures.

STEINDLER ARTHUR

The traumatic deformities and disabilities of the upper extremity by Arthur Steindler in collaboration with John Louis Marxer

Springfield, Ill. Charles C Thomas, 1946. 494 p. illus. 26 cm. $12.00. 4447

Contents: Part A, General considerations pertaining to traumatic disabilities of the upper extremity: Traumatic deformation of upper extremity and restoration of form. Restoration of function. Pain factor in traumatic disabilities of upper extremity. General surgical principles applying to upper extremity. Part B, Special part: Traumatic disabilities of shoulder girdle and arm. Traumatic disabilities of elbow joint. Traumatic disabilities of forearm and wrist: Traumatic disabilities of forearm and wrist from tendon injuries. Traumatic deformation of hand and fingers. Index.

Note: The author has written this monograph as a case book rather than a text because the complex nature of the deformities and disabilities resulting from traumatic injuries does not permit any consistent grouping according to anatomical or functional principles. A general discussion of the subject matter, including restoration of form and function by various methods, is contained in Part A. The "special part" B, which forms the major portion of the text, is subdivided according to the skeletal elements of the upper extremity and it is here that the numerous case reports are analyzed from various aspects: mechanical, diagnostic, therapeutic, and surgical. The individual case reports are accompanied by statistical data. The book contains many interesting photographs, as well as a list of illustrations, an author index, and a subject index. Bibliographical references are given for each of the two parts separately.

WILLIS, THEODORE A.

Man's back. Springfield, Ill. Charles C Thomas 1953 161 p. illus. (part col'd) 28 cm. $9.50. 4448

Contents: Embryology of the back. Anatomy of the back. Vertebral anomalies and defects of development. Mechanics of the back. Examination of the back. Injuries of the back. Diseases of the back. Tumors of the back. Scoliosis. Psychoneuroses and malingering. Physical therapy of back lesions. Operations on the back. Index.

Note: Written primarily from the standpoint of orthopedics, this book contains extensive discussion of the embryology, anatomy and mechanics of the back, as well as of its diseases and congenital anomalies. Congenital disorders, injuries, and diseases are covered as to etiology, diagnosis, and treatment. The book is based on the author's own extensive experience and on the literature. However, literature references are not included. There are 121 figures.

WOODCOCK, BEATRICE

Scoliosis, the practical approach to treatment. Stanford Stanford University Press, 1946. 111 p. illus. 22 cm. $2.00 4449

Contents: Part I, Introduction. Change of outlook. What is scoliosis? Rotation and deviation. Compensation. Part II, First principles in the gymnastic program. Appendix. Index.

Note: In the first part of this useful book the author discusses the morphology of curvature of the spine, the skeletal and muscular changes produced by it, and how nature can be aided in making compensatory adjustments, such as counter-curves. The latter part describes and illustrates corrective exercises. The author has had long experience in the field, part of it under Dr Arthur Steindler at the University of Iowa. The book is addressed chiefly to physical therapists, but medical practitioners, particularly pediatricians, also will find it of interest.

YEAR BOOK OF ORTHOPEDICS AND TRAUMATIC SURGERY

The year book of orthopedics and traumatic surgery (1955–1956 Year Book series) Edited by Edward L. Compere. Chicago The Year Book Publishers, Inc., 1956. 333 p. illus. 20 cm. $6.50 4450

Contents: Introduction. Anatomy, embryology, physiology and pathology. Congenital deformities. The epiphyses. Poliomyelitis. Osteomyelitis and other infections. Tumors, cysts and fibrodysplasias. Arthritis and rheumatism. Fractures and dislocations. The spine and pelvis. The neck, shoulder and arm. The hand and wrist. The hip, leg and knee. Amputations and prostheses. Surgical and diagnostic technics. Instruments, appliances and brace books. Calcium and phosphorus metabolic diseases of bones. Miscellaneous. Index.

Note: This annual volume is edited and organized similarly to the other books in this publisher's useful Year Book series. Selections of the world's medical literature published between November, 1954, and November, 1955, are abstracted at some length. References given in all cases to the original publication. The abstract is often supplemented by a note in which the editor himself evaluates the findings reported in the article or relates them to other works. There are 211 figures in this issue.

PLASTIC SURGERY

BROWN, ADOLPH MARTIN

Modern plastic surgical prosthetics. New York Grune & Stratton, 1947 293 p. illus. 22 cm. $6.75 4451

Contents: Part I, General considerations. The prosthesis laboratory. Part II, Examination of the patient. Making the negative impression. The positive cast. The materials used in prosthetic sculpture. Sculpture. Separating compounds. Finishing the mold. Part III, Nasal prostheses. Prostheses for the eye and orbit. Prosthetic restorations for the breast. Aesthetic correction of lower limb deformities with finished latex prostheses. Prosthetic restorations for the hand and parts of the hand. Prostheses as implants in plastic surgery. Part IV, Plastic materials. Latex. Colors suitable for rubber latex prostheses. Acrylic resins. Vinylpolymers as prosthetic materials. Other flexible plastic materials suitable for prostheses. Bibliography. Illustrations. Index.

Note: A manual of materials used and methods followed in making artificial restorations of missing or deformed parts of the human body, especially the face. The mechanics of artificial limbs is not covered. There are 180 plates that illustrate techniques and the "before and after" appearances of patients. The book is of interest chiefly to plastic surgeons.

BROWN, JAMES BARRETT AND FRANK MCDOWELL

Skin grafting. Second edition. 239 illustrations, including two plates in color. Philadelphia J B Lippincott Company 1949 339 p. illus. (part col'd) 26 cm. $7.50. 4452

Contents (abridged): Early general care of burns. Early local care of burns. Spontaneous healing of burns and other open wounds. Preparation of wounds for skin grafting. Application of thick split skin grafts. Application of free full-thickness grafts. Pedicle flaps. Repairs of hand, arm and axilla. Repair of body and lower extremities. Repairs of face, neck and mouth. Repairs of nose and ears. Homografts. Restoration of defects from mechanical injuries. Repair of chemical and electrical burns. Surgical repair of radiation injuries. Skin grafting in military plastic surgery. Faults of skin grafts. Bibliography. Index.

Note: The first edition of this book—published in 1943—was limited to skin grafting of burns. In this edition its scope has been enlarged to include skin grafting in the repair of lesions from other causes as well. Though more inclusive, the book remains a manual of selected techniques, based largely on the authors' own work but including also some techniques described in the literature. Approximately half of the space is devoted to the illustrations. The text which accompanies the illustrations is written in a direct and lucid style. The bibliography is extensive.

BURKS, JAMES W., JR.

Wire brush surgery in the treatment of certain cosmetic defects and diseases of the skin. Springfield Ill. Charles C Thomas, 1956 154 p. illus. 24 cm. $6.75 4453

Contents: History of corrective cosmetic technics. Anatomy of the skin. Histopathology of the healing process. Psychologic aspects of planing. Equipment and supplies for surgical planing. Anesthesia for planing. Technic of surgical planing. Postoperative care. General results. Complications. Indications and contraindications of surgical planing. Future trends in surgical planing. References.

Note: Abrasive planing of the skin with a rotating wire brush as a technique in correcting disfigurements, such as acne scarring, has come into wide use in recent years. The author of this book, a member of the faculty of the School of Medicine of Tulane University, is one of the pioneers in its use, and at the time the book was written had made over 100 planings. In this book he has

outlined the historical development of planing techniques, presented the basic information on anatomy and histopathology described the wire-brush technique in detail, and discussed indications and contraindications. Many of the 68 figures are before-and-after photographs of cases. Included also are photographs of equipment and of the arrangement of the operating room. There are 71 references in the bibliography

Fox, Sidney A

Ophthalmic plastic surgery New York Grune & Stratton, 1952 290 p illus. 27 cm $15 00 4454

Contents The brow and the lids—anatomy Fundamentals of lid surgery Grafts. Technical details. Minor surgical procedures. The lid margins—first aid. Lid notches and colobomata. Canthal repairs. Entropion. Ectropion. Ptosis. Displacements of lid and globe. The conjunctiva. Socket reconstruction. Reconstruction of the lower lid. Upper lid reconstruction. Hair-bearing grafts. Index.

Note. A useful well-illustrated manual addressed to general surgeons and to beginners in ophthalmic surgery The author states, I have attempted to include here in systematic and progressive order all the basic classical operations of our specialty Except for few final chapters on the more esoteric reconstructive aspects of lid surgery all the procedures found here are those commonly used in every day practice. Generally speaking, each procedure included is described in a compact text and is illustrated in a series of drawings. Included also are valuable comments on special points in connection with the selected procedure and on alternative procedures.

Hughes, Wendell L

Reconstructive surgery of the eyelids Second edition With 268 illustrations St. Louis The C V Mosby Company, 1954 260 p illus. 26 cm $7 00 4455

Contents Introduction. Early development of skin grafting. Development of grafting without a pedicle. Variations of pedicle flaps. Thin dermo-epidermic grafts. General considerations regarding grafting. Reconstruction of the conjunctival layer Reconstruction of tarsus. Transplantation of cilia and other miscellaneous lid structures. Case reports illustrating blepharopoiesis by the author's method. Upper lid reconstruction. Reconstruction of both lids. Choice of treatment for arious types of growths. References. Index.

Note. A standard monograph on the plastic surgery of the eyelids. It is based both on the literature and on the uthor's own practice and includes a historical review of all reported techniques from the 17th century onward. The uthor's own methods are described specifically and in detail. The illustrations include not only numerous before-and-after photographs of patients, but also drawings of surgical operations showing the techniques step by step. The first edition as published in 1943 and was only 160 pages long. In preparing this second edition revisions and augmentations were made in both the text and pictures. The added material includes an extensive section on upper lid reconstruction and also the chapter on choice of treatment. A few references to literature published since the first edition was written have been added to the bibliography which now contains 458 references to the international literature.

Kazanjian, Varaztad Hovhannes and John Marquis Converse

The surgical treatment of facial injuries. Baltimore The Williams & Wilkins Company 1949 574 p illus. 26 cm $10 00 4456

Contents The face. Healing of wounds. General principles of operati technic. Early treatment of facial injuries. Fractures of the mandible. Fractures of the maxilla. Fractures of the nose. Fractures f the zygoma. Complex fractures of the face. Some general principles f reconstructi surgery Pedicled skin flaps. Free grafts of skin and mucosa. Free grafts f dermis, fat, fascia, cartilage and bone. Deformities of the upper portion of the face. Deformities of the eyelids and orbital region. Deformities f the nose. Deformities of the soft tissues of the lower portion of the face Deformities of the bones of the lower portion of the face. Surgery of the oral cavity and pharynx. Temporomandibular ankylosis. Facial paralysis. Deformities of the external ear Burns of the face. Maxillofacial prosthesis. Anesthetic management. Index.

Note A comprehensive work based on the very extensi experience of the authors in pri ate institutional, and military practice. Anatomical, psychological and other basic aspects are not neglected, but most of the space in the book is devoted to descr[illegible] and illustrations of surgical cases and techniques. There are 44 [illegible], and many of them contain several reproductions of drawings [illegible] photographs. A typical chapter is organized under the [illegible] subheadings, introduction—general considerations—the [illegible] of burns—local treatment—late treatment of burn deformities—case histories. The book is of primary interest to medical students [illegible] interests in plastic surgery and to plastic surgeons and general surgeons, and of secondary interest to general practitioners of medicine, dentists, etc.

Padgett, Earl Calvin

Plastic and reconstructive surgery With the collaboration of Kathryn Lyle Stephenson Springfield, Ill. Charles C Thomas, 1949 945 p illus. 29 cm. $22.50 4457

Contents (abridged) Skin flaps. Transplantation of skin, [illegible] and mucosa. Transplantation of bone and cartilage. Transplantation of fat, fascia, tendons, and nerves. Transplantation of other miscellaneous tissues and organs. The general care of wounds of the soft tissues. Traumatic surgery of the nerves, tendons, and blood vessels. Traumatic surgery of the head, face, and neck. Traumatic surgery of the extremities. The early care of the thermal and physico-chemical injuries. Reconstructive surgery of the head and forehead. The reconstruction of congenital clefts. Reconstructive surgery Of the nose. Of and about the orbit. Of the ear. Of the cheek and face. Of the mouth and jaw Of the neck. Of the chest wall, breast, oesophagus, and heart. Of the abdominal all, abdomen, and back. Of the uro-genital organs, perineal and anal regions. Of the skin and subcutaneous tissues of the extremities. Of the deep soft tissues of the extremities. Of the hard tissues of the extremities. Fracture and cineplastic amputations and reconstructions. Appendix. Index.

Note A comprehensi presentation of this subject, written by one of the outstanding authorities in the field. It covers not only the techniques which ar in current use but also those of historic interest. All techniques are fully illustrated, most of them in step-by-step sequences, and some of the historical ones are pictured also. As the contents indicate, some operations hich are usually performed by surgeons in other specialties, such as urology are covered in addition to operations usually done by plastic surgeons. The related literature is fully cited in chapter bibliographies. The book is designed for specialists in the field and also for other surgeons who are occasionally called upon to perform reconstructive surgery

Peer, Lyndon A

Transplantation of tissues. Volume I Cartilage, bone, fascia, tendon, and muscle. Baltimore The Williams & Wilkins Company, 1955 421 p. illus. 26 cm. $13.50 4458

Contents. Part I, General considerations The importance of understanding tissue cells. The cell and smaller living units. The human tissue cell. Differentiation, aging and death of tissue cells. Intercellular dead substances surrounding tissue cells. Structure and viability of cells. The parenchymal cell in free tissue grafts. Part II, Cartilage Heterogenous, homogenous and autogenous grafts. Transplantation of cartilage in animals. Structure of cartilage. Transplantation of cartilage in humans. Clinical use of cartilage grafts. Part III, Bone Structure of bone. Transplantation of bone in animals. Autogenous bone transplants in humans. Homogenous bone transplants in humans. Heterogenous bone transplants in humans. Clinical use of bone grafts. Part IV Fascia and tendon Structure of fascia and tendon Transplantation of fascia in animals. Transplantation of fascia in humans. Transplantation of tendon in animals. Transplantation of tendon in humans. Clinical use of fascia and tendon grafts. Part Muscle Structure of skeletal muscle. Transplantation of muscle in animals. Transplantation of muscle in humans. Part VI, Theories of cell replacement Cell survival theory [illegible] replacement theory Index.

Note: The author of this book is the [illegible] of diced cartilage grafts and has made other contributions to the [illegible] of these transplantations. The [illegible] basic knowledge and techniques of these transplantations [illegible] experimental work on animals is included in separate chapters [illegible] of the full picture, but the primary emphasis is on the [illegible] to date with transplantation of tissues in human patients [illegible] ences in results between transplantations in animals and human patients are pointed out in such passages as the [illegible] should use great discretion in applying the results of [illegible] periments with cartilage grafting [illegible] the behavior of [illegible] as [illegible] human. Techniques are fully described [illegible] pages are devoted to cartilage grafts, and the techniques are [illegible] illustrated. The book is based on the international literature, [illegible]

cluding the author's own publications, and extensive bibliographies are included in the chapters. There are 163 figures, most of which contain reproductions of more than one drawing or other illustration.

THOREK, MAX

Plastic surgery of the breast and abdominal wall. With an introduction by Rudolf Nissen. With a foreword by J Eastman Sheehan. Springfield, Ill. Charles C Thomas, 1942 446 p. illus. (part col'd) 26 cm. $20.00. 4459

Contents (abridged) Anatomy—histology. Embryology. Histophysiology. Historical, developmental and comparative considerations. Physiology of the breast. Factors concerning the female breast. Racial characteristics. Congenital anomalies of the breast. Hypertrophies of the female breasts. Etiology, symptoms, course and complications of breast hypertrophies. Gynecomastia. Indications and contraindications for reconstructive surgery of the female breast. The technic of plastic operations for hypertrophy and pendulosity of the female breast. Scars and keloids. Amastia, hypomastia and inequality. Diseases of the nipples. Reconstructive surgery of the abdominal wall. Index.

Note. This book was built upon the author's experience of over 25 years of active general surgical practice. It presents, evaluates, and illustrates the various standardized procedures on plastic surgery of the breast and abdominal wall as advocated by many surgeons. It is supported by the author's own [illegible] and original technique. Correlated subjects are discussed. Operative techniques and details are carefully shown. Four hundred fifty-eight illustrations, including a number of color plates, clarify the text.

PUBLIC HEALTH

AMERICAN PUBLIC HEALTH ASSOCIATION

Control of communicable diseases in man an official report of the American Public Health Association. Eighth edition. New York. The American Public Health Association, 1955 219 p. 20 cm. $0.60. 4460

Note. A reference manual which not only is widely used in the United States of America, but also enjoys a considerable circulation in other countries in the original language and also in translations. It is addressed to public health workers and others who are concerned in one way or another with the control of communicable diseases. It discusses such matters as the reporting of cases of communicable diseases to local health authorities, but most of the space, in fact all but 18 pages, is devoted to compact articles on the known communicable diseases. These articles are arranged alphabetically by name of disease beginning with Actinomycosis and ending with Yellow Fever. The discussion of each disease is arranged under the following subheads: identification, etiologic agent, source and reservoir of infection, mode of transmission, incubation period, period of communicability, susceptibility and resistance, occurrence, and methods of control. Comparing the eighth edition with the seventh, the number of diseases has been increased from 92 to 1[illegible]; the individual accounts of diseases have been revised somewhat, especially as to methods of control, and the index has been improved.

AMERICAN PUBLIC HEALTH ASSOCIATION COMMITTEE ON ADMINISTRATIVE PRACTICE. SUBCOMMITTEE ON LOCAL HEALTH UNITS

Local health units for the nation a report by Haven Emerson, with the collaboration of Martha Luginbuhl. Cambridge, Mass. Harvard University Press, 1945 339 p. illus. 27 cm. $1.25 4461

Contents Principles. Definitions and sources of data. Local public health services, existing and proposed, in the United States. Present and suggested personnel and costs for local health services for each state and the District of Columbia. State laws requiring or authorizing the creation of local health jurisdictions.

Note. The report presents information on existing local health services and recommendations for a national and adequate system under which each state would be divided into a series of health administrative areas, none of which would be [illegible] population under 50,000. For each of the 1,197 proposed divisions the authors give data as to the boundaries, population, area, financial resources, hospital beds, practicing physicians, and minimum desirable personnel and budgets, as well as information about existing local health services. The study is particularly addressed to town and county government officers and to residents of rural areas.

ANDERSON C L.

School health practice St. Louis The C. V Mosby Company 1956 560 p. illus. 22 cm. $4.75 4462

Contents. Introduction. Part I. The school age child: Health of the normal child. Good physical growth and development. Emotional development. Departures from normal health, growth and development. Part II. Organization of the school health program. Basic plan of the school health program. Part III. School health services. Appraisal aspect of health services. Preventive aspects of school health services—communicable disease control—safety emergency care and first aid. Remedial aspects of health services. Part IV Health instruction. Foundations of instruction. Elementary school health instruction. Junior high school health instruction. Senior high school health instruction. Health contributions of high school subject fields. Part V Healthful school living: Healthful school. Part VI. Measurement in school health practice; Evaluation. Appendixes. Index.

Note: An unexpectedly comprehensive textbook for student teachers, which is of value also to nurses engaged in or about to enter school nursing. It deals with those areas of public health which under the system of education and community organization prevalent in the United States of America come within the province of the schools. In other words, it covers both the appraisal of the health of school children and the school instruction of children in good health practices. It includes glossaries, activity lists, and lists of textbooks, pamphlets, etc., useful in school health work.

ANDERSON GAYLORD WEST AND MARGARET G. ARNSTEIN

Communicable disease control a volume for the health officer and public health nurse. *Third edition. New York The Macmillan Company 1956 500 p. illus. 24 cm. $6.50.* 4463

Contents (abridged) Part I: Control measures. The legal basis of communicable disease control. *Administrative agencies. Role of* the public health nurse. Care of communicable disease case at home. Epidemiological investigation of communicable diseases. Part [illegible] Typhoid and paratyphoid fever. Brucellosis. Food poisonings and infections. Undulant fever. Diphtheria. Hemolytic streptococcal infections. Rheumatic fever. Whooping cough. Measles. Smallpox. Poliomyelitis. Meningococcus meningitis. Pneumonia. Influenza. Common colds. Tuberculosis. Gonorrhea and syphilis. Rabies. Impetigo, pediculosis, scabies, and ringworm. Diseases spread through arthropods—plague, tularemia, Rocky Mountain spotted fever, typhus, yellow fever, encephalitis, malaria. Index.

Note. The first part of this volume, which accounts for about one-third of the book's length, deals with general aspects of the subject and is of interest not only to public health officers and nurses but to various community agencies. The second part is devoted to discussions of specific diseases from the public health standpoint and is of practical value to health officers and nurses. All of the chapters are supplemented by selected bibliographies. The second edition was published in 1948. In this third edition, revisions have been made in Part I, largely to reflect the increasing importance of infectious diseases in public health activities in the United States of America. One chapter has been added in this part, and two chapters have been added in the second part. A selection of literature published since the second edition was written has been added to the bibliographies in both parts.

BYRD OLIVER E. compiler

School health sourcebook. Stanford Stanford University Press, 1955 373 p. 24 cm. $7.50. 4464

Contents: Definitions, conclusions, and policies. Pupil health problems. Health instruction. School health services. Conservation of vision. Speech and hearing. Dental health in schools. The handicapped child. Communicable disease control. School nursing. Alcohol

and narcotics education. Mental health in schools. The school environment. School safety Fire prevention in schools. Nutrition in schools. Athletics and physical education. Health of the teacher Parent and community relationships. International experiences in school health. Bibliography Alphabetical list of sources. Author index. Subject index.

Note A reference book of contemporary opinion and information on health activities centered in schools. It consists of 400 abstracts of periodical articles, bulletins, special reports, etc., published in the United States of America in the decade 1945–1955. These abstracts, which have an average length of two-thirds of a page, are organized under the headings listed above. They are supplemented in each chapter by a prefatory survey written by the compiler of the book. Citations of the source publications are given in the bibliography The book is of interest to such readers as public health officers, school and public health nurses, advanced students preparing for careers in public health, social work, etc., and physicians and school administrators.

CAVINS, HAROLD M

National health agencies, a survey with especial reference to voluntary associations, including a detailed directory of major health organizations Washington, D C. Public Affairs Press, 1945 251 p 22 cm. $3 00 4465

Contents Basic characteristics. Backgrounds. Social awakening. American Psychiatric Association. American Medical Association. American Dental Association. American Public Health Association. National Tuberculosis Association. National Committee for Mental Hygiene. American Child Health Association. American Cancer Society National Safety Council. National Society for the Prevention of Blindness. American Society for the Hard of Hearing. American Heart Association. American Eugenics Society American Social Hygiene Association. Miscellaneous organizations. Index.

Note. The origin and growth of national voluntary health agencies in the United States of America are outlined in this work. The author recognizes two types of such agencies, the professional one organized by and for members of a medical group, and the promotional one created to "help solve medical socio-medical problems. N attempt is made to evaluate the work f these organizations, and the author bases his discussion on an examination of 10 typical agencies. The latter part of the volume serves as directory of national health agencies, and provides information concerning the organization and activities of each group.

CHENOWETH, LAURENCE BENJAMIN, AND WHITELAW REID MORRISON

Community health. Third edition. New York Appleton Century-Crofts, Inc., 1949 314 p illus. 22 cm. $3.25 4466

Contents Hygiene and health education. Health conditions in the United States. Types and causes of disease. Immunology Contact infection. Diseases spread by the human carrier Diseases usually contracted from the soil. The relation of air to health. Water and water-borne diseases. Diseases spread by animals. Diseases usually transmitted by food. Diseases spread by insects. Quarantine, isolation, and disinfection. Waste disposal. The accident problem. Public health administration. Vital statistics. Difficult health problems. Glossary Index.

Note A survey of typical community health problems and of methods of handling them, written for use in introductory college courses. Emphasis is placed on preventive measures, with some attention given to the historical background of the subject. Previous editions were entitled *Community hygiene* For this edition the work was not only re-titled, but there have been considerable rearrangement and revision.

COHN ALFRED EINSTEIN, AND CLAIRE LINGO

The burden of diseases in the United States New York Oxford University Press 1950 129 p illus (part col d) 31 cm $10 00 4467

Contents. The international list of causes of death—changes in nomenclature. On the alue of statistical statements. Population and the death rate. Leading causes of death. Race. Sex. The course of events in specified diseases. Shape of curves by diseases. Numerical changes in selected causes of death. Morbidity Summary Addenda. Notes. References.

Note. A valuable interpretive study of statistical data available in the publications of the United States Bureau of the Census and the World Health Organization. The statistical data have been used as a basis for series of graphs and charts, and these are supplemented by a commentary written by the authors. In the chapter on leading causes of deaths, the data and commentary are arranged by age groups, and in that on the course of events and specified diseases the arrangement is by specific diseases and groups of related diseases. Five charts reproduced in color suitable for wall mounting and on a large scale, are supplied in a separate slipcase. The book is basic reference tool in public health work, life and sickness insurance, and in other fields where data on disease, causes of death, and life expectancy are useful.

DACK, G M

Food poisoning. Third edition, revised and enlarged. Chicago University of Chicago Press 1956 251 p 24 cm. (The University of Chicago Committee on Publication in Biology and Medicine, Lester R. Dragstedt and others) $6 00 4468

Contents. Introduction. Chemical poisons in food. Poisonous plants and animals. Botulism. Staphylococcus food poisoning. *Salmonella. Streptococcus faecalis* in relation to food poisoning. Significance of other bacteria in food poisoning. Infections to be differentiated from food poisoning. Index.

Note. A compact survey written from the public health viewpoint. It describes the chief causative agents, their effects, cites typical outbreaks of public health interest, and refers to selected literature. The clinical manifestations of the various forms of food poisoning are usually mentioned, but the author has not attempted to cover these from the viewpoint of clinical medicine. The first edition appeared in 1943 and the second edition in 1949 In the third edition the book is nearly 70 pages longer and contains substantial amount of newly added material, particularly in the chapters on chemical poisons and on poisonous plants and animals. The discussion of bacterial food poisoning has been rather extensively revised and enlarged. Literature published since the second edition has been added to the bibliographies.

DAVENPORT, S J, AND G G MORGIS

Air pollution a bibliography Washington, D C Government Printing Office, 1954 448 p 26 cm (United States. Bureau of Mines. Bulletin 537) $1 75 4469

Contents. Introduction. General aspects of air pollution. Nature and origin of air pollution. Composition of air pollutants. Effects of air pollution On health. On structures and materials. On vegetation. Methods of determining air pollution. Control of air pollution. Legal aspects of air pollution. Cost of air pollution. Index of authors.

Note Compiled in the Health Branch, Health and Safety Division U S. Bureau of Mines, this bibliography of 3,902 references confined strictly to outdoor atmospheric pollution. The articles are not only listed but also abstracted. The arrangement under each subject is chronological by year of publication, within each year the arrangement being alphabetical by authors. Abstracts are partly original and partly adapted from identified bibliographical sources. Society publications as well as journals are represented, with dates of publication ranging from 1819 through 1952 Titles of articles in foreign languages are gi en in English translation.

EBERSON, FREDERICK

Microbes militant a challenge to man the story of modern preventive medicine and control of infectious diseases. A revision of "The microbe's challenge. New York The Ronald Press Company 1948 401 p illus. 24 cm. (Humanizing science series edited by Jaques Cattell) $5 00 4470

Contents The simple life. The times change. The [illegible] Chemistry parasite Changeable microbes. Jekyll and Hyde types. Microbial chil warfare—antibiotics. The border and behavior Microbial chil warfare—antibiotics. [illegible] animals or hidden. Virus riddles. Little microbe—what next?

Medicine

Public Health

cubes ten search. Epidemics to order. The charnage. Glossary. Suggested readings. Index of authors and personages. Subject index.

Note: A narrative account for general readers of the high-lights in the history of preventive medicine. There is some emphasis on the fundamental principles of modern bacteriology on which is based modern techniques of the control of infectious diseases. Although a popular book, it is not over simplified. In this edition the chapter on the antibiotics is new and there are significant changes in other portions of the text. The book is now about 50 pages longer.

GOLDMANN FRANZ
Public medical care principles and problems. New York Columbia University Press, 1945 226 p. 23 cm. $3.25 4471

Contents: Part I, Haphazard growth. The pattern of progress. The growth of public hospitals. From "free dispensary" to public medical center. The development of programs of public medical care for "persons in need." Administration of public medical care: its present framework. Part II, Directed growth. Planning for medical care. References. Index.

Note: The history of the development of public medical care in Great Britain and the United States of America, its status as of about 1944, and the requirements of an adequate program are outlined in this book. The author's main thesis is that adequate medical care is a fundamental human right, and that provision for it is as essential to the well-being of society as it is to the individual. In the final chapter he outlines various methods that have been tried or proposed for the support and control of public medical care.

—— Voluntary medical care insurance in the United States. New York Columbia University Press, 1948. 228 p. 22 cm. $3.25. 4472

Contents: The principle of medical care insurance. Trends of development in the United States. Attitudes of national voluntary organizations. Cash indemnity plans. Nonprofit hospital service plans—Blue Shield—Blue Cross plans. Nonprofit physicians' service plans—Blue Shield plans. Nonprofit plans covering professional and hospital services—individual practice plans. Group practice plans. Limitations and potentialities of voluntary plans. Bibliographical notes. Index.

Note: An analysis of voluntary medical care insurance that will be of considerable value to anyone who wishes to appraise the relative merits of voluntary and compulsory plans. It traces the development of voluntary plans and discusses the distinctive features, achievements and limitations of the programs in operation. Detailed information on the benefits and costs of plans now in operation is presented. The author reaches the conclusion that voluntary plans cannot be expected to provide for all of the nation.

GUNN SELSKAR MICHAEL, AND PHILIP S. PLATT
Voluntary health agencies, an interpretive study with a foreword by Louis I. Dublin. Under the auspices of the National Health Council. New York The Ronald Press Company 1945 364 p. 22 cm. $4.50. 4473

Contents (abridged): Definitions, scopes and types. Social values and functions of voluntary health agencies. Where the voluntary health agencies lag. The human factor. What voluntary health agencies can do to increase their effectiveness. The role of the state organizations. The role of the national organizations. The problem at the national level. Financing voluntary health work. The professional organizations. The American National Red Cross. Volunteers. Health activities of civic and welfare organizations. The future. Appendices. Statistical tables. Self-evaluation schedule for voluntary health agencies. Index.

Note: This volume comprises an excellent picture of problems confronting the myriad health agencies organized on a voluntary basis throughout the United States of America. That this kind of social enterprise, representing the widest range in size and purpose, is still contributing notably to national social betterment is not denied. At the same time, the agencies themselves, integration with governmental activities, and practical aspects of agency finance are subjected to the major problems to be solved. These, with the pertinent suggestions offered for individual agency evaluation, make the study of primary concern to persons actively concerned with social work involving health. There is no bibliography.

HANLON JOHN J
Principles of public health administration. With 47 illustrations. Second edition. St. Louis The C. V. Mosby Company 1955 693 p. illus. 25 cm. $8.50. 4474

Contents (abridged): Part I, Introduction. Philosophy of public health. Background and development of public health in the United States. Economic justification of public health activities. Sociological aspects of public health. Part II, Administrative considerations in public health: Organizational considerations in public health. Personnel factors in public health. Governmental aspects of public health. Public relations in the public health program. Part III, Pattern of public health activities in the United States: Present organization of official public health programs. Vital statistics. Laboratory services. Health education. Environmental health. The control of communicable diseases. Public health nursing. Maternal and child health activities. Chronic diseases and adult health. Public health nutrition. Occupational health and private enterprise. Accidents, a public health problem. Rehabilitation. Public health dentistry. Mental health. Voluntary health agencies. Part IV, Public health activities on the international level. World health problems. International health programs, their growth and activities. Author index. Subject index.

Note: An established textbook for college students and college graduates who are preparing for careers for administrative positions in the public health field. The subject is covered both broadly and specifically against the background of the current public health structure in the United States of America. Three chapters are devoted to a worldwide view of public health needs, activities and organizations. The material is organized in four parts, of which selected number are all titles are given, and 31 chapters, of which . . . as published in 1950. In the second edition, the length of the book has been increased by almost 200 pages. Most of the revision has consisted of adding material including the entire fourth part. However, some data have been revised, and references have been made to some literature published since the first edition was written.

HARDY MARTHA CRUMPTON AND CAROLYN H. HOEFER
Healthy growth a study of the influence of health education on growth and development of school children. Chicago The University of Chicago Press 1936 360 p. illus. 23 cm. $6.00. 4475

Contents (abridged): Introduction. Selection and comparison of the groups. Medical examinations. Physical growth and development. Mental growth. Educational achievement. School progress and success. Interests and attitudes. Behavior adjustment. Some influences of a health-education program during the elementary-school years. An appraisal of health of school children. The role of health in development during late childhood.

Note: Report of a study of 409 elementary-school pupils in Joliet, Illinois, during an 11-year period. Yearly records were kept on health, growth, accomplishment, habits, and social development as the children progressed from the third grade to the junior high school, and are here interpreted and summarized. The book won the 1939 award of the American Educational Research Association for outstanding research in the field of special methods and psychology of elementary-school subjects.

HEALTH YEARBOOK, 1954 Compiled by Oliver P. Byrd. Stanford Stanford University Press, 1955 325 p. 24 cm. $4.50. 4476

Contents: Health as a social accomplishment. Health as a social problem. Nutrition and health. Exercise and health. Exercise and body mechanics. Fatigue and rest. Mental health and disease. Heredity and eugenics. Infection and immunity. Chronic and degenerative disorders. Habit-forming substances. The care of special organs. Safety. Health and the physical environment. Health services and facilities. Family health. School health. Occupational health. Community health services. International health. Trends and predictions. Bibliography. Alphabetical list of sources. Author index. Subject index.

—— 1955 Compiled by Oliver P. Byrd. Stanford Stanford University Press, 1956. 339 p. 24 cm. $4.50. 4477

Contents. Health as a social accomplishment. Health as a social problem. Nutrition and health. Physical fitness. Mental health and disease. Heredity and eugenics. Infection and immunity. Chronic and degenerative disorders. Habit-forming substances. Sight, hearing, and speech. Dental health. Health and the physical environment. Health services and facilities. Family health. School health. Occupational health. Community health services. International health. Trends and possibilities. Bibliography. Alphabetical list of sources. Author index. Subject index.

Note. An annual series published since 1943. From the first volume in the series through the one for 1952 the title was *Health instruction yearbook.* Each of the annual volumes presents abstracts of a "statistical sample" of current health literature. The abstracts are classified under the headings given in the above contents and are written in a style that is easy to read. In later volumes in the series at least, they average more than one page in length. References to the source articles are given. Usually the headings under which the abstracts are classified are the same from year to year. However, there are some differences between the 1955 and 1956 volumes as noted above. Although the chapter headings are essentially the same, the material presented in them is new with each issue. In short, no abstract is repeated. The 1955 volume contains 261 abstracts, a typical number.

HISCOCK, IRA VAUGHAN

Community health organization. Fourth edition. Cambridge, Mass. Harvard University Press, 1950. 278 p. illus. 24 cm. $2.75 4478

Contents. The government and public health. The planning of community health work. Organization and administration. Public health education. Statistics and records. Preventable disease control; epidemiology. Venereal disease control. Tuberculosis control. The maternal and child health program. The school health program. Public health nursing. Environmental sanitation. Laboratory service. Hospital and health center facilities. Newer health problems. Medical care administration in relation to public health. Voluntary health service. The health survey. Financial aspects of community health work. Index.

Note. A standard work on community health services and organization. In comparison to the edition of 1939, many of the chapters have been rewritten, and new material has been added in order to furnish health officers, nurses, and teachers of public health with up-to-date practices for the protection and promotion of public health. The work is practical rather than theoretical, being based upon surveys of health administration in cities of varying sizes. The work may be used as a handbook by the health administrator and his staff, as an instruction manual for the training of health personnel, and also as a source of information for the layman interested in the health work of official and voluntary agencies.

HISCOCK, IRA VAUGHAN

Ways to community health education, with the collaboration of Mary P. Connolly, Marjorie Delavan, Raymond S. Patterson and William H. F. Warthen. Cambridge, Mass. Harvard University Press, 1939. 306 p. illus. (part col'd) 24 cm. $3.00 4479

Contents. Introduction. The basis for public health education. Participation of community groups. Meetings. The newspaper. Printed matter. The radio. Exhibits. Motion pictures. Some aids on the job. Promoting sanitation and safety. A campaign against an acute infectious disease: diphtheria. Campaigning against tuberculosis and syphilis. Teaching people how to live. Sources of material for public health education. Suggestions for the purchasing of printing. A pioneer health education leaflet: "Contagious consumption." A city health education program. Index.

Note. Techniques and devices which have proved effective in building community-wide understanding of health problems and stimulating individuals and groups of citizens to effort for their own and the community's health are discussed in this book. The author has had the collaboration of leaders in the field who have pooled their ideas on the objectives and principles of health education. The book is profusely illustrated with materials used successfully by official and voluntary agencies in different sections of the country, rural and urban.

JOINT COMMITTEE ON HEALTH PROBLEMS IN EDUCATION OF THE NATIONAL EDUCATION ASSOCIATION AND THE AMERICAN MEDICAL ASSOCIATION

Health education: a guide for teachers and a text for teacher education. Edited by Charles C. Wilson. Fourth edition, completely rewritten. Washington, D. C. National Education Association of the United States, 1948. 413 p. illus. 24 cm. $3.00 4480

Contents (abridged). Educating children for health. Health problems—past, present, and future. Solving school and community health problems. Healthful school living. Health education through health service. The psychology of teaching health. Health education in the elementary school. Secondary school health education. Health education of college students, prospective teachers and health educators. Adult health education. Evaluation in health education. Health education in action. Appendices. Index.

Note. In this volume leaders in the fields of education, medicine, and public health have collaborated to present the best in modern viewpoints concerning the responsibilities and opportunities in health education. Particular attention is given to those health problems which affect children and the discussions center about the means in which child knowledge and attitudes to health may be influenced by healthful living at school and by proper contact with health authorities. The book is designed primarily for use by teachers, physicians, and nurses, and each chapter includes questions for class discussion, suggestions for supplementary activity, and a brief bibliography. A thorough revision of the earlier editions.

MATHESON, ROBERT

Medical entomology. Second edition. Ithaca, Comstock Publishing Company, Inc., 1950. 612 p. illus. 24 cm. $7.50 4481

Contents (abridged). Arthropods and human disease. The order Acarina. The Hexapoda. The orders Orthoptera and Hemiptera. The order Anoplura—the biting and sucking lice. The Diptera—flies. Mosquitoes. The problem of mosquito control. Other bloodsucking nemocerous flies. The bloodsucking muscoid flies. The housefly and its allies. Myiasis in man and allied conditions. The Siphonaptera—fleas. Poisonous and urticating arthropods. Collecting, preserving, and mounting insects. Index.

Note. A survey which serves both as an introductory text for college students of medicine and public health and as a reference guide for graduate workers in the field. It is arranged by order and much morphological information is included. However, more attention is given to life cycles rather than the transmission of human diseases and their control. The extensive bibliographies contain largely literature on the medical and public health aspects, but the chief systematic descriptions are listed also. The first edition was published in 1932. This edition is a complete revision in which are incorporated the major advances in the field during World War II and the subsequent years. There are now 242 figures, of which 43 were added in this revision.

MAXCY, KENNETH F., editor

Rosenau preventive medicine and public health. With 27 contributing authors. Eighth edition. New York, Appleton-Century-Crofts, Inc., 1956. 1,465 p. illus. (part col'd) 25 cm. $15.00 4482

Contents. Section I, Prevention of communicable diseases. Contagious diseases spread largely from the mouth and nose. Air-borne infection, by A. D. Langmuir. Contagious diseases spread largely through fecal discharges. Contagious diseases spread by genital contact, by E. G. Clark. Contagious diseases unclassified as to principal mode of spread. Arthropod-borne diseases. Control of arthropod vectors and infestations, by L. E. Rozeboom. Control of rats and other rodents, by D. E. Davis. Diseases spread largely by contact with animal or other extrahuman sources. Section II. Nutrition and deficiency diseases, by W. H. Sebrell, Jr. General considerations of food elements. Malnutrition. Normal nutritional requirements. Nutrition in preventive medicine. Section III, Maintenance of health and prevention of disability. Historical development of maternal and child health, by P. A. Harper. Maternal health services, by J. Whitridge, Jr. Infant and preschool

by P. A. Harper. Health services for children of school age, by A. Frank. Services for the physically handicapped child, by E. Dorman. Economic, chronic disease and disability in adults, by L. Breslow. Mental hygiene, by P. V. Lemkau. Section IV. Food L. Breslow. Mental hygiene, by P. V. Lemkau. Section IV. Food sanitation. Food infections and their prevention. Milk and milk products. Meat, fish, eggs and plants. Food establishment sanitation, by W. Tiedeman. Section [illegible] Environmental medicine, by A. M. Baetjer. Temperature. Radiation. The effects of high and low barometric pressures. Noise. Atmospheric pollution. Ventilation. Section VI. Industrial hygiene. Diseases of occupation, by A. M. Baetjer. Introduction. Occupational diseases. General health of the working population. Work and fatigue. The promotion and regulation of industrial medicine and hygiene. Section VII. Sanitary control of water supplies, sewage and refuse disposal. Water, by E. W. Moore. Sanitary analysis of water, by E. W. Moore. Interpretation of sanitary water analysis, by E. W. Moore. The purification of water, by E. W. Moore. Water and its relation to disease, by E. W. Moore. Sewage, by G. M. Fair. Refuse disposal, by G. M. Fair. Section VIII. Methodology. Epidemiology. Statistical measures, by P. M. Densen. The health of the population, by P. M. Densen. Section IX. Public health organization and activities, by E. L. Stebbins. National health services. National health services in the United States. The provincial or state health organization. Local health services. International health organization. The voluntary health organization. Index.

Note: This cyclopedic work has long been recognized as standard, authoritative presentation for the instruction of students of medicine and public health, and the guidance of graduate practitioners in these fields. It provides an authoritative and comprehensive view of the field and includes some historical and statistical information. The original author was Dr. Milton J. Rosenau, and the first edition appeared in 1913. The seventh edition under the same editorship as the present one appeared in 1951. It was an extensive revision of the former text, and this eighth edition in turn is an extensive revision of the seventh with many changes in the text, the statistical data, and literature references.

Meyer, Karl F

The zoonoses in their relation to rural health. Berkeley and Los Angeles University of California Press 1955 49 p. illus. 23 cm. $1.00. 4483

Contents: Introduction. Persistence of zoonoses and the tendency of [illegible]. Major zoonoses. Zoonoses of increased importance. Organization of the control of zoonoses. Veterinarians and sanitary engineers in rural public health work. References.

Note: Published in this large pamphlet is a paper first presented at the Seventh General Assembly of the World Health Organization in May 1954. It deals with the public health aspects in rural areas of infections of animals which are incidentally contagious to man—such diseases as anthrax, brucellosis, leptospirosis, plague, [illegible], bovine tuberculosis, psittacosis, and jungle yellow fever. It outlines the public health significance of these diseases and others, and makes definite recommendations for the organization and administration of public health work for their prevention and control.

Milbank Memorial Fund

Research in public health papers presented at the 1951 annual conference of the Milbank Memorial Fund. New York Milbank Memorial Fund, 1952 279 p. illus. 23 cm. $1.00. 4484

Contents (abridged): Part [illegible] *Types of studies and methodology.* Role of basic research in elucidating etiology and prevention of major causes of disability and death, by L. A. Scheele. The longitudinal study of families as a method of research, by J. Downes. Ecological investigation of disease, by J. E. Gordon. Experimental studies of effects of changing environment, by D. G. Whal[illegible]. Evaluation of preventive health services in industry by L. J. Goldwater. Evaluation of special tests and procedures in public health, by H. F. Dorn. Research in public health administration, by E. L. Stebbins. Part II, *Family studies as a method of public health research.* A frame of reference for family research in problems of medical care, by L. W. Simmons. Longitudinal study of the health experience plan of greater New York, by N. R. Deardorff. The Cherokee Indians survey by F. W. Jackson. Family study of poliomyelitis, by A. D. Langmuir and others. Family studies of the common respiratory diseases, by G. F. Badger. Family studies in Pittsburgh, Pennsylvania, by A. Ciocco. The long-term study at Hagerstown, Maryland, by P. S. Lawrence.

Note: In this collection of original papers the main theme is the need for research that will develop knowledge upon which public health programs for the prevention and care of adult diseases, especially the chronic and degenerative diseases, may be based. Research methods are discussed, and some notable research studies are described. Transcripts of the discussion at the conference are included with most of the papers.

Mott Frederick Dodge, and Milton I Roemer

Rural health and medical care. New York McGraw Hill Book Company Inc., 1948. 608 p. illus. 24 cm. (McGraw Hill series in health science Amos Christie, consulting editor) $9.00 4485

Contents (abridged): Part I, Rural America. The population. The economy. Part II, Present-day levels and trends of rural health. Deaths and their causes. The burden of sickness. Diseases of rural life. Part III, Rural doctors and other health personnel. Part IV, Rural health facilities: General and allied hospitals. Mental and tuberculosis hospitals. *Auxiliary health facilities. Facilities for environmental sanitation.* Part [illegible] Medical services and expenditures. Part VI, Governmental efforts to improve rural health. Public health services. Special governmental programs affecting medical care. Rural health activities of the Department of Agriculture. Part VII, Voluntary health programs. Tackling the payment problem. Improving rural health resources. Part VIII, The road ahead: General social measures. Payment for medical care. Rural health facilities. Medical service of high quality. Public health organization. Name index. Subject index.

Note: A comprehensive, authoritative study of medical and health facilities in the rural areas of the United States of America. The inadequacies of these facilities are shown and are related to the economic background. The very serious shortage of physicians, dentists, and nurses is examined in detail and the reasons for it are analyzed. In the final parts of the book the authors argue for rural health service supported by the Federal Government under a program for national health insurance, but they also point out remedial measures which can be taken short of such a national scheme. The book is based on [illegible] literature review and original sources are cited freely in footnotes.

Mullett Charles F

The bubonic plague and England an essay in the history of preventive medicine. Lexington University of Kentucky Press, 1956 401 p. 24 cm. $9.00 4486

Contents: The plague in its historical setting. The Black Death and its aftermath. The first half of the sixteenth century. The reign of Elizabeth—first half, 1558–1580. The last two decades of Elizabeth. The plague of 1603 and its aftermath. The course of the plague, 1625–1633. Plague, war, and famine, 1634–1664. London's last dreadful visitation. The plague of 1665 in literature. England without plague, 1665–1720. The late dreadful plague at Marseilles. England and the plague, 1723–1815. Contagion vs. anticontagion, 1815–1825. Since 1825—new facts and old factors. Appendices. Index.

Note: A scholarly study based on a wide review of source literature. The various methods that were proposed or employed to control the epidemics of plague are a primary theme. However, the author has also included much on the social effects of the plague. The source literature is scrupulously cited. The index is a fully detailed one with many references under such headings as "Physicians," "Prevention," and "Quarantine."

Mustard Harry Stoll

Government in public health. Cambridge, Mass. Harvard University Press, 1945 233 p 21 cm. (New York Academy of Medicine. Committee on Medicine and the Changing Order Studies) $1.50. 4487

Contents: Preface, by J. A. Miller. The nature of the document. Acknowledgments. Certain preliminary considerations. Federal health services. State health departments. Local health departments. Adventures of government in public health programs. A summary of trends and [illegible] considerations of certain needs. Appendix: Two historical documents. Index.

Note. In this work the development of public health service in the *United States* is reviewed from the social and governmental standpoints. Much of the book deals with contemporary public health services and with the potential future developments.

MUSTARD, HARRY STOLL

An introduction to public health. Third edition. New York The Macmillan Company, 1953 315 p 24 cm $4 50 4488

Contents The backgrounds and associations of public health work. Vital statistics. Organization and administration of public health work. Health education and related activities. The acute communicable diseases. Tuberculosis as a public health problem. The venereal diseases. Mental health. Sanitation and industrial hygiene. The individual and his hygiene. Childbearing and its relation to the public health. The hygiene of infancy and young childhood. School health service. Public health aspects of certain noncommunicable diseases. Medical care. Index.

Note. A standard, widely used introduction to public health principles and practices. It serves primarily as a textbook in schools of nursing, social work, teachers colleges, liberal arts colleges, etc. It is concisely written in a lucid, factual style. The first edition was published in 1935 and the second edition in 1944. Comparing this third edition to the second, there is a new chapter on health education and one on mental health. Numerous revisions have been made in chapters carried over from the second edition.

NEW YORK ACADEMY OF MEDICINE. INSTITUTE ON PUBLIC HEALTH, 1947

Ecology of health Edited by E H. L Corwin Cambridge, Mass Harvard University Press, 1949 196 p 21 cm. $2 50 4489

Contents. Genetics and the public health. Maternal health and nutrition—a problem in preventive medicine Animal and insect reservoirs of disease. Climate, geography and disease. Realities in preventive psychiatry Trends in state and local health service. The hospital survey and construction act and a nation-wide health program, by H. Emerson The preparation of professional workers in the field of public health, by C. E. A. Winslow Education of the layman in health responsibilities, by F Bobbitt. Index.

Note Except for the three chapters for which particular authors are indicated in the above table of contents, the chapters of this book consist of facts and ideas gathered from various papers and discussions that occurred at the Institute. These composite chapters are described in the book's foreword as *distillates* of the discussions. The book as a whole presents a synthesis of thought in the United States of America on the aspects of public health named in the chapter titles. The presentation is largely nontechnical hence, the book may be read by anyone with serious interest in the field. The chapters are supplemented by selected lists of references.

NYSWANDER, DOROTHY BIRD

Solving school health problems, the Astoria demonstration study, sponsored by the Department of Health and the Board of Education of New York City Dorothy B Nyswander director of the study Cambridge Mass. Harvard University Press 1942 377 p. illus. 23 cm. $2 00 4490

Contents Problems of administration. Plan of the Astoria study The school physician and his job. Findings and follow-up for the entering group and the specially referred group. Teacher participation. Educational opportunities of the nurse. Daily tasks of the school nurse. Referrals by the teacher as part of the nurse's case load. Keeping school medical records alive. Testing visual acuity Testing for loss of hearing. Obtaining dental care. Care of the cardiac child. Private physicians and the school health program. Ventures in staff education. Serving the school child. Appendix. Publications relative to the Astoria school health study Index.

Note. The Astoria demonstration study was set up under the auspices of the Department of Health and the Board of Education of New York City aided by the American Child Health Association, the Milbank Memorial Fund, the Metropolitan Life Insurance Company the United States Children's Bureau, and the New York State Department of Health to find how within available means, the best health service could be given to children. Out of this experimental study has come a more effective program throughout which emphasis is placed upon the educational aspect. A simplified record system makes complete information about each child available to school physician, nurse, and teacher, enabling them to co-operate in giving the best health service.

SIMMONS, JAMES STEVENS, AND OTHERS

Global epidemiology, a geography of disease and sanitation. By James Stevens Simmons, Tom F Whayne, Gaylord West Anderson, Harold Maclachlan Horack and collaborators. Philadelphia J B Lippincott Company, 1944–54 3 v illus. 26 cm. vol. I, $10 00, vol. II, $15 00, vol. III, $12.00. 4491

Contents (abridged) Volume I, Part I, India and the Far East: Burma. Ceylon. China. Formosa. French Indo-China. India. Japan. Korea. British Malaya. Nampo Islands and Ryukyu Islands. Part II. The Pacific area: Australia. Cook Islands and Niue Island. Easter Island. Fiji Islands. French Oceania. Gilbert, Ellice, Ocean and Nauru Islands. Guam. Territory of Hawaii. Japanese mandated Islands. Johnston Island and Northern Line Islands. Netherlands East Indies. New Caledonia. New Hebrides. New Zealand. North Borneo, Sarawak and Brunei. Papua and New Guinea and the Bismarck Archipelago. Philippine Islands. Phoenix Islands. Pitcairn Island. Samoa Islands. British Solomon Islands. Tokelau or Union Islands. Tonga or Friendly Islands. Map showing world distribution of the principal tropical diseases. Index. Volume II. Section one, The Nile Valley: Egypt. Anglo-Egyptian Sudan. Section two, The Ethiopian Highlands: Eritrea. Ethiopia. British Somaliland. French Somaliland. Somalia. Section three East Africa. Kenya, Uganda. Tanganyika. Nyasaland. Northern Rhodesia. Southern Rhodesia. Mozambique. Section four The Islands of the Indian Ocean. Zanzibar protectorate. Madagascar and the Comoro Archipelago. Mauritius. Réunion. Section five, South Africa: Union of South Africa. South West Africa. The High Commission Territories of South Africa. Bechuanaland Protectorate. Swaziland. Section six, Equatorial Africa: Angola, Belgian Congo. Ruanda-Urundi. French Equatorial Africa. Spanish Guinea (Rio Muni and Fernando Póo) Cameroons—French—British. São Tomé and Principe. Section seven, West Africa: Nigeria. Gold Coast. Togoland—French—British. Liberia. Sierra Leone. Portuguese Guinea. The Gambia. French West Africa. Cape Verde Islands. Section eight, Northern Africa: Canary Islands. Spanish Sahara and Ifni. Morocco. Spanish Morocco. Tangier. Algeria. Tunisia. Libya. Appendix. Maps showing distribution of the principal tropical diseases. Health hints for the tropics. Bibliography. Index. Volume III. The Near and Middle East: Section one, The Near East: Cyprus. Iraq. Israel. The Hashemite Kingdom of the Jordan. Lebanon. Syria. Section two, Approaches to Eastern Asia and Europe: Afghanistan. Iran. Turkey. Section three, The Arabian Peninsula: Aden Colony and Protectorate. Bahrein. Kuwait. Muscat and Oman. Qatar. Saudi Arabia. Trucial Oman. Yemen. Appendix. Index.

Note. In this important survey of medical, health, and sanitary conditions throughout the world, information and statistical data are furnished under sub-heads such as the following for each of the geographical areas mentioned in the contents: Geography and climate Population and socio-economic conditions Environment and sanitation—water supply—waste disposal Fauna and flora; food sanitation Health services and medical facilities—health organizations Mental institutions, Personnel Diseases—diseases spread by contact chiefly through intestinal or urinary tract—diseases spread chiefly through respiratory tract—diseases spread chiefly through contact—diseases spread by arthropods—additional diseases. Finally, for each of the areas, there is a general summary and a bibliography. The first volume in the series was based on surveys made during World War II by the Medical Intelligence Division of the Preventive Medicine Service in the Office of the Surgeon General. The subsequent volumes have been based in part on these surveys and in part on a variety of other sources including official publications of local governments, scientific papers in journals and data obtained through correspondence and visits to some of the countries. Alida Thomas is an associate author of volumes two and three.

SINAI, NATHAN, AND OTHERS

Health insurance in the United States, by Nathan Sinai, Odin W Anderson and Melvin L. Dollar Cambridge Mass. Harvard University Press, 1946 115 p. 22 cm. $1.50 4492

Medicine

Public Health

Contents: Preface, by G. Baehr. Introduction. The health insurance movement during three periods. Attitudes of professional, government, and lay groups. Enabling legislation for voluntary plans. Characteristic features of voluntary plans. Problems before voluntary plans. The health insurance movement continues. References. Index.

Note: One of series of monographs prepared under the auspices of the New York Academy of Medicine. It traces the development of the movement of medical or health insurance from the beginning of the movement about 1915 up to 1944. It describes the basic features of Blue Cross and similar plans sponsored by hospitals and medical societies and outlines the problems involved in the administration of such plans. A five-page bibliography is included.

SMILEY DEAN FRANKLIN, AND ADRIAN GORDON GOULD

Your community's health. A revision of *Community hygiene.* New York The Macmillan Company 1952 454 p. illus. 22 cm. $5.50. 4493

Contents (abridged) Section I, A record of progress. Section II, Controlling health hazards in our environment. Combating infection. Controlling sources of infection in the from person to person. Controlling insect-borne diseases. Making indoor and outdoor air safer. The health significance of soil. A sanitary water supply. The communities' interest in housing. Food and restaurant sanitation. Section III, The community attack on specific diseases and disorders: Community problems in mental hygiene. Community problems in sex hygiene. The care of the chronically ill. Section IV, Meeting the needs of specific population groups: Health protection in infancy, childhood, and maternity. Better medical facilities for rural dwellers. Protecting the health of our urban dwellers. Making old age happier. Section V, Agencies for improving health and welfare: Your doctors, dentists, nurses, and hospitals. Your public health agencies. The drug industry. Your social and welfare agencies. Your community recreational agencies. A look ahead. Suggested list of sources of motion pictures on selected health subjects. Index.

Note: A textbook written at the college level, but organized so that it is useful also as an elementary reference book in public libraries, etc. The viewpoint is that of the educated citizen interested in public health rather than of students who are preparing to make their careers in this field. Contemporary problems in the United States of America and techniques useful in solving them are covered in lucid style. Selected references to professional literature are provided in the form of footnotes, and lists of suggested reading useful to the nonspecialist are given at the ends of chapters. The preceding edition was published in 1941. Extensive revision was made throughout the text in preparing this edition.

SMILLIE, WILSON GEORGE

Preventive medicine and public health. Second edition. New York The Macmillan Company 1952 603 p illus. 24 cm. $7.50 4494

Contents (abridged) Section I, Introduction. Population trends and the public health. Vital statistics. Section II, Environmental sanitation. Water supplies and swimming-pool sanitation. Excreta disposal. Vermin and their control. Food inspection. Diseases transmitted through food other than milk and milk products (food poisoning). Housing and its relation to health. Section III, Communicable disease control. Epidemiology. Control of the communicable diseases of childhood. Control of acute respiratory infections. Control of enteric infections. Control of tuberculosis and leprosy. Venereal diseases. Section IV, Child hygiene. Section V, Adult health protection and promotion. Mental hygiene. Malnutrition and its prevention. Industrial hygiene. Geriatrics. Section VI, Public health administration. Administration of local health services. Rural health administration. National health services. Voluntary health activities. The public health nurse. Medical social work. A nation-wide medical care program. Index.

Note. An outstanding text for use in schools of medicine. The author has stressed the fact that it is not designed for public health personnel. The major thesis is that the main obligation of the physician is to keep all people well not only by means of his contacts with patients but also by promotion of family and community health. Much attention is given to the social and economic factors involved in the maintenance of health. However there is also considerable information on specific clinical techniques. The present edition represents very substantial revision with added material on premature babies, child health in general, accident prevention, health protection of the young adults and many other topics. The references to literature have been revised.

SMILLIE, WILSON GEORGE

Public health administration in the United States. Third edition. New York The Macmillan Company 1947 637 p. illus. 24 cm. $7.00. 4495

Contents (abridged) Part I, Functions of health organization. Development of public health administration in the United States. Part II, Administrative control of communicable diseases: Administrative methods in control of diphtheria. Other communicable diseases of childhood. Administrative control of typhoid fever and allied diseases. Administrative methods in control of tuberculosis. Venereal disease control. Acute respiratory infections. Administrative control of smallpox. Malaria. Rabies. Poliomyelitis. Meningococcus meningitis. Intestinal parasites. Part III, Basic activities of health organization: Vital statistics. Epidemiology. The public health laboratory. Public health nursing. Sanitation and sanitary inspection. Public health education. Mental hygiene. Industrial hygiene. Child hygiene. Nutrition. Adult hygiene. Part IV, Organization of public health programs: Municipal health administration. Rural health administration. State health administration. Health administration in the Federal government. Voluntary health organizations. The practicing physician and the public health department. Training of public health personnel. Budgets and budget making. The national health program. Appendix. Index.

Note: A comprehensive treatment of public health techniques and activities. It is used both as textbook in schools of public health and as reference book of information on standard and current methods. This edition has been extensively revised to incorporate knowledge and techniques developed since 1940. The new material includes information on recent developments in the control of communicable diseases, the antibiotics, new procedures in sanitation, and recent contributions to such fields as nutrition and geriatrics. The appendix contains the standard minimum qualifications for key public health positions that have been set by the Committee on Professional Education of the American Public Health Association.

SMILLIE, WILSON GEORGE

Public health, its promise for the future a chronicle of the development of public health in the United States, 1607–1914 New York The Macmillan Company 1955 501 p. illus. 23 cm. $7.00. 4496

Contents (abridged) Section I, The Colonial period, 1600–1790: Colonial conceptions of public health. Communicable diseases during the colonial period. Medical care, medicine, curative and preventive, among the Indians. Section II, The pioneer period, 1790–1861: The period of great epidemics. Asiatic cholera. A story of malaria. General sanitation. Industrial hygiene—colonial days to the twentieth century. The diet of the early American. The medical care of slaves. An early prepayment plan for medical care—the Thomsonian system of botanical medicine. Child health. Mental health promotion. The American Medical Association—the pioneer days. Sanitary surveys. Section III, The period of development—the Civil War to World War I: The United States Sanitary Commission in the Civil War. City health departments. The American Public Health Association. State health departments. The National Board of Health, 1879–1883. Environmental sanitation—its development during the 19th century. Epidemiology and communicable disease control—from the Civil War through the end of the 19th century. Health education. Public health nursing. Infant hygiene. Voluntary health agencies. The development of federal health services. Appendix: The great pioneers of public health in America, 1610–1911. Proper-name index. Subject index.

Note: A well-documented history of the development of public health in the United States of America. In dealing with the early years, the story is primarily one of the lack of public health, or of public health efforts based on false premises. The gradual evolution of sound methods and of laws and organization to put them into effect is covered in considerable detail with frequent mentions of persons, organizations, and publications. Aspects such as the medical care of slaves and American Indians are covered as well as the more expected topics. The author's sources are cited in footnotes throughout the volume, and the names of the numerous individuals mentioned are brought together in the proper name index. Essentially reference book, nevertheless there are many passages that merit reading by anyone who is interested in the development of public health, or in the health aspects of civilization in the United States of America from colonial days to 1914.

Note In this work the development of public health service in the United States is reviewed from the social and governmental standpoints. Much of the book deals with contemporary public health services and with the potential future developments.

MUSTARD, HARRY STOLL

An introduction to public health. Third edition New York The Macmillan Company 1953 315 p 24 cm. $4 50 4488

Contents The backgrounds and associations of public health work. Vital statistics. Organization and administration of public health work. Health education and related activities. The acute communicable diseases. Tuberculosis as a public health problem. The venereal diseases. Mental health. Sanitation and industrial hygiene. The individual and his hygiene. Childbearing and its relation to the public health. The hygiene of infancy and young childhood. School health service. Public health aspects of certain noncommunicable diseases. Medical care. Index.

Note A standard, widely used introduction to public health principles and practices. It serves primarily as a textbook in schools of nursing, social work, teachers colleges, liberal arts colleges, etc. It is concisely written in a lucid, factual style. The first edition was published in 1935 and the second edition in 1944 Comparing this third edition to the second, there is a new chapter on health education and one on mental health. Numerous revisions have been made in chapters carried over from the second edition.

NEW YORK ACADEMY OF MEDICINE INSTITUTE ON PUBLIC HEALTH, 1947

Ecology of health Edited by E H. L Corwin. Cambridge, Mass Harvard University Press, 1949 196 p 21 cm. $2.50 4489

Contents. Genetics and the public health. Maternal health and nutrition—a problem in preventive medicine Animal and insect reservoirs of disease. Climate, geography and disease. Realities in preventive psychiatry Trends in state and local health service. The hospital survey and construction act and a nation-wide health program, by H. Emerson. The preparation of professional orkers in the field of public health, by C. E. A. Winslow Education of the layman in health responsibilities, by F Bobbitt. Index.

Note. Except for the three chapters for hich particular uthors are indicated in the abov table of contents, the chapters of this book consist of facts and ideas gathered from various papers and discussions that occurred at the Institute. These composite chapters are described in the book's foreword as "distillates of the discussions. The book as whole presents a synthesis of thought in the United States of America on the aspects of public health named in the chapter titles. The presentation is largely nontechnical hence, the book may be read by anyone with a serious interest in the field. The chapters are supplemented by selected lists of references.

NYSWANDER, DOROTHY BIRD

Solving school health problems the Astoria demonstration study sponsored by the Department of Health and the Board of Education of New York City Dorothy B Nyswander, director of the study Cambridge, Mass. Harvard University Press 1942 377 p. illus 23 cm $2 00 4490

Contents Problems of administration. Plan of the Astoria study The school physician and his job. Findings and follow-up for the entering group and the specially referred group. Teacher participation. Educational opportunities of the nurse. Daily tasks of the school nurse. Referrals by the teacher as part f the nurse's case load. Keeping school medical records alive. Testing visual acuity Testing for loss of hearing Obtaining dental care. Care of the cardiac child. Private physicians and the school health program. Ventures in staff education. Serving the school child. Appendix. Publications relati to the Astoria school health study Index.

Note. The Astoria demonstration study was set up under the auspices of the Department of Health and the Board of Education of New York City aided by the American Child Health Association, the Milbank Memorial Fund, the Metropolitan Life Insurance Company the United States Children's Bureau, and the New York State Department of Health to find how within available means, the best health service could be given to children. Out of this experimental study has come a more effective program throughout which emphasis is placed upon the educational aspects. A simplified record system makes complete information about each child available t school physician, nurse, and teacher, making them to co-operate in giving the best health service.

SIMMONS, JAMES STEVENS, AND OTHERS

Global epidemiology, a geography of disease and sanitation By James Stevens Simmons, Tom F Whayne, Gaylord West Anderson, Harold Maclachlan Horack, and collaborators Philadelphia J B Lippincott Company, 1944–54 3 v illus. 26 cm vol. I, $10 00, vol. II, $15 00, vol. III, $12 00 4491

Contents (abridged): Volume I, Part I, India and the Far East: Burma. Ceylon. China. Formosa. French Indo-China. India. Japan. Korea. British Malaya. Nanpo Islands and Ryukyu Islands. *Part II, The Pacific area:* Australia. Cook Islands and Niue Island. Easter Island. Fiji Islands. French Oceania. Gilbert, Ellice, Ocean and Nauru Islands. Guam. Territory of Hawaii. Japanese mandated islands. Johnston Island and Northern Line Islands. Netherlands East Indies. New Caledonia. New Hebrides. New Zealand. North Borneo, Sarawak and Brunei. Papua and New Guinea and the Bismarck Archipelago. Philippine Islands. Phoenix Islands. Pitcairn Island. Samoa Islands. British Solomon Islands. Tokelau or Union Islands. Tonga or Friendly Islands. Map showing world distribution of the principal tropical diseases. Index. *Volume II. Section one, The Nile Valley* Egypt. Anglo-Egyptian Sudan. *Section two, The Ethiopian Highlands:* Eritrea. Ethiopia. British Somaliland. French Somaliland. Somalia. *Section three, East Africa:* Kenya, Uganda. Tanganyika. Nyasaland. Northern Rhodesia. Southern Rhodesia. Mozambique. *Section four, The Islands of the Indian Ocean:* Zanzibar protectorate. Madagascar and the Comoros Archipelago. Mauritius. Réunion. *Section five, South Africa:* Union of South Africa. South West Africa. The High Commission Territories of South Africa. Bechuanaland Protectorate. Swaziland. *Section six, Equatorial Africa:* Angola. Belgian Congo. Ruanda-Urundi. French Equatorial Africa. Spanish Guinea (Rio Muni and Fernando Póo) Cameroons —French—British. São Tomé and Príncipe. *Section seven, West Africa:* Nigeria. Gold Coast. Togoland—French—British. Liberia. Sierra Leone. Portuguese Guinea. The Gambia. French West Africa. Cape Verde Islands. *Section eight, Northern Africa:* Canary Islands. Spanish Sahara and Ifni. Morocco. Spanish Morocco. Tangier. Algeria. Tunisia. Libya. Appendix Maps showing distribution of the principal tropical diseases. Health hints for the tropics. Bibliography Index. *Volume III. The Near and Middle East Section one, The Near East:* Cyprus. Iraq. Israel. The Hashemite Kingdom of the Jordan. Lebanon. Syria. *Section two, Approaches to Eastern Asia and Europe* Afghanistan. Iran. Turkey *Section three, The Arabian Peninsula* Aden Colony and Protectorate. Bahrein. Kuwait. Muscat and Oman. Qatar Saudi Arabia. Trucial Oman. Yemen. Appendix. Index.

Note. In this important survey of medical, health, and sanitary conditions throughout the world, information and statistical data are furnished under sub-heads such as the following for each of the geographical areas mentioned in the contents Geography and climate Population and socio-economic conditions, Environment and sanitation—water supply—waste disposal Fauna and flora, Food sanitation Health services and medical facilities—health organizations Mental institutions Personnel Diseases—diseases spread or contracted chiefly through intestinal or urinary tract—diseases spread chiefly through respiratory tract—diseases spread chiefly through contact—diseases spread by arthropods—nutritional diseases. Finally for each of the areas, there is general summary and a bibliography The first volume in the series was based on surveys made during World War II by the Medical Intelligence Division of the Preventive Medicine Service in the Office of the Surgeon General. The subsequent volumes ha been based in part on these surveys and in part on variety of other sources including official publications of local governments, scientific papers in journals and data obtained through correspondence and visits to some of the countries. Ruth Alida Thomas is an associate author of volumes tw and three.

SINAI, NATHAN, AND OTHERS

Health insurance in the United States by Nathan Sinai, Odin W Anderson and Melvin L. Dollar Cambridge Mass. Harvard University Press, 1946 115 p. 22 cm. $1.50. 4492

[illegible] liquids, by J. L. York. Condensation techniques for dust detection and collection, by J. L. Talbott and A. Roslova. Role of activated carbon in practical control of atmospheric contamination, by A. B. Ray. Theory and basic principles of the [illegible] flocculator, by M. W. R. Clar. The place of tall stacks in air pollution control, by G. R. Hill. Design and use of smokeless hand-fired residential coal-burning equipment, by J. R. Garvey. Abatement of dust from power plant stacks, by O. Cruz. Part iv. Health panel: Skin effects of air pollutants, by M. B. Sulzberger. Effects of prolonged exposure to air pollutants, by R. A. Kehoe. Effects of industry emissions in air pollution, by A. Wolman. Effect of loss of sunlight on human health, by H. F. Blum. Respiratory tract allergic effects from chemical air pollution, by F. W. Wittich. Part v. Instrumentation panel. Atmospheric sampling by electrostatic precipitation, by E. C. Barnes. Direct photography of aerosol suspensions, by A. L. Cheney. The preparation, collection, and measurement of aerosols, by V. K. LaMer. New developments in instrumentation for air pollution studies, by C. Brunelli and others. A recording visibility meter, by A. L. Cheney. Part vi. Legislation panel. Problems in the drafting and administration of air pollution control legislation, by A. C. Stern. The legal aspects of the California air pollution control act, by H. W. Kennedy. The St. Louis code and its operation, by R. R. Tucker. Part vii. Meteorology panel. Meteorological aspects of atmospheric pollution, by E. W. Hewson. The problem of dispersion of hot gases in the atmosphere, by O. G. Sutton. The diffusion problem in hilly terrain, by I. Z. Holland. The application of meteorological control to atmospheric pollution problems, by M. E. Smith. Index.

Note. This volume contains the papers presented at a conference that was organized and sponsored by several departments of the United States National Government. However, the speakers included representatives of industrial corporations as well as governmental units. Altogether, there are 97 papers in the book, and these are supplemented by references and transcripts of discussions. There is considerable repetition of thought among the various papers, and the book is far from a homogeneous monograph. However, it does contain a wide and varied array of information on many aspects of the current air pollution problem. Most of the papers are devoted to problems and methods in the United States of America. However, there are several British contributors, and their papers outline current British activity and research in the field. The index fails to do justice to the contents of the book.

WADSWORTH AUGUSTUS BALDWIN

Standard methods of the Division of Laboratories and Research of the New York State Department of Health with a foreword by Gilbert Dalldorf. Third edition. Baltimore The Williams & Wilkins Company 1947 990 p. illus. 23 cm. $10.00 4503

Contents (abridged): General laboratory procedures. General bacteriologic technics. Stains and reagents. Care and breeding of laboratory animals. Use of experimental and test animals. Maintenance of the collection of type cultures. Determination of hydrogen-ion concentration. Colorimetric chemical analyses and related technics. The spectroscopic laboratories. Estimation of potency by biologic assay. Methods used in the department for the preparation of media and glassware. Methods used in the diagnostic laboratories. General instructions. Examination for pneumococci. Examination for streptococci and staphylococci. Examination for mycobacterium. Examination for mutants of food poisoning. Examination for brucella and other microorganisms commonly associated with animal hosts. Examination for bacteria of actinomycosis and mycotic diseases. Examination for parasitic worms. Examination of blood. Examination of urine. Examination of cerebrospinal fluid. Histologic procedures. Methods used in the laboratories for sanitary and analytical chemistry. Examination of sewage, sewage sludge, industrial wastes, and polluted water. Examination of milk and cream. Methods used in the research, serum, and vaccine laboratories. Production and standardization of diphtheria toxin. Purification and concentration of plasma and sera of immunized horses and rabbits. Preparation of pertussis vaccine. Preparation of brucella abortus vaccine. Preparation of diagnostic, prophylactic and therapeutic products for distribution. Sterility tests of prophylactic, therapeutic, and other preparations. Methods used in the administrative offices. Methods used in the library, publications, and museum department. Appendix. Index.

Note. This reference book is valuable for its detailed description of the laboratory methods and related procedures of a large and highly organized governmental health department. The first edition, published in 1927, was undertaken chiefly as a means of maintaining a high standard of work among the many employees of the New York State Department of Health by providing each one with precise, detailed directions for the routine technical procedures with which he was concerned. However, since the first edition, the value of the work has been recognized by public health agencies and workers throughout the world. Numerous significant changes have been made in the present edition to correspond with changes in the procedures of the New York State Department of Health which took place from 1939 through January 1945. There is a new chapter on biologic assay and several important diagnostic procedures, such as the standardization of syphilis, have been revised. Changes due to new emphasis on virus diseases and to the growing importance of chemotherapy appear in many chapters. The lists of references which follow the chapters have been revised and augmented.

WATERMAN THEDA L. AND VALORUS F LANG

Chronic illness today's major health problem, a challenge to every community St. Louis The C. V Mosby Company, 1955 343 p. illus. 23 cm. $4 90. 4504

Contents: Unit i, Background of the problem. Introduction. Scope of the problem. *Unit ii. How to care for those who are chronically ill.* Care of chronically ill in the hospital. Care of the chronically ill in nursing homes. Home care programs for patients with chronic illness. *Areas where further study is needed. Services essential to the care of the chronically ill.* Unit iii. Clinical aspects of chronic illness. General considerations. Cancer. Arthritis. Central nervous system. *Cardiovascular diseases. Respiratory disorders. Gastrointestinal tract. Genitourinary diseases. Anemias. Endocrinology—*diabetes mellitus. Addison's disease. Visual disturbances, hearing loss, and addictions. *Unit iv. Rehabilitation.* General considerations—specific considerations. Unit v, Community educational program. Kinds, techniques, and materials. Appendix: Organizations with programs for the chronically ill. Index.

Note. Primarily a textbook for the instruction of students preparing for careers in such fields as nursing, medical social work, and physical therapy. The community approach to the care of the chronically ill is emphasized. Information is included also on specific diseases which are responsible for chronic illness and on techniques of nursing and rehabilitation. The chapters include study questions and references to pertinent literature. One of the authors is a graduate nurse and the other a graduate physician, and both are associated with the Central Agency for Chronically Ill in Milwaukee.

WELLS WILLIAM FIRTH

Airborne contagion and air hygiene an ecological study of droplet infections. Cambridge, Mass. Published for the Commonwealth Fund. Harvard University Press 1955 423 p. illus. 24 cm. $6.00. 4505

Contents: Part i, Airborne contagion—First section, Physics and physical chemistry of droplets and droplet nuclei: Atomization. Evaporation and condensation. Aerodynamics of droplet nuclei. Aerodynamics of sampling. Summary of the principles derived from physical science. Second section, Biology, biophysics, and biochemistry of droplet nuclei infection and disinfection. Biology of parasitism in droplet nuclei. Biophysics of droplet nuclei disinfection. Biochemistry of droplet nuclei disinfection. Conclusions from experiments on the viability, longevity and vulnerability of airborne parasites. Third section, Physiology and pathology of droplet nuclei contagion: Quantitative implantation of inhaled droplet nuclei. Response and reaction to inhaled droplet nuclei contagion. Quantal theory of inhaled tuberculosis and other droplet infections. Part ii, Air hygiene: Sanitary ventilation. Threshold sanitary ventilation. Demonstration of air hygiene. Essay on dust-borne infection. The ecology of droplet infections. Appendices. Bibliography. Index.

Note. More than 20 years of research at Harvard University and at the School of Medicine of the University of Pennsylvania formed the basis for this treatise on the role of indoor air in transmitting certain contagious diseases. The work followed the author's discovery more than 20 years ago that droplets coughed or sneezed into the air quickly evaporate leaving residues, or nuclei, afloat in the air. In the first part, the basic results, that is to say, those pertaining to the diffusion and fate of coughed or sneezed droplets, to the viability of microorganisms in droplet nuclei and to the response of experimental animals to inhaled droplet nuclei, are synthesized. In the second part, the practical aspects of treating indoor air, as in schools, by radiation, or other means such as glycol, to make it sanitary are presented. In both parts of the book, experimental techniques, and results are described in detail. Apparatus is illustrated. There is a 16-page bibliography of the international literature. The book is of interest to physicians and scientists working at the research level in public health and to

SMITH, GEDDES

Plague on us. Cambridge, Mass. Harvard University Press, 1941 365 p illus. (part col'd) 23 cm $3 00 4497

Contents. Prologue. Pestilence. The black death. The English sweat. "The Poore's plague." Yellow fever and the founding fathers. Asiatic cholera on the march. Yellow fever in the headlines. The Spanish influenza. Past thinking. Contagion. The physical environment. The human factor. Chronological digression. Miasma vs. contagion. Bacteria. The sick man. The parasite. Approach of the parasite. Entrance of the parasite. Effect of the parasite. Reception of the parasite. Fate of the host. Fate of the parasite. The sick crowd. The infective agent. Infection at home. Infection in transit. Infection and the herd. Some determinants. The epidemic formula? *Defenses.* Curing or killing the giver Isolating the giver. Cutting communication. Isolating the taker Reinforcing the taker's resistance. Detective work. The case of the Methodist ladies. The case of the wading boys. The case of the ladylike oysters. The case of the elderly fliagers. The case of the sleepy lobsters. The case of the plumber's patchwork. Unfinished business. Influenza, pneumonia, the common cold. Tuberculosis. Sundry items. Malaria. Yellow fever Plague. Epilogue.

Note. Wars, mass migrations, and epidemics have always gone together In spite of the brilliant achievements of medicine in preventing and curing communicable disease the world is always in danger of devastating explosions of disease. This gives point to the present account of man's past experience. The fascinating story has been written by a layman for laymen, and has been checked for accuracy by medical authorities.

SPEKTER, LOUIS

The pediatric years, a guide in pediatrics for workers in health, education and welfare. Springfield, Ill. Charles C Thomas, 1955 734 p illus. 24 cm $12 50 4498

Contents (abridged) Section I, Optimum health of children depends upon their being born healthy Trends in saving the lives of mothers and infants. Section II, Optimum health depends upon understanding how children grow and develop, and upon daily care: What a child is like. Examination of the sick child. Nutrition. Adolescence. Section III, Optimum health depends upon care during illness: Congenital defects. Chronic disease and the handicapped. Convalescence. Diseases of the digestive system. Dental health. Parasitic diseases. Poisoning. Diseases of the respiratory system. Allergy Infectious diseases. Diseases of the cardiovascular system. Diseases of the endocrine system. Diseases of the musculo-skeletal system. Body mechanics. Diseases of the nervous system. Hearing loss and deafness. Vision and diseases of the eye. Some problems of behavior and personality Diseases of the skin. Section IV Optimum health depends upon professional workers and facilities Community responsibility in health and disease. Voluntary health services. Official health services. Section V Optimum health depends upon standards of services Standards of health services. Standards for housing. Section VI, Pediatric procedures. Glossary Index.

Note A reference book of information pertaining to the health and care of children from infancy to adolescence. Written by a physician It is directed to such personnel as nurses, social workers, specialists in nutrition, specialists in physical therapy psychologists, dentists and teachers In short, to persons who are not educated in medicine but whose professional work involves the physical welfare of children. It is organized in six sections and 56 short chapters. The titles of enough of the chapters have been quoted above to indicate the scope of the book. A very wide range of information is presented in concise, semitechnical style. Occasional references to related literature are included. Definitions of technical terms are included both in the text and in the 30-page glossary

STERN, BERNHARD JOSEPH

Medical services by government local state, and federal. Cambridge Mass. Harvard University Press 1946 222 p 21 cm. (New York Academy of Medicine Committee on Medicine and the Changing Order Studies) $1 50 4499

Contents. Preface, by W G. Smillie. Introduction. Medical services for the indigent by local government social and historical backgrounds. Medical services by local government recent developments. Medical services by state government. Expenditures for medical services by state and local governments. The nature and extent of hospital services by government. Federal grants-in-aid for medical care. Medical services by the federal government. Appendix. Statistical data relative to hospital service. Index.

Note. The sixth in a series of monograph studies. The author traces the growth of government responsibility for public health, and surveys the medical services administered or controlled by governmental agencies. The volume is well documented, and is intended as a source of information for those who are concerned with the subject of medical care in the United States of America.

STIEGLITZ, EDWARD JULIUS

A future for preventive medicine. Cambridge Mass Harvard University Press, 1945 93 p. illus 22 cm. (New York Academy of Medicine Committee on Medicine and the Changing Order Studies) $1 00 4500

Contents Preface, by E. L. Stebbins. Introduction. Definitions. Health over the last forty years. A program for preventive medicine. Summary References. Index.

Note. One of a series of studies on recent trends in medical practice sponsored by the New York Academy of Medicine. It outlines what preventive medicine is doing and what it can do for the nation's health. The author indicates that the practice of preventive medicine has notably decreased infant and childhood mortality and that now and for the future the chief problem is one of controlling the degenerative diseases of an individual's middle years and old age. The highest expression of preventive medicine according to the author is not merely the prevention of disease, but the establishment and maintenance of optimum health.

SYMPOSIUM ON NUTRITION FRONTS IN PUBLIC HEALTH

Nutrition fronts in public health, proceedings of the Nutrition Symposium held at Yale University, November 10, 1950 New York The National Vitamin Foundation, Incorporated, 1951 168 p illus. 23 cm. $1 50 4501

Contents (abridged) Nutrition and maternal health, by I. G. Macy Factors conditioning the development of malnutrition, by B H. Ershoff. Nutrition as factor in aging, by C. M. McCay Influence of nutrition on work performance, by E. Simonson. Nutrition and resistance—susceptibility to infection, by H. A. Schneider Nutritional factors and hormones in stress reactions, by L. T Samuels.

Note. This volume contains the original papers which were presented at a symposium attended by professional workers in the fields of nutrition research and public health. The public health aspect is stressed in all of them. Bibliographies and transcripts of discussions are included.

UNITED STATES TECHNICAL CONFERENCE ON AIR POLLUTION

Air pollution Sponsored by the Interdepartmental Committee on Air Pollution, Louis C McCabe chairman. New York McGraw Hill Book Company Inc., 1952 847 p. illus. 26 cm. $12 50 4502

Contents (abridged) Part I, Agriculture panel Air pollution in relation to economics, by V W Johnson. Some impurities in the air and their effects on plants, by M. D Thomas and others. Similarities between disease symptoms and chemically induced injury to plants, by L. M Massey The effects of air-borne fluorides on livestock, by K. J. Largent. Some effects of fluorine fumes on vegetation, by E. W Griffin and B. B Bayles. Fluorosis in livestock, by P H. Phillips. Part II, Analytical methods and properties panel The spectrum of particle size and its relation to air pollution, by H. P Munger. Physical properties of aerosols, by D Sinclair Chemical analysis of air pollutants, by A. J Haagen-Smit Method for identifying and estimating gases and vapors in air pollution, by M. Shepherd. Spectrographic analysis in air pollution studies, by R. F Scribner Part III, Equipment panel Odor control practices, by W H. Whiteridge. Viscous impingement filters, by J W May Spray towers, bubble towers, and packed towers using reactive and

non-reactive liquids, by J. L. York. Condensation techniques for dust detection and collection, by J. L. Yellott and A. Broadway. Role of activated carbon in practical control of atmospheric contamination, by A. R. Ray. Theory and basic principles of the sonic smoke flocculator, by H. W. St. Clair. The place of tall stacks in air pollution control, by G. R. Hill. Design and use of smokeless hand-fired residential coal-burning equipment, by J. R. Garvey. Abatement of dust from power plant stacks, by O. Craig. Part IV. Health panel. Skin effects of air pollutants, by M. B. Sulzberger. Effects of prolonged exposure to air pollutants, by R. A. Kehoe. Effects of ionizing radiation in air pollution, by A. Weiman. Effect of loss of sunlight on human health, by H. F. Blum. Respiratory tract allergic effects from chemical air pollution, by F. W. Wittich. Part V. Instrumentation panel. Atmospheric sampling by electrostatic precipitation, by E. C. Barnes. Direct photography of aerosol suspensions, by A. L. Cheney. The preparation, collection, and measurement of aerosols, by V. K. LaMer. New developments in instrumentation for air pollution studies, by C. Bramwell and others. A recording visibility meter by A. L. Cheney. Part VI. Legislation panel. Problems in the drafting and administration of air pollution control legislation, by A. C. Stern. The legal aspects of the California air pollution control act, by H. W. Kennedy. The St. Louis code and its operation, by R. R. Tucker. Part VII. Meteorology panel. Meteorological aspects of atmospheric pollution, by E. W. Hewson. The problem of dispersion of hot gases in the atmosphere, by O. G. Sutton. The diffusion problem in hilly terrain, by J. Z. Holland. The application of meteorological control to atmospheric pollution problems, by M. E. Smith. Index.

Note. This volume contains the papers presented at a conference that was organized and sponsored by several departments of the United States National Government. However, the speakers included representatives of industrial corporations as well as governmental units. Altogether, there are 97 papers in the book, and these are supplemented by references and transcripts of discussions. There is considerable repetition of thought among the various papers, and the book is far from a homogeneous monograph. However, it does contain a wide and varied array of information on most aspects of the current air pollution problem. Most of the papers are devoted to problems and methods in the United States of America. However, there are several British contributions, and their papers outline current British activity and research in the field. The index fails to do justice to the contents of the book.

WADSWORTH, AUGUSTUS BALDWIN

Standard methods of the Division of Laboratories and Research of the New York State Department of Health with a foreword by Gilbert Dalldorf Third edition. Baltimore The Williams & Wilkins Company 1947 990 p. illus. 23 cm. $10.00 4503

Contents (abridged): General laboratory procedures. General bacteriologic technic. Stains and reagents. Care and breeding of laboratory animals. Use of experimental and test animals. Maintenance of the collection of type cultures. Determination of hydrogen-ion concentration. Gasometric chemical analysis and related technics. The spectroscopic laboratories. Estimation of potency by biologic assay. Methods used at the department for the preparation of media and glassware. Methods used in the diagnostic laboratories: General instructions. Examination for pneumococci. Examination for streptococci and staphylococci. Examination for mycobacterium. Examination for bacteria of food poisoning. Examinations for brucella and other microorganisms commonly associated with animal hosts. Examination for infections of actinomycetes and mycotic disease. Examination for parasitic worms. Examination of blood. Examination of urine. Examination of cerebrospinal fluid. Histologic procedures. Methods used in the laboratories for sanitary and analytical chemistry. Examination of sewage, sewage sludge, industrial wastes, and polluted water. Examination of milk and cream. Methods used in the antitoxin, serum, and vaccine laboratories: Production and standardization of diphtheria toxin. Production and concentration of antitoxins and sera of immunized horses and rabbits. Preparation of pertussis vaccine. Preparation of brucella abortus vaccine. Preparation of diagnostic, prophylactic and therapeutic products for distribution. Sterility tests of prophylactic, therapeutic, and other preparations. Methods used in the administrative offices. Methods used in the library, publications, and museum department. Appendix. Index.

Note: This reference book is valuable for its detailed description of the laboratory methods and related procedures of a large and highly organized governmental health department. The first edition, published in 1927 was undertaken chiefly as a means of maintaining a high standard of work among the many employees of the New York State Department of Health by providing each one with concise, detailed directions for the routine technical procedures with which he was concerned. However, since the first edition, the value of the work has been recognized by public health agencies and workers throughout the world. Numerous significant changes have been made in the present volume to correspond with changes in the procedures of the New York State Department of Health which took place from 1939 through January 1945. There is a new chapter on biologic assay, and several important diagnostic procedures, such as the serodiagnosis of syphilis, have been revised. Changes due to new emphasis on virus diseases and to the growing importance of chemotherapy appear in many chapters. The lists of references which follow the chapters have been revised and expanded.

WATERMAN, THEDA L., AND VALORUS F LANG

Chronic illness today's major health problem, a challenge to every community St. Louis The C. V. Mosby Company 1955 343 p. illus. 23 cm. $4.90. 4504

Contents: Unit I, Background of the problem: Introduction. Scope of the problem. Unit II, How to care for those who are chronically ill: Care of chronically ill in the hospital. Care of the chronically ill in nursing homes. Home care programs for patients with chronic illness. Areas where further study is needed. Services essential to the care of the chronically ill. Unit III, Clinical aspects of chronic illness: General considerations. Cancer. Arthritis. Central nervous system. Cardiovascular diseases. Respiratory disorders. Gastrointestinal tract. Genitourinary diseases. Anemias. Endocrinology—diabetes mellitus, Addison's disease. Visual disturbances, hearing loss, and addictions. Unit IV, Rehabilitation: General considerations—specific considerations. Unit V, Community educational programs: Needs, techniques, and materials. Appendix: Organizations with programs for the chronically ill. Index.

Note: Primarily a textbook for the instruction of students preparing for careers in such fields as nursing, medical social work, and physical therapy. The community approach to the care of the chronically ill is emphasized. Information is included also on specific diseases which are responsible for chronic illness and on techniques of nursing and rehabilitation. The chapters include study questions and references to pertinent literature. One of the authors is a graduate nurse and the other a graduate physician, and both are associated with the Central Agency for Chronically Ill in Milwaukee.

WELLS, WILLIAM FIRTH

Airborne contagion and air hygiene an ecological study of droplet infections. Cambridge Mass. Published for the Commonwealth Fund. Harvard University Press, 1955 423 p. illus. 24 cm. $6.00 4505

Contents: Part I, Airborne contagion—First section, Physics and physical chemistry of droplets and droplet nuclei. Atomization. Evaporation and condensation. Aerodynamics of droplet nuclei. Aerodynamics of sampling. Summary of the principles derived from physical science. Second section, Biology, biophysics, and biochemistry of droplet nuclei infection and disinfection. Biology of parasites in droplet nuclei. Biophysics of droplet nuclei disinfection. Biochemistry of droplet nuclei disinfection. Conclusions from experiments on the viability, longevity and vulnerability of airborne parasites. Third section, *Physiology and pathology* of droplet nuclei contagion: Quantitative implantation of inhaled droplet nuclei. Response and reaction to inhaled droplet nuclei contagium. Quantal theory of inhaled tuberculosis and other droplet infections. Part II, Air hygiene: Sanitary ventilation. Threshold sanitary ventilation. Demonstration of air hygiene. Essay on dust-borne infection. The ecology of droplet infections. Appendixes. Bibliography. Index.

Note: More than 20 years of research at Harvard University and at the School of Medicine of the University of Pennsylvania formed the basis for this treatise on the role of indoor air in transmitting certain contagious diseases. The work followed the author's discovery more than 20 years ago that droplets coughed or sneezed into the air quickly evaporate leaving residues, or nuclei, afloat in the air. In the first part, the basic results, that is to say those pertaining to the diffusion and fate of coughed or sneezed droplets, to the viability of microorganisms in droplet nuclei and to the response of experimental animals to inhaled droplet nuclei, are synthesized. In the second part, the practical aspects of treating indoor air, as in schools, by radiation, or other means such as glycol, to make it sanitary are presented. In both parts of the book, experimental techniques, and results are described in detail. Apparatus is illustrated. There is a 14-page bibliography of the international literature. The book is of interest to physicians and scientists working at the research level in public health and to

SMITH, GEDDES

Plague on us. Cambridge Mass. Harvard University Press 1941 365 p illus (part col'd) 23 cm. $3 00 4497

Contents: Prologue. Pestilence. The black death. The English sweat. "The Poor's plague." Yellow fever and the founding fathers. Asiatic cholera on the march. Yellow fever in the headlines. The "Spanish" influenza. Past thinking. Contagion. The physical environment. The human factor. Chronological digression. Miasma vs. contagion. Bacteria. The sick man. The parasite. Approach of the parasite. Entrance of the parasite. Effect of the parasite. Reception of the parasite. Fate of the host. Fate of the parasite. The sick crowd. The infective agent. Infection at home. Infection in transit. Infection and the herd. Some determinants. The epidemic formula? Defenses. Curing or killing the giver. Isolating the giver. Cutting communication. Isolating the taker. Reinforcing the taker's resistance. Detective work. The case of the Methodist ladies. The case of the wading boys. The case of the ladylike oysters. The case of the elderly villagers. The case of the sleepy lobsters. The case of the plumber's patchwork. Unfinished business. Influenza, pneumonia, the common cold. Tuberculosis. Sundry items. Malaria. Yellow fever. Plague. Epilogue.

Note. Wars, mass migrations, and epidemics have always gone together. In spite of the brilliant achievements of medicine in preventing and curing communicable disease, the world is always in danger of devastating explosions of disease. This gives point to the present account of man's past experience. The fascinating story has been written by a layman for laymen, and has been checked for accuracy by medical authorities.

SPEKTER, LOUIS

The pediatric years a guide in pediatrics for workers in health, education and welfare. Springfield, Ill Charles C Thomas, 1955 734 p illus. 24 cm. $12 50 4498

Contents (abridged) Section I, Optimum health of children depends upon their being born healthy. Trends in saving the lives of mothers and infants. Section II, Optimum health depends upon understanding how children grow and develop, and upon daily care. What a child is like. Examination of the sick child. Nutrition. Adolescence. Section III, Optimum health depends upon care during illness. Congenital defects. Chronic disease and the handicapped. Convalescence. Diseases of the digestive system. Dental health. Parasitic diseases. Poisoning. Diseases of the respiratory system. Allergy. Infectious diseases. Diseases of the cardiovascular system. Diseases of the endocrine system. Diseases of the musculo-skeletal system. Body mechanics. Diseases of the nervous system. Hearing loss and deafness. Vision and diseases of the eye. Some problems of behavior and personality. Diseases of the skin. Section IV, Optimum health depends upon professional workers and facilities. Community responsibility in health and disease. Voluntary health services. Official health services. Section V, Optimum health depends upon standards of services. Standards of health services. Standards for housing. Section VI, Pediatric procedures. Glossary. Index.

Note A reference book of information pertaining to the health and care of children from infancy to adolescence. Written by a physician, it is directed to such personnel as nurses, social workers, specialists in nutrition, specialists in physical therapy, psychologists, dentists and teachers, in short, to persons who are not educated in medicine but whose professional work involves the physical welfare of children. It is organized in six sections and 56 short chapters. The titles of enough of the chapters have been quoted above to indicate the scope of the book. A very wide range of information is presented in a concise, nontechnical style. Occasional references to related literature are included. Definitions of technical terms are included both in the text and in the 30-page glossary.

STERN, BERNHARD JOSEPH

Medical services by government local state and federal Cambridge Mass. Harvard University Press, 1946 222 p 21 cm (New York Academy of Medicine Committee on Medicine and the Changing Order Studies) $1 50. 4499

Contents. Preface, by W. G. Smillie. Introduction. Medical services for the indigent by local government social and historical backgrounds. Medical services by local government recent developments. Medical services by state government. Expenditures for medical services by state and local governments. The nature and extent of hospital services by government. Federal grants-in-aid for medical care. Medical services by the federal government. Appendix. Statistical data relating to hospital service. Index.

Note: The sixth in a series of monograph studies. The author traces the growth of government responsibility for public health, and surveys the medical services administered or controlled by governmental agencies. The volume is well documented, and is intended as a source of information for those who are concerned with the subject of medical care in the United States of America.

STIEGLITZ, EDWARD JULIUS

A future for preventive medicine. Cambridge Mass Harvard University Press, 1945 93 p illus. 22 cm. (New York Academy of Medicine. Committee on Medicine and the Changing Order Studies) $1 00 4500

Contents Preface, by E. L. Stebbins. Introduction. Definitions. Health over the last forty years. A program for preventive medicine. Summary. References. Index.

Note. One of a series of studies on recent trends in medical practice sponsored by the New York Academy of Medicine. It outlines what preventive medicine is doing and what it can do for the nation's health. The author indicates that the practice of preventive medicine has notably decreased infant and childhood mortality and that now and for the future the chief problem is one of controlling the degenerative diseases of an individual's middle years and old age. The highest expression of preventive medicine according to the author is not merely the prevention of disease, but the establishment and maintenance of optimum health.

SYMPOSIUM ON NUTRITION FRONTS IN PUBLIC HEALTH

Nutrition fronts in public health proceedings of the Nutrition Symposium held at Yale University, November 10, 1950 New York The National Vitamin Foundation, Incorporated, 1951 168 p. illus. 23 cm. $1 50 4501

Contents (abridged) Nutrition and maternal health, by I. G. Macy. Factors conditioning the development of malnutrition, by B. H. Ershoff. Nutrition as a factor in aging, by C. M. McCay. Influence of nutrition on work performance, by E. Simonson. Nutrition and resistance—susceptibility to infection, by H. A. Schneider. Nutritional factors and hormones in stress reactions, by L. T. Samuels.

Note This volume contains the original papers which were presented at a symposium attended by professional workers in the fields of nutrition research and public health. The public health aspect is stressed in all of them. Bibliographies and transcripts of discussions are included.

UNITED STATES TECHNICAL CONFERENCE ON AIR POLLUTION

Air pollution Sponsored by the Inter departmental Committee on Air Pollution, Louis C McCabe chairman New York McGraw Hill Book Company, Inc., 1952 847 p. illus. 26 cm. $12.50 4502

Contents (abridged) Part I, Agriculture panel Air pollution in relation to economics, by V. W. Johnson. Some impurities in the air and their effects on plants, by M. D. Thomas and others. Similarities between disease symptoms and chemically induced injury to plants, by L. M. Massey. The effects of air-borne fluorides on livestock, by E. J. Largent. Some effects of fluorine fumes on vegetation, by S. W. Griffin and R. B. Bayles. Fluorosis in livestock, by P. H. Phillips. Part II, Analytical methods and properties panel. The spectrum of particle size and its relation to air pollution, by H. P. Munger. Physical properties of aerosols, by D. Sinclair. Chemical analysis of air pollutants, by A. J. Haagen-Smit. Method for identifying and estimating pollen and spores in air pollution, by M. Shepherd. Spectrographic analyses in air pollution studies, by R. F. Scribner. Part III, Equipment panel Dust control practices, by J. W. May. Viscous impingement filters, by W. H. Whiteridge. Spray towers, bubble towers, and packed towers using reactive and

edition was written was added to the bibliography. The author, a specialist in clinical psychology, is Head of the Department of Psychology of the University of New Hampshire.

CROW LESTER DONALD AND ALICE CROW

Mental hygiene. Second edition. New York McGraw Hill Book Company Inc., 1951 433 p. illus. 23 cm. (McGraw Hill series in education Harold Benjamin consulting editor) $5.50 4512

Contents (abridged) Part I. Mental hygiene and the individual. Mental hygiene—its nature and function. The emotions and behavior. Part II. Individual adjustment. Significance of adjustment mechanisms. Adjustment problems. Hygienic adjustment of the developing person. Adjustment problems of the preschool child. Adjustment problems of the elementary-school child. Adjustment problems of the secondary-school pupil. Adjustment problems of the adult. Adjustment problems of the physically handicapped and the mental deviate. Part III. Mental hygiene in relation to school functions and personnel. The educational needs of the individual. The teacher and his adjustments. Utilization of evaluating techniques. Guidance. Hygienic supervision. Part IV. Mental hygiene in relation to school function. Part V. Mental hygiene in general life areas. Achieving marital and family adjustment. Achieving occupational adjustment. Adjustment in community relations. Part VI. Mental illness and mental health. Name index. Subject index.

Note: A mature, well-rounded view of mental hygiene and personality development is presented in this book, which is used primarily as a text for student and graduate teachers. Mental disease and therapy for the mentally ill are discussed in two brief chapters, but aside from these, the book is devoted to the development and adjustment of normal persons in normal family and community living. Schools and colleges are treated as part of the normal environment. The first edition was published in 1941. It was extensively rewritten and reorganized for this second edition. Questions, study questions and suggestions for further reading are included at the end of each chapter.

DOLLARD JOHN AND NEAL E. MILLER

Personality and psychotherapy an analysis in terms of learning, thinking and culture. New York McGraw Hill Book Company Inc., 1950. 488 p. illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $7.50 4513

Contents (abridged) Part I. Orientation. Part II. Basic principles of learning. Part III. The normal use of the mind in solving emotional problems. Introduction to higher mental processes. The role of words and sentences in arousing drives, mediating rewards, and producing foresight. Reasoning and planning. Social training in the use of higher mental processes. Part IV. How neurosis is learned. Social conditions for the learning of unconscious conflicts. How symptoms are learned. The unconscious—how repression is learned. Part V. The new conditions of therapeutic learning. Selecting patients who can learn. Fear reduction—permissiveness and the compulsion to utter. Transference—generalized responses to the therapeutic situation. Labeling—teaching the patient to think about new topics. Teaching the patient to discriminate—role of past and present. Part VI. Conflict. Why conflicts and misery can be relieved only in real life. The dynamics of conflict—their implications for therapy. A hypothesis concerning alcohol, barbiturates, and lobotomy. Part VII. Special aspects of therapy. Ways of getting rid of symptoms. Techniques of therapeutic intervention. How therapy can go wrong. Part VIII. Two applications to normal living. Self-study. Suppressing troublesome thoughts to get freedom for creative thinking. Bibliography. Name index. Subject index.

Note: An original and interesting presentation of the principles and presentation of psychotherapy as the resolving of neurosis. Both the formation of neuroses and their therapy are explained in terms of the learning process and of interactions between individuals and society. The point of view is a synthetic one based on the principles of Freud and his school, the findings of experimental psychology and on social psychology. The organization and style of the book are such that persons not trained in psychology or psychoanalysis can read it with profit. On the other hand, the main theme and the content will be of interest to persons who are professionally concerned with psychoanalysis and personality study. There is an extensive bibliography. The authors are members of the faculty of Yale University.

ENGLISH, OLIVER SPURGEON, AND GERALD H. J. PEARSON

Emotional problems of living avoiding the neurotic pattern. Revised and enlarged edition. New York W W Norton & Company Inc. 1955 592 p. 22 cm. $5.95 4514

Contents. Section A. The formative years—from birth to seven: Development of personality during the oral period. Emotional disturbances that occur during the oral period. Development of personality during the anal period. Emotional disturbances that occur during the anal period. Development of personality during the genital period. Emotional disturbances that occur during the genital period. Section B. The years between—the period of sexual latency: Development of personality during the latent period. Emotional disturbances that occur during the latent period. Section C. The approach to adulthood—adolescence: Development of personality during adolescence. Emotional disturbances that occur during adolescence. Section D. Emotional problems of living: Work and play. Marriage and sexual adjustment. Maturity and its problems. Mental illness. Treatment. Index.

Note: An elementary but detailed discussion of the common emotional problems and the milder types of neuroses. Its primary purpose is to explain the forces that mold personality and then to point out the genesis of neurotic behavior. It is addressed primarily to such groups as young physicians, clergymen, and social workers who have professional but non-specialist interests in the subject, and secondarily to interested laymen. The basic viewpoint is Freudian. The first edition was published in 1945. It was considerably expanded for this second edition. The senior author is Chairman of the Department of Psychiatry of Temple University School of Medicine, and the junior author is Dean of the Institute of the Philadelphia Association for Psychoanalysis.

EWALT, JACK R.

Mental health administration. Springfield Ill. Charles C Thomas 1956 168 p. 23 cm. $5.50. 4515

Contents: Concept of administration. Administrative organization of mental health departments. A community mental health program. Function of the professions in mental health center program. Institutional or hospital organization. Staffing. The business aspects. Special facilities within the mental hospital. Obtaining support. Volunteers. The chaplain. The hospital as special environment. Problems of employee morale. Psychiatric problems and the law. Bibliography and reading list. Appendices. Index.

Note: An authoritative and useful book on the organization and administration of governmental departments and other organizations of an official or quasi-official nature for the promotion of mental health. It covers the full range of the subject from organization at the top down to the daily management of mental hospitals. Information is included even on such details as the choice of flooring materials for institutions and hospitals devoted to the care of mental patients. Nevertheless, the book is not overloaded with detail, and is written so that it can be read in a few hours. The author is Commissioner of the Massachusetts Department of Mental Health and also Clinical Professor of Psychiatry in the Harvard Medical School.

GREENBLATT MILTON AND OTHERS

From custodial to therapeutic patient care in mental hospitals explorations in social treatment. By Milton Greenblatt, Richard H. York, Esther Lucile Brown in collaboration with Robert W Hyde. New York Russell Sage Foundation 1955 497 p. 24 cm. $5.00 4516

Contents (abridged) Introduction, by E. L. Brown. Part I. Toward a therapeutic community, by M. Greenblatt: Beginnings of growth. Eliminating major evils. Effect of somatic treatments. Remobilization. Patient government. Development of therapeutic potential of personnel. Improvement of patient care through teaching and research. Relation of the hospital to the community. Treatment results. Part II. Experiments in ward patient care at Bedford Veterans Administration Hospital, by R. H. York: History and postwar changes. Collaboration between Russell Sage Project and the hospital. A disturbed ward. Two programs for chronic patients. Part III. Motivating patients at chronic wards at Metropolitan State Hospital, by R. H. York: Characteristics and his-

scientists and technicians specializing in the control of airborne infection in food factories, hospitals, schools, etc.

WENSLEY, EDITH

The community and public health nursing, a handbook for and about boards and citizens committees. For the National Organization for Public Health Nursing New York The Macmillan Company, 1950 250 p illus 21 cm. $3 75 4506

Contents (abridged) Part I, Public health nursing—basic facts A bit of history Public health nursing today Trends. Part II, Boards and citizens committees—their responsibilities and organization A citizens committee for the public health nursing service of a health department or other governmental agency Responsibilities of a board of directors in a voluntary agency Schoolboards and school nursing. Officers and committees of a board of directors. Who shall be members? And how long? Part III, Boards and citizens committees—how their responsibilities are carried out Meetings—how to make them interesting and productive. Board-executive-staff relationships. Finances. Public relations. Interagency relationships. Appendixes. Index.

Note. Information about public health activities and about the functions and responsibilities of citizens serving on boards and committees of public health agencies is contained in this work, a successor to the National Organization for Public Health Nursing's *Board members' manual*, second edition, 1937 The particular purpose of the book is to inform members of advisory committees of official agencies and of boards of voluntary agencies, but it is useful also to public health personnel who work with members of such committees and boards. The book depicts public health practices and organization in the United States of America.

WILLIAMS, RALPH CHESTER

The United States Public Health Service 1798–1950 Washington, D C Commissioned Officers Association of the United States Public Health Service, 1951 890 p. illus 26 cm $10 00 4507

Contents Origin and background hospitals. On guard against disease from without. The evolution of public health. Public health laboratory research. Field studies and demonstrations in public health. Intragovernmental relationships. International health relations. Leadership and leaders. Those who carry on. When war came. World War II. Public health in the mid-twentieth century Source of material. Index.

Note. A factual history of the origin, evolution, organization, and activities of the U S. Public Health Service and of its predecessor the U S. Marine Hospital Service, written by the Assistant Surgeon General. It is based both upon manuscript and printed records and upon abstracts, statements, sketches, and other material submitted by large number of activ and retired officers and employees. The 195 illustrations include numerous portraits.

WINSLOW, CHARLES-EDWARD AMORY

Man and epidemics. Princeton Princeton University Press 1952 246 p. illus. 22 cm. $4 00 4508

Contents The evolution of the public health program. Objectives and approaches. The problem of pure water Disposal of human wastes. Milk supply Sanitary problems of food supply Insects and the transmission of disease. Scourges of the past. Challenges of the future. References. Index.

Note A narrative account of the public health movement, its techniques and some of its achievements. The style is factual and moderately technical. The book is suitable for reading and elementary reference by teachers, journalists, and the general public.

ZINSSER, HANS

Rats lice and history being a study in biography, which after twelve preliminary chapters indispensable for the preparation of the lay reader, deals with the life history of typhus fever Boston Little, Brown and Company, 1935 301 p 20 cm. $5.00. 4509

Contents (abridged) An explanation and apology The relationship bet een science and art. Bacteria and other parasites—the origin of life. Parasitism in general. The changing nature of infectious diseases. So-called new diseases, and some that have disappeared. Diseases of the ancient world—a consideration of the epidemic diseases which afflicted the ancient world. Epidemics and the fall of Rome. The influence of epidemic diseases on political and military history and the relative unimportance of generals. The louse—the environment which has helped form [illegible] character. Rats. Mice. The birth, childhood, and adolescence of typhus. Earliest epidemic exploits of our disease. Young manhood—the period of early vigor and wild oats. Appraisal of a contemporary and prospects of future education and discipline.

Note: This "biography of disease presents an informal though scientific account of the history of typhus fever and its influence upon the course of civilization. The style of the book is nontechnical, conversational, and at times dramatic and humorous. There are number of digressions into social and economic history literature, geography poetry and natural science, somewhat suggestive, as the author points out, of the discursive plan of Sterne's *Tristram Shandy* Written for the general reader, the work offers a wide ariety of miscellaneous information relating to the history of typhus, based on the uthor' extensive readings of the classical writers, such as Herodotus, Aristotle, Thucydides, Galen, Justinian, Procopius, Mommsen, Shakespeare, Gibbon, Brill, Murchison, and others. I spite of its achronological and desultory treatment, the work attains unity through its constant emphasis on the role of typhus in world history

MENTAL HYGIENE AND POPULAR PSYCHIATRY

BEERS, CLIFFORD WHITTINGHAM

A mind that found itself, an autobiography Fifth edition revised. Garden City Doubleday & Company, Inc., 1921 394 p. illus. 22 cm $3 95 4510

Note. A classic account of one man's experience in institutions for the care of the insane in the United States of America in the early years of the 20th century After suffering incredibly brutal and inhuman treatment, the author recovered his sanity and went on to found the National Committee for Mental Hygiene and otherwise to take leading part in worldwide movement for improved care of persons with mental disorders and better understanding of mental disease. The first edition was published in 1908, and the book has since gone through many printings. The last revised edition was issued in 1921 The copy of it examined for purposes of this review was printed in 1936 and contained on pages 1 352 the text of *A mind that found itself* and on pages 353–394 history of the mental hygiene movement and other matter pertaining to it.

CARROLL, HERBERT A

Mental hygiene the dynamics of adjustment. Third edition. Englewood Cliffs, N J Prentice-Hall, Inc., 1956 428 p. 22 cm. $5 50. 4511

Contents Introduction. Mainsprings of human behavior. The need for physical security The need for emotional security The need for achievement. The need for status. Some aspects of learning. Adjusting to frustration. Neurotic adjustments. Psychotic adjustments. The community The school. Exceptional children. The role of measurement. Regaining mental health. Questions for study and discussion. Selected bibliography Index.

Note While the central subject of this introductory college textbook is the prevention and treatment of behavior disorders, it includes also general introductory material on motivation, individual differences, learning, psychometrics, and related phases of psychology It is directed to two groups of students those who are intending to major in psychology and those who are interested in learning about mental hygiene as part of their general education The psychoses are treated in order that the student may better understand the relationships between normal and abnormal behavior The second edition was published in 1947 In preparing this third edition, the chapter entitled "The community" is newly added and new sections were added to several other chapters. Several chapters were rewritten, and a selection of literature published since the first

KOTINSKY, RUTH AND HELEN L WITMER editors

Community programs for mental health theory practice, evaluation. Contributors Barbara Biber and others. Cambridge, Mass. Published for The Commonwealth Fund by Harvard University Press, 1955 362 p. 21 cm. (Advisory committee Abraham Z. Barhash, and others) $5.00. 4523

Contents: Part I, Theory: The mental health movement, its theoretical assumptions, by S. W. Ginsburg. Part II, Practice: The field of mental promotion, by E. M. Tufts. Mass programs for the promotion of mental health, by R. L. Chamberlain and E. de Schweinitz. Schooling as an influence in developing healthy personality, by B. Biber. Part III, Evaluation: Problems in the evaluation of mental health programs, by L. P. Herma. Toward social psychology of mental health, by M. Jahoda. Appendix: Problems in the use of sample surveys, by R. R. Holt. The authors.

Note: Essentially a survey of mental hygiene or mental health programs in the United States of America since 1930. The chapters are essentially independent papers. However, all but one were written especially for this volume, and all emphasize the community approach to the promotion of mental health. Numerous specific programs and activities are described.

KRAINES SAMUEL HENRY AND E S THETFORD

Managing your mind you can change human nature. New York The Macmillan Company 1943 374 p. 22 cm. $3.50. 4524

Contents: Introduction. Man versus animal. Automatic habits in a changing world. Emotional thinking. Making allies of our attitudes. Tension. Heart symptoms. Stomach symptoms. Other symptoms. Psychologic mechanisms. Symbolic symptoms. Sex and marriage. A realistic philosophy of life. Intellectual objectivity and emotional stability. Achieving maturity. Self-reliance and courage. Energy expression. Changing social nature. Index.

Note: A nontechnical treatise on mental hygiene for the layman, and for physicians, nurses, and others dealing with emotional problems, tensions, and maladjustment. This book is psychosomatic in approach, and the discussion is augmented by down-to-earth philosophy. A practical technique is suggested whereby the reader can control his emotions and substitute mature and healthful attitudes for childish ones.

LEMKAU PAUL V

Mental hygiene in public health. Second edition. New York The Blakiston Division, McGraw Hill Book Company Inc., 1955 486 p. illus. 23 cm. (McGraw Hill series in health science Amos Christie, consulting editor) $9.00. 4525

Contents: Part I. The place of mental hygiene in public health. The field of mental hygiene. Mental hygiene as a public health responsibility. Techniques in mental hygiene—leadership personnel—methods. The attack on the problem—national mental health service—state organization—local administration. Part II, The development of the individual. The study of personality development. The pre-individual factors—eugenics. The prenatal and paranatal period. The period of infancy. The preschool period. The school period. The adolescent period. The young-adult period. The period of middle age. The period of old age. Summary and retrospect. Appendix: Review of psychopathological states. Visual aids. Author index. Subject index.

Note: An introductory but comprehensive textbook. It follows the organization of a course in mental hygiene given by the author at the School of Hygiene and Public Health of the Johns Hopkins University. The elements of mental hygiene in an overall program of public health and preventive medicine are discussed in detail. Approximately 130 pages are devoted to the first part which deals primarily with the governmental aspects of the subject, while two and one-half times as much space is devoted to mental hygiene in the development of the individual. Extensive bibliographies are included at the chapters of both parts. The first edition was published in 1949. This second edition represents a very extensive revision and considerable expansion of the book.

MCKINNEY, FRED

Psychology of personal adjustment students introduction to mental hygiene. Second edition. New York John Wiley & Sons, Inc. 1949 752 p. illus. 22 cm. (Wiley publications in psychology Herbert S. Langfeld advisory editor) $6.00. 4526

Contents: Introduction. Adjustment to college work. Concentration, learning, and thinking. Personal efficiency. Understanding oneself. Development of personality. Growth adjustment. Personal orientation. Vocational selection. Social adjustment. Social proficiency and leadership. Affections and convictions. Marital adjustment. Emotional stability. Self-confidence. The adjusted personality. Appendix. Name index. Subject index.

Note: A well-written and eminently practical discussion of the emotional and psychological problems which face the average college student. The book stresses the student's point of view and is designed for use as a text in introductory psychology courses and for individual reading. In this edition, it has been revised and enlarged to incorporate the latest trends and developments in the field of personal adjustment. A chapter on development of personality has been added, and new case studies have been included. The chapter bibliographies have also been brought up to date.

MENNINGER, KARL A.

The human mind. Third edition, corrected enlarged, & rewritten. New York Alfred A. Knopf Inc. 1945 531 p. 24 cm. $6.00. 4527

Contents: Principles. Personalities. Symptoms. Motives. Treatments. Applications. Bibliography. Index.

Note: Written by a leading American psychiatrist, this book is widely recognized as an outstanding elementary exposition of human behavior and its disorders from the point of view of psychiatry. It is intended for lay readers, but is not an extreme popularization. It is a bulky book, abounding in quotations from literature and case histories. In fact, it contains enough substance to make it useful to medical students and even graduate physicians as an introduction to psychiatry. The first edition was published in 1930 and the second edition in 1937. The book has passed through many printings, and the publisher states that more than 200,000 copies have been sold in the United States of America alone.

MENNINGER, WILLIAM CLAIRE, AND MUNRO LEAF

You and psychiatry New York Charles Scribner's Sons, 1948. 175 p. 21 cm. $2.50 4528

Contents: Our machinery. Our orientation. Our training. The development of our relationships. The struggle. Personality structure. Mental mechanisms. If you go to the psychiatrist. The application to you. Index.

Note: A straightforward and relatively brief exposition of the workings of the human mind, written in the light of modern psychoanalytic theory but not in its terminology. As is implied by the title, it is designed for lay reading. Mainly it deals with normal or slightly abnormal behavior but how normal behavior can become abnormal, and what can be done if this occurs, are discussed also.

MOORE, THOMAS VERNER

Personal mental hygiene. New York Grune & Stratton, 1944 331 p. 22 cm. $5.50 4529

Contents: Preface. The concept of mental hygiene and mental disorder. The mental hygiene of emotional life. Depression. Anxiety and scrupulosity. Anger. Hatred and race prejudice. Defect of guidance and control in emotional life. The play of intellect and emotion in the problems of life. Balanced and unbalanced personalities and their sense of values. The mental hygiene of the home. The overprotected child. The rejected child. Home [illegible] and the problem of dating. The ideal of family life. Mental hygiene and the school. Religious ideas in mental hygiene. [illegible] drives: lusts and insatiable cravings. Unwholesome drives: the lure of pleasure and its rationalization. Reinterpretations and religious ideals. Index of authors. Index of subjects.

torical development of the hospital. Social activities for chronic women patients. Motivation of a chronic men's ward. Conclusion by E. L. Brown and M. Greenblatt. Social treatment. Bibliography compiled by F. L. Wells. Index.

Note: An important contribution to the theory and practice of patient care in psychiatric hospitals. It is an account of an elaborate experimental investigation which had as its purpose a study of the extent to which principles and practice of patient care already evolved by certain small and relatively favored psychiatric hospitals in the United States of America could be applied to larger and less-well-favored institutions. The Boston Psychopathic Hospital which has for a number of years long been a leader in the development of sound and practical methods in the care of psychiatric patients. The large hospitals chosen for study were the Veterans Administration Hospital in Bedford, Massachusetts, and the Metropolitan State Hospital in Waltham, Massachusetts. The book is organized for reading by all interested persons. The graphs and tables that feature so many reports of scientific experiments are, for the most part, lacking. The bibliography is an extensive though selected one.

Hinsie, Leland Earl

Understandable psychiatry New York The Macmillan Company, 1948 359 p 22 cm. $5 00 4517

Contents: How feelings make us sick. Emotional pains. The oneness of mind and body. Regressive living. Troublesome character traits. Origin of types of personality. Instinctual impulses. Mental energy. The role of organic factors. Anxiety. Fear. Obsessions and compulsions. Mania and melancholia. Schizophrenia. Change of life. Epilepsy. Alcohol and other drugs. Antisocial people (psychopathic personalities). Emotions and intellect. Appendix: Official classification of mental disorders. Index.

Note. A well-organized discussion of psychiatric disorders and of the techniques of modern psychotherapy written for the lay reader. A good share of the text consists of rewritten excerpts from case histories, but these have been largely freed of technical terminology and so skillfully woven into the exposition that the reader is unconscious of their origin. Comprehension of the work requires more concentration than is required by some other popular works on the subject, but because the treatment has not been over-simplified, the reader may obtain a more helpful understanding of the meaning and methods of psychiatry. Although it is addressed particularly to patients who are undergoing psychiatric treatment, the book is meaty enough to be useful also to general practitioners of medicine. There are no references to other literature.

Horney, Karen, editor

Are you considering psychoanalysis? New York W W Norton & Company Inc. 1946 262 p 21 cm $1 49 4518

Contents: Introduction by K. Horney. Why psychoanalysis? by A. R. Martin. What schools of psychoanalysis? by V. Barbo. What is neurosis? by M. Ivimey. What are your doubts about analysis? by H. Kelman. Who should your analyst be? by H. Kelman. What do you do in analysis? by E. Kilpatrick. What does the analyst do? by K. Horney. How does analysis help? by M. Ivimey. How do you progress after analysis? by K. Horney. Index.

Note. A collection of lectures that were originally given under the auspices of the Auxiliary Council of the Association for the Advancement of Psychoanalysis. The purpose of the lecture series, and of this book, was to supply answers to the more common and significant questions that laymen ask about psychoanalysis. The two final lectures are of special value to the uninitiated, for they explain that psychoanalysis is no magic cure but a technique whose benefits depend upon the co-operative efforts of analyst and patient.

Horney Karen

Neurosis and human growth, the struggle toward self realization. New York W W Norton & Company Inc. 1950 391 p. 22 cm $5.50. 4519

Contents. Introduction—a morality of evolution. The search for glory. Neurotic claims. The tyranny of the should. Neurotic pride. Self-hate and self-contempt. Alienation from self. General measures to relieve tension. The expansive solutions—the appeal of mastery. The self-effacing solution—the appeal of love. Morbid dependency. Resignation—the appeal of freedom. Neurotic disturbances in human relationships. Neurotic disturbances in work. The road of psychoanalytic therapy. Theoretical considerations. Reference readings. Index.

Note: A penetrating study of neurosis viewed as a special and unfortunate form of human development. It is designed for lay readers primarily and is written in the same clear convincing style that has characterized this author's other books.

Horney, Karen

Our inner conflicts, a constructive theory of neurosis New York W W Norton & Company, Inc. 1945 250 p 21 cm. $4.50. 4520

Contents: Introduction. Part I, Neurotic conflicts and attempts at solution. The poignancy of neurotic conflicts. The basic conflict. Moving toward people. Moving against people. Moving away from people. The idealized image. Externalization. Auxiliary approaches to artificial harmony. Part II, Consequences of unresolved conflicts: Fears. Impoverishment of personality. Hopelessness. Sadistic trends. Conclusion: resolution of neurotic conflicts. Index.

Note: In the first part of this book, the author describes the four major attempts at solution of their conflicts made by most neurotic persons. In the second part, the consequences of these unresolved conflicts are described. The author's theory of neurotic development is constructive, in that it allows neurotic hopelessness to be tackled and resolved and steps to be taken toward an integration of personality. Freud's pessimism as regards neuroses and their treatment is not shared by the author of this book, who believes that man has the capacity and desire to develop his potentialities and become a decent human being, and that these deteriorate if his relationship to others and hence to himself is, and continues to be, disturbed." The book is scholarly and lucidly written. It ranks easily as one of the better books on psychoanalysis for the layman.

Katz, Barney, and Louis P Thorpe

Understanding people in distress emotional and mental disorders their cause care, and cure. New York The Ronald Press Company, 1955 357 p. 21 cm. $4 00 4521

Contents: What makes people act that way? The struggle for good adjustment. The times and signs of distress. Mild everyday distress. Delinquency and crime as personality disorders. Understanding sexual behavior. Unusual sexual behavior. How emotional distress makes your body sick. Neurotics in distress. More about neurotics. Alcohol drugs, and emotional distress. The distress of old age. Psychoses caused by emotional distress. Mental illnesses from disease and injury. Hope for people in distress. Recommended readings. Index.

Note: A fairly substantial book written for lay readers. The authors are clinical psychologists.

Klein, D B

Mental hygiene a survey of personality disorders and mental health. Revised edition New York Henry Holt and Company, 1956 654 p. illus. 21 cm. $6 75 4522

Contents (abridged): Part one, General introduction. Part two, The nature of mental disorders. Mental disorder and scientific understanding. An outline of psychopathology. Part three, Preventing mental disorder. Prophylactic aspects of structural disorders. Prophylactic aspects of functional psychoses. Prophylactic aspects of neurotic disorders. Part four, Promoting mental health. Home and the balanced personality. From the nurture of infants to the nature of adults. The dynamics of conscience. From fixations to functional autonomy. Coping with reality. Is repression a mental hygiene evil? Manners and morale. Education for mental health. Glossary. Index.

Note. Although introductory to the subject, this book contains more of the substance of professional thought on mental hygiene than some introductory works. It deals with basic principles and concepts, fundamental issues and scientific aspects of the promotion of mental health and the prevention of mental disease. It incorporates the history and philosophy of the mental hygiene movement in the United States of America. Primarily it is addressed to college students who are preparing for careers in clinical psychology but is suitable also for those who need a book somewhat more advanced than those written as personal guides to mental hygiene. The first edition was published in 1944. The book was somewhat reorganized and extensively rewritten for this second edition.

the [illegible] in mental hospitals to show how these institutions [illegible] to heal patients. The volume provides specific information [illegible] how to select a mental hospital to how to receive the [illegible] covered patient after his discharge. The appendix contains [illegible] of those states in the United States of America that license and [illegible] private mental hospitals. A new edition was published in 1957 95 p. 90 [illegible]

STRECKER, EDWARD ADAM

Basic psychiatry New York Random House, 1952 473 p. 21 cm. $3 95 4536

Contents Introduction. Causation. Classification or naming. Examination and symptoms. The organic psychoses. Toxic psychoses. "Functional" reactions. Manic-depressive and schizophrenic psychoses. Paranoia and paranoid conditions. Psychoneuroses. The psychosomatics and psychosomatics of pregnancy and childbirth. Pathological drinking. Mental defects. Constitutional psychopathic inferiority. Treatment. The silver cord. A design for childhood. The psychiatry of war. Postscript. Index.

Note: A book for laymen and other nonspecialists on the human problems which develop [illegible] need for psychiatric attention. The common psychiatric ailments are described with case studies to point up the descriptions and make them more concrete to the reader. The language is relatively simple, and the total work paints a broad picture of what the psychiatrists are currently able to do in discovering, combating and treating mental ailments. The author is Emeritus Professor of Psychiatry at the University of Pennsylvania.

THORPE, LOUIS PETER

The psychology of mental health. New York The Ronald Press Company 1950. 747 p. illus. 21 cm. $6.00 4537

Contents: Part I, The problem of mental health. Modern society and mental health. Part II, The psychodynamics of mental health. Basic needs and mental health. Psychoanalysis and mental health. Nature and evaluation of mental health. Adjustment mechanisms and mental health. Part III, Personality and mental health. Mental health and the organization of personality. Physiological factors in personality and mental health. Development of personality. Part IV Conditions marked by inadequate mental health. Minor personality maladjustments. Psychosomatic disorders. Hostile behavior. Deviant sexual behavior. The psychoneuroses. The functional psychoses. Part [illegible] Improving mental health. Mental health and the home. The school and mental health—teacher-pupil relationships—subject-matter and administrative aspects. The community and mental health. Diagnosing mental health and personality. Therapeutic methods and readjustment. Glossary of technical terms. Author index. Subject index.

Note. A comprehensive text, written at the college level and designed for use in courses on mental hygiene, dynamics of personality etc. Its wide scope makes [illegible] useful also as an orientation survey for such professional people as teachers and social workers. Particular attention is paid to the significance of home and school experiences in relation to mental health. Source articles and books are cited in footnotes throughout the book, and the chapters conclude with lists of recommended readings. The author is Professor of Education and Psychology at the University of Southern California.

UNITED STATES NATIONAL INSTITUTES OF HEALTH. SUBCOMMITTEE ON EVALUATION OF MENTAL HEALTH ACTIVITIES

Evaluation in mental health a review of the problem of evaluating mental health activities. Report. Washington, D C. Government Printing Office, 1955 292 p. 24 cm. (United States Public Health Service. Publication no. 413) $2.00. 4538

Contents Introduction. I, Theoretical and methodological considerations. Theoretical considerations. Identification of mental health activities. Levels of evaluation. Methodological considerations in scientific evaluation. II, Comments relating to mental health activity areas. Community organization. Administration. Professional personnel. Education and information. Preventive effects of programs. Factors influencing individual mental health. Diagnostic, prognostic and treatment procedures. III, General observations and recommendations. References: Theoretical and methodological considerations. Mental health activity areas. Appendix: Supplementary reference list. Author index.

Note The subcommittee [illegible] hich prepared this report was appointed to investigate evaluation studies in the field of mental health, to describe those already available and to report on studies underway. Four-fifths of the report is an annotated bibliography of 934 studies concerned with evaluating mental health activities. Introductory chapters present some observations, suggestions, and recommendations growing out of the collection and analysis of the material. The subcommittee, [illegible] hich worked for more than two years in the preparation of the report, looks upon it as [illegible] working tool for individuals, teams, and other groups, rather than as [illegible] manual or guide. A major goal of the report is to increase interest in evaluative activity in the field of mental health and to stimulate progress in both research and applications.

WALLIN JOHN EDWARD WALLACE

Minor mental maladjustments in normal people based on original autobiographies of personality maladjustments. A casebook for the use of students of mental hygiene psychology education, child development, sociology and the formation of personality traits. Durham Duke University Press, 1939 298 p 24 cm. (Duke University publications) $3.00 4539

Contents (abridged) Purpose and nature of the investigation of mental, educational, and social maladjustments, and the practical contributions [illegible] hich this book is expected to make. Fears and phobias. Dreads, anxieties, and worries. Bashfulness, timidity lack of self-confidence, and seclusiveness. Feelings of inferiority and inadequacy. Obsessions and compulsions. Dreams, nightmares, somnambulism, and somniloquism. Daydreaming. Emotional disturbances and maladjustments produced by specific processes of emotional conditioning. Difficulties produced by criticism, sarcasm, ridicule, nagging, and threats. Reactions to unfavorable comparisons. Effects of superstitious beliefs. Effects of parental behavior patterns and home treatment. Effects of the school situation and teacher attitudes and behavior patterns. Attitudes or behavior patterns induced by physical handicaps, defects, or appearance. Food fads, antipathies, caprices, and idiosyncrasies. Index.

Note: Designed for specialists, teachers, students, and laymen. It is based upon factual autobiographies gathered from intellectually normal and superior people. The ways in [illegible] hich various maladjustments arise from the process of early conditioning are demonstrated.

PERSONAL HYGIENE

DAVIS ARTHUR F AND WARREN H. SOUTHWORTH

Meredith's Hygiene a textbook for college students on physical mental and social health from personal and public aspects. Fifth edition. New York The McGraw Hill Book Company 1954 906 p. illus. 23 cm. $6.00 4540

Contents (abridged) Part I, Introduction. Part II, The body in health and disease. Part III, Forces for health. Part IV The problem of infection. Part [illegible] Some major health problems. Part VI, First aid in injury and illness. Part VII, The hygiene of everyday life. Part VIII, Familial hygiene. Part IX, Mental health. Supplement. List of 16-mm films. Directory of film sources. Sources and materials for teachers of college hygiene. Bibliography. Index.

Note: The original author of this book was *Florence Meredith* and it was first published in 1918, since when it has been extensively used in its various editions as [illegible] textbook for college students. It is especially suited to the instruction of student teachers and other students who are preparing for professions in which [illegible] broad and fairly substantial knowledge of personal hygiene is useful. This current edition is organized in the nine sections [illegible] hose titles are given above and in 37 chapters. It contains 170 figures.

Note A book intended primarily for the individual. It presents various attitudes, ideals, and principles which the author who is professor of psychology and psychiatry at the Catholic University of America, believes to be of value to the individual confronted with personal difficulties. The workings of the mind and its adjustments to life are illustrated by analyses not only of clinical material but also of historical and literary personalities. The book is written from the Roman Catholic standpoint and bears the *Nihil obstat* and imprimatur of the Archbishop of Baltimore.

MORGAN, JOHN JACOB BROOKE

How to keep a sound mind revised edition of *Keeping a sound mind* New York The Macmillan Company, 1946 404 p illus. 22 cm $4 90 4530

Contents. How to appraise yourself. How to make people like you. How to develop social poise. How to attain social security How to overcome handicaps. How to attain emotional maturity How to master your fears. How to overcome emotional depressions. How to fit into a working world. How to make your work count. How to think clearly How to solve mental conflicts. How to develop a wholesome pattern for living. How to be happily maladjusted. Index.

Note A matter-of-fact approach to mental hygiene. It is written primarily for use as a textbook in first year college courses but is also suitable for general reading. The evidences of mental ill-health are described, and means of developing good mental habits and wholesome emotional adjustments are discussed in simple language. This revised edition contains some new material and some of the older material has been rearranged in accordance with suggestions by instructors who have used the book as a text.

REDLICH, FRITZ, AND OTHERS

The inside story, psychiatry and everyday life. Compiled under the direction of Fritz Redlich. Text written by June Bingham with the collaboration of Jacob Levine. New York Alfred A. Knopf 1953 280 p illus 22 cm. $4 00 4531

Contents Prologue—the psychiatrist's prescription. The layman preface. The key to laughter—repression Basic urges and feelings. Anxiety Children. Normal and abnormal people. The psychiatrist. Will power and knowledge. Epilogue—a final prescription. Comparative glossary of some psychiatric terms—what they mean to the doctor—what they mean to the layman. Bibliography Books for the general reader books for the student pamphlets and movies. National agencies for mental health.

Note In this book for lay readers humor is combined with well written text. A large number of cartoons by some of the leading humorous cartoonists of contemporary United States of America are reprinted in the volume for the light they throw on human urges and foibles. There are few references in the text itself to the cartoons, but the relationships are obvious. The text explains in simple but interesting style some of the basic ideas of psychiatry about human behavior and about the conflicts that develop in the adjustment of individuals to the world. At the same time, it throws light on how and why the techniques of psychiatry are sometimes able to help people resolve their emotional and psychological difficulties. Dr Redlich, the senior author is Chairman of the Department of Psychiatry of the School of Medicine of Yale University

RENNIE THOMAS ALEXANDER CUMMING AND LUTHER E WOODWARD

Mental health in modern society Cambridge Mass Harvard University Press 1948 424 p illus. 24 cm. $4 00 4532

Contents Part I, Lessons from the war period Mental health services in the armed forces. Emergency measures for aiding veteran-civilian adjustment. The psychiatric disabilities of war—dynamics and motivation—principles, methods, and results of treatment. Part II, Post-emergency problems in mental health Continuing mental health problems and needs. Part III, Sources of help in treatment and prevention Contributions of the practicing physician. Contributions of social workers. Contributions of the psychologist. Pastoral counseling and church life. Mental hygiene in industry Practical considerations in interviewing and counseling. The mental hygiene of family living. Mental health in education. Summary and prospect—the individual and society Appendices. Index.

Note: During World War II great advances were made in knowledge of the causes and methods of treatment of mental illness. The present volume aims to show how this newly acquired knowledge can be applied in solving problems of mental health at the community level. The responsibilities of both individuals and agencies in psychiatric rehabilitation work are discussed.

SCHNEIDERS, ALEXANDER A.

Personal adjustment and mental health. New York Rinehart & Company, Inc., 1955 587 p 23 cm. $6 00 4533

Contents Part one, The study of adjustment: Introduction. The scientific study of adjustment. Part two, Nature and conditions of adjustment Basic concepts for adjustment psychology Criteria of adjustment and mental health. Personality and adjustment. Conditions and determinants of adjustment. The dynamics of adjustment. The process of adjustment. Part three, Patterns of adjustment: Normal adjustment patterns. Adjustment by defense reactions (flight from self) Adjustment by aggression and delinquency—by escape and withdrawal (flight from reality)—by flight into illness. Part four Varieties of adjustment Personal and social adjustment. Vocational and marital adjustment. Part five, Mental hygiene and treatment Nature and principles of mental hygiene. The treatment of adjustment problems. Glossary Appendixes. Index.

Note A textbook for college students. It is concerned primarily with the problems of personal adjustment to life in present-day society and secondarily with mental health or mental hygiene. Even though it is an introduction to the subject of personal adjustment, it is a rather substantial work, containing detailed discussions of most points of personal adjustment both normal and abnormal. The principles and methods of psychotherapy are surveyed in one chapter Literature references are printed as footnotes throughout the book, and there is a useful glossary. The author is Professor of Psychology and Director of Psychological Services in Fordham University and the book is written from the Roman Catholic viewpoint.

STECKLE, LYNDE CHARLES

Problems of human adjustment. New York Harper & Brothers 1949 351 p illus. 22 cm. 4534

Contents Introduction. Man the animal. Emotional living. Mind-body Realistic living. The road to neurosis. The main problems of life. Sanity in sex. Courtship and marriage. Happiness in work. The search for God. Maturity in old age. A realistic outlook on life. Bibliography Index.

Note. The author of this book states, "college students, professional persons, industrialists, factory or clerical workers,—in fact all mankind—must face and resolve certain fundamental issues of living. The thesis here presented is that these issues obtain problem status only when man attempts to meet them with inadequate preparation. The book is a nontechnical, commonsense discussion aimed at general readers and college students. It is well documented with references to more than 170 books and papers. The author is a professional psychologist. A revised edition was published in 1957 419 p., $5.00.

STERN, EDITH (MENDEL)

Mental illness a guide for the family with the collaboration of Samuel W Hamilton Revised edition. New York National Association for Mental Health 1945 124 p 20 cm. 4535

Contents Foreword, by S. W Hamilton. A healthy attitude toward mental illness. When mental illness strikes. Why hospitalize? Private or public hospital? Getting the patient admitted. Taking the patient to the hospital. Leaving the patient at the hospital. The hospital world Life in ... The first month in the hospital. Some treatments for mental illness. The family mental hospital. Letters and visits. Toward discharge When the ... and the hospital. The permanence of recovery Continued care ... patient comes home. The ... Appendices. Glossary

There's some you can do. Appendices. Glossary

Note A simple straightforward account of what to do when mental illness strikes a member of the family The author points out that mental disease is illness and they tell the reader behind

tion. Part [illegible] Community health. Communicable disease control. Community health organization. Appendices: Width-weight tables for college men and college women. First aid condensed. Index.

Note: A broad, elementary discussion of basic human physiology, reproduction, nutrition and exercise, with [illegible] modern emphasis on mental health and family living. The viewpoint and lucid style make the book easy to read, and its inclusiveness gives it some value as [illegible] personal reference book as well as [illegible] text.

SMILEY DEAN FRANKLIN, AND ADRIAN GORDON GOULD

Your health. New York The Macmillan Company 1951. 555 p. illus. 22 cm. $5.00. 4547

Contents: Good health is not just good luck. Building resistance—avoiding infection. Immunity by inoculation. Avoiding nose and throat disorders. Science conquering tuberculosis. Fresh air indoors. *Food and health.* Preventing intestinal infections. *Healthy teeth and gums.* Preventing nervousness. Some facts about sleep, play and muscles. Keeping [illegible] healthy mind. Keeping up appearances. Exercise—how much, how little? The hygiene of emotions. Combating heart disease. The hygiene of the genital system. Social hygiene problems. Safeguarding vision and hearing. Choosing your doctor and hospital. The proprietary remedies—yes or no? You and your health department. When you build that home. When that first baby comes. When your child enters school. *If you work in [illegible] factory.* If you live in the country. When you grow older. Sources of various pictures on health. Glossary of technical terms. Index.

Note: Although designed as [illegible] text for college freshman courses, this volume has value for the general reader as [illegible] guide in developing sensible habits of living. The book is based on the author [illegible] College textbook of hygiene, 2nd ed., 1940, but the material has been so extensively revised and rewritten as to constitute [illegible] new work. Less attention is now given to the structure and functions of the various parts of the body and more emphasis placed on community health problems. Chapter bibliographies are included.

STILES WILLIAM W

Individual and community health. New York McGraw Hill Book Company Inc., 1953 492 p. illus. 24 cm. $6.50. 4548

Contents: An introduction to individual and community health. Accidents and violence. Wound infections. Contact and air-borne diseases. General measures of disease control. Disorders of nutrition. Cancers and metabolism. Food sanitation. Food-borne diseases. Water, sewage and flies. Arthropod-borne diseases. Animal-borne diseases. Environmental and occupational diseases. Socio-sexual problems. Maternal and child care. Disorders of the nervous system. Problems relating to medical care. The challenge to control disease. Index.

Note: An introductory exposition of health problems and healthful principles of living in the framework of modern communities. The major part of the book is devoted to descriptions of the origin and control of various categories of disease. A summary style of presentation is followed and [illegible] wide range of information presented. The chapters are divided into typical sections, most of which have brief lists of "Suggested readings" appended. Where controls are discussed, no therapy is suggested. The book is useful primarily as [illegible] text in introductory college courses in health. The author is Associate Professor of Public Health at the University of California.

TURNER, C. E.

Personal and community health. Tenth edition. St. Louis The C. V Mosby Company 1956 660 p. illus. 23 cm. $4 75 4549

Contents (abridged): Part I, Personal health. Health values and motivation. Nutritional needs. Digestion and health. Oral hygiene. The health of the breathing structures. Hygiene of the circulation. Hygiene of the excretory system. The skin. Endocrines as factors in health and personality. The hygiene of the nervous system. Narcotics and stimulants. The hygiene of body activity. Preventing accidents. Heredity and health. Familial hygiene. Adult hygiene. Part II, Community health: Man [illegible] nature battle against disease. *Public health today.* *Essential facts of immunity.* Communicable disease control. Maternal and child health. Health protection through food control. Safe [illegible] water supplies. Waste disposal. School health. Health in industry. Appendix. Glossary. Index.

Note: An introductory college textbook [illegible] book has been widely used in its various editions since publication of the first edition in 1918. It is designed to give useful information and instruction on [illegible] wide variety of health problems [illegible] which [illegible] affect the life of the [illegible] average college student or graduate [illegible] whether or not he enters [illegible] scientific profession. The close relationship between personal and community health and the responsibility of the individual toward the community in health matters are stressed. However, much specific information on personal hygiene is also included. The book is written in [illegible] plain, factual style that is easy to read, and is attractively illustrated. Selected bibliographies are included.

VAN BUSKIRK EDGAR FLANDREAU

Principles of healthful living for the individual and the community Edited by Carl L. Kline. New York The Dryden Press 1948. 474 p. illus. 21 cm. $4.00. 4550

Contents: Part one, Basic concepts. Our environment. A survey of the human organism. Part II, Emphasizing the individual aspects of healthful living: Vision and hearing. The skin and the teeth. Bodily movement and posture. Activity and relaxation. Air and breathing. Diseases of the respiratory system. Foods. The digestive system. The circulatory system. The excretory system. Part III, Emphasizing health in human relationships. The continuation of life. Control and integration of the body. Mental health. Mental handicaps. The progress of medicine. *Family health. Disease control in family and community.* Public-health agencies. One hundred books named for supplementary reading. Index.

Note: An elementary but inclusive text [illegible] which is designed primarily for use in personal hygiene courses in colleges. The style is largely nontechnical, and the book is organized to facilitate reading. It is, therefore, suitable for lay readers also. Among the changes in this edition [illegible] addition of the chapters on family and community health.

DIEHL, HAROLD SHEELY, AND RUTH E BOYNTON

Personal health and community hygiene, a revision of *Healthful living for nurses* Second edition. New York McGraw Hill Book Company, Inc., 1951 469 p illus 24 cm. (McGraw Hill series in nursing, Lucile Petry, consulting editor) $5 00 4541

Contents (abridged) Safeguarding the health of nurses. Mental health. Nutrition and growth. Stimulants. Exercise—fatigue—rest. Sunlight and fresh air Specific disease prevention. Colds and influenza. Care of the nose, throat, ears, and teeth. The conservation of vision. Care of the skin and hair Care of the feet. Glands f internal secretion. Sex life and venereal diseases. Modern parenthood. Health problems of advancing years. Community health. Controlling communicable diseases. Animals, insects, and disease. Sanitation and health. Health in school and on the job. Government and health. Voluntary health services. Appendixes. Index.

Note. As textbook used in using schools and in nonprofessional courses in hygiene under its two previous titles, *Healthful living for nurses* and *Textbook f healthful living*, this book has been a standard tool of instruction for a decade. In line with its present title, new material (5 chapters) has been added on community health and health services. It is written in clear nontechnical language and gi es general understanding of the whole subject without including specific treatments. The ample references, charts, and tables have for the most part been brought up to date.

DIEHL, HAROLD SHEELY

Textbook of healthful living Fifth edition. New York McGraw Hill Book Company Inc., 1955 802 p illus (part col d) 23 cm. $6 50 4542

Contents (abridged) Possibilities of longer life and better health. Major health problems. Mental health. Nutrition and growth. Sound teeth. Care of the skin and hair. Glands of internal secretion. Sex life. Health problems of advancing years. Community health. Animals, insects, and disease. Sanitation and health. Government and health. Voluntary health services. Health in the future. Appendix. Index.

Note. A standard work on personal hygiene. It is used as textbook in introductory courses offered to college students and as a reference book for lay readers. A very wide range of topics is covered. It is organized in 30 chapters and an appendix which is almost 200 pages long. The common language is employed in the chapters, but the appendix contains a series of condensed summaries of specific diseases, and these are cast in medical terminology Also included in the appendix is a useful glossary in which technical terms are defined and their pronunciation indicated. Literature references and suggestions for further reading are included. The fourth edition was published in 1950. Although much material was carried over from it to this fifth edition, revisions ere made in number of chapters. These included the addition of information on lung cancer antibiotics, and rehabilitation of the disabled and other topics. An abridged version used primarily as a textbook in short courses, is available under the title, *Element of healthful living*, third edition, McGraw-Hill Book Company Inc., 1955 351 p., $4 50.

EMERSON, WILLIAM ROBIE PATTEN

Health for the having, a handbook for physical fitness. New York The Macmillan Company 1944 146 p illus. 19 cm. $2 00 4543

Contents How well are you? What is a physical fitness examination Is your weight right? How do you know? Underweight—its correction. Overweight—its correction. Is your blood pressure rising? How good are your health habits? Are you starving amidst plenty? Your day budget your time. Health questions and their answers. Does our school system make for health? How long do you expect to live? Save life your own. Appendix Tables of 100 calorie portions tables of height and weight individual weight charts. Index.

Note. A concise manual in nontechnical language, outlining the regimen needed for positive health, with emphasis on the elimination of faulty health habits. Written for the layman, and for physicians, teachers, health educators and others conducting physical fitness programs.

JOHNS, EDWARD B , AND OTHERS

Health for effective living, a basic health education text for college students. By Edward B Johns, Wilfred C Sutton Lloyd E. Webster Adviser and consultant Walter H. Brown. New York McGraw Hill Book Company, Inc., 1954 473 p illus. 24 cm. $5.00. 4544

Contents. Part one, Orientation in health education Understanding health—a point of view Appraising health needs and interests. Exploring the college health program. Part two, Developing a healthy personality: Appraising mental health. Making life adjustments. Part three, Preparing for effective family living: Choosing a life partner. Planning for marriage. Preparing for responsibilities of parenthood. Part four Developing and maintaining health Maintaining a healthy and attracti e body Utilizing opportunities for rest and recreation. Selecting and eating wholesome foods. Selecting health services and products. Part five, Building defenses for effective living Preventive and controlling communicable disease. Understanding chronic and degenerative diseases. Understanding depressants and stimulants. Part six, Effective living in the community Living safely in a community Participating in the community health program. Solving international health problems. Index.

Note. Written by present and former faculty members of the University of California at Los Angeles, this book is directed to undergraduate college students, and its purpose is to provide basic information on personal hygiene, family life, and public health for personal use and guidance. It is not designed as a text for students who are planning careers in such fields as public health. It is well organized, ritten in a style that is easy to read, and is adequately provided with guides to further reading.

MARVIN, H. M

You and your heart, a clinic for laymen on the heart and circulation. Foreword by Paul D White. New York Random House, 1950. 306 p illus. 22 cm. $3 00 4545

Contents The miracle of health, by H. M. Marvin. Blood and muscle (the circulatory system and how it works) by H. M. Marvin. Internal adventure (short history of man's exploration of his circulatory system) by H. M. Marvin. The heart at birth (congenital defects and their treatment) by H. M. Marvin. Road blocks of the heart (diseases of the coronary arteries) by H. M. Marvin. Hearts in trouble (diseases other than those of the coronaries) by H. M. Marvin. Rheumatic fever (the nature and treatment of rheumatic heart disease) by T D. Jones. High blood pressure (our commonest chronic complaint) by I. H. Page. Faulty supply lines (diseases of the blood vessels) by I. S. Wright. The ounce of prevention (public health aspects of heart disease) by D D Rutstein. Misapprehensions (some common fallacies about heart disease) by H. M. Marvin. Unanswered questions (the status and the need for research) by H. M. Marvin. Index.

Note. A book for lay readers written by physicians acti in the American Heart Association and the National Heart Institute. To insure clarity the technical papers of the medical men were put into everyday English by a nonmedical writer The book is reliable source of information for sufferers from heart disease and other nonphysicians interested in the subject. Its purpose is to inform and to allay fear rather than to encourage self-diagnosis and treatment.

SCHIFFERES, JUSTUS J

Healthier living a text in personal and community health New York John Wiley & Sons, Inc., 1954 928 p. illus 22 cm $6.25 4546

Content (abridged) Part I, Introduction and orientation An introduction to healthier living Part II, Education for family living: Family background. Development of the individual Human reproduction. Social aspects of sexual adjustment Part III, Mental health Mental health and normal emotional development Personality development—the unconscious mind Failures in lif adjustment—mental illness, alcoholism. Achieving mature philosophy of life. Part IV Personal health Food and nutrition Physical and motor activity Body care and grooming Sight and sound—vision, hearing, and speech. Obtaining good and escaping bad medical ad-

ment. Malocclusion. Etiology of malocclusion. Diagnosis. Measurement of dentofacial changes in relation to the cranium, by B. H. Broadbent. Extraction in relation to orthodontic treatment. Tissue changes incident to orthodontic tooth movement. The approach to treatment. Methods and aids to treatment. Myofunctional treatment of malocclusion, by A. P. Rogers. Mechanistic treatment of malocclusion. Orthodontic bands, by E. W. Swinehart. The labial arch. The edgewise arch mechanism, by C. F. Wright. The lingual arch and the removable lingual arch. Treatment of malocclusion. Retention. Plastic surgery of the jaws, by E. A. [illegible]. Practice management. Authors index. Subject index.

Note: A long-established work which is used both as a guide for practicing dentists and as a text for the instruction of advanced students of dentistry. The basic knowledge of the field including the history of orthodontics, the anatomy of occlusion and the etiology of malocclusion are covered in the early chapters. Most of the space is devoted to detailed descriptions of orthodontic techniques and related matters, including diagnosis and management of practice. In this edition there are 713 figures, representing a somewhat higher number of illustrations. Literature references are included as footnotes.

APPLEGATE, OLIVER C.

Essentials of removable partial denture prosthesis. *352 illustrations with 10 in color* Philadelphia W B Saunders Company 1954 323 p. illus. (part col'd) 29 cm. $10.00. 4556

Contents: Terminology. Classification. Component parts. Use of the surveyor. Abutment support. Impression registration. The study cast. The occlusal rest. The direct retainer. The indirect retainer. The minor connector. The major connector. The base. Preliminary examination. Mouth preparation. Class I design. Class II design. Class III design. Class IV design. Problems of design. Stress control. The functional impression. Registration of occlusal paths. Instruction of the partial denture patient. Clinical procedures in partial denture prosthesis. The hydrocolloid impression. Making the cast. Preparing the resin tray. The functional impression. Correcting the master cast. Survey of master cast. Duplication of master cast. Making a refractory cast. Penciled design on cast. The wax pattern. The sprue pattern. Investing the pattern. Preparation for the casting. Making the casting. Polishing a casting. Adjusting the cast structure. Wrought clasp adaptation. The temporary wax base. The appliance "try-in." The occlusal [illegible]—path pattern—template. Setting teeth to a template. Attaching teeth to metal base. Use of accessory items. Insertion of the partial denture. Index.

Note: An exceptionally detailed treatise on the type of partial denture prosthesis which depends upon [illegible] rather than upon vital teeth for major support in the mouth. There is emphasis on the necessity of a careful survey of the patient's mouth and on planning for the required prosthesis. Design and construction of removable partial prostheses are explained in full detail. Much of the exposition is cast in question-and-answer form, and extensive use is made of typographical devices for emphasis, such as the setting of phrases and even sentences in capitals. Text and illustrations are carefully correlated. The book is intended primarily for use as a textbook in advanced courses in dental colleges. However, it will be of value to graduate dentists, especially to those who have not yet accumulated extensive experience in partial prosthesis and to those who wish to keep abreast of all important writing on this subject.

APPLETON, JOSEPH LUKE TEASDALE

Bacterial infection with special reference to dental practice. Fourth edition, thoroughly revised with 108 illustrations and 5 plates, 4 in color Philadelphia Lea & Febiger 1950. 644 p. illus. (part col'd) 24 cm. $10.00. 4557

Contents (abridged): Part I, Bacteriology. Relation of bacterial growth to oxygen supply. Pure culture study of bacteria. Filtrable viruses. Chemoprophylaxis and chemotherapy. Part II, Infection. How bacteria produce disease. The natural defenses. The humoral defenses. The cellular defenses. Resistance or immunity. Artificial active immunization. Characteristics of infection. Types of infection. The control and prevention of infectious disease. Part III, Special infections of the oral cavity. Ecology of the oral cavity. The streptococcus-pneumococcus group. The spirochetes of the mouth. Dental caries. The bacteriology of the dental pulp. Periodontal disease and infection. Focal infection. "Vincent's" disease. Actinomycosis. Osteomyelitis. Oral manifestations of extra-oral infections, exclusive of syphilis and tuberculosis. Interrelations of tuberculosis and oral infections. Bacteriologic aspects of oral hygiene. Index.

Note. An inclusive, well-documented textbook and treatise. It is organized so as to convey a sound knowledge of the principles, [illegible], and causes of infection and to describe the oral and related infections which are of interest in the practice of dentistry. The text is compactly written, and much ground is covered. Literature references are given in the form of footnotes, and there are 10 or more citations on many of the pages. Both sides of controversial matters, such as the concept of focal infection, are presented. The third edition was published in 1944. In this edition new textual material and new illustrations amounting to about 140 pages have been added, and references to recent publications have been entered in the footnotes.

ARCHER, WILLIAM HARRY

A manual of dental anesthesia an illustrated guide for student and practitioner Philadelphia W B Saunders Company 1952 192 p. illus. 26 cm. $5.50. 4558

Contents: The history of anesthesia. Part I, Local anesthesia. Local anesthetic solutions. Local anesthesia. Anesthesia for operative dentistry and root canal therapy. Postinjection complications. Part II, General anesthesia. Preanesthetic examination. Preanesthetic and preoperative preparation of ambulatory patient. Free or patent airway. General anesthesia for oral surgery in the office. Analgesia in dentistry. General anesthesia for oral surgery in the hospital. Complications of general anesthesia for oral surgery—their prevention and treatment. Legal aspects of anesthesia. Index.

Note: Both anesthetic drugs and anesthetic techniques are covered in this well-written, fully illustrated work. Drugs are discussed in regard to chemical and physical properties, pharmacology and toxicity, uses, duration of anesthesia, etc. Techniques are described explicitly. The 146 figures are a special feature. They include reproductions of drawings, roentgenograms and photographs, and many are arranged in series that illustrate techniques in step-by-step fashion. The preliminary chapter on history runs to 34 pages and includes a long list of references.

ARCHER, WILLIAM HARRY

A manual of oral surgery: a step-by-step atlas of operative techniques. Second edition. Philadelphia W B Saunders Company 1956. 877 p. illus. 26 cm. $16.50. 4559

Contents: The extraction of teeth. The use of elevators in oral surgery. Impacted teeth. Apicoectomy. Oral surgery for dental prosthesis. Antibiotic therapy. Oral, face and neck infections. Cysts of the oral cavity. Surgical treatment of cysts of the oral cavity. Affections of the salivary glands. Surgical treatment of oral [illegible] tumors. Complications associated with oral surgery. Oral [illegible]—the dentist's responsibility—[illegible] of the primary lesions and their cervical metastases. Radiation therapy of carcinoma of the oral cavity. Cleft lip. Cleft palate. Oral prosthesis in rehabilitation of cleft palate patients. Surgical treatment of prognathism of the lower jaw. Fractures of the mandible, maxilla and facial bones. The use of cast splints in the treatment of fractures of the maxilla and mandible. [illegible] anatomy of the facial bones and jaws. Oral radiographic interpretation. Anatomic explanation of pain in and about the oral cavity. Treatment of pain in the oral cavity and vicinity. Oral surgery in the hospital. Sterilization, disinfection and [illegible]. Legal aspects of oral surgery and anesthesia. Hospital dental departments, internships and residencies. Index.

Note. An exceptionally inclusive and detailed textbook designed for students in dental colleges and for dental practitioners. For the latter it can serve both as a "refresher" and a presentation of new techniques. Included among the illustrations are many step-by-step sequences of drawings and photographs illustrating actual techniques. Textual discussions are explicit. Descriptions and illustrations of numerous interesting cases are included. The first edition was published in 1952. In the second edition, which is longer by 230 pages, many new illustrations and case reports have been added. The number of figures is now 1,400, and many of them include more than one illustration.

BERNIER, JOSEPH L.

The management of oral disease a treatise on the recognition, identification, and treat

DENTISTRY

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Advances in experimental caries research. A symposium presented on December 29, 1953, at the Boston meeting of the American Association for the Advancement of Science. Reidar F Sognnaes, editor Washington, D C American Association for the Advancement of Science, 1955 236 p illus 23 cm $6 75 4551

Contents. Production and evaluation of experimental animal caries a review by R. Johansen and P H. Keyes. Location of experimental caries on different tooth surfaces in the Norway rat, by R. M. Stephan and M. R. Harris. Genetic factors in experimental rat caries, by H. R. Hunt and others. Developmental factors in experimental animal caries, by J H. Shaw and R. F Sognnaes. Dietary factors in experimental rat caries, by P J McClure Salivary factors in experimental animal caries, by A. Schwartz and D Weisberger Endocrine factors in experimental animal caries, by W G. Shafer and J C. Muhler. Intra-oral effects upon experimental hamster caries, by J. B Fine and others. Oral environmental factors in experimental rat caries, by F J Orland. Influence of antibiotics on experimental rat caries, by R. J Fitzgerald. Effect of various agents on experimental caries a résumé, by J W Hein. General summary by R. F Sognnaes. Author index. Subject index.

Note The 20 contributors to this monograph include specialists in anatomy bacteriology and zoology as well as dentistry The results of a number of significant experiments are presented. The suitability of various species of laboratory animals for experimental caries research variability among members of the same species in their susceptibility to dental caries the influence of diet during the period of tooth development and environmental factors in the mouth which influence the rate of caries incidence, are some of the topics on which data are presented. Literature references are included in each chapter

AMERICAN DENTAL ASSOCIATION

Accepted dental remedies including a list of accepted products together with other information compiled to promote rational therapeutics in dentistry Twenty first edition Chicago American Dental Association, 1956 206 p. illus. 21 cm. $2 00 4552

Contents Members of the Council. Council consultants. Provisions for acceptance of products. Official agencies and official standards relating t drug products. Prescription writing. Analgesics, sedatives and hypnotics. Anesthetics. Antiseptics and germicides for topical application. Antibiotics and other anti-infectives. Agents and methods for the sterilization or disinfection of dental instruments. Astringents, styptics, hemostatics and vasoconstrictors. Central nervous system stimulants. Dentifrices. Fluorine compounds. Mechanical aids. Miscellaneous preparations. Mouth washes. Nutritional factors. Zinc oxide preparations. Formulas and tables. Symptoms and treatment of acute poisoning. Bibliographic index to products not included in A.D R. Index to other current Council reports. Index to distributors General index

Note The standard reference book of acceptable drugs and medicines for use in dentistry It is published annually under the supervision of the American Dental Association's Council on Dental Therapeutics, and each new edition is intended for use only during the year of issue. In general, the information given about each drug covers the following points official name chemical group, chemical formula, molecular weight, substances from which prepared, properties, actions and uses, dosage and name of one or more American manufacturers. The bibliography of articles about products which were found not acceptable, also the bibliography of other reports which have been published from time to time in the *Journal of the American Dental Association*, are useful features which serve to guide readers t search additional material on dental remedies. Every new edition contains some important revisions.

AMERICAN DENTAL ASSOCIATION

Clinical testing of dental caries preventives report of a conference to develop uniform standards and procedures in clinical studies of dental caries Council on Dental Therapeutics, Council on Dental Research Council on Dental Health. Chicago American Dental Association 1955 67 p. illus, 24 cm 4553

Contents Introductory statement. Design of the study A, Type of index of caries experience. B, Standardization of dental examinations. C, Methods for the control of variables. D The use of laboratory tests in clinical study Conduct of the investigation. Analysis of data and evaluation of the results. Presentation of the data. Appendices. Index.

Note. An important contribution toward the solution of the problems of achieving useful, scientifically reliable results in clinical testing of drugs for the prevention of dental caries. Sponsored by three major units of the American Dental Association, it was developed by special committees which conducted many studies and analyses of the several facets of such testing. Presented here are the seven final reports of the committees together with some additional reports and comments. Clearly stated and fairly detailed recommendations are made in regard to units for caries measurement, standardized techniques for dental examinations made in the course of such studies, control of variables, evaluation of the results, publication, etc. Literature references are supplied.

AMERICAN DENTAL ASSOCIATION

Specifications for dental materials prepared by George C Paffenberger and W T Sweeney Second edition Chicago American Dental Association 1956 104 p. illus. 24 cm. $1 00 4554

Contents (abridged) Dental research at the National Bureau of Standards. Specifications for dental materials. List of certified dental materials. Bibliography of publications on dental research conducted at the National Bureau of Standards. Bibliographic index.

Note. Forty-tw pages of this pamphlet are devoted to fourteen specifications for specific dental materials The remainder of the space has been used for such things as list of dental materials certified as meeting the requirements of the specifications, discussion of the research ork on dental materials conducted at the National Bureau of Standards in cooperation with the Council on Dental Research of the American Dental Association, bibliography of publications that have resulted from this research, critical discussion of the status of ultrasonics in ca ity preparation, and various information on the Association procedures for formulating specifications and certifying materials.

ANDERSON, GEORGE M

Practical orthodontics (Original text by the late Martin Dewey) Fifth sixth, seventh and eighth editions revised by George M Anderson. Eighth edition. St Louis The C. V Mosby Company 1955 702 p illus. 26 cm $17.50 4555

Contents Orthodontics, Historical résumé of the evolution and growth of orthodontics, by W W Weinberger Occlusion of the

attempt to establish other Boston. Defeat of the Taggart patents. Part II. Professional and economic perplexities. An Englishman attacks American Dentistry. The modern Sisyphus. The business side of dentistry. Part III. The specialties. Fact, fad and fraud in the treatment of pyorrhea. Extraction specialists and oral surgeons. Orthodontia from Fauchard to Angle. Part VII. Miscellaneous. Women in dentistry. Mouth care through the ages. Some sidelights on the British scene. The versatile G. V. Black. Glasgow people Fauch—the man he revolutionized dentistry. Lord Spear Penny. The dental laboratories. Paper by B. F. Philbrook which helped defeat Taggart. Chronology. Epilogue. Bibliography. Index.

Note: An inclusive history of dentistry composed from many sources and written in popular style. As it is intended for American readers, the author has placed emphasis, as indicated in the subtitle, on progress and developments which originated in the United States of America. Included is a photographic section of portraits and brief biographies of 14 persons of importance in the history of dentistry.

BURKET, LESTER WILLIAM

Oral medicine: diagnosis and treatment. With a chapter on oral cancer by S. Gordon Castigliano. 372 illustrations including 40 subjects in color. Second edition. Philadelphia. J. B. Lippincott Company. 1952. 575 p. illus. (part col'd) 26 cm. 4565

Contents (abridged): Section I. General considerations. Medical-dental relations. Diagnosis in dentistry. Section II. Gingival enlargement. Temporomandibular disease, mucous membranes and epithelioma, leukemia. Section III. Diseases of the tongue and dermatologic diseases of dental interest. The dermatoses. Section IV. Diseases of the organ systems. The respiratory system. The cardiovascular system. The gastro-intestinal system. The urogenital system. The endocrine system. The blood and the blood-forming organs. The bones and the joints. The nerves, the nervous system and the muscles. Section V. Nutritional deficiencies and diseases of metabolism. Section VI. Specific infectious granulomata. Syphilis. Tuberculosis. Miscellaneous infectious granulomata. Section VII. Focal infection, dental pulpitis, and periodontia. Section VIII. Occupational hazards in dentistry and in industry. Section IX. Oral cancer. Section X. Laboratory aids in diagnosis. Laboratory procedures. Section XI. Color atlas. Section XII. Regional diagnostic index. Index.

Note: A treatise which is concerned not only with those diseases that originate in the oral cavity but also with the pathology, diagnosis, and treatment of various systemic diseases with oral manifestations. The principal theme is that the dentist often has an unusual opportunity to detect and diagnose diseases which are the direct concern of the physician, and that there should be therefore close cooperation between dentists and medical practitioners in the care of patients. Of course many of the diseases covered are wholly within the scope of the dentist. Discussions are laid rather than concise and clearly symptoms, and treatment are usually covered. Extensive bibliographies are included and the illustrations are numerous and well reproduced. The chapter on oral cancer has been added in this edition. Certain other chapters have been rewritten or expanded and recent literature has been added to the bibliographies. A third edition was published in 1957. $14.00.

CARR, MALCOLM WALLACE

Dentistry: an agency of health service. Cambridge, Mass. Harvard University Press, 1946. 219 p. 21 cm. $1.50. 4566

Contents: Preface, by Robert Whitney Bolwell. The present status of organized dentistry. Part I. History. Historical development of the autonomous dental profession. International dental relations. Part II. Education. Predental education, the dental curriculum, and graduate education. Hospital internships and residencies. Part III. Dental practice. The practice of dentistry. Hospital dental service. Dentistry in industry. Public health dentistry. Dental practice in rural areas. Dentistry by Negroes. Preventive dentistry. National dental legislation. Part IV. Research. General discussion of research. Problems for investigation and current progress. Research in dental materials. Part V. Dental socio-economics. Problems of dental socio-economics. Part VI. Summary and conclusions. Index.

Note: This monograph has been written for the dentist, doctor, public health worker, and layman, and is one of the series of medical studies sponsored by the New York Academy of Medicine. It provides a compact but inclusive discussion of dentistry from the standpoint of its place in public health service.

CHERASKIN, E., AND L. L. LANGLEY

Dynamics of oral diagnosis. Chicago. The Year Book Publishers Inc. 1956. 533 p. illus. 27 cm. $16.00 4567

Contents: Part I. Oral medicine: Diseases due to biologic agents. Diseases due to physical agents. Diseases due to chemical agents. Neoplasms. Cysts. Hormonal disturbances. Developmental disturbances. Nutritional disturbances. Reactions to stress and antigenic substances. Metabolic disorders. Miscellaneous disorders. Part II. Oral diagnosis: Gross appraisal of the patient. Examination of the head and neck. Examination of the oral cavity. Radiographic examination. Laboratory aids. Final diagnosis. Index.

Note: An unusually broad view of diagnosis in dentistry is presented in this textbook. Essentially it teaches that the practicing dentist has responsibilities in diagnosis parallel to those of practicing physicians. Diseases and abnormalities of the mouth and systemic diseases that have oral manifestations are, of course, emphasized. The first part—300 pages long—is devoted to descriptions of diseases of the classes noted in the above contents. Measles and poliomyelitis are among the many diseases described under "Diseases due to biologic agents." Pregnancy is included in the section entitled "Hormonal disturbances." Each disease considered is discussed as to pathologic physiology, clinical features, radiographic or laboratory findings, and treatment. The primary thesis of the book is the necessity for thorough and efficient plan of diagnosis consisting of gross appraisal of the patient, examination of the head and neck, examination of the oral cavity and use of radiography and clinical laboratory tests where these are appropriate. There are 314 figures. The authors are members of the faculty of the School of Dentistry of the University of Alabama.

COELHO, DAVID, AND JULIAN M. RIESER

A complete fixed bridge procedure. Second edition. New York. New York University Press, 1955. 140 p. illus. 23 cm. $5.50. 4568

Contents: Introduction. Treatment planning. Occlusal balance. Parallelism. Abutment preparation. Protection of prepared abutment teeth. Compound-copper band impressions, dies, transfers, and working models. Wax pattern technic. Investing and casting technic. Fitting the casting. Impressions, models, and shade matching. Pontic construction. Assembly. Finishing. Waxing, flasking, and packing of plastic facings and pontics. Cementation. Periodontal considerations. Completely indirect bridge construction using alginate hydrocolloid. Causes of failure. Index.

Note: A concise, straightforward presentation of techniques. It is designed as an introductory textbook for students in dental colleges. The second edition is the result of an extensive revision of the first edition and the addition of chapters and parts of chapters on new techniques and materials. It contains 137 figures, a majority of which are reproductions of photographs.

COMROE, BERNARD ISAAC, AND OTHERS

Internal medicine in dental practice, by Bernard I. Comroe, Leon H. Collins, jr., and Martin P. Crane. Illustrated with 76 engravings and 6 colored plates. Fourth edition, thoroughly revised with 86 illustrations and 6 colored plates. Philadelphia. Lea & Febiger. 1954. 563 p. illus. (part col'd) 24 cm. $7.50. 4569

Contents: Diseases of the heart and blood-vessels. Diseases of the respiratory tract. The gastro-intestinal tract. Diseases of the kidneys and urinary tract. Diseases of the nervous system. Endocrinology. Diseases of blood and blood-forming organs. Arthritis and allied conditions. The infections. The eye—nose—pharynx—mouth—salivary glands. Allergy—deficiency diseases—vitamins. Chemical poisoning—intoxication. Foci of infection. The sulfonamides. Antibiotics. Appendix. Index.

Note: A textbook of internal medicine which is written expressly for students of dentistry and graduate dentists. Its purpose is to facilitate the recognition of the symptoms of *systemic* diseases and to facilitate cooperation among dentists and physicians in the care of patients. It covers the *full* range of diseases that come within the scope of the internist but treats them in less detail than would be expected in a book designed for medical students. Literature references to far too treatments of specific topics are included.

ment of diseases of the oral regions With 1001 text illustrations and 5 color plates. St Louis The C V Mosby Company, 1955 825 p illus 26 cm. $15 00 4560

Contents The interpretation of signs and symptoms—biopsy Histology of the skin and oral mucous membrane. Anomalies of the teeth. The pathology of dental caries. Inflammation and repair Diseases of the pulp and periapical tissues. Physiologic pathology of the calcified dental tissues. The pathology of periodontal disease. Superficial lesions generally local in character Oral reactions in allergy and to drugs. Viral and viral-like lesions of the oral mucosa. Specific inflammatory lesions, including fungi. Oral lesions in diseases of the blood. Oral lesions in deficiency and metabolic diseases. Tumorlike proliferations. Superficial keratoses and dermatologic-like lesions of the oral mucosa. Cysts of the oral regions. Tumors of the odontogenic apparatus. Inflammation and tumors of the salivary glands. Disturbances of the maxillary and mandibular bones. Benign tumors of the soft oral structures. Malignant tumors of the oral regions. Index.

Note A treatise of broad scope designed primarily for use as text in dental colleges and containing features, particularly a high number of excellent illustrations and extensive bibliographies, that give it reference value for graduate practitioners. Pathology is emphasized however it is presented as essential background for treatment of patients. Etiology clinical features, and treatment are all discussed concisely The illustrations include many pictures of both gross and micropathology and are well reproduced. The author is Chief of the Oral Pathology Branch of the United States Armed Forces Institute of Pathology and member of the faculty of the Georgetown School of Medicine.

BOYLE, PAUL E , editor

Kronfeld's histopathology of the teeth and their surrounding structures Fourth edition, thoroughly revised and edited by Paul E Boyle. 497 illustrations and 2 color plates. Philadelphia Lea & Febiger, 1955 535 p. illus (part col'd) 24 cm $10 00 4561

Contents Anomalies in shape and number of teeth. Physiology and pathology of tooth formation and calcification. Enamel hypoplasia and hypocalcification—Hutchinson's teeth—mottled enamel. Regressive changes in dentin and pulp. Dental caries, by N B. Williams. Pulpitis. Acute apical periodontitis. Chronic apical periodontitis. Tissue changes following root canal therapy Cementum—changes with age, function and infection. Tooth resorption. The structure and function of the tooth supporting tissues. Influence of function upon teeth and surrounding structures. Periodontal diseases (gingivitis, periodontoclasia, pyorrhea alveolaris) Tissue changes due to excessive functional stress. Tissue changes in orthodontia. Embedded teeth—dentigerous (follicular) cysts—median anterior maxillary cysts. Tooth fracture. Healing of extraction wounds—histology of edentulous jaws. Vincent's disease—discolorations and stains—common diseases of the oral mucosa. Tumors of the oral cavity Addenda Differential diagnosis of toothache. Index.

Note. A well-written and fully illustrated treatise on tissue changes in the teeth and surrounding structures that correspond to certain well-defined clinical conditions. Both etiologic and reactive changes are covered, and there is also much supplementary information such as a summary of the evidence bearing on a supposed relationship between caries and pregnancy a discussion of stains on teeth, and discussion of the public health aspects of excessive amounts of fluorine in drinking water Extensive bibliographies are included The book is used by advanced students of dentistry and by graduate dental practitioners. The third edition was published in 1951 The greater part of its text and illustrations has been carried over to this fourth edition however important new matter on such topics as dental caries has been added. The number of illustrations and the length of the book were both increased.

BRAUER, JOHN CHARLES AND OTHERS

Dentistry for children By John Charles Brauer, William W Demeritt, L B Higley, Maury Massler Isaac Schour Third edition. New York The Blakiston Division McGraw Hill Book Company 1952 454 p. illus 24 cm. $10 00. 4562

Contents Part I, Fundamental considerations in the practice of dentistry for children: Practice of dentistry for children. Psychologic development of the child (parent and child management). Development of the teeth—normal and abnormal, by I. Schour and M. Massler Morphology and histology of the primary teeth, by I. Schour and M. Massler Preventive orthodontics, by L. B. Higley. Dental caries and the growing child, by M. Massler. Lesions and infections of the oral soft tissues, by M. Massler and I. Schour. Nutrition and oral disease—general considerations, the vitamins, by I. Schour and M. Massler Nutrition and oral disease—the minerals, nutriments, and clinical considerations, by I. Schour and M. Massler. The endocrine glands, by M. Massler and I. Schour. Part II, Technical procedures in the practice of dentistry for children: Dental examination for the child patient. Preventive dentistry Operative dentistry for children. Pulp and root canal therapy in primary and young permanent teeth. Space maintenance. Removable denture prosthesis, by W W Demeritt. Treatment and restoration of fractured and displaced permanent and primary anterior teeth. Oral surgery for children. Index.

Note. A comprehensive exposition of the special aspects of dentistry that are of importance in the dental care of children. As shown above, the book is divided in two parts, one on preventive dentistry and fundamental matters pertaining to children's teeth and their care the other to the actual technical procedures of dentistry for children. The book is used as a text in colleges of dentistry and is useful also to general practitioners of dentistry Both the basic topics and techniques are covered in detail. The literature of the subject is extensively cited. The second edition was published in 1947 The chapter on removable denture prosthesis is new in this edition, and a number of the other chapters have been extensively rewritten. There are now 263 figures. All of the authors are members of the faculties of colleges of dentistry in the United States of America.

BRECKER, SOL CHARLES

The porcelain jacket crown, a manual stressing the preparation of normal and abnormal teeth. With 290 illustrations and frontispiece in color St. Louis The C. V Mosby Company 1951 263 p illus. (part col'd) 26 cm. $5 00 4563

Contents: Classification of preparations for the porcelain crown. The preparation. Preparation of teeth influenced by their anatomy. Preparation of teeth influenced by their condition. Preparation of teeth influenced by their position. Procedures after the preparation is completed. Shortcomings of the porcelain jacket crown—how to prevent or minimize them. Porcelain bridges. References. Index.

Note: The aim of this very carefully prepared volume is to provide technical guide for dental students and graduate dental practitioners. By means of numerous photographs and drawings rather than by many words, the author explains the procedures and techniques involved in the construction of porcelain jacket crowns. There are selected references at the end of the volume.

BREMNER, M D K.

The story of dentistry from the dawn of civilization to the present, with special emphasis on the American scene Third edition revised. Brooklyn, N Y Dental Items of Interest Publishing Company Inc., 1954 462 p illus. 24 cm $7 50 4564

Contents: Part I, Anthropological facts and theories: From tubercles to teeth. Before Adam. Bad teeth and civilization. Magic in the treatment of toothache. Odd beliefs about the teeth. Part II, Dentistry among the early peoples of history The Egyptians, Near East and China. The Greeks, Etruscans and Romans. The Hebrews. Part III, After the fall of Rome and through the Middle Ages. Abulcasis of Cordova. The break of dawn in western Europe. The rebirth of scientific thought. Part IV The roots of modern dentistry Pierre Fauchard. The invention of porcelain teeth. Part V Development on this continent From the early colonial period to 1839 Professional journalism. Dental organizations. Separate school for the training of dentists. Part VI, Dentistry's contribution to the mastery of pain Horace Wells, the discoverer of anesthesia. The discovery of ether and other agents. Part VII, The effect of two great inventions—vulcanite and the dental engine False teeth for the millions. Crown and bridgework Part VIII, Fillings and filling materials. Gold foil. Amalgam, cement and porcelain Part IX, The casting process and the fight against commercialism Disclosure of the inlay technique. Development of the casting process. The

the root, with or without loss of crown structure. Class VII, Displacement of teeth, without fracture of crown or root. Partial displacement—extreme mobility but little displacement. Total or complete displacement. Class VIII, Fracture of the crown en masse and its replacement. Class IX, Traumatic injuries to deciduous teeth. Fracture of deciduous teeth, diagnosis. Displacement of deciduous teeth, diagnosis. Index.

Note: A compact and useful work written from the viewpoint of the graduate dental practitioner. Each of the chapters begins with "Prescription for treatment," in which all the steps are covered from the recording of the case history to a step-by-step notation of the treatment. Following this, various approaches to each problem are considered, and diagrams, pictures, and X-ray photographs are used where applicable. Bibliographies are included. The author is Professor of Operative Dentistry at the University of Toronto.

ENNIS LE ROY MASSEY

Dental roentgenology Fourth edition, thoroughly revised. With 1207 illustrations. Philadelphia Lea & Febiger 1949 538 p. illus. 24 cm. $10.00. 4575

Contents (abridged) The roentgen-ray tube. Roentgen-ray department. Intra-oral and extra-oral technique. Methods of localization. Dental roentgen-ray films. Normal anatomical landmarks of the teeth and jaws as seen in the roentgenogram. Dental pathology in relation to roentgenology. Index.

Note: A standard treatise, the first edition of which was published in 1931. It is addressed to advanced students in dental colleges and to dental practitioners. Although introductory to the field, it is an extensive treatment with both basic information and detailed descriptions of practical techniques. The chapter on pathology is nearly 230 pages in length. A majority of the illustrations are reproductions of roentgenograms.

FELDMAN MAX HILLEL

Exodontia. Fourth edition, thoroughly revised, with 322 illustrations. With a chapter on dental malpractice jurisprudence by Michael A. Hayes Philadelphia Lea & Febiger 1951 290 p. illus. 24 cm. $6.50 4576

Contents: The management of teeth in the presence of acute infection. Indications concerning the extraction of teeth. The significance of roentgenographic examinations of the teeth. Operative considerations. Manipulation of instruments. Exodontia technic for teeth in normal alignment. Exodontia technic for teeth in abnormal alignment. Exodontia technic for roots fractured during extraction. Exodontia technic for roots fractured some time in the past and wholly or partially embedded. Exodontia technic for morphologically abnormal teeth. Impacted teeth. Exodontia technic for pathologically abnormal teeth. Sutures and drainage. The management of deciduous teeth. Operative accidents. Postoperative considerations. Dental malpractice jurisprudence, by M. A. Hayes. Index.

Note: A detailed treatise on tooth removal. As much attention is given to pre- and post-operative techniques as to the actual techniques of removal, although the latter are covered in full detail also. Two tools invented by the author — "cross-bar pathelever" and a surgical drill used to make an opening in the tooth for the insertion of the pathelever, and the techniques dependent on these instruments, are given some emphasis, but other instruments and techniques are well covered also.

FISCHER, BERCU

Orthodontics diagnosis, prognosis, treatment. With 1180 illustrations on 212 figures. Philadelphia W B Saunders Company 1952 334 p. illus. 26 cm. $12.00. 4577

Contents: Elements of treatment. The individuality hypothesis. The meaning of the "normal." Case analysis. Inadequacy of intermaxillary and occipital orthodontic force. The basic treatment plan—sectional treatment. Specific cases. Technical procedure. Methods of recording. Index.

Note: A thoroughly detailed treatise on a system of orthodontic treatment which the author terms "sectional treatment" because a minimum number of teeth are subjected to orthodontic force at one time. The principal technique makes use of occipital force applied to the teeth through an edgewise arch and occipital bow the latter of which is supported by a headcap worn by the patient. Background matters, such as variation of response in individuals, are fully discussed. The illustrations include many "before and after" photographs of cases and many drawings of appliance details.

GABEL ARTHUR B editor

The American textbook of operative dentistry with contributions by eminent authorities. Ninth edition, thoroughly revised, with 472 illustrations. Philadelphia Lea & Febiger 1954 626 p. illus. 24 cm. $10.00. 4578

Contents. Examination and diagnosis, by P. E. Boyle. Caries, by P. Jay. Preventive dentistry, by R. W. Bunting. Mechanics, by A. B. Gabel. Operative procedure, by A. B. Gabel. Metal inlays, by E. B. Smyd. Porcelain inlays, by W. D. Vehe. Special operative procedures, by T. J. Hill. Restorative materials, by F. A. Peyton. Index.

Note. A critical presentation of techniques and materials which are currently useful in operative dentistry. Each chapter is a survey, with literature references, of the subject named in its title. Most of the authors are members of faculties of leading dental colleges in the United States of America. The book is used primarily as a textbook for advanced students of dentistry but it is of value also to graduate dentists. Extensive bibliographies are included in most of the chapters. The chapter on dentistry for children which appeared in it was omitted in preparing the ninth edition. There are no new chapters, but most of the chapters carried over were revised to some degree.

GLICKMAN IRVING

Clinical periodontology The periodontium in health and disease recognition diagnosis and treatment of periodontal disease in the practice of general dentistry Illustrated with 742 figures. Philadelphia W B Saunders Company 1953 1,019 p. illus. (part col'd) 25 cm. $15.00. 4579

Contents (abridged) Section I, The tissues of the periodontium. Gingiva. Periodontal membrane. Cementum. Alveolar bone. Section II, Periodontal disease—Part I, Gingival disease: Changes in the consistency, surface texture and position of the gingiva. Gingival bleeding. Gingival infections. Gingival changes in puberty, menstruation and pregnancy. The oral mucosa in dermatologic disease, by F. P. McCarthy and P. L. McCarthy. Part II, Chronic destructive periodontal disease: Periodontal pocket. Bone loss in periodontal disease. "Bifurcation" and "trifurcation" involvement. Periodontal abscess. Periodontal disease in childhood. Epidemiology of periodontal disease. Part III, The etiology of periodontal disease: Role of calculus and other deposits on the tooth surface in the etiology of periodontal disease. Role of bacteria in the etiology of periodontal disease. Role of traumatic occlusion in the etiology of periodontal disease. Nutritional influences in the etiology of periodontal disease. Hematologic and other systemic disturbances in the etiology of periodontal disease. Part IV The classification of periodontal disease. Part V, The principles of occlusion pertinent to the problem of periodontal disease. Section III, The clinical management of periodontal disease: Treatment planning. Rationale for periodontal treatment and principles of healing. General principles governing instrumentation. Pocket eradication. Scaling and curettage technique for the eradication of the periodontal pocket. Eradication of the infrabony type of pocket. Treatment of bifurcation and trifurcation involvement. Treatment of gingival enlargement. Treatment of acute gingival disease. Occlusal equilibration. Prosthetic and operative dentistry procedures in periodontal treatment. Orthodontic procedures in the management of periodontal disease. Occlusal rehabilitation and the periodontal problem, by L. A. Cohn. Drugs in periodontal therapy. Index.

Note: A very comprehensive text on that sector of dentistry which is concerned with the tissues that surround and support the teeth; in other words, the tissues named in the chapter titles of Section I as listed above. Approximately 70 pages are devoted to functional and histological description of these tissues. Diseases and their treatment occupy most of the rest of the volume. Here, the tissue changes that underlie the clinical manifestations are emphasized. Therapeutic techniques are described in much detail. The book is directed to general practitioners of dentistry rather than to specialists in periodontal care and is used both as a reference book by graduate dentists and as a textbook for advanced students in dental colleges. The author is Director of the

COOLIDGE, EDGAR D, AND MAYNARD K HINE

Periodontia, clinical pathology and treatment of the periodontal tissues. Second edition, thoroughly revised, 424 illustrations on 250 figures and 2 color plates Philadelphia Lea & Febiger, 1954 384 p illus. (part col'd) 24 cm $7 50 4570

Contents. Part I, Prevention and classification of periodontal diseases Oral and dental hygiene. Prevention of dental disease. Classification and outline of pathological changes in the periodontal structures. Part II, Treatment of inflammatory changes in the gingival and periodontal tissues: Gingivitis caused by chemical and mechanical irritation. Gingivitis caused by dental calculus. Gingivitis caused by infection. Gingivitis associated with systemic disturbances. Hyperplastic gingivitis and hyperplasia of the gingival tissues. Periodontitis. Part III, Treatment of retrogressive changes in the periodontal tissues Gingivosis and periodontosis. Atrophy of the periodontal tissues. Functional response to occlusal stress and the effect of traumatism. Part IV Correction of occlusal disharmony and care of the oral tissues Prevention and correction of occlusal disharmony (occlusal equilibration)—treatment for the prevention and correction of occlusal disharmony (occlusal equilibration) The use of the toothbrush in the care of the teeth and oral tissues. Index.

Note This book is essentially an advanced text for students in dental colleges, but it has some usefulness also as an office reference book for graduate dentists. The descriptions of diseases and therapeutic procedures are clear and specific. Most of the illustrations are reproductions of photographs (including some microphotographs) and they are well reproduced. Literature references are included. The first edition was published in 1951 The presentations of several major topics have been reorganized and revised, the number of illustrations increased, and the book lengthened by 67 pages in this second edition.

COOLIDGE, EDGAR D, AND ROBERT G KESEL

A textbook of endodontology including the clinical pathology and treatment of the dental pulp and pulpless teeth. Second edition thoroughly revised, 345 illustrations on 210 figures and a colored plate. Philadelphia Lea & Febiger 1956 366 p illus (part col d) 24 cm $7 50 4571

Contents Therapeutic principles. Dental caries. Dental pain, its source and characteristics. Treatment of the dentin. Treatment of the dental pulp in which vitality should be preserved. Partial pulp removal. Anatomy of root canals with relation to pulp removal and root-canal filling. Pathology and treatment of diseased pulps before their removal. Removal of the pulp and preparation of root canals for filling. Treatment of necrosis, gangrene and putrefaction of the pulp. Important principles in root-canal treatment. The treatment of infected root canals and pulpless teeth. Sulfonamide and antibiotic medication for infected root canals Bacteriology in endodontic treatment. Principles and technique of filling root canals. Healing and repair after pulp removal and root canal filling. Treatment of teeth with inflammatory disturbances of the apical periodontal tissues. Root resection. Focal infection. Pulpless teeth. Index.

Note A text on that branch of dentistry which aims at the conserving of rather than the extraction of teeth. The authors consider all phases of healing and repair of pulpless teeth, but place specific emphasis on root canal treatment. Each type of disease is considered separately and the proper treatment is described. Much attention is given to the problem of achieving sterility in root canals and to the germicides, sulfonamides, and antibiotics employed to achieve it. The subject is covered at an advanced level. The book is suitable for students in the upper classes of dental schools, graduate students of dentistry and graduate practitioners. The first edition, entitled *Endodontia*, was published in 1950 and was written by the senior author alone. The book was reorganized and considerably revised for this second edition. The chapter entitled Bacteriology in endodontic treatment is a new addition.

DIAMOND, MOSES

Dental anatomy, including anatomy of the head and neck. Third edition. New York The Macmillan Company, 1952 471 p. illus. 26 cm. $10 00 4572

Contents. Introduction and nomenclature. Comparative dental morphology The development of teeth. Formation and calcification of hard tissues. The tooth tissues. Eruption. Deciduous teeth. The maxillary teeth. The mandibular teeth. Technique for reproducing basic tooth forms. Variations and anomalies. Arrangement of teeth and occlusion. The supporting tissues of the teeth. Atlas: The pulp chamber and the pulp canals. The muscles of the head and neck. The oral cavity and its soft tissues. The vascular system. The nervous system. Temporomandibular articulation. The growth and development of the skull. Bibliography Index.

Note An outstanding text published in first edition in 1929 and in a second edition in 1935. The present third edition contains much new material of a fundamental nature derived from research studies made subsequently to the writing of the second edition. The whole book has been reorganized and its scope considerably extended. The Atlas noted in the table of contents contains 32 plates based on original drawings made from new dissections. The atlas is not included in the paging of the volume. The bibliography is an extensive one classified according to the chapter arrangement.

DOBBS, EDWARD C

Pharmacology and oral therapeutics a textbook for students and practitioners. Eleventh edition St. Louis The C. V Mosby Company, 1956 579 p illus 22 cm. $9.00 4573

Contents Part I, Pharmacology Introduction to pharmacology and oral therapeutics. Introduction to the study of drugs. Drugs which depress the central nervous system. Drugs which stimulate the central nervous system. Drugs which act on the autonomic nervous system. Regional analgesia. Drugs which act on the respiratory system. Drugs which act on the circulatory system. Drugs which affect the blood. Drugs which act on the gastrointestinal system. Drugs which affect the genitourinary system. Drugs which act on the skin and mucous membranes. Chemotherapy and antibiotics. Glandular texts, antibodies, and iodine therapy Dietary factors. Local anti-infectives. Astringents. Irritants and counterirritants. Caustics. Physical therapeutics. Part II, Therapeutics: Prescription writing. Coloring, flavoring, and sweetening agents. Dental and oral therapeutics. Index.

Note: A standard textbook and reference manual in which pharmacology is treated from the viewpoint of dentistry The first edition was published in 1909. For many years the senior author was Hermann Prinz, and the title was *Dental materia medica and therapeutics*. The ninth and 10th editions were entitled *Pharmacology and dental therapeutics*. These changes in title emphasize the enlargement of the book's scope to cover all of oral therapeutics. Some subjects and drugs are discussed which are not used directly in dentistry but are useful for background knowledge and full treatment is given to those topics and drugs that are of direct application to dentistry Many formulas are given for dental preparations. In this 11th edition, the book has been revised to bring the descriptive material on drugs into conformity with the *United States Pharmacopeia XV* and the *National Formulary X*

ELLIS, ROY GILMORE

The classification and treatment of injuries to the teeth of children a reference manual for the dental student and the general practitioner Third edition Chicago The Year Book Publishers Inc. 1952 247 p. illus. 19 cm $4.25 4574

Contents (abridged) Class I, Simple fracture of crown, involving little or no dentin. Class II, Extensive fracture of crown, involving considerable dentin but not the pulp. Class III, Extensive fracture of crown, involving considerable dentin and exposing the pulp Pulp capping. Pulpotomy Class IV Traumatized tooth which becomes non vital, with or without loss of crown structure Vital tooth. Non vital tooth, with pulp chamber opened by fracture Class Nonvital tooth, with pulp chamber not opened by fracture. Class Teeth lost as result of trauma: Placement of restoration. Repositioning to compensate for loss of tooth. Class VI, Fracture of

which the authors discuss the salient features of the case and treatment. The third and much shorter part is devoted to anesthesia, operative procedures, and the techniques of constructing prostheses.

KELSTEIN LOUIS B

Pedodontics for the general practitioner—a textbook of oral pediatrics. With 270 illustrations. Brooklyn, N. Y. Dental Items of Interest Publishing Company Inc., 1956 396 p. illus. 24 cm. $9.75 4585

Contents: Historical background. Psychologic development of children. Psychotherapy of oral habits. The role of parents in dental treatment for children. Training children to become dental patients. Administrative procedures in dentistry for children. Embryology of the jaws and related structures. Physical growth and development. Endocrines and growth. Nutrition. Systemic diseases in children. Periodontal and soft tissue diseases in children. Etiology and control of dental caries. The primary dentition. Roentgenograms for children. Dental materials. Oral health services for children. Silver amalgam restorations for children. Restoring severely carious primary teeth. Endodontics for children. The management of injuries to children's anterior teeth. Oral surgery and anesthesia for children. Prosthesis for children. Etiology and interception of potential dento-facial abnormalities. Index.

Note: As the title indicates, this is a book for the general dental practitioner rather than the specialist in children's dentistry. A basic knowledge of dentistry is assumed, and the entire book is devoted to dentistry for children in all its aspects, including relations with parents, psychological aspects of managing child patients, basic information on children's growth and development, and other topics of a background nature. Dental techniques are, of course, the primary subject, and approximately the latter half of the book is devoted to them. The chapters include literature references, and the volume is adequately illustrated. The author is Chief of the Pedodontic Section of the Dental Clinic of Beth Israel Hospital in Newark, New Jersey.

LANGLEY L. L., AND E. CHERASKIN

The physiological foundation of dental practice. With 192 illustrations. Second edition. St. Louis The C. V. Mosby Company 1956. 587 p. illus. 25 cm. $9.75 4586

Contents (abridged): Section I. The nervous system. Receptors. The senses. Skeletal muscle. Sensory functions. Motor systems. Cerebellum. Cranial nerves. Autonomic nervous system and the hypothalamus. Integration of the nervous system. Section II, Circulation: Cardiac muscle. Heart sounds and the pulse. Electrocardiography. Regulation of the heart action. Arterial blood pressure. The venous blood pressure. The capillaries and lymphatics. Blood. Section III, Respiration: Oxygen and carbon dioxide transportation. Control of respiration. Integration of the respiratory system. Section IV, Excretion: The kidney. Fluid and acid-base balance. Section V, Alimentation: Salivation. Mastication and deglutition. The stomach. The intestines. Food metabolism. Energy metabolism. Section VI, Endocrinology. Index.

Note: A textbook designed to meet the needs of dental students for a particular presentation of physiology different from that which suits the needs of students of medicine. To cite an example of the difference, about one third of the volume is devoted to the physiology of the nervous system because the dentist is more intimately concerned with the nervous system than with the other physiological systems. In comparison with standard textbooks designed for medical students, most other topics are treated briefly. Implications for dentistry are pointed out frequently. The first edition was published in 1951. In preparing this edition, the authors rewrote a number of chapters and sections of chapters and revised the bibliographies.

MCBRIDE, WATER CLAR

Juvenile dentistry Fifth edition, thoroughly revised, with 30 illustrations. With special chapters by James Nuckolls Dorothea Radusch, C. Taylor Hall and Harold V Dwyer Philadelphia. Lea & Febiger 1952 370 p. illus. 24 cm. $7.00. 4587

Contents: The management of the child. The management of the office. Growth and development of the teeth. Morphology of the deciduous teeth, with special reference to the pulp cavity and its relation to cavity preparation, by J. Nuckolls. Examination and diagnosis. Preventive dentistry. Operative procedures for vital deciduous teeth. Pulp management in both dentitions. Operative procedures for young permanent teeth. Root resection, by C. T. Hall. Filling materials and their application. Extraction and anesthesia. Preventive orthodontics. Teeth and the diet, by D. F. Radusch. Physical diagnosis, by H. V. Dwyer. Index.

Note: This book is both a text for use in dental colleges and a manual for graduate dentists whose practice includes child patients. Most of its content pertains to disorders of children's teeth and the techniques of treating and restoring them, but interspersed with the technical material is a good deal of advice on the management of the child patient (and his parents) so as to obtain cooperation. The fourth edition appeared in 1945. Although much of the contents of this edition is identical with the contents of that one, some revision has been made in most of the chapters, and the recent literature has been added to the reference lists.

MCCALL JOHN OPPIE AND SAMUEL STANLEY WALD

Clinical dental roentgenology—technic and interpretation, including roentgen studies of the child and the adolescent. Third edition, with 1277 illustrations on 475 figures. Philadelphia W. B. Saunders Company 1952 384 p. illus. 26 cm. 4588

Contents: Introduction. Electricity and roentgenology. The dental roentgenogram and the films used in dental roentgenography. Factors in dental roentgenography. Complete intra-oral roentgenographic survey—evaluation of roentgenograms. Stereoscopic roentgenography. Roentgenographic interpretation. Dental roentgenograms of the normal child. Differential diagnosis between anatomic landmarks and indications of pathologic conditions. Anomalies and abnormal development. Growth phenomena. Hypoplasia. Dental caries. Periapical lesions. Root resorption. Periodontal disease. Fractures of the teeth and jaws, and operative trauma. Osteomyelitis. Cysts. Bone dysplasias. Benign tumors of the jaws. Malignant tumors of the jaws. Involvement of the maxillary sinus. The temporomandibular articulation. Localization of unerupted teeth, cysts, salivary calculi and foreign bodies. Index.

Note: Intended for dental hygienists, students, and practitioners, this book covers in detail the use of X-rays in diagnostic techniques in dentistry. Almost as much space is given to the illustrations as is given to the text. As would be expected, a large proportion of the illustrations are reproductions of roentgenograms, but some are photographs that show correct positioning of patients. The second edition was published in 1947. In the third edition the scope and organization are the same; however, significant additions and revisions have been made. The additional material includes a description of the long cone technique. The number of pages has been increased by 43 and the number of illustrations by nearly 150. The fourth edition was published in 1957. 446 p. $12.00.

MCCOY JAMES DAVID

Applied orthodontics. In collaboration with Earl Emanuel Shepard. Seventh edition, thoroughly revised. 212 illustrations and 9 plates. Philadelphia. Lea & Febiger 1956 336 p. illus. 24 cm. $7.50. 4589

Contents: The object and scope of orthodontics. The growth of the masticatory apparatus. Dental and oral anomalies. The etiology of dental and oral anomalies. Pre-treatment requisites. Appliances for the correction of dental and oral anomalies. Elements of modern appliances. The operation of appliances. Orthodontic practice. Orthodontic practice—requirements of treatment. Post-treatment requisites. Index.

Note: An introduction to the basic principles and methods employed in the prevention and correction of dental and oral anomalies. In its various editions, it has been used as a textbook in dental colleges since the publication of the first edition in 1922. Considerable space is devoted to basic principles of growth and development of the oral structures and to the etiology of abnormalities. The sixth edition was published in 1946. This seventh edition is the first to bear the name of a collaborating author. Otherwise, the only major changes are in the illustrations. These have been extensively revised, so that many of them in the seventh edition are either re-drawn versions of illustrations from earlier editions or are entirely new.

Division of Graduate and Postgraduate Studies of Tufts College Dental School. Literature references are given. A second edition was scheduled for publication early in 1958.

GOLDMAN, HENRY M , AND OTHERS

Periodontal therapy By Henry M Goldman, Saul Schluger, Lewis Fox. With 190 text illustrations and 100 plates. St. Louis The C V Mosby Company, 1956 565 p illus. 26 cm $18 75 4580

Contents Diagnosis. The rationale for periodontal therapy Prognosis. Periodontal treatment planning. Instrumentation. Coronal and root surface scaling. Re-evaluation of gingival form and attachment after scaling. Gingival curettage. Gingivectomy Gingivoplasty osteoplasty and osteoectomy T eatment of the infrabony pocket. Special problems in periodontal therapy Temporary splinting. Occlusal adjustment. Orthodontics in periodontal therapy Oral habits and occlusal neuroses. Procedures in general dentistry as it pertains to periodontal therapy Periodontal prosthesis. Necrotizing ulcerative gingivitis. Oral physiotherapy Medicinal aids in periodontal disease. Physical health status affecting periodontal therapy The maintenance phase. Index.

Note The authors of this book purposely omitted discussion of basic anatomy and histology in order to have adequate space for explanation of therapeutic techniques and such closely related matters as prognosis. The volume is both a text and an atlas. The 100 plates mentioned in the title are full-page plates containing several illustrations each. Most of the text figures also contain more than one illustration. Both plates and text figures are of excellent quality The erbal text consists both of legends accompanying the illustrations and of chapters written in the usual style f verbal exposition. Extensive bibliographies are included. The book is suitable for use as a textbook offered to advanced students in dental colleges and as medium of self-instruction and reference by general practitioners of dentistry The senior author is Chairman of the Department f Periodontology of the Graduat School of Medicine of the University of Pennsylvania, and his collaborators are members of the faculty of the School of Dental and Oral Surgery of Columbia University

GROSSMAN, LOUIS IRWIN

Dental formulas and aids to dental practice. With 25 illustrations, 1 in color Philadelphia Lea & Febiger 1952 318 p illus. (part col d) 21 cm $5 00 4581

Contents (abridged) Section I, Operative dentistry Dentin desensitizers. Cavity sterilizing solutions. Dental cements. Self-curing acrylics. Silver alloys. Inlay gold. Dental ceramics. Coloring agents for porcelain. Section II, Prosthetic dentistry Impression materials. Waxes. Separating media. Investment material. Solders. Dental base materials. Dental adhesi powders. Denture cleansers. Section III, Therapeutics Anesthetics. Endodontics. Periodontics. Oral hygiene Oral surgery Prescription writing. Nutrition and itamins. Section IV Diagnosis X-ray processing. Bacteriology Histological methods for dental tissues. Biologic tests. Section V 101 helpful hints. Section VI, Cosmetics, home remedies, antidotes, conversion tables, etc. Index.

Note. A useful collection of formulas for drugs and materials currently used in dentistry For each formula, ingredients and their amounts are stated, and brief directions are given for compounding. At the beginning of each sub-section, there is usually discussion of the uses of the class of compound to which the sub-section is devoted for example, formulas for cavity aralishes are preceded by paragraph of discussion of their uses and limitations. Formulas for a few commercial compounds, particularly tooth powders and toothpaste are included. The uthor is member of the faculty of the University of Pennsylvania.

GROSSMAN, LOUIS IRWIN editor

Lippincott's Handbook of dental practice. Second edition with 388 illustrations, 4 color plates Philadelphia J B Lippincott Company, 1952 503 p. illus. (part col d) 26 cm $10 00 4582

Contents: Part I, Diagnosis and treatment The prevention of dental caries, by R. G. Bibby and J F Volker Control of dental caries, by L. I. Grossman. Oral diagnosis, by G. R. Winter and L. I. Grossman. Roentgenologic interpretation, by E. C. Stafne. Orthodontics, by A. G. Brodie. Periodontics, by B. Orban. Endodontics, by L. I. Grossman. Diseases of the mouth, by L. W Burket. Prescription writing, by E. C. Dobbs. Anesthesia, by W R. Archer Exodontics, by J R. Cameron and J. J. Stetzer jr. Part II, Restorative dentistry Gold inlay restorations, by E. M. Gorrell and H. K. Mathews. Amalgam, silicat and direct resinous restorations by B Kornfeld. Ceramic restorations, by C. C. Bastian. Pedodontics, by C. A. Sweet. Crown and bridge restoration, by A. O. Klaffenbach. Partial dentures, by V R. Trapozzano. Complete dentures, by V R. Trapozzano. Index.

Note: A reference guide for practicing dentists. The style of presentation is direct and concise. Much use is made of illustrations and of tabular and semi-tabular statements of data and reference information. Bibliographies are included, but the book is not a literature digest, and no effort has been made to make them complete. The first edition was published in 1948. The major change in the second edition is the addition of the chapter on oral diagnosis. A section has been added on the use of the self-curing acrylics, and numerous smaller revisions and additions ha e been made in other chapters. About 80 illustrations have been added.

GROSSMAN, LOUIS IRWIN

Root canal therapy Fourth edition, thoroughly revised, with 347 illustrations on 140 figures 1 in color Philadelphia Lea & Febiger, 1955 399 p. illus (part col d) 24 cm. $7 50 4583

Contents. Pulpless teeth and local infection. Diseases of the dental pulp. Diseases of the periapical tissues. Clinical diagnostic methods. Pulp capping. Pulpotomy Pulp mummification. Pulpectomy Rationale of endodontic treatment. Selection of cases for treatment. Principles of endodontic treatment. Anatomy of pulp cavity Preparation of the root canal. Irrigation of root canals. Sterilization of the root canal. Bacteriologic examination. Filling of the root canal. Root resection. Treatment of fractured and traumatized anterior teeth. Bleaching of discolored pulpless teeth. Index.

Note. A standard textbook for advanced dental students and guide for dental practitioners. The whole question of focal infection in relation to teeth is critically reviewed in the first chapter and diseases of the dental pulp and periapical tissues are described concisely in the second and third chapters. The remaining three-fourths of the book is devoted to the techniques of root canal therapy which are described in detail. References to the literature are included in all chapters. The third edition was published in 1950 In preparing this fourth edition, two chapters, one on history the other on treatment of deciduous teeth, were deleted, the material on sterilization of the root canal was reorganized and greatly expanded and other important additions ere made. Both the number of illustrations and the number of pages ere moderately increased.

KAZIS, HARRY, AND ALBERT J KAZIS

Complete mouth rehabilitation through crown and bridge prosthodontics. 551 illustrations on 332 engravings Philadelphia Lea & Febiger 1956 392 p illus. 26 cm $15 00 4584

Contents (abridged) Part I, Theoretical concepts basic to complete mouth rehabilitation The temporomandibular joint and its related structures. Functional occlusion. Periodontal considerations in crown and bridge prosthodontics Cephalometric appraisal of complete mouth rehabilitation, by R M Ricketts Attrition, abrasion and erosion. Part II, Practical case reports Overbites. Attrition bites. End-to-end bites. Prognathic bites. Temporomandibular joint complications. Part III, Operati and technical considerations in crown and bridge prosthodontics Anesthetic procedures for crown and bridge prosthodontics. Operative procedures for crown and bridge prosthodontics. Technical procedures in crown and bridge prosthodontics. Index.

Note. The senior author' *Planning and treatment for bite raising*, 1948 was pioneer work in the sector of dental therapy once known as "bite raising" or "bite opening, but now more generally known as "mouth rehabilitation The present book is successor to it rather than revision. It effects the development and maturation f the field in a decade and half The first part, hich presents basic theory and applied anatomy is 100 pages long. The second part—189 pages in length—is made up of detailed presentations of ariety of indi idual ases. Each case is fully described in text and pictures as to condition hen first seen, clinical and radiographic examination, diagnosis, treatment plan, and treatment. Some of the chapters end ith Critique in

students, it is useful also as a guide and reference book for graduate dental practitioners. It stresses the common disorders and [illegible] techniques in preference to rare or exotic [illegible] ones. The illustrations are of good quality. Extensive bibliographies are included in the chapters. The third edition was published in 1948. The fourth edition is the result of very extensive rewriting and some reorganization. Important revisions were made in both the textual text and illustrations without, however, changing the book's scope or purpose.

Miller, Samuel Charles and others

Oral diagnosis and treatment a textbook for *students and practitioners* of dentistry and medicine. With an introduction by Allen T Newman. Second edition. 574 illustrations in black and white and 39 color plates. Philadelphia The Blakiston Division McGraw Hill Book Company Inc., 1946 903 p illus. (part col'd) 24 cm. 4595

Contents (abridged) The science of oral diagnosis, by S. C. Miller. Diseases of the mouth and pharynx in children, by L. M. [illegible]. Diseases of the oral mucous membranes exclusive of neoplasms, by G. M. MacKee and A. C. Cipollaro. Roentgenographic interpretation, by L. M. Ennis. Diagnosis of the disturbances of the temporomandibular articulation, by [illegible]. Surgical conditions of the mouth, by T. Blum. Diagnosis of incipient periodontal disease, by [illegible] and J. L. Bloom. Rationale of treatment for periodontal disease, by S. C. Miller. Pulp testing and diagnosis of pulp abnormalities, by A. Walker and M. Brown. Lesions of the hard structures of the teeth and their treatment, by F. J. [illegible]. Partial denture design and planning, by C. H. Schuyler. Diagnosis for full denture prosthesis, by J. [illegible]. Diagnosis in orthodontics, by S. Hemley. Tumors of the oral mucous membrane, by G. M. MacKee and A. C. Cipollaro. Mouth infections and their relation to systemic disease, by [illegible] and L. [illegible]. Diagnosis and treatment of diseases of the salivary glands, by A. J. [illegible]. Oral manifestations of endocrine dysfunction, by W. Wolf. Oral and dental lesions of occupational origin, by J. A. Salzmann. Anodontia (ablative dentistry), by J. M. Mullin. Bacteriology of the oral cavity by D. C. Lyons. Index of proper names. Subject index.

Note. This composite volume, written by a group of specialists, presents systematized procedures for the diagnosis and treatment of oral diseases. Although dental problems and procedures are emphasized, the book, as the title indicates, will also be of value to physicians. This edition includes new chapters on [illegible] the diseases of the salivary glands, roentgenographic interpretation, the latest techniques for extra-oral fixation of mandibular fractures, and [illegible] of the chapters on [illegible] by subject specialists. These additions and other changes account for 140 extra pages. An author index to the extensive chapter bibliographies is included. A third edition was published in 1957 [illegible] p. $14.00

Muhler, Joseph C. and Maynard K. Hine, editors

A symposium on preventive dentistry with specific emphasis on dental caries and periodontal diseases. St. Louis The C. V Mosby Company 1956 266 p. illus. 22 cm. $6 75 4596

Contents Preventive dentistry—definition and scope, by P. E. Blackerby Changing concepts in epidemiology by [illegible]. Role of bacteriology in the etiology control and prevention of dental caries, by F. J. Orland. The role of carbohydrates in the control of dental caries, by P. Jay. The etiology control and prevention of dental caries—the role of fat, by J. F. Volker. Nutrition and dental caries, by J. H. Shaw. Saliva and dental caries, by R. G. Dilley. The role of [illegible] dental plaques in the etiology of caries, by R. M. Stephan. The role of heredity in the causation of dental caries in rats (caries resistance), by H. R. Hunt and others. The role of home care in dental caries control, by P. C. Kitchin. Public health methods in dental caries control, by [illegible]. Topical fluoride therapy by C. L. Howell. Enzymes and enzyme inhibitors in the etiology and control of dental caries, by L. S. Fosdick. Operative treatment as a method of dental caries control, by G. [illegible] Boyd. The clinical management of rampant dental caries, by R. E. McDonald. Periodontal disease—present status and interpretation of epidemiological research, by C. D. Marshall-Day. Nu-tritional aspects of the etiology prevention and treatment of periodontal disease, by I. Glickman. The role of bacteria in periodontal disease, by N. B. Williams. The role of calculus deposition in periodontal disease, by [illegible]. Prevention of periodontal disease—clinical aspects, by F. E. [illegible]. Detection of oral signs of systemic diseases, by D. F. Mitchell. Prevention of malocclusion, by J. W. Adams. Prevention of death and loss of teeth from cancer—the dentist's role, by H. R. G. Robinson. How should preventive dentistry be taught in the dental school? by J. C. Muhler. Author index. Subject index.

Note. A symposium in print rather than a collection of papers presented at a meeting, this work consists of articles written for it by biologists, teachers of dentistry and leaders in dental research. The purpose is to present an authoritative survey of current thought on the etiology of dental diseases in relation to preventive dentistry. The typical paper is brief and to the point, and includes a well selected list of references. The book is of interest to practicing dentists, public health workers, and to scientists engaged in research on dental caries and related problems.

National Research Council. Food and Nutrition Board

A survey of the literature of dental caries. Prepared for the Food and Nutrition Board, National Research Council, under the supervision of the Committee on Dental Health P C. Jeans chairman, C. A. Elvehjem and C. G. King by Guttorm Toverud, Gerald J Cox, Sidney B Finn, Charles F Bodecker James H. Shaw Washington D C National Academy of Sciences—National Research Council, 1952 567 p. illus. 26 cm. (National Academy of Sciences—National Research Council. Publication 225) $5.00. 4597

Contents. Introductory review by G. Toverud. Experimental dental caries in animals, by G. J. Cox. Prevalence of dental caries, by S. B. Finn. Pathology of dental caries by C. F. Bodecker. Oral environment and dental caries, by G. J. Cox. Fluorine and dental caries, by G. J. Cox. Nutrition and dental caries, by J. H. Shaw. Bibliography.

Note. The international literature pertaining to dental caries is critically surveyed in the seven lengthy chapters of this work. The chapters are composed, in large part, of abstracts of journal articles which are organized and run together in a narrative text designed for straightforward reading. However, each of the surveyors has added some critical interpretation, usually in a concluding section, but sometimes in the main part of his chapter. References to sources are embedded in the text, and the full citations are given in the [illegible]-page bibliography. There is no volume index.

Nevin Mendel and others

Conduction, infiltration and general anesthesia in dentistry by Mendel Nevin and P G Puterbaugh. Collaborators Fred R. Adams and Hillard R. Nevin. Fifth edition revised. Illustrated with 228 engravings and large trigeminal nerve chart. Brooklyn, N Y *Dental Items of Interest Publishing Co., Inc.,* 1948 428 p. illus. 25 cm. (Modern dentistry series) $7.50 4598

Contents (abridged) Conduction and infiltration anesthesia. Important anatomical structures and landmarks. The trigeminal nerve as related to dental surgery. Blocking the maxillary nerve and its branches. Pterygomandibular anesthesia. Infiltration anesthesia. Pharmacology of drugs used as local anesthetics. Preparation of the anesthetic solution from tablets. The physiology of local anesthesia. Local anesthesia with [illegible]. Preoperative and postoperative treatment of patients. [illegible]. General anesthesia and analgesia: Indications and methods of administration. General anesthesia in the dental office. General anesthesia in the hospital. Bibliography. Index.

Note. A text and reference book for dental students and practitioners wherein are described the safest and approved techniques and methods of administering local anesthetics. Each phase of

McGEHEE, WILLIAM H. O , AND MELVIN W GREEN

Pharmacology and pharmacotherapeutics for dentists. Fourth edition New York Mc Graw Hill Book Company, Inc., 1952 550 p. illus. 24 cm $7.50 4590

Contents: Basic principles of pharmacology and prescription writing. Drugs used by the dentist chiefly for their local effects on the mouth and teeth. Local drugs altering the inflammatory process. Drugs acting locally on the gastro-intestinal tract. Drugs acting on sensory nerves. Drugs acting chiefly after internal administration. Drugs acting on the autonomic nervous system and drugs acting on muscles. The pharmacology of the metals, specifics, vitamins and hormones. Appendix. Therapeutic index. Subject index.

Note: A standard text for college students of dentistry and reference book for use by practicing dentists. Property uses, dosages, and methods of application are given for a wide range of drugs and pharmaceuticals. Dental remedies whose value is still controversial are included if they have won some acceptance, but their current status is clearly indicated. The appendix includes among other information a tabulation of the solubility of important drugs and a dental formulary and prescription guide. The third edition appeared in 1947 Important changes have been made in the present edition. These include discussions of new products, such as the ammoniated dentifrices, and changes in terminology necessary to make the text conform with the *United States Pharmacopoeia XIV* the *National formulary IX* and Accepted dental remedies, 15th edition.

McGEHEE, WILLIAM H. O , AND OTHERS

A textbook of operative dentistry Fourth edition By William H. O McGehee, Harry A True, E Frank Inskipp, and contributors. New York The Blakiston Division, Mc Graw Hill Book Company, Inc., 1956 720 p illus 24 cm. $14 00 4591

Contents. Diagnosis in operative dentistry Routine methods of diagnosis. Instruments and instrumentation—chair and operating positions. The dental office—ideal arrangement and working conditions, hygiene, light, and asepsis. Role of the dental assistant in operative dentistry Exclusion of moisture from field of operation. Principles of cavity preparation in relation to pathology and clinical features of dental caries. Preparation of cavities—nomenclature—technical procedures. Instrumentation for cavity preparation—fundamental principles—preparation of class I, II, III, IV and V cavities. Accuracy with speed—diamond instruments and tungsten-carbide burs—washed-field dentistry and vacudent—airbrasive. Restoration of the contact point and separation of the teeth. Use of the matrix in restoring teeth. Restoration of tooth structure—classification of materials—cements. Tooth restoration with amalgam—properties and manipulation. Gold foil in tooth restoration—properties and preparation. Manipulation of gold foil in tooth restoration—class I, II, III, IV and cavities. The cast-gold inlay—indications for use—waxes—investments—golds. Construction of the cast-gold inlay—direct pattern—investing—casting. Indirect methods in constructing the gold inlay—hydrocolloid—Dietrich impression material—copper plated dies—casting—finishing, by M. J Thompson and A. Selberg. The porcelain inlay and the acrylic inlay Hyperesthetic dentin—erosion—abrasion—interproximal wear—senile caries. Operative dentistry for children, by C. A. Sweet, sr and I. I. Beechen. Diseases of the dental pulp—endodontics. Index.

Note A standard work used primarily as textbook in dental schools, but useful also for review and reference by graduate dentists. It covers the field broadly including not only descriptions of techniques but also some of the practical aspects of dental practice. Instruments used in operative dentistry and materials are covered with adequate thoroughness. Most of the space is, however devoted to descriptions and illustrations of techniques. The first edition was published in 1930 and the third edition in 1950. In this edition, the major revisions and additions are found in chapters dealing with areas in which important developments have occurred recently such as the one whose title begins Accuracy with speed. There are now 423 figures, many of which contain more than one illustration.

MANHOLD JOHN H

Introductory psychosomatic dentistry New York Appleton-Century-Crofts Inc 1956 193 p illus. 22 cm. $5 00 4592

Contents Part I, The psychosomatic concept. Introduction. Historical background of psychosomatics. Statistical methods. The research results. The psychosomatic concept. Part II, Practical applications. Practical applications for the dentist. Index.

Note: Although not the first book on psychosomatics for dentists, this book is certainly one of the first few The first two chapters are devoted to outlining the basic ideas and history of psychosomatic medicine. Following this background material, the reader is introduced to the elementary fundamentals of descriptive and inferential statistics. Then follows a detailed presentation of the results of studies carried out by the author and his associates to discover relationships between personality traits and dental disorders, particularly caries. This part of the book is the only one of value as a scientific contribution. The terminal chapter discusses implications of psychosomatics in practical dentistry and contains explicit examples of good handling of patients with personality difficulties. It could fairly be described as an essay on practical, applied psychology Literature references and lists of suggested readings are given in most of the chapters.

MASSLER, MAURY, AND ISAAC SCHOUR

Atlas of the mouth and adjacent parts in health and disease. Drawings by Carl T Linden 180 illustrations (19 in color) Chicago American Dental Association, 1951 unpaged. illus (part col'd) 29 cm. 4593

Contents The oral cavity The permanent arch. The deciduous arch. Relationships of enamel, dentin and pulp. Occlusion of the teeth (normal and abnormal) Life cycle of the tooth. Physiologic spacing of the anterior teeth. Dental caries. The progress of dental caries. Effects of the loss of a tooth. Dental erosion. Dental fluorosis. Chronology of tooth development. Growth and calcification patterns of enamel and dentin. Enamel hypoplasia. The teeth in congenital syphilis. Common lesions of the buccal mucosa. Common lesions of the lips. The progress of periodontal disease. Diseases of the tongue. Benign conditions of the tongue. The tongue in systemic disturbances. Oral diseases of occupational origin. The floor of the mouth. The salivary glands. The tonsils (Waldeyer's ring) Common ailments of the throat. The paranasal sinuses. The effects of mouth breathing. Frontal and horizontal sections through the face. Arteries of the head. Veins of the head. The trigeminal nerve. Anatomy of the temporomandibular joint. Action of the temporomandibular joint in mouth opening. Abnormal openings of the mouth. Abnormal closure of the temporomandibular joint. Deviation of the midline in mouth opening. Facial asymmetry and midline deviation. The temporal muscle. The masseter muscle. The internal pterygoid muscle. The external pterygoid muscle. Muscles of the mandible. Fractures of the neck of the condyle. Fractures of the angle of the mandible. Fractures of the body of the mandible. Multiple fractures of the mandible and fracture in the midline. Treatment of mandibular fractures.

Note. A compilation of large-scale illustrations of the teeth, the mouth, and related parts. As indicated by the plate titles—given above—the work has diagnostic value as well as anatomical. The book is made up so that each right-hand page is occupied by a plate while the facing left-hand page carries the verbal legend or description. A new edition was scheduled for 1957

MEAD, STERLING VERNON

Oral surgery Fourth edition With 872 text illustrations and 13 color plates. St. Louis The C V Mosby Company, 1954 1 478 p illus (part col'd) 26 cm $17.50. 4594

Contents (abridged) Diagnosis. Surgical procedures. Surgical anatomic relationships of the mouth. Selection of anesthetic. Chemotherapy and antibiotics. Inflammation. Nonspecific infections. Specific infectious diseases. Wounds, injuries and burns. Periapical diseases of the teeth. Periodontal disease Removal of teeth. Removal of foreign bodies. Surgical preparation of the oral tissues for restorations. Surgical correction of abnormal frenum labii. Fractures. Diseases and malformations of the maxillary bones Malocclusion and deformities of the jaws. Diseases and disorders of the salivary glands and their ducts. Diseases of the nerves Diseases of the lips and soft tissues of the mouth The tongue Hemorrhage Syncope shock and collapse, and emergency measures Tumors of the mouth and jaws. Cysts of the mouth and jaws. Physiotherapy Diet, vitamins, nutritional deficiencies and metabolic disorders related to oral surgery Index.

Note One of the leading comprehensive texts on oral surgery Although designed primarily for the instruction of dental college

graphs and 17 charts. Brooklyn, N Y *Dental Items of Interest* Publishing Company Inc. 1942 748 p. illus. 24 cm. $12.00 4603

Contents: General diagnostic survey. Specific diagnostic survey. Critical study of abutment possibilities. A survey of edentulous spans of mouth for the restoring of missing teeth and its influence in determining the selection of the type of restoration. Fixed bridgework—historical review. Precision slotted attachment removable bridgework. Partial dentures. Clasps. Posture. Model duplication. Methods and procedures for the making of duplicates of master models. Plastics in dentistry. Gold and its alloys for the construction of restorations. Some general remarks on impression methods and the materials used for them. Obtaining accurate dental registers or bites and articulators. Anterior fixed restorations. Construction of posterior fixed restorations. Removable bridge construction with the use of precision. Slotted attachments. Operative and prosthetic technic in partial denture construction.

Note: An advanced volume on prosthetic dentistry. All types of restorations are described and illustrated.

SELDIN HARRY MENDEL

Practical anesthesia for dental and oral surgery: local and general. Third edition, thoroughly revised, with 238 illustrations. Philadelphia Lea & Febiger 1947 562 p. illus. 24 cm. $8.50. 4604

Contents (abridged): Anatomical bases for local anesthesia. Anesthetic solutions. Field block or infiltration anesthesia of the maxilla and the mandible. Intraoral block anesthesia of the mandible. Extraoral block anesthesia of the maxilla and mandible. Operative dentistry and pulp canal therapy. Complications of local anesthesia and their treatment. Part II. General anesthesia: The selection of anesthetics for oral operations. Practical physical diagnosis for the dental anesthetist. The physiology of inhalation anesthesia. Premedication. The administration of nitrous oxide and its mixtures. Analgesia. The management of the recalcitrant patient. Accidents in anesthesia. Ethylene. Cyclopropane. Divinyl ether or vinethene. Ethyl chloride. Intravenous anesthesia. Resuscitation. Index.

Note: In this volume, the author has made a special effort to include material which will be of practical value to the dental surgeon. Detailed descriptions of the techniques utilized in administering local and general anesthetics are accompanied by many excellent diagrams and photographs of cadaver dissections. Each type of operation is preceded by a brief review of the anatomy of the area under consideration. This edition has been revised to incorporate the latest knowledge in the field.

SIMON WILLIAM JOHN editor

Clinical operative dentistry. 650 illustrations on 538 figures. Philadelphia W B Saunders Company 1956 381 p. illus. 24 cm. $9.50. 4605

Contents: Guides to operative dentistry. Amalgam restorations. Inlay restorations. Silicate cements. Acrylic resin fillings. Gold foil restorations. Index.

Note: The sector of dentistry covered in this textbook is that which is concerned with the restoration of carious teeth, or—in the vernacular—with the filling of teeth. Fillings, inlays and three-quarter crowns are included, but not full crowns or bridges. There is considerable description of the various materials, but the book is mainly devoted to the techniques of cavity preparation, filling, etc. As noted in the title, there is a large number of illustrations. Many of these are reproduced from drawings and show the teeth and the operations on them in larger than life size. There are 33 contributors to the volume, including both teachers of dentistry and practitioners. Apparently they furnished material to the editor who integrated and re-wrote it to form the chapters of the book. The names of the contributors are given in the front matter but no chapters or sections of chapters are signed. The editor is Dean and Professor of Operative Dentistry in the State University of Iowa.

SKINNER, EUGENE W

The science of dental materials. Fourth edition illustrated. Completely revised and rewritten. Philadelphia W B Saunders Company 1954 456 p. illus. 24 cm. $7.50 4606

Contents (abridged): Physical properties of dental materials. Gypsum products. Impression compound. Zinc oxide-eugenol impression pastes. Reversible hydrocolloid impression materials. Irreversible hydrocolloid impression materials. Chemistry of the synthetic resins. Denture base resins: acrylic resin teeth. Dental cements. Dental porcelain. Metals: solidification and structure. Wrought metal. Gold foil and its manipulation. Dental amalgam alloys. Dental casting gold alloys. Inlay casting wax. Gypsum investments for inlay casting procedures. Gold inlay casting procedures. Dental gold alloy wires. Gold alloy solders. Steel: its constitution and heat treatment. Wrought base metal alloys: orthodontic wires. Cobalt-chromium alloys for dental castings. Abrasion and polishing. *Appendix.* Index.

Note: A widely used textbook for first-year courses in dental colleges. Basic knowledge on such matters as the constitution of alloys is included, along with a wide range of descriptive information on specific materials, their properties, applications and manipulations in dentistry. The first edition was published in 1936 and the third edition in 1946. This fourth edition is a very thorough revision, with somewhat more emphasis on basic theory and generally a more mature approach to the subject. Selected literature references are included in the chapters. Although the book is an introduction, the coverage is thorough enough to make it useful to the graduate dentist in need of a review or a survey of the newer materials.

SOMMER, RALPH FREDERICK, AND OTHERS

Clinical endodontics: a manual of scientific endodontics. By Ralph Frederick Sommer, F Darl Ostrander and Mary C. Crowley. Philadelphia W B Saunders Company 1956 514 p. illus. 25 cm. $10.50 4607

Contents: A brief history of root canal therapy. Pulp cavity anatomy as applied to endodontics. Sterilization and disinfection of instruments. Clinical evaluation of diagnostic aids. Rubber dam technique for endodontics. Bacteriology in endodontic practice. The concept of pain and application in endodontics. Non-specific root canal antiseptics and miscellaneous drugs used in endodontics. The antibiotics and other chemotherapeutic agents in endodontics. Basic principles of endodontic procedures. Diseases and treatment of the dental pulp. Diseases of the periapical tissues and their treatment. Hermetical sealing of root canals in anterior teeth. Instrumentation and filling of canals of multirooted teeth. Root resection and apical curettage. Traumatic injuries to teeth. Detailed bacteriology of endodontics. Roentgenographic diagnosis of periapical lesions. The nonsurgical management of teeth with periapical pathosis. Bleaching the discolored pulpless tooth. Restorations for nonvital teeth. Prescriptions, formulas and supplies. Index.

Note: An authoritative and thorough work, designed for use as text by advanced students in dental colleges and as a working guide for practicing dentists. Up-to-date techniques of root canal therapy are fully described. Antisepsis and other methods of controlling infections, including the antibiotics, are given much emphasis. The 344 figures illustrate many aspects of the subject, including instruments, techniques, apparatus, and, of course, many photographs and radiographs of teeth in need of endodontic treatment, and of the results of such treatment. Well selected literature references are included in the chapters. The authors are all members of the faculty of the School of Dentistry of the University of Michigan.

SOUDER, WILMER, AND GEORGE C. PAFFENBARGER

Physical properties of dental materials. Washington, D C. Government Printing Office, 1942 222 p. illus. 24 cm. (United States National Bureau of Standards. Circular 433) $1.50. 4608

Contents: General introduction. Metals and alloys: Dental amalgam alloy. Dental mercury. Gold and its alloys in dentistry. Base metal alloys. Ceramic materials: Investments for gold alloys. Investments for base metal alloys. Cements. Organic materials: Impression materials. Inlay pattern waxes. Organic denture base materials. Dentifrices. Methods of purchasing: Certified products. Testing government purchases. Specifications. Federal specifications.

the subject is fully illustrated with diagrams and photographs, and the anatomical structures encountered in nerve blocking are described in detail. A much briefer account of the methods employed in general anesthesia is included. This edition is fundamentally the same as the 1938 revision however later techniques, such as co-medication, and new equipment, such as the aspirating syringe, are now described. A chapter on local anesthesia with penicillin has been added, and the section dealing with complications, post-operative treatment, pharmacology of drugs, and restorative measures have been revised and expanded. Some new references have been added to the bibliography

ORBAN, BALINT J, AND FRANK M WENTZ

Atlas of clinical pathology of the oral mucous membrane, a practical approach to diagnosis By Balint J Orban, Frank M Wentz and contributors. 72 colored illustrations, 142 black and white illustrations, 14 charts. St. Louis The C V Mosby Company, 1955 135 p illus (part col'd) 29 cm. $12 50 4599

Contents Part I Introduction to systematic diagnosis. The normal mucous membrane. Part II Diseases of the oral mucous membrane. Infectious diseases. Noninfectious diseases. Metabolic and endocrine disturbances. Nutritional and dietary disturbances. Chemical and physical injuries. Disturbances of the blood-forming organs. Index.

Note A pictorial reference book of the more common oral diseases and disorders. The introductory first part occupies only 20 pages. The balance of the volume is devoted to the atlas. In this part, 66 diseases and disorders of clinical interest in dentistry are pictured and concisely described. The matter on an individual condition occupies one page or two facing pages and includes one or more (usually more) illustrations, together with several concise paragraphs on etiology clinical features, differential diagnosis, treatment, etc. A colored illustration reproduced from a colored photograph, is always included. Although by no means exhaustive, the book is a useful compendium for students of dentistry and graduate practitioners.

SALZMANN, JACOB AMOS

Principles of orthodontics. Second edition. 533 illustrations Philadelphia J B Lippincott Company 1950 887 p illus (part col'd) 24 cm $15 00 4600

Contents Orthodontics in preventive dentistry and public health. Orthodontics and prophylactic orthodontics. Growth and development. Bone growth and the carpal index. Development and growth of the head. Developmental anatomy and physiology of the face and jaws. Development of the dentition. Anomalies of tooth formation and eruption. Ontogenetic development of the occlusion of the teeth. The endocrines in relation to dentofacial deformities. Nutrition in relation to dentofacial development. Etiologic factors in dentofacial deformities. Classification and diagnosis of dentofacial anomalies. Differential diagnosis and treatment planning. Orthodontic examination of the patient. The prevention and treatment of incipient malocclusion. Principles of mechanotherapy The Tweed method. The Johnson twin-wire appliance. The Norwegian system and bite plates. Dentofacial changes in orthodontics. Index of authors. Subject index.

Note A treatise of wide scope. The primary emphasis is on the necessity of understanding growth processes and other biological factors. However the latter 370 pages of the book are devoted to techniques. The book is used both as text in advanced and graduate courses and as reference manual in professional libraries. Very extensive bibliographies are included and the names of the authors of the cited papers are entered in the author index, thus forming guide to the currently important literature. The first edition appeared in 1943 Important additions and revisions are evident in this edition. The book is more than 200 pages longer the number of illustrations has been substantially increased and the significant literature published since 1943 has been added to the bibliographies.

SARNAT, BERNARD G, editor

The temporomandibular joint Springfield Ill Charles C Thomas 1951 148 p. illus. 23 cm. (American lecture series. Publication no 134 A monograph in American lectures in dentistry, edited by Edward J Ryan) $4 75 4601

Contents. Functional anatomy of the temporomandibular joint, by H. Sicher Histophysiology of the temporomandibular joint, by J P Weinmann and H. Sicher Contribution of the mandibular condyle to the growth of the face, by A. G. Brodie. Pathology of the temporomandibular joint, by J P Weinmann and H. Sicher. An evaluation of Costen's syndrome from an anatomic point of view by A. A. Zimmerman. Diagnosis of some abnormal temporomandibular joint conditions, by A. G. Brodie. Temporomandibular disorders. diagnosis and dental treatment, by J R. Thompson. References.

Note. A collection of original papers written to clarify certain segments of the knowledge of the temporomandibular joint and to relate this knowledge to clinical problems and treatment. The level of writing is postgraduate. The editor is Head of the Department of Oral and Maxillofacial Surgery of the College of Dentistry of the University of Illinois.

SCHLOSSER, RUDOLPH O, AND DANIEL H. GEHL

Complete denture prosthesis Third edition Illustrated with 292 figures. Philadelphia W B Saunders Company, 1953 511 p. illus. 25 cm. $8 50 4602

Contents: The objectives of complete denture prosthesis. Oral anatomy and physiology and their relation to body metabolism. The masticatory mechanism. Case history examination of the mouth, diagnosis and prognosis. Practical application of physics and other requisites for success in complete denture prosthesis. Primary impressions and study casts. Tooth selection. Individually prepared impression trays. A comparison of some of the impression materials commonly used in complete denture prosthesis. Anatomical and physiological factors in the taking of impressions for complete denture prosthesis. Secondary impressions. Casts, baseplates, mounting casts and occlusion contour rims. The denture space, its relation to the rest position of the mandible, when the latter is used as a position of reference in registering the vertical dimension of the former in compliance with the biological and physiological as well as the esthetic requirements. Registration of the positional relations of the jaws and transfer of the recorded denture space to the articulator. Arranging the teeth for complete denture prosthesis in compliance with the esthetic and functional requirements. Trying in the wax model dentures. Converting the wax models into finished dentures. Checking the fit of the completed dentures and establishing the occlusal balance preparatory to final insertion. Instructions to the patients receiving new dentures. Adjustment service for the denture patient during the initial period of use. Maintenance and correction of dentures. Immediate denture procedure. Technic for constructing single complete dentures and complete maxillary dentures in conjunction with partial mandibular dentures. Case reports and treatment of anomalies of jaw form and relations by means of complete denture prosthesis. Index.

Note: A comprehensive, practical manual used as textbook by undergraduate students of dentistry and as a reference book by dental practitioners. The principal subject is the making of complete denture prostheses. However other subjects, such as the related anatomy and physiology the mechanics of mastication, and the techniques of making single complete dentures for patients who have opposing natural teeth with or without partial dentures, are also covered. The importance of thorough understanding of mandibular movement is stressed, and considerable space is given to materials, techniques of impression-taking, articulating, and fitting. The first edition was published in 1939 and the second edition in 1946. Comparing the second edition to the third edition, the name of co-author appears on the title page for the first time and many revisions and augmentations have been made in both the verbal text, illustrations and literature lists. A fourth edition was scheduled for publication early in 1958

SCHWARTZ, JACOB R

Modern methods of tooth replacement a categoric treatise on the manifold methods by which one or more missing teeth may be replaced, employing any of the approved systems of construction. With 1881 original illustrations, executed and drawn by the author and comprising 1507 drawings 357 photo-

dental schools, the scope of the book is so wide that it is [illegible] useful reference treatise in both dentistry and medicine. Considerable attention [illegible] given to pre- and post-operative care of patients as well as to surgical techniques. Each volume is profusely illustrated and well supplied with extensive lists of the related literature. The first edition was published in 1948. In preparing this edition moderately extensive revisions were made in both the text and illustrations. The number of illustrations and the length of the text have both been increased, and recent literature has been added to the bibliographies.

TYLMAN, STANLEY DANIEL

Theory and practice of crown and bridge prosthesis. Third edition. With 1,364 text illustrations and 9 color plates. St. Louis The C. V. Mosby Company 1954 1,017 p. illus. (part col'd) 25 cm. $16.00. 4613

Contents (abridged) History of fixed partial prosthesis. Examination of patients. Facial factors. The maxillae and mandible. Planning the fixed partial denture. Oral anatomy and oral physiology in relation to crowns and fixed partial denture prosthesis. Histological structure of teeth and supporting tissues in relation to crown and fixed partial denture prosthesis. Some physical and engineering principles related to crown and fixed partial denture prosthesis. A biological interpretation of physical and mechanical principles. Classification and types of fixed partial dentures. Special problems and preliminary measures in the preparation of teeth for crowns and retainers. The construction of intracoronal and extracoronal retainers. The construction of complete veneer porcelain crowns. The construction of pontics for fixed partial dentures. The fabrication, testing, and adjustment of fixed partial dentures. The removal and repair of crowns and fixed partial dentures. The use of acrylic resins in crowns and fixed partial dentures. Color reproduction in synthetic resins. Oral rehabilitation. Index.

Note A comprehensive work which has been used in its several editions since 1940 as [illegible] textbook for dental college students and reference book for dental practitioners. In the current edition, it is organized in 37 chapters, of which [illegible] selection are listed by title above. The importance of analyzing the patient's needs and planning treatment to meet them is stressed. Detailed descriptions of the processes and techniques involved in the construction of crowns and fixed partial dentures are accompanied by numerous step-by-step drawings and reproductions of photographs. The second edition was published in 1947. In preparing the third edition, material was both deleted and added. The additions are scattered throughout the book and pertain to such matters as new materials and new developments in casting procedures, in pin-type attachments, etc. The index has been improved and references to more recent literature added.

UNITED STATES ARMY INSTITUTE OF PATHOLOGY

Atlas of dental and oral pathology prepared at The Army Institute of Pathology from material in The Registry of Dental and Oral Pathology of The American Dental Association by Joseph L. Bernier and J. E. Ash. Fourth edition, a complete revision and rewriting of the previous editions of James B Mann and Henry M Goldman. 484 illustrations 150 plates Washington, D C. American Registry of Pathology 1948. 230 p. illus. 28 cm. $7.00. 4614

Contents Embryology and histology. Pathology of the hard dental structures. Pathology of the soft dental structures. Odontogenic tumors. Odontogenic cysts. Hyperplastic, atrophic and inflammatory lesions. Oral lesions of specific etiology. Benign oral tumors. Malignant ectodermal tumors. Malignant mesenchymal tumors. Index.

Note In the present edition the well-known book has been completely reorganized and rewritten. The case method of organization employed in earlier editions has been abandoned. The text is now organized into chapters as indicated above. There are now 484 figures, and practically all of them are reproductions of photographs and photomicrographs which [illegible] with [illegible] of pathological conditions of the oral cavity and the surrounding tissues. Among the new features of this edition are the new format, the new text, and added plates on [illegible] effects.

UNITED STATES DEPARTMENT OF THE ARMY

Dental laboratory technicians. Washington, D C. Government Printing Office, 1954 319 p. illus. 23 cm. (United States. Department of the Army Technical manual TM 8–226) $1.25 4615

Contents Introduction. The dental laboratory. Dental materials. Anatomy and tooth carving. Technical procedures required for construction of full dentures. Partial dentures. Repair and correction of dentures. Inlays, crowns, and bridges. Dental splints. References.

Note This technical manual has [illegible] threefold purpose: first, as [illegible] textbook for [illegible] course of training for dental laboratory technicians; second, as [illegible] textbook for use in on-the-job training; and, third, as [illegible] ready reference manual for dental laboratory procedures commonly employed in the Army. Since it deals with techniques of importance to the initial training of dental laboratory technicians, emphasis is placed upon the reasons for the processes used in the various dental laboratory procedures. The manual covers the details of procedures requiring [illegible] considerable degree of skill and experience, as well as basic techniques, and contains more than 700 separate illustrations.

WEINBERGER, BERNHARD WOLF

An introduction to the history of dentistry with medical & dental chronology & bibliographic data. St. Louis The C. V Mosby Company 1948 2 v. 26 cm. $7.50. 4616

Contents (abridged) Volume [illegible] Introduction. First period, Antiquity. The teeth of prehistoric man and his descendants. Mesopotamian and Oriental dentistry. Ancient Egyptian medicine and dentistry. The dentistry of the people of Israel. The dental art of the Phoenicians, fifth century B. C. The golden age of Roman dentistry. Decorations and mutilations of teeth. Second period, Arabian, mediaeval and period of Renaissance information. Dentistry during the Middle Ages. Barber-surgeons, barbers and [illegible]—and dentists. Dentistry in the Renaissance—the revival of anatomy and physiology. Third period, Dentistry as an independent profession. The dawn of dental literature. The advent of scientific dentistry. Dentistry during the eighteenth century. Chronological table. General works of reference. Dental literature, 1530–1820. Bibliographies and biographies. Index of personal names. Subject index. Volume II. The first one hundred years of dentistry in America. Diseases and dentistry in America during the colonial period (1734–1800). John Baker, M.D. (1732–1796). Robert Woofendale (1742–1828). Paul Revere (1735–1818). Isaac Greenwood, Sr., of Boston (1730–1803). James (Jacques) Gardette (1756–1831). Isaac Greenwood, Jr. (1758–1829). Jean Pierre (John Peter) Le Mayeur, M.D. in America (1783–1806). Josiah Flagg (1763–1816). John Greenwood, pioneer American dental scientist (1760–1819). Richard Cort[illegible] Skinner. Charles Willson Peale (1741–1827). George Washington. General works of reference. Index of personal names. Subject index.

Note A valuable, though rather poorly organized, reference history [illegible] which has obviously been based on extended research. A number of quotations from early works, advertisements, etc. are incorporated in the text. There are numerous illustrations of not only documents but dentures. The author does not minimize the significance of the roles played by artisans, untrained "tooth-drawers," and quacks, at the same time he presents [illegible] strong case for his claim that dentistry has always been [illegible] specialized branch of medicine and that the truly guiding spirits of the profession have been medical scientists. In addition to bibliographies attached to each chapter, there are several general reference lists and historical bibliographies in both volumes. There is also [illegible] fairly detailed chronological table.

WHEELER, RUSSELL CHARLES

A textbook of dental anatomy and physiology. Second edition, illustrated. Philadelphia W. B Saunders Company 1950. 422 p. illus. 26 cm. $7.00 4617

Contents Nomenclature and general considerations. Development of the teeth, calcification and eruption. General considerations in the physiology of the permanent dentition. Physiologic tooth form protecting the periodontium. The deciduous teeth. The permanent teeth—the maxillary incisors. The mandibular incisors. The canines (cuspids) maxillary and mandibular. The maxillary premolars (bi-

American Dental Association specifications. Bibliography Appendix: Conversion tables. Index.

Note From 1919 to 1942 the National Bureau of Standards was responsible for an extensive dental research program centering around dental amalgams, restorative materials, and techniques. This circular is a compilation of scientific and technical information selected from the more than 100 separate publications (listed in the bibliography) on the various phases of dental research conducted as part of this program. The publication was undertaken as a permanent one-volume review of the results of the research.

SWENSON, MERRILL G

Complete dentures Third edition Eight hundred eighty two illustrations, ten in color St. Louis The C V Mosby Company, 1953 735 p illus (part col'd) 25 cm $13 50 4609

Contents (abridged) Part I, Related factors of complete denture construction Anatomy and physiology in relation to denture construction. Underlying principles and fundamentals of impression making. Vertical dimension. Methods of securing centric and protrusive relation. Arrangement of teeth. Occlusion. Face-bow Articulators. Surgery in relation to complete dentures. Selection of teeth. Part II, Construction of complete dentures: Preliminary maxillary impression. Preliminary mandibular impression. Zinc oxide-eugenol paste impressions. Mounting records. Mounting the casts on the articulator by means of face-bow and centric records. The setup. Post dam, check of esthetics. Waxing, flasking, and processing. Remounting finished dentures. Part III, Immediate denture construction Indications, advantages, and disadvantages. Impressions. Boxing, flowing of the cast, separation of the cast. Construction of bite rims, centric relation, face-bow and mounting. Setting of the teeth. Surgery and insertion of denture. Perfection of occlusion. Rebasing, duplicating, and subsequent service for immediate dentures. Part IV Supplemental procedures and materials—duplication of casts. All-compound preliminary impressions. Other immediate impression methods. Part V Single maxillary dentures and rebasing: Rebasing complete dentures. Complete maxillary denture opposing partial mandibular denture. Wax extension as applied to extremely resorbed maxillary and mandibular ridges. Complete maxillary denture against natural mandibular teeth. Bibliography Index.

Note A clearly written, detailed exposition of basic knowledge, procedures and techniques pertinent to the making of various kinds of complete dental prostheses. It is used as textbook for students in dental college and is also used as practical guide for graduate dental practitioners and dental mechanics. The verbal text is closely integrated with the hundreds of excellent photographs and diagrams. The second edition was published in 1947 This third edition is not an extensive revision however three chapters have been revised or extended.

THOMA, KURT HERMANN, AND HAMILTON B G ROBINSON

Oral and dental diagnosis with suggestions for treatment. Fourth edition. With 928 illustrations, 55 in color Philadelphia W B Saunders Company 1955 449 p illus. (part col'd) 25 cm. $10 50 4610

Contents. Part I, The dentist's responsibility in diagnosis and treatment-planning Examination. The case history Physical examination. Laboratory tests. Special examinations for dental and oral diseases. X-ray examination. Consultations. The process of diagnosis and treatment-planning. Final examination. Part II, Diagnosis of oral disease The head and face. The lips. The teeth. Dental caries Pulp and periapex. Periodontal disease. The tongue and floor of the mouth. The palate. The buccal, labial, and alveolar mucosa. Salivary glands. The jaws. Temporomandibular joint. Neurologic disturbances. Focal infection and extension of dental disease. Pain. Index.

Note In its first three editions this standard work was primarily reference book for practicing dentists and secondarily a text for the instruction of advanced students of dentistry In this fourth edition it has been extensively revised and reoriented so that it is primarily text for students. Considered from this standpoint it is an introduction to the diagnosis of diseases of the mouth and teeth The first part accounts for 108 pages and is devoted to general methods of diagnosis, record keeping and treatment planning. In the second and longer part, diseases are dealt with by class and site. A considerable range of diseases is covered, but the book is not a cyclopedia of oral disease. The number of illustrations—928—is high for a book of this length. The selected literature references now cover publications as recent as 1954.

THOMA, KURT HERMANN

Oral pathology, a histological, roentgenological and clinical study of the diseases of the teeth jaws, and mouth. Fourth edition. With 1,594 illustrations, including 92 in color St Louis The C V Mosby Company, 1954 1,536 p illus (part col'd) 26 cm. $22.50. 4611

Contents (abridged) Part I, Anomalies and diseases of the teeth: Abnormal occlusal relationship of the teeth. Pathology of the form and structure of the teeth. Physiologic pathology of the teeth. Changes in the teeth caused by general disease. Pathologic effects of dental restorations. Traumatic injuries of the teeth. Idiopathic resorption of the tooth with metaplasia. Part II, Odontitis. Dental caries. Dentoalveolar abscesses. Periodontal diseases, by H. M. Goldman. Facial abscesses and phlegmons resulting from odontogenic infections. Part III, Anomalies and diseases of the head and jaws. Congenital malformations of the head and face. Malformations of the skull and their effect on the jaws. Developmental anomalies of the jaws. Local diseases of the jaws. Cysts of the jaws. Part IV Abnormalities and diseases of the temporomandibular articulation Developmental anomalies. Traumatic injuries of the mandibular joint. Inflammatory arthropathies. Tumors of the mandibular joint. Part V Diseases of the nerves and muscles of the face and jaws. Part VI, Mouth diseases: Congenital and acquired anomalies. Infectious diseases of the mouth. Virus diseases of the oral cavity Oral lesions in dermatological diseases. Allergic manifestations and drug intolerance. Oral diseases of metabolic origin. Oral lesions in blood diseases. Part VII, Diseases of the salivary and mucous glands. Functional disorders of the salivary glands. Congenital abnormalities and inflammatory diseases of the salivary and mucous glands. Cysts and tumors of the salivary and mucous glands. Part VIII, Tumors of the jaws. Tumors of odontogenic origin. Tumors of osteogenic origin. Tumors of the soft tissues of the oral cavity Index.

Note. A treatise of exceptionally comprehensive scope. It covers both the gross pathology and the micropathology of all the common and most of the rare abnormalities and diseases of the teeth, jaws, and mouth. Clinical aspects are emphasized. It is used both as a textbook in dental colleges, and as a reference book by practitioners of dentistry and dental graduates engaged in research or teaching of dentistry The chapters are essentially critical surveys of the literature, and extensive references to the source articles are included. The first edition was published in 1941 and the third edition in 1950. The fourth edition is shorter by approximately 40 pages and contains about 70 fewer illustrations than the third edition. However the number of illustrations in color has been increased. Shortening of the book was accomplished by deleting the chapters devoted to the results of animal experimentation. Revisions and augmentations were made to most of the chapters, and the chapter on dental caries was extensively rewritten. This particular chapter now contains bibliography which is 16 pages long.

THOMA, KURT HERMANN

Oral surgery Second edition. With 1789 illustrations including 121 in color St Louis The C. V Mosby Company 1952 2 v illus. (part col d) 26 cm. $25 00 4612

Contents. Volume I, The principles of surgery The general care of the patient Anesthesiology Chemotherapeutics and antibiotics Dentoalveolar surgery The treatment of abnormalities of the jaws. edentulous mouth. The treatment of traumatic diseases of the jaws. The treatment of odontogenic diseases of the maxillary sinus. The treatment of osteomyelitis and necrosis of the jaws. Volume II, The treatment of diseases of the mandibular joint. The treatment of infections of the face and neck. The treatment of diseases of the salivary and mucous glands. The treatment of diseases of the fifth and seventh nerves. The treatment of cysts of the jaw The treatment of benign tumors of the mouth and jaw The treatment of malignant tumors. The treatment of developmental deformities of the jaw The treatment of acquired defects of the mandible The treatment of oral abnormalities and defects Index

Note An outstanding work which provides comprehensive and detailed description of surgical techniques used in the correction of diseases, injuries, and abnormalities of the oral cavity teeth, jaw and adjacent structures. Although addressed primarily to graduate dentists, especially those who are taking instruction in postgraduate

NURSING

GENERAL

BARRETT JEAN

Ward management and teaching. Second edition. New York Appleton-Century-Crofts, Inc., 1954 440 p. illus. 22 cm. $4 75 4619

Contents: Part I, The position of head nurse. The place of the head nurse in the hospital and the school of nursing. Preparation of the head nurse. Part II, The responsibility of the head nurse for the quality of patient care: The meaning of good nursing. Dietary service as it relates to quality nursing. Nursing care of the patient on admission to the hospital. Planning the patient' care. Supervision of patient care. Preparing the patient for discharge from the hospital. Factors which influence the quality of patient care. Part III, The responsibility of the head nurse for good ward management: The factors involved in good ward management. The responsibility of the head nurse for the physical environment. Providing supplies and equipment. Receiving and transmitting medical orders. Record keeping. Giving and receiving reports. Establishing good relationships. Delegating responsibility. Assigning duties and responsibilities. Planning time. Part IV, The educational responsibilities of the head nurse: Establishing desired outcomes of clinical experience. Planning clinical experience. Supervision of personnel. Essentials of ward teaching. The group conference. Bedside clinic, nursing care conference, teaching rounds. The demonstration. Nursing care study. Evaluation of teaching and supervision. Evaluation reports and conferences. Part V, The head nurse: responsibility to herself and her profession: The head nurse: personal growth and professional obligations. The head nurse as an administrator and teacher. Index.

Note: A standard textbook addressed primarily to nursing school graduates who are preparing to become head nurses in hospitals. It provides an authoritative and up-to-date view of the responsibilities and functions of head nurses in modern hospitals. The various aspects of the field named in the chapter titles are discussed in detail and, in addition, references are given to the more important literature on each topic. The first edition was published in 1949. Considerable reorganization and revision of the text are apparent in this second edition, and the lists of readings included in the chapters have been extensively revised. The author is Director of the Department of Nursing Education of the Syracuse University School of Nursing.

BROWN ESTHER LUCILE

Nursing for the future a report prepared for the National Nursing Council. New York Russell Sage Foundation, 1948. 198 p. 24 cm. $2.00. 4620

Contents: Extension of health services. Future demand for nursing care. Differentiation of nursing service according to function. Future role of the professional nurse. Education for practical and graduate bedside nurses. Education for the professional nurse. Resources for the future.

Note: A brilliantly written report whose chief purpose is to point out how nursing education may be best adapted to the present and future needs of society. The basic information was obtained in visits to hospitals and nursing schools and by interviews with public health leaders, doctors, and other interested parties. Two advisory committees assisted the author, and three regional conferences attended by directors of nursing schools and other persons connected with nursing education were held, in order to obtain information and opinions. The book contains important material for students of nursing and all persons interested in the education of nurses.

DAKIN FLORENCE, AND ELLA M THOMPSON

Simplified nursing. By Florence Dakin and Ella M Thompson with the assistance of Margaret LeBaron. Sixth edition. Philadelphia J B Lippincott Company 1956 800 p. illus. 21 cm. $4 75 4621

Contents (abridged): Part I, Getting your bearings: Practical nursing is a career. Part II, Health is everybody's business: Community and personal health. Part III, The human body in action. Tissues and membranes. The skeletal system. The muscular system. The circulatory system. The digestive system. The respiratory system. The reproductive system. The endocrine system. The nervous system. The special senses. Part IV, Family living: The patient is part of the family. What shall we eat? Special diets for special conditions. The child is a person, too. After 40—what? Mother and baby care. Part V, Illness conditions: Diseases of the skin. Diseases and conditions of the circulatory system. Cancer. Diseases of the digestive system. *Diseases of the respiratory system.* Diseases of the urinary system. Diseases of the reproductive system. Diseases of the endocrine system. Diseases of the nervous system. Diseases and conditions of the eye and the ear. Allergies. Mental disorders. Part VI, Nursing is an art: The patient in his surroundings. Health and comfort measures for the patient. Information the doctor needs. Nursing treatments. Drugs and their administration. Care in emergencies. List of national organizations distributing health information. Index.

Note: A standard textbook for the instruction of practical nurses. (In the United States of America practical nurses and professional nurses are distinguished by different educational preparation and duties, those of the practical nurse being much simpler.) It is also of value to women who feel the need of a book for guidance in the nursing care of their own families. It is written in simple style, covers a wide range of elementary and basic information, and has a fully detailed index and other features that suit it both to study and to reference use. The fifth edition was published in 1951. In this sixth edition, there have been some reorganization of the material and some expansion, the latter resulting in an increase of about 70 pages in the length of the book. Some illustrations appearing in the fourth edition were deleted, and many new ones added; the total number is now 114. A selection of recent literature has been added to the useful bibliography.

DEMING DOROTHY

The practical nurse. Cambridge Mass. Harvard University Press 1947 370 p. 23 cm. $3.00. 4622

Contents: The practical nurse and the care of the sick. Who is the practical nurse? The supply of practical nurses. The birthplace of practical nursing—the home. General hospitals. Mental hospitals. Tuberculosis hospitals. The chronically ill and the aged; convalescents. Industry. The newest field—public health. Uncle Sam needs practical nurses. Other opportunities for the practical nurse. The schools of practical nursing. The curriculum in schools of practical nursing. Supervision. Protection through legislation. Hiring suitable practical nurses. Next steps. Appendix. Annotated list of textbooks and instruction outlines. The approved schools of practical nursing. Practical nurses in visiting nurse associations. Practical nursing service through professional registries in Ontario, Canada. Past opinions regarding state licensure of practical nurses. Index.

Note: In the United States of America, the term "practical nurse" designates a person who has not pursued a full course of education and training that would entitle her to a license or registration as a professional nurse but who by virtue of experience, or a shorter course of instruction, is permitted to carry out simpler types of nursing activities. In this book, the author has described how practical nurses have functioned in the past and the many ways in which they are now serving in homes, hospitals, industry and public health. The need for this type of nursing service is pointed out, and ways of expanding it and improving it through effective choice, preparation, supervision, and legal control are suggested.

cuspids) The mandibular premolars (bicuspids) The maxillary molars. The mandibular molars. The pulp cavities of the permanent teeth. Dento-osseous structures. Temporomandibular articulation—muscles of mastication—analysis of mandibular movements. The arrangement of the teeth and occlusion. Index.

Note: A textbook for use in schools of dentistry It is introductory to dental anatomy but it is thorough enough and sufficiently detailed to make it of interest to graduate dentists as well as to students. Terminology embryology and physiology are considered in the first four chapters. The succeeding chapters are devoted to a detailed study of general anatomy as the chapter titles indicate. The first edition was published in 1940. No major changes were made in this edition, but the text has been revised and clarified in numerous places. Also, changes have been made in the illustrations. These include an entirely new series of illustrations in the chapter on pulp cavities. A selection of recent literature has been added to the bibliography

YEAR BOOK OF DENTISTRY (1955–1956 Year Book series) Editors Prosthetic dentistry, Stanley D Tylman, Operative dentistry, Donald A. Keys, Public health, John W Knutson Orthodontics, Harold J Noyes Oral pathology and oral medicine, Hamilton B G Robinson, Oral surgery, Carl W Waldron Chicago The Year Book Publishers, Inc. 1956 461 p illus. 20 cm. $6.00. 4618

Contents. Diagnosis. Pulpal and periodontal diseases and related pathology Caries. Public health. Orthodontics. Surgery and related pathology Restorative and prosthetic dentistry Subject index. Index to authors.

Note: An annual publication edited and organized similarly to the other annuals in this publisher's *Year Book* series. The chapters consist of abstracts in English of articles selected from the medical and dental journals of the world. The typical abstract is several hundred words in length, and in many instances is supplemented by a brief editorial note in which the author's results are evaluated or related to other published work. A reference to the original publication is always given. Illustrations are often reprinted from the original publication In this issue there are 317 such figures. Each annual issue covers the literature of approximately one year. In the case of the issue described here, the abstracts are of articles appearing in journals received by the editors from September, 1954, to August, 1955

Nursing

General

JAMIESON, ELIZABETH M., AND MARY F SEWALL

Trends in nursing history their relationships to world events. Fourth edition. Illustrated. Philadelphia W B Saunders Company 1954 577 p. illus. (part col d) 20 cm. $4 75 4628

Contents (abridged) Part one, Ancient civilizations: Life among [illegible] peoples. Beginnings of civilization. Early Christian era. Part two, The Middle Ages. Part three, The modern era—scientific, economic, and social evolution: Renaissance, Reformation, and decline in nursing, 1500-1840 A.D. Early hospitals and nursing in America. Sporadic efforts at social reform. Modern development of [illegible] agencies, 1840-1893. Group consciousness develops with growth of schools, 1893-1920. National surveys of nursing and medicine, 1920-1939. World War II, 1939-1945. Modern trends in nursing, 1945-1953. International relationships. Index.

Note A widely used nursing school textbook. It presents a panoramic view of the development of nursing with emphasis on the major events but including also much on persons who shaped them. In this edition, there are numerous portraits of leaders in nursing. The social status of women in the various nations and eras runs through the book as a secondary theme. The research activities and current state of organized nursing in the United States of America are outlined in the chapter entitled "Modern trends in nursing," which was newly added in this fourth edition.

JENSEN DEBORAH MACLURG

History and trends of professional nursing Third edition. St. Louis The C. V Mosby Company 1955 508 p. illus. 22 cm. $4 75 4629

Contents (abridged) Part I, Orientation. Unit I. The social and professional history of nursing. Part II, Historical background. Unit II, Pre-Florence Nightingale nursing. Unit III, Florence Nightingale—her life and influence on nursing. Unit IV Early American nursing. Unit V Expansion of professional nursing. Unit VI, Professional nursing between World War I and World War II. Unit VII, Nursing during World War II. Part III, Contemporary nursing in the United States. Unit VIII, Postwar development and trends. Unit IX, [illegible]. Unit X, [illegible] opportunities for the graduate nurse. Unit XI, Legal aspects, by J. F Spalding. Part IV Nursing in the world today. Unit XII, A survey of the development of nursing in other countries. Unit XIII, International relationships. Index.

Note A standard history of nursing and survey of trends in nursing, used as a textbook for student nurses. Although it includes biographical sketches of the persons who have made contributions to the art of nursing, the growth of nursing is pictured as an integral part of development of social structure. Many developments are necessarily only summarized, but good bibliographical lists are included for those students who wish to pursue a topic further. The second edition was published in 1950. This third edition is the result of much rearrangement and augmentation. The units on legal aspects and opportunities for graduate nurses are new additions, and revisions have been made in many of the chapters carried over from the preceding edition. A selection of the literature published since the second edition was written has been added to the bibliographies.

MONTAG MILDRED L., AND MARGARET FILSON

Nursing arts. Second edition. Illustrated. Philadelphia W B Saunders Company 1953 619 p. illus. 20 cm. $4.50. 4630

Contents Part I, Orientation to nursing: Health—a social accomplishment—a social responsibility. The education of nurses. Part II, Environment of the patient. The hospital. The patient's room. Care of the environment. Medical asepsis. Surgical asepsis. Part III, Admission and discharge of the patient: The patient's record. Part IV, The making of the diagnosis. Observation of signs and symptoms. The vital signs. The physical examination. Laboratory tests. Special diagnostic tests. Part V, General care and comfort of the patient. Planning the patient's care. Teaching the patient. The general care of the patient. Comfort, rest and sleep. Serving of food and fluids. Diversional therapy. Religious needs of the patient. The care of the surgical patient. The care of patients with long-term illness and the aged. The care of the gravely ill and the dying. The care of the dead. Part VI, Therapeutic treatments: Administration of medicines. Parenteral therapy. Treatments of the urinary bladder. Treatments of the colon. Irrigations. Treatments [illegible]. Applications of heat, cold and counterirritants. [illegible]. Oxygen, carbon dioxide and helium therapies. Application of bandages and binders. Appendix. Index.

Note The basic, everyday techniques of nursing are described explicitly in this textbook. Included are not only such procedures as making the beds of patients but also uncommon ones, such as correct procedure when it is necessary for a patient suffering from a communicable disease to sign a legal document. The illustrations include reproductions of some forms used in hospital records. In this edition, there are 129 figures. Short, selected bibliographies designed as guides to further reading are included in the chapters. The first edition was published in 1948. In preparing this edition, the authors both reorganized and revised, and in some of the chapters the revisions were substantial.

PERRODIN CECILIA M.

Supervision of nursing service personnel. New York The Macmillan Company 1954 622 p. illus. 22 cm. $6 00. 4631

Contents (abridged) Unit I, The nature and meaning of supervision: Administration, organization, supervision. Teaching, education, supervision. The language of supervision. Bibliography. Unit II, Basic concepts of importance in supervision: The philosophy of nursing supervision. Psychology the lifeblood of supervision. Sociology social insight, and supervision. [illegible]. Bibliography. Unit III, Principles of supervision and their relation to supervisory practices: General principles of clinical supervision. Specific principles of supervision. Area supervision—head nurse—patient—hospital—personnel. Public relations. Bibliography. Unit IV Analysis and evaluation of supervisory activities, requirements, and qualifications. Unit V Tools of supervision: Personnel policies. Staff education. [illegible]. The art of communication. Supervisory records. Facilities for operation and cooperation. Problem-solving and supervision. Bibliography. Unit VI, Contributions of education, business, and industry to supervision. Unit VII, The supervisory program. Unit VIII, The fruits of supervision: How supervision affects results. Bibliography. Index.

Note Although it is organized in short chapters and contains review questions and other standard devices to facilitate learning, this book is written at a level that makes it valuable to graduate nurses in supervisory positions as well as to students. It contains enough material to make it useful as a reference book on the organization of nursing supervision. Extensive references to the literature are a noteworthy feature.

PETRY LUCILE, editor

The encyclopedia of nursing. Prepared under the editorial supervision of Lucile Petry Philadelphia W B Saunders Company 1952 1,011 p. 21 cm. $4 75 4632

Note A reference work which is organized in alphabetical order. The majority of terms are followed by concise essays of one or more paragraphs in which the terms are not only defined, but additional information of interest to nursing students and graduate nurses is given. The matter under some main terms—for instance, heart—runs to several pages. Terms from medicine, physiology physics, chemistry and the social sciences are included—the criterion for inclusion having been pertinence to nursing. Also included are short biographical sketches of persons who have contributed to the advance of medicine and nursing. There are no illustrations.

PRICE, ALICE L.

The American nurses dictionary the definition and pronunciation of terms in the nursing vocabulary Philadelphia W B Saunders Company 1949 656 p. 20 cm. $4.25 4633

Note Although primarily a dictionary of terms peculiar to nursing, some terms from the common language that are frequently encountered in nursing literature are included also in this useful reference book. For each term, pronunciation, accent, and division into syllables are indicated, in addition to a well-phrased definition. The number of terms is approximately 21,000.

FINER, HERMAN

Administration and the nursing services New York The Macmillan Company, 1952 333 p illus. 22 cm. $4 50 4623

Contents (abridged) Part one, The nursing service's need for administrative skill. Part II, Compulsions to awareness of administrative skill The scarcity of personnel. Size of personnel in nursing service. Diverse departmental skills and nursing service. Multiplicity of skills within the nursing service itself. Nonmeasurability of quality of nursing care. Regional responsibilities and size of nursing unit. Part III, The content of administration The scope and principles of administration. Planning, organization, and budget. Personnel. Part IV Spirit of education for nurses. The place of administration in the nursing service curriculum. The spirit in which to teach administration to nurses. Summary research needs, and study advice. Appendixes. Index.

Note. This book is based largely on the findings of research project for which funds were furnished by the W K. Kellogg Foundation. The research project had as its purpose the study of such questions as, " Is the science of administration needed in the conduct of nursing service? If so, second, how seriously is it needed? Third, what inferences are to be drawn for the curriculums of schools of nursing and for the spread of knowledge of administration among nurses already on the job at various levels in nursing service departments? In the course of exploring these questions, the research project and the author studied various aspects of the nursing profession and nursing service, some of which are indicated by the chapter titles listed above. The book is of primary interest to directors of nursing schools and of nursing services in hospitals. It is also of interest to those who are concerned with the social aspects of nursing.

FUERST, ELINOR V , AND LU VERNE WOLFF

Fundamentals of nursing the humanities and the sciences in nursing Philadelphia J B Lippincott Company, 1956 592 p illus 21 cm $5 00 4624

Contents (abridged) Unit I, Nursing and its opportunities and responsibilities. Unit II, Principles serving as guides in the practice of nursing. Unit III, Practices of asepsis which help prevent illness. Unit IV Preparation of an environment for the care of a patient. Unit V Admission to a hospital. Unit VI, Teaching as an integral part of nursing. Unit VII, Practices concerned with hygiene and healthful living. Unit VIII, Meeting the needs of patients having modified or restricted activities in their daily living. Unit IX, Helping to meet the spiritual and the emotional needs of patients as part of the rehabilitative process. Unit X, Meeting the needs of patients having disturbances of elimination from the intestines. Unit XI, Meeting the needs of patients having disturbances of elimination from the urinary bladder Unit XII, Heat, cold and counterirritants as comfort and therapeutic agents. Unit XIII Routes and methods by which the nurse administers drugs and gases. Unit XIV Therapeutic and diagnostic measures for which the nurse usually assists. Unit XV Practices used in the care of wounds and the application of dressings. Unit XVI, Administering instillations and irrigations. Unit XVII, Controlling the spread of communicable disease. Unit XVIII, Care of the terminally ill patient and of the body after death. Index.

Note A well-organized basic text. It is designed primarily for the instruction of student nurses however it provides explicit descriptions of such a wide range of fundamental nursing techniques that it is useful for reference also. Literature references are included for each unit. The first-named author is Assistant Professor of Nursing in The Cornell University-New York Hospital School of Nursing, and her co-author is member of the staff of the Institute of Research and Service in Nursing Education of Teachers College, Columbia University

GELINAS AGNES

Nursing and nursing education Cambridge, Mass Harvard University Press 1946 85 p 21 cm. (New York Academy of Medicine Committee on Medicine and the Changing Order Studies) $1 00 4625

Contents Preface, by Mrs. A. Belmont. Introduction. The development of nursing as a profession. Nursing supply and demand before and during World War II. Personnel policies and the maintenance of standards. Nursing education—problems and recommendations. Estimated nursing supply and demand in the post war period. Building the future of nursing. Index.

Note. The volume is directed at present and prospective nurses and at all others who are concerned with medical care, whether from the standpoint of private nursing or public health. Reference lists of books and periodicals for further reading are given at the end of each chapter

GILL, HELEN Z

Basic nursing Fourth edition Revised by the teaching staff of the Household Nursing Association, Boston, Massachusetts. Third edition known as *Textbook of attendant or practical nursing* by Shepard. New York The Macmillan Company, 1955 729 p. illus. 21 cm. $4 50 4626

Contents (abridged) Part I, The practical nurse—her role in nursing. Part II, The normal body—its structure and functions. Part III, Foods—their function or use in the body Part IV, The practical nurse and her patient's environment. Part V The practical nurse gives care and comfort to the patient. Part VI, Some common drugs and their administration. Part VII, Care of the mother and child. Part VIII Medical, surgical and orthopedic patients—their nursing care. Glossary Index.

Note. A clearly written and exceptionally inclusive textbook covering topics in medicine, physiology nursing, etc., which are of practical interest to hospital attendants and practical nurses—that is, nurses not enrolled for full training. It is designed primarily for use in courses organized for these members of hospital staffs, but the style is simple and the explanations are sufficiently explicit to make the book useful for reference and self-instruction. The third and earlier editions were written by Katharine Shepard. The book was reorganized and extensively revised in preparing this edition. The material added has resulted in an increase of over 200 pages.

HARMER, BERTHA, AND VIRGINIA HENDERSON

Textbook of the principles and practice of nursing Fifth edition. Revised by Virginia Henderson New York The Macmillan Company 1955 1,250 p. illus. (part col d) 24 cm. $7 00 4627

Content (abridged) Part I, The place of nursing in health service The practice of nursing and preparation of the nurse. Health programs and nurse relationships. The hospital. Part II, Fundamentals of nursing care Organization and care of the environment. Admission and discharge of the patient. Controlling the spread of communicable disease by aseptic measures. Observing, reporting, and recording observations. The patient's record. Personal cleanliness. Nutritional needs and methods of feeding. Body mechanics—transportation, rest, sleep, and prevention of pressure sores. Rehabilitation and related therapies. Responsibility of the nurse for health teaching. Part III, The role of nursing in health evaluation and diagnostic techniques. Part IV The role of nurses in therapeutic measures Basis for the selection of method in therapeutic procedures. Baths and packs Massage, therapeutic exercise, and pressure. Radiation therapy and electrotherapy Administration of medicines. Aspirations and incisions of body cavities. Drainage, irrigation and medication. Part Common problems in nursing practice. Nursing in the care of the dying and the dead. Nursing care of patients with localized infections Care of wounds, including surgical dressings. Preoperative nursing care. Postoperative nursing care. Nursing care of patients with systemic infections. Nursing care of patients with skeletal injuries. Accidents and emergencies. Appendixes. Glossary Index.

Note A standard, comprehensive treatise of the fundamentals of general nursing care and the nursing care of the commoner types of medical and surgical disease. It is used both as textbook and as a reference book. The fourth edition was published in 1939. In preparing this fifth edition, the organization and scope of the volume were not essentially changed, but its text was very extensively rewritten. Many new illustrations were added, and the bibliographies were revised to include literature published since the fourth edition was written.

and child care. Nursing care in certain special cases. Bandages and slings. Index.

Note: An elementary and practical book designed for the instruction of students who are pursuing short courses to qualify as "practical" nurses and for the guidance of nurses not in school who are already engaged in such nursing. It is not intended for the instruction of nursing students enrolled in full courses that lead to academic degrees in nursing. Its broad scope is apparent from the titles of the sections and chapters listed above. A few pages are devoted to background knowledge, but most of the space is occupied by brief but explicit and detailed descriptions of nursing techniques. The style of exposition is as nontechnical as possible, and the verbal text is supplemented by 120 figures. Aside from its primary use, the book is useful also as a guide for mothers who nurse members of their own families.

WOLF, LULU KATHRYN

Nursing. New York: D. Appleton-Century Company, Inc., 1947. 534 p. illus. 22 cm. $4.00. 4640

Contents (abridged): Part I, Orientation to nursing: The origin and development of nursing. Twentieth century trends in nursing. The nation's health problems. The nurse in the nation-wide health program. Part II, Orientation to hospital nursing: The hospital—a community health agency. The individual patient in the hospital. Part III, Orientation to patient care: Investigating the patient's needs. Recording observations on the patient's record. Planning the patient's nursing care. Providing for the patient's personal cleanliness. Providing for the patient's nutritional needs. Providing for the patient's comfort, rest and relaxation. Protecting the patient and others from infection. Giving medications to the patient. Withdrawing fluid from the patient's body. Providing for the patient's best needs on discharge from the hospital. Index.

Note: A comprehensive and inspiring textbook for student nurses. The material on the background and the status of nursing is well condensed and effectively presented. More than two-thirds of the volume is given over to discussion and explanation of various nursing techniques, explicitly and in detail, emphasis being on hospital rather than home care. Throughout the text, stress is laid on the nurse's need to understand the patient's emotional and psychological problems, as well as his physical illness. The significance of nursing in public health is emphasized. Selected references follow each chapter, and there are numerous drawings which illustrate techniques.

YOUNG, HELEN, AND ELEANOR LEE

Lippincott's quick reference book for nurses. Seventh edition. Prepared under the direction of Eleanor Lee. Author panel: Mary E. Allanach, Elizabeth S. Gill, Helen F. Pettit, Dorothy E. Reilly, and Nelda Ross Larsson. Philadelphia: J. B. Lippincott Company, 1955. 727 p. illus. 18 cm. $4.00 4641

Contents (abridged): Pharmacology. Medical and surgical. Nursing technics. Diet therapy. Maternity nursing, including child care. Appendices: Tables of measurement. Apothecaries' system. Metric system. Solution table with domestic measures. Table of capacity. Thermometer scales. Table of temperature equivalents. Poisons—symptoms and treatment. Pressure points in control of bleeding. Index.

Note: A widely used handbook of information pertaining to nursing. Helen Young was the principal author of the first five editions. A sixth edition was prepared by an editorial board under her direction, and the present edition was prepared under Eleanor Lee with the assistance of an author panel, as noted following the title above. The book provides a wide range of information on drugs, diseases, nursing techniques, etc. The information is presented as compactly as possible in tables, short definitions, concise essays, and lists. It is arranged in five parts and appendices whose titles are given above. The index is thoroughly detailed.

WORKS ON SPECIAL TOPICS

ANTHONY, CATHERINE PARKER

Textbook of anatomy and physiology. Fourth edition. With 240 illustrations, including 17 color plates. St. Louis: The C. V. Mosby Company, 1955. 671 p. illus. (part col'd) 22 cm. $4.75 4642

Contents (abridged): Unit I, The body as an integrated whole. Unit II, The erect and moving body: The skeletal system. The muscular system. Unit III, Integration and control of the body. Unit IV, Maintaining the metabolism of the body: The circulatory system. The respiratory system. The digestive system. The urinary system. Unit V, Reproduction of the human being. Unit VI, Glandular control of body functioning. Suggested supplementary reading. Index.

Note: A successful introductory text for students of nursing. By the use of tables, outline summaries, and a high number of illustrations the author has succeeded in presenting more information than the number of pages would indicate. However, fundamental information rather than variant details is emphasized. The illustrations are higher in quality than is often seen in this kind of text. The preceding edition was published in 1950. In this edition, the treatment of physiology has been further amplified and information has been added on a number of topics. The number of illustrations was substantially increased.

AVERILL, LAWRENCE AUGUSTUS, AND FLORENCE C. KEMPF

Psychology applied to nursing. Fifth edition. Illustrated. Philadelphia: W. B. Saunders Company, 1956. 417 p. illus. 21 cm. $4.25 4643

Contents: Unit I, The dramatic role of psychology in all major human enterprises: Psychology, adjustment, and the student nurse. Psychology at work in today's world. Psychology in nursing. Unit II, How to study effectively: Self guidance in study. Unit III, Why people behave as they do: The original foundations of behavior. Habits, attitudes, and other determiners of behavior. The neuromuscular mechanism in motivation. How we learn. Learning—stages and procedures—some comparisons and principles. The individual learner. Unit IV, The process of growing up: Psychology of childhood and adolescence. Achieving adulthood. Unit V, Conflicts and tensions: Conflict, tension and frustration. Emotional states and tensions. Unit VI, In pursuit of mental health: Mental hygiene of the family. Mental health in succeeding life stages. Unit VII, Special problems of adjustment: The psychology of the aging and aged. Nursing the physically handicapped. Bibliography. Index.

Note: An elementary and practical introduction to psychology designed for the instruction of student nurses. It provides a fund of psychological knowledge that is useful to such students both in understanding their own personalities and behavior and in understanding those of patients. The first edition was published in 1943 and the fourth edition in 1951. In this fifth edition, the material in the book has been rearranged and revised rather extensively.

BIDDLE, HARRY CLARENCE

Chemistry in health and disease. Fourth edition. Philadelphia: F. A. Davis Company, 1955. 797 p. illus. 22 cm. $5.75 4644

Contents (abridged): Part I, Inorganic chemistry: Atoms, molecules, and the electron theory. Solutions—liquids of everyday use. Ionization—the explanation of chemical action in solution. Acids. Bases. Salts. Nonmetals and metals. X-rays, radioactivity and nuclear chemistry. Part II, Organic chemistry: Substitution products of hydrocarbons. Carbohydrates. Fats. Proteins. Part III, Biochemistry: Chemistry of digestion. Chemistry of blood and lymph. Urinary excretion. Hormones. Vitamins and milk. Part IV, Appendix: Antidotes for some common poisons. Antiseptics and disinfectants. Tests for textile fibers. Chemical composition of some food materials. Table of physical constants of the elements. Part V, Laboratory chemistry. Index.

Note: An introductory textbook directed particularly to students of nursing, but sometimes used in courses offered to other students whose interest in chemistry is primarily in its applications in health and medical work. It is longer and covers more topics than is the author's *Chemistry for nurses*, described below. It is written in a straightforward, elementary style and is organized and equipped with chapter outlines, self-testing questions, reviews of new terms, etc., to facilitate learning on the part of the reader. The fifth part, which concludes the book, contains directions for 22 laboratory exercises or experiments. This fourth edition contains a large number of revised and rewritten sections, some of which were made to incorporate new developments and others to improve the effectiveness of the exposition.

PRICE, ALICE L

The art, science and spirit of nursing Illustrated. Philadelphia W B Saunders Company, 1954 882 p illus 20 cm. $5.50 4634

Contents (abridged) Part I, Introduction. Effective study methods. Interpersonal relationships in nursing. Part II, The hospital environment Hospital housekeeping. The patient's hospital environment. Safety measures. Part III, Basic procedures for preclinical study Cleansing baths—personal hygiene—routine care. Comfort measures. Admission of the patient. Observation of patient—the hospital record. Food requirements and food service. Elimination. Collection of specimens. Diagnostic tests. Part IV Procedures for advanced preclinical study: Preoperative care. Postoperative care. Surgical dressings. Irrigations. Part V Procedures for clinical study Catheterization. Administration of medicines. Administration of fluids. Inhalation therapy Part VI, Procedures for advanced clinical study: Spiritual needs of the patient. Care of the dying patient. Care of patient with a communicable disease. The chronically ill—the aged. Radiation. Bandaging. Index.

Note. A comprehensive, modern textbook on general nursing techniques, designed as a basic book for undergraduate students in nursing schools. Its contents and organization were determined in part by the responses to a questionnaire circulated by the author among 650 instructors of nursing arts and 200 students of nursing. It contains a large amount of material even though the author has not included step-by-step outlines of procedures. Most of the 375 illustrations are reproductions of photographs of nursing procedures.

ROTHWEILER, ELLA L, AND OTHERS

The art and science of nursing By Ella L Rothweiler, Jean Martin White, and Doris A. Geitgey With a section on bandaging by Felix Jansey, and a section on first aid by Dorothy M Richards With 180 illustrations Fifth edition. Philadelphia F A Davis Company, 1954 805 p. illus (part col'd) 23 cm. $5 00 4635

Contents (abridged) Unit I, Introduction. Unit II, Organization and care of the patient's environment. Unit III, General care of the patient. Unit IV Assisting with examinations and observing symptoms. Unit Measures to aid elimination and maintain cleanliness. Unit VI, Supplying fluids. Unit VII, Administration of medicines. Unit VIII, Therapeutic uses f heat, cold, and counter irritants. Unit IX, Other nursing skills. Care f the unconscious patient. Oxygen therapy Care of patient in respirator. Care of the chronically ill patient. Anesthesia. Gastrointestinal decompression and drainage. Surgical dressings. Bandaging. Unit X, First aid treatment. Index.

Note An outstanding textbook on the basic techniques of nursing. It is organized in the 10 units whose titles are given above and in 58 chapters. Chapters in the first unit deal with such topics as "The profession of nursing," "The nurse and health conservation, "Personality and personal appearance, and "The nurse and her patient. Chapters in other units deal with specific techniques, such as bed-making, serving food, routines of admission and discharge of patients, observations of pulse, temperature and respiration, care of patients who are unconscious, and bandaging. All such procedures are described in specific detail and the descriptions are supplemented by illustrations. The first edition of the book was published in 1935 and the fourth edition in 1950. In this fifth edition Doris A. Geitgey appears for the first time as collaborating author.

SELLEW GLADYS, AND M E EBEL

A history of nursing Third edition. Illustrated St. Louis The C. V Mosby Company 1955 432 p illus 22 cm. $4 50 4636

Contents (abridged) Nursing practices among primitive peoples. Nursing in the ancient civilizations. Nursing at the beginning of the Christian era. Influence of social lif on health in early estern Europe. Medicine and nursing in the Middle Ages. The origins of modern health problems. Health problems of the industrial city Scientific progress in medicine. Organized charities in nursing. The foundation of the nursing profession by Florence Nightingale in England. The background of professional nursing in the United States. Advance in nursing care—the Red Cross, nursing in the Spanish-American War nursing in World War I. Nursing, social work, and public health. Nursing in World War II and in the postwar period. A summary of recent nursing trends outside the United States. Professional nursing today Bibliography Periodicals Index.

Note. A nursing school textbook in hich the history of nursing is related as a facet of social history The evolution of nurses practices from earliest cultural periods to the present day is traced, and it is shown how the practices of any period are interwoven ith religion, laws, economic system, and cultural pattern prevailing. The second edition was published in 1951. In this third edition, the book has a new co-author who is Associate Professor on the faculty of the College of Nursing of Marquette University The scope and general plan are unchanged in this third edition, but some sections have been revised to bring them into accord ith recent developments and trends in nursing.

SPALDING, EUGENIA KENNEDY

Professional nursing, trends and relationships. Fifth edition, revised and reset. 51 illustrations. Philadelphia J B Lippincott Company, 1954 636 p illus 21 cm. $5.25 4637

Contents (abridged) Problem sol ing, an essential in making professional adjustments: Problem solving—technique and general sources. Evaluating, collecting, and organizing reference materials. Unit one, The social and professional outlook of the nurse: Nurses in the present situation. Nursing as a profession. Unit two, Choosing field of ork and succeeding in it: A survey of occupational opportunities for nurses. Nurses in public service. Continued education and growth. Securing, filling, and resigning from a position. Unit three, Professional organizations and activities: The alumnae association. The American Nurses' Association. International nursing relationships. The National League for Nursing. Other national nursing and allied organizations. Professional nursing journals in the United States. The American National Red Cross. Nursing and related legislation. Public relations in nursing. Organization principles and practices which aid in professional activities. Unit four, Other phases—personal and professional Legal relationships, responsibilities, and problems. Economic security Relationships and personal growth. Appendix. Index.

Note. A comprehensive, detailed view of the profession of nursing in contemporary United States of America is presented in this book, which is addressed to nursing students in their last year of undergraduate study and graduate nurses. The many facets of the nursing profession, its opportunities, organizations, and community relationships are described in some detail, and the nurse-reader is offered a wide range of useful information and advice on professional and personal progress. Very extensive reading lists are included. The fourth edition was published in 1950. Extensive revisions were made in preparing this fifth edition, which has been printed from re-set type.

TABER, CLARENCE WILBUR

Taber's vocabulary of medical terms. Fourth edition. Philadelphia F A Davis Company 1953 771 p 18 cm. $3 50 4638

Note. A briefer version of the author's *Cyclopedic medical dictionary* It contains fewer terms than the larger dictionaries and lacks supplementary features, such as illustrations and tables. Nevertheless, many thousands of terms are defined, and pronunciations are given for most of them. It is useful dictionary for students of nursing, graduate nurses, biologists, and others ho encounter medical terms in their reading, but do not need full-scale compendium.

WHITE, JEAN MARTIN

Practical nursing. 120 illustrations. Philadelphia F A. Davis Company 1953 447 p. illus. (part col d) 22 cm $3 50 4639

Contents Section Qualifications and conduct of the nurse. Personal hygiene. Care of your patient surroundings and property Section II Infection, disinfection, and sterilization. The isolated patient. Section III, Anatomy and physiology Introduction. Skin. Bones. Muscles. Digestion. Circulation Respiration Excretion. Brain and nerves. Special senses. Glands. Reproductive systems. Section IV: Admitting the hospital patient. Assisting the doctor—symptoms. The care and comfort of your patient Section Treatments. Section VI Food for your patient. Buying, caring for and cooking food. Section VII Medicines. Section III Maternity care. Baby

the general characteristics of bacteria, factors in the growth of bacteria, disinfection and sterilization, the role of bacteria in the causation of disease, and the classes of bacteria. A considerable part of the second section is devoted to descriptions of diseases of the various systems of the body. The book is well organized to facilitate study and the illustrations are of good quality. In comparison to the fifth edition, there has been some reorganization and [illegible] considerable amount of revision of both text and illustrations.

COURCHAINE, ARMAND JOSEPH
Chemistry visualized and applied. Edited by M. Cordelia Cowan. Drawings by Richard Albany New York G. P Putnam's Sons, 1950. 687 p. illus. 22 cm. $4.90 4650

Contents (abridged) Part 1, Fundamentals and applications of inorganic chemistry: Chemistry and physics. Matter. Energy. Elements and metals. Oxides—compounds of oxygen. Solutions. Acids. Bases. Salts. Ionization and its applications. *Part II*, Fundamentals and applications of organic chemistry: Hydrocarbons. Alcohols and ethers. Aldehydes and ketones. Organic acids, esters, amines and amides. Nitrogen derivatives—urea and uric acid. Alkaloids and chemotherapeutic drugs. Part III, Introduction to biological chemistry: Carbohydrates. Fats and related compounds. Amino acids and proteins. Sterols and vitamins. The chemistry of hormones. Enzymes. Digestion. Metabolism. The chemistry of blood and milk. Urine. Appendixes. Index.

Note: An inclusive survey designed primarily for student nurses but useful also to students in other fields where [illegible] knowledge of chemistry and biochemistry is important but is subordinate to other sciences. The essentials not only of general chemistry but also of biochemistry are covered descriptively. Comprehension on the part of the reader is facilitated by the liberal use of structural diagrams, graphic illustrations, and references to applications of the chemical knowledge in the understanding of life processes. The second edition was published in 1937 683 p. $3.50.

CRUZE, WENDELL W
Psychology in nursing. New York The Blakiston Division McGraw Hill Book Company Inc., 1955 494 p illus. 23 cm. (Mc Graw Hill series in nursing Lucile Petry consulting editor) $5.50 4651

Contents: Psychology and the student nurse. Psychology of efficiency. Origin of an individual. Development of an individual. Receptors and their functions. Nervous system. Effectors—muscles and glands. Motivation of human behavior. Emotions and health. Personality. Development of personality. Conflict, frustration, and adjustment. The psychoneuroses and the psychoses. Intelligence and aptitudes. Observation. Thinking. Psychological aspects of nursing children and adolescents—chronic and aged patients. Glossary. Visual aids. Index.

Note: A well-written introductory textbook, designed for the instruction of student nurses. A broad, basic view of psychology is presented, and some topics are included—for example, [illegible] discussion of genetics—that are not always discussed in introductory texts on psychology. The psychological aspects of these topics is, of course, stressed. The implications of psychology for nursing, both in the nurse [illegible] understanding of her own personality and in her understanding of the personality problems of patients, are made clear. The author is [illegible] teacher of psychology.

CULBERTSON JAMES T AND M CORDELIA COWAN
Living agents of disease. New York G. P Putnam's Sons, 1952 624 p. illus. 22 cm. $4.90. 4652

Contents (abridged) Unit 1, Introduction: Ways by [illegible] which organisms produce disease. Social significance of living agents of disease. Unit II, The nature of living agents of disease: Bacteria. Spirochetes. Yeasts and molds. Rickettsiae and allied organisms. Viruses. Protozoa. Arthropods. Organizations participating in the study of organisms. Unit III, Methods in the study of living agents of disease. The laboratory. Disinfection and sterilization. The study of bacteria. The study of spirochetes and yeasts and molds. The study of rickettsiae and viruses. The study of protozoa, helminths and arthropods. Collection of specimens and use of experimental animals. Unit IV, The human body in relation to other organisms: Natural bacterial flora of the body. Infestment of the human body. Resistance to organisms and factors [illegible] which determine infectivity of organisms. Response of the body to antigens of other living human beings. Unit [illegible] The control and eradication of living agents of disease. Prevention of spread of disease. Increment of resistance of potential hosts. Organizations for the control and eradication of infectious diseases. Some of the laws concerned [illegible] with or relating to infectious diseases. Unit [illegible], Bacterial organisms and the diseases they cause. Unit VII, Other organisms and the diseases they cause: Pathogenic spirochetes and spirochetal infections. Pathogenic yeasts and molds and mycotic infections. Pathogenic rickettsiae and allied organisms and their infections. Pathogenic viruses and viral infections. Parasitic protozoa and protozoal infections. Parasitic helminths and helminthiasis. Primary arthropodal pathogens and arthropodal disease conditions. Man's potential ability for survival. Index.

Note: An introductory treatment that gives [illegible] broad view of the role of microorganisms and some larger organisms in disease. The book is organized so that it may be used as [illegible] text in nursing schools and other educational institutions. Some information is included on diagnosis and treatment of specific diseases caused by living organisms, but the book is not intended as [illegible] clinical manual.

DOOLEY, MARION SYLVESTER, AND JOSEPHINE RAPPAPORT
Pharmacology and therapeutics in nursing. Second edition. New York McGraw Hill Book Company, Inc., 1953 486 p. illus. 23 cm. $4.50. 4653

Contents: History of drug therapy. General features of drugs. Measurements and computations. Drug administration. General analgesics. Special analgesics and other drugs in the prevention and cure of acute and chronic arthritis and gout. Hypnotics and sedatives. General anesthetics. Antiemetics and sedatives. Drugs as respiratory depressants and stimulants. Antiseptics and disinfectants. Local anesthetics. Drugs acting on the peripheral nervous system—on the heart and coronary diseases—on the peripheral vascular diseases. Endocrines. Antihistamines (antiallergenic). Vitamins. Blood, blood products, and blood substitutes. Drugs acting on blood and blood-forming organs. Stomachics and carminatives. Antacids. Evacuants (laxatives, cathartics, drastics, emetics). Anthelmintics, taeniacides, and other parasiticides. Drugs acting as diuretics and antidiuretics. Antimalarials. Sulfonamides. Antibiotics as cures of infectious diseases. Antibiotic antisyphilitic drugs. Serums. Vaccines. Drugs in emergencies. Reference reading suggestions. List of [illegible] materials. Index.

Note: A textbook designed for use in schools of nursing organized at the collegiate level. It affords [illegible] correlation of basic pharmacologic and therapeutic knowledge with the techniques of [illegible] nursing. Techniques of the administration of drugs are explicitly described from the nurse standpoint. However, most of the volume is devoted to descriptions of individual drugs. These descriptions are organized in the chapters [illegible] here titles are given above, and they cover for each drug information on its properties, actions, uses, toxicity, dangers, and techniques of administration. The first edition was published in 1948. For the second edition, the book was somewhat reorganized and extensively rewritten. Chapters were added on the antihistamines and the antibiotics.

FRANCIS CHARLOTTE A., AND EDNA C. MORSE
Fundamentals of chemistry and applications chosen from inorganic, organic, and biochemistry with applications in physiology microbiology nutrition and everyday concerns. Fourth edition. New York The Macmillan Company 1956 543 p. illus. 22 cm. $6.00. 4654

Contents (abridged) Substances and how they are recognized. Mixtures. Physical and chemical change. Oxygen. Catalytic agents. Chemical changes involve energy transformations. Radioactive elements. Introduction to bases, acids, and salts. A study of water. Solutions. Colloidal solutions. Emulsions. Ions and ionization. Oxidation-reduction. An introduction to organic chemistry. Carbohydrates. Proteins. Enzymes and their functioning. Chemistry of digestion. Function and fate of glucose, fats, and proteins in the body. The blood and its functions. Index.

Note: An introductory text for students of nursing, home economics, and other fields where some knowledge of basic chemistry is essential because of its application to life processes. The treat-

BIDDLE, HARRY CLARENCE

Chemistry for nurses, a combined text and laboratory manual, including essential principles from inorganic organic, and biochemistry Fourth edition. Consultant Vaughn W Floutz. With 212 illustrations. Philadelphia F A. Davis Company, 1951 351 p illus. 22 cm. $4 00 4645

Contents (abridged) Part I Inorganic chemistry Structure and behavior of atoms. Oxygen—the breath of life. Water Solutions—liquids of everyday use. Ionization—facts explaining chemical and electrochemical reactions in solution. Salts—compounds having no common ion. Metals and nonmetals—base-forming and acid-forming elements. Part II, Organic chemistry Compounds that make life possible. Important classes of organic compounds—substitution products of hydrocarbons. Carbohydrates—aldehyde or ketone derivatives of complex alcohols. Fats—our most important body-storage foods. Proteins—tissue builders. Digestion—chemical change in alimentary canal. Part III, Appendix Vitamins and milk. Blood and urine. Foods. Part IV Glossary Part Laboratory experiments. Index.

Note. A long-established introductory text. Although it includes material from various branches of chemistry and also a considerable range of reference data, it is not one of those texts which overwhelms the student with detail. The matter included has been carefully selected from the standpoint of its usefulness to nurses. Comprehension is facilitated by chapter outlines, summaries, "self-testing questions," etc.

BOGERT, L JEAN

Fundamentals of chemistry Seventh edition Philadelphia W B Saunders Company, 1953 648 p illus 21 cm. $4 50 4646

Contents (abridged) Fundamental facts regarding science, energy and matter Chemical elements and the atomic theory Valence and chemical formulas. Classification of compounds and discussion of acids, bases, and salts. System of naming compounds. The most important of all compounds—water. Energy in chemical changes. Combustion and oxidation—reduction. Nitrogen and the atmosphere. Solutions. The halogens and other nonmetals. Uses of inorganic salts in the body Radioactivity nuclear reactions, and atomic energy Hydrocarbons and halogen derivatives. Ethers, alcohols, aldehydes, and ketones. Organic acids and salts, esters, amines, and amino acids. Cyclic compounds. Carbohydrates. Fats and related substances. Proteins and amino acids. The vitamins. Digestion and the digestive enzymes. Metabolism—chemical changes in the tissues. Endocrine glands and their hormones. Appendix. Index.

Note. A long-established and widely used textbook. It is designed for students pursuing courses in home economics, nursing and other fields where the need of a background knowledge in chemistry is recognized but the student will probably not pursue his studies beyond the introductory course. It is widely used in nursing schools, but its use is not limited to these schools. The first edition was published in 1924 The eighth edition was scheduled for publication early in 1958.

BOGERT, L JEAN

Nutrition and physical fitness Sixth edition Philadelphia W B Saunders Company 1954 664 p illus. 21 cm. $4 50 4646A

Contents Part I, Body needs Functions of food and its relation to health. Carbohydrates, fats, proteins. Energy needs—basal metabolism and regulation of body temperature. Total energy requirement of adults. Fuel value of foods and control of body weight. The protein requirement. Why the body needs mineral elements, water and fiber Calcium and phosphorus. Iron copper and iodine. General information about vitamins. Ascorbic acid (vitamin C) B-complex vitamins. Fat-soluble vitamins. Different food groups and their place in the diet. Adequate diets for normal adults. Part II, Body processes The body as whole in its relations to food. Digestion and absorption of food Metabolism and the influence of ductless glands. Excretion and the factors affecting it. Part III, Meal planning How to build menus—for day—for week. Family food budgets. Food fads and fantasies. Recent trends in American dietary habits. Part IV Diet for special conditions Diet for pregnant and nursing mothers. Diet for children and teenagers. Diet for after forty Overweight—its significance and treatment. Malnutrition—how to detect and overcome it. Appendix. Index

Note: A basic practical text for students of nursing, students of home economics, and even for laymen who want an elementary but substantial book. The fundamentals of nutrition are covered in an elementary manner and much practical information on menu planning, calorie calculations, etc., is included. Good lists of supplementary reading are furnished for each chapter. The fifth edition was published in 1949 This sixth edition represents very extensive revision in which more than half of the text is new

BOYD, WILLIAM

An introduction to medical science, an elementary text on pathology Fourth edition, thoroughly revised, with 124 illustrations and 3 colored plates. Philadelphia Lea and Febiger, 1952 304 p illus. (part col'd) 24 cm. $4 50 4647

Contents (abridged) Part I, Some general principles. The evolution of medical science. The nature and causes of disease. Inflammation, immunity and allergy Some bacterial infections. Tumors. Part II, The organs and their diseases. Part III, Practical applications The principles of treatment. The collection of material for the laboratory Index.

Note A standard introduction for student nurses. Concise descriptions of common diseases are provided, together with discussions of causes, manifestations and symptoms, and principles of treatment. In this edition, revisions have been made to cover recent developments in the fields of treatment and therapy and new sections have been added dealing with such topics as congenital heart disease, edema, shock, fluid balance, iron pneumonia, and dust diseases of the lungs. The author is a member of the faculty of the University of Toronto.

BURDON, KENNETH LIVINGSTON

Textbook of microbiology Third edition, revised. New York The Macmillan Company, 1947 728 p illus 22 cm. $4 75 4648

Contents (abridged) Part I, Elements of microbiology Scope and character of microbiology History of microbiology Outstanding properties of the principal kinds of microbes. Microscopes and microscopical methods. Morphology of bacteria. General physiology of bacteria. Activities of nonpathogenic, saprophytic bacteria. Cultivation of bacteria—culture media and methods. Isolation and identification of bacteria. Growth characteristics of bacteria in laboratory cultures. Part II, Methods of destroying microorganisms and of controlling the spread of communicable diseases—sources and modes of infection. Part III, Infection and resistance. Microbes and disease. Reaction of the body to infection—cellular defense. Natural and acquired immunity Anaphylaxis or hypersensitiveness. Part IV Microbiology of important infectious diseases. Appendix. Index.

Note. An introductory textbook designed primarily for use in nurses' training schools. It offers concise but fairly comprehensive presentation of the fundamentals of general and medical microbiology and the elementary phases of immunology and public health. This edition has been somewhat rewritten in parts and also rearranged so as to increase its effectiveness as text. There are several new illustrations and the reference lists have been revised.

CARTER CHARLES F , AND ALICE LORRAINE SMITH

Microbiology and pathology Sixth edition. With 313 illustrations. St. Louis The C. V Mosby Company 1956 970 p illus. 22 cm. $6.50 4649

Contents (abridged) Part I, Microbiology Section 1, General principles of microbiology Section 2 Relation of bacteria to disease. Section 3 Bacteriology of water and milk Section 4, Special bacteriology Part II, Pathology The hospital pathologist and his work. The nature and causes of disease. Defenses of the body against disease. Disturbances of circulation. Inflammation, repair and regeneration. Infectious diseases. The vitamin deficiencies. Tumors. Defects of body development. Diseases of the heart and blood vessels —The lymph nodes and spleen—the respiratory system—nervous system—the digestive system—the urinary system—the endocrine glands—the bones and joints. Part III, Glossary Index

Note An elementary textbook, which is used in the instruction of student nurses. In this edition it is organized in 55 chapters of which a selected few are listed by title above In the first part the chapters are devoted to general aspects of microbiology such as

Planning the adequate diet. Food habits and customs of various nationality groups. Pregnancy and lactation. Infant feeding. Feeding of children. Nutrition for the aged. Part ii. Diet therapy. Modifications of the normal diet—in selection of food—in consistency—in energy value—in protein content—in fat content—in carbohydrate—in mineral content. Part iii. Introduction to the study of cookery. Food hygiene. Beverages. Eggs. Cereals. Soups. Vegetables. Fruits. Salads and salad dressings. Desserts. Cheese. Meat, fish and poultry. Part iv. Appendix: Calculation of food values. General references. Index.

Note: An inclusive, introductory text in which the fundamentals of nutrition, normal and special dietary requirements, the principal foods, and diet-planning are all discussed. There is somewhat more emphasis on general aspects of dietetics even though the book was planned primarily for student nurses. There are 45 tables of reference data and many typical menus.

JUNG, FREDERIC THEODORE AND ELIZABETH CARPENTER EARLE

Anatomy and physiology. With 339 illustrations. Third edition. Philadelphia F. A. Davis Company 1955 829 p. illus. 23 cm. $5.50. 4661

Contents (abridged): Unit i. An introduction to anatomy and physiology. Introduction—a brief history of anatomy and physiology. Unit ii. The osseous system—the erect body. Unit iii. The muscular system—the moving body. Unit iv. The nervous system—integration and control of the body. Unit v. Sensory receptors—guardians of the body. Unit vi. The circulatory system—maintenance of cellular metabolism. Unit vii. The respiratory system—the air line of the body. Unit viii. The alimentary system—maintenance of nutritional needs of the body. Unit ix. The excretory system—waste disposal of the body. Unit x. The integumentary system—the covering of the body. Unit xi. The endocrine system—the chemical regulator of the body. Unit xii. The reproductive system—perpetuation of the species. Unit xiii. Conclusion. Individual differences. Common reactions to environmental changes. Appendix. Index.

Note: An elementary textbook designed mainly for the instruction of nurses. A wide range of basic and useful information is included. The book is well organized, written in a simple, direct style, and adequately illustrated.

KIMBER, DIANA CLIFFORD AND CAROLYN E. GRAY

Textbook of anatomy & physiology. Thirteenth edition. Revised by Caroline E. Stackpole and Lutie C. Leavell. New York The Macmillan Company 1955 850 p. illus. (part col'd) 22 cm. $5.75 4662

Contents (abridged): Unit i. The body as a whole—structural and functional relationships and organization. Unit ii. The structural and functional relationships for correlation and co-ordination of external activities. Unit iii. The structural and functional relationships for correlation and co-ordination of internal activities—metabolism. Unit iv. Adaptive responses and the special senses. Unit v. The structural and functional relationships for human reproduction and development. Reference books and books for further study. Glossary. Index.

Note: The first edition of this book was published in 1893, and in its various editions it has been a standard textbook since that year. It is designed for student nurses and is used chiefly in schools of nursing, but it is suitable for use in any course where it is desired to give a fairly inclusive but not exhaustive exposition of human anatomy and physiology and their interrelationships. The 12th edition was published in 1944. In this 13th edition there are 2 chapters, including a new one on water and electrolyte balance. A number of the chapters carried over from the preceding edition have been revised and some of them have been enlarged. The number of illustrations has been increased to 388.

KRUG, ELSIE E. AND HUGH ALISTER McGUIGAN

Pharmacology in nursing. With 41 text illustrations and 18 color plates. Seventh edition. St. Louis The C. V. Mosby Company, 1955 703 p. illus. (part col'd) 22 cm. $4.75 4663

Contents (abridged): How to study pharmacology. Pharmaceutic preparations. Arithmetic review. The administration of medicines. The action of drugs. Dosage. Common poisons and antidotes. Common active principles of plant drugs. Antiseptics and disinfectants. Antibiotics. Drugs that affect the central nervous system. Autonomic drugs. Skeletal muscle relaxants. Drugs that affect the digestive system—The circulatory system—the respiratory system—the skin and mucous membranes—the urinary system—the eye—the reproductive system. Chemotherapeutic agents. Drugs used in disorders of metabolism and nutrition. Serums and vaccines. History of materia medica. General references. Glossary. Index.

Note. A standard textbook for student nurses. Its purpose is to supply a background of knowledge that will enable graduate nurses to work cooperatively with physicians in the administration of medicines. It describes in an elementary, straightforward manner the specific drugs, antibiotics, etc., in regard to their physiological actions, dosages, and methods of administration. The fifth edition was published in 1951. In preparing this seventh edition, revisions were made to bring the book into accordance with the *Pharmacopoeia of the United States of America XV* and the *National Formulary X*, and to include new drugs from *New and nonofficial remedies.*

MILLARD, NELLIE D., AND OTHERS

Human anatomy and physiology by Nellie D. Millard, Barry G. King and Mary Jane Showers. Fourth edition. 315 illustrations with 55 in color, 225 by Lucille Cassell Innes. Philadelphia W. B. Saunders Company 1956. 593 p. illus. (part col'd) 21 cm. $5.00. 4664

Contents: Unit i. The body as an integrated whole: The body as a whole. The whole body and its component parts. Epithelial and connective tissues. Unit ii. Integration and control of the body by the nervous system. Nervous tissue. Initiation and propagation of the nerve impulse. The spinal cord and the spinal nerves. The brain and cranial nerves. The special senses. The autonomic nervous system. Unit iii. The erect and moving body: The skeletal system. Articulations. Muscular tissue. The physiology of muscle. The skeletal muscles. Unit iv. Maintaining the metabolism of the body: Blood. The circulatory system. The heart—blood vessels and circulation. Some physical aspects of circulation—measurement of blood pressure. The maintenance and regulation of blood pressure. The lymphatic system. The respiratory system. The physiology of respiration. The digestive system. The physiology of digestion. Absorption and metabolism. Structure and function of the urinary system. Regulation of body temperature. The endocrine system. Unit v. Reproduction of the human being: *Female reproductive system. Male reproductive system.* Prenatal development of the human body. Index.

Note: A standard introductory work which is used primarily as a text in schools of nursing but also finds use in courses offered in undergraduate liberal arts colleges. It covers the fundamentals of human anatomy and physiology without attempting the detail of full-scale texts such as are used in medical schools. There are over 300 illustrations; nevertheless, the greater part of the description is in the form of narrative text. The first edition was published in 1941 and the third edition in 1951. For this fourth edition the arrangement was changed so that the nervous system is now the subject of the second unit. Other changes of a pedagogical interest were made and numerous small revisions and augmentations were made in many of the chapters. The number of illustrations was slightly increased.

MITCHELL, KATHERINE, AND MARGARET COWDEN BERNARD

Food in health and disease: preparation, physiological action, and therapeutic value. Fifth edition. Philadelphia F. A. Davis Company 1955 688 p. illus. (part col'd) 23 cm. $4.25 4665

Contents (abridged): Part i. Food and nutrition. Food elements and their uses. Further food elements. Normal diets. Part ii. Diet in disease. Diets which are modifications in consistency. Diets which are modifications in energy value. Diets in which there is

ment is simple and largely descriptive. However more ground is covered than in some introductory texts for students of nursing. The third edition was published in 1950. Chapters on radioactive elements and on enzymes were added among other changes.

FRANCIS, CARL C, AND G CLINTON KNOWLTON

Textbook of anatomy and physiology Second edition With 365 text illustrations and 31 color plates St. Louis The C. V Mosby Company, 1950 624 p illus (part col'd) 22 cm 4655

Contents (abridged) Unit I, The body body tissues, environment. Unit II, Posture and movement. Unit III, Integrative mechanisms. Unit IV Maintenance of the body tissues. Unit V Reproduction Glossary Index.

Note A standard text for use in nursing schools. Anatomy and physiology are correlated rather than presented as separate subjects. The illustrations are of high quality The first edition was published in 1943 The original book was extensively rearranged and revised for this edition. A third edition was published in 1957 under the title *Integrated Anatomy and Physiology* 641 p., $5.85

FROBISHER, MARTIN, AND OTHERS

Microbiology and pathology for nurses Fourth edition. By Martin Frobisher, jr Lucille Sommermeyer, Raymond H Goodale. Philadelphia W B Saunders Company 1956 845 p illus. (part col'd) 21 cm. $6 50 4656

Contents (abridged) Unit I, General principles. Morphology and structure of bacteria. The relation of bacteria to their environment. The role of microorganisms in everyday life. Unit II, Inhibition, destruction and removal of microorganisms Methods of inhibition and destruction of microorganisms. Principles of sterilization and disinfection applied to nursing. Unit III, Infection, immunity and allergy Unit IV Special microbiology: The gram-positive cocci. Genus Neisseria. The family Enterobacteriaceae. The viruses (dermotropic and pneumotropic) The rickettsiae and rickettsioses. Table of general references. Unit V General pathology: Degenerative processes and necrosis. Inflammation and repair Infections. Ulceration. Obstructions. Neoplasms. Malignant tumors. Diseases of the circulatory system—respiratory system—gastrointestinal system—Urinary tract—Integumentary system—Endocrine glands—Nervous system—eye and ear—musculoskeletal system—reproductive system. Unit VII, Clinical pathology: Nurses' responsibilities in clinical tests. Examinations of blood—urine—cerebrospinal fluid—transudates and exudates—gastric contents—feces. Index.

Note A standard textbook for the instruction of student nurses. Its scope is wide however the topics included are covered in an elementary fashion appropriate to the book's purpose. Most of the book is devoted to background information but such techniques as sterilization, disinfection, and the collection of specimens for diagnostic laboratory tests, which are the responsibility of nurses, are fully described from the standpoint of practice. The first edition was published in 1943 and the third edition in 1951 In preparing this fourth edition many chapters were extensively revised and parts of the book were reorganized. Some of the illustrations which appeared in preceding editions were deleted, and many new ones added. The total number of figures is now 281 The microbiology units are also published in a separate book under the title *Microbiology for nurses*, ninth edition, 1956, Philadelphia, W B. Saunders Company 551 p., $5.00.

GOODALE, RAYMOND H

Nursing pathology Second edition. Philadelphia W B Saunders Company 1956 384 p. illus 21 cm. $4.50 4657

Contents (abridged) Unit I, General pathology Causes of disease. Body defenses against disease. Degenerative processes and necrosis. Inflammation and repair Infectious diseases. Ulceration. Obstructions. Neoplasms. Benign tumors. Malignant tumors. Unit II, Applied pathology Diseases of the circulatory system. Respiratory system. Gastrointestinal system. Spleen and lymph nodes. Urinary tract. Integumentary system. Endocrine glands. Nervous system. Eye and ear Musculoskeletal system. Reproductive system. Unit III, Clinical pathology Nurse's responsibilities in clinical tests. Examinations of blood. Of urine. Of cerebrospinal fluid. Of transudates and exudates. Of gastric contents. Of feces. Appendix. Glossary Index.

Note Basic knowledge on pathology and on clinical laboratory tests for pathologic conditions is presented in this textbook, which is designed for the instruction of student nurses. The pathology of diseases is described in an elementary manner and the technical terms of pathology are described in a 49-page glossary The diagnostic procedures are described in relatively more detail. The first edition was published in 1948. The major change made in preparing this second edition was the deletion of most of the discussion of microscopic pathology One chapter was added, and sections of others revised.

GOOSTRAY, STELLA, AND J RAE SCHWENCK

A textbook of chemistry Seventh edition. New York The Macmillan Company, 1954 426 p illus. 22 cm $4 75 4658

Contents Introduction—a chemist looks at nursing. We live in a changing world. Our complex world is made of simple things. Chemical shorthand and weight relationships. From chemical activity to nuclear research. Types of chemical changes and their control. How the states of matter are explained. Preserver of life—supporter of combustion. Redox. The compound most important to life. Behavior of substances in water The chemical opposites and their reaction products. Electrically charged particles in solution. T typical families of elements. The most versatile element. The field of organic chemistry Simple derivatives of the hydrocarbons. Cyclic organic compounds. The chemical nature and functions of food. Chemical changes within the body Chemicals that control body processes. The vital fluid in health and disease. Who's who among chemicals in physiology Bibliography Appendix. Index.

Note A long-established textbook used in schools of nursing. It contains selection of basic information from general chemistry inorganic chemistry and biochemistry of interest in nursing. Topics such as water solutions, the chemistry of food, and the chemistry of the blood are discussed more fully than topics less directly related to nursing. Each chapter is prefaced by an outline and concludes with summary both being devices to facilitate comprehension on the part of the reader. The sixth edition was published in 1950. Addition of the chapter "Who's who among chemicals in physiology" is the major change in this edition.

GREISHEIMER, ESTHER M

Physiology and anatomy with practical considerations By Esther M Greisheimer, with the assistance of Ann A Miraldo, Seventh edition rewritten and reset. 430 illustrations, including 48 in color Philadelphia J B Lippincott Company, 1955 868 p. illus. (part col'd) 21 cm. $5 75 4659

Content (abridged) Unit I, The body as an integrated whole. Unit II, The erect and moving body The skeletal system. Anatomy of the muscular system. Physiology of muscular tissue. Unit III, Integration and control of the body by the nervous system. Unit IV Maintaining the metabolism of the body Blood, tissue fluid and lymph. Physiology of the circulatory system. Physiology of the respiratory system. Physiology of the digestive system. Physiology of the excretory system and water and salt balance. Regulation of body temperature. Anatomy and physiology of the endocrine system. Unit The reproductive system. References. Glossary Index.

Note. A standard textbook for the instruction of student nurses. It affords an elementary but broad and fairly detailed survey of human physiology and anatomy It is written in simple, descriptive style and is well organized for study This seventh edition is the result of extensive revision. Most chapters have been revised to some extent, and several of them widely rewritten. The former Unit VI has been deleted. Many new illustrations have been added, however the total number of illustrations is lower due to the deletion of many dated ones.

JOHNSON DORIS

Modern dietetics. Edited by Hazel E Munsell. New York G P Putnam's Sons 1951 529 p. illus. (part col'd) 21 cm. $4 50 4660

Content (abridged) Part I: Nutrition and health. Proteins. Carbohydrates. Energy metabolism. Vitamins. Water and cellulose.

The fat-soluble vitamins. Water-soluble vitamins. Meal planning for the family. Food patterns of various cultural groups. Section II, Normal nutrition in special conditions: Diet during pregnancy and lactation. Feeding during infancy. Nutrition of older children. Section III, Diet therapy: Deficiency diseases. Overweight and underweight. Nutrition and surgical conditions. Fevers and infections. Diseases of the intestinal tract. Disturbances of the liver and gallbladder. Diabetes mellitus. Glandular disturbances. Diseases of the cardiovascular system. Anemias. Allergic and skin disturbances—elimination diets. Diets and tests for diagnostic purposes. Section IV, Practical applications of nutrition, elementary cookery. Recipes. Recipe index. Appendix. Bibliography. Additional references. Recipe index. Index.

Note: A long-established (the first edition was published in 1918) textbook for instruction in schools of nursing. It is useful also to nurses, physicians, and others who are concerned in a professional or semi-professional way with the planning of diets in the course of caring for the young, aged, or ill. In it are covered the basic knowledge of food and nutrition and a wide range of specific information on standard and special diets, cookery and recipes. The tenth edition was published in 1950. Numerous revisions were made in preparing this 11th edition, but the most important were those made in the dietary calculations, charts, tables, etc., to bring them into accordance with the 1953 revision of the National Research Council's Recommended dietary allowances. A selection of literature published since the 10th edition was written has been added to the bibliography.

SHERMAN MANDEL

Psychology for nurses. New York Longmans, Green and Company 1947 237 p. illus. 21 cm. $2 75 4672

Contents: The problems of psychology. Perception. Learning and memory. Thinking and reasoning. Work and mental efficiency. Intelligence. Mental tests. Motives. The emotions. Emotions and attitudes. Personality. The abnormal. Index.

Note: This rather severely condensed work is designed to give the student nurse the elementary concepts of general psychology. Physiological aspects of psychology are largely omitted, the emphasis being on clinical application. The fullest chapters are on those subjects which will most directly concern the nurse in her career—emotion, personality and the abnormal. The presentation is simple and direct. Questions for discussion and suggested supplementary reading lists follow each chapter.

SOLOMON CHARLES AND ELIZABETH S GILL

Pharmacology and therapeutics. Seventh edition. Philadelphia J B Lippincott Company 1956. 628 p. illus. (part col d) 21 cm. $5.50. 4673

Contents: Introduction. Pharmacy (drugs and solutions). Drugs acting on the skin and the mucous membranes. Antiseptics and disinfectants (anti-infectives). Drugs acting on the nervous system. Central nervous stimulants—depressants. Drugs affecting the peripheral nervous system. Drugs acting on the autonomic nervous system. Drugs used for their effect upon the respiratory tract. Drugs which affect the heart and blood vessels. Drugs affecting the blood and blood-forming organs. Drugs acting on the alimentary tract. Drugs acting on the urinary tract. Drugs acting chiefly on the reproductive system. Drugs affecting the temperature of the body. Specific and so-called specific drugs. Substances affecting metabolism, nutrition and growth. Endocrine products. Allergens. Hormones. Enzymes and enzyme systems. Toxicology. Nonmedicinal therapeutics. Treatment of emergencies. Bibliography. Glossary of the terms used in the text. Approximate equivalents. Index.

Note: A standard text and reference book, the first edition of which was published in 1934 and the second edition in 1937. It is directed to student and graduate nurses and its purpose is to provide the general and specific knowledge of drugs and their uses that is necessary to nurses in co-operating with physicians, and in prescribing and administering in emergencies when no physician is available. Approximately the first 100 pages are devoted to basic matters such as nursing ethics and etiquette, general techniques of administration of drugs, classification of drugs, weights, measures and dosages. Most of the remainder of the volume is devoted to descriptions of drugs classified as indicated in the above chapter titles. In this seventh edition the book has been revised to bring it up to date with the *United States Pharmacopoeia XV*, *National Formulary X*, and the 1956 edition of *New and nonofficial remedies*. Other changes, most of them being expansions of chapters to include the descriptions of new drugs, have been made.

STERN, FRANCES

Stern's applied dietetics the planning and teaching of normal and therapeutic diets. Revised by Helen Rosenthal, Pearl C. Baker and Wilma A. McVey Third edition. Baltimore The Williams & Wilkins Company 1949 293 p. illus. 26 cm. $5.00. 4674

Contents: Part I, The daily food requirements of the body. The construction of the normal diet. The construction of the therapeutic diet. Environmental factors that influence the effectiveness of the diet. The education of the patient on the normal diet. The education of the patient on the therapeutic diet. Part II, Tables to simplify the computation of the diet. Part III, Dietary outlines. Part IV, Typical diets and menus.

Note: A standard book for nursing students, graduate nurses, public health workers, and others with professional interests in dietetics. It is based on a long career in dietetics in the department of the Boston Dispensary that was eventually named the Frances Stern Food Clinic in honor of the author. The present edition was prepared after the author's death by the present chief of the Frances Stern Food Clinic and two other of her former associates. In comparison to the preceding edition, Part I is not significantly changed, but the tables, dietary outlines and diets in the subsequent parts have been revised to bring them in line with present knowledge of food composition, nutritive requirements, etc. Part II now contains 62 tables.

THOMPSON, LAVERNE RUTH

Introduction to microorganisms. Third edition—illustrated. Philadelphia W B Saunders Company 1954 552 p. illus. 20 cm. $5.25 4675

Contents (abridged): Unit I, Fundamentals of microbiology. Unit II, Bacteria and environment. Favorable environment. Unfavorable environment. Unit III, Parasites and the host: Parasites as disease agents. Immunity. Anaerobes. Chemotherapy. Hospital sanitation. Unit IV, The pathogens. The detection and recognition of pathogens. Bacteria transmitted by food and water. Viruses transmitted by person-to-person contact or by blood. Animal parasites transmitted by food and water or contact. Bacteria transmitted by respiratory secretions. Viruses transmitted by respiratory secretions. Organisms transmitted by contact with mucous membranes. Fungi transmitted by contact with spores. Organisms transmitted by contact with animals. Organisms transmitted by mosquitoes. Unit V, Man against parasites: Organization for public health. Appendix. Index.

Note: A standard textbook for student nurses. It deals with microorganisms from the standpoint of human health and disease and contains little on their classification or morphology. Somewhat more space is given to general aspects of the subject such as immunity and sanitation than to the descriptions of diseases. The style is straightforward and simpler than in some textbooks written for college students. Lists of supplementary readings are included. In this edition, there are 83 illustrations.

UNIVERSITY OF KANSAS. SCHOOL OF MEDICINE

Therapeutic meal plans a new diet manual. Prepared by The Department of Dietetics and Nutrition, University of Kansas School of Medicine. Edited by Virginia Toews, Berdena Rosenow and Ruth Gordon. Lawrence University of Kansas Press, 1952 111 p. 22 cm. $3.00. 4676

Contents (abridged): Routine hospital meal plans. Liquid variations. Carbohydrate, protein, fat variations. Salt variations. Mineral variations. Ash variations. Fiber variations. Mechanical and chemical variations. Miscellaneous. Calorie variations. Glucose-value variations. Pregnancy and lactation. Infant and child feeding. Test diets. Additional tables. Index.

Note: This manual is intended to provide the medical and nursing staffs of hospitals with examples of meals which can be readily adapted to meet specific requirements of patients. Each type of diet includes a listing of necessary and additional foods, foods to omit, special rules, suggested menus, and the total vitamin and mineral content of each meal plan.

modification of one or more constituents. Part III, Laboratory outlines. Part IV Outline of the course in dietetics for student nurses. Part V Appendix Recommended daily dietary allowances. Composition of foods. Food value of average servings. Short method of dietary analysis. Cholesterol content of foods. Sodium and potassium content of foods. Sodium and potassium content of public water supplies. Index.

Note. A standard textbook used primarily in the instruction of student nurses and student dietitians. It is organized in five parts and 12 teaching units. In addition, the appendix which is more than 60 pages long contains a variety of reference data useful in the daily work of dietitians and nurses in charge of diets. The importance of a normal diet as part of the general health program and as the basis of diet in disease is stressed throughout. Nevertheless, special diets for various diseases are explicitly described and numerous typical menus are given in full. The section of laboratory outlines includes typical recipes for a variety of dishes. The first edition was published in 1933 and the fourth edition in 1951.

MULLER, THERESA GRACE

The foundations of human behavior dynamic psychology in nursing Foreword by William A Hunt. New York G P Putnam's Sons, 1956 254 p 21 cm $4 50 4666

Contents (abridged) Part I, Study of psychodynamics Evolution of dynamic psychology Mental health goals in nursing. Personality perspectives. Part II, Driving forces of human nature Dynamics of motivation. Concern with discipline. Achievement of integration. Part III, Understanding the dynamics. Part IV Dynamics of human relationships The affects. Conflict and anxiety Stress and fear Possessiveness and jealousy Self-realization and religion. Psychological growth and maturity Appendixes: Annotated bibliography on fiction, biography and poetry Bibliography Index.

Note. An introductory textbook written specifically for student nurses. It is organized on an unconventional pattern. Selected principles from psychology and psychiatry are introduced and related directly to human behavior problems encountered in nursing. Case histories, quotations from literature, etc., are used in place of formal exposition in some sections of the book. The author is Professor of Nursing and Educational Director of Graduate Studies in Psychiatric Nursing of the University of Nebraska.

NEAL, RAYMOND ELWOOD

Chemistry in nursing New York Mc Graw Hill Book Company, Inc., 1948 564 p illus. 24 cm. (McGraw Hill series in nursing, Lucile Petry, consulting editor) $5.50 4667

Contents (abridged) Unit I Physical and chemical changes. Unit II Some fundamental concepts. Unit III Oxygen. Unit IV The physics of water. The chemistry of water. Unit Nitrogen and its oxides. Unit VI, Acids, metal hydroxides, and salts. Unit VII Reactions of ions. Unit VIII Chlorine and its compounds. Unit IX Carbon, its oxides, and carbonates. Unit X Organic chemistry Unit XI Alcohols. Unit XII Aldehydes, ketones, and acids. Unit XIII Carbohydrates. Unit XIV Esters. Unit XV Proteins. Unit XVI Aromatic chemistry Appendix. Index.

Note. The author of this text has made a special effort to adapt his subject to meet the special needs of student nurses and to present the material in a clear and readable style. Practical applications are emphasized, and the sections on physiological chemistry are integrated with the discussions of the chemistry of foods and digestion. Review exercises and experiments to be prepared by the students are printed on perforated pages to facilitate correction by the instructor Other aids for instructors, such as suggested demonstrations for lectures, lists of materials required for experiments, and visual aid material, are included in the appendix.

NETER ERWIN, AND DOROTHA RAE EDGEWORTH

Medical microbiology for nurses. Third edition revised With 112 illustrations 9 in color Philadelphia F A. Davis Company 1956 549 p illus (part col d) 23 cm $5 00 4668

Contents (abridged): Section I, General bacteriology Section II, Immunology: Antigens and antibodies. Immunity Immunization, and serum therapy Blood groups, blood-transfusion reactions and hemolytic disease of the newborn. Section III, General microbiological aspects of infectious diseases. Section IV Special bacteriology Section V Rickettsiae and rickettsial diseases (rickettsiology) Section VI, Virology Section VII, Medical mycology Section VIII, Medical protozoology Section IX, Medical helminthology helminthic diseases. Section X, History of microbiology Section XI, Summary of certain microbiological aspects of infectious diseases. Section XII, The place of micro-organisms in the world of living things. Section XIII, Laboratory guide. General bibliography Glossary Index.

Note. A concise survey of those aspects of microbiology which are of particular interest in nursing is provided by this standard textbook. The role of microorganisms in disease, their identification and their control by disinfection and sterilization are the aspects emphasized. In this current edition, the book is organized in 13 sections, the titles of which are given above, and in 43 chapters. Most of the chapters are short for example, the one on rickettsiae and rickettsial diseases runs to only 10 pages, but in it this class of organism is identified, the diseases due to it are briefly described, the vectors are named, the diagnostic tests are described, control methods are outlined, and 15 references are given to the literature. The second edition was published in 1951 This third edition is the first to bear the name of a co-author The major changes are the addition of chapter on medical helminthology and a laboratory guide however some revisions are made in most chapters.

O'HARA, FRANK J

Psychology and the nurse. Fourth edition. Philadelphia W B Saunders Company, 1954 313 p illus. 20 cm. $3.50 4669

Contents Psychology The art of study The mind and the reacting mechanism. Effect of sensation on the mind. Imagination and dreams. Memory The art of thinking. Attention and the laws of learning. Intelligence tests and educational measurements. Feelings and emotions. Inclinations, choice and motivation. Conflicts and adjustments. Formation of habit. Personality Mental disorders. Index.

Note A standard introductory textbook for student nurses. It presents the basic and elementary concepts and principles from general psychology that are useful as background in practical nursing. In most of the chapters, implications for nursing are implied rather than explicitly pointed out. However there are some sections, such as one entitled Motivation and the nurse in which direct applications in nursing are discussed. The third edition was published in 1949 In this edition, there are two new chapters. One chapter has been deleted, and sections of other chapters have been rewritten. The review questions at the ends of chapters have been improved. The author is Professor of Psychology on the staff of Mercy Hospital School of Nursing, Wilkes-Barre, Pa.

PEPLAU, HILDEGARD E

Interpersonal relations in nursing a conceptual frame of reference for psychodynamic nursing Foreword by R. Louise McManus. New York G P Putnam s Sons, 1952 330 p. illus. 21 cm. $4 50 4670

Contents. Part I, Phases and roles in nursing situations. A definition of nursing. Phases of nurse-patient relationships. Roles in nursing. Part II, Influences in nursing situations Human needs. Interferences to achievement of goals. Opposing goals. Unexplained discomfort. Part III, Psychological tasks Learning to count on others. Learning to delay satisfaction. Identifying oneself Developing skills in participation. Part IV Methods for studying nursing as an interpersonal process. Observation, communication, and recording. Selected bibliography (by topics) Index.

Note A well-written book on applied psychology in nursing. It is written throughout in the terms of nurse-patient relationships. As a background to the discussion of these, the author delineates the principles of behavior in terms that will enable the student nurse to relate them to her work.

PROUDFIT, FAIRFAX THROCKMORTON, AND CORINNE HOGDEN ROBINSON

Nutrition & diet therapy Eleventh edition. New York The Macmillan Company 1955 859 p. illus (part col d) 22 cm $5 25 4671

Contents (abridged) Section I, Normal nutrition Food and its relation to health. Proteins. Carbohydrates. Fats. Mineral elements.

by Frank Netter With a section on the new born by Harry Bakwin. Philadelphia W B Saunders Company 1954 768 p. illus. 20 cm. $5.50. 4682

Contents (abridged) Unit i, History of obstetric care The history of obstetrics and obstetric nursing. Maternity care in hospitals. Unit ii, Human reproduction. Reproduction anatomy Female physiology in relation to reproduction. Development of the fetus. Unit iii, Nursing and pregnancy Physiologic changes in pregnancy Diagnosis of pregnancy Prenatal care. Environmental conditions influencing prenatal development. Complications of pregnancy Unit iv, Nursing during labor and delivery: Mechanism of labor. Nursing care in labor. Management of labor in the home. Precipitate delivery and emergency delivery by the nurse. Analgesia and anesthesia in obstetrics. Complicated labor and delivery Accidents and injuries of labor. Complications of labor. Operative obstetrics. Unit v, Nursing during the puerperium. Normal puerperium. Complications of the puerperium. Unit vi, Nursing in the neonatal period. Care of the newborn. Feeding during the newborn period. Disorders of the newborn. Infant care in the home. Glossary Index.

Note A nursing school textbook of excellent quality More than the usual proportion of space is devoted to the background knowledge of the subject. However, techniques of nursing care also are well covered. The text is written in a direct style that is easy to comprehend, and it is supplemented by 346 figures. The authors, one of whom is a specialist in nursing and the other a specialist in obstetrics and gynecology are members of the faculty of the New York University College of Medicine. The third edition is scheduled for publication early in 1958.

BRADY LEO, AND OTHERS

Essentials of gynecology Second edition. By Leo Brady Ethna Louise Kurtz, and Eileen McLaughlin. New York The Macmillan Company 1950. 256 p. illus. 21 cm. $3.50. 4683

Contents. Anatomy Physiology of the female reproductive organs. The gynecological history and examination. Gynecological symptoms and their importance. The gynecological infections. Uterine displacements and obstetrical injuries. Ectopic or extra-uterine pregnancy Sterility. Gynecological cysts and tumors. Gynecological surgery The equipment and supplies in the gynecological operating room. The student nurse in the operating room. Postoperative treatment. Postoperative complications. Female urology Radiation therapy in gynecology Index.

Note An authoritative and useful outline for student nurses. It is based primarily on requirements and practices at Johns Hopkins Hospital. The chapter on radiation therapy in gynecology is newly added, and other chapters and passages—particularly that on equipment and supplies in the gynecological operating room—have been rewritten.

BROWN MARY LOUISE

Occupational health nursing. In association with John Wister Meigs. New York Springer Publishing Company Inc., 1956. 276 p. 22 cm. $4.50. 4684

Contents (abridged) Part i The field and scope of occupational health nursing. Part ii, The two functions of occupational health nursing Occupational injuries and diseases. Non-occupational injuries and illnesses. Health evaluation program. Health counseling. Records and reports. Health education. Environmental sanitation. Official and voluntary agencies. Nursing organizations. Part iii, Participation of the nurse in occupational health programs Industrial hygiene. Industrial safety Workmen's compensation. Labor unions and union health services. Special programs. Occupational health nursing policy and procedure manual. Index.

Note The specialized field of nursing to which this book pertains is also known as industrial nursing. Occupational or industrial nurses carry on their profession in industry as members of corporation staffs or as members of nursing organizations maintained by employers' groups or workers' groups. The book is both an introductory text in the field and a reference manual of principles and procedures. The topics covered in it are treated at a professional level in recognition of the fact that many occupational health nurses have considerable administrative responsibility The author and her associate are both members of the faculty of the Yale University School of Medicine.

BROWNELL KATHRYN OSMOND

A textbook of practical nursing. Fourth edition. Illustrated. Philadelphia W B Saunders Company 1954 512 p. illus. 20 cm. $4.25 4685

Contents. Some history The health of the nurse. Getting the most from life. Your patient's body Your patient's [illegible]. The patient's environment. Nursing care. A convalescent patient. Diagnostic procedures. Treatment ordered for the patient. Diagnostic symptoms. Drugs and their use. The expectant mother. Formulas and protective foods. Child care. Older folks. Mental health. [illegible] Emergency care for the patient. Nutrition. Appendix. Professional word list. Index.

Note. A book widely used in the United States of America for the instruction of practical nurses as distinguished from student nurses enrolled in full-length courses leading to graduation as registered nurses. It is elementary written in a simple style, and deals primarily with the routine techniques of patient care. However, wide range of these is covered, and there is also considerable attention to background knowledge, such as an elementary description of human anatomy The third edition was published in 1949 In preparing this edition, many revisions, scattered throughout the book, were made without changing the over-all scope or plan.

COULTER, PEARL PARVIN

The nurse in the public health program. New York G P Putnam's Sons, 1954 309 p. 21 cm. $4.75 4686

Contents: Team relationships. The family team. The nurse-family team. The nurse-doctor team. The nurse-hospital team. The nurse-social-worker team. The nurse-citizen team. The nurse-teacher team. Teamwork through organization. Teamwork through professional competence. Teamwork through professional status. Index.

Note A well-written introductory textbook designed for the instruction of student nurses who are preparing for the specialty of public health nursing. Because it expresses [illegible] modern viewpoint and describes from the nurse's standpoint the organization of public health work in contemporary United States of America, it is useful also as a "refresher" and guide for graduate nurses who are turning to public health work from other fields of nursing. Appropriately it emphasizes the team approach in which the nurse cooperates with other welfare workers and agencies and with the patient's family Skillful use is made of case histories in illustrating important principles. The author is Director and Professor of Public Health Nursing of the School of Nursing of the University of Colorado.

CROSSEN ROBERT JAMES AND ANN JONES CAMPBELL

Gynecologic nursing. Fifth edition. With 171 illustrations, including three in color St. Louis The C V Mosby Company 1956. 769 p. illus. (part col'd) 22 cm. $4.25 4687

Contents Points in anatomy Points in physiology Gynecologic symptoms and their significance. Gynecologic history and examination. Pelvic infections. Uterine displacements, injury to the pelvic floor, fistulas. Extrauterine pregnancy Tumors of the uterus. Ovarian tumors. Malformations. Disturbances of function. Psychosomatic aspects of nursing. Gynecologic treatment methods. Nursing procedures. Public health aspects of gynecologic nursing. Glossary Index.

Note A standard textbook for student nurses. Obstetric nursing is not covered; instead the book is limited to nursing techniques in relation to diseases of women. Much space is devoted to the illustrations, the number of which is exceptionally high for a volume of this length. The first edition was published in 1937 and the fourth edition in 1951. Comparing the fourth edition with the fifth edition, the number of illustrations has been increased slightly even though some of the older ones were deleted. A short chapter on psychosomatic aspects of gynecologic nursing has been added, and sections of some other chapters have been revised. Some new terms have been added to the glossary

DAVIS DAVID M., AND GEORGE M STRONG

Urological nursing. Fifth edition illustrated. Philadelphia W B. Saunders Company 1953 196 p. illus. 20 cm. $3.25 4688

WALKER, BURNHAM S, AND OTHERS

Chemistry and human health. By Burnham S Walker, Isaac Asimov and M Kolaya Nicholas New York The Blakiston Division, McGraw Hill Book Company, Inc., 1956 445 p. illus 24 cm (McGraw Hill series in nursing, Lucile Petry, consulting editor) $5 75 4677

Contents. The experimental method. Matter and energy Oxygen, hydrogen, and water Metals and nonmetals. Solutions and ions. Acids and bases. Organic chemistry Proteins and enzymes. Carbohydrates and their metabolism. Lipids and their metabolism. Protein metabolism. Tissues and body fluids. Diseases of metabolism. Chemical defense against infection. Appendix. Index.

Note An introduction to chemistry written for the instruction of students of nursing. The level is somewhat higher than that of some nursing texts in chemistry in other words, it includes more chemical theory and less description. However no previous course in chemistry on the part of the students has been assumed. Appropriately there is a clear emphasis on biochemistry Two of the authors are biochemists on the faculty of Western University's School of Medicine, and the third is Instructor in Chemistry and Pharmacology in the Jersey City Hospital School of Nursing.

WITTON, CATHERINE JONES

Microbiology with applications to nursing Second edition New York The Blakiston Division, McGraw Hill Book Company, Inc., 1956 620 p illus. 23 cm. $6 00 4678

Contents (abridged) The basic structure and activities of microorganisms. The control of microorganisms. Sources and modes of infection. Infection and immunity Introduction to the study of pathogens. The pathogenic bacteria. Pathogenic organisms other than bacteria. Appendixes. Literature of microbiology Classification of medically important schizomycetes. Index.

Note: In this introductory book there is presented both general and specific information on bacteria and other microorganisms (together with a few that are not microscopic) of pathogenic interest. The book is addressed particularly to nurses. The information presented is of background nature that is to say no attempt is made to cover fully such matters as the specific techniques of nursing patients with communicable diseases. More space is devoted to general control matters which are of interest in such fields as public health than to descriptions of specific organisms. The illustrations include many diagrams of life cycles of microorganisms. The first edition was published in 1950. The second edition is organized in seven parts, of which the titles of all are listed above, and 38 chapters. Revisions and additions have been made in many parts of the text and many new illustrations have been added. The appendix section on laboratory methods that appeared in the first edition has been deleted. The bibliography has been revised. The author is Associate Professor of Biology in Simmons College.

WRIGHT HAROLD N, AND MILDRED MONTAG

A textbook of pharmacology and therapeutics. Sixth edition Illustrated Philadelphia W B Saunders Company 1955 557 p illus 20 cm $4 75 4679

Contents (abridged) Unit I, Orientation to pharmacology and therapeutics The administration of drugs. The pharmacologic basis of drug action and the classification of drugs. Unit II, Drugs used for their effects on skin and mucous membrane. Unit III, Anti-infective drugs Drugs used against bacterial and virus infections. Drugs used in treatment of malaria, amebiasis and other protozoal infections. Serums, vaccines and allergenic preparations. Unit IV Drugs acting on the nervous system Drugs producing stimulation of the central nervous system (respiratory stimulants) Hypnotic and anticonvulsant drugs. The narcotic drugs. Antipyretic and analgesic drugs. General anesthetics. Oxygen therapy and other forms of gas therapy Alcohols. Drugs acting on the autonomic nervous system. Unit V Drugs acting on the cardiovascular system and blood. Unit VI, Drugs acting chiefly on the smooth muscle of the gastrointestinal, urinary and respiratory tracts and reproductive organs. Cathartic drugs. Anthelmintic drugs. Diuretics. Drugs acting chiefly upon the uterus. Drugs used as X-ray contrast media, and other diagnostic aids. Unit VII, Vitamins and hormones. Unit VIII, Therapy of neoplastic diseases. Unit IX, Domestic and industrial poisoning. Unit X, Legislation in regard to drugs. Unit XI, History of pharmacology Appendix: Canadian drug legislation, by C. W Nash. Glossary Index.

Note: A textbook designed primarily for the instruction of student nurses. The first-named author is Professor of Pharmacology in the University of Minnesota and the co-author is Associate Professor of Nursing Education in Teachers College of Columbia University The first edition was published in 1937 Four new chapters are added and important changes made in other chapters in preparing the sixth edition.

SPECIAL TYPES OF NURSING

BENZ, GLADYS S

Pediatric nursing With 114 illustrations. Third edition St. Louis The C. V Mosby Company 1956 634 p illus. (part col d) 22 cm. $5.25 4680

Contents (abridged) Unit I, Developing skills in child care: Mental health and its contribution to child care. General principles of child care. Nursing care in special therapies. Nursing care in the home. Rehabilitation. Unit II, Growth and development: Heredity and environment. Teeth and dental care. Nutrition. Play and recreation for children. Unit III, The newborn infant Some diseases of the newborn. Vital statistics and infant mortality Infant feeding. The premature infant. Unit IV Diseases affecting the body systems: The ear and the respiratory system. The digestive system. The blood, lymphatics, and cardiovascular system. The skin. The genitourinary system. The eye. Nutritional metabolic, and endocrine disturbances. Unit V The communicable diseases. Unit VI, The child in the community The changing attitude toward child care. Today's approach to child care. Index.

Note. A standard textbook on the nursing care of children. Although there is considerable discussion of home influences on the physical and psychological development of children, and one chapter deals with nursing care in the home, most of the topics are discussed from the viewpoint of hospital care. The book is not strictly limited to topics usually classified as nursing but includes allied ones too, such as the evolution of society's attitude toward the care of children, the sex education of children, and play and recreation for children. The first edition was published in 1948 and the second edition in 1952.

BERRY, EDNA CORNELIA, AND MARY LOUISE KOHN

Introduction to operating room technique. New York The Blakiston Division, McGraw Hill Book Company Inc. 1955 154 p. illus. 28 cm. $4 00 4681

Contents The students and surgery Construction of the operating room. Organization of the operating room Sterilization. Asepsis and the principles of sterile technique The surgical scrub gowning and gloving. Positions. Preparation of the patient's skin; draping. Room and table setup procedure of case. Methods of hemostasis. Sutures. Needles. Radium. Plastic surgery Orthopedics. Urology Ophthalmology and otolaryngology Wound healing. Surgical equipment and routines. Economy in the operating room. Anesthesia. Medicolegal aspects. References. Index.

Note. A well-organized textbook and manual of basic nursing techniques in connection with surgical operations. Such techniques as gloving and draping are described step by step and are illustrated. The general features of special kinds of surgery for example, orthopedic surgery and the special requirements for instruments and other equipment are outlined from the viewpoint of nurses. In recognition of the fact that operating-room procedures vary from hospital to hospital, the volume has a format suitable for insertion in a standard ring binder and interleaving with notes on variations in procedures. The senior author is Head Nurse of Operating Rooms in the University Hospitals of Cleveland, Ohio.

BOOKMILLER MAE M, AND GEORGE LOVERIDGE BOWEN

Textbook of obstetrics and obstetric nursing Second edition With original drawings

described from the nurse's standpoint. In general, for each disease there is an outline of the basic anatomy and physiology, some discussion of pathology, etiology and description of signs and symptoms. However, the main emphasis is on pre- and post-operative care. The 5th edition was published in 1944. It was extensively revised for this edition. Many changes were made in the text, and more than 100 of the illustrations are new.

FITZSIMMONS LAURA W

Textbook for psychiatric attendants. New York The Macmillan Company 1947 332 p. illus. 21 cm. $4.00. 4694

Contents: Division I: An introduction to psychiatric nursing. Special problems associated with mental patients. Emergencies and first aid. Ward housekeeping. Hygiene and health. Special therapies. Nursing care of patients according to group classifications. Division II: Treatment and procedures. Definitions and explanations. Suggested list for reference reading. Index.

Note: A text for training attendants in mental hospitals in the care and welfare of patients which supplements the manual for instruction published by the Nursing Committee of the American Psychiatric Association, *A manual for training attendants in mental hospitals*, New York, 1945. It is arranged in units dealing with the various phases of hospital work, which customarily come within the scope of an attendant's duties. Basic principles and procedures of caring for mental patients are included, but there is no discussion of symptoms, classification, diagnosis, or therapy of mental diseases. The text could be used by persons studying by themselves in hospitals where no course for attendants is given.

GAGE, NINA D., AND OTHERS

Communicable diseases, by Nina D Gage, John Fitch Landon and Helen T Sider With the collaboration of Grace M. Longhurst and George F Hoch. 56 illustrations, including 15 color plates. Sixth edition. Philadelphia. F A. Davis Company 1955 520 p. illus. (part col d) 23 cm. $4 75 4695

Contents (abridged): Unit I, General principles and care. Unit II, Common communicable diseases. Unit III, Rarer communicable diseases. Unit IV, Diseases less readily communicated. Unit V, Additional services and technics: United States Public Health Service. The nonhospitalized communicable-disease patient. Administration of antitoxins and antisera. The antibiotics. Unit VI, Appendix: Glossary for Units II, III, and IV. Reference readings. Index.

Note: A standard textbook widely used in schools of nursing. Its purpose is to teach the special aspects of the nursing of patients with communicable diseases. Simplified medical descriptions of individual diseases are followed by discussions of the nursing care that they require. In this sixth edition, the purpose and general plan of the book are unchanged, but useful additions and revisions have been made. The chapter on antibiotics has been added, and the discussions of diseases, such as tuberculosis, where new developments in therapy have brought about changes in requirements for nursing, have been revised.

GILBERT RUTH

The public health nurse and her patient. Cambridge, Mass. *Harvard University Press*, 1951 348 p. 24 cm. $3 75 4696

Contents: Mental hygiene in public health nursing. Teaching health. Nurse and maternity patient. The child in his family. Nursing the sick patient. Relationships with co-workers. Bibliography. Index.

Note: An illuminating presentation of attitudes and relationships among patients and nurses engaged in public health nursing. The book is addressed to the public health nurse, but it is devoted mainly to the patients. Family situations and typical problems of individual patients are both discussed thoroughly together with indications of the nurse's part in helping to solve them. The first edition appeared in 1940. This edition represents an extensive revision based on larger experience and upon the literature published since 1940.

GOTTEN, NICHOLAS, AND LETITIA WILSON

Neurologic nursing Philadelphia F A. Davis Company 1940. 195 p. illus. 22 cm. 4697

Contents (abridged): Unit I, Anatomy and physiology: The nervous system; peripheral nerves; *cranial nerves*, sympathetic nerves; cerebrospinal fluid. Unit II, Neurologic signs and symptoms. Unit III, Neurologic disorders: The paralyses. Birth trauma. Mental deficiency. Spina bifida. Degenerative diseases of the spinal cord. Muscular disorders. Neuritis. Meningitis. Anterior poliomyelitis. Syphilis. Encephalitis. Encephalitis lethargica. Chorea. Cerebral vascular diseases. Epilepsy. Migraine. Alcoholism. Brain tumors. Spinal cord tumors. Trigeminal neuralgia. Head injuries. Spinal cord injuries. Diagnostic tests. Bibliography. References. Index.

Note. A concise and simple description of the etiology, pathology, symptoms, and methods of treatment of neurologic diseases for nurses. Much of the material contained in this specialized text is not available in general nursing textbooks. A second edition was published in 1949 and a third edition was published in 1957 312 p. The latter edition is priced at $4.40.

GUTIÉRREZ MAHONEY C G DE AND ESTA CARINI

Neurological and neurosurgical nursing Illustrated. Second edition St. Louis The C. V Mosby Company 1956 565 p. illus. (part col d) 22 cm. $6.25 4698

Contents (abridged): Historical introduction. Anatomy and physiology of the nervous system. Diagnostic study of the patient. Medical therapy. Introduction to the nursing care of the overactive, underactive, and maladjusted patient on the neurological or neurosurgical service. Care of the unconscious patient. Convulsive disorders. Developmental diseases. Degenerative diseases. Infectious diseases. Vascular diseases. Intracranial tumors. Injuries of the nervous system. Intravertebral tumors. Surgical therapy. Neurosurgical treatment for selected psychiatric patients. The treatment of pain. Medications most frequently used. Appendix: Supplementary references. Periodicals. Glossary. Index.

Note: An authoritative and thorough textbook containing both background knowledge and descriptions of the specialized techniques of neurological and neurosurgical nursing. Appropriately it is written at a more advanced level than the textbooks written for freshman students in nursing schools. The level of treatment assumes that the student will have acquired a knowledge of not only basic nursing procedures but also of basic anatomy. Neuroanatomy, diseases of the nervous system, and medical and surgical techniques are all described in an elementary and practical manner, and are related to nursing procedures. Well-selected literature references are given, and the book is adequately illustrated. The first edition was published in 1949. Revisions are apparent in many of the chapters in this second edition, and there is one new chapter.

HAMBY WALLACE BERNARD

The hospital care of neurosurgical patients. Second edition. Springfield Ill. Charles C Thomas, 1948. 156 p. illus. 22 cm. $3.00 *4699*

Contents: General considerations. Review of the anatomy of the structures surrounding the central nervous system. Physical aids in the diagnosis of disease of the central nervous system. Special minor surgical procedures. Head injuries. Disorders of the cranial nerves. Intracranial neoplasms. Prefrontal lobotomy. Spinal cord lesions. Post-operative drainage. Index.

Note: A brief but adequate manual for hospital nurses and house officers of hospitals, who are responsible for the care of neurosurgical patients. The author's aim has been to cover basic procedures in examination and care and to indicate danger signals which should be reported to the attending physician. The new edition is nearly 30 per cent longer than the previous work. The chapter on prefrontal lobotomy is new and there are numerous new or revised passages which show details of instruments, surgical drainage, etc. References to other literature are not provided.

Content Anatomy and physiology of the urogenital tract. Diseases of the urogenital tract. Urinary obstruction and principles of urinary drainage. Nursing care. Urological equipment—procedures. Operations nomenclature. Index.

Note. A standard textbook for student nurses. It describes in an elementary and brief manner neurological anatomy and physiology and the common diseases of the urogenital tract. However the primary subject is nursing in urological cases. Nursing care in urological cases, instruments, and other equipment used in urological diagnosis, surgery and nursing, and surgical and other procedures are described more fully and from the nurse's viewpoint. The book is adequately illustrated. The fourth edition was published in 1946. The organization and purpose are the same in this fifth edition. The chapter titles are the same, but the discussion of such matters as the control of infection has been rewritten to include new drugs and new procedures.

DENISON, ABBY HELEN

A textbook of eye, ear, nose and throat nursing, completely revised by Lyyli Eklund. Second edition New York The Macmillan Company 1937 367 p. illus (part col'd) 22 cm $4 00 4689

Contents Anatomy and physiology of the eye. Diseases of the eye and special points in their nursing care. Hygiene of the eyes. Drugs and solutions used in treatment. Technique of nursing procedures in relation to diseases of the eye. Preparation of supplies and appliances used in eye treatments. The eye operating room. The out-patient department eye clinic. Anatomy and physiology of the ear Diseases of the ear and special points in nursing care. Drugs and solutions used in ear treatment. Technique of nursing procedures in relation to diseases of the ear Anatomy and physiology of the nose and accessory sinuses. Diseases of the nose and accessory sinuses and nursing care. Anatomy of the mouth, pharynx, larynx, trachea and esophagus. Drugs and solutions used in the treatment of nose and throat diseases. Technique of nursing procedures. Ear nose and throat operating room. The function of a social service department in a specialized hospital. Index.

Note For graduate and undergraduate students of nursing, this concise text emphasizes nursing care and gives detailed instruction on specific techniques of various therapeutic measures and nursing procedures.

ELMAN ROBERT

Surgical care a practical physiologic guide New York Appleton Century Crofts Inc, 1951 586 p illus. (part col'd) 25 cm $10 00 4690

Contents Introduction. Systemic reaction to trauma. Psychogenic factors in surgery Nutrition in surgery Physical factors in surgery Basic preoperative care. Anesthesia, by M. Saklad. Inhalation therapy and resuscitation, by M. Saklad. Routine postoperative care. Chemotherapy in surgery Postoperative pain. Pulmonary complications. Thromboembolic disease. Postoperative renal dysfunction. Surgical shock. Wound complications. Abdominal complications. Postoperative fever Thermal burns. Author index. Subject index.

Note A textbook on convalescent care of surgical patients. It covers care, both before and after operations, and there are also discussions of anesthesia and resuscitation which are, of course, related to the operation itself. All of the material is written from the standpoint of the basic physiological principles. Nevertheless, much of the exposition is specific and directly related to the daily work of house physicians and nurses. For example, formulas for the tube feeding of patients are included. The author is Professor of Clinical Surgery of the School of Medicine of Washington University

EMERSON CHARLES PHILLIPS JR, AND JANE SHERBURN BRAGDON

Essentials of medicine the art and science of medical nursing. Seventeenth edition. 268 illustrations, including 19 subjects in full color Philadelphia J B Lippincott Company, 1955 922 p. illus (part col d) 21 cm $5 00 4691

Contents (abridged) Unit one, Introduction to nursing care. Unit two, The respiratory system. Unit three, The circulatory system. Unit four The digestive system. Unit five, The renal system. Unit six, The integumentary system. Unit seven, Allergic disorders. Unit eight, The endocrine glands and metabolism. Unit nine, The nervous system. Unit ten The musculoskeletal system. Unit eleven, The reproductive system. Unit twelve, The communicable diseases. Unit thirteen, Nursing in disaster Index.

Note. A very successful text, the first edition of which was published in 1908. It provides a comprehensive though elementary survey of the diseases and disorders that come within the scope of internal medicine In short, those which are treated without surgery It is used for the instruction of student nurses and for reference by practicing nurses. Simplified descriptions of diseases are combined with specific and fairly detailed information on medical and physical therapy and nursing care. Selected literature references are included. The sixteenth edition was published in 1950. The unit on disaster nursing was added in this seventeenth edition. Numerous revisions and additions have been made in other units, but the overall plan of the book is unchanged. The new joint author is Associate Director of the School of Nursing of Massachusetts Memorial Hospitals.

FADDIS, MARGENE O, AND JOSEPH M HAYMAN, JR.

Care of the medical patient a textbook for nurses. New York McGraw Hill Book Company, Inc., 1952 654 p. illus. 23 cm. (Mc Graw Hill series in nursing, Lucile Petry consulting editor) $5 50 4692

Contents (abridged) Part I Introduction What are the qualifications for good medical nursing? The importance of understanding the patient. The examination of the patient. Some important reactions to injury Part II, The patient's needs are the nurse's problems The nature and importance of special needs. The patient with severe, acute illness. The patient with long-term illness. The aged patient. The patient with disturbances of consciousness and of muscle movements. Part III, Special treatments and diagnostic procedures The administration of oxygen. The aspiration of fluids from body cavities. Part IV Nursing patients with particular diseases. Visual aids. Index.

Note In writing this book, the authors took into account (1) the increasing number of patients with chronic illnesses such as the aged, (2) the importance of psychological rapprochement between nurse and patient and (3) the nurse's part in the education of the patient and his family to care for himself and to live with his illness. An understanding of these new factors in successful nursing is stressed as an important adjunct to technical knowledge and skills. The greater part of the volume (478 pages) is devoted to discussions of particular diseases, written from the nurse's standpoint. This part has considerable reference value for graduate nurses.

FELTER ROBERT KENNETH AND OTHERS

Surgical nursing By Robert K. Felter Frances West, and Lydia M Zetzsche and associates Sixth edition With 363 illustrations 7 in color Philadelphia F A. Davis Company 1952 768 p. illus. (part col d) 23 cm. $4.50 4693

Contents (abridged) Unit I, Introductory and basal pathological states Inflammation and infection Unit II, Surgical skills and nursing Preoperative nursing care. Anesthesia. General postoperative nursing care (during normal convalescence) Unit III, The respiratory system: Surgical treatment of pulmonary tuberculosis and nursing care. Unit IV Diseases of the cardiovascular and the lymphatic systems. Unit V Diseases of the gastrointestinal system Surgery of the stomach and duodenum and nursing care. Hernia and nursing care. Unit VI, Genitourinary surgery Surgical procedures and postoperative nursing care. Unit VII, Surgery of the osseous and muscular systems Diseases of the osseous system. Tuberculosis of the osseous system. Sprains, dislocations, and transportation of the injured. Fractures. Unit VIII, Endocrine diseases. Unit IX, Surgery of the nervous system. Unit X, Eye, ear nose and throat. Unit XI, Integumentary system Burns. Unit XII, The female reproductive system. Unit XIII, Plastic and reconstructive surgery Unit XIV The nurse in the operating room. Index.

Note A textbook for use in schools of nursing Classes of diseases and individual diseases which are treated by surgery are

ses. Part [illegible] Suggestions for the nursing care of various types of psychiatric patients: The nurse and psychiatric nursing patients—hyperactive and hypoactive states. Autistic, acute, and chronic [illegible] reactions. Paranoid, panic, and anxiety states. Hysterical and obsessive reactions and personality disorders. The psychiatric nursing care of the individual patient. Index.

Note: A clearly written book addressed to student nurses and graduate nurses who are acquainted with basic nursing techniques. Practically all of the space is devoted to psychological and psychiatric topics which are directly important in psychiatric nursing or are useful as background. Little is included on general nursing procedures. Extensive lists of the related literature are included. The book [illegible] based on the author's extensive experience in psychiatric nursing and in the teaching of psychiatric nursing to others.

KNOCKE, FREDERICK JOHN AND LAZELLE S. KNOCKE

Orthopaedic nursing 312 illustrations. Philadelphia F. A. Davis Company 1951 682 p. illus. 23 cm. $5.50. 4706

Contents (abridged): Unit II, Psychology: Psychology of orthopedically handicapped, by H. R. Meledash. Unit III, Rehabilitation: Rehabilitation—a composite science, by Col. J. M. Smith. IV, Role of nurse in rehabilitation. Unit [illegible] Bed patients: Care of bedfast orthopedic patient. Orthopaedic surgical patient. Care of cast patient. Care of traction patient. Patient on frame. Unit VI, Up patients: Care of semiambulatory and ambulatory patients. Unit VII, Home care: Orthopaedic implications in community nursing, by M. Kee. Unit VIII, Special therapies. Physical therapy by E. C. Addison. Occupational therapy by E. H. Becker. Daily-activity teaching, by M. E. Brown. Unit IX, Applying fundamentals of orthopedic nursing. The poliomyelitis patient. Appendix. Index.

Note: A textbook that is introductory to this specialized field of nursing but which nevertheless provides full and explicit discussions of present-day techniques, including the psychological and occupational therapy aspects. Selected bibliographies and lists of visual aids accompany the chapters.

LARSON CARROLL B AND MARJORIE GOULD

Calderwood's orthopedic nursing. Revised by Carroll B Larson and Marjorie Gould. With 284 illustrations. Third edition. St. Louis The C. V Mosby Company 1953 687 p. illus. 23 cm. $5 75 4707

Contents (abridged): Unit I, Introduction for the teacher and the student. Unit II, General features of orthopedic nursing: Nursing care of cast patients. Nursing care of the orthopedic surgical patient. Orthopedic braces and apparatus. Unit III, Congenital deformities. Unit IV Developmental diseases of bone. Unit [illegible] Infections of bones and joints: Nursing care of patients with osteomyelitis and septic conditions of the joints. Nursing care of patients with skeletal tuberculosis. Unit VI, Metabolic disorders of bone. Unit VII, Arthritis. Unit VIII, Poliomyelitis: Nursing care of patients with poliomyelitis. Unit IX, Cerebral palsy. Unit X, Common painful affections in adults. Nursing care of patients with conditions of the low back. Bursitis. Disabilities of the feet. Unit XI, Special operative procedures: Nursing care following amputation. Unit XII, Fractures and dislocations, sprains, and other joint injuries. Compound fractures and first aid. Nursing care of the fracture patient. Nursing care of the patient in traction. Unit XIV Bone tumors. Unit XV Neuromuscular affections. Progressive muscular dystrophy. Birth palsy (Erb paralysis). Charcot joints and other neuromuscular affections (neuropathies). Glossary. Index.

Note: An outstanding textbook on the nursing of orthopedic patients. It is used mainly in courses offered to nursing school students who are preparing for this specialty but it is useful also to graduate nurses in general nursing who occasionally care for orthopedic patients. The specialized techniques of orthopedic nursing are covered in full detail, and the necessary background of medical information on diseases that cause deformities is included also. The authors of the first two editions were Robert V. Funsten and Carmelita Calderwood. The authors, or revisers, of this third edition are respectively the Chairman of the Department of Orthopedic Surgery of the State University of Iowa and the Supervisor of Orthopedic Nursing in the same institution. The second edition was published in 1949. In this third edition, the material has been considerably reorganized so that there are now 14 units of instruction instead of 11, new information has been added to the text, and the number of illustrations has been substantially increased.

LESSER MARION S AND VERA R KEANE

Nurse-patient relationships in a hospital maternity service. St. Louis The C. V Mosby Company 1956 301 p. illus. 22 cm. $4.25 4708

Contents: The study design—goals and methods. The setting for the study. The pregnant woman reveals her needs and the role of the nurse during pregnancy. The nurse describes antepartal needs and her role in antepartal care. The laboring woman reveals her needs and the role of the nurse during labor and delivery. The nurse describes intrapartal needs and her role during labor and delivery. The new mother reveals her needs and the role of the nurse following delivery. The nurse describes postpartal needs and her role in maternal and infant care. Conclusions, implications, and some suggestions for improving nursing practice in maternity care. Appendix.

Note: This book is the report of a study carried out at New York Hospital under a grant from the American Nurses Association. The research was directed toward finding ways in which nurse-patient relationships could be improved in the maternity service of the hospital in which it was carried out. However, the findings of the study are applicable to the maternity services of other hospitals as well. The study was conducted largely by interviewing nurses and patients. The book contains many excerpts from the interviews and full transcripts of the interviews in several cases. The researchers found, among other things, that the needs of patients for emotional support and information on child-bearing and child care were not being met. Suggestions are made for the teaching of nurses to meet these needs.

LYNCH THERESA INEZ

Communicable disease nursing Second edition. With 131 text illustrations and 4 color plates. St. Louis The C. V Mosby Company 1949 776 p. illus. (part col'd) 22 cm. $4 75 4709

Contents (abridged): Part I, Orientation to communicable disease nursing: Preparation for communicable disease nursing. Prevention and control of communicable diseases. Vaccines, immune sera, and serum reactions. Sulfonamides and antibiotics. Medical aseptis. Part II, Medical aspects and nursing care of communicable diseases: A, Diseases spread mainly by discharges from the nose and mouth. B, Diseases spread mainly through discharges from the skin and mucous membranes. C, Diseases spread mainly through discharges from the gastrointestinal tract. D, Diseases transmitted mainly by infected animals. E, Diseases transmitted mainly by infected insects. Part III, Tuberculosis. Part IV The venereal diseases. Part [illegible] Communicable diseases and the community. Appendices. Morbidity reporting requirements. Precaution technics suggested for general hospitals. Nursing procedures. Glossary. Index.

Note: A textbook for use in nursing schools. In it, the special techniques of communicable disease nursing are described fully and, in addition, enough information is included on medical aspects, such as etiology, sources of infection, course of the disease, complications and treatment to give the nurse an adequate background for informed and sympathetic nursing. There is a special chapter on home care which is of interest both to the public health nurse and to nurses practicing privately. The first edition was published in 1942. For this edition, three chapters were added, and numerous revisions were made in those carried over. Many of the changes were [illegible] reflection of the advances in the control of communicable diseases made during World War II.

MCGRATH BETHEL J

Nursing in commerce and industry Cambridge, Mass. Harvard University Press, 1946. 356 p. illus. 23 cm. $3.00. 4710

Contents: History of industrial nursing in the United States. Industrial organizations and the nurse. Relationships with employers and employee organizations. The nurse's duties and responsibilities. Physical facilities of the industrial health service. A healthful working environment. A health program for every worker. Occupational accidents and hazards. Occupational disease hazards. Nonoccupational illness and accidents. Mental hygiene. Sight conservation, by E. Mumford. Orthopedic nursing, by K. Ott. Nutrition. Problems peculiar to women in industry. Communicable disease control. Records and reports, by H. L. Brockson. Rehabilitation. Workmen's compensation. Industrial welfare activities. Hourly nursing service by an outside agency by L. M. Harmon. Con-

HEADLEE, RAYMOND, AND BONNIE WELLS COREY

Psychiatry in nursing New York Rinehart & Company, Inc., 1948 308 p 22 cm $5 00 4700

Contents Part I, Normal variations in human behavior Normal variations. Sexual adjustment. Pain. Sleep. Part II, The varieties of mental illness Mental diseases having structural pathology—infectious states—toxic psychoses—disorders resulting in seizures—senile reaction patterns—new growths—miscellaneous disorders. The affective disturbances—depressions—excitements—schizophrenia and paranoia—psychoneuroses—amoral behavior Part III, The practice of psychiatric nursing Historical developments. The attitude of the modern nurse. Observing and recording the patient's behavior Underlying principles. Special procedures. Appendices. Index.

Note. A practical and well-written text for the guidance of student and practicing nurses who are specializing in the field of mental illnesses. The treatment is particularly adapted to meet the needs of nurses working in mental institutions. Various types of mental illnesses are described, together with outlines of special nursing procedures. A 14-page bibliography is included.

HETHERINGTON, HUBERT WILLOWS, AND FANNIE W ESHLEMAN

Nursing in prevention and control of tuberculosis Revised third edition. Illustrated with photographs and charts New York G P Putnam's Sons, 1950 361 p illus. 21 cm. $4 50 4701

Contents Pulmonary tuberculosis—history epidemiology etiology pathology symptoms. The diagnosis of tuberculosis. Treatment of pulmonary tuberculosis. The management of pulmonary tuberculosis and its complications. Tuberculosis and pregnancy Collapse therapy in pulmonary tuberculosis. Tuberculosis in infants and children. Tuberculosis case-finding. Prevention of tuberculosis among nurses. Nursing in the treatment of tuberculosis. The prevention of tuberculosis. Tuberculosis dispensary or chest clinic. Family health service. Family case studies. Rehabilitation. Appendix. Index.

Note A nursing college textbook in which information on the special nursing techniques of tuberculosis nursing is combined with general and public health on this disease. There is a long chapter on the prevention of tuberculosis and related information in other chapters. The book thus has potential value for social case workers and other persons outside the nursing profession who have professional interest in the tuberculosis problem. However its main purpose is the information and instruction of student and graduate nurses. Selected literature references are included. The first named author is Chief of Clinic of the Henry Phipps Institute of the University of Pennsylvania.

HULL, EDGAR, AND CECILIA M PERRODIN

Medical nursing With 172 illustrations, 12 in color Fifth edition Philadelphia F A Davis Company, 1954 830 p illus. (part col d) 23 cm. $5 50 4702

Contents (abridged) Unit I, Basic principles Causes and classifications of disease. The recognition of disease. The treatment of disease. The prevention of disease. The diet for the medical patient. Social and health aspects in medical nursing. Nursing care of special phases of disease Unit II, The respiratory system. Unit III, The cardiovascular system. Unit IV The blood and blood-forming organs Unit V The digestive system. Unit VI, Urinary system. Unit VII Diseases of the locomotor and cutaneous systems. Unit VIII, Ductless glands and metabolism. Unit IX, The nervous system. Unit X, Nutrition. Unit XI, Allergy physical agents, chemical agents. Unit XII, Infectious diseases. Index.

Note A comprehensive, introductory textbook used for instruction in undergraduate schools of nursing It deals with the principles and techniques of nursing care of patients who are being treated medically rather than surgically In short, its subject is the nursing aspects of internal medicine. General principles and other basic topics are covered in the first section, which is 93 pages long. Most of the sections that follow are devoted to the diseases of specific systems of the body The clinical picture of each disease is concisely sketched. In the last chapter of each unit, the nursing care of the group of diseases described in the unit is discussed. The fourth edition was published in 1950. In preparing this fifth edition, one chapter was deleted, two were added, and changes were made in many of the chapters carried over.

INGRAM, MADELENE ELLIOTT

Principles and techniques of psychiatric nursing Fourth edition. Illustrated. Philadelphia W B Saunders Company, 1955 529 p illus. 20 cm $4 75 4703

Contents I, Historical background of treatment of the mentally ill History and development of the care of the mentally ill. II, Patient, nurse and the immediate situation Approach. Personal hygiene. Personal property Feeding problems. Suicides; escapes; hazards accidents. Admission, transfer discharge. Management of active patients. Group management. Increasing patients' self-direction. Treatments. III, Psychiatric theory and treatment Behavior Mental disorders. Specific psychiatric treatments IV Therapeutic techniques for relating the patient to the culture The arts, education and physical activities in treatment. Occupational therapy Drama in treatment. Music in treatment. Recreation as treatment. Bibliotherapy Hydrotherapy V Nursing adaptations for psychiatric situations. Charting. Night duty Nursing in the services. Legal aspects. Traveling with patients. VI, Brief discussion of social guidance and counseling techniques. Mental hygiene. Glossary Index.

Note: A standard textbook used for instruction in both undergraduate and postgraduate nursing courses. It offers a broad and at the same time a detailed introduction to the principles and techniques of nursing care of patients with mental disorders. Elementary descriptions of these disorders and of their treatment are included as essential background information. The first edition was published in 1939 and the third edition in 1949 For this fourth edition the book was reorganized and extensively rewritten.

JENSEN, JULIUS, AND DEBORAH MACLURG JENSEN

Nursing in clinical medicine 4th edition of *Clinical nursing in medicine* New York The Macmillan Company 1954 889 p. illus. 21 cm. $4 00 4704

Contents (abridged) Part I, Background data: Unit I, General introduction. Unit II, Fundamental principles. Part II, Discussion of general conditions Unit III, General disease conditions. Part III, Discussion of specific conditions (organ systems): Unit IV Diseases of the cardiovascular system. Unit V Diseases of the blood and blood-forming organs. Unit VI, Diseases of the respiratory system. Unit VII, Diseases of the gastrointestinal system. Unit VIII, Diseases of the urinary system. Unit IX, Diseases of the musculoskeletal or locomotor system. Unit X, Diseases of the endocrine system. Unit XI, Diseases of the nervous system. Unit XII, Diseases due to poisons, chemical and physical agents. Unit XIII, The infectious diseases. Unit XIV Diseases of the skin. Appendices. Index.

Note. Internal or clinical medicine is covered from the nursing viewpoint in this standard book. Most of the space is devoted to elementary descriptions of the diseases and disorders which are treated by medical therapy The descriptions cover etiology symptoms, treatment, etc. However background knowledge and nursing care also are covered. The third edition was published in 1945. In preparing this edition, the book was completely reorganized, several chapters were added, and chapters carried over were revised. One of the appendices contains lists of books, journals and films pertinent to clinical nursing.

KALKMAN, MARION E

Introduction to psychiatric nursing New York McGraw-Hill Book Company Inc., 1950 336 p. illus. 24 cm. (McGraw-Hill series in nursing Lucile Petry consulting editor) $5 00. 4705

Contents (abridged) Part one, Preliminary considerations Learning to observe the psychiatric patient. Part II, Understanding the patient. Part III, What can be done for the patient Patient history Physical methods of treatment. Psychological and social methods of treatment. Teamwork in psychiatric treatment. Part IV How the psychiatric nurse works. Discussion of some general concepts of psychiatric nursing. The problem of restraint. The problem of suicide. Psychiatric nursing orders and attitudes. The nurse's first experiences on psychiatric service. Talking to psychiatric pa-

who are responsible for curricula in nursing schools. Also, there is much for the graduate nurse who is considering entering the field of psychiatric nursing or who is generally interested in the social contributions of nursing. Lengthy bibliographies are included in each chapter.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING

Manual of public health nursing. Third edition. New York The Macmillan Company 1939 529 p. 19 cm. $3.50. 4716

Contents: What is public health nursing? Relationships to health and social agencies. Plan of work. Administrative responsibilities. Office administration. Education of the public health nurse. Reports and records. Family health service. The home visit. Health conferences, classes, clubs, and clinics. Standing orders. Maternity nursing service. Child health service. School nursing service. Industrial nursing service. Morbidity nursing service. Tuberculosis nursing service. Service for the control of syphilis and gonorrhea. Orthopedic nursing service. Appendix: Minimum qualifications for those appointed to positions in public health nursing. Acute communicable diseases for which care is frequently given by the public health nurse. Index.

Note: Written as a guide for the field worker in public health nursing, whether in country, small-community state, or large-city service. It does not dictate programs, but guides the reader rather to an understanding of general underlying principles which will help her to evolve a program suitable for her community.

NEWTON KATHLEEN

Geriatric nursing. Second edition. St. Louis The C. V. Mosby Company 1954 424 p. illus. 23 cm. $4.75 4717

Contents: Unit I, General background. Introduction. The nurse and the patient. Basic personal-psychologic needs. Employment and economic security. Housing in health and during illness. Unit II, Therapeutic considerations. General hygiene. Nutrition. Unit III, Clinical nursing. Special treatments. Anesthesia and operative care. Nursing in diseases of the gastrointestinal tract. Nursing in cardiovascular renal diseases. Nursing in diseases of the ear, nose, and throat. Nursing in diseases of the chest. Nursing in diabetes mellitus. Nursing in diseases of the skin. Nursing in diseases of the eye. Neurologic nursing. Psychiatric nursing. Orthopedic nursing. Urologic nursing. Gynecologic nursing. Index.

Note: Both the general aspects and specific techniques associated with the nursing care of aged people are covered in this book. Much attention is given to the importance of viewing the patient as a person and to extending sympathetic understanding to him. Diseases of the aged are described from the nurse's viewpoint. The book is designed for use as a text in nursing schools, and also as a self-instruction manual for graduate nurses. Literature references are included. The first edition was published in 1950. In preparing this second edition no changes were made in the book's organization or scope, but sentences and paragraphs were rewritten in many chapters to bring them up to date, and a selection of literature published since the first edition was written was added to the chapter bibliographies.

NORLIN ELINOR E. AND BESSIE M. DONALDSON

Everyday nursing for the everyday home. Illustrations by Mary Simms. New York The Macmillan Company 1942 306 p. illus. 22 cm. $3.00 4718

Contents: Nursing—what is it? What the home should know about its nursing responsibilities. Fundamental principles of nursing for maintaining health. The right to be well born and born well. Keeping baby well and happy (first year). When the baby walks and talks (second year). The child's first schooling (second to sixth year). Life at school (beginning sixth year). The needs and desires of the teen age. Honor thy father and thy mother. A place for the aged person in his own home. Forestalling illness in the home. Making the home a place of safety. Modern aseptic attitude versus pseudo-scientific beliefs and practices. Illness always creates problems. Making room in the home for the needs of sickness. The home bed and its correct use for the sick person. Alert watchfulness for signs and symptoms. Bedside notes for the physician. Everyday care of the patient. Therapeutic measures commonly prescribed. Providing for the nutritional needs of the patient. Significance and importance of the convalescent period. When a chronic condition develops. Special devices and procedures used to obtain rest and comfort. Special nursing procedures necessary when disease is communicable. What to do in emergencies arising in the home. Suggested readings. Glossary. Index.

Note: Written for persons without professional training. It is designed to teach them how to keep illness away from the home, but to do if illness comes, how to adapt home facilities to the situation, and how to co-operate with the physician. It distinguishes between procedures safe for the layman to carry out and those requiring professional skill.

NOYES ARTHUR PERCY, AND EDITH M HAYDON

Textbook of psychiatric nursing. Fourth edition. New York The Macmillan Company 1946. 396 p. illus. 22 cm. $4.50. 4719

Contents (abridged): Psychiatry and psychiatric nursing. Mental mechanisms and motives. Personality types. The causes and nature of mental disorders. Symptoms of mental disease. General paresis and cerebral syphilis. Psychoses with epidemic encephalitis. Psychoses with other infectious diseases. Alcoholic psychoses. Psychoses due to drugs or other exogenous toxins. Traumatic psychoses. Psychoses due to circulatory disturbances. Psychoses with convulsive disorders (epilepsy). Senile psychoses. Psychoses with metabolic and other somatic diseases. Psychoses with tumor and other diseases of the brain. Psychoneuroses. Manic-depressive psychoses. Schizophrenia (dementia praecox). Paranoia and paranoid conditions. Psychopathic personalities. Principles of psychiatric nursing. Nursing procedures and treatments. Psychoanalysis. The nurse and her profession. History of psychiatry and of psychiatric nursing. Glossary. Index.

Note: An established textbook for nurses who are preparing for this specialized kind of nursing. In this edition the title has been changed to indicate the increased emphasis on nursing techniques. However, there is approximately the same amount of material about the nature of mental disease.

O'NEILL ANNA M

Operating room technic. Third edition. Philadelphia F. A. Davis Company 1953 379 p. illus. 23 cm. $3.75 4720

Contents (abridged): Part I, General technic: History of surgery. Teaching program. Duties of surgical aids. Operating room personnel. Preparation of patients for operation. Positions used in the operating room. Sterilizing. Ligatures, sutures, and drains. Anesthesia. Surgical nomenclature. Blood transfusion. Fractures. Part II, Operations: Instruments, sutures, surgical accessories. Index.

Note: An established textbook for the instruction of student nurses. It is written in a simple, explicit style, and is well organized for both instruction and reference. Practically the whole of the second part is devoted to lists of instruments, accessories, and sutures required for specific operations. The first edition was published in 1941 and the second edition in 1944. In this third edition, there are numerous small revisions and also several added topics including a new section on oral surgery.

RENDER HELENA WILLIS

Nurse-patient relationships in psychiatry. New York McGraw-Hill Book Company Inc. 1947 346 p. illus. 24 cm. (McGraw-Hill series in nursing; Lucile Petry consulting editor) $4.50. 4721

Contents: Psychiatric nursing—meaning—objectives. Behavior—observing—recording—understanding—modifying. Nursing care: Remedial approach. Primary personality disorders. Special problems. Rehabilitation. Secondary personality changes. The use of art, literature, music. Appendix. Index.

Note: The main subject of this book is the psychology of nursing psychiatric patients. It is written for student nurses and graduate nurses who are preparing for this specialty, and its purpose is to orient the nurse so that her attitude as well as her techniques will be conducive to her patients' recovery. Most topics are treated in detail from the viewpoint of the nurse on the job, and there are copious references to further reading.

clusion. Appendix. Suggestions for the nurse's library Sources of information. Equipment for the health service. Standing orders for nurses in industry Outline for manual of policies and procedures. Formula for an industrial cleanser Standards for maternity care and employment of mothers in industry Equipment and technique for eye examinations. Formula for computing cost of part-time nursing service. Index.

Note Sponsored by the National Organization for Public Health Nursing, this handbook presents a comprehensive discussion of the policies, procedures, and problems of an expanding industrial health program and of the duties and responsibilities of nurses in the development of the program. The volume is intended for present and prospective industrial nurses and for company executives.

MANHATTAN EYE, EAR, AND THROAT HOSPITAL

Nursing in diseases of the ear, nose and throat. Ninth edition. Edited by David H. Webster and others Philadelphia W B Saunders Company, 1953 317 p. illus. 20 cm. 4711

Contents (abridged): I, The eye Anatomy and physiology Diseases. Common remedies used in treatments. Eversion of lids. Retractors. Drops, solutions, ointments, and salves. Contagious diseases. The nurse's duties at operations. Postoperative care. Instruments and appliances. Orthoptic training. II, The ear Anatomy and physiology Examination general methods and instruments commonly employed. Diseases of the auricle and the internal ear III, The nose: Anatomy of the nose and para-nasal sinuses. Diseases. IV The pharynx and larynx. Anatomic description of the pharynx. Diseases of the pharynx. The larynx. V General Clinical pathology in ophthalmology and otorhinolaryngology Vitamins. Allergy The sulfonamide drugs. Use of tuberculin in ophthalmology Treatment of syphilis. Preparation of surgical dressings. The nurse's duties in emergencies. Management of troublesome children. The care and feeding of children. Index.

Note A text for student nurses, based on the methods practiced at the Manhattan Eye, Ear and Throat Hospital, New York City It covers general principles and outlines the specific duties of the nurse in the care of the patients and the nursing procedures necessary A tenth edition, much revised, was published early in 1958, 349 p.

MILLER, NORMAN F, AND HAZEL AVERY

Gynecology and gynecologic nursing With a chapter on the gynecology operating room, by Molly Kowal, and a chapter on the psychosomatic approach in gynecology by Sprague Gardiner Third edition Illustrated with 272 diagrammatic drawings. Philadelphia W B Saunders Company 1954 525 p illus 20 cm. $4 75 4712

Content (abridged) Part I, Anatomy and physiology Part II, Psychologic aspects of gynecology Part III, Functional disturbances. Menstrual dysfunctions. Infertility Part IV Mechanical disturbances Childbirth injuries. Uterine displacements. Body mechanics. Part Pelvic infections. Part V, Benign tumors and other benign lesions of the vulva, vagina, urethra and uterus. Part VII, Malignant tumors of the vulva, vagina and uterus. Part VIII, Tumors of the ovary Part IX, Gynecologic complications of pregnancy Part X, Irradiation in gynecology Part XI, Gynecologic nursing procedures Preparation of the examining room. The gynecologic examination, diagnostic tests, and remedial procedures. Preparation of the patient for a gynecologic operation The gynecology operating room. Postoperative care of gynecologic patients. Appendix. Index.

Note. A basic text for this nursing specialty It is used in the instruction of student nurses and is concerned primarily with diseases of the female reproductive organs. However at the front of the volume 100 pages are devoted to normal anatomy physiology and psychology and the terminal part on gynecologic nursing procedure is about 140 pages long. The disease descriptions are elementary and the volume is thoroughly and clearly illustrated. The senior author is Professor of Obstetrics and Gynecology in the Medical School of the University of Michigan and the junior author is Supervisor of Nursing in the Woman Hospital of the University of Michigan.

MORRISSEY, ALICE B

Rehabilitation nursing Foreword by Howard A. Rusk New York G P Putnam's Sons, 1951 299 p 21 cm. $4 50. 4713

Contents. Part I, The meaning of rehabilitation Historical survey of rehabilitation. Incidence of disability in the United States. Integration of personality in disability The nurse role in rehabilitation. Part II, Nursing principles and procedures in rehabilitation. Fundamentals of nursing care in rehabilitation. Nursing measures to prevent physical deformities. Procedures for bladder and bowel rehabilitation. Measures for the prevention and care of decubitus ulcers. Teaching the activities of daily living. Techniques of crutch walking. Care and use of mechanical leg braces. Wheel chairs. The voice and speech rehabilitation, by E. E. Baker, jr. Part III, Nursing practice in rehabilitation: The care of the amputee. The care of the hemiplegic patient. The care of paraplegic and quadriplegic patients. Index.

Note. In this book, current techniques in the rehabilitation of physically handicapped persons are presented for nurses. Most of the discussion pertains to the care and teaching of such patients. However this material is presented against the background of the modern viewpoint of full rehabilitation. Thus, there is a long discussion of the psychological aspects. Lists of references accompany the chapters, and there are 54 figures.

MULLER, GULLI LINDH, AND DOROTHY E. DAWES

Introduction to medical science Third edition. Illustrated Philadelphia W B Saunders Company 1953 610 p. illus. (part col d) 20 cm. $4 75 4714

Contents (abridged): Unit I, The development of medical science. A historical review of the progress of medicine. Unit II, The causes of disease. Unit III, How disease manifests itself in the body Inflammation, a reaction of the body to injury Circulatory disturbances. Tumors. Examination of tissues. Unit IV How the doctor makes the diagnosis: Examination of the patient. Urine. Blood. Examination of other body fluids. Bacteriologic diagnostic tests. Immunologic diagnostic tests. Gastro-intestinal studies and tests. Collection and handling of specimens. Unit How disease is treated. Forms of therapy Physiotherapy Unit VI, How disease is controlled and prevented The Federal health program. The health program of the state. The health of the community Sanitary conditions in the home. The dairy industry and its control. Other food products. Water supply Disposal of sewage and refuse. Industrial sanitation. Health control in disaster situations. Glossary Prefixes and suffixes. Index.

Note. A general introduction to the scope and basic techniques of medicine in public health. It is directed to student nurses, and its purpose is to provide a background that will enable the nurse to understand the significance of the work she will do in hospital clinics and wards. The style is elementary and the chapters cover only the high points of the topics named in their titles. On the other hand, unexpectedly extensive bibliographies are included. A useful feature is the long glossary which is printed on pages of distinctive color so that the reader can locate it easily The fourth edition was scheduled for publication early in 1958.

MULLER, THERESA GRACE

The nature and direction of psychiatric nursing, the dynamics of human relationships in nursing Philadelphia J B Lippincott Company, 1950 379 p. 21 cm $3 00 4715

Contents Part I, Status of psychiatric nursing Introduction. Mental illness. Mental institutions. Psychiatric nursing and nursing education. Psychiatry and medical education. Psychiatric social work and clinical psychology Therapeutic and preventive measures. Part II, Nature of psychiatric nursing Role of the nurse in psychotherapy Psychodynamics of behavior deviations. Underactive behavior Overactive behavior Psychosomatic viewpoint. Community health aspects. Part III, Direction of psychiatric nursing Personal qualifications. Inservice education. Psychiatric nursing in the basic curriculum. Psychiatric nursing in advanced professional curricula. Evaluation and research. Bibliography Index.

Note. Rather than a beginner's text, this work is a source book of information on the current status of psychiatric nursing in the United States of America, the special nature of psychiatric nursing as distinguished from other types of nursing, and on the teaching of psychiatric nursing. There is much in it of interest to persons

[illegible] patient. Psychiatric nursing in public-health work. Glossary. Index.

Note: A standard text for student and graduate nurses [illegible] for the specialty of psychiatric nursing. It presents [illegible] range of information on the subject, and is outstanding for its full descriptions of nursing procedures in the care of mentally disturbed patients. The fourth edition was published in 1953. In the fifth edition the book was extensively revised and enlarged. Several chapters were rewritten and five new ones added. The length was increased by almost 140 pages and the number of illustrations by 14. A selection of literature published since the fourth edition was added to the bibliographies.

WALES, MARGUERITE

The public health nurse in action. With a foreword by Lillian D Wald. New York The Macmillan Company 1941 437 p. illus. 22 cm. $3 75 4728

Contents: Better care for mothers and babies. Infant and preschool health. The school child. Communicable disease. Tuberculosis [illegible] program. Orthopedic nursing. The public health nurse in the control of syphilis and gonorrhea. The chronically ill patient. Industrial nursing service. The public health nurse marches on. Appendix. Index.

Note: An unusual presentation of public health principles through the description of [illegible] public health nurse's activities, day by day, in certain types of situations. The principles are set off in special [illegible] through the informal case histories. This is written primarily for field workers in public health, but is also suitable as text for the teaching of student nurses.

WEST, JOHN PETTIT, AND OTHERS

Nursing care of the surgical patient, by John Pettit West, Manelva Wylie Keller and Elizabeth Harmon. Fifth edition. Formerly *Textbook of surgical nursing* 4th ed., by MacFee and Keller New York The Macmillan Company 1951 500 p. illus. 22 cm. $4.25. 4729

Contents: Unit I, Introduction to surgical nursing. Unit II, Fundamental considerations. Unit III, Nursing care. Index.

Note: A standard textbook for use in schools of nursing. Contains information on diseases treated by surgery accompanied [illegible] descriptions of nursing techniques. The style is simple and direct. The section on the operating room which appears in earlier editions has been dropped. The book is consequently shorter. In the [illegible] extensive revisions have been made. There are new [illegible] figures, good selected bibliographies and [illegible] detailed index.

WOODWARD, HENRY L., AND BERNICE GARDNER

Obstetric management and nursing. Fifth edition. Revised by *Richard D Bryant* and Anna E. Overland. 520 illustrations on 351 plates. 4 color plates. Philadelphia F A. Davis Company 1955 836 p. illus. (part col d) *23 cm.* $5 75 4730

Contents (abridged): Unit I, The background of obstetric nursing. Unit II, Anatomy and physiology correlation. Unit III, Normal pregnancy and prenatal care. Unit IV, Normal labor management and nursing care. Unit [illegible] Home delivery and public health obstetric nursing, by W. P. [illegible] and F. K. Harder. Unit VI, Abnormalities of pregnancy and their nursing care. Unit VII, Abnormalities and complications of labor. Unit VIII, Obstetric injuries and operative obstetrics. Unit IX, Puerperal complications and their nursing care. Unit X, The abnormal infant and its care, by D. Y. Jones and H. F. Downing. Appendix: The place for practical [illegible] in obstetrical nursing, by N. M. Stevenson. Standards for maternity care and employment of mothers in industry. Glossary. Index.

Note: One of the standard textbooks widely used in schools of nursing as an introduction to the specialty of obstetric nursing. The range of information presented in the text proper is unusually inclusive. Furthermore, the text is supplemented by [illegible] high number of illustrations. The inclusion of [illegible] section on home delivery as distinguished from delivery in [illegible] hospital is also noteworthy. The first edition was published in 1936 and the fourth edition in 1951. Although the book has been shortened by [illegible] few pages in this fifth edition, many sections have been rewritten, and one new chapter has been added. Illustrations have been revised, and the several glossaries of the preceding editions have been combined in one Glossary.

ZABRISKIE, LOUISE, AND NICHOLSON J EASTMAN

Nurses handbook of obstetrics. 377 illustrations including 8 color plates. Ninth edition, completely revised. Philadelphia J B Lippincott Company 1952 695 p. illus. (part col d) 21 cm. $5 00. 4731

Contents (abridged): Unit I, Human reproduction. Aims of obstetric nursing. Anatomy in [illegible] basis for obstetrics. Physiology in relation to obstetrics. Development and physiology of the fetus. Presentations and positions. Unit II, Nursing in pregnancy. Normal pregnancy. Prenatal care. Complications of pregnancy. The mental hygiene of pregnancy. Preparations for labor and delivery. Unit III, Nursing during labor and delivery. Anesthesia and analgesia in labor. Conduct of normal labor. Operative obstetrics. Unit IV, Nursing during the puerperium. Normal puerperium. Complications of the puerperium. Unit [illegible] The neonatal period. The nursing care of the new baby. Nursing care of the premature baby. After-care of the baby. Unit VI, Additional maternity information. History of obstetrics. Practical aids. Glossary. Index.

Note: A long-established textbook, outstanding for comprehensiveness, the clarity of the presentation, and the number and quality of the illustrations. Although intended primarily for use in organized classes, it is useful also as [illegible] reference book by graduate and public health nurses, etc. The first-named author was formerly Night Supervisor in the *Lying-In Hospital*, New York. The second-named author is Obstetrician-in-chief at the Johns Hopkins University. The eighth edition was published in 1948. *For this ninth edition* the book was reorganized and the type reset. A new chapter has been added, and many revisions have been made in other chapters. The *sections* relating to such important topics as prenatal care, the Rh factor, new analgesics and anesthetics, care of premature babies, etc. Many illustrations have been added.

RODEMAN, CHARLOTTE R.

A guide for psychiatric aides New York The Macmillan Company, 1956 234 p 21 cm. $3 75 4722

Contents History of the care of psychiatric patients. The psychiatric aide and the psychiatric team. Attitudes. Aide-patient relationships. Observation and reporting. *Protection of the patient.* Physical care of patients. Care of patients in relation to their symptoms. Special procedures in the care of the psychiatric patient. Ward management. Basic nursing procedures. Words you should know Bibliography Index.

Note The staffs of present-day psychiatric hospitals in the United States of America usually include a number of "aides" who attend to the routine care of patients. These staff members have not been formally educated in nursing, but work under the supervision of the medical and nursing staff. This is a practical book designed for the instruction and guidance of this group of personnel. It was written by a trained nurse, and it describes those techniques of patient care which are performed by psychiatric aides alone or in cooperation with nurses and physicians, such as bedmaking, bathing, and administration of medicines. In addition it discusses background information on the protection of psychiatric patients against self-injury on behavior patterns of psychiatric patients, etc. There is a useful glossary of nursing and medical terms and a selected bibliography

SCHWARTZ, MORRIS S, AND EMMY LANNING SHOCKLEY

The nurse and the mental patient, a study in interpersonal relations. By Morris S Schwartz and Emmy Lanning Shockley with the assistance of Charlotte Green Schwartz New York Russell Sage Foundation, 1956 289 p 24 cm. $3 50 4723

Contents Part I, Recurring problem situations. Fear and patient assaultiveness. The patient is demanding. The patient is withdrawn. The patient is hallucinating, delusional, or self-preoccupied. The patient has eating difficulties. The patient is incontinent. The patient's behavior has a sexual connotation. The patient is suicidal. The patient is extremely anxious. Part II, Interpersonal processes common to problem situations The nurse and the patient—an illustration. Understanding the patient. Communicating with the patient. Relating to the patient. Conclusion. Index.

Note An important addition to the literature of psychiatric nursing. It is a product of a research project carried out in a small, private mental hospital. This project was concerned with a study of relationships between nurses and mental patients and had as its object the finding of ways to alter the directions of these relationships so that the mental health of patients would be improved. Although many incidents that occurred in the course of the study are described, and transcripts of discussions of them among members of the research team, nurses and other members of the staff of the institution are included, the book is not a report of the research project. Essentially it is a textbook of the interpersonal psychological aspects of psychiatric nursing. It is written at a mature level and is perhaps the best treatment yet published of nurse-patient relationships in institutions for the care of the mentally ill.

SELLEW GLADYS AND MARY F PEPPER

Nursing of children Seventh edition Illustrated Philadelphia W B Saunders Company 1953 349 p illus. 20 cm. $3 75 4724

Contents Part I, Social psychology of childhood History of pediatric nursing. The child in the family and the community Growth and development—signs of good health. The infant—neonate and baby The child from two to six Middle childhood—six to twelve years—the grade school child. Adolescence (sometimes called later childhood) Part II, Illness in infancy and childhood The nursing care of the child Health supervision of the school child The sick infant and young child. The older child in illness Communicable diseases Appendix. Index

Note An established text used in its various editions since the publication of the first edition in 1926 It covers child growth and development, child psychology children diseases, and the nursing care of children, in an elementary practical style. It is designed primarily for the instruction of student nurses There is considerable emphasis on the social and psychological aspects of nursing as well as on the techniques of physical care Selected but rather extensive reference lists designed as guides to further reading are included.

SELTZER, ALBERT PINCUS

Diseases of the eye, ear, nose, and throat, a textbook for nurses. With the technical assistance of Bernard C Gettes. New York McGraw Hill Book Company, Inc., 1950. 347 p. illus. 24 cm. $5 00 4725

Contents (abridged) Part one, General considerations. Part II, The eye. Part III, The nose. Part IV The mouth. Part V The throat and the esophagus. Part VI, The larynx and its diseases; the trachea. Part VII, The ear Part VIII, Special subjects. Visual aids. Index.

Note An inclusive work which covers the basic anatomy embryology and physiology insofar as these are of concern to nurses but is devoted chiefly to nursing techniques. Techniques are described explicitly The author's style is lucid. There are short lists of literature references and 28 figures.

STAFFORD, EDWARD S, AND DORIS DILLER

A textbook of surgery for nurses. Second edition—illustrated Philadelphia W B. Saunders Company, 1954 651 p. illus. 20 cm $4 25 4726

Contents (abridged) Unit I, The fundamentals of surgical nursing. Unit II, Nursing in thoracic surgery Unit III, Nursing in vascular surgery Unit IV Nursing in surgery of the alimentary tract. Unit V Surgery of the urinary tract. Unit VI, Surgery of the integumentary system. Unit VII Diseases due to allergy Unit VIII, Surgery of the endocrine glands. Unit IX, Nursing in neurologic surgery Unit X, Surgery of the eye, ear nose and throat. Unit XI, Nursing in orthopedic surgery Unit XII, Nursing in surgery of the reproductive organs. Unit XIII, Communicable disease. Index.

Note. Written by a surgeon on the staff of the Johns Hopkins Hospital and by a graduate nurse who is a specialist in surgical nursing, this book is designed for the instruction of advanced students in nursing schools. Its principal subject is the nursing care of surgical patients. However it includes as essential background for surgical nurses a wide range of information on diseases treated by surgery and on surgical techniques. It does not cover anesthesia or the duties of nurses in operating rooms. It is well organized and the current edition is illustrated with 168 figures. There are 13 units and 51 chapters, of which only the unit titles are listed above. The first edition was published in 1947 The third edition was scheduled for publication early in 1958.

STEELE, KATHARINE MCLEAN, AND MARGUERITE LUCY MANFREDA

Psychiatric nursing Fifth edition. 115 illustrations. Philadelphia F A Davis Company Publishers 1954 684 p. illus. 23 cm. $4 75 4727

Content Unit I, Historical background Psychiatry and its heritage. The psychiatric institution and its organization. Pioneers in mental hygiene. Unit II, Introduction to psychiatric nursing Psychiatry nursing. Orientation. Legal aspects of psychiatric nursing. Mental hygiene and prevention. Unit III, Studying the psychiatric patient Personality development. Observation of symptomatic behavior Observation of neurologic symptoms. Case study Staff conferences. Unit IV Fundamental nursing care Environmental management. Hygiene. Nutrition. Treatment of physical complaints. Night nursing. Unit V Overactive underactive and antisocial patients Care of overactive patients Psychophysical control of patients Care of underactive patients Care of convalescent patients. Unit VI, Practical procedures Charting. Routine procedures. Special procedures Prevention and treatment of hazards. Unit VII, Specific mental disorders Psychoses with mental deficiency Psychopathic personality Psychoneuroses Organic psychoses. Toxic psychoses Affective disorders Involutional melancholia. Paranoia and paranoid types Schizophrenia (dementia praecox) Postpartum psychoses and neuroses Unit VIII, Therapeutic technics. Psychotherapy Shock therapies Therapeutic activities. Hydrotherapy Psychosurgery Unit IX, Psychiatric nursing outside the psychiatric hospital Care of mental patient in the home. Care of mental patient in the general hospital Application of psychiatric principles in general hospital T[illegible]ing with the men-

BURLING, TEMPLE, AND OTHERS

The give and take in hospitals a study of human organization. By Temple Burling, Edith M Lentz, and Robert N Wilson. A study conducted by the New York State School of Industrial and Labor Relations, a unit of the State University of New York at Cornell University with the support and cooperation of the American Hospital Association. Foreword by George Bugbee. New York G P Putnam's Sons, 1956 355 p. 21 cm. $4 75 4736

Contents: Part I, Hospitals and the American scene: The hospital in its historical setting. The individual hospital and its local community. The patient and his family in the hospital. Part II, The hospital power structure: The board of trustees. The administrator. The medical staff. Part III, A study of some hospital occupational groups: The nursing profession—a study of change. The head nurse and her role in hospital organization. Social service workers. Clerical employees in the hospital. The new nursing auxiliaries. Men at work—a study of male employees in the hospital. Laundry and housekeeping employees. Part IV, Hospital departments in action: The admissions office. The obstetric department. A comparison of medical and surgical floors. The operating room. Some aspects of an outpatient clinic. The laboratories. The dietary department. Communication needs in growing institution. Bibliography. Index.

Note: Six community hospitals offering general medical and surgical care and chosen as representative of such hospitals in the United States of America were studied in the course of the research program upon which this book is based. The investigators who conducted the research studied hospital records, interviewed staff members, even took on hospital chores, in order to become thoroughly familiar with the organization and personnel problems of the hospitals. The findings are presented in considerable detail and in readable style. Numerous excerpts from interviews are included, but there are no tables or graphs such as are usually found. The book probably represents the most thorough study ever undertaken of personnel problems in modern hospitals.

COMMISSION ON HOSPITAL CARE

Hospital care in the United States a study of the function of the general hospital its role in the care of all types of illness, and the conduct of activities related to patient service, with recommendations for its extension and integration for more adequate care of the American public. Cambridge Mass. Harvard University Press, 1947 631 p. illus. 24 cm. $4.50. 4737

Contents (abridged): Foreword, by T. S. Gates. Section I, The organization, objectives, purposes, and method of study of the Commission on Hospital Care. Section II, Summary of conclusions and recommendations. Section III, Influences and trends in administrative relationships and organizational patterns that underlie the future development of hospital service. Factors that have influenced the growth of hospitals. Functions of the general hospital. Hospitals and public health departments. Maintenance of standards of service. Licensure of hospitals. Hospital service for rural people. Provision of hospital service and quality of care for Negroes. Financing hospital service. Section IV, Factors affecting the size, use, and need for hospital facilities: Population factors. Socio-economic factors. Geographic and transportation factors. Population density and the size of hospital communities. Measuring need for hospital facilities. Section V, An analysis of the physical, service, and financial aspects of existing hospitals. Section VI, Suggestions for the integration of hospital service and an estimate of additional facilities necessary to serve the public needs adequately. Illustrated by the planning program of one state. Section VII, The history of hospitals in the United States. Section VIII, Methods of financing hospital care, legal status, and interrelationships of hospitals with governmental and voluntary health agencies. Index.

Note: A detailed report based on comprehensive survey of hospital service and general hospitals throughout the United States of America. The Commission on Hospital Care which conducted the survey was an independent, nongovernmental body composed of representative leaders from many fields, including education, industry, agriculture, journalism, and labor as well as medicine and hospital management.

CORWIN EDWARD HENRY LEWINSKI

The American hospital. Cambridge Mass. The Harvard University Press, 1946 241 p. illus. 21 cm. (New York Academy of Medicine. Committee on Medicine and the Changing Order Studies) $1.50. 4738

Contents: Preface, by Claude W. Munger. Sources of information about hospitals. The hospital domain. Hospital finance. Distribution and utilization of hospital facilities. The hospital as an employer and as training ground. Medical service. The outpatient department. Housing of hospitals. Retrospect and prospect. Index.

Note: The ninth volume in series of books dealing with medicine and the changing order by the New York Academy of Medicine. The present monograph is intended as an orientation for doctors, nurses, medical administrators, and students to the problems now confronting American hospitals. The author traces the principal trends in the development of the hospital as part of the social structure, describes the various services offered, discusses many problems of plant, administration, and finance, and considers the social and organizational patterns foreshadowed for the future.

FAXON NATHANIEL WALES editor

The hospital in contemporary life. Cambridge Mass. Harvard University Press 1949 288 p. illus. 22 cm. $5 00 4739

Contents: The development of the hospital, by E. D. Churchill. The relief of suffering, by H. K. Beecher. Human nature and the understanding of disease, by S. Cobb. The care of the patient, by L. S. McKittrick. The education of the doctor, by O. Cope. How medicine grows and its relation to science, by E. M. Landis. Unsolved problems, by J. C. Aub. The place of the hospital in the social order by N. W. Faxon. Index.

Note: The primary purpose of this book—composed of the revised texts of lectures originally delivered under the sponsorship of the Lowell Institute—is to promote on the part of the general public an informed and sympathetic understanding of the social importance of the hospital. However, only the author of the final lecture has addressed himself specifically to the hospital as social institution. Several other chapters are devoted to highlights in the history of medicine and of hospitals.

LAMB ALBERT R.

The Presbyterian Hospital and the Columbia-Presbyterian Medical Center 1868–1943 A history of a great medical adventure New York Columbia University Press 1955 495 p. illus. 24 cm. $8.75 4740

Contents: 1868–1890 Founding and early years of Presbyterian Hospital. 1890–1910: Early years in the rebuilt hospital. 1910–1916 The first agreement between Presbyterian and Columbia. 1917–1918 Presbyterian Hospital in World War I. 1919–1921 The second agreement with Columbia and the Medical Center accord. 1922–1924 Planning the medical center and modifying the full-time plan. 1925–1927 The construction of the medical center. 1928–1930 Opening of the medical center. 1930–1934 The center during the depression years. 1935–1938 Expanding at the center and planning the future. 1939–1941 Plans for more expansion and the advent of war. 1942–1943 Early years of the war and new regime. Afterword. Appendices. Index.

Note: An "official" history of great private hospital and medical center in the City of New York. About one-third of the space is devoted to the history of Presbyterian Hospital before the affiliation with Columbia University and the organization of the Medical Center. The rest is given to the negotiations, planning and construction of the Medical Center and to its history from the opening to 1943. This part of the book is particularly valuable record of the factors in the creation of this great medical center and of the personalities who brought it into being and managed it during its early years.

HOSPITALS

AMERICAN COLLEGE OF RADIOLOGY

Planning guide for radiologic installations By the Committee on Planning of Radiologic Installations of the Commission on Public Relations of the American College of Radiology Wendell G Scott, Chairman Chicago The Year Book Publishers, Inc., 1953 336 p illus (part col'd) 26 cm. $8 00 4732

Contents. Introduction and purposes of planning guide, by W G. Scott. Hospital radiologic practice, by S. W Donaldson. Viewpoint of the hospital administration in the planning of the radiology department, by J J Golub. Architectural problems and procedures in planning the radiology department or office, by S. Kingsbury Compilation of items to be considered in the planning of radiology departments and offices, by W G. Scott and others. Pertinent "don't" in the construction or the remodeling of radiologic installations, by W G. Scott and others. The design and arrangement of rooms for fluoroscopy by R. Golden and others. Construction and arrangement of dressing booths and lockers, by R. Golden. Film illuminators—film viewing and interpretation rooms, by E. Pendergrass and R. H. Chamberlain. Walls, windows, floors and ceilings—functional and decorative features—lighting, by B. R. Young. Ventilation and air conditioning, by A. H. Dowdy and G. A. Rogers. The darkroom and film processing facilities, by R. P Ball and others. Identification, sorting and distribution of roentgenograms, by P J Hodes and others. Active and permanent radiographic filing—microfilming, by H. F Hare and others. Photofluorographic installations for routine chest and gastric examinations, by R. H. Morgan and others. Requirements for radiographic equipment in operating rooms and for rooms for special diagnostic examinations, by P C. Swenson and others. Mobile -ray equipment—accessory wiring and storage facilities, by W W Furey and M. DeBear Dental radiographic installations, by E. R. Miller and G. M. Fitzgerald. Radiation protection, by H. O. Wyckoff and others. Design and recommendations for the radioisotope laboratory by C. B. Braestrup and E. H. Quimby Facilities for radium storage, preparation and transportation, by A. N Arneson and W M. Holm. Problems of establishing private office for the practice of radiology by W Bailey Appendixes. Medical x-ray protection up to two million volts. X-ray protection design. Protection against radiations from radium, cobalt-60 and cesium-137 (Encapsulated sources) Index.

Not An authoritative and useful manual. It as developed by committee of the American College of Radiology in cooperation ith other professional groups, including the American Hospital Association and the American Institute of Architects. It spells out in considerable detail the principles of planning facilities for radiography in hospitals, medical centers, and offices of private practitioners of radiology In addition, much specific information is given on equipment for film processing, sorting, etc. As indicated in the chapter titles, the special requirements for the use of radioisotopes and radium are considered, although most of the book deals with x-ray installations and equipment. In addition to the chapter on protection from radiation, the appendix is devoted to the complete reprinting of three National Bureau of Standards *Handbooks* on radiation protection. Literature references are included in some of the chapters.

BACHMEYER ARTHUR CHARLES, AND GERHARD HARTMAN, editor

Hospital trends and developments 1940–1946 Cambridge Mass. Harvard University Press 1948 819 p 24 cm. $5 50 4733

Content (abridged) Current trends. Hospital service. Rural hospital and health facilities. Hospital developments in foreign countries. The trustee. Hospital organization and management. The hospital administrator Medical staff organization and relationships. Nursing education and ursing service. Operating room. Obstetrical service. X-ray service. Outpatient department. Special services. Medical social service. Admitting and discharge. Financial control. Legal aspects. Hospital construction. Plant maintenance. Purchasing. Food service. Housekeeping. Laundry management and linen control. Personnel management. Public relations. Volunteers and volunteer service. Group hospital and health insurance. Public health. Regional planning of hospital services and facilities.

Note A complementary volume to the editors' *The hospital in modern society* New York, 1943 which, like the earlier compilation, contains a selection of articles from a wide range of periodicals. In the present volume, there are 143 articles classified under the headings listed above. They have been selected from the periodical literature of 1940–1946. The book is designed for hospital administrative personnel and for students preparing for this field.

BELKNAP, IVAN

Human problems of a state mental hospital. New York The Blakiston Division, McGraw Hill Book Company, Inc., 1956. 277 p. illus. 24 cm. $5 50 4734

Contents. How the study began. Mental hospitals in the United States. Mental hospitals in South State. The organization of Southern State Hospital. The hospital at work—the patients and the organization of treatment. The executive system and its problems (level I) The physicians, departments, and services (level II). The classification and assignment of patients (level III). Relationships of the ward system with the upper levels. The ward control system in action—Ward 30. Getting out of the hospital. Conclusions. Appendixes References. Theory and methods. Index.

Note Written by sociologist, this book is a detailed study of a specific, but unidentified, state hospital charged with the care of patients with mental disorders. The hospital chosen was typical of such hospitals in the United States of America, its problems common to most of them. The internal organization and the routines in caring for patients in this hospital are described in detail. The book's thesis is that the social organization of such hospitals is fundamentally wrong and a hindrance to effectiv treatment of patients. Finally the author makes recommendations for the reform of both the pattern f care f mental patients by governmental agencies and the internal organization of state mental hospitals.

BIGLEY, LORETTA I

Community clinics the hospital outpatient department and nonhospital clinics setting up and maintaining the clinic workshop. 86 illustrations. Philadelphia J B Lippincott Company 1947 276 p. illus 21 cm. $5.00. 4735

Contents Part I, Organization, administration, general considerations Introduction—development of the modern clinic. Standards of organization and administration. The outpatient department. The patient. Medical social service. Research, records, reference libraries. Nutrition. Relation of the public-health urse to the outpatient department. X-ray department. General conduct of the clinics. Part II, Classification of clinics, treatment of individual and integrated units Classifications of clinics. The cardiac clinic. Emergency department. Surgical clinics. Cancer and tumor clinics. Genito-urinary clinics. Maternity and child-health clinics. Pediatric clinics. Eye, ear nose and throat clinics. Dental clinics. Clinics in industry Rehabilitation clinics. Part III, Clinics as an educational medium An integrated program.

Note: The author broadly surveys the modern clinic and its work in the community Both the independent welfare clinic and those operating as the out-patient departments of hospitals are thoroughly described and discussed from the standpoint of basic planning, layout, equipment supplies, operation, management personnel, types of patients, clinic-patient relationships, and health education for the public. The book is designed as a textbook and reference manual for the orientation of hospital interns, urses, and public health workers. Photographs of typical equipment are reproduced, and lists of selected references are provided.

PHARMACY

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

Epitome of the Pharmacopeia of the United States and the National Formulary with comments. Issued under the direction and supervision of the Council on Pharmacy and Chemistry of the American Medical Association. Tenth edition. Philadelphia J B Lippincott Company 1955 322 p. 20 cm. $3.00. 4744

Note: A standard compendium of information on drugs selected from the standpoint of their usefulness to practicing physicians. It is based on the *U. S. Pharmacopeia* and the *National Formulary*, but the technical information concerning tests for purity, etc., that appears in those compendia is omitted. For each of the drugs listed, the information is included on the following points: official title, synonyms, brief definitions, concise descriptions of physical properties, actions, uses, and dosage. Drugs of doubtful therapeutic usefulness are included and described but comments such as the following indicate their current status: "Dental hydrargyrum cathartic, formerly used as diuretic, but now considered too irritating." The present edition is based on *U.S.P. XV* and *N.F. X.*

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

New and nonofficial remedies 1956. Philadelphia J B Lippincott Company 1956. 540 p. illus. 20 cm. $3.35 4745

Note: An annual publication in which drugs submitted by pharmaceutical manufacturers to the Council are described and critically reviewed. The information on each drug covers the following: trade name, chemical name, structural formula (in most cases), actions and uses, dosage, names of manufacturers, and forms (i.e. tablets, capsules, solutions) and types and sizes of packages in which the product is currently marketed. Although much of the text of any particular edition is carried over to the succeeding edition, all of [illegible] carefully reviewed and no product is retained in the list that is no longer considered useful.

AMERICAN PHARMACEUTICAL ASSOCIATION

The National Formulary Tenth edition. Official from December 15 1955 Washington, D C. The American Pharmaceutical Association distributed for the Association by J B Lippincott Company Philadelphia, 1955 867 p. illus. 24 cm. $9.00. 4746

Contents (abridged): Committee on National Formulary. History of the National Formulary. Articles added to the National Formulary X. Articles official in N.F. [illegible] but not admitted to N.F. X. General principles of revision. Complete list of all admissions to N.F. X. Monographs on drugs, chemicals and preparations. General tests, processes and apparatus. Reagents and test solutions. General information. Index.

Note: This latest edition of the *National Formulary*, like the preceding editions, [illegible] designed to supply definite formulas for preparations that are sufficiently used in the medical practice within the United States of America or its possessions, and for which formulas are not included in the *Pharmacopeia of the United States*, and to provide standards and tests for the identity, quality, and purity of the ingredients used in these formulas and in other drugs so that uniformity in the physical properties and therapeutic action of these preparations [illegible] be assured. Articles deleted from the *Pharmacopeia of the United States* are often added to the *National Formulary* and vice versa. The standards of the *National Formulary* are recognized as official by the terms of the Federal Food, Drug and Cosmetic Act. The number of new articles in this edition is 239 while 2 2 articles official in the preceding edition were not admitted to this one.

COOK ERNEST FULLERTON, AND ERIC W MARTIN editors

Remington's practice of pharmacy a treatise on the manufacturing, standardizing and dispensing of pharmaceutical products with biological and chemical properties, tests for purity assays uses and doses also a guide to the legal obligations of the pharmacist and the professional services rendered in helping to maintain community health. A textbook and reference guide for pharmacists physicians, and other medical scientists. Associate editors E. Emerson Leuallen, Arthur Osol Linwood F Tice Clarence T Van-Meter With the cooperation of more than 200 assistant editors and contributors. Over 1,000 illustrations. Eleventh edition. Easton, Pa. The Mack Publishing Company 1956 1 707 p. illus. 29 cm. $20.00 4747

Contents (abridged): Introduction to pharmacy. Physical pharmacy. Preparations of pharmacy. Inorganic pharmacy. Organic pharmacy. Biological pharmacy. Analytical pharmacy. Professional services of pharmacy. Appendix. Pharmaceutical manufacturers. Index.

Note: The first edition of this comprehensive and authoritative work was published in 1885, and the tenth edition was published in 1951. Used both as textbook in courses of pharmacy and as reference book in the profession, it is widely recognized as standard authority. In this edition, it is composed of the parts whose titles are listed above and 120 chapters. It has been revised to bring it into conformity with the *United States Pharmacopeia XV*, the *National Formulary X* and *New and Nonofficial Remedies 1955*. As is customary in each new edition, antiquated remedies and obsolete processes have been deleted and much new information has been added.

THE DISPENSATORY OF THE UNITED STATES OF AMERICA. 25TH EDITION By Arthur Osol and George E. Farrar jr., with Karl H. Beyer jr., John H. Brown, David K. Detweiler Robertson Pratt, and Heber W Youngken. Editor emeritus Horatio C. Wood, jr Based on the fifteenth revision of The United States Pharmacopeia, the tenth edition of The National formulary The British pharmacopoeia, 1953 the first edition of the International pharmacopoeia, Volumes I and II. Philadelphia J B Lippincott Company 1955 2 139 p. 27 cm. $25.00. 4748

Contents: Part I. Drugs recognized by *The United States Pharmacopeia, British Pharmacopoeia, International Pharmacopoeia,* or *The National Formulary.* Part II. Drugs not official in *The United*

NICHOLSON, EDNA E

Planning new institutional facilities for long term care. Forewords by Leonard A Scheele, Edwin Crosby, G Warfield Hobbs, III, Edwin B Morris, jr New York G P Putnam's Sons, 1956 358 p 20 cm. $4 50 4741

Contents Part I, The need for long-term care in institutions and how the care can be provided The need for long-term care in institutions. Planning new services to fit the need. Long-term care as part of the community's health program. Chronic-disease hospitals and rehabilitation centers. Nursing homes, homes for the aged, and some advantages and disadvantages of specialization. Part II, Planning the organization and program of a new unit for long term care Preliminary planning for the establishment of new facilities. Organizing for ownership and operation of new facilities. Services the institution must provide. Personnel. Part III, The building, equipment, and furnishings Selection of the architect and choice of the location. The building—how to plan it. What makes a good building. Patient areas. The service units and general requirements. Equipment, furnishings, and supplies. Part IV The costs The costs and how to meet them. Some earmarks of good facilities for long-term care. Index.

Note A manual of information and recommendations pertaining to the planning and design of hospitals, nursing homes, homes for the aged, and other institutions for the care of the aged and chronically ill. The subject is covered from a broad, social point of view At the same time the discussion is a detailed one that includes discussions of such matters as taxation as well as the more expected facets of planning. The author is Executive Director of the Institute of Medicine of Chicago, and the book is based in part on the experience of this organization's Central Service for the Chronically Ill in supplying advice and recommendations over a period of more than two decades to persons interested in the establishment of nursing homes, hospitals, etc.

PERKINS, JOHN J

Principles and methods of sterilization Springfield, Ill. Charles C Thomas, 1956 340 p illus. 25 cm $8 00 4742

Contents Historical introduction Thermal destruction of microorganisms. Principles of steam sterilization. Minimum standards for sterilization. The modern surgical supply sterilizer Preparation and sterilization of dressings and dry goods—Rubber goods—Surgical instruments. Water sterilizers. Dry heat sterilization. Sterilization and care of syringes and needles. Disinfection of instruments and utensils by boiling water. Chemical disinfection. Terminal sterilization of instruments and supplies following septic cases. Sterilizer controls, sterilization indicators and culture tests. The central (supply) service department. The rectangular (bulk supply) sterilizer Preparation of parenteral solutions. Preparation and terminal heating of infant formulas. The laboratory sterilizer (autoclave). Gaseous sterilization with ethylene oxide. Index.

Note A comprehensive and detailed treatise on sterilization, disinfection, and other measures for the control of microorganisms in hospitals. It begins with a 32-page chapter on the history of antiseptic measures in hospitals. All of the remainder of the volume is devoted to present-day equipment and techniques, with the emphasis on the latter Techniques of preparing of linen, instruments, gloves, etc. for sterilization are described explicitly The 174 figures include both photographs of equipment and photographic demonstrations of techniques. Included is a chapter on the infant formula room in which both the necessary equipment and good techniques of preparing milk mixtures for new-born infants are noteworthy Literature references are included in the various chapters.

WRIGHT, MARION J

Improvement of patient care, a study at Harper Hospital. This book is published in co-operation with and under the sponsorship of the American Hospital Association. New York G P Putnam's Sons, 1954 236 p. illus. 24 cm. $5 50 4743

Contents Do something!—but what? The study is organized. How did the patients and medical staff feel about us? What did people who did the work think? How many patients for how long, and how seriously ill? How much and what kinds of care must we give? We undertake a brand-new development. Could personnel time be conserved? We apply industrial practice to hospital work. We put our theories to the test. Application to the hospital as a whole. Closing the circle. List of appendices.

Note The methods and results of a comprehensive study of organization, services and personnel of Harper Hospital, a large hospital in Detroit, Michigan, are presented in this book. The study was remarkable not only for its thoroughness, but also because it introduced the concepts of industrial engineering to hospital management and tentatively applied them to some hospital activities. In the course of the study a large mass of data on hospital management and daily routines was collected not only from Harper Hospital but from a group of other hospitals by questionnaire. For the most part, these data are summarized in readable form in the main chapters of the book. However some use has been made of tables. In addition to tables, there are 22 appendices in which questionnaires and forms used in the study lists of staff duties and bibliographies are included, among other matter

Pharmacy

ever from the first edition have been revised, and the chapters on packaging, labeling and pricing that appeared in the first edition have been deleted. A selection of literature published since the first edition was written has been added to the chapter bibliographies. The book is complementary to the same editors' American pharmacy, fourth edition, described above.

MERCK & COMPANY INC.

The Merck index of chemicals and drugs an encyclopedia for the chemist pharmacist, physician, and allied professions. Sixth edition. Rahway N J Merck & Co., Inc. 1952 1,167 p. illus. 24 cm. $8.00 thumb index edition, $7.50, plain edition. 4753

Contents (abridged) Abbreviations. Chemicals and drugs. Organic name reactions. Radioactive isotopes used in medical therapy and diagnosis. Coal-tar colors (dyes) for foods, drugs, and cosmetics. Mixed indicators for volumetric work and pH determinations. Mixed indicators. Oxidation-reduction. Universal indicators. Absorption indicators. pH test indicators. Standard buffers for calibration of pH meters. pH values of standard solutions. Equivalents of the metric and U. S. systems of measures and weights. Comparison of United States, British imperial, and metric systems of liquid measures. Concentration of acids and bases. Thermometric equivalents. Specific gravity. Constant humidity compositions. Anti-freeze mixtures. Cooling mixtures. Constant humidity solutions. Boiling temperatures of liquids. Melting points of some aqueous liquids. Refractive index (nD) of liquids. Specific gravity of liquids. Specific gravity of solids. Weight of liquids per gallon. Alchemical symbols. Percentage solution tables. Alchemical symbols used in biology and botany. Weights and logs of elements and groups and their multiples.

Note A widely-used encyclopedic reference book of chemicals and drugs primarily of interest to medical practitioners and pharmacists. Most of the space (1025 pages in this edition) is occupied by a dictionary of terms. Here are entered in one alphabet short statements of information about specific chemicals and drugs together with cross references from synonyms. Data given in typical listings include the chemical formula, synonyms, molecular weight, color, odor, specific gravity, boiling point, solubility, medical uses, dosage, and industrial uses. If a chemical is commercially available there is a statement to this effect. The remaining pages are devoted to useful tables, formulas and other data frequently used in working with and dispensing drugs. The fifth edition appeared in 1940. The present edition is an extensive revision in which matter carried over from the previous edition has been thoroughly revised and 1900 new compounds have been added. Among the material added to the supplementary lists and tabulations is a useful compendium of standard organic reactions known by name such as Amadori rearrangement.

MODERN DRUG ENCYCLOPEDIA AND THERAPEUTIC INDEX. Edited by Marion E Howard. Sixth edition. New York Drug Publications, Inc., 1955 1 477 p. 24 cm. $15.00 4754

Contents Glossary. Pharmaceuticals. Biologicals. Allergens. Addenda. Therapeutic index. Generic name index. Manufacturers and distributors index. General index.

Note A standard reference book of information on drug products manufactured in the United States of America. Products are entered under the names under which they are sold, whether this is a generic name or a trade name. For example, there is a description of "Cevalin" as well as one of Vitamin C. Generally speaking, the following information is given for each drug: the trade name and its pronunciation, manufacturer's name, general description, action and uses, methods of administration, dosages, and forms (i.e. tablet, liquid, etc.) in which it is supplied. The volume is thoroughly indexed. Supplements issued every two months by the same publisher serve to keep the information up to date.

THE PHARMACOPEIA OF THE UNITED STATES OF AMERICA (THE UNITED STATES PHARMACOPEIA) Fifteenth revision U.S.P xv By authority of the United States Pharmacopoeial Convention, Inc., meeting at Washington, D C., May 9 and 10 1950 Prepared by the Committee of Revision and Published by the Board of Trustees. Official from December 15 1955 Easton Pa. Mack Publishing Company 1955 1 178 p. illus. 23 cm. $10.00. 4755

Contents (abridged) General Committee of Revision. History of the Pharmacopeia of the United States. New admissions to the U.S.P xv Articles official in the U.S.P xiv but not admitted to the U.S.P xv Changes in official titles. Monographs. General tests, processes, and apparatus. Reagents, indicators, and solutions. Tables. Index.

Note The official description of medicinal drugs for the pharmacy profession of the United States of America. In comparison to *U.S.P XIV U.S.P XV* represents an even greater revision than usual, reflecting fundamental changes in the organization of the work of revision. The revision covered the deletion and addition of drugs, revisions of many procedures, changes in nomenclature and official titles. Latin subtitles of drugs have been dropped, and the same is true of the apothecary equivalents in the statements of dosages and sizes. A short statement entitled "Category" which indicates the kind or class of preparation, has been added to each monograph. The following is an example from the monograph on Wool Fat. "Water-absorbable ointment base." The number of monographs added in this revision was 241; while 162 of those appearing in *U.S.P XIV* were deleted.

STOCKING CHARLES HOWARD AND ELMON L. CATALINE

Arithmetic of pharmacy Based on the original text by Alviso B Stevens. Eighth edition. New York D Van Nostrand Company Inc., 1952 148 p. illus. 24 cm. $3.00. 4756

Contents: Weights and measures. Specific gravity and specific volume. Weight—volume. Percentage solutions. Dilution and concentration. Reducing and enlarging formulas. Additional calculations pertaining to prescriptions. Conversion of temperatures. Commercial calculations. Chemical calculations. Appendix. Index.

Note. A long-established introductory textbook for students and reference book for beginning pharmacists. It covers chiefly the mathematical calculations that are used in connection with the compounding of medicines on prescription. Many worked examples are included, and there are also problems for the student to solve. The work has been considerably revised and reorganized in the present edition.

WILSON CHARLES O AND OLE GISVOLD, editors

Textbook of organic medicinal and pharmaceutical chemistry Third edition. Philadelphia J B Lippincott Company 1956 823 p. illus. 26 cm. $11.00 4757

Contents: Introduction, by O. Gisvold and C. O. Wilson. Physicochemical properties in relation to biologic action, by T C. Daniels and W D. Kumler. Metabolic changes of drugs and related organic compounds in the body (detoxication) by T C. Daniels and W D. Kumler. Hydrocarbons, by A. Taub and C. O. Wilson. Halogenated hydrocarbons, by A. Taub and C. O. Wilson. Alcohols, by C. O. Wilson. Ethers, by C. O. Wilson. Aldehydes and ketones, by E. V Lynn. Aliphatic carboxylic acids and their derivatives, by C. O. Wilson. Aromatic carboxylic acids, their salts and esters, by C. O. Wilson. Various nitrogenous compounds, by C. O. Wilson. Quaternary ammonium compounds, by T O Soine. Heterocyclic compounds, by C. O. Wilson. Phenols and their derivatives, by O. Gisvold. Amines having sympathomimetic activity by R. F Doerge. Amines having adrenergic blocking action, by O. L. Webster. Amines having parasympathomimetic activity by C. O. Wilson. Amines having parasympatholytic action, by T O. Soine. Histamine and antihistaminic agents, by R. F Doerge. Antimalarials, by O. Gisvold. Amines and amides having local anesthetic activity by C. O. Wilson. Amines and amides with analgesic action, by T O. Soine. Sulfur and phosphorus compounds, by T C. Daniels and W D. Kumler. Surface-active agents, by A. Taub. Compounds containing metals, by T C. Daniels and W D. Kumler. Dyes, by T C. Daniels and W D. Kumler. Steroids, by O. Gisvold. Carbohydrates or saccharides, by O. Gisvold. Glycosides, by O. Gisvold. Antibiotics, by R. F Doerge. Vitamins, by O. Gisvold. Proteins, by E. V Lynn. Diagnostic agents, by C. O. Wilson. Terpenes and related compounds, by C. O. Wilson. Index.

States Pharmacopeia, British Pharmacopoeia, International Pharmacopoeia, or The National Formulary Part III, Veterinary uses and doses of drugs. Index.

Note. As in its previous editions, this standard compendium includes both descriptions of individual drugs and survey articles on groups of drugs. The descriptions of individual drugs are organized, in most instances, according to the following pattern Definition chemical structure and history physical description and properties techniques of assay uses former uses, toxicology; dosage and methods of storage. The survey articles are devoted to classes of drugs, such as Anticoagulant drugs, Barbiturates, and Local anesthetic agents. In this edition the drug descriptions have been revised as necessary to bring them into conformity with the *United States Pharmacopeia XV* and other authorities mentioned in the title above and to include new advances in the knowledge of the drugs. Also the information given in them on dosage has been expanded. Several new survey articles have been added, and the one on antibiotics has been rewritten. The number of pages in the three principal parts is now Part I, 1,521; part II, 411 part III, 123

JENKINS, GLENN L , AND OTHERS

Quantitative pharmaceutical chemistry By Glenn L Jenkins John E Christian and George P Hager Fourth edition. New York McGraw Hill Book Company, Inc., 1953 534 p illus 21 cm 4749

Contents (abridged) Part 1 General methods used in official pharmaceutical analyses Gravimetric analysis. Principles of titrimetric (volumetric) analysis. Alkalimetry Acidimetry Precipitation methods. Oxidation-reduction methods. Gasometric methods. Part 2 Special methods used in official pharmaceutical analyses: Ash and moisture determinations. Extractive and crude fiber content. Assay of volatile oils. Alkaloidal assaying. Official type methods. Alkaloidal assays by special methods. Assay of enzyme-containing substances. Part 3 Physicochemical methods used in official pharmaceutical analyses Specific gravity and density Melting, congealing, and boiling temperatures. Colorimetry spectrophotometry fluorophotometry nephelometry and turbidimetry Refractometric measurements. Rotatory power Solubility Viscosity measurements. Electrolytic methods. Appendix. Index.

Note. A long established textbook and laboratory manual used for instruction in schools of pharmacy Its broad scope gives it some value as a reference book of analytical methods useful in pharmacy It includes both methods which are official in the *United States Pharmacopeia* and *National Formulary*, and also nonofficial methods that are widely used in the profession. The fifth edition was published in 1957 532 p., $8.50.

JENKINS, GLENN L , AND OTHERS

Scoville s The art of compounding By Glenn L Jenkins, Don E Francke, E A. Brecht and Glen J Sperandio Eighth edition New York The Blakiston Division, McGraw Hill Book Company Inc., 1951 515 p illus 26 cm. 4750

Contents The prescription. Nomenclature and vocabulary Powders, capsules, and effervescent salts. Pills. Tablets. Lozenges and similar preparations. Simple, compound, and stock solutions. Percentage, saturated, and gaseous solutions. Adjusted solutions. Parenteral solutions. Solutions for special application. Colloidal solutions Allergenic solutions. Liquids containing insoluble substances. Emulsions. Ointments and ointment-type preparations. Suppositories. Miscellaneous external preparations. Sterilization and disinfection. Homeopathic pharmacy Therapeutic and physical incompatibilities. Chemical incompatibilities. Incompatibilities of organic substances. Index.

Note A standard reference manual and textbook for practicing pharmacists and pharmacy students first published in 1895 Emphasis is placed on the practical aspects of the subject with detailed descriptions of techniques and equipment employed in the preparation of powders, pills, capsules, tablets, etc. Basic principles underlying each operation are also discussed. Numerous prescriptions and standard formulas are included to illustrate the range of application. This edition has been extensively revised and the subject matter rearranged. New chapters on solutions for special purposes and allergenic solutions have been added, and the chapters on tablets, parenteral solutions, sterilization, and incompatibilities have been expanded. A ninth edition was published in 1957 551 p., $11.00.

LYMAN, RUFUS A., AND JOSEPH B SPROWLS, editors

American pharmacy textbook of pharmaceutical principles processes and preparations George Urdang, consulting editor Fourth edition Philadelphia J B Lippincott Company, 1955 478 p illus. 26 cm. $9 75 4751

Contents The field of pharmacy by G. Urdang. Part I, Fundamental principles and processes. Metrology by E. A. Brecht, Jr. Specific gravity and specific volume, by E. L. Cataline. Heat and refrigeration by J W Jones. Purification and clarification, by W R. Lloyd. The mechanical subdivision of drugs, by J. W Jones. Solutions, by K. J. Goldner. Colloids, emulsions and suspensions, by M. F W Dunker Extraction, by N E. Foss. Part II, Pharmaceutical preparations: Waters, by R. A. Bowers. Syrups and juices, by R. A. Brecht. Solutions, injections and sterile suspensions, by J. B. Sprowls. Infusions and decoctions, by W A. Purdum. Mucilages, creams, glycerogelatins, glycerites and collodions, by E. M. Piela. Mixtures, suspensions, magmas, gels and jellies, by A. N Martin. Emulsions, by A. N. Martin. Soaps, liniments, lotions, oleates and sprays, by A. L White. Ointments, cerates, plasters and cataplasms, by L. C. Zopf. Suppositories, by S. Riegelman. Spirits and elixirs, by T D. Rowe. Vinegars, tinctures, fluidextracts, fluidglycerates and extracts, by W A. Purdum. Resins and oleoresins, by N E. Foss. Masses, pills, troches and tablets, by L. M. Ohmart. Powders, capsules, cachets, dragees, candy medication and triturations, by P A. Foote. Effervescent salts, by H. G. DeKay Radioactive pharmaceuticals, by D. M. Skauen. Index.

Note. In this book, the chapters are the work of professors of pharmacy associated with leading colleges of pharmacy in the United States of America. It is especially designed as a textbook for use in undergraduate colleges of pharmacy and it has enjoyed wide use since the first edition was published in 1945. It is concerned both with the basic principles of pharmacy and with methods for compounding broad groups of pharmaceuticals. No attempt is made to cover the business aspects of pharmacy or the details of pharmaceutical dispensing. The third edition was published in 1951. The terminal chapter on radioactive pharmaceuticals is new in this fourth edition. Other changes made from the third edition include a rearrangement of some of the chapters, revisions of many of them to bring them into accord with the *United States Pharmacopeia XV* and *National Formulary X* A new fully detailed index has been substituted for the index that appeared in former editions.

LYMAN, RUFUS A , AND JOSEPH B SPROWLS, editors

Textbook of pharmaceutical compounding and dispensing George Urdang, consulting editor Second edition Philadelphia J B Lippincott Company 1955 477 p illus. 26 cm $9 75 4752

Contents Dispensing through the ages, by G. Urdang. The prescription, by E. M. Piela. Accuracy in dispensing, by L. M. Ohmart. Dosage forms, by L. M. Ohmart. Flavors and odors and their pharmaceutical application, by C. H. Waldon. Coloring agents, by L. F Worrell. Solvents and solubility by H. M. Burlage. Some properties of aqueous solutions and their application to pharmacy by F M. Goyan. Solutions, by J. B. Sprowls. Parenteral preparations, by P J Jannke. Colloids, emulsions and suspensions, by M Barr. Dermatologic pharmaceuticals, by L. C Zopf. Incompatibility and the incompatibilities of inorganic compounds, by L. W Busse. Incompatibilities of organic compounds, by D. E. Wurster. The manufacture of tablets, by H. G. DeKay. Dental pharmacy by S. J Provenza and E. C. Dobbs. Hospital pharmacy by G. F Archambault. Index.

Note Although a good deal of specific information on the ingredients of standard prescriptions, solubilities of various compounds and incompatibilities, is presented, this work is essentially a presentation of basic scientific principles and standard techniques. It is designed for use primarily as a textbook in undergraduate courses in schools of pharmacy and its main purpose is the development of a general understanding of pharmaceutical dispensing. Most of the authors of the chapters are members of faculties of colleges of pharmacy in the United States of America. The first edition was published in 1949 The book was extensively revised for the second edition. There are several new chapters, chapters carried [illegible]

PSYCHOLOGY

GENERAL

ALLPORT, FLOYD H

Theories of perception and the concept of structure a review and critical analysis with an introduction to a dynamic-structural theory of behavior New York John Wiley & Sons Inc., 1955 709 p. illus. 23 cm. $8.50 4760

Contents (abridged) An orientation to psychological theories. The problem of perception—its place in the methodology of science. The classical theories and their legacy. The configurational approach—Gestalt theory of perception. Topological field theory and its relation to perception. The association approach—cell assembly and phase sequence. Motor aspects—sensory-tonic field theory—set and motor adjustments, their relation to perceptual theory. The Gestalt-state theory of perception. Directive-state school—hypothesis-theory and the [illegible] of [illegible]. Perception and theories of learning—the behavior-theory approach. The system viewpoints—cybernetics—its psychological implications and contributions to perceptual theory. Outline of a general theory of event-structure—a tentative statement with applications to the problems of perception. Bibliography. Index of names. Index of subjects.

Note A distinguished book in which the important modern theories of perception are critically reviewed. Finally the author proposes a new general theory of perception which he calls event-structure. The book is written at a level that makes it useful to students by graduate students of psychology and teachers of psychology. It is primarily of interest also to members of allied professions, particularly psychiatry and sociology.

ANNUAL REVIEW OF PSYCHOLOGY Volume 7 Paul R. Farnsworth, *editor* Quinn McNemar associate editor Stanford Annual Reviews, Inc., 1956 448 p. 23 cm. $7.00. 4761

Contents Learning, by W. K. Estes. Personality, by D. C. McClelland. Social psychology and group processes, by R. L. French. Abnormalities of behavior, by W. Schofield. Clinical methods—psychotherapy, by R. R. Harris. Counseling, by E. J. Shoben, Jr. Assessment of individual differences, by L. J. Cronbach. Industrial psychology, by W. K. Kendall. Statistical theory and research design, by L. E. Moses. Child psychology, by A. L. Baldwin. Educational psychology, by F. T. Tyler. Comparative psychology, by E. H. Hess. Physiological psychology, by D. B. Lindsley. Gerontology (later maturity), by I. Lorge. Vision, by C. G. Mueller and E. Reiter. Taste and smell, by C. Pfaffmann. Author index. Subject index.

Note Primarily a survey of the literature in English, both journal articles and books, although there are some citations of literature in other languages. The chapter titles listed above illustrate typical contents. Many of the chapters are repeated each year, each review covering the literature of a different period of time. Others appear in alternate years, and still others less frequently. The typical chapter is composed of abstracts run together in narrative text, with references to the original publications. The review is addressed to graduate psychologists and to other scientists with an interest in psychology and serves both as a review of progress and as a guide to the recent literature. The names and authors of all the cited papers are entered in the author index, and a detailed subject index covers the contents from the subject viewpoint.

BORING EDWIN GARRIGUES

A history of experimental psychology Second edition. New York Appleton-Century Crofts, Inc., 1950. 777 p. illus. 24 cm. (The Century psychology series Richard M Elliott, editor) $6.00 4762

Contents (abridged) Orientation: The rise of modern science. Origin of modern psychology within science. Psychophysiology in the first half of the nineteenth century. Phrenology and the mind-body problem. Physiology of the brain, 1800–1870. Specific energies of nerves. Physiological psychology of sensation, 1800–1850. Hypnotism. The personal equation. Origin of modern psychology within philosophy. Beginning of modern psychology—Descartes, Leibnitz and Locke. British empiricism—Berkeley, Hume and Hartley. British associationism—the Mills and Bain. German psychology before 1850—Kant, Herbart and Lotze. The founding of experimental psychology: Gustav Theodor Fechner. Hermann von Helmholtz. Wilhelm Wundt. Establishment of modern psychology in Germany. Establishment of modern psychology in Great Britain. Establishment of modern psychology in America. Later trends in modern psychology: Gestalt psychology. Behaviorism. Brain function. Dynamic psychology. Index of names. Index of subjects.

Note The first edition of this scholarly work appeared in 1929 and rapidly attained the status of a classic. The original text was rather extensively rewritten for the present edition. The author has stated that about half of the new edition is new writing. The scope is still [illegible] the psychology of the general, human, normal, adult mind as revealed in the psychological laboratory [illegible] and the range in time is now from about 1600 to about 1940. In spite of much subdivision by nation, school, and other groups, the effect of the book is that of a panoramic sweep of the subject. The narrative is studded with names, dates, and titles of works. However these are integrated in a balanced narrative in which the author clearly and authoritatively determines the contribution of each school and movement, and evaluates the significant work of each psychologist mentioned.

BORING EDWIN GARRIGUES

Sensation and perception in the history of experimental psychology New York D Appleton-Century Company Inc., 1942 644 p. illus. 23 cm. (The Century psychology series R. M Elliott, editor) $6.00. 4763

Contents Sensation and perception. Physiology of sensation. Visual sensation. Brightness. Color and its stimulus. Visual phenomena. Color theory. Visual perception of bidimensional space. Visual perception of depth and distance. Psychophysics of tone. Auditory perception. Auditory theory. Smell and taste. Tactual sensibility. Organic sensibility. The perception of time and movement. Concerning scientific progress. Indexes.

Note The background and evolution of modern psychology of sensation and perception is the subject of this study which traces chronologically the history of researches in the field from 1600 to 1930 and records the gradual development of present fact and opinion, describing the difficulties encountered by investigators and the factors which aided the progress of their experimentation. The work is intended more for the specialist than the layman and is based on a study of original source material which is summarized but not simplified. There are numerous reference notes and cross-references after each chapter.

BRENNAN ROBERT EDWARD

Thomistic psychology a philosophic analysis of the nature of man. New York The Macmillan Company 1941 401 p. illus. 22 cm. $5.50. 4764

Contents. Book I, Aristotle: The psychology of Aristotle. Book II, Aquinas: The psychology of Aquinas. Man the integer. The vegetative life of man. The [illegible]. Knowledge of [illegible]. The passions and actions of man. The intellectual knowledge of man. The volitional life of man. The powers of man. The habits of man. Man the person. The soul of man. Book III, The modernist

Note. Designed for undergraduate students in colleges of pharmacy this book is both a text and reference book on compounds used in medicine. The editors state that they "have attempted to include a discussion of all products described in the U.S.P xv N.F x, New and nonofficial remedies 1955 and Accepted dental remedies 1955 as well as the most important pharmaceuticals reported in the periodical literature. In the typical chapter the class of compounds under consideration is first discussed generally with particular reference to chemical structure and properties then the compounds of pharmaceutical interest are described individually In the descriptions of the individual drugs, preparation, physical properties, medical uses and usage dosages are covered. The bibliographies at the ends of the chapters are rather extensive and consist of (1) a list of references cited in the text of the chapter and (2) a list of suggested reading. The first edition was published in 1949 under the title *Organic chemistry and pharmacy* In the third edition some changes in the organization of the book and some revisions were made in order to keep the book up to date with the *United States Pharmacopeia*, the *National Formulary* and the other reference books mentioned in the quotation in this note. Also new literature has been added to the bibliography

WRIGHT, HAROLD N

Prescription writing and medical jurisprudence. Fifth edition, revised Minneapolis Burgess Publishing Company, 1956 118 p illus. 27 cm $2 75 4758

Contents (abridged) Section I, Prescription writing: Historical development of the prescription. Drug forms and preparations. Factors modifying the dosage of drugs rules for calculating dosages for children the preparation of quantitative solutions and dilution of stock solutions. Prescriptions for ointments, cerates and pastes. Prescriptions for suspensions, lotions, liniments and sprays. The coloring and flavoring of medications prescriptions for liquid medications. Prescriptions for tablets, capsules, pills, powders and suppositories. Incompatibilities and errors in prescriptions. Section II, Medical jurisprudence Medico-legal aspects of prescriptions. Procedures and precautions in toxicological examinations. Section III, Prescription Latin. Appendices. Important drugs having widely different Latin and English titles. Important official preparations often called by common names. Latin-English vocabulary. English-Latin vocabulary

Note An introduction to prescription writing which is used in the instruction of students of medicine and pharmacy In the first section it explains the conventions, terms and abbreviations of prescriptions describes the forms of drugs gives typical formulas for common medicines illustrates and interprets typical prescriptions as written by doctors and lists incompatibilities. The second section outlines points of law of interest in the practice of pharmacy in the United States of America, and the third section is an outline of Latin grammar as it is used in prescriptions, together with a discussion of how to write prescriptions in Latin. The volume is produced in inexpensive format with a spiral wire binding and paper covers.

YOUNGKEN, HEBER WILKINSON

Textbook of pharmacognosy 521 illustrations. Sixth edition New York McGraw Hill Book Company, Inc., 1948 1,063 p. illus. 23 cm $8 50 4759

Contents Part I, Fundamental and morphological considerations of drugs Fundamental considerations. Morphological classification of crude drugs. Therapeutic classes of drugs. Part II, Taxonomic consideration of drugs: Drugs of vegetable origin. Drugs of animal origin. Antibiotics and bacterial biological products. Microanalytical methods. Bibliography Index.

Note A long-established textbook, used in American colleges of pharmacy since the publication of the first edition in 1921 It is also used as a reference manual in the crude drug trade. The chapter on drugs of vegetable origin accounts for 840 of the book's pages and provides full descriptions, which are usually accompanied by illustrations, of all the useful drugs of this class. This edition exhibits numerous revisions, many of which were made to bring the text into harmony with the 13th revision of the *United States Pharmacopeia* and the 8th edition of the *National Formulary* The chapter on antibiotics is new as are substantial parts of several other chapters.

gest that by use of the technique, associative learning and creative thought can be facilitated. In the second part of the book, written by Dr. Erickson, possible applications of the technique in psychotherapy are discussed together with six case reports in which these directions under hypnosis was used by the author.

CURRENT TRENDS IN PSYCHOLOGICAL THEORY by Wayne Dennis and others. Pittsburgh University of Pittsburgh Press 1951 213 p. 22 cm. $4.00. 4770

Contents: Developmental theories, by W. Dennis. Theories of personality by R. Leeper. Learning theories, by H. F. Harlow. Theories of perception, by J. J. Gibson. Cognition and motivation in psychological theory by D. Krech. Theories of psychotherapy by D. McK. Rioch. Brain and behavior, by W. S. McCulloch. Principles and problems of theory construction in psychology by H. Feigl.

Note: A collection of lectures originally delivered at the University of Pittsburgh in February 1951, under the auspices of the Department of Psychology. The authors include professors of psychology and psychiatry from leading American universities. Each of the authors has outlined the current status of a specific area of psychology and has indicated the probable direction of further developments. A list of literature references accompanies each lecture. Although addressed to advanced college students majoring in psychology and graduate psychologists, the book is a handy and authoritative survey for anyone with professional interests in the field.

DENNIS WAYNE, AND OTHERS

Current trends in psychology Pittsburgh University of Pittsburgh Press, 1947 225 p. illus. 22 cm. $4.00. 4771

Contents: Psychology as a profession, by W. Dennis. Experimental psychology by B. F. Skinner. Child psychology by R. R. Sears. Clinical psychology by E. L. Kelly. Psychotherapy by C. Rogers. Personnel psychology by J. C. Flanagan. Human engineering, by C. T. Morgan. The sample interview survey by R. Likert.

Note: The papers in this volume were presented originally as lectures at a conference sponsored by the University of Pittsburgh in March, 1947. Each paper was prepared by a leader in the field, and each presents a survey of the current status, problems, and future development of various branches of psychology. Although written by specialists, and addressed mainly to advanced students and graduate workers in the field, technical phraseology has been kept to a minimum, hence, the book can be useful to mature general readers also. The chapters on psychotherapy and the sample interview survey contain bibliographies.

DENNIS WAYNE, editor

Readings in the history of psychology New York. Appleton-Century-Crofts, Inc., 1948 585 p. 25 cm. (The Century psychology series Richard M. Elliott, editor) $5.00 4772

Note: A chronologically arranged selection of 60 readings taken from classic works including papers, monographs, and books in psychology with the purpose of tracing the growth and development of the science. The selections range in time from the 4th century B. C. to recent times. The volume is intended chiefly for the orientation of college students who are majoring in psychology.

DEUTSCH, HELENE

The psychology of women, a psychoanalytic interpretation. Foreword by Stanley Cobb. New York Grune & Stratton, 1944 405 p. 22 cm. $5.00. 4773

Contents: Prepuberty. Early puberty. Puberty and adolescence. Menstruation. Eroticism—the feminine woman. Feminine passivity. Feminine masochism. The "active" woman—the masculinity complex. Homosexuality. Influence of the environment. Bibliography. Index.

—— Volume two Motherhood. New York Grune & Stratton, 1945 498 p. 22 cm. $5.50. 4774

Contents: Social and biologic aspects. Motherhood, motherliness and sexuality. The prematernity phases. The psychology of the sexual act. Problems of conception—psychologic prerequisites of pregnancy. Pregnancy. Delivery. Confinement and lactation—first relations with the child. The mother-child relation. Unmarried mothers. Adoptive mothers. Stepmothers. Epilogue. The climacterium. Bibliography. Index.

Note: A noted study of the normal psychic development of women and their normal conflicts. Aberrant behavior is referred to only as needed in clarification of the norm. The first volume covers from girlhood through early maturity with special emphasis on the problems of pre-adolescence and on the psychological importance of the formative period. The second volume deals with normal, adult womanhood. The work is addressed to educated lay readers as well as to psychologists and physicians. The viewpoint is Freudian.

DEWEY, JOHN

How we think a restatement of the relation of reflective thinking to the educative process. Boston D. C. Heath and Company 1933 301 p. 20 cm. $4.50. 4775

Contents: Part I, The problem of training thought. What is thinking? Why reflective thinking must be an educational aim. Native resources in training thought. School conditions and the training of thought. Part II, Logical considerations: The process and product of reflective activity—psychological process and logical form. Examples of inference and testing. Analysis of reflective thinking. The place of judgment in reflective activity. Understanding—ideas and meanings—conceptions and definitions. Systematic method—control of data and evidence—control of reasoning and concepts. Empirical and scientific thought. Part III, The training of thought. Activity and the training of thought. From the concrete to the abstract. Language and the training of thought. Observation and information in the training of mind. The recitation and the training of thought. Some general conclusions. Index.

Note: A classic description of the processes of reflective thought and how they may be efficiently used in education. It was written originally for use as a text in the training of teachers, but it is of interest to any educated person who is curious about the nature of the thinking process.

DOLLARD JOHN AND OTHERS

Frustration and aggression, by John Dollard, Leonard W Doob, Neal E. Miller O H. Mowrer Robert R. Sears in collaboration with Clellan S Ford Carl Iver Hovland, Richard T Sollenberger New Haven Published for the Institute of Human Relations by Yale University Press 1939 209 p. 23 cm. $3.00. 4776

Contents: Definitions. Psychological principles. Socialization in America. Adolescence. Criminality. Democracy, fascism, and communism. A primitive society: the Ashanti. References. Index.

Note: A monograph which attempts to explain aggressive behavior in terms of prior frustrations and in this manner to interpret some of the findings of the clinician, the experimentalist, and the field worker. An analysis in terms of the frustration-aggression hypothesis is made of child training, adolescence, criminology, race prejudice, democracy, fascism, communism, and a primitive African society. The problems posed and the illustrative material are of interest not only to the psychologist, sociologist, criminologist, and educator but to the educated layman as well. The list of references contains 189 books and publications.

GARRETT HENRY EDWARD

Great experiments in psychology Third edition. New York Appleton-Century-Crofts, Inc., 1951. 358 p. illus. 24 cm. (The Century psychology series edited by Richard M. Elliott) $3 75 4777

Contents: Pavlov and the conditioned reflex. Franz' and Lashley's studies of the role of the brain in learning. Thorndike's laws of learning. Köhler's experiments in perception and learning and their importance for Gestalt psychology. Thorndike's and Woodworth's experiments on the transfer of training and their influence upon the

Modern psychology and the Thomistic synthesis. Bibliography Index.

Note: The author analyzes Aristotle's and Aquinas' conceptions of the nature of man and shows how these conceptions pro- and Aquinas and his commentaries on them, give the reader an relationships and differences between modern scientific psychology and traditional philosophic psychology are shown, while the author's generous citations from the original writings of Aristotle insight into the thought of these two great students of man.

BROWN, CLARENCE W, AND EDWIN E GHISELLI

Scientific method in psychology New York McGraw Hill Book Company Inc., 1955 368 p illus. 24 cm. (McGraw Hill series in psychology Clifford T Morgan, consulting editor) $6 00 4765

Contents. Part I, Some general concepts about the scientific method Some characteristics of science. Presuppositions of the scientific method. The general aims and methods of science. Functional organization among natural phenomena. The control of psychological variables. Some facts and principles of psychological measurements. Part II, Steps of the scientific method. The definition and delimitation of a scientific problem. The use of hypotheses in formulating a problem. Collecting the facts. The organization, analysis, and interpretation of facts. Generalizing from scientific data. Part III, Some individual scientific procedures. Physical variables in psychological experiments. The subject in psychological experiments. Some procedures for quantifying behavior. Scientific method in field-type studies. Index.

Note. Addressed to college students who are majoring in psychology this book is substantial introduction to the methods and techniques of experimental science. Although textbook, it is written in a full style that many readers can comprehend without the assistance of an instructor Clear and convincing discussions of the aims and general methods of science are included in the early chapters, but from the fifth chapter onwards the exposition is directly related to scientific investigation in psychology The authors are psychologists on the faculty of the University of California.

BRUNER, JEROME S, AND OTHERS

A study of thinking, by Jerome S Bruner, Jacqueline J Goodnow, and the late George A Austin A publication of the Harvard Cognition Project. New York John Wiley & Sons Inc., 1956 330 p illus. 23 cm (A Wiley publication in psychology Herbert S. Langfeld, advisory editor) $6 00 4766

Contents Introduction. On attributes and concepts. The process of concept attainment. Selection strategies in concept attainment. Reception strategies in concept attainment. On disjunctive concepts and their attainment. On categorizing with probabilistic cues. An overview Appendix Language and categories, by R. W Brown. Bibliography Index of authors. Index of subjects.

Note. An original study of the nature of thinking The book is a product of an extended program of research conducted in the Laboratory of Social Relations at Harvard University A conclusion reached by the authors is that virtually all cognitive activity involves and is dependent on the process of categorizing. Categorizing is examined in detail, especially in the first chapter under such subheadings as "The invention of categories, "The generality of categorizing, "Language culture and categorizing, "The achievements of categorizing, "The motive to categorize "On the validation of categorizing, and "Learning to categorize. The fourth to seventh chapters describe the techniques and results of empirical experiments carried out in connection with the study In the appendix, the process of language learning is interpreted in the light of the authors' theories of categorizing, by Professor Roger W Brown of Harvard University

BRUNSWIK, EGON

Perception and the representative design of psychological experiments. Second edition revised and enlarged Berkeley University of California Press, 1956 154 p. illus. 27 cm. $5 00 4767

Contents Part I Systematic and representative design of psychological experiments, with results in physical and social perception: The variables entering objective psychological research. Fundamental aspects of design in psychological research. The classical psychophysical experiment and its relationship to mere statistics. Proximal multidimensional psychophysics of "Gestalt problems—intraorganismic field dynamics. Distal multidimensional psychophysics of the "thing-constancies"—stabilization of relations with the remote environment. Forced representativeness of stimuli in experiments on social perception. Ecological vs. populational generality Convergence of experiment and statistics in the methodology of a probabilistic functionalism. Ecological validity of potential cues and their utilization in perception. Ecological representativeness of experimental results in the history of psychology Development toward greater representativeness in experiments on learning. Part II, Perception—the ecological generality of its distal aim: Visual, auditory and tactile-kinesthetic constancies. The extended constancy problem. Developmental aspects of the constancy problem. Perception and thinking. The study of physiognomic perception by systematic-representative hybrid designs. Textural ecology as propaedeutic to functional psychology Acquisition and extinction of perceptual cues. Problems of stimulus representativeness in clinical psychology Conclusion functional theory and a definition of perception. Bibliography

Note A book on psychological research, the contents of which will interest professional psychologists, especially those concerned with the development of modern experimental psychology The book is divided into two parts, the first treating the development of representative design in psychology the second dealing with the functional study of perception. The first part appeared previously as contribution to the Berkeley Symposium on Mathematical Statistics and Probability (1949) while the second part is new. Experimental data are presented in tabular and graphic form throughout the volume. The bibliography extends to eight pages.

COOMBS, C H, AND R. C KAO

Nonmetric factor analysis. Ann Arbor University of Michigan Press 1955 63 p. illus 23 cm. (University of Michigan. Engineering Research Institute Bulletin no. 38.) $2 00 4768

Contents Introduction. Mathematical basis. Some general theorems. Theorems on the conjunctive-disjunctive model. The compensatory model. Discussion. Summary List of symbols. References.

Note A complementary work to C. H. Coombs, *A theory of psychological scaling*, Ann Arbor 1952. It presents new methods appropriate to data collected by the Method of Single Stimuli (monotone items) the type of data to which Guttman scalogram analysis is commonly applied. The methods are not alternatives to Guttman scalogram analysis but are multidimensional models which might be appropriate when the conditions for a unidimensional solution are not satisfied.

COOPER, LINN F, AND MILTON H. ERICKSON

Time distortion in hypnosis an experimental and clinical investigation. With a foreword by Harold Rosen. Baltimore The Williams & Wilkins Company 1954 191 p. illus 24 cm. $4 00 4769

Contents. Part I, Experimental studies Introduction. Time. Definitions. Subjects. Methods. Training Experimental basis of this report. Miscellaneous activities. Counting Sound signals. Metronome. Review and practice. Coincidental happenings. Special inquiry Association. Thought. Creative mental activity Motor learning. Nonmotor learning. Mathematical mental activity Polygraph studies. A semantic interpretation of verbal suggestion. Conclusions. Part II, The clinical and therapeutic applications of time distortion References. Index.

Note. "Time distortion as defined in this book designates substantial difference between the seeming duration of an interval of time and the clock reading of the identical interval. In short, it designates that class of human experiences in which short interval of time seems like many minutes or even hours. In the first and major part of this book, written by the senior author, series of experiments pertaining to time distortion under hypnosis are described, and the other points of that some of the findings are

Hypnosis and the dissociation hypothesis. Hypnosis considered as sleep. Hypnotic suggestibility and the transcendence of voluntary capacity. Hypnosis as a state of heightened suggestibility. Hypnosis regarded as habit. Hypnosis and non-prestige suggestion. Interpretation. Indexes.

Note: A discussion of the nature of hypnosis from the experimental viewpoint, intended for psychologists and students but understandable by the general reader. The persons employed as subjects in the research are normal rather than pathological, and the underlying principles are sought rather than treatments or cures. Important techniques are described in detail for research workers. Bibliographies follow each chapter.

JEFFRESS LLOYD A. editor

Cerebral mechanisms in behavior: the Hixon Symposium. New York John Wiley & Sons, Inc., 1951 311 p. illus. (part col'd) 23 cm. $8.00. 4784

Contents: The general and logical theory of automata, by J. von Neumann. Why the mind is in the head, by W. S. McCulloch. General discussion. The problem of serial order in behavior, by K. S. Lashley. Functional differences between the occipital and temporal lobes with special reference to the interrelations of behavior and extracerebral mechanisms, by H. Klüver. Relational determination in perception, by W. Köhler. Brain and intelligence, by W. C. Halstead. General discussion. The symposium from the viewpoint of a chemist, by R. W. Brown. Name index. Subject index.

Note: The edited transcript of lectures and discussions presented at a symposium held September 20–25 at the California Institute of Technology under the auspices of the Hixon Fund Commission. The symposium was planned as a step in the integration of experimental results and knowledge from several fields of science which impinge on the relations between behavior and brain. The level of discussion is advanced, and the book is addressed to such readers as graduate psychologists, neurologists, and biologists.

JOHNSON DONALD M

The psychology of thought and judgment. New York Harper & Brothers, 1955 515 p. illus. 21 cm. (Under the editorship of Gardner Murphy) $6.00 4785

Contents: Introduction. The thought processes—methods for analysis and classification. The dynamics of thought. Perception and thought. Learning and thinking. Preparation for thought and judgment. The production process—motor responses—complex patterns and problems. Judgment—scaling—variables—responses—validation. Individual differences in thought and judgment. Intellectual differences of social groups. The improvement of thinking. Index of names. Index of subjects.

Note: An important contribution to an area of psychology in which there has been less research and less synthesis than in most fields of the science. It is a critical survey of historical development and current status to which the author has added, in some of the chapters, suggestions for further research to such passages in the literature. "The studies by Welch and Long on higher levels of abstraction suggest a way to secure an empirical identification of abstract thinking. The ability to form second-order concepts perhaps be compared with ability to form first-order concepts." The book is directed primarily to graduate students of psychology and graduate psychologists, and is of interest also to educators and psychiatrists. Extensive references to the literature are included.

KOFFKA, K.

Principles of gestalt psychology New York. Harcourt Brace and Company 1935 720 p. illus. 22 cm. $7.50 4786

Contents *(abridged)*: Why psychology. Behavior and its field—the task of psychology. The environmental field—the problem, selection of four solutions, general formulation of the true solution—visual organization and its laws—figure and ground—the framework—the constancies—tri-dimensional space and motion. Action—the ego, the executive—adjusted behavior, attitudes, emotions, and the will. Memory—foundation of a trace theory, theoretical section—foundation of a trace theory, experimental section and completion of the theory. Learning and other memory functions. Society and personality. Conclusion. Bibliography. Index.

Note: This book is one of the basic presentations of gestalt psychology. In it the author sought to present a theoretically consistent psychology constructed on the concept of organization. The presentation has somewhat philosophical overtones. It was written when the author was a member of the faculty of Smith College.

LECRON LESLIE M editor

Experimental hypnosis. A symposium of articles on research by many of the world's leading authorities. New York The Macmillan Company 1952 483 p. illus. 21 cm. $6.00. 4787

Contents: Introduction, by L. M. LeCron. Hypnosis in perspective, by C. W. Williams. Dynamics in hypnotic induction, by J. A. Christenson, Jr. A rapid method for the induction of hypnosis, by J. E. Whalen. Deep hypnosis and its induction, by M. H. Erickson. Hypnotic susceptibility as a function of waking suggestibility by W. D. Furneaux. Auditory hypnosis, by J. S. Horsley. A study of age regression under hypnosis, by L. M. LeCron. Rorschach psychodiagnosis in hypnotic regression, by R. A. Norgarb. Time distortion in hypnosis, by L. F. Cooper and M. H. Erickson. The influence of hypnosis on somatic fields of function, by P. J. Reiter. The control of the heart rate by hypnotic suggestion, by S. J. Van Pelt. Hypnosis in obstetrics, by W. T. Heron and M. Abramson. Hypnodontics, by A. A. Moss. Hypnosis in dentistry by T. O. Burgess. Extrasensory perception and hypnosis, by J. B. Rhine. Antisocial uses of hypnosis, by P. C. Young. Hypnosis and depressive states, by G. Odencrantz. Automatic writing and hypnosis, by A. M. Mühl. Projective hypnoanalysis, by J. G. Watkins. The hypnoanalysis of phobic reactions, by J. M. Schneck. Index of names. Index of subjects.

Note: A collection of independent papers reporting on research in hypnosis itself rather than on practical applications. Most of the articles are here published for the first time, having been prepared at the invitation of the editor who has furnished the introduction, the connecting material between chapters, and one of the articles. The editor and 14 of the contributors are from the United States of America, of those from other countries, three are English, one is Danish, one is Swedish, and one is South African. The papers deal with the experiments of their authors, and report the techniques, results, and related research. Most of the papers are accompanied by bibliographies.

LECRON LESLIE M., AND JEAN BORDEAUX

Hypnotism today Foreword by Milton H. Erickson. New York Grune & Stratton, 1947 278 p. 21 cm. $4.50. 4788

Contents: Part I, Hypnotism and suggestion. Hypnotism today. The background of hypnotism. Inducing hypnosis. Suggestibility. Principles of suggestion. Hypnotic phenomena. Posthypnotic suggestion, autohypnosis and heterohypnosis. Theories of hypnosis. Hypnotism and the psychic sciences. Part II, Hypnotherapy. Abnormal psychology—functional diseases. Psychotherapeutic methods. Functional hypnotherapy. A system of brief hypnoanalysis. Psychosomatic hypnotherapy. Research in hypnotism. References. Index.

Note: Most of the extensive literature dealing with hypnotism was produced during the years 1880–1920 and therefore is considerably out of date today. The present volume aims to present the modern aspects of hypnotism and to place it on a scientific basis, free of the misconceptions and misrepresentations with which it is usually surrounded. Actual details of how to hypnotize are described, along with results of the more important experimental work carried out in psychological laboratories. Because the authors are both experienced consulting psychologists, they have stressed the psychotherapeutic possibilities of the subject. Although the book is phrased in popular language, it is intended as a textbook for students and workers interested in psychology and psychotherapy.

LEHMAN HARVEY C

Age and achievement. Princeton Published for the American Philosophical Society by Princeton University Press 1953 359 p. illus. 24 cm. $7.50. 4789

Contents: I, Age and achievement. In science. In medicine, surgery and related fields. In philosophy. In music. In art. In literature. II, Quality versus quantity. Of literary output. Best books. In other fields. III, The nature of the creative years. Age and maximum income. Age and leadership. Early achievement and total output. Young thinkers and great achievements. Older thinkers and great achievements. Achievement by decades. Peak performance of

doctrine of formal discipline. Ebbinghaus's studies in memory and forgetting. Watson's studies of the behavior of the human infant Cannon and experimental studies of the emotions. Experimental approaches to personality study McDougall and social psychology Binet and the individual intelligence test. The Army tests—Alpha, Beta, and AGCT Galton and the measurement of individual differences. Visual and auditory perception—the work of Helmholtz and others. Cattell's studies of reaction time. Weber's and Fechner' laws and the development of psychophysics. Index.

Note. The plan of organization in most of the chapters of this book is first to describe a classical experiment, then to show what has followed it. The author's interpretation of these significant experiments and his evaluations of the theory built upon them are in themselves contributions to psychology The book is used mainly by college students of psychology However some chapters as those on intelligence testing are useful to laymen and to persons in professions other than psychology The second edition was published in 1941 In this edition, the scope and purpose of the book are unchanged, but considerable rewriting is evident in most of the chapters. Revisions and additions have been made in the text, and new literature has been added to the bibliographies now printed at the ends of the chapters. The chapter on "McDougall and social psychology" has been added. The order of the chapters has been rearranged, and the order of topics within the chapters has also been revised.

GESELL, ARNOLD

The embryology of behavior, the beginnings of the human mind. By Arnold Gesell, in collaboration with Catherine S Amatruda. New York Harper & Brothers 1945 289 p illus (part col'd) 23 cm. $7 50 4778

Contents The search for beginnings. Birth and age. Zygote and embryo. The genesis of behavior The archaic motor system. The growth of fetal behavior Breathing behavior. Muscle tonus. Electrotonic integration. The fetal-infant. The circumnatal infant. The diurnal cycle of sleep and wakeness. Species and individual. The dynamic morphology of behavior The hierarchical continuum. A photographic delineation of behavior patterns and growth sequences. Appendix. Selected references. Index.

Note. The evolution of behavior patterns in the human being is traced in this book from embryo to infant. Included is the report of the reaction of fetus only eight and one-half weeks old to fine hair stroked across its cheek. However most of the data presented were obtained in a study of premature infants. The primary emphasis is on the growth in organization of behavior Reaction and behavior patterns at various embryonic fetal and infant ages are analyzed in detail and correlated with somatic development. A 46-page section contains reproductions of photographs in series which show behavior associated with various stages of fetal and infant development. The methods of the study upon which the book was based in part are concisely described in an appendix.

HARRIMAN PHILIP LAWRENCE

The new dictionary of psychology New York Philosophical Library 1947 364 p. 24 cm. $5 00 4779

Note About 2,500 terms which are well established in modern psychological literature are defined in this reference book. The definitions are concise, but a fair number are one-quarter page length, and some are longer Thumbnail sketches of the contributions of outstanding authorities in the field of psychology are included. The work is intended for the use of student and graduate psychologists.

HARTMANN GEORGE WILFRIED

Gestalt psychology a survey of facts and principles New York The Ronald Press Company 1935 325 p illus 21 cm (Psychology series A T Poffenberger editor) $4 00 4780

Contents Part I, Historical Antecedents and development of the doctrine. Part II, Theoretical Physical basis of the Gestalt theory Physiological foundations. Philosophical foundations. Varieties of Gestalt theory Part III, Empirical Phenomena of visual perception. Studies in audition and the skin senses. The unity of the senses. Memory processes. Learning data and interpretations. Thinking and reasoning. Researches on insight. Action, emotion, and will. Part IV Educational problems. Part V Critical. Criticisms of Gestalt theory by other schools of thought. Conclusion, the present status of the Gestalt school. A note on bibliographies. Biographies. Chronology of significant dates and events in development of Gestalt psychology Glossary

Note. A compact survey based on a liberal use of quotations, both direct and condensed. It is designed to include the gist of the most important writing, both American and foreign, on configurative psychology up to the time of the book's publication.

HARVARD UNIVERSITY

The Harvard list of books in psychology Compiled and annotated by the psychologists in Harvard University Second edition. Cambridge Mass Harvard University Press, 1955 84 p 21 cm. $1 25 4781

Contents. Reference works and basic handbooks. General handbooks and textbooks. Theories and systems of psychology History of psychology Psychological methods—statistics and measurement—tests and individual differences. Physiological psychology Psychological inheritance and evolution. Constitutional psychology Comparative animal psychology Sensation and perception. Learning and conditioning. Thinking, imagination, and language. Motivation and psychological dynamics. Feeling and emotion. Psychological aesthetics. Personality General social psychology Attitudes and opinions. Cultures, customs, and institutions. Behavior disorders. Clinical practice and psychotherapy Developmental and child psychology Educational psychology Applied psychology and human engineering. Industrial and personnel psychology Psychology of religion. Psychic research and parapsychology Non-technical books. Index.

Note. A useful guide to standard and recent books designed particularly for the guidance of undergraduate and graduate students. It is used also by librarians and others in need of a well-chosen list. The number of books included in this second edition is 69 The annotations are brief.

HERRICK, C JUDSON

The evolution of human nature. Austin University of Texas Press, 1956 506 p. illus. 24 cm. $7 50 4782

Contents (abridged) Part I, The evolution of behavior Biological factors of psychobiology Factors of behavior The world in which we live. Mechanisms of living. Analytic and integrative factors of behavior Trends in evolution. Evolution of mind. Evolution of experience. Social factors in evolution. The self Part II, The evolution of brains neurological factors of psychobiology The origin and general properties of the nervous system. Psychophysics. A biological analysis of mental processes. Evolution of mind. Sensation. Perception. Learning and intelligence. The origin and evolution of the cerebral cortex. The structure of the cortex. Localization of cerebral functions. The mechanics of mentation. Epilogue The unknown God. Bibliography Index.

Note. This book is an exploration of the psychological foundations of human behavior The author Professor Emeritus of Neurology at the University of Chicago, is a distinguished neuroanatomist and the second part of the volume—which accounts for approximately half of the length—is a well-written survey, cast in the common language, of what is known about the biological mechanics of man's mind. The first part is written from a broader viewpoint. In it, the author casts a biologist's eye on human behavior in general and concludes, among other things, "the survival of civilization is dependent far more upon our ability to understand the biological requirements of successful living ... than upon any military or other power ..." The bibliography is 22 pages long.

HULL CLARK LEONARD

Hypnosis and suggestibility an experimental approach New York D Appleton-Century Company Inc 1933 416 p. illus. 23 cm (The Century psychology series R. M Elliott, editor) $6 00 4783

Contents Hypnotism in scientific perspective Elementary phenomena of hypnosis and suggestibility Experimental phenomena of direct waking suggestion. Some relationships of experimental hypnosis and suggestibility The recovery of lost memories in the hypnotic trance. Experimental aspects of post-hypnotic phenomena.

Hypnosis and the dissociation hypothesis. Hypnosis conceived as sleep. Hypnotic suggestibility and the transcendence of voluntary capacity. Hypnosis as a state of heightened suggestibility. Hypnosis regarded as habit. Hypnosis and non-prestige suggestion. Interpretations. Indexes.

Note: A discussion of the nature of hypnosis from the experimental viewpoint, intended for psychologists and students but understandable by the general reader. The persons employed as subjects in the research are normal rather than pathological, and the underlying principles are sought rather than treatments or cures. Important techniques are described in detail for research workers. Bibliographies follow each chapter.

JEFFRESS, LLOYD A. editor

Cerebral mechanisms in behavior the Hixon Symposium. New York John Wiley & Sons, Inc. 1951 311 p. illus (part col d) 23 cm. $3.00. 4784

Contents: The general and logical theory of automata, by J. von Neumann. Why the mind is in the head, by W. S. McCulloch. General discussion. The problem of serial order in behavior, by K. S. Lashley. Functional differences between the occipital and temporal lobes with special reference to the interrelations of behavior and extracerebral mechanisms, by H. Klüver. Relational determination in perception, by W. Köhler. Brain and intelligence, by W. C. Halstead. General discussion. The symposium from the viewpoint of a clinician, by H. W. Brosin. Name index. Subject index.

Note: The edited transcripts of lectures and discussions presented at a symposium held September 20-25 at the California Institute of Technology under the auspices of the Hixon Fund Committee. The symposium was planned as a step in the integration of experimental results and knowledge from several fields of science which impinge on the relations between behavior and brain. The level of discussion is advanced, and the book is addressed to such readers as graduate psychologists, neurologists, and biologists.

JOHNSON DONALD M

The psychology of thought and judgment. New York Harper & Brothers, 1955 515 p. illus. 21 cm. (Under the editorship of Gardner Murphy) $6 00 4785

Contents: Introduction. The thought processes—methods for analysis and classification. The dynamics of thought. Perception and thought. Learning and thinking. Preparation for thought and judgment. The productive process—simple responses—complex outlines and problems. Judgment—stimulus, problem—response variables. Individual differences in thought and judgment. Intellectual activities of social groups. The improvement of thinking. Index of names. Index of subjects.

Note: An important contribution to an area of psychology in which there has been less research and less synthesis than in most fields of the science. It is a critical survey of historical development and current status to which the author has added, in some of the chapters, suggestions for further research in such passages as the following: "The studies by Welch and Long ... on higher levels of abstraction suggest a way to secure an empirical identification of abstract thinking. The ability to form second-order concepts could perhaps be compared with ability to form first-order concepts." The book is directed primarily to graduate students of psychology and graduate psychologists, and it is of interest also to educators and psychiatrists. Extensive references to the literature are included.

KOFFKA, K.

Principles of gestalt psychology New York Harcourt, Brace and Company 1935 720 p. illus. 22 cm. $7.50 4786

Contents (abridged): Why psychology? Behaviour and its field—the task of psychology. The environmental field—the problem; solutions of false solutions; general formulation of the true solution—visual organization and its laws—figure and ground—the framework—the constancies—tri-dimensional space and motion. The action—the ego, the executive—adjusted behaviour, attitudes, emotions, and the will. Memory—foundation of a trace theory; theoretical section—foundation of a trace theory; experimental section and completion of the theory. Learning and other memory functions. Society and personality. Conclusion. Bibliography. Index.

Note: This book is one of the basic presentations of gestalt psychology. In it the author sought to present a theoretically completed psychology constructed on the concept of organization. The presentation has somewhat philosophical overtones. At the time of writing the author was a member of the faculty of Smith College.

LECRON, LESLIE M editor

HARVARD UNIVERSITY

The Harvard list of books in psychology Compiled and annotated by the psychologists in Harvard University Second edition. Cambridge, Mass Harvard University Press, 1955 84 p 21 cm $1.25 4781

Contents. Reference works and basic handbooks. General textbooks and textbooks. Theories and systems of psychology. History of psychology. Psychological methods—statistics and measurement—tests and individual differences. Physiological psychology. Psychological inheritance and evolution. Constitutional psychology. Comparative animal psychology. Sensation and perception. Learning and conditioning. Thinking, imagination, and language. Motivation and psychological dynamics. Feeling and emotion. Psychological aesthetics. Personality. General social psychology. Attitudes and opinions. Cultures, customs, and institutions. Behavior disorders. Clinical practice and psychotherapy. Developmental and child psychology. Educational psychology. Applied psychology and human engineering. Industrial and personnel psychology. Psychology of religion. Psychic research and parapsychology. Non-technical books. Index.

Note. A useful guide to standard and recent books designed particularly for the guidance of undergraduate and graduate students. It is used also by librarians and others in need of a select list. The number of books included in this second edition is 607. The annotations are brief.

HERRICK, C JUDSON

The evolution of human nature. Austin. University of Texas Press 1956 506 p. illus. 24 cm $7.50 4782

Contents (abridged) Part I, The evolution of behavior. Historical factors of psychobiology. Factors of behavior. The world in which we live. Mechanisms of living. Analytic and integrative factors of behavior. Trends in evolution. Evolution of mind. Emotions of experience. Social factors in evolution. The self. Part II, The evolution of brains. Neurological factors of psychobiology. The origin and general properties of the nervous system. Psychophysics. A biological analysis of mental processes. Evolution of mind. Sensation. Perception. Learning and intelligence. The origin and evolution of the cerebral cortex. The structure of the cortex. Localization of cerebral functions. The mechanics of mentation. Epilogue. The unknown God. Bibliography. Index.

Note This book is an exploration of the psychological foundations of human behavior. The author, Professor Emeritus of Neurology at the University of Chicago, is a distinguished neuroanatomist, and the second part of the volume—which accounts for approximately half of the length—is a well-written survey, cast in the common language, of what is known about the biological mechanics of man's mind. The first part is written from a broader viewpoint. In it, the author casts a biological eye on human behavior in general and concludes, among other things, "the survival of civilization is dependent far more upon our ability to understand the biological requirements of successful living ... than upon any military or other power ..." The bibliography is 12 pages long.

HULL, CLARK LEONARD

Hypnosis and suggestibility an experimental approach New York D Appleton-Century Company Inc 1933 416 p. illus. 23 cm. (The Century psychology series R. M Elliott, editor) $6 00 4783

Contents. Hypnotism in scientific perspective. Elementary phenomena of hypnosis and suggestibility. Experimental phenomena of direct waking suggestion. Some relationships of experimental hypnosis and suggestibility. The recovery of lost memories in the hypnotic trance. Experimental aspects of post-hypnotic phenomena.

of scaling. Inferences—continuous variables. Small samples or t technique. Correlation—introduction and computation—interpretation and assumptions. Factors which affect the correlation ratio and assumptions. Multiple correlation. Other correlation methods. Frequency diagrams. Multiple correlation. Other correlation methods. Frequency comparisons—chi square. Comparison of variabilities. Analysis of variance—simple—complex—covariance method. Distribution-free methods. Remarks on error selection. Exercises. Appendix (tables) Index.

Note: A concise, well-written textbook on statistical methods. Although addressed to students preparing for careers in psychology [illegible] primarily concerned with the assumptions and limitations of the various techniques rather than with computations. The first edition was published in 1949. In this second edition, there are expanded and revised treatments of several topics. The author is Professor of Psychology, Statistics, and Education at Stanford University.

MARCUSE, F. L., editor

Areas of psychology. New York. Harper & Brothers. 1954. 532 p. 21 cm. (Under the editorship of Gardner Murphy) $5.00 4795

Contents: Vocational guidance, by A. G. Nelson. Industrial psychology—selection and placement of workers, by P. Smith. Industrial psychology—efficiency in work, by T. A. Ryan. Legal psychology—the psychology of testimony, by H. F. Wold. Counseling and personnel psychology, by R. Cronan. Social psychology, by R. B. MacLeod. Child psychology, by L. B. Murphy and M. Kahn. Educational psychology, by F. S. Freeman. Abnormal psychology, by B. Mittelmann and L. Malamud. Clinical psychology, by E. Simmons. Physiological psychology, by R. F. Rose. Comparative psychology, by H. G. Birch. Psychology and aesthetics, by R. H. Goodrich. Index.

Note: A textbook designed for use by college students who have completed introductory courses in general psychology. It contains the thirteen chapters whose titles and authors are listed above. These chapters are not reprints, but were written for the volume. Generally speaking, each one of them contains information on the basic principles, the important experimental work, and the applications of the area of psychology named in its title. Suggested readings are included in each of the chapters. Inasmuch as the chapters are essentially independent, the book is useful as a reference volume to readers outside of colleges who find themselves in need of an introductory discussion of one or more of the specialized fields of psychology.

MURPHY, GARDNER

Historical introduction to modern psychology. Revised edition. New York. Harcourt, Brace and Company. 1949. 466 p. illus. 22 cm. $6.75 4796

Contents (abridged): Part one, *The antecedents of modern psychology:* The intellectual background. The seventeenth century. The eighteenth century. The early nineteenth century. Part II, *The rise of the research spirit:* Some intellectual antecedents of experimental psychology. Social psychology in the mid-nineteenth century. The theory of evolution. Psychiatry from Mesmer and Charcot to Charcot. German physiological psychology in the age of Helmholtz. Wundt and experimental psychology. Early studies of memory. The influence of psychology, 1860-1910. The Würzburg school. Experiments on the acquisition of skill. Part III, *Contemporary psychological systems:* Behaviorism. Modern conceptions of association. Gestalt. Field theory. Sigmund Freud. The responses to Freud. Part IV, *Some representative research areas:* The measurement of intelligence. Physiological psychology. Child psychology. Social psychology. Personality. An interpretation. Bibliography. Index of names. Index of subjects.

Note: Concentrating upon the 19th and 20th centuries, the author traces the course of developments which transformed psychology from a discipline reflecting upon the nature and the activities of the mind to a science akin to other biological sciences relying upon experimental and mathematical methods. Emphasis is upon the results of research work, rather than upon the progress of psychological theory. In the new edition several new chapters have been added and every chapter dealing with the modern period (i.e., after Wundt and James) has been entirely rewritten in order to bring the picture up to date.

NATIONAL SOCIETY FOR THE STUDY OF EDUCATION

Intelligence: its nature and nurture. Prepared by the Society's Committee: George D. Stoddard, chairman, assisted by members of the Society and others. Edited by Guy Montrose Whipple. Chicago. University of Chicago Press. 1940. 2 v. illus. 23 cm. (National Society for the Study of Education. Thirty-ninth yearbook) $3.00 per vol. 4797

Contents (abridged): Part I, Comparative and critical exposition: Introduction, by G. D. Stoddard. Section I, Definition of concepts: The meaning of intelligence, by F. N. Freeman. The meaning of environment, by B. L. Wellman. Section II, Deviations in intelligence: The significance of deviation, by L. S. Hollingworth and [illegible]. L. M. Terman. Section III, The physiology of intelligence: The physiological correlates of intelligence, by L. Carmichael. Section IV, The problems of nature-nurture research—the relation between intelligence and such factors as sex, race, personality, socio-economic status, and the environment in general: Intelligence as related to socio-economic factors, by J. Loevinger. Sex differences in intelligence-test scores, by Q. McNemar and D. McNemar. Effects of human fertility trends upon the distribution of intelligence and culture, by R. B. Cattell. Ten years of research on twins—contributions to the nature-nurture problem, by H. D. Carter. Intelligence as related to race, by L. S. Hollingworth and P. Witty. Personality and adjustment as determiners and correlates of intelligence, by L. S. Hollingworth. New evidence on environmental influences on intelligence, by F. L. Goodenough. Some special problems of nature-nurture research, by F. L. Goodenough. The prediction of terminal intelligence from infant and preschool tests, by J. E. Anderson. Environment and the IQ, by G. D. Stoddard and B. L. Wellman. Section [illegible]. Comments upon the yearbook as a whole by members of the Yearbook Committee. Personal comments of the Yearbook Committee. Part II, Original studies and experiments: Introduction, by G. D. Stoddard. A longitudinal study of the effects of nursery-school training on successive intelligence-test ratings, by L. D. Anderson. Mental growth in young children, by N. Bayley. Mental and physical development patterns of identical twins in relation to organismic growth theory, by B. S. Burks. Influence of the nursery school on mental growth, by A. Frandsen and F. P. Barlow. The stability of mental-growth careers, by A. Gesell. The mental development of nursery-school children compared with that of non-nursery-school children, by F. L. Goodenough and K. M. Maurer. Age changes in the relationship between certain environmental variables and children's intelligence, by M. P. Honzik. Mental growth as related to nursery-school attendance, by H. E. Jones and A. P. Jorgensen. Influencing the rate of mental growth in retarded children through environmental stimulation, by K. G. Kephart. Subsequent growth of children with and without nursery-school experience, by W. C. Olson and B. O. Hughes. The effect of a change to a relatively superior environment upon the IQ of one hundred children, by M. L. Reymert and R. T. Hinton, Jr. The intelligence of Scottish children, by R. R. Rusk. Some Iowa studies of the mental growth of children in relation to differentials of the environment—a summary, by H. M. Skeels. The mental development of children of feebleminded mothers—a preliminary report, by M. R. Skippich. Recent changes in the IQ in certain superior schools, by R. L. Thorndike and others. Iowa studies on the effects of schooling, by B. L. Wellman. A genetic study of fifty gifted children, by P. Witty.

Note: A cross section of the thought of psychologists and educators and of the research work characteristic of the decade 1930-1940. This Yearbook is one of several by the Society pertaining to the study of intelligence.

OSGOOD, CHARLES E.

Method and theory in experimental psychology. New York. Oxford University Press. 1953. 800 p. illus. 24 cm. $10.00 4798

Contents: Part I, Sensory processes: Sensory quality. Sensory intensity. Audition. Vision. Part II, Perceptual processes: The nature of perceptual organization. Frequency dynamics in perception. Organization and dynamics in perception. Part III, Learning: Fundamental operations in learning. Theories of learning. Certain controversial issues in learning theory. Neurophysiology of learning. Serial and transfer phenomena. Retention. Part IV, Symbolic processes: Problem-solving and insight. Thinking. Language behavior. Bibliography and author index. Subject index.

Note: A systematic, critical survey of the principal facts and theories designed for the use of graduate and advanced undergraduate students of psychology and professional psychologists. It presents clearly and at some length the results of important experiments and relates them to basic physiology and to psychological theory. The first two parts on sensory processes and perceptual processes occupy 297 pages in contrast to the 479 pages of the

athlete and thinker IV Past, present, and future achievement: Attainment of leadership—then and now Man's most creative years—then and now Increasing longevity and future achievement. V General conclusions Summary and interpretation. Bibliography of references. Index.

Note. A thorough study of the problem that can be succinctly though inexactly stated by the question At what age does a genius produce his best work? For designations of best works, the author utilized various sources: lists of major contributions to chemistry lists of best books, histories of art, etc. Then he related the dates of production to the ages of the geniuses when the contributions were published or the works of art produced. He studied also the correlations between age and athletic prowess between age and the attainment of high income and between age and the attainment of leadership. The results are presented in such detail that the book is useful not only as a study of the most productive ages of man but also as a reference book on the achievements of the very young, the very old, etc. There are 61 tables, 170 figures (most of which are graphs) and a long bibliography

LEWIN, KURT

Principles of topological psychology *translated by* Fritz Heider and Grace M Heider New York McGraw Hill Book Company, Inc., 1936 231 p illus. 23 cm (McGraw Hill publications in psychology J F Dashiell, consulting editor) $5 00 4790

Contents. Part I, The task of psychology and the foundations of topological and vector psychology: The present state of psychology Formulation of law and representation of situation. General considerations about representing life space. Content and extent of the psychological life space. Causal interconnections in psychology The psychological life space as space in the sense of mathematics. Psychological space and psychological dynamics. The psychological worlds and the physical world. Mathematical representation and psychological theory Part II, Topological psychology Concepts of topology which are fundamental for psychology Concepts of topology fundamental for psychology Topology of the psychological environment. Psychological regions, locomotions, and communications. Boundaries of psychological regions. The relative position of two regions. Structural changes. The life space as finitely structured space. Topology of the person. The person as a differentiated region in the life space. Fundamental concepts and coordinated definitions for the representation of the person. Dimensions of the life space. Bibliography Glossary Indexes.

Note Planned to be of aid for the integrating tendencies in psychology by developing a group of concepts useful as a framework in all branches of psychology These concepts are both mathematically strict and fitted for the special needs of psychology They are based on a decade of experimental investigation. They are basic for the psychology of actions, emotions, motivation, for child psychology social psychology and abnormal psychology This book was not previously published in German, the translation being made from the manuscript.

LEWIS, DON

Quantitative methods in psychology Iowa City The Gordon Bookshop 1948 290 p illus. 28 cm 4791

Content Variables, constants, and functional relationships. Fitting curves to empirical data—I, Linear functions. Logarithms. Fitting curves to empirical data—II, Complex functions. Differentiation. Integration. The normal curve Distribution functions. Applications of equations. Goodness of fit. Index.

Note A graduate-level text developed in a course given by the author at the University of Iowa. It presents a selection of mathematical and statistical techniques useful in the interpretation of experimental results and illustrates their application to a variety of problems in psychology Numerous solved examples are included as part of the exposition. The book is designed for study after completion of a basic course in statistical methods.

LINDNER, ROBERT

Prescription for rebellion New York Rinehart & Co Inc. 1952 305 p. 22 cm $2 75 4792

Contents (abridged) Book I, Diagnosis: The lie that binds. Shamans and shibboleths. The eleventh commandment. Rebel's fate Adjustment causes and consequences—history from a new dimension—the antagonist. Book II, Prescription: The revolutionist's handbook. Epilogue. Notes. Additional bibliography

Note. In this work a professional clinical psychologist argues against the acceptance on the part of psychologists and psychiatrists of the idea of adjustment as a sound principle of human conduct. He states, this concept enjoins men to conform, to adopt an attitude of passivity and a philosophy of resignation. He believes that the concept should be replaced by one that will sustain man's instinct to avoid conformity He is particularly critical of some of the current methods of psychoanalysis and psychiatry Even though he purports to be addressing professional psychologists and psychiatrists, the book is written so as to appeal also to lay readers. The style is forceful and intentionally provocative.

LINDQUIST, E F

Design and analysis of experiments in psychology and education Boston Houghton Mifflin Company, 1953 393 p illus. 24 cm. $7 00 4792A

Contents Introduction Fundamental concepts and basic design. The chi-square, *t*, and *F* distributions. The simple-randomized design. Analysis of variance in double-entry tables. Treatments X levels designs. The treatments X subject design. The groups-within-treatments design. The random replications design. Factorial designs (two factors) Three-dimensional designs. Higher-dimensional designs. Latin square and graeco-latin square designs. Controlling individual differences in factorial experiments through the use of "mixed" designs. Analysis of covariance. Tests concerned with trends. Estimation of variance components in reliability studies. Index.

Note. A successful textbook in which the emphasis is on the mathematical and statistical principles of the design of experiments and analysis of their results rather than on the description of a wide range of models. The importance of the assumptions underlying tests of significance, and of effects of failure to satisfy them is given some emphasis. Most of the chapters are devoted to testing of significance however the terminal chapter introduces the reader to the estimation of population parameters.

MCCLELLAND, DAVID C, AND OTHERS

The achievement motive. By David C. McClelland John W Atkinson Russell A. Clark and Edgar L Lowell. New York Appleton Century-Crofts, Inc., 1953 384 p. illus. 22 cm (The Century psychology series, Richard M Elliott editor Kenneth Mac Corquodale assistant editor) $6 00 4793

Contents Introduction. Toward a theory of motivation. Arousing the achievement motive and obtaining imaginative stories. Analysis of imaginative stories for motivational content. Effects on fantasy of arousing achievement motivation. General applicability of the *N* achievement scoring system. The measuring instrument. Relation of *N* achievement score to behavior Origins of achievement motivation. Review Appendices Illustrative four-story records from thirty subjects. Scoring for the illustrative stories. Pictures and verbal cues used to elicit stories. Bibliography of achievement titles. References and author index.

Note Research conducted mainly at Wesleyan University in the period 1947–51 under the support of the Office of Naval Research, was the basis of this contribution to motivation theory The authors sought to measure and evaluate the effects of achievement motivation through its appearance in fantasy Motivation was experimentally aroused and its intensity controlled by the manipulation of arousal conditions. Experiments first dealt with hunger and then primarily with the achievement motive aroused by procedures creating ego-level control and experimentally induced experiences of success and failure. The experimental techniques are fully described and the results are presented in considerable detail.

MCNEMAR, QUINN

Psychological statistics. Second edition. New York John Wiley & Sons Inc. 1955 408 p. illus. 22 cm. (Wiley publications in psychology Herbert S Langfeld advisory editor) $6 00 4794

Contents Introduction. Tabular and graphic methods. Describing frequency distributions. Distribution curves. Probability and hypothe-

ment and genius. Effect of heredity and environment on the individual. Individual development. Physiological bases of behavior. Motivation. Emotions. Measuring personality. How personality [illegible]. Mental disease. Conflicts and the [illegible]. Learning. Remembering and forgetting. Perceiving. Thinking. Imagery. Imagination and dreams. Man social behavior. Psychology in everyday living. Biographical notes. Index.

Note: An introductory study of psychology for general readers and for future students who want [illegible]. The material in each chapter is arranged approximately in chronological order from the early discoveries to our own times. Viewpoints of the various schools of psychological thought are outlined and contrasted. A biographical appendix gives brief sketches of about 230 men and women whose work is dealt with in the book.

SHELDON, W. H.

The varieties of temperament: a psychology of constitutional differences. By W. H. Sheldon with the collaboration of S. S. Stevens. New York: Harper & Brothers, 1942. 520 p. 24 cm. $5.00 4803

Contents: Introduction and summary. The identification of the primary components of temperament. The scale for temperament. Constitutional differences as shown in the life history. Additional notes on the primary components of temperament. Relation of temperament to achievement and adjustment. Statistical relations among temperamental and morphological variables. Some theoretical considerations. Appendices: Basic data for 200 cases. The Wenger scale of [illegible] and [illegible]. The Chicago scale of [illegible] growth. Intercorrelations among the 60 traits. Index.

Note: A complementary volume to the author's *The varieties of human physique*, 1940. It is a study of relationships between variations in somatotypes and variations in temperament. It was based largely on original studies, and one of the features of the [illegible] is the inclusion of studies of 200 individual cases. A considerable part of the volume, however, is devoted to the author's interpretation of the data derived from measurements and observations.

SNYGG, DONALD, AND ARTHUR W. COMBS

Individual behavior: a new frame of reference for psychology. New York: Harper & Brothers, 1949. 386 p. 22 cm. $4.00. 4804

Contents: Part I. The personal approach to behavior: The challenge to psychology. *The personal frame of reference.* How behavior changes. What people strive for. The way we see ourselves. The phenomenal self in action. People under threat—the anatomy of maladjustment. Techniques of dealing with threat. Part II. The personal approach applied: *Social structure and action—the individual approach.* The goals of education. The task of the teacher. Diagnosis and research in a phenomenological system. The personal approach to therapy—selective methods—self-directive methods. Part III. The personal approach as a method of science: The place of a phenomenological approach in psychology. Appendices. Bibliography. Index.

Note: The heart of this distinctive book is a phenomenological system for the study of individual behavior, a system in which the field of observation is shifted from the experience of the observer to the experience of the behaver. The authors show that the basic human need is [illegible] the preservation and enhancement of the phenomenal self, and they define the phenomenal self in the following terms: "The phenomenal self includes all those parts of the phenomenal field which the individual experiences as part of characteristic of himself." The first part of the book is a carefully stated and fairly detailed outline of the proposed system. The second part illustrates the application of the system in various fields of psychology and the third part is a short discussion of the inadequacies of other approaches to the study of behavior. The bibliography runs to more than 300 references.

STEPHENSON, WILLIAM

The study of behavior: Q-technique and its methodology. Chicago: University of Chicago Press, 1953. 376 p. 24 cm. $7.50. 4805

Contents: Part I. Basic formulations: Prolegomena to Q. Dependency factor analysis. Differentiation of R and Q. Samples and their structure. Psychological principles. Some statistical and experimental principles. Some examples. Part II. Practical applications: Applications to type psychology. The prior analysis of questionnaires. Application to social psychology. Q-methodology and self-psychology. Q-methodology and personality. Q-technique and the projective tests. Application to clinical psychology. Review and conclusion. References. Index.

Note: "Q-technique [illegible] form of dependency analysis, is well known to scientists familiar with developments in statistics. The author of this book proposes a methodology based on it for psychology. He has said: 'We call it "Q-methodology." This is a set of statistical, philosophy-of-science, and psychological principles, which, we believe, is such as is demanded by the present scientific situation in the psychological and social sciences.' Basic formulations are described and examples are given in the first part. Specific applications are discussed and illustrated in the second part. The book is of special interest to graduate social scientists and psychologists who are interested in statistical techniques, including factor analysis.

STEVENS, STANLEY SMITH, editor

Handbook of experimental psychology. New York: John Wiley & Sons, Inc., 1951. 1436 p. illus. 23 cm. (A Wiley publication in psychology. Herbert S. Langfeld, advisory editor) $15.00 4806

Contents: Mathematics, measurement, and psychophysics, by S. S. Stevens. Physiological mechanisms: Excitation and conduction in the neuron, by F. Brink, Jr. Synaptic mechanisms, by F. Brink, Jr. Sensory mechanisms, by T. C. Ruch. Motor systems, by T. C. Ruch. Homeostasis, by E. W. Dempsey. Growth and development: Mechanisms of neural maturation, by R. W. Sperry. Ontogenetic development, by L. Carmichael. The genetics of behavior, by C. S. Hall. Growth curves, by N. W. Shock. Phylogenetic comparison, by H. W. Nissen. Motivation: Instinctive behavior: reproductive activities, by F. A. Beach. Learnable drives and rewards, by N. E. Miller. Emotion, by D. B. Lindsley. Learning and adjustment: Methods and procedures in the study of learning, by E. R. Hilgard. Animal studies of learning, by W. J. Brogden. Human learning and retention, by C. I. Hovland. Theoretical interpretations of learning, by K. W. Spence. Cognitive processes, by R. Leeper. The psychophysiology of learning, by C. T. Morgan. Speech and language, by G. A. Miller. Sensory processes: Basic correlates of the visual stimulus, by D. B. Judd. Visual perception, by C. H. Graham. The psychophysiology of vision, by S. H. Bartley. Basic correlates of the auditory stimulus, by J. C. R. Licklider. The perception of speech, by J. C. R. Licklider and G. A. Miller. The mechanical properties of the ear, by G. von Békésy and W. A. Rosenblith. Psychophysiology of hearing and deafness, by H. Davis. Taste and smell, by C. Pfaffmann. Somesthesis, by W. L. Jenkins. Vestibular functions, by G. R. Wendt. Time perception, by H. Woodrow. Human performance: Selection, by H. P. Bechtoldt. Training, by D. Wolfle. Engineering psychology and equipment design, by P. M. Fitts. Work and motor performance, by R. H. Seashore. Name index. Subject index.

Note: A technical survey of most of the field of experimental psychology written by 34 eminent United States of America psychologists. Each of the chapters depicts the contemporary state of its phase of the subject in some detail with frequent references to the literature, and some of these appraise the immediate present and near future of the subject at hand. The work is generously illustrated with drawings, charts, and diagrams. Each chapter has its own bibliography. The volume is an important reference book for graduate students and research workers in psychology.

TERMAN, LEWIS M., AND OTHERS

Genetic studies of genius. Volume I, Mental and physical traits of a thousand gifted children. Second edition. By Lewis M. Terman assisted by Bird T. Baldwin and others. Stanford: Stanford University Press, 1926. 648 p. illus. 23 cm. (Genetic studies of genius edited by Lewis M. Terman. Vol. I) $7.50 set of 4 vols., $25.00. 4807

Contents: History and description of the investigation. Methods and results of the search for subjects. Composition of the gifted group. Racial and social origin. Intellectually superior relatives. Vital statistics. Anthropometric measurements, by B. T. Baldwin. Health and physical history. Medical examinations, by A. H. Moore and E. Bronson. School progress and educational history. Tests of school accomplishment and general information. Specialization of the abilities of gifted children, by J. C. De Voss. Scholastic, occupational, and other interests. Play interests, knowledge, and

parts on learning and symbolic processes. There are 1 290 references in the "bibliography and author index.

QUASTLER, HENRY, editor

Information theory in psychology, problems and methods Proceedings of a conference on the estimation of information flow, Monticello, Illinois, July 5–9, 1954, and related papers Glencoe, Ill The Free Press, 1955 436 p illus 22 cm. $6 00 4799

Contents. Section I, Concluding review Section II, Information measures Foundations On the non-rational application of information measures in psychology by L. J Cronbach. A method for technological predictions, by D G. Elson. Isomorphism in statistical analysis, by W J McGill. Comments on McGill's paper by K. A. Brownlee. Tables for computing informational measures, by E. T Klemmer Standardized nomenclature—an attempt, by W J McGill and H. Quastler. Sampling distributions of information functions Note on the bias of information estimates, by G. A. Miller The moments of sample information when the alternatives are equally likely by M. S. Rogers and B F Green. The use of ILLIAC in determining distributions for information functionals, by L. G. Augenstine. Structured channels The estimation of transmitted information when conditional probabilities are interdependent, by F Attneave. Approximate estimation of information measures, by H. Quastler Section III, Information theory in psychology Basic considerations. Information theory terms and their psychological correlates, by H. Quastler Units The fine structure of psychological time, by J M. Stroud. Evidence of periodicities in human task performance, by L. G. Augenstine. Pragmatic communication, by E. L. Fritz and G W Grier jr Categories and classifications. A note on the concept of "Channel capacity" in psychology by H. W Hake. Probabilities and redundancy The perception of frequency of occurrence and the development of expectancy" in human experimental subjects, by H. W Hake. The effects of sequential dependencies on instrument reading performance, by V L. Senders and J Cohen. Verbal learning and memory variables related to amount of information, by M. Adelson and others. Channels and channel capacity Factors which influence channel capacity by A. Leonard. Stimulus-response compatibility information theory and perceptual-motor performance, by R. L. Deininger and P M. Fitts. Information measurement and reaction time, by P D Bricker Man's capacity to use information from complex displays, by J W Senders. Some observations on a delayed-feedback self-tracking task, by M. Adelson. The effect of number of subjects on the estimate of transmitted information, by V L. Senders. Fidelity and reliability by C. E. Osgood. Section IV The utilization of information The theory of signal detectability by T G. Birdsall. On the design of psychophysical experiments, by W P Tanner jr A basic experiment in detection, by T H. Schafer Appendixes. Name index. Subject index.

Note This volume, which contains the papers whose authors and titles are given above, is kind of landmark in psychology Held near the beginning of the use of information theory in psychology the conference (and the papers) was concerned primarily with the best ways of using information theory in psychology

RAPAPORT, DAVID

Organization and pathology of thought selected sources Translation and commentary by David Rapaport. New York Columbia University Press 1951 786 p 24 cm. $10 00 4800

Contents Part I, Introduction. Part II, Directed thinking: Determining tendencies awareness, by N Ach. On thought connections, by K. Buehler Recognition and "me-ness, by E. Claparède. Comments concerning psychological forces and energies, and the structure of the psyche, by K. Lewin. Intention, will and need, by K. Lewin. Principal factors determining intellectual evolution from childhood to adult life, by J. Piaget. The biological problem of intelligence, by J. Piaget. Part III, Symbolism Report on method of eliciting and observing certain symbolic hallucination-phenomena, by H. Silberer On symbol-formation, by H. Silberer Experimental dreams, by K. Schroetter. Experiments on symbolization in dreams, by G. Roffenstein. Concerning experimentally produced dreams, by M. Nachmansohn. On paraphrases in the Korsakow psychosis, by S. Betlheim and H. Hartmann. Part IV Motivation of thinking: The polyphony of thought, by W Stekel. Formulations regarding the two principles in mental functioning, by S. Freud. A note upon the "mystic writing-pad," by S. Freud. Negation by S. Freud. On the psychology of boredom, by O. Fenichel. Ego psychology and the problem of adaptation, by H. Hartmann. Part V Fantasy-thinking: Autistic thinking, by E. Bleuler Autistic-undisciplined thinking, by E. Bleuler. The psychology of daydreams, by J Varendonck. On preconscious mental processes, by E. Kris. Part VI, Pathology of thinking. On the development of thoughts, by P Schilder Studies concerning the psychology and symptomatology of general paresis, by P Schilder. The basic symptoms of schizophrenia, by E. Bleuler. On the structure of the amnesic syndrome, by H. Buerger-Prinz and M. Kaila. Part VII, Conclusion Toward a theory of thinking, by D. Rapaport. Bibliography Name index. Subject index.

Note. A well-chosen collection of papers on cognitive processes. Papers originally written in languages other than English have been translated into English, in most instances by the volume editor The editor also contributed the introduction, extensive commentaries on each paper and the final chapter In the last he co-ordinates some of the concepts and patterns that appear in the preceding papers and makes some suggestions toward their eventual organization into a psychoanalytically oriented theory of thinking.

ROBACK, A. A , editor

Present-day psychology an original survey of departments branches, methods, and phases, including clinical and dynamic psychology Edited by A. A Roback. With the collaboration of forty experts in the various fields. New York Philosophical Library, 1955 995 p 21 cm. $12 00 4801

Contents Part I, Topical departments Dedication. Introduction. Recent findings in general neurology by J G. Keegan. Issues and results in sensory psychology by P Ratoosh. Current theoretical approaches to perception, by P Bakan. The cognitive processes by T P Karwoski. Recent views on attention, by W E. Galt. Trends in the study of memory by W E. Galt. The status of emotion in contemporary psychology by M. Arnold. Personality study at crossroads, by A. A. Roback. The character aspects in recent psychology and psychiatry by A. A. Roback. Child psychology by J E. Anderson. Adolescence, by K. C. Garrison. Educational psychology by G C. Hanson. Psychometry by J. P Guilford. Animal and comparative psychology by S. Ross and W L Smith. Abnormal psychology by P L. Harriman. Social psychology by E. L. Oaler Applied psychology by C. W Hill. Military psychology by E. W Hill. Introduction to experimental parapsychology by J. B. Rhine. Contemporary histories of psychology by R. W Erickson. Part III, Dynamic and clinical psychology Some recent experimental work in psychodiagnostics, by W. Wolff. Projective techniques in contemporary psychology by L. Bellak. Milestones in psychoanalysis, by L. J Saul and A. S. Watson. Elementary psychosomatics, by J W D Hartman. Clinical psychology by W G. Ellisberg. Recent developments in psychotherapy by E. A. Gutheil. Psychodrama and sociatry by J L. Moreno. The present status of knowledge of abnormal psychology of the child, by E. Harms. Individual psychology by R. Dreikurs. Interpersonalism and sociodynamics, by J C. Moloney Present-day psychology of speech, by E. Froeschels. Hypnotherapy by M. V Kline. Part IV Methods. Trends in statistics and probability in psychology by H. Solomon. International psychology by C. Leuba. Part Psychological borderlands and humanistics The psychology of literature, by A. A. Roback. Glossodynamics and the present status of psycholinguistics, by A. A. Roback. Factorial studies of aesthetic judgments, by R. W Pickford. Psychology of art, by H. G. Schrickel. Recent trends in the psychology of values, by R. F Creegan. The psychology of religion by V Ferm. Index.

Note. The 40 papers, or chapters, whose titles and authors are listed above were written especially for this survey by eminent psychologists, most of whom are associated with colleges and universities in the United States of America. Each of the chapters is preceded by an editorial note and most contain bibliographies. As would be expected in a volume of such wide scope, the quality of the individual papers varies. However the volume contains much that is interesting and valuable for readers in fields allied to psychology who need either broad survey of it or compact survey on one of its facets.

SARGENT, STEPHEN STANSFELD

The basic teachings of the great psychologists. New York Barnes & Noble Inc. 1944 346 p illus. 21 cm $1.35 4802

Contents (abridged): The science of psychology Intelligence and intelligence testing. Measuring special abilities. Feeble-minded

ment and genius. Effect of heredity and environment on the individual. Individual development. Physiological bases of behavior. Motivation. Emotions. Measuring personality. How personality develops. Mental Cases. Conflicts and the unconscious. Learning. Remembering and forgetting. Perceiving. Thinking. Imagery, imagination and dreams. Man ... social behavior. Psychology in everyday living. Biographical notes. Index.

Note. An introductory study of psychology for general readers and for former students who want ... refresher. The material in each chapter is arranged approximately in chronological order, from the early discoveries to our own times. Viewpoints of the various schools of psychological thought are outlined and contrasted. A biographical appendix gives brief sketches of about 250 men and women whose work is dealt with in the book.

SHELDON W H.

The varieties of temperament a psychology of constitutional differences. By W. H. Sheldon with the collaboration of S S. Stevens. New York Harper & Brothers 1942 520 p. 24 cm. $5.00. 4803

Contents: Introduction and summary. The identification of the primary components of temperament. The scale for temperament. Constitutional differences as shown in the life history. Additional notes on the primary components of temperament. Relation of motivation to achievement and adjustment. Statistical relations among temperamental and morphological variables. Some theoretical considerations. Appendices: Basic data for 200 cases. The Wisconsin scale of radicalism and conservatism. The Chicago scale of mental growth. Intercorrelations among the 60 traits. Index.

Note. A complementary volume to the author's *The varieties of human physique,* 1940. It is ... study of relationships between variations in somatotypes and variations in temperament. It was based largely on original studies, and one of the features of the presentation is the inclusion of studies of 200 individual cases. A considerable part of the volume, however, is devoted to the author's interpretation of the data derived from measurements and observations.

SNYGG, DONALD AND ARTHUR W COMBS

Individual behavior a new frame of reference for psychology New York Harper & Brothers, 1949 386 p. 22 cm. $4.00. 4804

Contents: Part I, The personal approach to behavior. The challenge to psychology. The personal frame of reference. How behavior changes. What people strive for. The way we see ourselves. The phenomenal self in action. People under threat—the anatomy of maladjustment. Techniques of dealing with threat. Part II, The personal approach applied. Social structure and action—the individual approach. The *goals* of education. The task of the teacher. Diagnosis and research in ... phenomenological system. The personal approach to therapy—behavior methods—self-directive methods. Part III, The personal approach as ... method of science. The place of ... phenomenological approach in psychology. Appendices. Bibliography. Index.

Note. The basis of this distinctive book is ... phenomenological system for the study of individual behavior, ... system in which the field of observation ... shifted ... from the experience of the observer to the experience of the behaver. The authors show that the basic human need is ... the preservation and enhancement of the phenomenal self, and they define the phenomenal self in the following terms: "The phenomenal self includes all those parts of the phenomenal field which the individual experiences as part of characteristic of himself." The first part of the book is ... carefully stated and fairly detailed outline of the proposed system. The second part illustrates the application of the system in various fields of psychology and the third part ... short discussion of the inadequacies of other approaches to the study of behavior. The bibliography runs to more than 220 references.

STEPHENSON WILLIAM

The study of behavior Q-technique and its methodology Chicago University of Chicago Press 1953 376 p. 24 cm. $7.50. 4805

Contents: Part ... Basic formulations. Prolegomena to Q. Dependency factor analysis. Differentiation of R and Q. Samples and their structure. Psychological principles. Some statistical and experimental principles. Some examples. Part II, Practical applications. Application to type psychology. The q-set analysis of questionnaires. Application to social psychology. Q-methodology and self-psychology. Q-methodology and personality. Q-technique and the projective tests. Application to clinical psychology. Review and conclusion. References. Index.

Note: "Q-technique, ... form of dependency analysis, is well known to scientists familiar ... with developments in statistics. The author of this book proposes ... methodology based on it for psychology. He has said: "We call it Q-methodology. This is ... set of statistical, philosophy-of-science, and psychological principles, which, we believe, is such as is demanded by the present scientific situation in the psychological and social sciences." Basic formulations are described and examples are given in the first part, where specific applications are discussed and illustrated in the second part. The book is of special interest to graduate social scientists and psychologists ... who are interested in statistical techniques, including *factor analysis.*

STEVENS, STANLEY SMITH editor

Handbook of experimental psychology New York John Wiley & Sons, Inc. 1951 1 436 p. illus. 23 cm. (A Wiley publication in psychology Herbert S. Langfeld advisory editor) $15 00. 4806

Contents. Mathematics, measurement, and psychophysics, by S. S. Stevens. Physiological mechanisms: Excitation and conduction in the nervous, by F. Brink, jr. Synaptic mechanisms, by F. Brink, jr. Sensory mechanisms, by T. C. Ruch. Motor systems, by T. C. Ruch. Homeostasis, by E. W. Dempsey. Growth and development: Mechanisms of neural maturation, by R. W. Sperry. Ontogenetic development, by L. Carmichael. The genetics of behavior, by C. S. Hall. Growth curves, by K. W. Estes. Phylogenetic comparison, by H. W. Nissen. Motivation: Instinctive behavior: reproductive activities, by F. A. Beach. Learnable drives and rewards, by N. E. Miller. Emotion, by D. B. Lindsley. Learning and adjustment: Methods and procedures in the study of learning, by E. R. Hilgard. Animal studies of learning, by W. J. Brogden. Human learning and retention, by C. I. Hovland. Theoretical interpretations of learning, by K. W. Spence. Cognitive processes, by R. Leeper. The psychophysiology of learning, by C. T. Morgan. Speech and language, by G. A. Miller. Sensory processes: Basic correlates of the visual stimulus, by D. B. Judd. Visual perception, by C. H. Graham. The psychophysiology of vision, by S. H. Bartley. Basic correlates of the auditory stimulus, by J. C. R. Licklider. The perception of speech, by J. C. R. Licklider and G. A. Miller. The mechanical properties of the ear, by G. von Békésy and W. A. Rosenblith. Psychophysiology of hearing and deafness, by H. Davis. Taste and smell, by C. Pfaffmann. Somesthesis, by W. L. Jenkins. Vestibular functions, by G. R. Wendt. Time perception, by H. Woodrow. Human performance: Steadiness, by H. P. Bechtoldt. Training, by D. Wolfle. Engineering psychology and equipment design, by P. M. Fitts. Work and motor performance, by R. H. Seashore. Name index. Subject index.

Note. A technical survey of most of the field of experimental psychology written by 34 eminent United States of America psychologists. Each of the chapters covers the contemporary state of its phase of the subject in some detail with frequent references to the literature, and some of them appraise the immediate present and near future of the subject at hand. The work is generously illustrated with drawings, charts, and diagrams. Each chapter has its own bibliography. The volume is an important reference book for graduate students and research workers in psychology.

TERMAN LEWIS M., AND OTHERS

Genetic studies of genius. Volume I, Mental and physical traits of a thousand gifted children. Second edition. By Lewis M Terman, assisted by Bird T Baldwin and others. Stanford Stanford University Press, 1926 648 p. illus. 23 cm. (Genetic studies of genius edited by Lewis M. Terman. Vol. I) $7.50 set of 4 vols., $25.00. 4807

Contents: History and description of the investigation. Methods and results of the search for subjects. Composition of the gifted group. Racial and social origin. Intellectually superior relatives. Vital statistics. Anthropometric measurements, by B. T. Baldwin. Health and physical history. Medical examinations, by A. H. Moore and E. Bronson. School progress and educational history. Tests of school accomplishment and general information. Specialization of the abilities of gifted children, by J. C. De Voss. Scholastic, occupational, and other interests. Play interests, knowledge, and

parts on learning and symbolic processes. There are 1,190 references in the bibliography and author index.

QUASTLER, HENRY, editor

Information theory in psychology, problems and methods Proceedings of a conference on the estimation of information flow, Monticello, Illinois, July 5–9 1954, and related papers Glencoe, Ill. The Free Press, 1955 436 p illus. 22 cm. $6 00 4799

Contents Section I, Concluding review Section II, Information measures Foundations. On the non-rational application of information measures in psychology by L. J Cronbach. A method for technological predictions, by D G. Ellson. Isomorphism in statistical analysis, by W J McGill. Comments on McGill's paper by K. A. Brownlee. Tables for computing informational measures, by E. T Klemmer Standardized nomenclature—an attempt, by W J McGill and H. Quastler Sampling distributions of information functions Note on the bias of information estimates, by G. A. Miller The moments of sample information when the alternatives are equally likely by M. S. Rogers and B F Green. The use of ILLIAC in determining distributions for information functionals, by L. G. Augenstine. Structured channels. The estimation of transmitted information when conditioned probabilities are interdependent, by F Attneave. Approximate estimation of information measures, by H. Quastler Section III, Information theory in psychology Basic considerations. Information theory terms and their psychological correlates, by H. Quastler. Units The fine structure of psychological time, by J. M. Stroud. Evidence of periodicities in human task performance, by L. G. Augenstine. Pragmatic communication, by E. L. Frits and G. W Geier jr. Categories and classifications A note on the concept of "Channel capacity" in psychology by H. W Hake. Probabilities and redundancy The perception of frequency of occurrence and the development of "expectancy" in human experimental subjects, by H. W Hake. The effects of sequential dependencies on instrument reading performance, by V L. Senders and J Cohen. Verbal learning and message variables related to amount of information, by M. Adelson and others. Channels and channel capacity Factors which influence channel capacity by A. Leonard. Stimulus-response compatibility information theory and perceptual-motor performance, by R. L. Deininger and P M. Fitts. Information measurement and reaction time, by P B Bricker Man capacity to use information from complex displays, by J W Senders. Some observations on delayed-feedback self-tracking task, by M. Adelson. The effect of number of subjects on the estimate of transmitted information, by V L. Senders. Fidelity and reliability by C. E. Osgood. Section IV The utilization of information The theory of signal detectability by T G. Birdsall. On the design of psychophysical experiments, by W P Tanner jr A basic experiment in detection, by T H. Schafer Appendixes. Name index. Subject index.

Note This volume, which contains the papers whose authors and titles are given above, is kind of landmark in psychology Held near the beginning of the use of information theory in psychology the conference (and the papers) was concerned primarily with the best ways of using information theory in psychology

RAPAPORT, DAVID

Organization and pathology of thought, selected sources. Translation and commentary by David Rapaport. New York Columbia University Press, 1951 786 p 24 cm. $10 00 4800

Contents Part I, Introduction. Part II, Directed thinking Determining tendencies awareness, by N Ach. On thought connections, by K. Buehler Recognition and "me-ness, by E. Claparède. Comments concerning psychological forces and energies, and the structure of the psyche, by K. Lewin. Intention, will and need, by K. Lewin. Principal factors determining intellectual evolution from childhood to adult life, by J Piaget. The biological problem of intelligence, by J. Piaget. Part III, Symbolism Report on method of eliciting and observing certain symbolic hallucination-phenomena, by H. Silberer On symbol-formation, by H. Silberer Experimental dreams, by K. Schroetter. Experiments on symbolization in dreams, by G. Roffenstein. Concerning experimentally produced dreams, by M. Nachmansohn. On paramnesia in the Korsakow psychosis, by S. Betlheim and H. Hartmann. Part IV Motivation of thinking The polyphony of thought, by W Stekel. Formulations regarding the two principles in mental functioning, by S. Freud. A note upon the "mystic writing-pad, by S. Freud. Negation, by S. Freud. On the psychology of boredom, by O. Fenichel. Ego psychology and the problem of adaptation, by H. Hartmann. Part V Fantasy-thinking: Autistic thinking, by E. Bleuler Autistic-undisciplined thinking, by E. Bleuler. The psychology of daydreams, by J Varendonck. On preconscious mental processes, by E. Kris. Part VI, Pathology of thinking. On the development of thoughts, by P Schilder. Studies concerning the psychology and symptomatology of general paresis, by P Schilder. The basic symptoms of schizophrenia, by E. Bleuler. On the structure of the amnesic syndrome, by H. Buerger-Prinz and M. Kaila. Part VII, Conclusion Toward theory of thinking, by D. Rapaport. Bibliography Name index. Subject index.

Note. A well-chosen collection papers on cognitive processes. Papers originally written in languages other than English have been translated into English, in most instances by the above editor The editor also contributed the introduction, extensive commentaries on each paper and the final chapter In the last he co-ordinates some of the concepts and patterns that appear in the preceding papers and makes some suggestions toward their eventual organization into a psychoanalytically oriented theory of thinking.

ROBACK, A A., editor

Present-day psychology, an original survey of departments branches methods, and phases, including clinical and dynamic psychology Edited by A A. Roback. With the collaboration of forty experts in the various fields. New York Philosophical Library, 1955 995 p 21 cm. $12 00 4801

Contents Part I, Topical departments. Dedication. Introduction. Recent findings in general neurology by J G. Keegan. Issues and results in sensory psychology by P Ratoosh. Current theoretical approaches to perception, by P Bakan. The cognitive processes, by T F Karwoski. Recent views on attention, by W E. Galt. Trends in the study of memory by W E. Galt. The status of emotion in contemporary psychology by M. Arnold. Personality study at crossroads, by A. A. Roback. The character aspects in recent psychology and psychiatry by A. A. Roback. Child psychology by J. E. Anderson. Adolescence, by K. C. Garrison. Educational psychology by G. C. Hanson. Psychometry by J. P Guilford. Animal and comparative psychology by S. Ross and W I. Smith. Abnormal psychology by P L. Harriman. Social psychology by E. L. Geier. Applied psychology by C. W Hill. Military psychology E. W Hill. Introduction to experimental parapsychology by J B. Rhine. Contemporary histories of psychology by R. W Erickson. Part III, Dynamic and clinical psychology Some recent experimental work in psychodiagnostics, by W Wolff Projective techniques in contemporary psychology by L. Bellak. Milestones in psychoanalysis, by L. J Saul and A. S. Watson. Midcentury psychosomatics, by J W D. Hartman. Clinical psychology by W G. Eliasberg. Recent developments in psychotherapy by L. A. Gottlieb. Psychodrama and sociatry by J. L. Moreno. The present status of knowledge of abnormal psychology of the child, by E. Harms. Individual psychology by R. Dreikurs. Interpersonalism and semeiotics, by J. C. Moloney Present-day psychology of speech, by E. Froeschels. Hypnotherapy by M. V Kline. Part IV Methods. Trends in statistics and probability in psychology by H. Solomon. Integrational psychology by C. Leuba. Part V Psychological borderlands and humanistics: The psychology of literature, by A. A. Roback. Glossodynamics and the present status of psycholinguistics, by A. A. Roback. Factorial studies of aesthetic judgments, by R. W Pickford. Psychology of art, by H. G. Schrickel. Recent trends in the psychology of values, by R. F Creegan. The psychology of religion, by V Ferm. Index.

Note The 40 papers, or chapters, whose titles and authors are listed above were written especially for this survey by eminent psychologists, most of whom are associated with colleges and universities in the United States of America. Each of the chapters is preceded by an editorial note and most contain bibliographies. As would be expected in volume of such wide scope, the quality of the individual papers varies. However the volume contains much that is interesting and valuable for readers in fields allied to psychology who need either broad survey of it or compact essay on one of its facets.

SARGENT, STEPHEN STANSFELD

The basic teachings of the great psychologists. New York Barnes & Noble, Inc., 1944 346 p. illus 21 cm. $1 35 4802

Contents (abridged) The science of psychology Intelligence and intelligence testing. Measuring special abilities. Feeble-minded-

Note: This volume contains a selection of papers, together with complete bibliography of the publications, of one of America's outstanding psychologists whose best known book is *Purposive behavior in animals and men*, New York, 1932, and Berkeley 1951. It is a commemorative volume sponsored by colleagues and former students of Professor Tolman. However, the papers printed in it were selected by Tolman himself as representative of significant steps in the development of his psychological theory.

TOWNSEND, JOHN C.

Introduction to experimental method for psychology and the social sciences. New York McGraw Hill Book Company Inc., 1953. 220 p. illus. 23 cm. (McGraw Hill series in psychology Clifford T Morgan consulting editor) $4 75 4814

Contents: Part I, Theory of experimentation: Psychology and science. Causal sequences and the meaning of explanation. Armchair experimentation. Locating and simplifying problems. Part II, Design and conduct of experiments: Formation of hypotheses. Independent and dependent variables. Control of the experiment. Procedures for experimentation. Methods of inference. Apparatus. Conducting the experiment. Part III, Interpretation and conclusions. Central tendency and variability. Reliability of measures. Computing significance of differences. Testing for the significance of relationships. The construction of graphs. Part IV, Application of the experimental method: Report of two well-written experiments. Appendix (tables). Index.

Note: A short, well-written book intended for the instruction and guidance of undergraduate college students. It is potentially useful also to persons outside of colleges who find themselves in need of basic understanding of the general and statistical principles of scientific experimentation.

TYLER, LEONA E.

The psychology of human differences. Second edition. New York Appleton-Century-Crofts, Inc., 1956 562 p. illus. 24 cm. (The Century psychology series Richard M. Elliott, editor) $6.00. 4815

Contents: Part I, The field of differential psychology. Historical introduction. General principles. Wresting meaning from measurements. Part II, Varieties of individual differences. In intelligence. In school achievement. In vocational aptitudes. In personality. In interests and attitudes. In perception. Part III, Varieties of group differences: Sex differences. Race and nationality differences. Class differences. Age differences. The mentally deficient. The unusually gifted. Part IV, Factors producing differences. The relationship of mental to physical characteristics. The influence of the environment on individual psychological traits. The hereditary basis of individual differences. Toward a science of human differences—achievements and challenges. Bibliography. Index.

Note: An introduction to the psychology of variability among human beings and among various groups selected according to sex, age, etc. It is addressed primarily to advanced college students, including graduate students, who are majoring in psychology. It is useful also to graduate social and personnel workers, counselors, and even to lay readers with an interest in and some previous introduction to psychology. It integrates and interprets a very wide range of research and cites the source publications in a 37-page bibliography. The first edition was published in 1947. In this second edition, the level of the book is the same as in the first edition, but there has been much reorganization and rewriting. Among other changes the emphasis has been shifted to quantitative studies and measurements.

VINACKE, WILLIAM EDGAR

The psychology of thinking. New York McGraw Hill Book Company Inc., 1952 392 p. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $6.50. 4816

Contents: Introduction. Historical background. Consciousness and the field of attention. Ideas, imagery and imageless thought. The mechanisms of thinking. Logic in relation to the psychology of thinking. Concept formation. The transfer-orientation sequence. Problem solving. Imagination. Autistic thinking. Creative thinking. The internalization of experience. General aspects of personalized thinking. Attitudes. Public aspects of personalized thinking. Conclusions. Name index. Subject index.

Note: A survey in which knowledge from various areas of psychology that bears on the thinking process in human beings has been assembled and organized. It is addressed primarily to intermediate-level college students, hence, familiarity with accepted psychological terminology and some acquaintance with the methods of experimental psychology have been assumed. The book was based on an extensive literature survey and statements in the text are keyed to literature citations in the bibliographies appended to each chapter. The author is a faculty member of the University of Hawaii.

WOODWORTH, ROBERT SESSIONS

Contemporary schools of psychology. Revised edition. New York The Ronald Press Company 1948 279 p. illus. 21 cm. $4.25 4817

Contents: Our schools and their background. Functional and structural psychology. Associationism old and new. Behaviorism. Gestalt psychology. Psychoanalysis and related schools. Hormic and holistic psychologies. The middle of the road. Bibliography. Author index. Subject index.

Note: Outlines of the theories of the major schools of psychology and brief biographical sketches of the psychologists who contributed to them are provided in this book. It was first published in 1931. The author points out that the schools of thought discussed in the first edition still flourish today, and furthermore, no new ones of major significance have developed in the interval. However, the teachings of some of the schools have undergone considerable modification, and a number of important new studies have appeared. These form the subjects of the considerable amount of material that has been added in this extensively revised edition. The revision has also entailed the removal of much obsolete material.

WOODWORTH, ROBERT SESSIONS, AND HAROLD SCHLOSBERG

Experimental psychology. Revised edition. New York Henry Holt and Company 1954 948 p. illus. 24 cm. $8.95 4818

Contents: Introduction. Reaction time. Association. Attention. Emotion—expressive movements—energetics—other bodily changes. Psychophysics—the determination of thresholds—scaling methods. The cutaneous senses. The chemical senses. Audition. Vision. The perception of form. Perception of color. Visual depth perception. Eye movements in relation to perception. Learning—introductory survey. Conditioning. Discrimination learning. Maze learning. Motivation in learning and performance. Memory. Transfer and interference. Economy in learning and performance. Problem solving—thinking. Bibliographical index of authors. Subject index.

Note: A standard work, the first edition of which was published in 1938. It presents under the chapter titles which are listed above a critical synthesis of the pertinent research studies with references to the source publications. There is about 20 per cent more text in this revised edition, and the bibliography contains about 2,480 titles in comparison to 1,710 of the first edition. Since some old material was deleted in order to make room for new without unduly increasing the length of the book, larger percentages of both text and bibliography were added than these figures indicate.

GENERAL TEXTBOOKS

ANASTASI, ANNE, AND JOHN P. FOLEY, JR.

Differential psychology: individual and group differences in behavior. Revised edition. New York The Macmillan Company 1949 894 p. illus. 22 cm. $6.75 4819

Contents: Part I, Historical and methodological orientation: Historical introduction. Basic concepts of psychological testing. Nature and extent of individual differences. Heredity and environment. Part II, Analysis of individual differences: Biological factors in simple behavior development. Psychological factors in simple behavior development. The effects of practice. Schooling and intelligence. Age differences. Family resemblance. Twins and foster children. Bodily conditions and behavior. The quest for constitutional types. Variability within the individual. Trait organization. Part III, Major group differences: The subnormal. Genius. Sex differences—basic problems

practice. Reading interests. Tests of intellectual, social, and activity interests, by J H Wyman. Tests of character and personality traits. Trait ratings. Summary of data on 309 gifted high school pupils. Two years after. Conclusions and problems. Index.

—— Volume II, The early mental traits of three hundred geniuses. By Catherine Morris Cox, assisted by Lela O Gillan and others. Stanford Stanford University Press, 1926 842 p illus. 23 cm (Genetic studies of genius, edited by Lewis M Terman. Vol. II) $7 50 4808

Contents (abridged) Part I, Methods and results. Introduction. Earlier studies and a new method. Subjects and data. The IQ estimate. Treatment of the IQ. Discussion and analysis of the IQ ratings. Character ratings. Analysis of character ratings. Conclusions. Part II, Case studies. Appendixes. A case study in full. Excerpts from the early writings of young geniuses. Index of geniuses. General index.

—— Volume III, The promise of youth, follow up studies of a thousand gifted children, by Barbara Stoddard Burks, Dortha Williams Jensen, Lewis M Terman assisted by Alice M Leahy and others Stanford Stanford University Press, 1930 522 p. 22 cm. (Genetic studies of genius edited by Lewis M Terman Vol. III) $7 50 4809

Contents (abridged) Part I, Methods and results: Purpose, methods, and personnel. Follow-up procedures. Educational progress. Tests of scholastic achievement. Scholastic and other interests. Vocational plans and vocational achievement. Social and personality traits. Health history and vital statistics. Family statistics and sibling tests. Part II, Case studies. School acceleration and social adjustment. Deterioration of IQ or achievement. The conquest of obstacles. Some twins and other siblings. Behavior and personality problems. Youthful zealots. The promise of babyhood and the fulfillment of youth. Part III, A study of literary juvenilia. Derivation of a tentative scale for rating literary juvenilia. Results or ratings, with illustrations. Case notes on gifted juvenile writers. The prediction of literary achievement. Part IV Summary. Retrospect, prospect, and summary. Index.

—— Volume IV, The gifted child grows up twenty five years' follow up of a superior group, by Lewis M Terman, and M H Oden, in association with N Bayley and others Stanford Stanford University Press, 1947 448 p illus 23 cm. (Genetic studies of genius edited by Lewis M Terman Vol. IV) $7 50 4810

Contents (abridged) Composition and social origin of the gifted group. Characteristic traits of the gifted child—physique, health, and educational achievement—interests and preoccupations—character tests and trait ratings. Six years later—the promise of youth. Later follow-up—1936, 1940 and 1945. General health and physique. Mental health, nervous disorders, and general adjustment. Intellectual status of the gifted subjects as adults, by Q McNemar. Educational histories. Avocational and other interests. Political and social attitudes. Marriage, divorce, marital selection, and offspring. Marital adjustment. Subjects of IQ 170 or above. Subjects of Jewish descent. Factors in the achievement of gifted men. War records. Appraisal of achievement. References cited. Appendix. Index.

Note These volumes constitute the full report of a famous study of a group of children who were selected for the experiment because of their superior intelligence. In the first volume, the techniques of selection are explained and data on such characteristics of the selected group as racial origins, occupations of parents, health, physical measurements, achievements in school and interests outside of school are tabulated and analyzed. This volume contains also the results of a study of the progress of the children two years after the group was selected. The second volume, although part of the same study is a survey and analysis of the mental traits manifested in early childhood and youth of 300 persons whom the world recognizes as geniuses—such persons as Benjamin Franklin, Denis Diderot and Johann Wolfgang Goethe. The third volume is a further study after six years of the group studied in the first volume. The fourth volume is a study of the same group after 25 years. It presents the early adult achievements of 97 per cent of the original group and effectively lays to rest the timeworn notion that child prodigies are usually adult failures. The series presents in detail the results of the most thorough study of the kind yet made and is of interest not only to psychologists but to educators and sociologists as well.

THORNDIKE, EDWARD LEE

Selected writings from a connectionist's psychology New York Appleton-Century Crofts, Inc., 1949 370 p illus. 22 cm. (The Century psychology series, Richard M Elliott, editor) $3 50 4811

Contents. The law of effect. The spread or scatter phenomenon. The influence of punishments. The influence of the repetition of a connection. The influence of mental systems. The influence of the impressiveness of the first member of a related pair. Analytic and selective processes. The psychology of thinking in the case of reading. Ideo-motor action. The influence of primacy. Mental abilities. The constitution of arithmetical abilities. Heredity and environment. Mental fatigue. Valuations of certain pains, deprivations, and frustrations. Valuations of achievements, acts, and persons. Personality. The origin of language. The psychology of semantics. The psychology of labor. Science and values. Darwin's contribution to psychology. Index.

Note: A selection made by the author himself, of his writings published over a considerable span of years. On his criteria for selection he has stated: "I have, in fact, had in mind especially the needs of teachers who wish their students to know something of connectionist psychology at first hand, but find *H man learning* and *Man and his works* far too superficial, and my books of recent date far too long and too burdened with evidential matter." The book includes a number of papers in which were reported important advances in the psychology of learning, together with miscellaneous essays on language, science, etc.

THURSTONE, LOUIS LEON

Multiple-factor analysis, a development and expansion of *The vectors of mind* Chicago The University of Chicago Press, 1947 535 p. illus. 23 cm. $7.50 4812

Contents. Mathematical introduction. The factor problem. Fundamental equations. Geometrical models. A factor problem in two dimensions. The grouping method of factoring. Factors as explanatory concepts. The spherical model. The centroid method of factoring. Configurations and factor patterns. Rotation of axes. The method of extended vectors. The special case of unit rank. The unknown communalities. The simple-structure concept. Oblique structure. Factorial invariance. Alternative methods of rotation. Second-order factors. The effects of selection. The principal axes. The appraisal of individual abilities. Index.

Note. The concepts and techniques of multiple-factor analysis which were explained and demonstrated in the author's *The vectors of mind*, Chicago, 1935, are the subject of this successor to the 1935 work. A much fuller exposition is now presented, some of the criticisms made of the original work are answered, new material is presented on many topics that were not fully developed before, and new simpler factorial methods are explained. The book represents 10 years, additional work and is approximately twice as long.

TOLMAN, EDWARD CHACE

Collected papers in psychology Berkeley University of California Press, 1951 269 p. illus. 25 cm $4 50 4813

Contents. A new formula for behaviorism. Can instincts be given up in psychology? A behavioristic account of the emotions. Behaviorism and purpose. Purpose and cognition. A behavioristic theory of ideas. A behaviorist's definition of consciousness. Sign Gestalt or conditioned reflex? Gestalt and sign Gestalt. Psychology versus immediate experience. Operational behaviorism and current trends in psychology. The acquisition of string pulling by rats. Determiners of behavior at a choice point. Physiology, psychology and sociology. Prediction of vicarious trial and error by means of the schematic sowbug. Psychological man. A drive-conversion diagram. A stimulus-expectancy need-cathexis psychology. Cognitive maps in rats and men. Bibliography

Note: A textbook designed for introductory courses in colleges. In psychology viewed as the study of the growing and changing nature of human beings throughout the life span. This edition has been expanded and revised to cover pertinent advances in psychology between 1944 and 1948. The number of pages in the volume has been increased by more than one hundred.

GUILFORD JOY PAUL editor

Fields of psychology basic and applied. Second edition. New York D Van Nostrand Company Inc., 1950 779 p. illus. 24 cm. (The Van Nostrand series in psychology J P Guilford, editor) $6.50. 4825

Contents (abridged): Animal psychology—its point and purposes—methods and results, by C. J. Warden. Child psychology by H. B. English. Educational psychology by H. B. English. The concepts and methods of social psychology by D. Katz. The psychology of the crowd, by D. Katz. Abnormal psychology: the significance and forms of abnormal behavior—the salient abnormalities—the major [illegible], by L. F. Shaffer. The nature of individual differences, by A. Anastasi. Major group differences, by A. Anastasi. Clinical psychology by R. I. Watson. Individual mental efficiency by D. H. Fryer. Vocational psychology by M. S. Viteles. Professional psychology by D. H. Fryer. Physiological psychology by G. L. Freeman. Aesthetics, by K. Harrower. Points of view by M. Heidbreder. [illegible] Index of subject matter.

Note: A book planned to give a broad view of the fields or subareas of contemporary psychology. Under each heading, the field is defined, its subject matter outlined, some of the basic knowledge pertinent to it is discussed, and a selected list of references is added. The book is designed primarily for college students who completed an introductory course and need additional information to round out their knowledge of psychology or to enable them to select a field in which to specialize. In this edition several [illegible] are new and several others have been revised.

[GUIL]FORD JOY PAUL

[G]eneral psychology Second edition. New [Yor]k D Van Nostrand Company Inc., [illegible] 587 p. illus. 24 cm. (The Van Nostrand [serie]s in psychology J P Guilford, general [edito]r) $5.95 4826

[Conte]nts: What psychologists do. Psychology and its methods. [illegible] develops. An organism has needs. Complex motives. Conflicts of motives. Emotional responses. Vision, hearing, taste, [illegible]. [illegible] space, and movement. The [illegible]. Observing. Conditioned responses. [illegible] of learning. Memorizing. Remembering. Thinking. Reasoning. Human abilities. Human personality. Index.

A standard introductory textbook for use in college courses. [illegible] and fairly inclusive picture of the nature and [illegible] contemporary psychology. It is especially suited to the students who take a course in psychology for its cultural [value. T]he first edition was published in 1939. For this edition, [the] work was extensively reorganized and rewritten. The [illegible]. Several of the chapters that appeared in [the first e]dition have been dropped entirely or their content has [been incor]porated in other chapters. Some recent literature has been [added to] the bibliographies, but the references are still predominantly [to lit]erature published before 1940.

[HELSON], HARRY *editor*

[Th]eoretical foundations of psychology [New Y]ork D Van Nostrand Company Inc. [illegible] 787 p. illus. 24 cm. (Textbooks on [psychol]ogy J P Guilford, general editor) 4827

Methodological considerations, by M. O. Frenkel. [illegible] functions, by J. M. Oppenheimer. Some [illegible] of behavior, by E. Gellhorn. Development and [illegible] N. Bayley. Motivation, by P. W. Irwin. Feeling and [illegible] J. G. Beebe-Center. Fatigue and efficiency by S. H. [Bartley illegible], by H. Helson. Learning, by E. B. Newman. [illegible] H. F. Harlow. Measurement in psychology by J. P. [illegible] A. L. Comrey. Intelligence, by J. Loevinger. Personality [illegible] MacKinnon and A. H. Maslow. Psychological theory

and social psychology by D. Krech. Abnormal psychology by D. B. Klein.

Note. A textbook for advanced undergraduate and graduate college students. It is organized in the form of a symposium on the fundamental ideas, concepts, theories, and problems of modern psychology. Each chapter is a detailed presentation, containing discussion of facts, techniques, methods, and experimental data, as well as references to history and schools of psychology and to the work of individual psychologists. Bibliographies appear at the ends of the chapters.

HILGARD, ERNEST R.

Introduction to psychology New York Harcourt, Brace and Company 1953 659 p. illus. 24 cm. $7.50 4828

Contents (abridged): Introduction: Problems of psychology. Growth and development: Infancy and childhood. Adolescence and adulthood. Principles of growth and development. *Motivation, emotion, and adjustment:* Emotion and motivation. Social motives. Conflict and frustration. *Learning, perception, and thinking:* The management of learning. Remembering and forgetting. Perception. Thinking. *Individuality:* Individual differences and their testing. Testing intelligence. Group differences in tested intelligence. Personality and the self. Psychology applied to personal and social problems: Mental health and readjustment techniques. Vocational adjustment. Psychology in industry. Public opinion and propaganda. Problems of social groups. Psychology as a science and as a profession. Glossary. References and index to authors of works cited. Index.

Note: An introductory textbook which presents a broad and basic view of psychology. It is directed to college students who are taking their first course in the subject. Hence, in addition to elementary expositions of the basic principles, it contains many discussions of applications. The short chapter on psychology as a profession provides a view of the scope of contemporary professional psychology. The author is Professor of Psychology on the faculty of Stanford University. A second edition was published in 1957 653 p., $8.75.

HURLOCK ELIZABETH B

Developmental psychology New York McGraw Hill Book Company Inc., 1953 556 p. illus. 23 cm. (McGraw Hill series in psychology Clifford T Morgan, consulting editor) $6.50. 4829

Contents: Growth and decline. How life begins. Infancy. Babyhood (two weeks to two years). Early childhood (two to six years). Late childhood (six to twelve years). Puberty. *Early adolescence* (thirteen to sixteen years). Late adolescence (seventeen to twenty-one years). The "mature" adult. Adulthood (twenty-one to sixty years). Old age (sixty years to death). Bibliography. List of visual aids. Index.

Note: Based on the literature, this college textbook presents a broad survey of the fundamental studies and of work published in the years preceding the writing of the book. In short, the emphasis is on the classic literature and on studies published 1940–1952. The entire span of human life is covered with 304 pages being given to infancy, childhood and adolescence and 219 pages to adulthood and old age. Psychological aspects of development are definitely emphasized, but some information is included on physical aspects, especially in the chapters on infancy and childhood.

JOHNSON DONALD MCEWEN

Essentials of psychology an introductory textbook. New York McGraw Hill Book Company Inc., 1948. 491 p. illus. 24 cm. (McGraw Hill publications in psychology J F Dashiell consulting editor) $5.50 4830

Contents: Introduction. The history of motives and emotions. Motivation and emotion in social life. Sensory functions. Attention. Perception. Learning. Thought and judgment. The individual and society. Abilities and tests. Personality—the climax of the story. Abnormal personalities. References. Glossary. Audio-visual aids. Index.

Note: Selected contributions from experimental psychology, clinical psychology, psychoanalysis, and factor analysis have been synthesized in this book, so as to give the reader a general view of psychological principles, methods, and applications. The work is

—major results. Racial comparisons—problems of grouping—problems of measurement. Racial versus cultural differences. Socio-economic differences. The individual as member of multiple groups. Index.

Note A textbook in which differential psychology is presented as one approach to the understanding of behavior and in which the experimental knowledge upon which differential psychology is based is organized and summarized. The book is designed primarily for upperclass undergraduate college students who are majoring in psychology. Long lists of literature references are included. In addition to their usefulness in connection with the study of the book, these have some utility as guides to the knowledge and the literature of such subjects as psychological differences between the sexes. In this edition the book has been extensively revised and much enlarged.

ANDERSON, JOHN E

The psychology of development and personal adjustment. New York Henry Holt and Company 1951 720 p illus. 22 cm $5 50 4820

Contents (abridged) Why study human adjustment? Section I, Equipment for living. The body and the nervous system. Life space and the development of the infant. Section II, Learning skills. How skills are acquired. The development of language and symbolic skill. Problem solving and thinking. Section III Motivation emotions, and attitudes. Section IV Social behavior Section V Adjustment. Personality underlies adjustment. Stress, maturity and adjustment. Inadequate adjustment Section VI, Orientation to adult life. Adjustment in college. Maturity and old age. Adjustment to vocation. Section II Adjustment to family life. Courtship and betrothal. the home. Adjustment in marriage. References. Index.

Note This book is an example of texts in which findings in various fields of psychology are drawn on and reinterpreted for the benefit of freshmen and sophomore college students who are not primarily interested in psychology. In other words, it is a cultural type of text designed to give the general student some idea of the scope of psychology and its problems, fuller idea of its potential applications to himself and his life.

ANDREWS, T G, editor

Methods of psychology New York John Wiley and Sons, Inc., 1948 716 p illus. 23 cm $6 75 4821

Contents. An introduction to psychological methodology by T. G. Andrews. Conditioning and motor learning, by W N Kellogg. Studying memory and transfer by C. E. Buxton. Studying human thinking, by E. Heidbreder Psychophysical methods, by L. L. Thurstone. Studying perceptual phenomena, by J J Gibson. Studying vision, by S. H. Bartley Studying hearing, by E. G. Wever Studying the skin senses, by W L. Jenkins. Studying the senses of taste and smell, by C. Pfaffmann. Studying proprioception, by W D Neff. Studying animal behavior by H. F Harlow Motivation feeling, and emotion by P T Young. Methods of measuring and recording action, by R. C. Davis. Studying neuropsychology and bodily functions, by D B Lindsley Studying motor functions and efficiency by A. G Bills. Investigating and appraising intelligence and other aptitudes, by H. S. Conrad. Investigating and appraising personality by S. Rosenzweig. Methods and techniques in clinical psychology by the late A. W Brown. Objective studies of disordered persons, by J Zubin. Methods of studying the behavior and development of young children, by H. L. Koch. Studying social behavior by T M. Newcomb. Index of names. Index of subjects.

Note A manual of laboratory techniques and of experimental and testing methods. It is intended chiefly for use in courses offered to students who are preparing to become professional workers in psychology Each paper is accompanied by a selected list of the related literature.

COLE, LAWRENCE E

Human behavior psychology as a bio-social science. Yonkers N Y World Book Company 1953 884 p illus. 23 cm $6.25 4822

Content (abridged) Part I, The nature of the psychological problem Organism and environment. The individual and his social matrix. Part II, Growth and development The inheritance of capacities and susceptibilities. The maturing of the individual. Chemical aspects of the growth process. Part III, Motivation and the affective processes The style of life—a bio-social view of needs and purposes. The emotions. Part IV The modification of behavior Part Attending and perceiving: The perceiver and his needs. The influence of preparatory set. Localizing objects in a field. Organizing, recalling—a configurational approach. Part VI, The reasoning, thinking, and problem-solving. Reflections on the art of everyday thinking. Part IX, The structure and dynamics of the self-system The hypnotic state and the divided self. Freud and the psychoanalytic movement. Psychoanalytic theory of development. The superego—social and psychobiological considerations. The theory of repression and the divided self. The normal personality Index of names. Index of subject matter

Note Psychology is presented as a science in this introduction. The author who is a member of the faculty of Oberlin College, takes an eclectic view of the field and draws from biology, sociology medicine, anthropology and philosophy in addition to the area of knowledge commonly recognized as psychology. The book is designed for the instruction of students who have more than passing interest in the field.

CRAFTS, LELAND WHITNEY, AND OTHERS

Recent experiments in psychology By Leland W Crafts, Theodore C. Schneirla, Elsa E Robinson, and Ralph W Gilbert. Second edition. New York McGraw Hill Book Company, Inc. 1950 503 p. illus. 24 cm. (McGraw Hill publications in psychology; Clifford T Morgan, consulting editor) $4.75 4823

Contents (abridged) A study of attitudes toward religion among college students. The origin of the cat's responses to rats and mice. Migration and the "instinct" problem. Cooperation and competition. The physiology of emotional behavior. Facial expression in emotion. The duplicity theory of vision. The perception of obstacles by the blind. The function of the brain in relation to intelligence. Organic nervous diseases in relation to behavior The electrophysiology of the nervous system. The effect of distraction upon the performance of certain tasks. A comparison of the intelligence of "racial" and national groups in Europe. The conditioning of ... The importance of organization for retention and transfer. Methods of breaking undesirable habits. Conflict and experimental neurosis in cats. Problems in the perception of the vertical in space. Perception and memory as influenced by attitude and experience. Implicit muscular activities during thinking. Projection and the thematic apperception test. The opinion-polling technique as used in a study of the effects of bombing on Japanese morale. Index.

Note A college textbook that serves as an introduction to the methods of current experimental psychology and to some of the results of modern experiments. In general, in each of the chapters several experiments are specifically described, then the methods and findings are both discussed. Although some technical terminology is employed, the book is easy to read, and most of it can be grasped by the average educated reader without the aid of an instructor. In this final edition, and there are other important changes in the ...

GOODENOUGH, FLORENCE L.

Developmental psychology an introduction to the study of human behavior Second edition. New York D Appleton-Century Company 1945 723 p. illus. 22 cm. (The Century psychology series R. M. Elliott, editor) 4824

Contents (abridged) Part I, Principles and methods of modern psychology Part II, The child's equipment for living. Our hereditary background. Prenatal development. The child at birth. The normal course of human development. Speech. The beginnings of speech activity in pattern development during early childhood. Social development The ... of young children. The growth of personality. Physical growth. Understanding in childhood. General intellectual and emotional development in early childhood. Developmental perception, Judgment ... middle childhood. Adolescence. The college ... ligence and its ... and decline of abilities. Old age ... during the ... Common handicaps of normal persons ... years. Maturity ... delinquency and adult crime. Part V, Part IV ... development. Bringing up children. Incomplete. Mental ... in the adult. A backward look at ... The mental h... ing happiness ... thoughts for ... Index of names. Index of subjects.

perception. Psychological measurement. Part II, Personality and adjustment: Frustration and conflict. Mental health and psychotherapy. Part III, Social processes. Attitudes and beliefs. Prejudice and social conflict. Part IV Abilities and performance. Intellectual abilities. Aptitudes and vocational adjustment. Part Knowing the world: Vision. Hearing and lower senses. Language and speech. Part VI, Biological background: The brain and nervous system. The internal environment. Animal behavior. Bibliography. Glossary. Name index. Subject index.

Note: A well-written work published in an attractive format. It is designed for use as text in college courses. Fourteen other psychologists collaborated with the author in the book's writing, but the collaboration was carried out in an unusual way. The collaborating authors submitted drafts of their chapters which the principal author re-wrote, thus giving the book uniform style and at the same time more authority than could be given by single author. A broad, up-to-date view of the science of psychology presented. Photographs, well-conceived diagrams and other types of illustrations have been used in abundance.

MUNN, NORMAN L.

The evolution and growth of human behavior A revision of *Psychological development* Boston Houghton Mifflin Company 1955 525 p. illus. 25 cm. $6.50. 4837

Contents: The nature of genetic or developmental psychology. Foundations of development. Unlearned behavior. Evolution of intelligent behavior—basic processes. Evolution of intelligent behavior—learning and higher processes. Prenatal behavior. Basic factors in the behavioral development of children. Development of sensory processes. Development of spatially coordinated behavior. Motor development. Symbolic processes in children. Language. The growth of intelligence. Emotional development. Development of social behavior. The growth of personality in children. Changes in personality from adolescence until senescence. Index of authors. Index of subjects.

Note: This publication surveys the entire psychological development of human beings, emphasizing the relative importance of heredity and environment in the development not only of the human mind but also of other personal qualities, such as habits and attitudes. The author accomplishes this by summarizing important and representative experimental and observational studies which contribute to an understanding of human behavior from birth to maturity and beyond. While the over-all plan of the book remains the same as in the previous edition, the revised edition contains changes throughout, in some cases extensive changes, as the result of the progress of research during the 17-year period between 1938 and 1955. The book is appropriate for use as textbook by beginning students in psychology, both for those who intend to continue the study of psychology and those whose primary interests may be in other fields, such as education and the social sciences. Bibliographical references and suggestions for further reading appear at the ends of the chapters. There are 144 illustrations.

MURPHY GARDNER

An introduction to psychology by Gardner Murphy with the assistance of Herbert Spohn. New York Harper & Brothers, 1951 583 p. illus. (part col d) 24 cm. $4.50 4838

Contents: The study of persons. The biological significance of individuality. Heredity. Environment. Individuality in development. The endocrine system. Some elementary motives. Emotions. Conflict. Sensing and perceiving. Seeing. Hearing. Tasting, smelling, and the general senses. Learning. Remembering. Imagining and dreaming. Thinking. Creating. Intelligence and its measurement. The patterns of situation. The self. Assertion of the self. Defenses of the self. Personality measurement. Projective methods. Social attitudes and their setting. Personality patterns. Culture and the individual: ethnological evidence. Culture and the individual: our own tradition. Oneself and others: mapping one's own situation, understanding others. Glossary and index.

Note: Utilizing viewpoint, developed primarily in the study of personality, that every psychological act is the act of whole person and that the first task of psychology is to focus upon the nature of persons, the author presents an introductory textbook in psychology in new terms. Motives, percepts, thoughts, attitudes are seen as activities of persons. Since biographers, novelists, and other imaginative writers are concerned with persons and their inter-actions, the works of such authors as Walt Whitman, Walter de la Mare, Thomas Wolfe, and Truman Capote are drawn upon to help portray clearly what persons are. Similarly photographs are used as illustrative material to help make clear the relations of individual human beings to certain situations. The book deals with the subject of individual differences more fully than do other types of introductions to psychology but emphasis is rather upon the description of the nature of persons in terms of what all persons have in common. The author acknowledges his indebtedness to William Stern and Gordon W Allport in his thinking and writing, and at the end of the chapters presents brief lists of suggested readings.

POSTMAN LEO AND JAMES P EGAN

Experimental psychology an introduction. Under the editorship of Gardner Murphy New York Harper & Brothers, 1949 520 p. illus. 21 cm. $4.50. 4839

Contents: The scope of experimental psychology. The psychophysical methods. Cutaneous sensitivity. Audition. Smell and taste. Vision. Perception of color. Perception of form. Perception of space. Perception of movement. Experimental analysis of judgment. Reaction time and association. Measurement of learning. Conditioning. Experimental study of human learning. Retention and forgetting. Transfer of training. Emotional behavior. Behavior in social situations. Name index. Subject index.

Note: This is well-organized and well-illustrated textbook for students who have studied general psychology and are ready for study of experimental methods and laboratory procedures. In it is presented survey of the main empirical findings and functional relationships in selected areas of experimental psychology with special emphasis on the control, manipulation, and measurement of variables. Thirty experimental exercises are described; these are included as concrete illustrations to supplement the text. References are given at the ends of the chapters.

PRONKO N H. AND OTHERS

Empirical foundations of psychology by N H. Pronko and J W Bowles, jr., with the collaboration of D T Herman Harris Hill, and John Bucklew jr New York Rinehart & Company Inc., 1951 464 p. illus. 22 cm. $5.00 4840

Contents: Introduction. Heredity and psychology. The reactional biography: the psychological life history of organisms. Biological characteristics of the organism and early acquisition of behavior. Basic patterns of behavior. Social behavior. Personality. Intelligence. Attention. Perception and factors which affect it. Implicit or "thinking" behavior. Feelings. Emotion. Failure of stimulus-response coordination. Remembering. Learning. Interrelationships between physiology and psychology. Name index. Subject index.

Note: A book of selections or "readings" in modern psychology suited for use in connection with general introductory textbook of psychology. Many of the articles are reprinted from journals dated between 1941 and 1948, with few inclusions from earlier years. The remainder, over half the contents of the book, was written especially for the book by the five authors whose names are on the title page.

RUCH, FLOYD L.

Psychology and life including an illustrated reference manual The brain and nervous system. Fourth edition. Chicago Scott, Foresman and Company 1953 492 p. illus. 26 cm. $6.00. 4841

Contents: Part I, Foundations: Psychology as science. Personality and individuality. Nature and nurture. Human capacities and abilities. Part II, The dynamics of adjustment. Motivation. Emotions—inner springs of action. Frustration and stress. Mental health and psychotherapy. Part III, Knowing the world: The special senses. Observation. The learning process. Learning and remembering. Thinking, communication, and persuasion. Part IV Psychology at work: Personal adjustment problems in group living. Psychology and work. Psychology and social problems. Part Reference manual: The brain and nervous system. Careers in psychology. Recommended readings. References. Name index. Subject index.

Note: An attractive and readable textbook designed for use in first courses in psychology offered to college students. It provides broad introduction to psychology with some emphasis on the development of personality and the dynamics of adjustment. There

designed for use by freshman and sophomore college students and is equipped with such apparatus as chapter summaries and work lists to facilitate study The author is a professor at Michigan State College.

KELLER, FRED SIMMONS, AND WILLIAM N SCHOENFELD

Principles of psychology, a systematic text in the science of behavior New York Appleton Century Crofts, Inc., 1950 431 p illus 22 cm. (The Century psychology series Richard M Elliott, editor) $4 50 4831

Contents Psychology and the reflex. Respondent conditioning. Operant conditioning. Extinction and reconditioning. Generalization and discrimination. Response variability and differentiation. Chaining. Secondary reinforcement. Motivation. Emotion. Social behavior A last word. References and author index. Subject index.

Note. A college text for introductory courses, but an unusual one, in that it is limited to the knowledge of fundamental principles of behavior which has been gained from experimental psychology It is unusual also in its attempt to present even introductory materials in psychology (Skinnerean) from systematic and coherent theoretical points of view Much of the space is given to descriptions of experimental techniques and to the results of noted experiments, most of which were performed on rats and other small animals. However applications to the understanding of human behavior are discussed. The book is suited to use by college students and also by educated lay readers who wish a dependable survey of the scientific bases of psychology The list of references runs to 306 citations. The authors are members of the faculty of the Department of Psychology of Columbia University

KIMBLE, GREGORY A.

Principles of general psychology New York The Ronald Press Company 1956 400 p. illus. 26 cm $5 50 4832

Contents I, Basic methodology· Introduction. Psychology as a science. Methods for describing data. Intelligence and aptitude testing. Functions of intelligence. II, Sensation and perception. The sensory processes in general. Vision and audition. Perception. III, The modification of behavior Psychological development. Conditioning and simple learning. Selective learning. Verbal and motor learning. Extinction, habit breaking, and forgetting. IV Behavior dynamics. The primary drives. Secondary motivation. Frustration, stress, and conflict. Personality and adjustment. Behavior pathology Index of names. Index of subjects.

Note. A textbook for use in first courses in psychology offered to college students. It provides an adequate view of the general content of modern psychology and good descriptions of experimental techniques. The author is a member of the faculty of Duke University

KUHLEN, RAYMOND G, AND GEORGE G THOMPSON, editors

Psychological studies of human development. New York Appleton Century-Crofts, Inc 1952 533 p illus. 24 cm. (The Century psychology series, edited by R. M. Elliott) $3 75 4833

Contents (abridged) Foreword to students. Physical factors in psychological development. Processes of learning and adjustment. Psychological growth under different social-cultural conditions. Intellectual changes with age. Intelligence and psychological adjustment. Patterns of language-conceptual growth. Interest patterns and their implications. Growth of social values and attitudes. Social development—interpersonal relations. Home and family relations. Adjustments in school. Vocational orientation and adjustment. Some factors in personal and emotional adjustment. Index.

Note. An anthology of selections or "readings" chosen for college students who are majoring in developmental psychology child psychology or in other fields where knowledge of the psychological aspects of human development is essential. There are 71 papers or selections, classified under the headings given above. Most of these are abridged, but the abridgments were skillfully done and reference is always given to the original publication. As to the criteria for selection, the editors state "The present papers have been selected to provide a sampling both with respect to important areas of research in the psychology of human development and with respect to broad age-bands of the life span. An effort has been made to provide papers which utilize a great variety of research procedures or which summarize a group of studies as a means of arriving at broader generalizations which extend theory

LINDGREN, HENRY CLAY

Psychology of personal and social adjustment. New York American Book Company 1953 481 p. illus. 21 cm. $5 00 4834

Contents Introduction to the study of human behavior. The development of personality the self. The functioning of the unconscious processes. Emotion: threat, anxiety and hostility—patterns of defense and escape. The struggle against shyness and feelings of inferiority—to become independent and self-reliant. The forces that mold us determinants of personality—social class and status. What happens in groups. Communication, the process of social interaction. Adjustment factors in employment. Choosing a vocation, self-appraisal—the study of an occupation. Getting an education background—learning. Building sound relationships between the sexes. Patterns of deviation antisocial and abnormal. Integrative and disintegrative factors in mental health. Toward better mental health. Index.

Note. An elementary practical exposition of the psychology of normal individuals. It explains the factors that influence personal development and social interaction and emphasizes topics of immediate interest to college students. It is written in a palatable style and is fully supplied with literature references for the guidance of those students who wish to read the more technical literature. Although designed primarily for use as a text in college courses on personal adjustment, mental hygiene, etc., it is also of value as practical guide for young adults who are not enrolled in college courses.

MARX, MELVIN HERMAN, editor

Psychological theory contemporary readings. Arranged and edited by Melvin H. Marx. New York The Macmillan Company 1951 585 p. illus. 22 cm. $5.50 4835

Contents (abridged) Part I, Theory construction The general nature of theory construction, by M. H. Marx. Psychology and the science of science, by S. S. Stevens. Operationism and theory construction, by G. Bergmann and K. W Spence. Types of constructs in psychology by K. W Spence. The intervening variable, by E. C. Tolman. The conceptual focus of systems, by E. Brunswik. The molar-molecular distinction, by R. A. Littman and E. Rosen. The emphasis on molar problems, by G. W Allport. The probability point of view by E. Brunswik. The uniformity point of view, by C. L. Hull. Topology and hodological space, by J F Brown. Factor analysis, by L. L. Thurstone. Operational analysis, by D. G. Ellson. The nature of field theory by K. Lewin. Psychoanalytic propositions, by E. Kris. Part II, Theory foundations. The Gestalt interpretation of perception, by K. Koffka. The psychology of objective relations, by E. Brunswik. Connectionism, by E. L. Thorndike. Contiguity theory by E. R. Guthrie. Descriptive behaviorism, by B. F Skinner The Freudian theory of anxiety by S. Freud. Principles of psychosomatic research, by F Alexander. Social theory of neurotic conflict, by K. Horney The frustration-aggression hypothesis, by N E. Miller Stimulus-response theory of anxiety by O. H. Mowrer Approaches to personality by G. Murphy Stimulus-response theory in social psychology by N. E. Miller and J Dollard. The basic personality structure, by A. Kardiner Index.

Note. A collection of short papers and excerpts, most of which are reprinted from previously published work. The value of the book lies in the assembly of authoritative writings on psychological theory

MORGAN, CLIFFORD T

Introduction to psychology With the collaboration of Lawrence T Alexander and others. New York McGraw Hill Book Company, Inc. 1956 676 p illus. (part col d) 24 cm. $6.50 4836

Contents (abridged) I, The science of psychology Part I, Principles of behavior: Maturation and development. Motivation. Learning and remembering. Imagination and thinking Attention and

velopment and change of interests. Beliefs, values, and attitudes. Personality. Visual aids. Bibliography and author index. Subject index.

Note: A distinguishing feature of this book is that it presents information on the physiological and psychological development of all ages of human development from birth to senescence. However because full treatments of development during infancy and childhood were already available in book form, the authors give more attention to the changes of maturity and old age. The information has been gathered from the literature, and it is organized in the chapters whose titles are listed above. As the chapter titles indicate, the arrangement is one of physical and psychological attributes. Within the chapters the arrangement is more or less chronological. The combined bibliography and author index is 30 pages long. The book is primarily [illegible] college textbook, but has some use [illegible] as [illegible] reference book and guide to the literature.

PHYSIOLOGICAL PSYCHOLOGY

Bartley S Howard and Eloise Chute

Fatigue and impairment in man. New York. McGraw Hill Book Company 1947 429 p. illus. 23 cm. $6.00 4848

Contents: Introduction. Various views on fatigue. Fatigue and allied concepts. Electrophysiological studies. Anoxia and related [illegible] conditions. Lack of [illegible] in the body [illegible]. [illegible] conditions. Temperature extremes and water and salt lacks. Metabolism and nutrition. Conventional visual-fatigue studies. Hours and conditions of work in industry. Drug action in relation to fatigue and impairment. Orientation in neuromuscular activity. Sleep and other procedures. The long-term changes in the individual. Mental [illegible]. Personal factors in the work situation. Visual performance and fatigue. Conflict and frustration. Chronic fatigue and related syndromes. Conclusions. List of visual aids. Author index. Subject index.

Note: A comprehensive treatise based on the literature and on the authors' own researches. It reviews the experimental results and theories pertinent to the field and presents [illegible] new theory, the essence of which [illegible] that fatigue is seen as an expression of the whole person. The literature is cited in footnotes, and the names of the authors of the chief publications are brought together in the seven-page author index. The presentation [illegible] is technical, but the scope of the book [illegible] so wide that [illegible] is of interest in many fields, including industrial management, teaching, physiology and medicine.

Ford Clellan Stearns and Frank A. Beach

Patterns of sexual behavior With a foreword by Robert Latou Dickinson M.D New York Harper & Brothers and Paul B Hoeber Inc., 1951 307 p. illus. 24 cm. $5 75 4849

Contents: Foreword, by R. L. Dickinson. The task and the methods. The nature of coitus. Types of sexual stimulation. Circumstances for coitus. Attracting [illegible] sex partner. Sexual partnerships. Homosexual behavior. Relations between different species. Self-stimulation. Development in the individual. Feminine fertility cycles. Other physiological factors in sex behavior. Human sexual behavior in perspective. Glossary. Bibliography. Authors [illegible]. Index of [illegible]. Index of topics.

Note: A comparative study of the sexual behavior of human beings of various present-day cultures and the sexual behavior of various lower animals. The human beings belong to 190 different societies scattered from the Arctic circle through five continents to the tip of Australia. The animals range from rats and mice to the great apes. The authors, respectively professors of anthropology and psychology at Yale University, present the volume as [illegible] step toward the development of [illegible] sound understanding of the sexual behavior of human beings as [illegible] is affected by their evolutionary heritage and by the conditions imposed upon them by their social environment.

Freeman Graydon La Verne

Physiological psychology New York D Van Nostrand Company Inc., 1948. 530 p. illus. 23 cm. $6.00 4850

Contents (abridged): Part I, Basic mechanisms in behavior: The field of physiological psychology. Basic relations in neural theory. Gross features of neuromuscular action. Receptor mechanisms. Effector mechanisms. Adjustor mechanisms. Part II, The structure-functional organization of bodily mechanisms: Stratification of reaction patterns. The spinal cord and nerves. The sympathetic ganglia and nerves. Medulla oblongata and cranial nerves. The cerebellum. The midbrain and thalamic regions. The cerebral hemispheres. Afferent and efferent conduction systems. Part III, The integrative action of bodily mechanisms: Spinal integration. Integration at the subcortical level. Integration at the cortical level. Equilibrium, competition, and dominance. Facilitation and inhibition. Part IV, Bodily mechanisms and variable behavior: Motivation. Neuromuscular sets and postures. Learning. Decrement—fatigue and oscillation. Personality. Author index. Subject index.

Note: Although this volume is essentially [illegible] revision of the author's earlier book, *Introduction to physiological psychology* New York, The Ronald Press Co., 1934, the original material has been so revised and reworked in the light of recent knowledge as to constitute [illegible] new work. The purpose of the text is to provide psychologists with [illegible] review of physiological facts and theories pertinent to their field, and to present in systematic form [illegible] study of "the relationship between integrated behavior and bodily processes of the intact organism." The book will be of value as [illegible] text for students of psychology, medicine, education, and sociology.

Geldard Frank A.

The human senses. New York John Wiley & Sons, Inc., 1953 365 p. illus. 23 cm. $6.00 4851

Contents: Introduction. The visual stimulus and the eye. Basic visual phenomena. Color vision and color blindness. Visual acuity, contrast, and interaction. Sound energy and the ear. Auditory phenomena. Electrophysiology and auditory theory. The skin and its stimuli. Pressure and pain. Temperature sensitivity. Kinesthetic and organic sensibilities. Labyrinthine sensitivity. The sense of smell. The sense of taste. References. Index.

Note: Carrying out the belief of the author that "the highroad to the understanding of human nature is by way of an appreciation of man's senses and of the fundamental role they play in the attainment of knowledge and the regulation of behavior," this volume takes up each of the five senses in turn and describes their separate natures from the viewpoint of modern experimental psychology. It is [illegible] text book for students of psychology and for general readers. The author is Professor of Psychology, University of Virginia.

Hayek, Friedrich August von

The sensory order an inquiry into the foundations of theoretical psychology. With an introduction by Heinrich Klüver Chicago The University of Chicago Press, 1952 209 p. 22 cm. $5.00 4852

Contents: The nature of the problem. An outline of the theory. The nervous system as an instrument of classification. Sensation and behavior. The structure of the mental order. Consciousness and conceptual thought. Confirmations and verifications of the theory. Philosophical consequences. Bibliography. Index.

Note: This book is [illegible] presentation of an original theory of sensory order and the relations between physical and sensory phenomena. It is the author's thesis that "sensory perception must be regarded as an act of classification." He approaches the problem of classification to determine the relationships between experience and the relationship to the conditions [illegible] which makes experience possible. The work is philosophical and theoretical and is designed to pose problems for future consideration as well as to stabilize some of the material already known and available.

Hebb, Donald Olding

The organization of behavior a neuropsychological theory New York John Wiley & Sons. Inc., 1949 335 p. illus. 22 cm. $5.50 4853

Contents: The problem and the line of attack. Summation and learning in perception. Field theory and equipotentiality. The first stage of perceptual growth of the assembly. Perception of [illegible] complex: the phase sequence. Development of the learning capacity. Higher and lower processes related to learning. Problems of motivation: pain and hunger. The problem of motivational drift. Emotional disturbances. The growth and decline of intelligence. Bibliography. Index.

are numerous illustrations, many of which are reproduced photographs. A list of literature references in support of the text and a separate list of books for supplementary reading are included. The third edition was published in 1948. In this fourth edition, the book has been considerably reorganized and shortened. The chapter on careers in psychology is newly added. A new edition was scheduled early in 1958.

RUJA, HARRY

Psychology for life New York McGraw Hill Book Company, Inc., 1955 427 p illus. 23 cm $4 75 4842

Contents. Part I, Introduction The values of psychology Psychology as science. Part II, Learning and remembering Efficient college learning. Motivating learning. Learning through practice. Meaningful learning. Remembering. Part III, Vocational choice and intelligence Choosing a vocation. Intelligence and vocational success. Intelligence—its nature and measurement. The shaping of intelligence by heredity—by environment. Part IV Thinking and perceiving Thinking. Attending, observing, and perceiving. Part V Personality and motivation Personality factors in friendship and marriage. What is personality? Character culture, and physique. Motivation in daily life. Part VI, Emotions and mental health Living with our emotions. Controlling fear and anger The sick mind. Reactions to frustration. The healthy mind. Becoming mature. References. Index with glossary

Note An introductory textbook for short courses. It is well written, adequately illustrated, and fully supplied with literature references that may lead interested students to further study. The author did not attempt a broad view of psychology but selected topics which he considered important and of interest to beginning college students. Even though many areas of psychology are not mentioned, the reader is given a view of contemporary psychology as a vital science with many implications for daily living.

STAGNER, ROSS, AND T F KARWOSKI

Psychology New York McGraw Hill Book Company, Inc., 1952 582 p illus. 26 cm $5 75 4843

Contents Orientation Part one, Dynamics Biological drives. Emotions. Social motives. Part II, Cognition Sensing. Perceiving. Association. Conditioning. Problem solving. Remembering. Thinking. Intelligence. Part III, Personality Foundations. Conflict. Maturity Bibliography Name index. Subject index.

Note An introductory textbook for use in college courses. Psychology is presented as the scientific study of man's nature and behavior The treatment is unified by emphasizing the principle of homeostasis. The authors have been exceptionally skillful in relating psychological principles and facts to the background of experiences such as a beginning college student is likely to possess. The following passage illustrates this point "A persisting mental set ... interferes with attention to objects outside its scope. ... The last class before a vacation is ... inattentive to the lecture. Although written in a style obviously designed to hold the interest of the beginning student, the book has a substantial content. Perceptual processes, conditioning, and other difficult topics are presented without sidestepping difficult ideas and with frequent references to the experiments on which the knowledge is based. The book is well illustrated. The chapters include lists of recommended readings, and there is a 16-page bibliography of source material.

UNDERWOOD, BENTON J

Experimental psychology an introduction New York Appleton Century-Crofts Inc. 1949 638 p 22 cm (The Century psychology series edited by Richard M Elliott) $5 00 4844

Contents (abridged) Introduction. Discriminal processes. Motivation. Frustration. Conflict. Transfer of training. Learning. Forgetting—retention. Work. References. Author index. Glossary and subject index.

Note The methods and techniques of experimental psychology and the relationships between stimuli and behavior which have been demonstrated by experiment are given about equal emphasis in this college textbook The author has tried to avoid the sterility which can arise from an overemphasis on methodological sophistication (with little awareness of the sophistication necessary to evaluate the origins and quality of that content) The essential details of experimental procedures and apparatus set-ups are given, but the author has excluded technical details of apparatus. Also, he has not included quantitative data derived from experiments but has stated results in generalized terms. However a fair picture is given of contemporary methods. The bibliography contains 427 items and includes reference to original descriptions of many landmark experiments. The author is Associate Professor of Psychology in Northwestern University.

VALENTINE, WILLARD LEE, AND DELOS D WICKENS

Experimental foundations of general psychology Third edition. New York Rinehart & Company, Inc., 1949 472 p illus. 22 cm. $5 00 4845

Contents Magic and science. Psychology and the methods of science. The principle of control. Aptitudes. Inheritance. Maturation and growth. Intelligence. The meaning of intelligence-test scores. Physiological conditions. Drives and motives. Motives and incentives. The development of emotional behavior. Emotion in adults. Suggestibility and hypnosis. Perception. Conditioning. Learning. Remembering. Reasoning. Learning, thinking, imagining, dreaming. Personality Index of authors. Index of subjects.

Note. An elementary text in which accepted psychological principles are developed by examining a large variety of experimental work. These principles are then applied to practical situations in the lives of average people. The book does more than most introductory works to give the student and the layman an understanding of scientific method in general and of experimental procedure in psychology This revision of the 1941 edition presents new material on popular misconceptions about the nature of psychology on social behavior and on personality Experiments have been added which are more precise or thought to be of more interest to the reader. Eighty-five photographs and diagrams and a large number of tables contribute to the book's usefulness. The book is intended to be used together with some standard text which would systematize the facts here presented. Professor Valentine died in 1947 Professor Wickens is on the faculty of Ohio State University. This is the first edition on which his name appears as co-author

WOLFF, WERNER

Essentials of psychology Second revised and enlarged edition of *What is psychology* New York Grune & Stratton, 1956 385 p. illus. 22 cm. $6 50 4846

Contents (abridged) Part I, The scope of psychology Origins of psychology Three major psychological standpoints. Methods of psychological research. Is psychology a science? Part II, The physiology of behavior Origin of the individual. Brain and the nervous system. Electro-chemical basis of psychological activity Part III, Perception Part IV Retention Memory and its measurement The learning process. Learning theories. Part V Thinking Origins of thinking. The organization and mechanism of thought. Theories of thinking. Part VI, Intelligence The influence of heredity and environment. Intelligence and aptitude tests. Part VII, Emotion Theories of emotion. The physiology of emotion. Reactions to interference. Emotion and expression. Part VIII, Personality Definitions of personality Psycho-somatic theories of personality Psychological theories of personality Diagnosis of personality Part IX, Attitudes. Part X, Motivation The structure of motivation. Sigmund Freud. Alfred Adler Carl Gustav Jung The application of psychology Bibliography Author index. Subject index.

Note: A well-planned introductory text which is designed to impart a realistic view of the scope and content of present-day psychology It is suitable for students who have a serious interest in the science. There is a bibliography of 411 references.

ZUBEK, JOHN P, AND P A. SOLBERG

Human development New York McGraw Hill Book Company Inc., 1954 476 p. illus. 24 cm. (McGraw Hill series in psychology Clifford T Morgan consulting editor) $6.25 4847

Contents Introduction. Genetic foundations of behavior Neural development. Glandular development. Physical development. Motor development. Sensory development—vision and hearing—chemical and cutaneous senses. Learning and symbolic processes. Intellectual development. Emotional development. Social development. De-

the United States of America. Statistics taken from the case histories are given in 173 tables and about 150 graphs. The bibliography covers 41 pages. This book and its companion volume comprise ... known scientific description and analysis of human sexual phenomena as they were found in the United States during the 1940's.

KINSEY ALFRED CHARLES AND OTHERS

Sexual behavior in the human male, by Alfred C. Kinsey Wardell B Pomeroy and Clyde E. Martin. Philadelphia W B Saunders Company 1948. 804 p. illus. 24 cm. $7.50. 4859

Contents: Part I. History and method: Historical introduction. Interviewing. Statistical problems. Validity of the data. Part II. Factors affecting sexual outlet: Early sexual growth and activity. Total sexual outlet. Age and sexual outlet. Marital status and sexual outlet. Age of adolescence and sexual outlet. Social level and sexual outlet. Stability of sexual patterns. Rural-urban background and sexual outlet. Religious background and sexual outlet. Part III. Sources of sexual outlet: Masturbation. Nocturnal emissions. Heterosexual petting. Pre-marital intercourse. Marital intercourse. Extra-marital intercourse. Intercourse with prostitutes. Homosexual outlet. Animal contacts. Clinical tables. Appendix on sample size. Bibliography. Index.

Note: Since its publication in January 1948, this work has become known throughout the literate world. Many more copies have been sold than are usually sold of important literary works during the entire lifetime of the author. Nevertheless, it is not intended popularization but ... factual report and interpretation of data collected in ... carefully planned interviews whose sole object is to collect information. The authors are members of the faculty of Indiana University and the study has been supported by the National Research Council's Committee for Research on Problems of Sex. The present volume is based on interviews with 5,300 ... white males. Volumes planned for subsequent publication will present data on specialized topics such as legal aspects of sex behavior and prostitution.

MORGAN CLIFFORD THOMAS, AND ELIOT STELLAR

Physiological psychology Second edition. New York McGraw Hill Book Company Inc., 1950. 609 p. illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $7.00. 4860

Contents: Introduction. The peripheral response mechanism. The central nervous system. Nerve physiology. The internal environment. The chemical senses. Spatial vision. Brightness vision. Color vision. Hearing. The skin senses. Somesthetic mechanisms. The motor systems. Reflexes. Coordination. Emotion. Sleep and activity. Bodily needs. Instinctive behavior. Mating behavior. Conditioning. Sensory learning. Problem solving. Brain lesions in man. Behavior disorders. Electrical activity and behavior. Bibliography and author index. Subject index.

Note: An introductory survey that is comprehensive enough to make it useful as a ... reference book as well as text for undergraduate college students. The emphasis is on the physiological mechanisms of normal behavior. Considerably more information ... included on animal than on human psychology. Select lists of references for further reading are appended to the individual chapters, and the "Bibliography and author index" serves as an extensive list of the related periodical literature. The work was extensively rewritten in this edition. It is intended for the same groups of readers as the original edition.

OLIVEN JOHN F

Sexual hygiene and pathology a manual for the physician. Philadelphia J B Lippincott Company 1955 481 p. 24 cm $10.00. 4861

Contents: Part I. Sexuality in childhood: Normal and abnormal sexual development of the child. Sex education of the child. Common sex problems of childhood. The child as victim of sexual aggression. Abnormal sex behavior in children. Part II. Sexuality in the second decade: Normal and abnormal pubertal development. Adolescent sex education. Some common sex problems of the second decade. Deviated sex behavior in juveniles. Part III. Sexuality of the normal adult: Review of sexual organs and functions. Premarital consultation. The sexual act. Marital difficulties and marriage counseling. Principles of contraception. Sexuality in later life. Part IV. Sexual pathology: Somatic disorders and conditions. Sexual impotence. Frigidity. Syndromes of hypersexuality. Sexual deviations. Homosexuality. Name index. Subject index.

Note: Written by a professional psychiatrist and addressed to such readers as medical students and practicing physicians, this book deals in a practical manner with sex behavior in humans. It supplies the knowledge needed by practicing physicians in answering patients' questions and in aiding patients to overcome common sexual difficulties. At the same time, it describes pathologic sex behavior, thus enabling the physician to judge when a patient needs more than simple guidance and treatment.

REYMERT MARTIN LUTHER, editor

Feelings and emotions. The Mooseheart Symposium in cooperation with the University of Chicago. Anton J Carlson, president of honor Martin L. Reymert, general chairman, James G Miller cochairman. Edited by Martin L. Reymert. New York McGraw Hill Book Company Inc., 1950. 603 p. illus. 23 cm. (McGraw Hill publications in psychology Clifford T Morgan consulting editor) $8.00. 4862

Contents: Why feelings and emotions? by M. L. Reymert. I. Theory: psychophysiological approaches: Emotion as visceral action—an extension of Lange's theory, by M. A. Wenger. An excitatory theory of emotion, by M. B. Arnold. The conditioning of emotions, by R. P. [illegible]. A biodynamic psychoanalytic approach to the problems of feeling and emotion, by J. H. Masserman. Sensory affectivity, by H. Pieron. Theory of emotions in Soviet dialectic psychology, by I. D. London. II. Theory—psychological approaches: Emotional excitement as a necessary constituent in learning, by [illegible]. Study of the integrative process—its importance for psychiatric theory, by T. M. French. The emotions regarded as functional connections, by A. E. Michotte. The phenomenological approach to the problem of feelings and emotions, by F. J. J. Buytendijk. Emotions and sentiments in recent psychology, by J. [illegible]. A differential concept of feelings and emotions, by E. Harms. III. Reports of recent experiments: The study of patterns of emotional expression, by H. E. Jones. Experimental studies of mental patterns under stress, by R. B. Malmo. Animal origins of anxiety, by H. S. Liddell. Psychotic behavior produced in the Norway and Alexandrine rats apparently by fear of food poisoning, by C. P. Richter. Connective inhibitions during thought processes, by D. Katz. IV. Reviews integrating current experimental approaches: Central nervous mechanisms for the expression of anger in animals, by P. Bard. Emotions and the electroencephalogram, by D. B. Lindsley. A new frontier—neurophysiological effects of emotion on the brain, by C. W. Darrow. The experimental study of psychosomatic processes, by J. G. Miller. Some implications of physiological individuality, by R. J. Williams. V. Emotions and psychosomatics: Physiological manifestations of chronic emotional states, by N. W. Shock. Life situations, emotions, and bodily disease, by H. G. Wolff. VI. Emotions in the study of personality dynamics and clinical psychology: Nature and the individual in the psychologist's perspective, by S. Rosenzweig. The use of clinical diagnostic techniques in research ... emotions, by A. Roe. Intimacy and shyness in the dynamic structure of personality, by J. Nuttin. Guilt feelings—their function and dysfunction, by R. L. Jenkins. Some anthropological considerations concerning guilt, by M. Mead. The significance of the self-regarding attitudes and perceptions, by C. R. Rogers. Some psychological features of schizophrenia, by D. Shakow. VII. Emotions in human development: Emotion from the standpoint of a developmental morphology, by A. Gesell. Affect, expression, and symbolic function in the drawing of children, by L. van der Horst. Changes in emotional responses with age, by J. E. Anderson. Meeting the emotional needs of older persons, by G. Lawton. VIII. Emotions in social behavior: Emotional dimensions of group life, by D. Cartwright. Group behavior and the concept of emotion, by F. Fearing. On the psychology of social groups as illustrated by their incidence of mental disorder, by O. Ødegaard. Emotion and the social crisis: a problem in phylobiology, by T. Burrow. The irrational in the international picture, by G. Murphy. IX. Emotions in applied fields: Emotions in the factory, by W. V. Bingham. The emotional stress of the American in present-day industry, by C. R. [illegible]. The affective function of language, by [illegible]. Feeling and emotion in art, by H. S. Langfeld. X,

Note In this book, a theory of behavior "that is based as far as possible on the physiology of the nervous system" is presented. The gist of the theory is that no single nerve cell or pathway is essential to any habit of perception but that responses to stimuli are made by means of a diffuse "cell-assembly" The author's interest in the subject developed from observations by him and others that human beings suffered little loss of intelligence as a consequence of the removal of substantial amounts of brain tissue.

HOLT, EDWIN BISSELL

Animal drive and the learning process, an essay toward radical empiricism. With a supplementary essay on This material world, by Harold Chapman Brown. New York Henry Holt and Company, 1931 307 p. 21 cm. $3 50 4854

Contents Physiology versus verbal magic. Growth and learning. The pattern of organism. The pattern of the nervous system. The conditioned reflex. Random movements. The reflex-circle (Bok) Circular reflexes and progression; inhibition. Equilibration and postural tones. The education of sensory surfaces. The chain reflex. Avoidance responses—trial, error and success. Echo and imitation. Instinctive and appetitive drives. Response to mild annoyers—abience with adience. Obstacles—trial-and-error learning. Reflex conduction and integration—the objective reference of reflexes—motor half centres, reenforcement and inhibition—synaptic charge, partial and complete overcrowding. Further factors in integration—sustained responses and the locus of freedom, cross-conditioning. Motor block. The organism as a whole. This material world, by H. C. Brown. Bibliography Index.

Note. An important presentation of psychology in terms of physical and, primarily physiological processes. It was based on an extensive study of the literature, and is in essence an integration of vast number of research studies, not hitherto related to one another It is written at a level that suits it t reading by advanced students of psychology and graduate psychologists. The subtitle expresses the author's approach that is to say he has employed the way of thinking designated as "radical empiricism by William James.

HULL, CLARK LEONARD

A behavior system, an introduction to behavior theory concerning the individual organism New Haven Yale University Press, 1952 372 p illus. 25 cm $6 00 4855

Contents Introductory considerations. Simple trial-and-error learning. Discrimination learning. Behavior and the molar stimulus trace (s') Fractional antedating goal reactions. Simple behavior chains. Learning within the individual behavior link. Behavior in relation to objects in space. Multidirectional maze learning. The problem-solving assembly f behavior segments. Value, valuation, and behavior theory Concluding considerations. Glossary of symbols. Index of names. Index of subjects.

Note In the uthor' *Principles of behavior* New York, 1943 and his *Essentials of behavior* New Haven, 1951 he stated systematically the primary behavior principles. In this book he has shown "the applications of the principles to the deductions of the simpler phenomena characterizing the behavior of single organisms. These works are aimed toward the systematic quantitative description of both individual and social behavior although because of Professor Hull' death, the planned volume on social behavior was not written. In the present book, the content is cast largely in the form of theorems and of critical discussions of the experimental evidence on which the theorems are based. The book is addressed to graduate psychologists.

HULL CLARK LEONARD

Principles of behavior an introduction to behavior theory New York D Appleton Century Company Inc 1943 422 p. illus. 21 cm. (The Century psychology series R. M Elliott, editor) $5 50 4856

Contents. The nature of scientific theory Introduction to an objective theory of behavior Stimulus reception and organism survival. The biological problem of action and its coordination. Characteristics of innate behavior under conditions of need. The acquisition of receptor-effector connections—primary reinforcement. The acquisition of receptor-effector connections—secondary reinforcement. The symbolic construct sHr as function of the number of reinforcements. Habit strength as function of the nature and amount of the reinforcing agent. Habit strength and the time interval separating reaction from reinforcement. Habit strength as a function of the temporal relation of the conditioned stimulus to the reaction. Stimulus generalization. Some functional dynamics of compound conditioned stimuli. Primary motivation and reaction potential. Unadaptive habits and experimental extinction. Inhibition and effective reaction potential. Behavioral oscillation. The reaction threshold and response evocation. The patterning of stimulus compounds. General summary and conclusions. Glossary of symbols. Index of names. Index of subjects.

Note An objective, systematic presentation of the fundamental principles of behavior. Technical considerations are omitted from the text but are gathered at the end of the volume. Statements of primary principles are presented at the ends of the chapters, and each chapter has a list of references.

KANTOR, JACOB ROBERT

Problems of physiological psychology Bloomington Indiana Principia Press, Inc., 1947 398 p illus 24 cm. $6 00 4857

Contents. Section I The historical background of physiological psychology Problems and paradoxes of physiological psychology. Philosophical and scientific backgrounds of physiological psychology The British traditions of physical investigation and biological evolution of mind. The Continental tradition of laboratory physiology The historical rise and division of physiological psychology Philosophy and psychological science. The brain in the history of science. The biology and psychology of the nervous system. Section II. Analytic survey of the data and constructions of physiological psychology: Analysis of scientific physiological psychology General physiological psychology Sensory physiopsychology Psychophysiology Psychoneurology Experimental psychoneurology Clinical psychosurgery Psychochemistry Psychobiology Psychosomatic medicine. Section III. Suggestions for the emendation of physiological psychology Toward an authentic physiological psychology Bibliography and author index. Subject and name index.

Note In this work, the author's purpose is to define the scope of physiological psychology and to describe the types of problems with which this branch of psychology is concerned. He traces the development f the science from its earliest beginnings and discusses the methods and techniques which hav been evolved and which are now generally employed. Although the book serves as an introduction to the subject, the treatment is such that it will be of interest primarily to professional psychologists and advanced students. A 35-page bibliography is keyed to the textual material.

KINSEY, ALFRED CHARLES *AND OTHERS*

Sexual behavior in the human female by the staff of the Institute for Sex Research, Indiana University Alfred C Kinsey, and others Consulting editors Jerome Cornfield, statistics Harold Dorn, statistics Robert Laidlaw, psychiatry Karl Lashley psychology neurophysiology Emily Mudd, marriage counseling Philadelphia W B Saunders Company 1953 842 p illus 24 cm. $8 00. 4858

Contents. Foreword, by R. M. Yerkes and G. W Corner. Part I, History and method Scope of the study The sample and its statistical analysis. Sources of data. Part II Types of sexual activity among females: Pre-adolescent sexual development. Masturbation. Nocturnal sex dreams. Pre-marital petting. Pre-marital coitus. Marital coitus. Extra-marital coitus. Homosexual responses and contacts. Animal contacts. Total sexual outlet. Part III, Comparisons of female and male Anatomy of sexual response and orgasm. Physiology of sexual response and orgasm. Psychologic factors in sexual response. Neural mechanisms of sexual response. Hormonal factors in sexual response. Bibliography Index.

Note: A notable study carried out under the sponsorship of the Committee for Research on Problems of Sex, Medical Division, National Research Council. The publication presents for the human female the same types of social, statistical, anatomical, physiological, and psychological data as are presented for the human male in the complementary volume described in the next entry The analyses are based upon statistics gathered before 1950 from 5,940 white, nonprison females residing in all states of

population, and what can be learned from the study of co-operation among animals that could lead to better international co-operation are some of the topics discussed in the "applied" portion of the book. Aside from the discussion of implications from human society the book is a useful and interesting account of observations and experiments on animals, the results of which indicate considerable degree of automatic co-operation among non-human animals.

KLÜVER, *HEINRICH*

Behavior mechanisms in monkeys. With an introduction by K. S. Lashley Chicago University of Chicago Press, 1933 387 p. illus. 23 cm. (Behavior Research Fund monographs) $6.50. 4869

Contents (abridged) The general problem of behavior mechanisms. Animals used in this study Methods and general procedure. *First group of experiments:* Reactions to weight relations. Reactions to auditory relations. Reactions to visual relations. Reactions to motion changes. *Second group of experiments:* Visual acuity Tactual acuity Anisotropy Handedness. Strain functions. Instrumentation. Lesions. Chronological sequence of experiments. Discussion of results in the light of various problems. Summary Bibliography Index.

Note A monograph presenting the description and the results of the author's experiments in the study of sub-human primates, particularly the analysis of their behavior. Theoretical matters have been excluded so far as possible. The study of behavior is approached from a biological point of view although the author points out that there is difficulty in drawing a sharp line of demarcation between a biological and a sociological approach. The work deals not only in behavior mechanisms *per se* but also in behavior data which may be of use in connection with neurophysiological and related problems, since the brain of the lower primates is a simplified replica of the human brain. There are numerous tables of data and photographs, and the bibliography contains 509 references to the world literature.

MCCLELLAND DAVID C editor

Studies in motivation. Selected and edited by David C. McClelland. New York Appleton-Century-Crofts, Inc. 1955 552 p. illus. 24 cm. (The Century psychology series Richard M Elliott, editor) $6 00 4870

Contents (abridged) Part I. Psychodynamics A. Unconscious motives. B. The clinical study of human motivation C. Conscious motives. Part II, Biological origins of motives A. Instinctive bases for behavior B. Acquisition of motives. C. Theoretical considerations *Part III, Social origins of motives and values* A. Economic conditions as sources of values. B. The origins of motives and values in the family structure. C. Culture patterns as sources of values. D. Religion as a source of values. Part IV The effects of motivation on behavior A. Measuring human motivation B. Motivation and performance. C. Motivation and cognitive processes. D. Conflict. Index.

Note A well-selected anthology of writings pertaining to motivation in both lower animals and man Altogether it contains 50 papers. Some were originally journal articles, and others have been adapted from chapters in books. In the volume, the names of the authors and the original places of publication are all given. The book is suitable for use as a text or supplementary readings in advanced undergraduate college courses, and as a cross section of the work in this field, it is useful also to graduate psychologists and other scientists who feel the need for a representative collection.

MAIER, NORMAN RAYMOND FREDERICK, AND T C SCHNEIRLA

Principles of animal psychology New York McGraw Hill Book Company Inc. 1935 529 p. illus. 23 cm. (McGraw Hill publications in psychology J F Dashiell, consulting editor) $7.00 4871

Contents (abridged) Part I, Principles discernible in the behavior of infrahuman animals Fundamental characteristics of behavior First problems in the behavior of multicellular animals. New and significant advances in adaptation—the worms. Basic activities in the phylum Arthropoda. Basic features of vertebrate behavior. Modifiability and the partial alteration of directly determined behavior Part II, Prerequisites to behavior dominated by modifiability The differential reaction to stimuli. Neural mechanisms in behavior. Part III, The nature of modification in behavior—class Mammalia: Introduction to the problem of learning. Factors determining performance in learning situations. Higher mental processes. Bibliography Subject index. Author index.

Note. This book reinterprets and systematizes the varied behavior data of animals below man in an attempt to organize the evidence into a consistent psychological theory In addition, the book offers an analytical discussion of certain special problems, particularly learning and its nature, in connection with the behavior of higher animals. Each chapter contains a list of suggested readings and in addition there is an extensive bibliography of books and periodical articles.

MINER, ROY WALDO, editor

Comparative conditioned neuroses. Consulting editor Edward J Kempf New York Published by the Academy 1953 141–380 p. illus. 21 cm. (New York Academy of Sciences. Annals. Vol. 56 art. 2) $3.50 4872

Contents. Principles of nervous breakdown in schizokinesis and autokinesis, by W. H. Gantt. A comprehensive approach to the dynamics of conditioning neuroses, by H. S. Liddell. Morphological and constitutional factors in conditioning, by W. T. James. Neuroendocrine components in the physiological response to stress, by R. F. Graham. Factors modifying conditioned reactions and their relations to the autonomic nervous system, by E. Gellhorn. Cross-sectional and longitudinal studies of adjustive behavior in dogs, by J. L. Fuller. Experimentally produced behavior reactions to food poisoning in wild and domesticated rats, by C. P. Richter. Physiological changes during chronic fear, by G. F. Mahl. Neuroses in monkeys—a preliminary report of experimental observations, by J. H. Masserman and C. Pechtel. Human conditioning and anxiety by L. Welch. Neurosis—a disorder of conditioning or problem solving? by O. H. Mowrer. The relation of cerebral to autonomic activity in the conditioned emotional reactions of children, by C. W. Darrow. Neuroses as conditioned, conflicting, holistic, attitudinal, acquisitive-avoidant reactions, by E. J. Kempf. Certain aspects of conditioning in the human, by W. G. Reese. Vigilance (orienting behavior), conditional reactions, and adjustment patterns in schizophrenic and compulsive patients, by S. Fisch.

Note. Papers with titles and authors as listed above are contained in this publication. All were first presented at a conference on comparative conditioned neuroses in humans and other animals held by the Section of Psychology of The New York Academy of Sciences in February 1952. A majority of the papers report the results of research on animals other than human beings. Literature references are included in the papers.

MUNN NORMAN LESLIE

Handbook of psychological research on the rat an introduction to animal psychology Boston Houghton Mifflin Company 1950 598 p illus. 25 cm. $7.50. 4873

Contents. Introduction. Unlearned behavior. General activity Motives, emotions, and hoarding. Sensory processes. The role of sensory processes in maze behavior. The learning process. Some aspects and conditions of learning. Systematic psychology Abnormal and social behavior. Appendices: Books on comparative psychology Some additional references on comparative psychology Bibliography Index of authors. Index of subjects.

Note. This work supersedes the author's *An introduction to animal psychology: the behavior of the rat,* published in 1933. The new work includes extensive revisions of former conclusions made necessary by investigations and research in the intervening years. It also includes certain fields of animal psychology not covered in the earlier book, behavior disorders, social behavior, emotional behavior, and systematic psychology Illustrative material consists of 180 figures, many of them picturing mazes and other apparatus used in psychological testing, and 13 tables showing data resulting from experiments. The bibliography of more than 2,300 entries covers publications in all languages on rat behavior

Methodology: The sample interview as a research tool to study motivation, by R. Likert. The factorial study of emotions, by Sir C. Burt. The significance of Q-technique for the study of personality by W Stephenson. Epilogue, by A. J Carlson. Name index. Subject index.

Note An important volume which contains the papers originally presented at the second International Symposium on Feelings and Emotions held at Mooseheart and Chicago, Illinois, October 28–30, 1948. The contributors include scientists from several nations and from several branches of science, notably physiology biochemistry anthropology and neurology as well as psychology

SKINNER, BURRHUS FREDERIC

The behavior of organisms an experimental analysis New York D Appleton Century Company, Inc. 1938 457 p illus 23 cm (The Century psychology series, R. M Elliott, editor) $5 00 4863

Contents A system of behavior Scope and method. Conditioning and extinction. Periodic reconditioning The discrimination of a stimulus. Some functions of stimuli. Temporal discrimination of the stimulus. The differentiation of a response. Drive. Drive and conditioning. The interaction of two variables. Other variables affecting reflex strength. Behavior and the nervous system. Conclusion.

Note This book explains an original method of investigating behavior which makes it possible to identify and to treat experimentally a considerable number of fundamental behavior variables. It emphasizes that kind of behavior ("operant behavior") which is not elicited in response to stimulation but may be said to be "emitted" by the organism. It gives special attention to the processes of discrimination and advances a new interpretation. It develops an important concept of the reflex "reserve" and presents fresh and simple treatment of the problem of motivation.

SNYDER, FREDERIC WINKLER, AND N H. PRONKO

Vision with spatial inversion Wichita University of Wichita Press 1952 144 p illus 21 cm $2 50 4864

Contents Studies in perception. The problem and general plan of the present study The card-sorting task. The Minnesota rate of manipulation test. The Purdue pegboard test. The mirror-tracing task. Observations on extra-experimental activities. Theoretical discussion and summary Bibliography Appendix Experimental diary

Note Reported in this book are the results of an experiment planned to obtain answers to the following questions What occurs in perception when the visual field is inverted? What is the influence of past-experience on performance during disorientation and following removal of the inverting lenses? During considerable part of the experiment the field of vision of the subject was both inverted and considerably restricted. Restriction and inversion of the visual field were accomplished by system of lenses set into pair of tubes so as to constitute binocular unit-power telescope. The effects of the disruption of established visuo-motor habits were studied by various tests of learning, some of which are named in the chapter titles. The diary printed in the appendix was kept by the subject himself and states the effects as they appeared to him. In the first chapter of the book previous studies which resemble the purpose and methodology of this study are discussed.

WENGER, M A. AND OTHERS

Physiological psychology By M A Wenger F N Jones and M H Jones. New York Henry Holt and Company 1956 472 p. illus (part col d) 24 cm $6 00 4865

Contents Introduction. The organism. Conducting cells and nerve action. Introduction to the central nervous system. Contracting cells and muscle action. Irritable cells—sensation and perception. Pressure and temperature. Pain. The proprioceptive senses. The chemical senses. Audition. Vision. Secreting cells and chemical integration. Reflexive behavior Autonomic functions. The organization of movement. Cortical dynamics and integrated behavior Motivation. Emotional behavior Psychosomatic problems. Somatopsychological problems. Some problems in physiological psychology Appendix—references. Glossary Index.

Note. A textbook for college courses written by three members of the University of California at Los Angeles. It presents primarily for students who are majoring in psychology an introduction to the structure and functions of the systems of the body which are of psychologic interest, namely the nervous system, the senses, and the endocrine system. In addition, it includes discussions of psychosomatics, the somatopsychological effects of fatigue, diet, narcotics, etc. It is written from a psychobiological point of view, and there is emphasis on the fact that physiology as well as psychology must be taken into account in the study of behavior. The terminal chapter includes, among other things, a short discussion of the physiological factors in abnormal behavior

WORTIS, SAMUEL BERNARD, AND OTHERS

Physiological and psychological factors in sex behavior New York The New York Academy of Sciences, 1947 62 p. 23 cm. (New York Academy of Sciences. Annals Vol 47, p 603–664, 1947) $1.25 4866

Contents Introduction to the conference, by S. B. Wortis. Part I Animal sex behavior: Animal endocrines in relation to sexual behavior by W C. Young. Sex behavior in primates, by W R. Gab. Part II, Human sex behavior Sex behavior in the human animal, by A. C. Kinsey Aberrant sex behavior in humans, by M. Herman. Sex and culture, by G. Bateson.

Note. The purpose of these papers, presented originally at conference held in March, 1946, under the auspices of the New York Academy of Sciences, is to demonstrate, on the basis of scientific fact, the need for change in man's attitude toward sex behavior and, eventually in the law concerned with sex matters. Problems of animal and human sex behavior are discussed separately in the light of recent psychological and physiological findings.

YOUNG, PAUL THOMAS

Emotion in man and animal, its nature and relation to attitude and motive. New York John Wiley and Sons Inc., 1943 422 p. illus. 23 cm. $5 50 4867

Contents. The nature of emotion. Attitudes and motives, determinants of emotion. Needs and appetites. Emotional development. Bodily changes in emotion. Patterns of organic response in emotional excitement. Feeling and emotion as conscious processes. Direct determinants of emotion. Predisposing conditions of emotional disturbance. Attitudes and motives in relation to emotion. General conclusion. Index of authors. Index of subjects.

Note An important book on emotions in relation to attitudes and motives. These topics are considered in the light of scientific investigations and in relation to practical human problems of development and adjustment. The material is of interest to students of child psychology education, anthropology physiology, social and experimental psychology and allied fields. The book takes account of clinical material and case studies as well as the findings of the laboratory A generous number of plates and figures illustrate the text. Bibliographies, notes, and suggestions for further study amplify the presentation.

COMPARATIVE PSYCHOLOGY

ALLEE, W C

Cooperation among animals with human implications A revised and amplified edition of *The social life of animals* New York Abelard Schuman 1951 233 p illus. 21 cm. $3 50 4868

Contents The approach. History Natural history Beginnings of cooperation. Aggregations of higher animals. Population size and evolution. Group behavior Group organization Social transitions. Some human implications. The peck order and international relations. Summary Literature cited. Index.

Note As noted in the title, this book is revision of the author's *The social life of animals*, 1938. In the chapters devoted to co-operation among animals, new information and new evidence from experiments has been added. In the discussions of implications for mankind, there are broader and more forceful extensions of the experimental findings to the realm of co-operation among men and, more particularly co-operation among nations. Whether biological relationships make war necessary whether war is justified by the biological results such as the reduction of the

Psychology

Social Psychology

... In Soviet psychology. Modern Soviet psychology. Psychology and the Soviet system. Notes. Index.

Note This book is both a study of the effects of the Soviet political system upon psychology in Russia and a study of the concept of human nature as it is presented in the new Soviet psychology. It is penetrating and well documented. Although of primary interest to psychologists, it is written in a style that makes it available also to educated people outside this profession.

BERRIEN FREDERICK KENNETH

Comments and cases on human relations. New York Harper & Brothers, 1951 500 p. illus. 22 cm. $4.50 4881

Contents (abridged) Part one: The setting. Words and things. Observing and thinking. Motivation and behavior. Social skills and group codes. Attitude, prejudice, and rumor. Rebuilding attitudes. Part ... Organization, control, and personality. Society and self. Part III Appendix. Index of names. Index of subjects.

Note A "case method" text designed for use in undergraduate college courses and adult education groups where considerable use is made of group discussion in teaching. In the first part—which occupies about one-half of the space—the social processes of contemporary society are described and analyzed, and successful methods of adjusting conflicts due to them are outlined. The second part of the book is devoted to narrative descriptions of 28 individual and group situations ranging from problems in the maladjustments of adolescents to complex problems in labor-management relations. These "cases" are intended for discussion by the classes and other groups making use of the book, and they constitute its unique features. The author is Professorial Lecturer at George Washington University

BETTELHEIM BRUNO AND MORRIS JANOWITZ

Dynamics of prejudice. A psychological and sociological study of veterans. New York Harper & Brothers, 1950 227 p. illus. 24 cm. (Studies in prejudice edited by Max Horkheimer and Samuel H. Flowerman. Sponsored by The American Jewish Committee. Social studies series. Publication no. IV) $4.00. 4882

Contents Dynamic approach to intolerance. Patterns of ethnic intolerance. Stereotyping the minority. Social status. The war experience. Anxiety and intolerance. Tolerance: ... function of control. Continuing tendencies, anti-Negro attitudes. Reflections, and applications for social action. Appendix: The interview. Sampling procedure. Comments on the interview situation. Defining the patterns of intolerance. Reliability of analytic procedures. Schedule of interview questions. Supplementary tables. Index.

Note One of a series of volumes of which the aim is not merely to describe prejudice but to explain it in order to help in its eradication. In the view of the editors eradication of prejudice means re-education on the basis of scientific understanding. In this volume the connection between personality traits and prejudice among war veterans ... concerned with the purpose of discovering what there is in the psychology of the individual that renders him "prejudiced" or "unprejudiced." The group selected for intensive study was a random sample of 150 male veterans of World War II who were residents of Chicago, excluding those who were officers and members of ethnic groups toward which hostility is most frequently directed, i.e., Negroes, Jews, Chinese, Japanese, Mexicans. The work is of interest to psychologists and sociologists.

CANTRIL, HADLEY

The psychology of social movements. New York John Wiley & Sons, Inc., 1941 274 p. 23 cm. (Wiley books in psychology H. L. Langfeld, advisory editor) $4 25 4883

Contents Part I, Basic concepts: Mental context. Motivation in social life. The individual's pursuit of meaning. Part II, Social movements: The lynching mob. The kingdom of Father Divine. The Oxford group. The Townsend plan. The Nazi party. Index.

Note A readable and informative volume. The author has made a penetrating analysis of the complex reasons behind the rise of social movements—their social context, the psychology of the leaders and the followers, the special appeals. Consideration is given to economic and political factors. The book appeals alike to students of social psychology and laymen.

CARTWRIGHT, DORWIN, AND ALVIN ZANDER, editors

Group dynamics research and theory Evanston Row, Peterson and Company 1953 642 p. illus. 24 cm. $6.00 4884

Contents (abridged) Part I, Approaches to the study of groups. Part II, Group cohesiveness. Part III, Group pressures and group standards. Part IV Group goals and group locomotion. Part ... The structural properties of groups. Part VI, Leadership. Index.

Note A collection of 41 papers from previously published books, chapters (and shorter passages) from periodical journals, and ... The selections represent some of the most important modern contributions by Americans to the psychology of groups. Each of the six parts is prefaced by a chapter written by the editors, in which the selections in the particular part are correlated and interpreted. The volume is well indexed.

CENTERS RICHARD

The psychology of social classes a study of class consciousness. Princeton Princeton University Press, 1949 244 p illus 22 cm. (Studies in public opinion, a series under the editorial sponsorship of *The public opinion quarterly* and directed by a committee consisting of Gordon W Allport, Hadley Cantril, W Phillips Davison) $3.50. 4885

Contents Introduction—the social context. Theoretical context—some key concepts and the interest group theory of class structure. Some prior research and the tasks of the present enquiry. Technique and procedure. Politico-economic orientations of occupational strata. Class consciousness and class structure. The interest group theory of class structure—a critical appraisal. Other psychological differences between social classes. Sociological and psychological correlates of class consciousness—the problem of determinants. Summary and conclusions. Appendixes: Some comparative data—class consciousness in Sweden and France. A note on the relation of class and status—a critique of some recent social anthropological research. Supplementary tables. Interview schedule. References. Index.

Note The results of original research on the socio-economic stratification of classes in the United States of America are presented and analyzed in this volume. The investigation was carried out by the Field Staff of the Office of Public Opinion Research of Princeton University and the principal technique used was person-to-person interviews with individuals deemed to represent a cross section of the adult white male population of the United States. The data obtained in the study are presented in 94 tables and a smaller number of graphs. They are discussed and conclusions are drawn in the accompanying text, which is written in a semi-technical but readable style.

DEWEY RICHARD AND W J HUMBER

The development of human behavior New York The Macmillan Company 1951 762 p. illus. 24 cm. $6.25 4886

Contents Part I, A note on the function of theory: What is social psychology? Human nature's interactive variables. Mechanisms of biological inheritance. Potentialities for human nature. Environment. The interactive process. Motivation in social behavior. Personality. Part II, The social psychology of age groups: Infancy and the preschool years. Childhood. Adolescence. Adulthood. Old age. Part III, Abnormal status, deviant roles, and personality: Who's normal? The social psychology of minority status. Physiological-anatomical minorities. Cultural minorities. Personal-social minorities. Those outside of the law. Those outside our world. Part IV Institutions, organizations, and personality: The school and personality. Religion and human nature. The job, the economic system, and the individual. Riots, mobs, and panics. Part ... Social psychology and ethics. The good society. Appendix. Index of names. Index of subjects.

Note An introductory but substantial presentation of the principles of social psychology and of the behavior of groups in society interpreted in terms of social psychology. Much emphasis is placed

RIESEN, AUSTIN HERBERT, AND ELAINE F KINDER

Postural development of infant chimpanzees, a comparative and normative study based on the Gesell behavior examination. With a foreword by Henry W Nissen New Haven Yale University Press, 1952 204 p illus 24 cm $5 00 4874

Contents Introduction. Posture as behavior. General postural characteristics of the chimpanzee. Subjects and procedures. Treatment of data and methods of presentation. Comparative data—postural development of chimpanzee and man. Postural schedule for chimpanzee infants. Individual differences in postural development among the chimpanzee subjects. Discussion. Summary Bibliography Index.

Note. This book contains a detailed report of a comparative behavior study of chimpanzee infants and human infants during their first year of life. Both groups of infants were tested on 202 items of the Gesell and Thompson behavior examination, and the data obtained are carefully tabulated and analyzed to indicate differences in postural development of each species. The material, which is primarily of interest to students of psychology is part of larger study conducted at the Yerkes Laboratories of Primate Biology regarding the physical, psychological and behavioral development in chimpanzees.

STONE, CALVIN PERRY, editor

Comparative psychology Third edition New York Prentice Hall, Inc , 1951 525 p illus. 24 cm. $6 75 4875

Contents Introduction, by C. P Stone. Historical background of comparative psychology by R. H. Waters. Maturation and "instinctive" functions, by C. P Stone. Motivation of animal behavior by P T Young. Internal secretions and behavior by W C. Young. Learning: general introduction, by W T Heron. Primate learning, by H. F Harlow Theoretical interpretations of learning, by K. W Spence. The neurology of learning, by D G. Marquis. Discriminative behavior in animals, by K. U Smith. Individual differences, by C. S. Hall. Problems and principles of animal sociology by N E. Collias. Social behavior in primates, by H. W Nissen. Abnormal behavior in animals, by R. A. Patton. Author index. Subject index.

Note. A college textbook designed for use in first courses in comparative (or animal) psychology It was formerly edited by F A. Moss. The pattern of the preceding edition, published in 1942 has been followed, and each of the chapters is monographic summary with references to the source literature. The authors of five of the chapters which appeared in the 1942 edition have rewritten their monographs for the present edition All of the other chapters are the work of new contributors. All of the bibliographies have been revised.

WASHBURN, MARGARET FLOY

The animal mind a text book of comparative psychology Fourth edition. Westport, Conn. Associated Booksellers, 1936 536 p. illus 20 cm $7 50 4876

Contents The difficulties and methods of comparative psychology The evidence of mind. The mind of the simplest animals. Sensory discrimination—methods of investigating it—the chemical sense—hearing—vision. Spatially determined reactions. Space perception and the perception of things. The modification of conscious processes by individual experience. Higher mental processes. The affective factors in the animal mind—drives, incentives and emotions. Some aspects of attention. References. Index of subjects. Index of names.

Note. One of the earliest objective interpretations of animal behavior now rated as classic of comparative psychology The first edition was published in 1908 and the fourth in 1936, all by the Macmillan Company The edition listed here is reprint of the last Macmillan edition.

YERKES, ROBERT MEARNS

Chimpanzees a laboratory colony New Haven Yale University Press 1943 321 p. illus. 24 cm. $6 75 4877

Contents Prologue. Servant of science. Part I, General descriptions: From jungle to laboratory Good tempers and bad. Social behavior. Life's cycles. Male and female. Part II, Mentality The world of the chimpanzee. Looking toward intelligence. Experience the teacher Memory foresight, and insight. Language and symbolism. Part III, Care and handling House and home. Feeding chimpanzees. Breeding and rearing. An ounce of prevention. Epilogue. The story of an idea. References and selected bibliography Subject-author index.

Note. Professor Yerkes organized and for many years directed the Yale Laboratories of Primate Biology at Orange Park, Florida. He experimented with the great apes in an effort to discover in their lives the springs of action that motivate living creatures, among them man himself For some 35 years, both in the United States of America and in Africa, he and his staff have conducted pioneer studies of the habits and social life of chimpanzees, devising tests for them, using them as experimental subjects, measuring and photographing them, understanding them with respect and affection. In this volume Dr. Yerkes has summed up his knowledge of the chimpanzee for both scientist and layman.

YOUNG, PAUL THOMAS

Motivation of behavior, the fundamental determinants of human and animal activity New York John Wiley and Sons, Inc., 1936. 562 p. illus. 23 cm. $6 75 4878

Contents. The problem. The energetics of activity Animal drives. Drive and purpose. Direction and regulation. Positive and negative behavior. Psychological hedonism. Social motivation. Emotion and motivation. The dynamic interplay of motives. Questions and exercises. Index.

Note. A general psychology study going beyond beginning or introductory psychology The author gives great deal of space to descriptions of experiments and cases so as to present impartially the points of view of a great many schools ranging from animal psychology to psychoanalysis. He has illustrated his theories by reference to numerous experiments, both his own and those of others, and has concisely estimated the importance of their results as bearing upon his problem.

SOCIAL PSYCHOLOGY

ASCH, SOLOMON E

Social psychology New York Prentice-Hall, Inc. 1952 646 p 24 cm. $6.25 4879

Contents. Part I, Introduction: Doctrines of man. Part II, Organization in psychological events: Structured properties of experience and action. Psychological invariance and change. Part III, Human interaction The transformation of man in society The problem of human interaction. Social facts—the products of interaction. The expression of emotions. Knowledge of persons and groups. An introduction to group theory Part IV Social needs. The ego. Social interest. Rules and values. The fact of culture and the problem of relativism. Part Effects of group conditions on judgments and attitudes. The doctrine of suggestion. Structural factors in the understanding of assertions. Group forces in the modification and distortion of judgments. The study of small groups. Opinion and attitude—their sociological shape. Sentiments and attitudes. Some remarks on propaganda. Name index. Subject index.

Note. A re-examination and evaluation of the fundamental concepts and assumptions regarding the social nature of man, in terms of Gestalt theory Rather than providing an exhaustive or historical review of the subject, the discussion centers around these aspects of behaviorism and psychoanalysis which relate directly to social psychology The chapters dealing with the expression of emotion, the understanding of assertions, and the distortion of judgments are based largely on the author's experimental studies in these fields. The author is Professor of Psychology at Swarthmore College.

BAUER, RAYMOND A

The new man in Soviet psychology Cambridge, Mass. Harvard University Press, 1952 229 p. 22 cm $4 00 4880

Contents Foreword, by J S. Bruner The relationship of psychology to society Two kinds of Marxism The pattern of social change. The behavioral psychologies of the twenties. The mechanistic model of personality Consciousness comes to man The turning point in applied psychology The decree against pedology The "new

... in Soviet psychology. Modern Soviet psychology. Psychology and the Soviet system. Notes. Index.

Note: This book is both a study of the effects of the Soviet political system upon psychology in Russia and a study of the concept of human nature as it is presented in the new Soviet psychology. It is penetrating and well documented. Although of primary interest to psychologists, it is written in a style that makes it available also to educated people outside this profession.

BERRIEN, FREDERICK KENNETH

Comments and cases on human relations. New York Harper & Brothers, 1951 500 p. illus. 22 cm. $4.50. 4881

Contents (abridged) Part one: The setting. Words and things. Observing and thinking. Motivation and behavior. Social skills and group codes. Attitudes, prejudice, and rumor. Rehabilitating attitudes. Organization, control, and personality. Society and self. Part II. Appendix. Index of names. Index of subjects.

Note: A "case method" text designed for use in undergraduate college courses and adult education groups where considerable use is made of group discussion in teaching. In the first part—which occupies about one-half of the space—the social pressures of contemporary society are described and analyzed, and successful methods of adjusting conflicts due to them are outlined. The second part of the book is devoted to narrative descriptions of 28 individual and group situations ranging from problems in the maladjustments of adolescents to complex problems in labor-management relations. These "cases" are intended for discussion by the classes and other groups making use of the book, and they constitute its unique feature. The author is Professorial Lecturer at George Washington University.

BETTELHEIM, BRUNO, AND MORRIS JANOWITZ

Dynamics of prejudice. A psychological and sociological study of veterans. New York Harper & Brothers, 1950. 227 p. illus. 24 cm. (Studies in prejudice, edited by Max Horkheimer and Samuel H. Flowerman. Sponsored by The American Jewish Committee. Social studies series. Publication no. IV) $4.00. 4882

Contents: Dynamic approach to intolerance. Patterns of ethnic intolerance. Stereotyping the minority. Social status. The war experience. Anxiety and intolerance. Tolerance a function of control. Combating intolerance: anti-Negro attitudes. Reductions, and applications for social action. Appendix. The interview. Sampling procedure. Comments on the interview situation. Defining the patterns of intolerance. Reliability of analytic procedures. Schedule of interview questions. Supplementary tables. Index.

Note: One of a series of volumes of which the aim is not merely to describe prejudice but to explain it in order to help in its eradication. In the view of the editors eradication of prejudice means re-education on the basis of scientific understanding. In this volume the connection between personality traits and prejudice among war veterans is examined with the purpose of discovering what there is in the psychology of the individual that renders him "prejudiced" or "unprejudiced." The group selected for intensive study was a random sample of 150 male veterans of World War II who were residents of Chicago, excluding those who were officers and members of ethnic groups toward which hostility is most frequently directed, i.e. Negroes, Jews, Chinese, Japanese, Mexicans. The work is of interest to psychologists and sociologists.

CANTRIL, HADLEY

The psychology of social movements. New York John Wiley & Sons, Inc. 1941 274 p. 23 cm. (Wiley books in psychology, H. L. Langfeld, advisory editor) $4.25 4883

Contents: Part I, Basic concepts: Mental context. Motivation in social life. The individual's pursuit of meaning. Part II, Social movements: The lynching mob. The kingdom of Father Divine. The Oxford Group. The Townsend plan. The Nazi party. Index.

Note: A readable and informative volume. The author has made a penetrating analysis of the complex reasons behind the rise of social movements—their social context, the psychology of the leaders and the followers, the special appeals. Consideration is given to economic and political factors. The book appeals alike to students of social psychology and laymen.

CARTWRIGHT, DORWIN, AND ALVIN ZANDER, editors

Group dynamics: research and theory. Evanston Row, Peterson and Company 1953 642 p. illus. 24 cm. $6.00 4884

Contents (abridged) Part I, Approaches to the study of groups. Part II, Group cohesiveness. Part III, Group pressures and group standards. Part IV, Group goals and group locomotion. Part V, The structural properties of groups. Part VI, Leadership. Index.

Note: A collection of 41 papers from professional journals, and chapters (and shorter passages) from previously published books. The selections represent some of the most important modern contributions by Americans to the psychology of groups. Each of the six parts is prefaced by a chapter written by the editors, in which the selections in the particular part are correlated and interpreted. The volume is well indexed.

CENTERS, RICHARD

The psychology of social classes: a study of class consciousness. Princeton Princeton University Press, 1949 244 p. illus. 22 cm. (Studies in public opinion, a series under the editorial sponsorship of *The public opinion quarterly* and directed by a committee consisting of Gordon W. Allport, Hadley Cantril, W. Phillips Davison) $3.50. 4885

Contents: Introduction—the social context. Theoretical context—some key concepts and the interest group theory of class structure. Some prior research and the tasks of the present enquiry. Techniques and procedures. Politico-economic orientations of occupational strata. Class consciousness and class structure. The interest group theory of class structure—a critical appraisal. Other psychological differences between social classes. Sociological and psychological correlates of class consciousness—the problem of determinants. Summary and conclusions. Appendices. Some comparative data—class consciousness in Sweden and France. A note on the relation of class and status—a critique of some recent social anthropological research. Supplementary tables. Interview schedule. References. Index.

Note: The results of original research on the socio-economic stratification of classes in the United States of America are presented and analyzed in this volume. The investigation was carried out by the Field Staff of the Office of Public Opinion Research of Princeton University and the principal technique used was person-to-person interviews with individuals deemed to represent a cross section of the adult white male population of the United States. The data obtained in the study are presented in 16 tables and a smaller number of graphs. They are discussed and conclusions are drawn in the accompanying text, which is written in a semi-technical but readable style.

DEWEY, RICHARD, AND W. J. HUMBER

The development of human behavior. New York The Macmillan Company 1951 762 p. illus. 24 cm. $6.25 4886

Contents: Part I, A note on the function of theory. What is social psychology? Human nature's interaction variables. Mechanisms of biological inheritance. Potentialities for human nature. Environment. The interactive processes. Motivation in social behavior. Personality. Part II, The social psychology of age groups: Infancy and the preschool years. Childhood. Adolescence. Adulthood. Old age. Part III, Abnormal status, deviant roles, and personality: Who's normal? The social psychology of minority status. Physiological-anatomical minorities. Cultural minorities. Personal-social minorities. Those outside of the law. Those outside our world. Part IV, Institutions, organizations, and personality: The school and personality. Religion and human nature. The job, the economic system, and the individual. Fads, mobs, and panics. Part V, Social psychology and ethics: The good society. Appendix. Index of names. Index of subjects.

Note: An introductory but substantial presentation of the principles of social psychology and of the behavior of groups in society interpreted in terms of social psychology. Much emphasis is placed

on th importance of the scientific attitude and on the information so far accumulated by the techniques of scientific investigations. In the first part, basic information on such pertinent topics as genetics, the structure of the nervous system, the influence of the social environment on human nature and human motivation is presented. In the remainder of the book, the phenomena of behavior evidenced within groups and as interactions among groups are analytically discussed. The text is well documented with literature references, and the names of the authors of cited papers are brought out in the index of names. The book is suited to use as a text in college courses offered to students who have completed basic courses in psychology. It has value also as a reference and orientation book for teachers, journalists, etc.

DOOB, LEONARD WILLIAM

Public opinion and propaganda. New York Henry Holt and Co, 1948 600 p il lus 22 cm $8 75 4887

Contents The importance of people. Social beha ior The nature of public opinion. The cultural background of public opinion. The behavior of public opinion. Sampling public opinion. The mechanics of polling. The evaluation of polls. Intensive measures of public opinion. The importance of public opinion. The nature of propaganda. The propagandist. The content of propaganda. The perception f propaganda. Personality and propaganda. The learning of propaganda. Propaganda and action. The printed media. Radio. The media of sight and sound. The value of analysis. References. Index.

Not A searching analysis of the interrelations of public opinion and propaganda, written from the viewpoint of modern social science. The techniques of modern propaganda, their effectiveness and limitations are described at length. Polls based on the questioning f selected samples of a community as a means of estimating public opinion are discussed from the same viewpoint and with equal thoroughness. The list of references is extensive. The work is suited to advanced students in sociology and to persons with professional interests in the subject.

DOOB, LEONARD WILLIAM

Social psychology an analysis of human behavior New York Henry Holt and Company, 1952 583 p 24 cm $8 75 4888

Contents Part I, The individual in society the social setting. The bases of behavior Socialization and learning. Actions and reactions. Language. The methods of research. Part II, The behavior of groups. Ethnic groups. The individual and his group. Organized groups. Group laws Leaders. Group prejudice. Delinquency and crime. Part III, Social change Vogues. Communication and the mass media. Education and re-education. Social conflict. The diffusion of change. The problems and scope of social psychology Index.

Note Mainly this book is a survey of the problems with which social psychology must deal. There is considerable emphasis on unsolved problems. So many quotations from significant surveys, reports, and other basic materials of social psychology are included that the book can be used as an introductory guide to such literature. The author has made good use of important research studies of World War II and the years immediately after Each of the three main parts contains a selected bibliography The book is useful chiefly as an introductory text at the college level for students with serious interests in social psychology and sociology

FARIS, ROBERT E LEE

Social psychology New York The Ronald Press Company, 1952 420 p 23 cm $5 50 4889

Content Human natur and the social order Inadequacy of biological motivation. Motivation—the individual aspect—social sources. The emergence of consciousness. The concept of unconscious mind. The emergence of self-consciousness in social interaction. Social determination of learning, perception and memory Social determination of attitudes and beliefs. The social factor in ability The ch acter of primary interaction. The differentiation of persons by variations of mind. The neurotic role. Personality disorganization. Trends and problems in social psychology Index of names. Index f subjects.

Note A well-written introduction, in which the main emphasis is on the significant results of the outstanding scientific investigations in recent decades of the ph nomena of social behavior and of personality development in human society No particular school of psychological thought is favored however the author is critical of the Freudian school. Frequent quotations from the writings of other authors are incorporated in the text, and there are numerous footnote citations of other writings. Although primarily a text for college courses, the book is so written that it can be read with profit by mature lay readers not enrolled in formal courses.

FRANK, LAWERENCE KELSO

Society as the patient, essays on culture and personality New Brunswick Rutgers University Press, 1948 395 p 22 cm. $6.00. 4890

Content (abridged) Society as the patient. The cost of competition. The principle of disorder and incongruity The significance of industrial integration. Social planning and individual ideals. Social change and the family The management of tensions. Social order and psychiatry Freud' influence on Western thinking and culture. Freedom for the personality Mental security Mental health in schools. Art and living. Science and culture. The historian as therapist. Dilemmas of leadership. Man's multidimensional environment. The arts in reconstruction. World order and cultural diversity

Not The contributions [illegible] the author of this book to social psychology and the study of society are widely recognized. He terms his special iewpoint "the psychocultural approach, and points out that it utilizes the concepts and findings of psychiatry psychoanalysis, and psychology along with those of anthropology and sociology The essence of his viewpoint is that the psychology of society is not a separate entity but is manifestation of the psychology of indi iduals. The essays in this book ha appeared over period of many years in numerous periodicals and are reprinted for the most part without textual changes.

GERTH, HANS, AND C WRIGHT MILLS

Character and social structure the psychology of social institutions. New York Harcourt, Brace and Company Inc., 1953 490 p illus. 22 cm $6 75 4891

Contents. Part I, Introductory Perspectives. Character and social structure. Part II, Character structure Organism and psychic structure. The person. The sociology of motivation. Biography and types of childhood. Part III, Social structure. Institutions and persons. Institutional orders and social controls. Symbol spheres. Stratification & institutional orders. The unity of social structures. Part IV Dynamics Social-historical change. The sociology of leadership. Collective beha ior Master trends. Bibliographical notes. Index.

Note The sub-title is key to this book. The authors are concerned not with traditional social psychology but with the psychology of social structures—institutions which in the present world not only control man's destiny—but also mold individual personalities. The following passage illustrates the iewpoint "When the roles composing social structure are specialized into more or less autonomous institutions, the traits of men are likely to be segregated and specific. A man may cheat his wife, but not his business partner or ice versa. On the field of sport the football player may be a ruthless tackler but on the dance floor an awkward partner and timid competitor. From this iewpoint the authors analyze the psychological aspects of social institutions and, in the terminal chapter assess the current trends toward totalitarianism and ca cellation.

HARTLEY EUGENE L , AND RUTH E HARTLEY

Fundamentals of social psychology New York Alfred A. Knopf 1952 756 p. illus. 24 cm. $5 50 4892

Contents (abridged) Part I, Communication—the basic social process The importance and nature of communication. Communication barriers and facilitation of communication. Mass communications, by G. D. Wiebe. Part II, Socialization—the group and the individual Socialization is learning Perception and socialization. The cultural control of behavior and emotion. Delinquency, by F L. Rouke. Part III, The individual and the group Groups and group processes. The individual in the group. Adjustment of the individual to social role Status. Leadership-followership. Attitudes and opinions (ith C. W Hart) Ethnic attitudes. Modifying ethnic attitudes. Index of names. Index of subjects

Note. A college textbook in which broad and substantial iew of social psychology is presented. Throughout the book, there is extensive citation of research studies, but the text is not collection of abstracts of such works. The authors ha e done much in the

way of synthesis and interpretation. The section on communication is potentially of value to students of advertising and journalism as well as to students of social psychology. The third part in which the dynamics of the individual functioning in society is discussed in terms of his psychology of loyalties to groups, his participation in groups, and his acceptance of social roles, is the longest of the three parts by considerable margin.

HOVLAND CARL I., AND OTHERS

Communication and persuasion psychological studies of opinion change. By Carl I. Hovland, Irving L. Janis and Harold H. Kelley New Haven Yale University Press 1953. 315 p. illus. 24 cm. $4.50. 4893

Contents: Introduction. Credibility of the communicator. Fear-arousing appeals. Organization of persuasive arguments. Group membership and resistance to influence. Personality and susceptibility to persuasion. Acquiring conviction through active participation. Retention of opinion change. Summary and emerging problems. Index.

Note: A book based on coordinated program of basic research into the factors of opinion change. In the popular language it is study of "how people's minds are changed, be changed, and by Controlled experiments were made, largely on captive audiences such as high school and college students. Much was learned about the effectiveness of various types of persuasiveness. Many essentially independent studies were carried out under the program, then the results were co-ordinated and some tentative generalizations made. Also, there has been some coordination of the results of investigators outside the program. Literature references are included in the chapters.

KARDINER, ABRAM

The individual and his society the psychodynamics of primitive social organization. With a foreword and two ethnological reports by Ralph Linton. New York Columbia University Press, 1939 503 p 23 cm. $5.50. 4894

Contents: Part I, Methodological Introduction. Basic orientations. Preliminary studies in primitive cultures. Security systems and basic personality structure. Part II, Descriptive. Marquesan culture, by R. Linton. Analysis of Marquesan culture. The Tanala of Madagascar by R. Linton. Analysis of Tanala culture. Part III, Theoretical. Psychology and sociology methodological review. Psychological principles and techniques. Index.

Note: This book represents an exploratory attempt to forge technique for synthesizing with psychology the knowledge accumulated by the social sciences. The author, psychiatrist, utilizes psychological techniques grounded in Freudian principles with some modification.

KARDINER, ABRAM

The psychological frontiers of society By Abram Kardiner with the collaboration of Ralph Linton, Cora Du Bois, and James West. New York Columbia University Press, 1945 475 p. 23 cm. $5 50. 4895

Contents: Foreword, by R. Linton. Preface. Psychology and the science of society. The techniques of psychodynamic analysis. The Comanche, compiled from information supplied by R. Linton. Analysis of Comanche culture. The Alorese, compiled by the author from summary notes and from the book *The people of Alor* by C. Du Bois. Analysis of Alorese culture. Personality studies. Basic personality character, value systems. New material, synthesis, and general conclusions to Alorese culture. Plainville, U. S. A., by J. West. Analysis of Plainville. The personalities of Plainville. Conclusions to Plainville. Basic personality and history. Index.

Note: The volume is an attempt to work out the technical problems originally outlined in the author's *The individual and his society* New York, 1939. Three varied societies, that of the Comanche Indians, that of the Alor Islanders in the Dutch East Indies, and that of Plainville, United States of America, contemporary American rural community are used as clinical demonstrations of principles set forth in the earlier volume. The part of the author was to work out the psychological technique employed and to select the cultures giving the best opportunity for refining and perfecting the technique, the data being presented by three ethnographers, specialists in their fields.

KILPATRICK WILLIAM HEARD, AND WILLIAM VAN TIL, editors

Intercultural attitudes in the making parents, youth leaders, and teachers at work. New York Harper & Brothers, 1947 246 p. 21 cm. (Ninth Yearbook of the John Dewey Society) $3.00 4896

Contents: Preface, by W. H. Kilpatrick. Basic principles in intercultural education, by W. H. Kilpatrick. Working with young children. Parents, by J. L. Hymes, Jr. The primary teacher, by H. Trager. Working with young adolescents: Adult-sponsored youth groups, by R. Bridges. The junior high school teacher, by F. Bostwick and M. F. Seguriason. Working with youth. Gangs, by C. E. Hendry and others. The high school teacher, by W. Van Til. The school as whole, by C. O. Arndt.

Note. Though addressed primarily to teachers and school officials, this book is also intended for any persons dealing actively with children and youth. The aim of the book is to describe the processes through which the attitudes of children and adolescents toward other groups are actually shaped. It examines the working of family of community and adult-sponsored groups, such as the Boy Scouts and the Y. M. C. A., and especially of the school in relation to children and youth, assuming that the intercultural attitudes of the child are in the making day by day through all the varied experiences that his life brings.

KLINEBERG OTTO

Social psychology New York Henry Holt & Company 1954 578 p. 24 cm. $7 75 4897

Contents. Part one, Introductory: Background and history. The social behavior of animals. Language. Part two, Social factors in human nature: The concept of human nature. Motivation. Emotional behavior. Social factors in perception and memory. Part three: Individual and class differences. Sex differences. Ethnic differences. Part four: Social and cultural factors in personality: The development of personality. Culture and personality—status, role and the individual—The study of national characteristics. Social factors in abnormality. Social factors in delinquency and crime. Part five, Social interaction: The individual in the group. Attitudes and opinions. Prejudice. Psychology and international relations. Index of names. Index of subjects.

Note: An introductory text for college students, first published in 1940. It provides broad view of the field, and includes more material from ethnology than is common in such books. There is extensive citation of related literature, and the names of the authors of the cited publications are brought together in the index of names. In preparing this second edition, the author revised and added to most of the chapters that are listed above under Parts four and five. The chapter on national characteristics and the terminal chapter were added.

KLINEBERG OTTO

Tensions affecting international understanding a survey of research. New York. Social Science Research Council, 1950. 227 p. 22 cm. (Social Science Research Council. Bulletin 62) $2.25 4898

Contents: Introduction. Personality in relation to nationality. National stereotypes. Attitudes and their modification. Influences making for aggression. Summary and conclusions. Index of names. Index of subjects.

Note: This work owes its existence to the Unesco Tensions Project whose official title is "Tensions Affecting International Understanding." It presents in skillfully written text the substance of wide range of research publications by psychologists and sociologists which are pertinent to those factors of international tension named in the principal titles above. References to the source publications are included.

KRECH, DAVID, AND RICHARD S CRUTCHFIELD

Theory and problems of social psychology New York McGraw Hill Book Company, Inc., 1948 639 p 24 cm. (McGraw Hill publications in psychology, J F Dashiell, consulting editor) $6 25 4899

Contents Part I, Basic principles The field and problems of social psychology The dynamics of behavior Perceiving the world. Reorganizing our perceptions. Part II, Social processes Beliefs and attitudes of men. Development and change of beliefs and attitudes. The measurement of beliefs and attitudes. Public opinion research. Persuasion through propaganda. The structure and function of social groups. Group morale and leadership. Part III, Applications Racial prejudice in the United States. Controlling racial prejudice. Industrial conflict. International tensions. Name index. Subject index.

Note. An interesting, well-organized textbook. The authors hold that the only sound basis for an understanding of social behavior is knowledge of individual perception and motivation, or in other words, that social psychology should and can be based on the experimentally-derived and widely-accepted knowledge of the behavior of individuals. However their treatment assumes that the student will have the basic knowledge, and therefore the work is devoted mainly to discussions of social behavior in the light of this knowledge. There are good reading lists appended to the chapters.

LAPIERE, RICHARD TRACY, AND PAUL R. FARNSWORTH

Social psychology Third edition. New York McGraw Hill Book Company, Inc. 1949 626 p 24 cm. $6 50 4900

Contents Part I, The nature of the individual and of society Social psychology The psychobiological bases of human behavior The sociocultural bases of human behavior Part II, The processes of socialization Socialization. Types of human behavior Overt symbolic behavior—gesture—speech. Overt nonsymbolic behavior Overt nonsymbolic behavior—symbolic sources. The covert behaviors. Part III, The human personality: Personality Personality stereotyping Personality norms. Personality deviations. Personality and social controls. Part IV Personality and social adjustment: The dynamics of social adjustment. Social disorganization and malpreparation for modern life. Social change and maladjustment. Socially atypical patterns of adjustment. Psychologically abnormal modes of adjustment. Part V Social interaction The interactional situation. Cultural situations. Interpersonal situations. Publics. Abnormal situations. Appendix. Bibliography and author index. Subject index.

Note A standard introductory textbook for use in college courses. In the present edition, three new chapters have been added, and most parts that have been carried over from the second edition have been extensively revised. The first-named author is Professor of Sociology and the second is Professor of Psychology in Stanford University

LEIGHTON, ALEXANDER HAMILTON

The governing of men general principles and recommendations based on experience at a Japanese relocation camp Princeton Princeton University Press 1946 404 p 23 cm $5 00 4901

Contents. Introduction The problem. Part I, The story of Poston. Evacuation. Beginning of Poston. Intake. Early days Community planning Self-government. Social organization. Social disorganization. First. Beginning of the strike. Deadlock End of the strike. Self-management after the strike. Reconsideration. Part II Principles and recommendations Fundamental postulate. Individuals under stress. Systems of belief under stress. Social organization under stress. Conclusion. List of references. Appendix Applied anthropology in a dislocated community by A. H. Leighton and E. H. Spicer Index.

Note. The first part of this outstanding contribution to social psychology is a detailed study of events and the social factors that determined them at Poston, Arizona, one of the inland relocation centers to which persons of Japanese origin were removed from the Pacific coastal regions of the U.S.A. during World War II The center was the scene of a "strike" against military authority which attracted wide attention. The sources of unrest which culminated in the strike are fairly analysed and without attempt to gloss over mistakes made by U.S.A. authorities. In the second part, the principles of social psychology which operate in communities organized under stress are stated and discussed from the viewpoint of just and efficient administration. The author is a psychiatrist and social anthropologist who was assigned to the relocation center to conduct research in its social phenomena and problems.

LEMERT, EDWIN MCCARTHY

Social pathology, a systematic approach to the theory of sociopathic behavior New York McGraw Hill Book Company, Inc., 1951 459 p illus. 24 cm (McGraw Hill series in sociology and anthropology, Richard T LaPiere, consulting editor) $6 00 4902

Contents Part I, Theory: Introduction. Deviation and differentiation. The societal reaction. Sociopathic individuation. Part II, Deviation and deviants. Blindness and the blind. Speech defects and the speech defective. Radicalism and radicals. Prostitution and the prostitute. Crime and the criminal. Drunkenness and the chronic alcoholic. Mental disorders. Appendix: Suggested outline to be followed in studying and writing the life history of a deviant. Glossary Index.

Note: In this book an original theoretical structure for the study of sociopathic phenomena is presented, and its applications to specific sociopathological types, such as radicals and alcoholics, are discussed. Since the author's main purpose is to advance a theory which will facilitate the integration of the study of social deviants with sociology rather than with the abnormal psychology textbooks, the book is potentially of greater interest to sociologists than to psychologists. However it presents a point of view about which the specialist in abnormal psychology should be informed. The level of treatment implies previous study of psychology and sociology on the part of the reader.

LEWIN, KURT

Field theory in social science selected theoretical papers. Edited by Dorwin Cartwright. A publication of the Research Center for Group Dynamics, University of Michigan. New York Harper & Brothers, 1951 346 p. illus 22 cm. $5 00 4903

Contents. Formalization and progress in psychology. Constructs in field theory Defining the "field at a given time." Field theory and learning. Regression, retrogression, and development. Field theory and experiment in social psychology Problems of research in social psychology Psychological ecology Frontiers in group dynamics. Behavior and development as a function of the total situation. Appendix Analysis of the concepts whole, differentiation, and unity Index.

Note. All of the papers in this volume were previously published elsewhere. Though written and published separately they now form a reasonably coherent whole. The editor has modified them slightly by omitting duplicate passages and occasionally writing a transitional paragraph. The book is a basic work both in social psychology and in sociology

LINDNER, ROBERT

Must you conform? New York Rinehart & Company, Inc. 1956 210 p 21 cm. $3 00. 4904

Contents The mutiny of the young. Homosexuality and the contemporary scene. Political creed and character The instinct of rebellion. Must you conform? Education for maturity

Note In this collection of lectures and journal articles, the author of *Prescription for rebellion*, described above, continues his exploration of the problem of conformity The first piece in the volume—originally one of four lectures constituting the Hackett Foundation Lectures for 1954—discusses the current rebellion of young people as manifested in juvenile delinquency in not only the United States of America but in other countries as well. The pieces that follow are devoted to other facets of the theme that conformity or adjustment to social pressures, is a dangerous precept.

Lindzey, Gardner, editor

Handbook of social psychology. Reading, Mass., Addison-Wesley Publishing Company, Inc., 1954. 2 v. illus. $8.50 per vol., set, $17.00. 4905

Contents: [illegible]

LINDNER, ROBERT

Must you conform? New York Rinehart & Company Inc., 1956 210 p. 21 cm. $3 00 4904

Contents The mutiny of the young. Homosexuality and the contemporary scene Political creed and character The instinct of rebellion. Must you conform? Education for maturity

Note. In this collection of lectures and journal articles, the author of *Prescription for rebellion*, described abov continues his exploration of the problem of conformity The first piece in the volume—originally one of four lectures constituting the Hacker Foundation Lectures for 1954—discusses the current rebellion of young people as manifested in juvenile delinquency in not only the United States of America but in other countries as ell. The pieces that follow are devoted to other facets of he theme that conformity or adjustment to social pressures is dangerous precept.

ment. Part IV Understanding social phenomena: Public opinion. Propaganda. Mass behavior. Social change and social movements. Group tensions and prejudice. Applications in the area of social [illegible]. Social psychology today and tomorrow. Name index. Subject index.

Note: An introductory text for use in college courses developed from a course in social psychology given at Barnard College, a course in which the author (a psychologist) and a sociologist, Willard W. Waller, collaborated. In presenting the relationships between individual and group behavior the author has integrated techniques and studies from the fields of psychology, sociology, anthropology and psychiatry. The extensive bibliographical material includes both citations of source articles and annotated lists of supplementary reading.

Sherif, Muzafer, and Carolyn W. Sherif

An outline of social psychology. Revised edition. With a new introduction by Gardner Murphy. New York, Harper & Brothers 1956. 792 p. illus. 24 cm. $6.00. 4915

Contents: Introduction: I. Introduction to social psychology. II. Basic facts and principles. III. Human interactions and its products. Group structure and norms (IV–VIII). Experience and behavior in social situations. Laboratory studies. Properties of groups. Formation and functioning of group structures. The formation of social norms. Intergroup relations. Collective behavior. IV. Motives of man: Motives in relation to social psychology. Motives and the socialization process. Motives and deprivations in human behavior. V. Man and products of his interaction. Man and his words. Social attitudes. Attitude formation and change. Ego-involvements. Ego-involvements and reference groups. Group prejudice. VI. Individuals and social change. Effects of technology. Man in cultural situations. VII. Present-day social psychology. A glance at social psychology: its backgrounds and present trends. Index of names. Index of subjects.

Note. Designed primarily for use as a college text, this book is a statement of major importance of the main principles and techniques of contemporary social psychology. The senior author has been one of the leading contributors to this field in the United States of America. The first edition, written by the senior author alone, was published in 1948. In this second edition, the book has been very extensively revised so as to reflect not only the content of a larger body of pertinent literature but also major advances in research techniques, particularly in the study of natural social groups in their natural surroundings. The length of the volume has been increased by more than 100 pages. Literature references are included in all of the chapters, and the names of authors of the cited literature are included in the index of names at the end of the volume.

Sherif, Muzafer, and Hadley Cantril

The psychology of ego-involvements: social attitudes & identifications. New York John Wiley & Sons Inc., 1947. 525 p. illus. 24 cm. $7.25 4916

Contents: Introduction. The problem of attitudes—studied. Some experimental facts concerning the basis of attitudes. The attitude formation extended to concrete situations. The problem and general characteristics of ego-involvements. Experiments on ego-involvements. The genetic formation of the ego. Re-formation of the ego in adolescence. Ego-involvements and identifications in group situations. Ego-involvements in concrete social situations. Breakdowns of the ego. Some illustrations from literature. The ego in psychoanalysis. Name index. Subject index.

Note: A broad study written from the standpoint of social psychology. It is based on a large variety of information and examples drawn from the fields of anthropology, sociology, psychology, child study literature, and public opinion surveys. The final chapter points out the inadequacies of Freudian psychoanalysis in the psychology of the ego.

Social Science Research Council

The American soldier. Volume I, Adjustment during Army life. By Samuel A. Stouffer, Edward A. Suchman, Leland C. DeVinney, Shirley A. Star, Robin M. Williams, jr. Princeton, Princeton University Press, 1949. 599 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. I) $9.00 4917

Contents: How these volumes came to be produced. The old Army and the new. How personal adjustment varied in the Army—general military considerations—by background characteristics—by type of Army experience in the Army. Social mobility in the Army. Job assignment and job satisfaction. Attitudes toward leadership and social control. The orientation of soldiers toward the war. Negro soldiers.

—— Volume II. Combat and its aftermath. By Samuel A. Stouffer, Arthur A. Lumsdaine, Marion Harper Lumsdaine, Robin M. Williams, jr., M. Brewster Smith, Irving L. Janis, Shirley A. Star, Leonard S. Cottrell, jr. Princeton, Princeton University Press, 1949. 675 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. II) $9.00 4918

Contents: Attitudes before combat and behavior in combat. General characteristics of ground combat. Combat motivations among ground troops. Problems related to the control of fear in combat. The combat replacement. Attitudes of ground combat troops toward rear echelons and the home front. Morale attitudes of combat flying personnel in the Air Corps. Objective factors related to morale attitudes in the aerial combat situation. Psychoneurotic symptoms in the Army. Problems of rotation and reconversion. The point system for redeployment and discharge. The aftermath of hostilities. The soldier becomes a veteran. Appendix. Consolidated index for volumes I and II.

—— Experiments on mass communication. By Carl I. Hovland, Arthur A. Lumsdaine, Fred D. Sheffield. Princeton, Princeton University Press, 1949. 345 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. III) $6.00 4919

Contents: Introduction. Part I, Film evaluation studies: The orientation film, "The battle of Britain." General implications derived from the orientation film experiments. The audience evaluation of films. Experimental comparison of alternative presentations. Effects of films as related to intellectual ability. Part II, Studies employing controlled variation. Short-time and long-time effects of an orientation film. The effects of presenting "one side" versus "both sides" in changing opinions on a controversial subject. The effect of an audience-participation technique in film-strip presentation. Summary and evaluation. Appendices. Measurement problems encountered. Index.

—— Measurement and prediction. By Samuel A. Stouffer, Louis Guttman, Edward A. Suchman, Paul F. Lazarsfeld, Shirley A. Star, John A. Clausen. Princeton, Princeton University Press, 1950. 756 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. IV) $10.00 4920

Contents: An overview of the contributions to scaling and scale theory. The problem of attitude and opinion measurement. The basis for scalogram analysis. The scalogram board technique for scale analysis. The utility of scalogram analysis. Relation of scalogram analysis to other techniques. The intensity component in attitude and opinion research. Problems of reliability. The principal components of scale analysis. The logical and mathematical foundation of latent structure analysis. The interpretation and computation of some latent structures. Two case studies in prediction—introductory comments. The screening of psychoneurotics in the Army—technical development of tests. The screening of psychoneurotics—comparison of psychiatric diagnoses and test scores at all induction stations. Studies of the postwar plans of soldiers—a problem in prediction. Some notes on sampling and questionnaire administration by the Research Branch. Index.

Note. A college textbook written from a new standpoint by a professor who has made use of the text in preliminary form in his teaching at the University of Michigan. Stressed is the reciprocal influences among human beings who interact with one another. The author shows that individual persons come to act, perceive, think, and feel in certain preferred ways in relation to their environments. The total organization of a person's predispositions to relate himself to his environment is held to represent his personality Throughout the book, the author emphasizes the human part of the individual's environment, stating that many of the most important conditions which account for individual behavior are group conditions.

POWELL, NORMAN JOHN

Anatomy of public opinion New York Prentice Hall, Inc , 1951 619 p illus. 22 cm. $5 65 4911

Contents Meaning and conceptualization of public opinion and propaganda. Measurement of public opinion. Groups and individuals as public opinion and propaganda instruments. Press. Motion pictures. Radio. Television. Propaganda—bases, propositions, and applications. The role of public opinion in democracy Appendices Selected bibliography projects and questions. References. Index.

Note. An informative book on the principles and media whereby public opinion is formed and manipulated. In a nontechnical style, it provides a broad introductory survey of the subject with particular reference to the situation in the United States of America. It is suited to use as a college textbook and as a manual of orientation for discussion groups. Also, it provides fairly detailed information on the methods of opinion polls and other techniques of assessing public opinion. It is out of date on some aspects of the field, such as the relative importance of radio and television in the United States of America.

RIESMAN, DAVID

The lonely crowd, a study of the changing American character In collaboration with Reuel Denney and Nathan Glazer New Haven Yale University Press 1950 386 p 24 cm (Studies in national policy editorial committee, V O Key and others) $5 00 4912

Contents Part I Character Some types of character and society From morality to morale—changes in the agents of character formation. A jury of their peers. Storytellers as tutors in technique. The inner-directed round of life. The other-directed round of life—from invisible hand to glad hand—the night shift. Part II, Politics. Recognizing the political. Tradition-directed, and other directed political styles—indifferents, moralizers, inside-dopesters. Political persuasions—indignation and tolerance. Images of power The conversation of the classes, and other dialogues. Americans and Kwakiutls Part III, Autonomy Adjustment or autonomy? False personalization—obstacles of autonomy in work. Enforced privatization—obstacles to autonomy in play The problem of competence. Autonomy and utopia. Index.

Note When it first appeared in 1950, this book was immediately recognized as an original and vital study of the "social character" of present-day Americans. The authors distinguish between "inner directed" and "other-directed" persons, the latter being those whose social behavior is molded by "peer-groups" or in other words, groups of one's peers such as the children in a school or co-workers in a unit of a business organization. Although they admit the existence in the American social structure of many persons who are still inner-directed, they contend that the modern American is other-directed The book is devoted to an examination of the forces that mold him in this pattern and the forces that operate upon him once the pattern has been accepted The book abounds in penetrating observations and provocative comment. Much of it is essentially a sociological study however the early chapters in which new concepts are introduced and the social processes of character formation are examined are contributions to social psychology

ROHRER, JOHN H , AND MUZAFER SHERIF, editors

Social psychology at the crossroads the University of Oklahoma lectures in social psychology New York Harper & Brothers 1951 437 p 22 cm $4 00 4912A

Contents Part one, Social psychology integrating individual and social approaches. Social psychological theory: integrating individual and social approaches, by T M. Newcomb. Part two, Biological factors and human behavior Genetic variability and human behavior, by P R. David and L. H. Snyder The "levels" concept in the study of social organization in animals, by T C. Schneirla. Levels of integration along the phylogenetic scale: learning aspect, by H. F Harlow Part three, Interaction in the cultural setting On cultural and psychological reality by M. J Herskovits. Cultural factors in the structuralization of perception, by A. I. Hallowell. The psychological habitat of Raymond Birch, by R. C. Barker and H. F Wright. Part four, Basic psychological functions. The place of phenomenological analysis in social psychological theory by R. B. MacLeod. Toward a general theory of cognition, by L. Postman. Scales of judgment and their implications for social psychology by J Volkmann. Part five, Group structures and individual roles: Small groups and large organizations, by W F Whyte. Work and the self, by E. C. Hughes. Behavior and organization: industrial studies, by C. H. Arensberg. Part six, Human behavior in the social psychological frame of reference: Conceptions of roles and ego in contemporary psychology by S. S. Sargent. Psychological problems of multiple group membership, by E. Hartley A preliminary experimental study of inter-group relations, by M. Sherif. Name index. Subject index.

Note. This book contains series of papers written by invitation and delivered at a conference held in April, 1950. Together, the papers give not only an account of the present status of social psychology but indicate the direction it must take if it is to make significant contribution to the understanding and improvement of human relations. A principal theme is that a unified scheme of social psychology must consider and integrate biological and psychological factors stemming from the individual with the factors from his sociocultural surroundings. Areas where the need for research is crucial are indicated.

RUESCH, JURGEN, AND WELDON KEES

Nonverbal communication notes on the visual perception of human relations. Berkeley University of California Press, 1956 205 p illus 29 cm. $7 50 4913

Contents. I, The frame of reference Modern theories and methods. Biology and culture as two determinants of nonverbal communication. The varieties of nonverbal languages. II, Messages through nonverbal action Nonverbal expression. The informative value of movement. People alone. The role of context in the interpretation of action. People together III, Messages through object and picture Codification in material terms. Object, word, and number The language of identification and recognition. Appeal and social control through material things. The organization of the material environment as personal expression. The syntax of object language. IV The language of disturbed interaction Social conflict and stress. Language and psychopathology Disturbances of motion and their communicative effects. Disturbances of perception and evaluation. Art, communication, and mental illness. Summary Toward theory of nonverbal communication. References. Index.

Note The work upon which this systematic study of nonverbal communication is based was done in the Division of Psychiatry of the University of California School of Medicine and the Langley Porter Clinic, San Francisco, and was supported in part by grant from the National Institute of Mental Health, United States Public Health Service. It is pioneering report upon the principles that apply to the nonverbal ways in which people communicate with one another in western civilization—akin to the logic, syntax, and grammar which govern verbal communication. In their presentation the authors are assisted by numbers of still photographs reproduced on 78 pages, some of them taken expressly for this book. While of interest to the general reader the work will be of especial interest to sociologists, psychologists, and psychiatrists.

SARGENT, STEPHEN STANSFELD

Social psychology an integrative interpretation. New York The Ronald Press Company, 1950 519 p. illus. 21 cm. $5 00 4914

Contents. Part I, Socialization of the individual Biological and social backgrounds. Culture and personality Social influences on personality Social learning—processes and products. Part II. The dynamics of social behavior Motives. Frustration and mechanisms. Ego-development and ego-involvement Part III, The patterning of social behavior Communicating and symbolizing. Social interaction and social groups. Social roles. Leadership. The person in social situ-

patterns: Specific disasters for which the most useful descriptive bibliographies were compiled. References cited.

Note: Presented in this pamphlet is an evaluatory summary of the types of published literature available on human behavior in disasters and other extreme situations. The summary is based on a bibliography amounting to more than 10,000 items coded on "Keysort" cards and maintained by the Committee on Disaster Studies of the National Research Council. The summary is followed by suggestions on techniques for further research on disaster psychology. The list of references pertains to the problems of disaster study not to the card bibliography already mentioned.

WALLACE ANTHONY F C.

Tornado in Worcester an exploratory study of individual and community behavior in an extreme situation. Washington, D C. National Academy of Sciences—National Research Council, 1956 166 p. illus. 28 cm. (National Academy of Sciences—National Research Council. Publication 392 Disaster study number 3 Committee on Disaster Studies, Division of Anthropology and Psychology) $2.50. 4927

Contents: Introduction. time-space model of disaster as type of behavioral event. Steady state—the city before impact. Warning—the city learns of impending impact. Impact—the tornado strikes. Isolation—the impact area goes it alone. Rescue—extrication, first aid, treatment, and evacuation. Rehabilitation—the attempt to restore the steady state. Irreversible change—the city achieves new equilibrium. Special topics—the disaster syndrome, the counter-disaster syndrome, the length of the isolation period, the cornucopia theory. Bibliography. List of interviews and field notes.

Note: A description and analysis of the human reactions due to the destructive tornado which passed through Worcester, Massachusetts, and several nearby towns June 9 1953, leaving death toll of 94 lives (56 in Worcester) and property damage estimated at $52,000,000 ($33,000,000 in Worcester). The author develops and applies concepts of time phases and spatial zones in disaster. His formulation of various explanatory hypotheses of interest to persons concerned with the theoretical and practical sides of human behavior in disaster: psychologists, sociologists, social workers, medical personnel, police officials, and civil defense authorities.

WILLIAMS, ROBIN MURPHY JR.

The reduction of intergroup tensions a survey of research on problems of ethnic, racial, and religious group relations. Prepared under the direction of the Committee on Techniques for Reducing Group Hostility New York Social Science Research Council, 1947 153 p. 23 cm. (Social Science Research Council. Bulletin 57) $1 75 4928

Contents: Introduction. Appraisal of programs in intergroup relations. Propositions on intergroup hostility and conflict. Selected possibilities for research. Summary and prospect. Appendix: Research approaches and techniques. Selected bibliography. Index.

Note: An outline of research problems issuing from the increasing awareness of racial, ethnic, and religious conflicts and from the existence of various agencies aimed at reducing the conflicts. A survey of the existing programs in the United States of America shows the need for clarification of their underlying assumptions, their specific goals, and the methods used to achieve the desired effects. While the basic propositions are subjected to critical analysis by the author himself, the chapters on possibilities for research and on research techniques point the way to the badly needed cumulative and systematic examination of the bases and effects of practical action in the field. The book contains an extensive bibliography. addition, those studies which deal with changes in intergroup attitudes are also presented in the form of table in the text.

YOUNG KIMBALL

Social psychology Third edition. New York Appleton-Century-Crofts, Inc., 1956 632 p. 23 cm. $5 75 4929

Contents (abridged): The nature and scope of social psychology. Part I, Social interaction and basic interrelations of individual, society and culture. Basic characteristics, motivation and emotion. Social learning and interaction. *Foundations of personality*. Language—basis of symbolic interaction. Personality and culture. Subcultures and personality. The nature and function of belief systems. Part II, Collective behavior. Leaders and followers. Behavior of crowds. Fashion. Public opinion. Media of mass communication—the printed page—motion pictures—radio and television. Measurement of opinion and attitude. Propaganda and censorship. The nature of race prejudice. The psychology of revolution. The psychology of war. Index of names. Index of subjects.

Note: An introductory textbook which is widely used in college courses in the United States of America. Approximately one-third of the space is devoted to the development of individual personality in the social matrix, while the chapters listed above under "Collective behavior" account for the remaining two-thirds of the volume. In this second part, broad view of the psychology of crowds, mass media, race prejudice, etc. is provided. A selection of pertinent literature is cited in both parts, and the names of authors of these publications are brought together in the index of names. The second edition was published in 1944. Extensive revisions and augmentations were made in preparing this third edition, although the level of the book and its general scope are unchanged.

PSYCHOLOGY OF PERSONALITY

ADORNO THEODOR W , AND OTHERS

The authoritarian personality by T W Adorno, Else Frenkel-Brunswik, Daniel J Levinson R. Nevitt Sanford in collaboration with Betty Aron Maria Hertz Levinson and William Morrow New York Harper and Brothers, 1950 990 p. illus. 24 cm. (Studies in prejudice edited by Max Horkheimer and Samuel H. Flowerman) $7.50 4930

Contents (abridged): Part I, The measurement of ideological trends. The contrasting ideologies of two college men—a preliminary view. The study of anti-Semitic ideology. The study of ethnocentric ideology. The measurement of implicit antidemocratic trends. Ethnocentrism in relation to intelligence and education. Part II, Personality as revealed through clinical interviews. Part III, Personality as revealed through projective material. Part IV, Qualitative studies of ideology: Prejudice in the interview material. Politics and economics in the interview material. Types and syndromes. Part Applications to individuals and to special groups: Genetic aspects of the authoritarian personality. Criminality and antidemocratic trends—a study of prison inmates. Psychological ill health in relation to potential fascism—a study of psychiatric clinic patients. References. Index.

Note: In this work based on an intensive, original study experts in the fields of social theory and depth psychology, content analysis, political sociology, and projective testing have developed the conception of an "authoritarian type" of personality common to most of the nations of the West. While conceding that only small proportion of people fit this type in detail, the authors hold that the general conception is valuable for an understanding of minority group prejudice, socio-economic conservatism, and acceptance of totalitarian ideologies. The "type" is defined in terms of pattern of characteristics isolated from group pencil-and-paper tests, projective devices and clinical interviews. It is explained largely in terms of family background (insecurity in relation to parents) and cultural norms. Insufficient attention is given to some of the economic and other factors which are also relevant. The book is designed for graduate students in the field of psychology and graduate psychologists and sociologists.

ALLPORT GORDON WILLARD

Becoming basic considerations for a psychology of personality New Haven Yale University Press, 1955 106 p. 20 cm. (Yale University The Terry lectures) $2 75 4931

Contents: The case for and against psychology. The Lockean tradition. The Leibnitzian tradition. The goal of psychology. The dilemma of uniqueness. Disposition. On social beginnings. The importance of early affiliation. Tribalism and individuation. Is the concept of self necessary? A proprium. *The fusion of proprium* functions. Critique. Chance, opportunistic, and oriented becoming. Motivation. Intention. Conscience. Schemata of value. Anxiety and

Note. These volumes present the techniques and the findings of a comprehensive, detailed study of the attitudes and adjustments of American soldiers to army life, training, and combat duty They are the work of group of sociologists and psychologists, and are based on data assembled between 1941 and 1945 by the Research Branch, Information and Education Division of the United States Army Volumes I and II are largely reports of the findings of the Council regarding soldiers' attitudes. Volume III contains an evaluation of various training programs used by the Army including educational films. Volume IV is devoted to descriptions and analyses of the techniques used by the Research Branch in collecting the data. The series is a monumental contribution to the literature of social psychology It is of value not only to psychologists who are concerned with military training and morale but also to social and applied psychologists in general.

SOCIETY FOR THE PSYCHOLOGICAL STUDY OF SOCIAL ISSUES

Readings in social psychology Revised edition. Prepared for the Committee on the Teaching of Social Psychology of the Society for the Psychological Study of Social Issues. Editorial committee, Guy E Swanson and others New York Henry Holt and Company, 1952 680 p illus 24 cm $6 50 4921

Contents. Part I, Approaches to the study of interaction: Some forms of interpersonal influence. Signs, symbols, and language in interpersonal communication. Transmitting influence through mass communications. Part II, The social patterning of interaction—collective problem-solving Collective problem-solving in small groups. Public opinion as collective problem-solving. Behavior in the absence of collective solutions. Part III, Recurring interaction patterns Social norms. Social roles. Stratified role structures. Leader follower roles. Part IV Some effects of interaction patterns on individual participants Social influences on individual psychological processes. Attitudes and judgments as influenced by reference groups. Social influences on persistence and change of attitudes. The continuous socialization of the individual. Part V Some social psychological approaches to public issues. Index.

Note A carefully selected anthology of papers and selections from books and papers illustrative of the empirical foundations upon which social psychology rests. It is used in conjunction with college courses in social psychology and is an excellent introduction to methods of investigation in the field. About half of the material in the present edition was added since the first edition was published in 1947

SYMONDS, PERCIVAL MALLON

The dynamics of human adjustment New York D Appleton Century Company, 1946 666 p 24 cm. (The Century psychology series Richard M Elliott, editor) $5 75 4922

Contents. Adjustment. Drives. Frustration. Aggression. Punishment. Anxiety Defenses against anxiety Fixation. Regression. Repression and the unconscious. Displacement. Introjection and the superego. Projection. Identification. Conflict. Guilt and self-punishment. Sublimation. Reaction formation—reversal formation. Compensation. Rationalization. Miscellaneous mechanisms. Fantasy Love and self-love. Normality Bibliography Index.

Note. A treatment from the psychoanalytical viewpoint of the dynamic or motivating factors that determine the adjustments of the human individual to mental and environmental situations It is comparatively detailed, and familiarity with the basic principles and terminology of psychology has been assumed. The work is suitable for use as textbook in advanced undergraduate and graduate courses, and is useful also as informative reading by professional workers in such fields as social work where an understanding of the motivation of people is essential. The bibliography contains 883 entries, most of which are annotated.

THOMAS, WILLIAM ISAAC

Social behavior and personality Contributions of W I. Thomas to theory and social research Edited by Edmund H Volkart. New York Social Science Research Council 1951 338 p. illus 24 cm. $3 00 4923

Contents Introduction: Social behavior and the defined situation, by E. H. Volkart. Part I, Social science and social behavior: The need for a social science. Methodological note. The behavior pattern and the situation. The methodology of behavior study The role of methodology in the development of science. Research and the social process. The comparative study of cultures. Part II, Social behavior and personal dynamics: The four wishes. A theory of social personality Personality and the content of the family The configurations of personality Part III, Social behavior and cultural dynamics: The psychology of culture change. The primary group and the definition of the situation. Social disorganization and reconstruction. The individualization of behavior. Reconciliation of the heritage. Part IV Personality and culture Outline of program for the study of personality and culture. Bibliography of W I. Thomas, compiled by A. P Hare. Biographical note. Index of names. Index of subjects.

Note A posthumous volume reviewing and integrating the major contributions to sociological and social-psychological theory and method of W I. Thomas (1863–1947) and making available a selection of his out-of-print and unpublished materials. Thomas was former president of the American Sociological Society Two features of his position in social science are summarized by the editor as follows: "The goal of social science is to obtain verifiable generalizations about human behavior. [The end] is to make available the kind of knowledge necessary and useful for the rational control of behavior

THURSTONE, L L, AND E J CHAVE

The measurement of attitude, a psychophysical method and some experiments with a scale for measuring attitude toward the church. Chicago University of Chicago Press, 1929 97 p illus 20 cm $2 00 4924

Contents Theory of attitude measurement. Construction of an attitude scale. The scale-values. The experimental attitude scale. Application of the experimental scale. Further studies of validity Some further problems in the measurement of attitude. Index.

Note. This pamphlet, first published in 1929 and reprinted six times up to 1934, is the first publication outside of journals on attitude measurement. In it, the basic theory is expounded and the construction of an experimental scale is described in detail.

UNIVERSITY OF PITTSBURGH

Current trends in social psychology Pittsburgh University of Pittsburgh Press, 1948. 299 p. illus. 21 cm. $4 00 4925

Contents. The new social psychology by W Dennis. A program of experimentation on group functioning and group productivity by R. Lippitt. Cultural diversity and world peace, by K T Behanan. An approach to social perception, by J. S. Bruner Experimental sociometry and the experimental method in science, by J L. Moreno. The social psychology of housing, by R. K. Merton. Communication research and the social psychologist, by P F Lazarsfeld. Psychological approaches to the prevention of war by J. G. Miller.

Note A collection of papers which were presented at the second of series of conferences held under the auspices of the Department of Psychology in the College of the University of Pittsburgh. Each lecture was prepared by an active worker in the field, and the discussions of the techniques, methods, and fields of study of social psychology are addressed both to professional psychologists and students. All but two of the papers are accompanied by bibliographies.

WALLACE, ANTHONY F C

Human behavior in extreme situations a study of the literature and suggestions for further research Washington D C. National Academy of Sciences—National Research Council 1956 35 p illus. 28 cm. (National Academy of Sciences—National Research Council Publication no 390. Committee on Disaster Studies. Disaster study no 1) $0 75 4926

Contents: Introduction. The major types of literature. Specific weaknesses of the existing literature. Desiderata of an organized approach to disaster studies. Limitations on disaster research. Ap-

Note: Edited and (in some instances) expanded versions of papers originally presented at a symposium entitled "Workshop in Personality" held at Barat College in June, 1951, comprise this volume. The authors are members of faculties of Catholic colleges, and the theory of personality presented is based on Christian concept of human nature. The book is designed for use as text [illegible] course in the psychology of personality. Literature references are included in each chapter.

BARKER, ROGER GARLOCK AND OTHERS

Adjustment to physical handicap and illness a survey of the social psychology of physique and disability by Roger G. Barker in collaboration with Beatrice A. Wright, Lee Meyerson, Mollie R. Gonick. Revised. New York Social Science Research Council, 1953 440 p. illus. 23 cm. (Social Science Research Council. Bulletin 55) $2.00. 4937

Contents: Introduction. Somatopsychological aspects of differences in physical size, strength, and attractiveness. Somatopsychological significance of crippling. Psychology of the tuberculous. Somatopsychological significance of impaired hearing. Somatopsychological significance of impaired vision. Social psychology of acute illness. Employment of the disabled. Bibliographies of literature on the somatopsychological significance of physique and disability. Index of names. Index of subjects.

Note: The authors of this study view the social psychology of physique as a fundamental area of psychology. They did not attempt to cover the whole of it in this book, but they do present [illegible] of the literature on the psychological effects of [illegible] physical size, muscular strength and motor ability, orthopedic disabilities, tuberculosis, auditory impairment, visual impairments, acute illness. The presentation is critical one and the authors point out many gaps in the available knowledge—gaps that need filling by adequate research. The literature is adequately cited, furthermore, selected research studies are analyzed individually. The first edition was published in 1946. This revised edition reflects the considerable progress made in the field since the first edition was written. The results of recent research have been incorporated, and the presentation [illegible] in part.

BELL, JOHN ELDERKIN

Projective techniques, a dynamic approach to the study of the personality New York Longmans, Green and Company 1948. 533 p. illus. 21 cm. $5.00. 4938

Contents (abridged): An introduction to projective techniques. Part I, Word-association and related techniques: The incomplete sentence test. The [illegible] test. Storytelling and completion. Part II, Visual stimulus techniques: The Rorschach technique. Cloud pictures. The thematic apperception test. Rosenzweig picture-frustration study. The Szondi test. Part III, Expressive movement and related techniques: The analysis of handwriting. Mira myokinetic psychodiagnosis. Visual-motor tests. Drawing, painting, and other arts. Finger painting. The mosaic test. Voice and speech. Part IV, Play, drama, and related techniques. The world test. The psychodrama. Part V, The field of projective techniques. Subject index. Name index.

Note: This work is an excellent review of the major techniques in psychological testing based on projection, and a [illegible] critical but generally sympathetic [illegible] of the work done in the field to date [illegible] serves as a valuable guide and reference book to advanced students, research workers, and professional psychologists. The techniques included are discussed historically, descriptively and critically [illegible] of methods of administration, interpretation, and application is adequate. Evaluation of these aspects of the tests is not limited to the author's own point of view but includes a careful summary in each instance of others' critical opinions. In addition, [illegible] list of references follows each method studied. The final chapter is a summary of achievements and failures in the use of projective techniques generally and a thoughtful statement of the kind of research needed to make present practices more effective and meaningful.

BLAKE, ROBERT R., AND OTHERS

Perception an approach to personality By Robert R. Blake and Glenn V. Ramsey in collaboration with Frank A. Beach and others. New York The Ronald Press Company 1951 442 p. illus. 23 cm. $6.50. 4939

Contents: Perceptual processes as basic to an understanding of complex behavior, by R. R. Blake and others. Some structural factors in perception, by C. T. Morgan. Body chemistry and perception, by F. A. Beach. The role of learning in perception, by E. R. Hilgard. Personality dynamics and the process of perceiving, by J. S. Bruner. Cultural and developmental factors in perception, by W. Dennis. The role of language in the perceptual processes, by A. Korzybski. Toward an integrated theory of personality, by U. Bronfenbrenner. Unconscious processes and perception, by J. G. Miller. Perceptual organization and behavior pathology, by N. Cameron. Perceptual reorganization in client-centered therapy, by C. R. Rogers. The personal world through perception, by G. S. Klein. Personality theory and perception, by E. Frenkel-Brunswik. Index of names. Index of subjects.

Note: The advances being made in the perceptual approach to personality at a dozen different research centers are combined in organized form in this work, which is constructed around the view that the study of perceptual activity provides a basic approach to an understanding of personality and interpersonal relations. The papers were delivered in substance at the 1949-1950 clinical psychology symposium held at the University of Texas. The editors have achieved better integration than is commonly true for such volumes. Stimulating reports of new research on perceptual tests indicating significant personality variables are accompanied by valuable theoretical articles, e.g. on the rapprochement of psychoanalytic and Gestalt theory in terms of perception. For graduate students of psychology and professional psychologists and psychiatrists.

BLUM, GERALD S

Psychoanalytic theories of personality New York McGraw Hill Book Company Inc., 1953 219 p 24 cm. (McGraw Hill series in psychology Clifford T Morgan, consulting editor) $4.50. 4940

Contents: Prenatal and birth influences. The neonates' personality potential. The first year of life. Ages one to three years. From three to five. The latency period (age five to prepuberty and adolescence) Prepuberty and adolescence. Adult character structure. Pathogenesis. Bibliography. Name index. Subject index.

Note: A concise survey of the psychoanalytic theories of personality of the Freudian and related schools of psychoanalytic thought. The author summarizes the pertinent ideas from the works of leading writers on psychoanalysis and gives literature references to the original works. Freudian theory is presented first in each chapter, then the views of earlier and later authorities who deviated in greater or less degree from orthodox thought. There are many critical notes by the author and some suggestions for experiments to test the validity of the [illegible] presented. The book is directed to advanced students of psychiatry, social work, psychology, etc. It is potentially useful to anyone familiar with psychoanalytic concepts who is in need of a guide to the views of psychoanalysis on personality. The bibliography lists 293 references.

BRUNER, JEROME SEYMOUR, AND DAVID KRECH editors

Perception and personality a symposium. Durham Duke University Press, 1950. 266 p. illus. 24 cm. $3.50. 4941

Contents: Some considerations concerning the relation between perception and cognition, by H. Wallach. Perception, cognition, and behavior, by J. Bruner and L. Postman. Where is the perceiver in perceptual theory? by G. S. Klein and H. Schlesinger. Discussion, by E. C. Tolman. Discussion, by G. Murphy. Remarks on functionalism in perception, by E. Brunswik. Notes toward a psychological theory, by D. Krech. Sensory-tonic field theory of perception, by H. Werner and S. Wapner. Intolerance of ambiguity as an emotional and perceptual personality variable, by E. Frenkel-Brunswik. The nature and importance of individual differences in perception, by H. A. Witkin. Autonomic discriminations without awareness, an interim report, by R. A. McCleary and R. S. Lazarus. Towards a reformulation of the perception-motivation dichotomy, by J. E. Hochberg and H. Gleitman. Task completion as a function of [illegible] factors, by J. W. Tuvey. On the perception of incongruity a paradigm, by J. S. Bruner and L. Postman. Personal values as determinants of perceptual fixation, by E. McGinnies and W. Bowles. The effect of need for achievement on recognition of need-related words, by D. C. McClelland and A. M. Liberman. Selective sensitization in auditory perception, by J. M. Vanderplas and R. R. Blake.

culture. Freedom. Structure of personality Religious sentiment. Epilogue. Psychology and democracy Index.

Note An expert, somewhat philosophical appraisal of the psychology of personality The author argues for "conceptual openmindedness and a reasoned eclecticism while he attempts to lay a groundwork for a psychology of personality outside the usual conceptual compartments of conditioning, id, ego, superego relationships, and other theories. The lectures (and the book) were addressed both to psychologists and non-psychologists and accordingly are couched in a semi-technical style that makes their content available to educated lay readers as well as to specialists in personality psychology

ALLPORT, GORDON WILLARD

The nature of personality selected papers. Reading, Mass. Addison Wesley Publishing Company, Inc., 1950 220 p illus 24 cm. $4 00 4932

Contents Attitudes Chapter 17 in *A handbook of social psychology* (edited by C. C. Murchison) 1935. The psychologist's frame of reference *Psychological bulletin*, 1940, 37 1 28. The functional autonomy of motives *American journal of psychology* 1937 50, 141 156. Motivation in personality: reply to Mr. Bertocci *Psychological review* 1940 47 533–554 The ego in contemporary psychology· *Psychological review* 1943 50 451–478. The psychology of participation *Psychological review* 1945 53 117 132 Geneticism *versus* ego-structure in theories of personality *British journal of educational psychology* 1946 16, 57–68. Effect a secondary principle of learning *Psychological review* 1946, 53 335–347 Personalistic psychology as science reply *Psychological review* 1946 53 132 133 Scientific models and human morals, *Psychological review* 1947 54 182 192 Personality· a problem for science or a problem for art? *Revista de psihologie*, 1938, vol. 1 no. 4 1 15 Bibliography

Note. This book is made up of photographic reproductions of articles written by the author and published in various books and periodicals as noted in the table of contents. All of the articles pertain to the theory of personality hich was present in the author's *Personality* New York, 1937 Some of them were written explicitly in answer to critics who expressed disagreements and misgivings in print, and others represent expansions in theory or application provoked by the author's own dissatisfaction with his previously stated position.

ALLPORT, GORDON WILLARD

Personality a psychological interpretation New York . Henry Holt and Company 1937 588 p. illus 24 cm. $6 95 4933

Contents Part I, The approach to personality Psychology *and* the study of individuality Defining personality A brief history of characterology Part II, The development of personality Foundations of personality Basic aspects of growth. The self and its constraints. The transformation of motives. The mature personality Part III, The structure of personality The search for elements. The theory of identical elements. The theory of traits. The nature of traits. The unity of personality Part IV The analysis of personality A survey of methods. Common traits, psychography Analysis by ratings, tests, experiments. Expressive behavior Part V Understanding personality The ability t judge people. Inference and intuition. The person in psychology Index of subjects. Index of names.

Note The purpose of this book is to co-ordinate the results of previous studies concerning personality and to provide new co-ordinating concepts and theories which will serve as a basis for further study Doctrines from various schools of psychology are borrowed and adapted in an effort to cover the many sides of the subject. Results of research in the subject are presented in the text, rather than in statistical charts and graphs.

ANDERSON HAROLD HOMER, AND GLADYS L ANDERSON, editors

An introduction to projective techniques & other devices for understanding the dynamics of human behavior New York Prentice-Hall, Inc., 1951 720 p illus. 22 cm. $7 25 4934

Contents. Part I, Introduction: Human behavior and personality growth, by H. H. Anderson. Problems in the validation of projective techniques, by J W Macfarlane and R. D Tuddenham. Principles of design in "projective or misperceptive tests of personality by R. B. Cattell. Part II, The Rorschach test: The Rorschach test. multidimensional test of personality by S. J. Beck. Validating and experimental studies with the Rorschach method, by A. I. Rabin. Part III, Varieties of tests of personality mechanisms: The four picture test, by D J Van Lennep. The thematic apperception test, by R. R. Holt. The thematic apperception technique in the study of group and cultural problems, by W E. Henry Word association and sentence completion methods, by J. B. Rotter. The Rosenzweig picture-frustration study by H. J Clarke. The Bender visual motor Gestalt test, by F Halpern. Drawing of the human figure. method of personality investigation, by K. Machover Spontaneous drawings of the human form in childhood schizophrenia, by J. A. Montague. Finger painting, by P J. Napoli. Graphology by R. Wolfson. Expressive movement and the methods of experimental depth psychology by W Wolff and J A. Precker. The Szondi test, by A. I. Rabin. Other projective methods, by W W Morris. Part IV General intelligence tests in personality appraisal Interpretation of the Wechsler Bellevue intelligence scale in personality appraisal, by M. Mayman and others. Qualitative aspects of the Stanford-Binet, by G. L. Anderson. Part Projective techniques in therapy: The use of puppetry as projective method in therapy by A. G. Woltmann. Therapeutic use of play by J C. Solomon. Psychodrama as a projective technique, by R. B. Haas and J. L. Moreno. The use of projective techniques in the interpretation of hostility patterns, by D M. Levy Author index. Subject index.

Note. This book offers unusually complete coverage of all the various projective and quasi-projective devices currently being employed in some aspect of personality appraisal. Each chapter is written by one or more experts in the use of the particular device under consideration. Theoretical, research, and applied interests are represented in varying degrees by the different contributions. Primarily for graduate students in psychology and practicing psychologists and psychiatrists.

ANGYAL, ANDRAS

Foundations for a science of personality Cambridge, Mass. Harvard University Press, 1941 398 p illus. 21 cm $2.25 4935

Contents. The idea of a science of personality The trend toward increased autonomy The psychological functions. Organism and environment. Biospheric dynamics. The trend toward homonomy. Specific dynamic trends. The problem of integration. Disturbances of integration. The course of life as a Gestalt. Epitome. Index.

Note. Human nature has long been studied in its many phases, but broad theoretical frame of reference for the integration of its manifold aspects has been wanting. Dr Angyal has constructed such a frame for science of personality His dynamic conception of personality is in harmony with the modern trend in the study of the human being, but he goes beyond the principle of personality as a unitary process, and embodies the basic laws of psychobiological processes in a closely knit and self-consistent system. The volume is addressed to all who are concerned with the problems of personality· psychiatrists, psychologists, biologists, sociologists, anthropologists, and others.

ARNOLD, MAGDA B , AND JOHN A. GASSON

The human person an approach to an integral theory of personality New York The Ronald Press Company, 1954 593 p. 21 cm. $6 00 4936

Contents Part I, The science of psychology· Basic assumptions in psychology by M. B. Arnold. The concept of "theory" in science and in psychology by J A. Gasson. Existentialism and scientific systematization, by W Smet. Part II, Personality structure: Contemporary personality theory by A. Walters. Personality theories based on physical and biological models, by J. A. Gasson. Personality theory—a formulation of general principles, by J. A. Gasson. A research method validating self-determination, by L. B. Snider Psychic determinism, freedom, and personality development, by N Mailloux. Part III, Personality integration Integration and the self-ideal, by V V Herr Feelings and emotions as dynamic factors in personality integration, by M. B. Arnold. Contemporary learning theory and human learning, by F J Kobler A theory of human and animal learning, by M. B. Arnold. Part IV Psychotherapy and self-integration Psychology as research, science, by A. A. Schneiders. Free association and free imagination, by M. B. Arnold. Counseling as therapy and self-integration, by C. A. Curran. Logotherapy and existential analysis, by M B. Arnold. The theory of psychotherapy by M. B. Arnold. Part Self-integration through religion Religious experience in client-centered therapy by W Smet. Religion and personality integration, by J A. Gasson. Index of names. Index of subjects.

of separate disciplines. Corroboration of earlier judgments through follow-up information. Appendixes: Psychiatric data—distribution of personality traits of Grant Study participants. Selected socio-economic data. Selected morphological data. Selected physiological data. Selected medical data. Scores of Grant Study participants in selected tests of mental function. Personality summary. Tables.

Note: A condensed preliminary report on a study carried out at Harvard University from 1938 to 1942 relating to the nature and needs of normal young men. For the purposes of the study "normal" is defined as the "balanced person whose combination of traits of all sorts allows him to function effectively in a variety of ways." The book describes the methods used, and summarizes the findings regarding the physical and mental development, behavior, aptitudes, interests, and other vital characteristics of the 268 students examined during the period. Even though the investigation is limited to a rather small, select group, the report is an important contribution to the knowledge of personality. The study is not yet complete and further publications will report on the careers of these 268 participants for at least another 15 or 20 years.

HUNT, JOSEPH MCVICKER, editor

Personality and the behavior disorders a handbook based on experimental and clinical research. New York The Ronald Press Company 1944 2 v illus. 24 cm. $12.50. 4947

Contents: Volume I. Part I, Theoretical approaches to personality: The structure of personality, by D. W. MacKinnon. Personality in terms of associative learning, by E. R. Guthrie. Dynamic theory of personality, by O. H. Mowrer and C. Kluckhohn. Part II, Cross-sectional methods of assessing personality: Subjective evaluations of personality, by E. S. Jones. Personality tests, by J. R. Miller. Interpretation of imaginative productions, by R. W. White. Part III, Behavior dynamics, experimental behavior disorders, and hypotheses: Clinical approach to the dynamics of behavior, by T. M. French. Physiological effects of emotional tension, by L. J. Saul. Experimental analysis of psychoanalytic phenomena, by R. R. Sears. Level of aspiration, by K. Lewin and others. An outline of frustration theory, by S. Rosenzweig. Conditioned reflex method and experimental neurosis, by H. S. Liddell. Experimental behavior disorders in the rat, by N. W. Fraser. Experimental studies of conflict, by N. E. Miller. Hypnotism, by A. Jenness. Part IV, Determinants of personality—biological and organic: Heredity, by L. S. Penrose. Constitutional factors in personality, by W. H. Sheldon. Personality as affected by lesions of the brain, by S. Cobb. Physiological factors in behavior, by M. W. Slack. Volume II. Part V, Determinants of personality—experiential and sociological: Infantile experience in relation to personality development, by M. A. Ribble. Childhood experience in relation to personality development, by L. B. Murphy. Adolescent experience in relation to personality and behavior, by P. Blanchard. Cultural determinants of personality, by G. Bateson. Ecological factors in human behavior, by R. E. L. Faris. Part VI, Some outstanding patterns of behavior disorder: Behavior disorders in childhood, by L. Kanner. Delinquent and criminal personalities, by L. G. Lowrey. Us[illegible] personalities in the military services, by A. W. Rowland. The psychoneuroses, by W. Malamud. The functional psychoses, by N. Cameron. The concept of psychopathic personality, by P. W. Preu. Seizure states, by W. G. Lennox. Part VII, Some investigated correlates of behavior disorders: Psychological deficit, by J. McV. Hunt and C. N. Cofer. Electroencephalography, by D. B. Lindsley. Part VIII, Therapy and the prevention of behavior disorders: Psychiatric therapy, by K. E. Appel. The prevention of personality disorders, by G. S. Stevenson. Author index. Subject index.

Note: The aim of this compilation is to present the major portion of theory, investigative fact, and clinical practice from various life sciences that bear on the study of personality. The 40 contributors represent the fields of psychology, sociology, anthropology, education, physiology and other sciences. Behavior disorders are analyzed in detail, while primary emphasis is placed on the whole organism or person. Extensive bibliographies follow each chapter.

JENNINGS, HELEN HALL

Leadership and isolation a study of personality in inter personal relations. Second edition. New York Longmans Green and Company 1950 349 p. illus. 21 cm. $4.00 4948

Contents: Foreword by Gardner Murphy. Part I, The problem of inter-personal choice: The significance of choice in human behavior. The choosing process—its study and analysis. Part II, Emotional and social expansiveness: Character of the choice process. Spread and focus of choice and rejection. The patterning of interrelations. The internal structure of the individual's social atom. Choice and choice-status as affected by high opportunity for contacts and other factors. Behavior characteristics of underchosen, average chosen, and overchosen. *Leadership and isolation.* Part III, The nature of emotional and social expansiveness: Personality and inter-personal relationships. The relation of criteria to living-working situations. Part IV, *Sociometric differentiation of groups:* The choosing process in inter-personal relations in leisure-time. Structural differences in groups—the psychegroup and the sociogroup. New directions. Glossary. *Bibliography.* Index.

Note: An important study conducted from the point of view of sociometry. It presents analyses of the personality traits of 450 individuals that affected their choice or rejection by other members of their groups. Although selected case histories are presented in detail and there are some tabulations of data, most of the book is devoted to generalized discussions and interpretations of the findings. The first edition was published in 1943. This second edition is an expansion of the original work. Part IV, which is devoted chiefly to the choosing process in leisure-time inter-personal relations, is new addition.

KENTUCKY UNIVERSITY COLLEGE OF ARTS AND SCIENCES

Learning theory personality theory and clinical research the Kentucky symposium. New York John Wiley & Sons, Inc. 1954 164 p. illus. 24 cm. $3 50 4949

Contents: Current interpretations of learning data and some recent developments in stimulus-response theory, by K. W. Spence. Stimulus-response theory as applied to perception, by D. D. Wickens. Motivational forces underlying learning, by H. F. Harlow. The premature crystallization of learning theory, by N. R. F. Maier. Learning and explanation, by D. K. Adams. Ego psychology, cybernetics, and learning theory, by O. H. Mowrer. Personality structures as learning and motivation patterns—theme for the integration of methodologies, by R. B. Cattell. Prospects and perspectives in psychotherapeutic theory and research, by J. M. Butler. Learning—an aspect of personality development, by D. Snygg. "Error"—theory and measurement, by R. B. Ammons. Some current research issues in clinical psychology, by J. R. Wittenborn. Index.

Note: Papers presented at a symposium held under the auspices of the University of Kentucky in March, 1953 are published in this volume. The meeting was held to facilitate integration of research and thought in three areas of psychology which, though related, have developed independently: learning theory, personality theory and clinical psychology. The majority of the papers deal with learning theory and together they throw much light on the current state of this area of psychology.

KLUCKHOHN, CLYDE, AND HENRY A. MURRAY, editors

Personality in nature, society and culture. Second edition, revised and enlarged. With the collaboration of David M. Schneider New York Alfred A. Knopf 1953 716 p. 25 cm. $8.00 4950

Contents: Introduction, by H. A. Murray and C. Kluckhohn. Part I, A conception of personality, by H. A. Murray and C. Kluckhohn. Part II, The formation of personality: Section I, The determinants of personality formation: Personality formation—the determinants, by C. Kluckhohn and H. A. Murray. Section II, Constitutional determinants: The genetic factor in autonomic nervous-system function, by H. Jost and L. W. Sontag. The genetic theory of schizophrenia, by F. J. Kallmann. Physical and physiological correlates of personality structure, by R. N. Sanford. Psychosomatic studies of some aspects of maternal behavior, by D. M. Levy. Section III, Interrelations between constitutional and group-membership determinants: Anthropological data on the problem of instinct, by M. Mead. Cultural control and physiological autonomy, by L. K. Frank. Social technique, social status, and social change in illness, by J. Ruesch. The frustration complex in Kwoma society, by J. W. M. Whiting. Breast-feeding and character formation, by F. Goldman-Eisler. Growth and crises of the "healthy personality," by E. H. Erikson. Biography and history, by A. M. Tozzer. Section IV, Group-membership determinants: The concept of national character, by G. Gorer. Aggression in Ifaluk society, by A. I. Hallowell. The general problem of Hopi adjustment, by D. Eggan. Doll play of Pilaga Indian children, by J. Henry and Z. Henry. Social class and color differences in child-rearing, by

Note. The importance of the field of perception as the area where general experimental and clinical-social psychology meet is the main point around which this book has been constructed. The papers are written on graduate level, and the book as a whole is addressed to graduate students and professional psychologists. It provides an authoritative survey of current trends in research, and offers theoretical structure for further advances. The papers were published originally in *Journal of personality* Volume 18.

CATTELL, RAYMOND BERNARD

Description and measurement of personality Yonkers World Book Company, 1946 602 p illus 21 cm. (Measurement and adjustment series edited by Lewis M Terman) $4 20 4942

Contents. Editor's introduction. The enterprise of describing, diagnosing, and measuring personality The nature and varieties of clinically distinguishable personality forms. Description of the principal pathological syndromes, neurotic and psychotic. The nature of traits. Basic methods for delimiting and measuring common and unique traits. Systematization of description and measurement scales. The predictive convenience of conditional modalities and other trait subdivisions. The principal surface traits discovered through behavior ratings. The principal source traits discovered through behavior ratings. The principal source traits based on self-inventories. The principal source traits discovered through objective test measurements. The established primary traits: their measurement and use in personality predictions. Bibliography Subject index. Index of names.

Note The author deplores the unsystematic and unscientific manner in which many studies of personality have been undertaken; and on the basis of his own research and a review of the literature of the subject outlines methods and techniques for more scientific personality description. The final chapters constitute a catalogue of syndromes, factors, and traits which may be applied in the measurement and prediction of personality The author leans heavily upon mathematical techniques, especially factor analysis. Criticisms of poor descriptive and measurement studies are based particularly on this approach. While highly technical the book is of interest to professional psychologists, psychiatrists and advanced graduate students.

CATTELL, RAYMOND BERNARD

Personality a systematic theoretical and factual study New York McGraw Hill Book Company, Inc. 1950 689 p illus 23 cm (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $7.50 4943

Contents Describing personality through types or syndromes. Describing personality through traits. Measuring personality by the life-record method. Measuring personality by self-rating and objective tests. Inherited, constitutional influences in personality Psychodynamics The intrinsic structure of dynamic traits. The structure of innate drives. The structures formed in the adjustment process. The self—its integration, adaptation, and adjustment. Psychosomatics Known functional patterns. Methodological venues to further evidence. Personality and the cultural matrix. The family its structure and setting. The family its relation to child personality Group dynamics and personality Personality and specific social organs. The abnormal and maladapted personality Evidence from the school misfit, the delinquent, and the criminal The neurotic. The psychotic. Life stages in personality Conception to puberty Adolescence, maturity old age. Principles of personality formation. Name index. Subject index.

Note The initial definition of personality is given as that which permits a prediction of what a person will do in given situation The concluding summary indicates that the principles of personality formation and operation may be incorporated in 17 given laws. From outset to conclusion this volume treats personality study by scientific standards, such as apply in experimental psychology and integrates personality study with psychological concepts in systematic manner. The treatment of motivation leans heavily upon McDougall, and the methodology upon Thurstone's factor analysis. The emphasis is upon experiment and research rather than on clinical views of personality The book may be used as text for graduate or an undergraduate course in personality study and is especially intended for the student majoring in psychology or expecting to follow psychology as profession. It covers the subject of personality study in detail, considering it as the natural hub upon which all more specialized sectors of psychology turn. A bibliography accompanies each chapter.

GILBERT, G M

The psychology of dictatorship, based on an examination of the leaders of Nazi Germany New York The Ronald Press Company, 1950 327 p illus. 22 cm $5 00 4944

Contents Part I, The genesis of dictatorship The emergent pattern of dictatorship—a psychocultural view Adolf Hitler and the Nazi movement. Part II, Selected case studies. The revolutionists. The diplomats. The militarists. The state police. Part III, Psychological implications Clinical and psychodynamic aspects. Some social relationships. Dictatorship and adaptive social behavior. References and bibliography Name index. Subject index.

Note. The author of this unique work served as prison psychologist at the Nuremberg trial of the Nazi war criminals in 1945-46, and thus was able to make a thorough first-hand study of such German leaders as Goering, Hess, von Ribbentrop and Keitel. This report of his findings, based on almost daily contact with the prisoners, offers a revealing picture of the character development, emotional conflicts, and social values of Hitler's chief lieutenants, and indirectly of Hitler himself The author has also attempted to integrate some of the data of economics, sociology politics and history as they throw light upon the rise of Nazism. Although written primarily for psychologists, the subject matter and the semi-technical style of the book make it of interest to readers outside this field.

HARSH, CHARLES MAXFIELD, AND H G SCHRICKEL

Personality development and assessment. New York The Ronald Press Company, 1950 518 p illus 24 cm. $6 00 4945

Contents Part I, Nature and development of personality: Introduction. Beginnings of personality Infancy—the first two years. Infancy—sources of personal differences. Progress in early childhood. Childhood learning and acculturation. Middle childhood—six to twelve. Middle childhood—expansion of personality Adolescence. Adolescent personality Early adulthood. Adjustments to love and marriage in early adulthood. Middle and old age. Part II, Personality study in theory and practice Theories of personality The psychoanalytic movement. Cultural approach and synthesis. Assessment of personality Questionnaires and trait organization. Interpretive assessment. Integration in personality Appendix. Theories of trait organization. References. Index of names. Index of subjects.

Note. A general study of personality from the standpoint of psychology organized for use as a textbook. In the first part are traced the typical stages of personality development from infancy to old age. For each period, there is discussion of (1) factors influencing personality (2) major problems and mechanisms of adjustment, (3) changes in motivation, (4) changes in ability and learned adjustment patterns, (5) significance of the phase for later developments, and (6) characteristic individual variations. The second part of the book is survey of theories about personality and methods of assessing it. By cross references in Part II the reader is reminded that theory and method must be related to the phenomena discussed in Part I. References are made throughout the text to the 22-page bibliography

HEATH, CLARK WRIGHT

What people are a study of normal young men, by Clark W Health in collaboration with Lucien Brouha Lewise W Gregory Carl C Seltzer Frederic L. Wells and William L. Woods The Grant Study Department of Hygiene, Harvard University Cambridge, Mass. Harvard University Press, 1945 141 p. illus. 21 cm. $2 00 4946

Contents (abridged) Section I, Introductory Grant Study concept of "normal. Aims and purposes. Nature of approach. Organization and general plan of work. Selection of participants. Methods of examining participants. Section II, Description of normal young men from the point of view of different disciplines: Description of normal personality Description of manner of adjustment to certain conditions. Discussion of certain adjustment phenomena primarily intrapersonal. Description of the group by socio-economic findings. The morphological approach. Physiological considerations. Medical considerations. Considerations from the field of mental measurement. Section III, Miscellaneous considerations and further discussion of nature of work: General considerations from combined observations

of sports [illegible]. Consideration of earlier judgments through [illegible] information. Appendices. Psychiatric data—distribution of personality traits of Grant Study participants. Selected socio-economic data. Selected morphological data. Selected physiological data. Selected medical data. Scores of Grant Study participants in selected tests of mental function. Personality summary. Tables.

Note: A condensed preliminary report on a study carried out at Harvard University from 1938 to 1942 relating to the nature and needs of normal young men. For the purposes of the study "normal" is defined as the "balanced person" whose combination of traits allows him to function effectively in a variety of ways. The book describes the methods used, and summarizes the findings regarding the physical and mental development, behavior, aptitudes, interests, and other vital characteristics of the 268 students examined during this period. Even though the investigation is limited to a rather small, select group, the report is an important contribution to the knowledge of personality. The study is not yet complete and further publications will report on the careers of these 268 participants for at least another 15 or 20 years.

Doll play of Pilaga Indian children, by J. Henry and Z. Henry. Social class and color differences in child-rearing, by

Note. The importance of the field of perception as the area where general experimental and clinical-social psychology meet is the main point around which this book has been constructed. The papers are ritten on a graduate level, and the book as whole is addressed t graduate students and professional psychologists. It provides an authoritative survey of current trends in research, and offers a theoretical structure for further advances. The papers were published originally in *Journal of Personality* Volume 18.

CATTELL, RAYMOND BERNARD

Description and measurement of personality Yonkers World Book Company *1946* 602 p illus. 21 cm. (Measurement and adjustment series, edited by Lewis M Terman) $4.20 4942

Contents Editor's introduction. The enterprise of describing, diagnosing, and measuring personality The nature and varieties of clinically distinguishable personality forms. Description of the principal pathological syndromes, neurotic and psychotic. The nature of traits. Basic methods for delimiting and measuring common and unique traits. Systematization of description and measurement scales. The predictive convenience of conditional modalities and other trait subdivisions. The principal surface traits discovered through behavior ratings. The principal source traits discovered through behavior ratings. The principal source traits based on self-inventories. The principal source traits discovered through objective test measurements. The established primary traits: their measurement and use in personality predictions. Bibliography Subject index. Index of names.

Note. The author deplores the unsystematic and unscientific manner in which many studies of personality have been undertaken and on the basis of his own research and a review of the literature of the subject outlines methods and techniques for more scientific personality description. The final chapters constitute a catalogue of syndromes, factors, and traits which may be applied in the measurement and prediction of personality The author leans heavily upon mathematical techniques, especially factor analysis. Criticisms of poor descriptive and measurement studies are based particularly on this approach. While highly technical, the book is of interest to professional psychologists, psychiatrists and advanced graduate students.

CATTELL, RAYMOND BERNARD

Personality a systematic theoretical and factual study New York McGraw Hill Book Company, Inc., *1950* 689 p illus. 23 cm. (McGraw Hill publications in psychology, Clifford T Morgan, consulting editor) $7.50 4943

Contents Describing personality through types or syndromes. Describing personality through traits. Measuring personality by the life-record method. Measuring personality by self-rating and objective tests. Inherited, constitutional influences in personality Psychodynamics The intrinsic structure of dynamic traits. The structure of innate drives. The structures formed in the adjustment process. The self—its integration, adaptation, and adjustment. Psychosomatics Known functional patterns. Methodological avenues to further evidence. Personality and the cultural matrix The family its structure and setting The family its relation to child personality Group dynamics and personality Personality and specific social organs. The abnormal and unadapted personality Evidence from the school misfit, the delinquent, and the criminal. The neurotic. The psychotic. Life stages in personality Conception to puberty Adolescence, maturity old age. Principles of personality formation. Name index. Subject index.

Note The initial definition of personality is given as "that which permits prediction of what a person will do in a given situation. The concluding summary indicates that the principles of personality formation and operation may be incorporated in 17 given laws. From outset to conclusion this volume treats personality study by scientific standards, such as apply in experimental psychology and integrates personality study with psychological concepts in systematic manner The treatment of motivation leans heavily upon McDougall, and the methodology upon Thurstone's factor analysis. The emphasis is upon experiment and research rather than on clinical views of personality The book may be used as text for graduate or an undergraduate course in personality study and is especially intended for the student majoring in psychology or expecting to follow psychology as profession. It covers the subject of personality study in detail, considering it as the natural hub upon which all more specialized sectors of psychology turn. A bibliography accompanies each chapter

GILBERT, G M

The psychology of dictatorship, based on an examination of the leaders of Nazi Germany New York The Ronald Press Company, 1950 327 p illus 22 cm. $5 00 4944

Contents: Part I, The genesis of dictatorship: The emergent pattern of dictatorship—a psychocultural view *Adolf Hitler* and the Nazi movement. Part II, Selected case studies. The revolutionists. The diplomats. The militarists. The state police. Part III, Psychological implications *Clinical and psychodynamic aspects. Some social relationships.* Dictatorship and adaptive social behavior. References and bibliography Name index. Subject index.

Note The author of this unique work served as prison psychologist at the Nuremberg trial of the Nazi war criminals in 1945-46, and thus was able to make a thorough first-hand study of such German leaders as Goering, Hess, von Ribbentrop and Keitel. The report of his findings, based on almost daily contact with the prisoners, offers a revealing picture of the character development, emotional conflicts, and social values of Hitler's chief lieutenants, and indirectly of Hitler himself. The author has also attempted to integrate some of the data of economics, sociology politics and history as they throw light upon the rise of Nazism. Although written primarily for psychologists, the subject matter and the nontechnical style of the book make it of interest to readers outside this field.

HARSH, CHARLES MAXFIELD, AND H. G. SCHRICKEL

Personality development and assessment. New York The Ronald Press Company 1950 518 p. illus 24 cm $6 00 4945

Contents Part I, Nature and development of personality: Introduction. Beginnings of personality Infancy—the first two years. Infancy—sources of personal differences. Progress in early childhood. Childhood learning and acculturation. Middle childhood—six to twelve. Middle childhood—expansion of personality Adolescence. Adolescent personality Early adulthood. Adjustments to job and marriage in early adulthood. Middle and old age. Part II, Personality study in theory and practice Theories of personality The psychoanalytic movement. Cultural approach and synthesis. Assessment of personality Questionnaires and trait organization. Interpretive assessment. Integration in personality Appendix Theories of trait organization. References. Index of names. Index of subjects.

Note A general study of personality from the standpoint of psychology organized for use as textbook. In the first part are traced the typical stages of personality development from infancy to old age. For each period, there is discussion of (1) factors influencing personality (2) major problems and mechanisms of adjustment, (3) changes in motivation, (4) changes in ability and learned adjustment patterns, (5) significance of the phase for later developments, and (6) characteristic individual variations. The second part of the book is a survey of theories about personality and methods of assessing it. By cross references in Part II the reader is reminded that theory and method must be related to the phenomena discussed in Part I. References are made throughout the text to the 23-page bibliography

HEATH, CLARK WRIGHT

What people are a study of normal young men by Clark W Health in collaboration with Lucien Brouha, Lewise W Gregory, Carl C. Seltzer Frederic L. Wells and William L. Woods The Grant Study Department of Hygiene Harvard University Cambridge, Mass. Harvard University Press, 1945 141 p illus 21 cm. $2 00 4946

Contents (abridged) Section I, Introductory Grant Study concept of "normal. Aims and purposes. Nature of approach Organization and general plan of work. Selection of participants. Methods of examining participants. Section II, Description of normal young men from the point of iew of different disciplines Description of normal personality Description of manner of adjustment to certain conditions. Discussion of certain adjustment phenomena primarily intrapersonal. Description of the group by socio-economic findings. The morphological approach. Physiological considerations Medical considerations. Considerations from the field of mental measurement. Section III, Miscellaneous considerations and further discussion of nature of work General considerations from combined observations

[illegible] Discipline and mental health. An experimental analogue of [illegible] Learning theory and the neurotic [illegible] The problem of security. Biological vs. moral "frustration [illegible]" ... the concept of personality disturbance. Identification—a link between learning theory and psychotherapy. On the psychology of [illegible] "talking back"—a contribution to language and personality theory. Bibliography. Index of names. Index of subjects.

Note: [illegible]

MURPHY, GARDNER

Personality a biosocial approach to origins and structure. New York Harper & Brothers, 1947 999 p. 24 cm. $7.50. 4956

Contents (abridged): Part one, Organic foundations. [illegible]

Note: [illegible]

MURRAY, HENRY ALEXANDER, AND OTHERS

Explorations in personality A clinical and experimental study of fifty men of college age. By the workers at the Harvard Psychological Clinic. New York Oxford University Press, 1938. 761 p. illus. 24 cm. $10.00. 4957

Contents: Preface. Introduction. Proposals for a theory of personality. Variables of personality. Judgments of personality. [illegible] Procedures: Conference. Autobiography. Family relations and childhood memories. Sexual development. Present dilemmas. Conversations. [illegible] Questionnaires. Abilities test. Aesthetic appreciation test. Hypnotic test. Level of aspiration test. [illegible] Rorschach test. Miscellaneous procedures. Reactions to frustration. Social interaction. Case history [illegible] Conclusions. Glossary. Index.

Note: The point of view adopted in this book is that personalities constitute the subject matter of psychology [illegible] The intentions of the authors were (1) to construct [illegible] theory of personality (2) to devise techniques for getting at some of the more important attributes of personality and (3) by study of the lives of many individuals to discover basic facts of personality. In order to make the book an integrated whole rather than a collection of articles on special topics, its authors adopted the following procedure: to have all experimenters study the same series of individuals with the same concepts actively in mind, and then in assembly—a meeting being devoted to each case—to report their findings and collaborate in accomplishing a common purpose: the formulation of the personality of every subject.

SLOTKIN, JAMES SYDNEY

Personality development. New York Harper & Brothers, 1952 401 p. illus. 22 cm. (Harper's social science series under the editorship of F Stuart Chapin) $4.50 4958

Contents: Part one, Inheritance. The concept of inheritance. Biological aspects of the individual. Traits resulting from inheritance. Part two, Socialization. The concept of socialization. Social aspects of the individual. Traits acquired through socialization. Part three, Culturalization. The concept of culturalization. Cultural aspects of the individual. Traits acquired through culturalization. Part four, Individualization. The concept of individualization. Particular aspects of the individual. Traits developed through individualization. Name index. Subject index.

Note: In this work, Dr. Slotkin develops the theory that "personality is the product of the responses made by an individual with particular heredity to the specific sequence of situations confronting him during his life history." [illegible]

SMITH, M BREWSTER, AND OTHERS

Opinions and personality By M. Brewster Smith, Jerome S Bruner and Robert W White. With the collaboration of David F Aberle, Stanley G. Estes, Eugenia Hanfmann, and Sheldon J Korchin. New York John Wiley & Sons Inc., 1956. 294 p. 23 cm. $6.00. 4959

Contents: Introduction. Converging approaches. On understanding an opinion. [illegible] John Chatwell. Charles Lanlin. Hilary Sullivan. The other seven. Opinions and personalities. Index.

Note: Developed from a project of the Psychological Clinic of Harvard University with support from the Laboratory of Social Relations, this book is a study of the psychological bases of opinions and their relationship to the total personality. How opinions are formed [illegible] functions they serve, how they relate to other factors such as intelligence, and how they fit into the structure of the individual personality are the main questions asked. The opinions held by 10 men about Russia and communism form the framework for the study. Chapters which generalize about opinion forming are placed before and after three case histories to highlight the psychological principles brought to light in the study. This work differs from most of the published literature on opinions, which tends to stress public opinion and the measurement of opinion, rather than the psychological development of opinion in the individual personality.

SOLOMON, JOSEPH C.

A synthesis of human behavior an integration of thought processes and ego growth. New York Grune & Stratton, 1954 265 p. 22 cm. $6.50. 4960

Contents: Introduction. The infant. The toddler. The oedipal age. Latency. Adolescence. The adult years. The middle years. Old age. Bibliography. Index.

Note: A psychoanalytic study of human behavior in the various stages of development from infancy to senescence. It correlates the principal features of behavior and personality with the development of the ego. Early in the book the author provides a table of ego organization, in which the personalities and behavior associated with the various stages of physical development and age are arranged under the following headings: Psychosexual stage, Principal external objects, "Mature ego, "[illegible]" and

A. Davis and R. J. Havighurst. Symbolic sibling rivalry in a Guatemalan Indian village, by B. D. Paul. Are basic needs ultimate? by D. Lee. Dominant and variant value orientations, by F. Rockwood Kluckhohn. Section v, Role determinants. Age and sex in the social structure of the United States, by T. Parsons. Bureaucratic structure and personality, by R. K. Merton. Social dynamics of physical disability in army basic training, by D. M. Schneider. Section vi, Situational determinants: The relation of birth to behavior, by I. S. Wile and R. Davis. Educative influence of personality factors in the environment, by F. Alexander. Personality under social catastrophe—ninety life-histories of the Nazi revolution, by G. W. Allport and others. An instance of the social origin of conflict resulting in psychoses, by J. McV. Hunt. The ghost of Henry James—a study in thematic apperception, by S. Rosenzweig. Section vii, Interrelations between the determinants: Some psychosomatic aspects of childhood, by L. W. Sontag. Infant reactions to restraint—problems in the fate of infantile aggression, by P. Greenacre. Individual and social origins of neurosis, by E. Fromm. Continuities and discontinuities in cultural conditioning, by R. Benedict. The life history in community studies, by J. Dollard. Some problems of personality development among Negro children, by B. Dai. American status systems and the socialization of the child, by A. Davis. Some sociological observations on culture and personality studies, by A. Inkeles. Part iii, Some applications to modern problems: The channeling of Negro aggression by the cultural process, by H. Powdermaker. Illness and the role of the physician—a sociological perspective, by T. Parsons. Trends in affectlessness, by N. Leites. The psychology of the Soviet middle elite—two case histories, by R. A. Bauer. Social change and cultural surrogates, by M. Mead. Administrative contributions to democratic character formation at the adolescent level, by M. Mead. The scientific approach to case work—with special emphasis on psychoanalysis, by R. Waelder. The functions of alcohol in primitive societies—a cross-cultural study, by D. Horton. A critique of cultural and statistical concepts of abnormality, by H. J. Wegrocki. Index.

Note. A well-selected anthology of periodical articles, book chapters, and original contributions pertaining to the development of human personality within society. It is used as supplementary reading by college students majoring in psychology or sociology and to a lesser extent by members of such professions as teaching and medicine who feel the need of a substantial collection of modern writings on personality. The first edition was published in 1948. Some of the papers in the original edition were revised for the second edition and several papers were added.

LEWIN, KURT

A dynamic theory of personality selected papers. Translated by Donald K. Adams and Karl E. Zener. New York McGraw-Hill Book Company Inc. 1935 286 p illus 23 cm. (McGraw-Hill publications in psychology) $6 00 4951

Contents The conflict between Aristotelian and Galileian modes of thought in contemporary psychology. On the structure of the mind. Environmental forces in child behavior and development. The psychological situations of reward and punishment. Education for reality. Substitute activity and substitute value. A dynamic theory of the feeble-minded. Survey of the experimental investigations. Index of names. Index of subjects.

Note. A collection of originally independent articles written at different times, but demonstrating the author's experimental approach to the problems of will, emotion, and character. The selection was made in order to give a picture of the author's investigations in these fields and their connections with various applied fields, especially child psychology, pedagogy, psychopathology, characterology and social psychology. Bibliographical references are given in footnotes. The final chapter gives a synopsis of the author's experimental investigations which is designed to orient those interested in closer acquaintance with his work.

LINTON, RALPH

The cultural background of personality. New York Appleton-Century-Crofts, Inc. 1945 157 p. 19 cm $2 00 4952

Contents The individual, culture and society. The concept of culture. Social structure and culture participation. Personality. The role of culture in personality formation. Index.

Note The five essays in this volume reflect the author's belief that environmental factors, and particularly those that may be classified as cultural, are of great importance in shaping personality. The book is strictly neither a study of the psychology of personality nor a study of social psychology. In fact, a principal theme is that personality psychology, social psychology and cultural psychology all have much to contribute toward the understanding of personality. The book had its origin in a series of lectures delivered at Swarthmore College in February 1943 but the essays in it are revisions of the lectures rather than the lectures themselves. The lecture style has persisted, however, and the volume is suitable for reading by any educated person who is interested in the subject; in other words, it is not addressed to specialists.

McCLELLAND, DAVID CLARENCE

Personality. New York Dryden Press, Inc., 1951 654 p illus. 22 cm. $5.50 4953

Contents Part i, Methodology: How personality is studied. The scientific approach to personality: the history of a belief. Obtaining the facts. Interpreting the facts. Relating the facts to one another. Part ii, Trait as a personality variable. Expressive traits. Performance traits. Trait theory. Part iii, Schema as a personality variable. Ideas and values. Roles and role models. Socialization: The source of schemata and motives. Part iv, Motive as a personality variable. Motivation: clinical approach. Motivation: experimental approach. The effects of motivation on behavior. Part v, Summary and integration: Conceptions of the self. Interrelation among the basic personality variables: predicting the concrete act. References and author index. Subject index.

Note. Using mainly the motivational scheme of H. A. Murray but combining methodological resources of many kinds, this author has attempted to develop a psychology of the individual personality somewhat along the lines long advocated by Gordon Allport. The diverse discussions of theoretical and research problems are tied together by constant reference to a single case who has been studied with extraordinary thoroughness. Intended for the advanced undergraduate student of psychology, it will be more useful at the graduate level.

MIKESELL, WILLIAM HENRY, AND GORDON HANSON

Psychology of adjustment. New York D. Van Nostrand Company, Inc., 1952 406 p. 24 cm (The Van Nostrand series in psychology, J. P. Guilford general editor) $4 75 4954

Contents. Frustration and maladjustment. Conflict. Our important wants. Indirect living. Arrested development. The aggressive mechanism. The withdrawal mechanism. The regressive mechanism. Our fantasy life. Illness as a mechanism. The problems of sex. The place of learning in educational adjustment. Social responsibility and work. Adjustment in the family. Various forms of therapy. Better choice of defense mechanisms. Building confidence. Function and goal-centered behavior. Index.

Note An introductory college text in which the individual personality is viewed as the product of adjustment to the pressures of the society in which the individual lives. Considerably more space is given to maladjustment than to adjustments that build up the normal personality, but the authors' purpose behind this emphasis appears to be to enable college students and other readers to avoid the maladjustments. No previous introduction to psychology is required, and the book is written in a style that makes it available to lay readers as well as to those who study the subject under an instructor. Literature references are included.

MOWRER, ORVAL HOBART

Learning theory and personality dynamics selected papers. New York The Ronald Press Company 1950 776 p illus. 24 cm. $9 00 4955

Contents (abridged) Part i, Learning theory: A stimulus-response analysis of anxiety and its role as a reinforcing agent. Preparatory set (expectancy)—some methods of measurement. Fear as an intervening variable in avoidance conditioning. Extinction and behavior variability as functions of effortfulness of task. Habit strength as a function of the pattern of reinforcement. The law of effect and ego psychology. On the dual nature of learning—a reinterpretation of "conditioning" and "problem solving." An experiment exemplifying "learning" as induction and insight as deduction. Part ii, Personality dynamics: An experimental analogue of "regression" with incidental observations on "reaction formation." Enuresis—a method for its study and treatment. Time as a determinant in integrative

[illegible] arousal and schizophrenia in children, by J. L. Despert. Experience with therapy of psychosomatic problems in [illegible], by R. S. Lourie. Adolescent frustrations and evasions, by L. G. Lowrey. Discussion of Chapters 13–16, by M. S. Mahler. Appendix. Index.

Note: The papers and discussions in this volume represent [illegible] section of the recent and current research in the United States of America and Canada pertinent to abnormal psychology of children.

BAKWIN HARRY, AND RUTH MORRIS BAKWIN

Clinical management of behavior disorders in children. Illustrated. Philadelphia W B Saunders Company 1953 495 p. illus. 24 cm. $10.00. 4966

Contents (abridged). Growth and development. Psychologic care of the physically ill and handicapped child. Etiologic factors in behavior disorders of children. Diagnosis and treatment of behavior disorders in children. Problems related to mental functioning. Developmental abnormalities. Problems related to emotional development. Problems of habit and training. Organic disturbances with a large psychic component. Antisocial behavior. Specific syndromes. General reference texts. Author index. Subject index.

Note: Written by two specialists in pediatrics, this book is addressed primarily to physicians and secondarily to social workers, child psychologists, etc. It presents a considerable body of literature on both normal and abnormal behavior in children, with the latter predominating. It is written in a straightforward style that is largely free of the technical terminology of psychoanalysis and clinical psychology. The title notwithstanding, more space is devoted to basic information and descriptions of disorders than to treatment. Selected literature references are included.

BETTELHEIM BRUNO

Truants from life the rehabilitation of emotionally disturbed children. Glencoe, Ill. The Free Press, 1955 511 p. 21 cm. $6.00. 4967

Contents (abridged). Part I, Introduction. The school. Part II, "Little things and time"—Paul, a case of "[illegible]." Part III, Emotional death and rebirth: Mary, a schizophrenic girl. Part IV, "Ten cowboys better than God"—John, [illegible] life and rehabilitation of a boy with anorexia. Part V, "I never knew you cared so much"—Harry, a delinquent boy. Appendix. Index.

Note: A companion to the author's *Love is not enough*, described above. It is largely devoted to four case histories of children who were treated by the author and his colleagues at the Sonia Shankman Orthogenic School of the University of Chicago. The case histories are very well written and they illustrate dramatically the methods of the School and their effects upon extremely disturbed children. When received at the School their maladjustments were so severe that they were unable to function in normal society; however, all were rehabilitated.

CAPLAN GERALD editor

Emotional problems of early childhood. Editorial advisory committee Frederick H. Allen, George E. Gardner Marian C. Putnam. New York Basic Books Inc., 1955 544 p. 24 cm. $7.50. 4968

Contents. Section I. Preventive aspects of child psychiatry. Clinical cases and discussions. Preventive intervention in a four-year-old child whose father committed suicide, by E. Lindemann and others. A mother whose child would not eat—psychiatric casework in a well-baby clinic, by J. M. Rosenfeld and M. Brandt. Disturbance in mother-infant relationship leading to apathy, extrapyramidal rocking and hair ball, by W. S. Langford. Research reports: A follow-up study of a predictive test of social adaptation in preschool children, by E. B. Lindemann and Ann Ross. A critical survey of a current program of research into mother-child relationship, by F. H. Stone. Measuring changes in the family of a five-year-old during treatment, by E. Chance. Commentary: Recent trends in preventive child psychiatry, by G. Caplan. Section II. The relations of physical and emotional factors, and problems of hospitalization. Clinical cases and discussions. Ulcerative colitis in a four-year-old boy, by G. E. Gross. Interrelationship of a preschool child, by J. C. Lubbock. Maternal deprivation, psychogenic deafness, and pseudo-retardation, by M. C. Ostow-Ortiguez and J. Aubry. Research reports: A program for the study of children with psychosomatic disorders, by G. J. Mohr and others. A psychiatric study of fifty preschool children referred to hospital for suspected deafness, by A. Heiferman. The effects of lack of mother care—methods of studying children aged one to three years, placed in institutions, by J. Aubry. Investigations dealing with the reactions of children and families to hospitalization and illness—problems and potentialities, by D. G. Prugh. Commentary: Mother child separation—process or event, by F. H. Allen. Section III, Problems of psychosis in early childhood. Clinical cases and discussions: Symbiotic aspects of a seven-year-old psychotic, by T. Morrow and E. A. Loomis, Jr. A case of psychosis of allergic etiology in a young child, by G. Heuyer. History of a child with an atypical development, and some vicissitudes of his treatment, by E. Rosenstock. The development of a schizophrenic child treated with electric convulsions at three years of age, by L. Bender. A special technique of psychotherapy with an autistic child, by N. Ward. Treatment of a borderline psychotic five-year-old girl, by F. Knowlton and M. Burg. Research reports: Intensive study and treatment of preschool children who show marked personality deviations, or "atypical development," and their parents, by B. Rank. Twenty years of clinical research on schizophrenic children, with special reference to those under six years of age, by L. Bender. Commentary: Some observations on psychosis in early childhood, by M. C. Putnam. Appendix. Index.

Note: The contents of this volume were selected from a much larger volume of papers presented to the International Institute of Child Psychiatry held in Toronto in August, 1954. Included are 12 case histories, nine reports of research, and four commentaries. Three of the contributors are from France, two from Israel, one from Canada, and one from Norway. The remainder are from the United States of America. The volume presents an international cross section of current thinking and experience. Literature references are included in most of the papers.

COLEMAN JAMES C.

Abnormal psychology and modern life. Second edition. Chicago Scott, Foresman and Company 1956 676 p. illus. 25 cm. $6.50 4969

Contents (abridged). Part I, Introduction. Abnormal behavior in our times. Development of our modern views of abnormal behavior. Part II, Dynamics of normal and abnormal behavior: Personality development and adjustment. Causes of abnormal behavior. Part III, Disorders of psychogenic origin: Transient personality reactions to acute or special stress. Psychoneurotic disorders. The functional psychoses. Character disorders (personality disorders). Alcoholism and drug addiction. Part IV, Disorders associated with brain pathology. Part V, Modern methods of diagnosis, understanding, treatment, and prevention: Diagnosis. Therapy. The prevention of abnormal behavior. Psychiatry in the modern world. Abnormal psychology in literature. Glossary. Name index. Subject index.

Note: A college textbook designed for use in advanced courses offered to students who have completed courses in general psychology. For such a book, it includes a relatively large number of case histories and relatively full accounts of mental disorders, methods of diagnosis and therapy. The principal changes in the second edition are the reorganization of the chapters on mental disorders to bring them into conformity with the new classification of mental disorders promulgated by the American Psychiatric Association, and the addition of a short chapter on psychosomatic disorders.

FOOTE ESTELLE J

Six children. Springfield, Ill. Charles C Thomas, 1956. 317 p. illus. 24 cm. $5.50. 4970

Contents: Introduction. The quick thinking child. The slow thinking child. The child whose brain has been injured. The child maladjusted emotionally. The child of unusual cultural background. The child of unusual training. Two additional children. Figures and charts. Conclusion. Bibliography. Index.

Note: The author of this book, a physician specializing in psychiatry, has had an extensive experience in the examination and study of mentally retarded children. The "six children" of the title were not individuals but are types derived from the study of more than 1,400 cases. The material on each type is organized according to the following pattern: general, history, school, psychometrics, psychiatric, differential diagnoses, discussion and advice, and comments. Despite the formal arrangement, the book is readable and interesting. The "two additional children" are types also: the child with an unusual physical defect and the child called "delinquent." Sixty-four pages of the book are devoted to discus-

"Neurotic ego traits. The book is essentially an elaboration of this table. It is persuasively and clearly written and contains bibliography of the related modern literature.

STAGNER, ROSS

Psychology of personality Second edition New York McGraw Hill Book Company, Inc. 1948 485 p illus 24 cm (McGraw Hill publications in psychology, J F Dashiell, consulting editor) $6 50 4961

Contents (abridged) Introduction The scientific study of personality Methods in the study of personality Description of personality The nature of personality structure. Development of personality basic patterns—simple learning—complex forms of learning. The organization of personality traits—the self Character. Attitudes and values. Type theories of personality Dynamics of personality The biological basis of motivation. Contemporary theories of dynamics. A cultural interpretation of motivation. Determinants of personality: Biological factors. Social determinants. The school system. Economic factors. Personality and social values. Bibliography and author index. Subject index.

Note A thorough and convincing study of normal personality The underlying theme is that the most important factor in the shaping of the personality is the social environment, but all of the outstanding theories bearing on the subject are examined in some detail and evaluated from the author's viewpoint. Only the normal personality is considered. The second edition, the writing of which was started in 1941 but not completed until 1947 incorporates some material relating to the effects of World War II upon individual personalities. The original text, largely behavioristic in orientation, has been extensively rewritten in order to take full advantage of recent developments in such aspects of the field as perception and projection testing, and to incorporate new experimental studies. The bibliography also has been revised to include references to the later literature. The book is written for undergraduates and beginning graduate students, but is not too difficult for other readers with a background in social science.

SYMONDS, PERCIVAL MALLON

The ego and the self New York Appleton Century-Crofts, Inc., 1951 229 p. 21 cm. (The Century psychology series Richard M Elliott, editor) $2 50 4962

Contents Introduction. The structure of the ego. Functions of the ego. Development of the ego. Development of the self Self feeling and self-valuation. Ego strength and ego weakness. The rôle of the affects in the ego. Ego, superego, and self-ideals. Ego breakdown and depersonalization. The rôle of the ego in pathological states. The place of the ego and the self in psychotherapy Education for ego and self development. Bibliography Index.

Note In this book the author views the ego as "the objective self as it might be observed by behaviorist, and the self as "the subjective self as it is perceived, conceived, valued and responded to by the individual himself. After defining the concepts, he presents in concise style the current knowledge of the ego and the self from the viewpoint of psychology In most parts, the text is well organized and smoothly written digest of relevant literature. Statements in the text are cross-referenced to the source articles and books. Included among the source materials are numerous ritings of psychoanalysts as ell as the writings of experimental psychologists. The book is useful as text in advanced college courses and as reading guide for graduate psychologists who wish to explore this area of psychology

WITKIN, H A., AND OTHERS

Personality through perception an experimental and clinical study By H A. Witkin H B Lewis, M Hertzman, K. Machover P Bretnall Meissner and S Wapner Under the editorship of Gardner Murphy New York Harper & Brothers, 1954 571 p illus 21 cm. $7 50 4963

Contents Introduction. Design of the study The space-orientation tests. Modes of space orientation. Self-consistency in mode of orientation. Relation between performance in the space-orientation tests and performance in other related tests. Developmental changes in perception. Sex differences in perception. Procedures for study of perception-personality relationships in the basic adult group. The interview The Rorschach test. The figure-drawing test. The thematic apperception test. Case histories. Perceptual results and diagnostic data for the hospital group. Perception-personality relationships in the hospital group. Perceptual results and composition of groups of children used in perception-personality study The miniature-toy play situation. Further studies of perception-personality relationships in children. Interrelations among personality tests and applicability of the personality measures. The nature of perception-personality relationships. Some problems of theory and method. Appendixes. Bibliography Index.

Note. Over period of 10 years, the author of this book carried out intensive investigations of relations between perception and personality The research was centered on tests of the ability of individual persons in orienting to the vertical plane despite misleading features f the prevailing visual field. Large differences in individual ability were discovered. The tests of orientation in space were supplemented by other tests most of which are named in the above chapter titles. The results of the study indicate beyond doubt that "particular modes of perceiving are consistently related to particular ways of adjusting" in life situations.

YOUNG, KIMBALL

Personality and problems of adjustment. Second edition New York Appleton-Century-Crofts, Inc., 1952 716 p illus. 24 cm. $5 75 4964

Contents (abridged): Part I, The foundations of personality: Constitutional foundations of personality Motivation and affective processes. Internal organization and interactional processes. Note. This is revision, without major changes, of idely used and valued textbook utilizing sociological approach to personality While some new material has been added and some attention given to changes in the field of theoretical psychology the orientation is still toward groups, social roles, and institutional patterns as the major determinants of personality Can be used by advanced undergraduates in psychology and sociology

ABNORMAL PSYCHOLOGY

AMERICAN PSYCHOPATHOLOGICAL ASSOCIATION

Psychopathology of childhood. Edited by Paul H Hoch and Joseph Zubin The proceedings of the forty fourth annual meeting of the American Psychopathological Association held in New York City June, 1954 New York Grune & Stratton 1955 303 p. 23 cm. $6 00 4965

Contents. Normal growth and development, by N. Bayley Scientific models for the investigation f child development, by W Dennis. Current trends of research in child development, by A. L. Baldwin. The development of time concepts in the child, by J. Piaget. Discussion of Chapters 1–4 by D McCarthy Psychopathology of mental deficiency in children, by C. E. Benda and M. J Farrell. Organic factors in the psychopathology of childhood, by C. Bradley Emotional and intellectual consequences of psychologic deprivation in infancy—a revaluation, by W Goldfarb. Early environment—its importance for later behavior by W R. Thompson. Discussion of Chapters 5–8, by L. R Angus. Presidential address Problems of preventive psychiatry in war by D McK. Rioch. Cultural pressures and achievement motivation, by I. L. Child and M. K. Bacon Child and family psychopathy—problems of correlation, by N. W Ackerman and M. L. Behrens. Discussion of Chapters 10–11 by L. Bender & R. Hamilton award. Oppositional syndromes and oppositional behavior by D M. Levy Notes on the follow-up studies of autistic children, by L. Kanner and L. Eisenberg. Differential diagnosis between character

[illegible]. The studies themselves are preceded in the volume by an introduction, written by Professor Wendell Johnson, of the University of Iowa, [illegible] research in this field. They are followed by [illegible] bibliography of graduate theses and publications produced through 1954.

KUGELMASS, I. NEWTON

The management of mental deficiency in children. New York. Grune & Stratton, 1954. 312 p. illus. 23 cm. $7.25 4975

Contents: Part I, Diagnosis: An introduction to mental deficiency in children. The complete examination of the retarded child. Part II, *Syndromes: Developmental varieties of mental deficiency*. Metabolic varieties of mental deficiency. Neuromotor varieties of mental deficiency. Psychological varieties of mental deficiency. Part III, Management: Management of the retarded child. Index.

Note: A concise treatise written by an eminent authority on the [illegible] of children who has pointed out that: "Children with I.Q. 25 to 50 are trainable, while those with I.Q. over 50 are both trainable and educable. The world's work can be done by individuals attaining I.Q. 75 or over." The book is directed primarily to graduate physicians and secondarily to psychologists who see children. The important subject of diagnosis is thoroughly discussed in the [illegible]-page first part. The second part is the heart of the volume, and accounts for most of its length. Here, the various syndromes are described in terms of their clinical features, pathologic changes, diagnostic criteria, treatment procedures, etc. The third part is devoted to training, education, and general principles of treatment, including both psychotherapy and drug therapy. Literature references are given throughout the volume.

LIPPMAN, HYMAN S.

Treatment of the child in emotional conflict. New York. The Blakiston Division, McGraw-Hill Book Company, Inc., 1956. 298 p. 22 cm. $6.00. 4976

Contents: Section I, Approaching therapy. Treatment of the child in emotional conflict. Methods of therapy. Involving the parents in the child's therapy. Introducing the child to therapy. Section II, The neurotic child. General characteristics of neurotic children. The child in acute anxiety states. The child with school phobia. The child with depression. The child with obsessional neurosis. Section III, The child with personality problems. The withdrawn child. The overprotected child. The effeminate boy. The [illegible] child. The child with neurotic character. Section IV, The child who acts out. The unsocialized child. The neurotic character. The neurotic delinquent. The "psychopath." Section V, The child with [illegible] hold on reality. The psychotic child. The mentally retarded child. The child with organic brain damage. The child who withdraws into [illegible]. Section VI, The problem of prevention. Section VII, Some principles of therapy. Index.

Note: A well-written, nontechnical book on the treatment of emotionally disturbed children. It is based in large part on the author's very extensive experience at the Amherst H. Wilder Child Guidance Clinic in St. Paul, of which he is now Director. The methods of therapy described have their roots in psychoanalysis, but the book is not addressed to psychoanalysts, nor is there much emphasis on the basic concepts of that field. Its primary topic is methods of therapy. Interwoven with the discussion of therapy are numerous case histories chosen to illustrate therapeutic techniques and their effectiveness. The prevention of emotional maladjustment on the part of children is discussed in a short but valuable paragraph. The book is addressed to such readers as general practitioners of medicine and social workers.

MCCORD, WILLIAM, AND JOAN MCCORD

Psychopathy and delinquency. New York. Grune & Stratton, 1956. 230 p. 23 cm. $6.50. 4977

Contents: Who is the psychopath? From moral insanity to psychopathy. The problem of diagnosis. The causes of psychopathy. The treatment of psychopathy. Milieu therapy—an evaluation. The psychopath, the law, and society. Appendix. Index.

Note: A valuable study of the psychopath, described by the authors of this volume as an "asocial, aggressive, highly impulsive person, who feels little or no guilt and is unable to form lasting bonds of affection with other human beings." It is concerned primarily with causes and treatment. It includes an extensive study of [illegible] example of the milieu therapy approach to the cure of psychopaths, namely the Wiltwyck School for Boys maintained by New York State. The boys in that institution were studied with all the techniques of clinical psychology in order to determine the effects of its methods upon them. The results of the studies are presented both in statistical form and in evaluatory discussions by the authors. The book is of interest both to criminologists and to psychologists.

MALZBERG, BENJAMIN, AND EVERETT S. LEE

Migration and mental disease: a study of first admissions to hospitals for mental disease, New York, 1939–1941. With an introduction by Dorothy S. Thomas. New York. Social Science Research Council, 1956. 142 p. illus. 23 cm. $1.50. 4978

Contents: Introduction, by D. S. Thomas. Scope and method. Nativity differentials. Differentials by state of birth. Five-year migration differentials. Recency of migration. Summary and conclusions. Appendices: Sources and methods. Some possible effects of "unknowns" upon observed differentials. Index.

Note: A study designed to provide data pertinent to the following questions. "Do migrants have higher incidence of mental disease than non-migrants in the area of destination? Are the differentials consistent when the definition of migration is varied? Do the differentials hold over the age range between the sexes, among groups defined in terms of color or race? Are the patterns of differentials consistent with respect to the 'functional' psychoses and other types of mental disease?" First admissions to hospitals for mental disease in the state of New York for [illegible] three-year period were analyzed and the results are presented in [illegible] of statistical tables. The tables are supplemented by discussions and by [illegible] summary and conclusions written by the authors.

SARASON, SEYMOUR B.

Psychological problems in mental deficiency. Second edition. New York. Harper & Brothers, 1953. 402 p. illus. (part col'd) 21 cm. (Under the editorship of Gardner Murphy.) $5.00. 4979

Contents: Criteria of mental deficiency. Problems in classification. Problems in the diagnosis of brain injury. Problems in test interpretation. Garden-variety mental deficiency. Cultural factors in the etiology of garden-variety deficiency. Cerebral palsy. Other forms of mental deficiency. Projective techniques. Psychotherapy. Interpretation of mental deficiency to parents. The problem of institutionalization. The problem of professional training. Bibliography. Author index. Subject index.

Note: An important critical study of potentialities and applications of psychological and psychiatric theories and techniques in the diagnosis and therapy of mental deficiencies. The author has stated that [illegible] this book is evidence of my own belief that the psychological problems in mental deficiency are as intriguing, puzzling, and promising as those found in any other clinical group." The first edition was published in 1949. The last three chapters in this second edition are newly added. They serve to extend the scope of the book in the direction of practice in the management and therapy of mentally defective persons. They contain among other things, some helpful advice to therapists on dealing with parents of mentally defective children. The bibliography, which is a list of the literature on which the book is based, now contains 319 references. The author is Professor of Psychology in Yale University.

TOMKINS, SILVAN S., editor

Contemporary psychopathology: a source book. With an introduction by Henry A. Murray. Cambridge, Mass. Harvard University Press, 1943. 600 p. illus. 24 cm. $5.00. 4980

Contents (abridged): I, Mental disease in childhood: Distorting factors of infant personality, by M. A. Ribble. The predisposition to anxiety, by P. Greenacre. The child's response to coercive bowel training, by M. Huschka. Studies in the interpretation of play, by E. H. Erikson. II, Psychosomatic and psychosomatic medicine: The influence of psychologic factors upon gastro-intestinal disturbances, by F. Alexander. [illegible]

sions and reproductions of forms and charts used by the author and her associates in the clinical work that formed the basis of the book.
